id In Freudian psychoanalytic theory, one of the three aspects of the human personality, along with the EGO and SUPEREGO. The id is the source of instinctual impulses such as sex and aggression as well as primitive needs that exist at birth. It is entirely nonrational and functions according to the pleasure-pain principle, seeking immediate fulfillment of its impulses whenever possible. Its working processes are completely unconscious in the adult, but it supplies the energy for conscious mental life, and it plays an especially important role in modes of expression that have a nonrational element, such as the making of art. The primary methods for unmasking its content, according to SIGMUND FREUD, are dream analysis and free association.

Ida, Mount Name of two separate mountains, one in Anatolia and the other on the island of CRETE. The Anatolian mountain is located near the site of ancient TROY and once held a Classical shrine where PARIS is said to have judged the beauty of three Greek goddesses. From its highest point, about 5,800 ft (1,800 m), the gods are said to have witnessed the TROJAN WAR. The second mountain, in west-central Crete, is the island's highest point, reaching 8,058 ft (2,456 m). It also held a Classical shrine, which included the cave where ZEUS, the father of the Greek pantheon, was said to have been reared.

Idaho State (pop., 2000: 1,293,953), northwestern U.S. It is bordered by Canada and the U.S. states of Montana, Wyoming, Utah, Nevada, Oregon, and Washington. It covers 83,574 sq mi (216,456 sq km). Its capital is BOISE. Idaho is dominated by the ROCKY MOUNTAINS, which extend from the Canadian border to south-central Idaho and along the Wyoming border. Its most extensive valley surrounds the SNAKE RIVER, which flows through HELLS CANYON, the deepest gorge in North America. First occupied by American Indians, the region was explored by the LEWIS AND CLARK EXPEDITION in 1805. It was part of the disputed Oregon Country that passed to the U.S. when Britain relinquished its claims by treaty in 1846. Discovery of gold in 1860 brought an influx of settlers. It became Idaho Territory in 1863 and was admitted to the Union as the 43rd state in 1890. Labour protests during 1890–1910 involving the INDUSTRIAL WORKERS OF THE WORLD erupted frequently. During the late 20th century, Idaho developed its agriculture and industry and promoted its natural wilderness.

ideal gas See PERFECT GAS

idealism In METAPHYSICS, the view that stresses the central role of the ideal or the spiritual in the constitution of the world and in mankind's interpretation of experience. Idealism may hold that the world or reality exists essentially as spirit or consciousness, that abstractions and laws are more fundamental in reality than sensory things, or, at least, that whatever exists is known to mankind in dimensions that are chiefly mental—that is, through and as ideas. Metaphysical idealism asserts the ideality of reality; epistemological idealism holds that in the knowledge process the mind can grasp only its own contents. Metaphysical idealism is thus directly opposed to MATERIALISM, and epistemological idealism is opposed to REALISM. Absolute idealism (see G. W. F. HEGEL) includes the following principles: (1) the everyday world of things and persons is not the world as it really is but merely as it appears in terms of uncriticized categories; (2) the best reflection of the world is in terms of a self-conscious mind; (3) thought is the relation of each particular experience with the infinite whole of which it is an expression; and (4) truth consists in relationships of coherence between thoughts, rather than in a correspondence between thoughts and external realities (see COHERENTISM). See also GEORGE BERKELEY.

Idelsohn \ˈē-dᵊl-ˌzōn**, Abraham (Zevi)** (b. July 14, 1882, Felixberg, Latvia, Russian Empire—d. Aug. 14, 1938, Johannesburg, S.Af.) Latvian musicologist. After studies in Germany he served as a synagogue cantor there (from 1903) before moving to Johannesburg and then to Jerusalem in 1905. Later he moved to the U.S., but after a stroke in 1934 he returned to Johannesburg. His monumental comparative studies of Jewish music in many parts of the world established that the tradition had remained relatively unchanged over time and also suggested connections between Jewish chant and the origins of Gregorian chant. He composed the first Hebrew opera, *Yiftah* (1922), and the song "Hava nagila."

Identity Christianity North American Christian movement that identifies Anglo-Saxon and other European peoples with the lost tribes of ISRAEL. Anti-Semitic and racist, Identity Christianity posits that God's COVENANT was actually with the European peoples and that the Jews are the offspring of Eve and Satan, and it characterizes blacks as subhuman. Though it has been largely unsuccessful in persuading "white Israelites" of their purported identity, small churches are active (mainly in the northwestern U.S.) and the movement proselytizes through publications, recordings, and the Internet.

identity of indiscernibles Principle enunciated by G.W. LEIBNIZ that denies the possibility of two objects being numerically distinct while sharing all their non-relational properties in common, where a relational

© 2006 Encyclopædia Britannica, Inc.

property is one that involves bearing a relation to another object. More formally, the principle states that if *x* is not identical to *y*, then there is some non-relational property *P* such that *P* holds of *x* and does not hold of *y*, or that *P* holds of *y* and does not hold of *x*. Equivalently, if *x* and *y* share all their non-relational properties, then *x* is identical to *y*. Its converse, the principle of the indiscernibility of identicals (also known as Leibniz's Law), asserts that if *x* is identical to *y*, then every non-relational property of *x* is a property of *y*, and vice versa.

identity theory In the philosophy of MIND, the doctrine that mental events are identical to physico-chemical events in the brain. So-called "type" identity theory asserts that each type of mental event, such as pain, is identical to some type of event in the brain, such as the firing of c-fibres. In response to objections based on the assumed "multiple realizability" of mental states, "token" identity theory makes the weaker claim that each token of a mental event, such as a particular pain, is identical to some token of a brain event of some type. See also MIND-BODY PROBLEM.

ideology Form of social or political philosophy in which practical elements are as prominent as theoretical ones. The term was coined in 1796 by the French writer Antoine-Louis-Claude, Comte Destutt de Tracy (b. 1754—d. 1836), as a label for his "science of ideas." Certain characteristics of his thought proved generally true of ideologies, including a more or less comprehensive theory of society, a political program, anticipation of a struggle to implement that program (thus requiring committed followers), and intellectual leadership. Destutt de Tracy's ideas were adopted by the French Revolutionary government in building its version of a democratic, rational, and scientific society (see DIRECTORY). Napoleon first gave the term a negative connotation with his scorn for what he called *idéologues*. Ideology is often contrasted unfavourably with PRAGMATISM. The significance of ideology follows from the fact that power is rarely exercised without some ideas or beliefs that justify support.

Iditarod \ī-ˈdit-ə-ˌräd\ **Trail Sled Dog Race** U.S. dogsled race. It is held each March and run over a route between Anchorage and Nome, Alaska. It originated in 1967 as a race 56 mi (90 km) long, but by 1973 it had evolved into the current race, a 1,152-mi (1,855-km) trek roughly tracing an old mail route established in 1910. The race also commemorates an emergency mission to get medical supplies to Nome during a diphtheria epidemic in 1925. It typically takes 9–14 days to complete the race. See also DOGSLED RACING.

idol Image or statue of a deity used as an object of worship. In Judaism, the making of any representation of God is strictly forbidden, as is the fashioning of any "graven image." Islam has also adhered to this rule. In Christianity, there has been a general acceptance of pictorial or sculpted images of Jesus and the saints and, on occasion, God, and Christianity has thus always faced the danger that such representations could be venerated superstitiously as idols. In Jainism, Hinduism, and Buddhism images of gods and saints are common; they are often the object of veneration. In Hinduism, a statue may be treated as a god as an act of devotion but loses its special status when the act of devotion is finished (see DURGA-PUJA, PUJA).

Idrīs \id-ˈrēs\ **I** *in full* **Sīdī Muḥammad Idrīs al-Mahdī al-Sanūsī** (b. March 13, 1890, Jarabub, Cyrenaica, Libya—d. May 25, 1983, Cairo, Egypt) King of Libya (1951–69). He succeeded his father in 1902 as leader of CYRENAICA but did not rule in his own name until 1916. Negotiations with Italy, which held the Libyan coast, resulted in agreements that confirmed Idrīs's authority (1917) and established a parliament (1919). His refusal to disarm his tribal supporters, however, led to Italy's invasion of Tripolitania in 1922, and Idrīs went into exile until after World War II (1939–45). In 1949 Cyrenaica and the other two Libyan provinces united under a constitutional monarchy headed by Idrīs. Independence was declared in 1951. He was overthrown by Col. MUAMMAR AL-QADDAFI in a military coup in 1969.

Idrīsid \ˈid-ri-sid\ **dynasty** Arab Muslim dynasty that ruled BERBER areas of Morocco (789–921). The founder, Idrīs I (r. 789–791), established the sharifian tradition in Morocco, by which the claim to descent from MUHAMMAD was established as the principle for monarchic rule. His son Idrīs II (r. 803–828) founded Fez (modern Fès) in 808. The dynasty was the first to incorporate both Berbers and ARABS. It broke up into rival principalities, paving the way for another Berber group, the ALMORAVID DYNASTY.

idyll *or* **idyl** \ˈī-dəl, ˈi-dəl\ In literature, a simple descriptive work in poetry or prose that deals with rustic life or pastoral scenes or suggests a mood of peace and contentment. Idylls have taken varying forms, from the eclogue to the long narrative poem treating an epic, romantic, or tragic theme (such as ALFRED TENNYSON's "Idylls of the King").

Ifat \i-ˈfät\ (1285–1415) Muslim state, central ETHIOPIA. Flourishing in the fertile uplands, it was established through the conquests of a 13th-century ruler known as Walashma. It served as a buffer between the kingdom of Damot and the Christian kingdom of Ethiopia. Ifat was conquered by the Ethiopian king Amda Tseyon in 1328 and made tributary to Ethiopia. After a long series of revolts, it was destroyed in 1415 when it was annexed to Ethiopia.

Ifni \ˈif-nē\ Region, southwestern MOROCCO. Located on the coast of the Atlantic Ocean, it has an area of some 580 sq mi (1500 sq km). It was settled in 1476 by Diego García de Herrera, lord of the Canaries, as a Spanish fishing, slaving, and trading locality. Abandoned in 1524 because of disease and the hostility of the local population, Spain reclaimed it following a treaty with Morocco in 1860. Effective Spanish reoccupation began in 1934, and it became part of Spanish West Africa in 1946. Ifni was ceded to Morocco in 1969.

IG Farben World's largest chemical CARTEL from its founding in Germany until its dissolution by the Allies after World War II. It grew out of a complex merger of German manufacturers of chemicals, pharmaceuticals, and dyestuffs (*Farben*). Its major members were the companies known today as BASF AG, BAYER AG, Hoechst AG, Agfa-Gevaert Group, and Cassella AG. They formed a loose association in 1916 and were formally united in 1925, with headquarters in Frankfurt. IG Farben expanded internationally in the late 1920s and the 1930s. During World War II, it established a synthetic oil and rubber plant at AUSCHWITZ to take advantage of slave labour by the death camp's inmates, on whom it also conducted drug experiments. After the war, several company officials were convicted of WAR CRIMES, and IG Farben was broken up into three independent companies.

Igbo \ˈig-bō\ *or* **Ibo** \ˈē-bō\ People of southeastern Nigeria. The Igbo speak dialects of Igbo, a Benue-Congo language of the Niger-Congo family (see NIGER-CONGO LANGUAGES). Before European colonization the Igbo lived in autonomous local communities, but by the mid 20th century they had developed a strong sense of ethnic identity. During conflicts in 1966 many Igbo in northern Nigeria were killed or forced into their traditional homelands in the east. In 1967 the Eastern region tried to secede from Nigeria as the independent nation of BIAFRA; hundreds of thousands of Igbo were killed or died of starvation. Today they number some 20 million. Many are farmers, but trading, crafts, and wage labour are also important, and many have become civil servants and business entrepreneurs.

igloo Temporary dome-shaped winter home or hunting-ground dwelling of Canadian and Greenland Inuit (ESKIMOS), made from blocks of snow. The builder chooses a deep snowdrift of fine-grained, compact snow and cuts it into blocks. After a row of blocks has been laid in a circle, their top surfaces are shaved off in a sloping angle to form the first rung of a spiral. Additional blocks are added to the spiral to draw it inward until a dome is completed, leaving a ventilation hole at the top.

Ignarro, Louis J(oseph) (b. May 31, 1941, Brooklyn, N.Y., U.S.) U.S. pharmacologist. He earned a Ph.D. from the University of Minnesota. Along with ROBERT F. FURCHGOTT and FERID MURAD, Ignarro was awarded a 1998 Nobel Prize for the discovery that NITRIC OXIDE acts as a signaling molecule in the cardiovascular system. Ignarro concluded that the factor that Furchgott had named endothelium-derived relaxing factor was nitric oxide. This work uncovered an entirely new mechanism by which blood vessels in the body relax and widen. It was the first discovery that a gas could act as a signaling molecule in a living organism. The principle behind the drug VIAGRA, used to treat impotence, was based upon this research.

Ignatius of Antioch \ig-ˈnā-shəs**, Saint** (d. c. 110, Rome; Western feast day October 17; Eastern feast day December 20) Early Christian martyr. Probably of Syrian origin, he may have been a pagan who persecuted Christians before his conversion. He succeeded St. PETER THE APOSTLE as bishop of Antioch. During the reign of TRAJAN, Roman authorities arrested Ignatius and sent him to Rome, where he was tried and executed. He wrote a series of famous letters on the journey to Rome, attempting to encourage his fellow Christians during their persecution. The letters condemn two sets of heretics: the Judaizers, who insisted that Christians continue to follow Jewish law, and the Docetists, who maintained that Jesus only appeared to suffer and die on the cross.

Ignatyev \ig-ˈnät-yif**, Nikolay (Pavlovich), Count** (b. Jan. 29, 1832, St. Petersburg, Russia—d. July 3, 1908, Krupodernitsy estate, Kiev

© 2006 Encyclopædia Britannica, Inc.

province) Russian politician and diplomat under Tsar Alexander II. A career diplomat, he concluded a treaty with China in 1860 that allowed Russia to construct the city of Vladivostok and become a major power in the northern Pacific. Appointed head of the foreign ministry's Asian department, he gained jurisdiction over Russia's relations with the Ottoman Empire as well, and in 1864 he became ambassador to Constantinople. An advocate of Pan-Slavism, he encouraged Serbia and Bulgaria in a revolt that proved unsuccessful. In 1878, after Russia's victory in the Russo-Turkish War, he negotiated the favourable Treaty of San Stefano. The western European powers replaced it with the Treaty of Berlin, far less favourable to Russia, and he was forced to resign.

igneous rock Any of various crystalline or glassy, noncrystalline rocks formed by the cooling and solidification of molten earth material (magma). Igneous rocks comprise one of the three principal classes of rocks, the others being metamorphic and sedimentary rocks. Though they vary widely in composition, most igneous rocks consist of quartz, feldspars, pyroxenes, amphiboles, micas, olivines, nepheline, leucite, and apatite. They may be classified as intrusive or extrusive rocks.

ignition system In a gasoline engine, the means used for producing an electric spark to ignite the fuel-air mixture in the cylinders to produce the motive force. The ignition system consists of a storage battery recharged by a generator, an induction coil, a device to produce timed high-voltage discharges from the induction coil, a distributor, and a set of spark plugs. The battery provides an electric current of low voltage, usually 12 volts, that is converted by the system to some 40,000 volts. The distributor routes the successive bursts of high-voltage current to each spark plug in the proper firing order.

iguana \i-'gwä-nə\ Any of about 13 of the larger members of the lizard family Iguanidae. Best known is the common iguana (*Iguana iguana*), which ranges from Mexico southward to Brazil. It reaches a maximum length of 6 ft (1.8 m). It lives in trees, especially trees overhanging water, into which it will plunge if disturbed. It is greenish, with brown bands that form regular rings on the tail. It primarily eats tender leaves and fruits but will also eat small birds and crustaceans. Species of the southwestern U.S. and Mexico include the chuckwalla (*Sauromalus obesus*) and desert iguana (*Dipsosaurus dorsalis*).

Iguazú Falls *or* **Iguaçu** \ˌē-gwə-'sü\ **Falls,** *formerly* **Victoria Falls** A series of cataracts on the Iguazú River near the border between Argentina and Brazil. The horseshoe-shaped falls were discovered by Álvar Núñez Cabeza de Vaca in 1541. They vary between 200 and 269 ft (60 and 82 m) in height and extend for 1.7 miles (2.7 km)—nearly three times wider than North America's Niagara Falls—and are divided into 275 waterfalls or cataracts. The scenic beauty and wildlife of the falls are protected by two separate national parks: Iguaçu National Park (1939) in Brazil and Iguazú National Park (1934) in Argentina. Both parks were designated UNESCO World Heritage sites in 1984 and 1986, respectively.

Iguazú Falls on the Iguazú River at the Argentina-Brazil border.

Iguazú River *or* **Iguaçu River** River, southern Brazil and northeastern Argentina. It winds westward for 820 mi (1,320 km) before joining the Paraná River at the point where Argentina, Brazil, and Paraguay meet. Although sections of the river are navigable, it is known chiefly for the scenic Iguazú Falls. Near the falls a major portion of the river tumbles into a chasm called the Garganta del Diablo ("Devil's Throat"), which has been described as "an ocean plunging into an abyss."

Iguvine \ī-'gü-vīn\ **Tables** Set of seven inscribed bronze tables written in the Umbrian language and found in 1444 at Iguvium (modern Gubbio, Italy). Some are written in the Umbrian script and others in the Latin alphabet; they probably date from the 3rd to 1st century BC. The tables record liturgy, sacred rites, and regulations of the Fratres Atiedii, a brotherhood of priests, and are of great value for the study of ancient Italic language and religion.

Ihara Saikaku \ē-'hä-rä-'sī-ˌkä-kù\ *or* **Ibara** \ē-'bä-rä\ **Saikaku** *known as* **Saikaku** *orig.* **Hirayama Togo** (b. 1642, Ōsaka, Japan—d. Sept. 9, 1693, Ōsaka) Japanese poet and novelist. He first won fame for his speed in composing *haikai* (humorous linked-verse poems), once producing 23,500 in a day. He is best known for his novels, including *The Life of an Amorous Man* (1682) and *Five Women Who Loved Love* (1686) in which he enchanted readers with racy accounts of the amorous and financial affairs of the merchant class and the demimonde. He was one of the brilliant figures of the 17th-century revival in Japanese literature.

Ii Naosuke \'ē-ē-nä-'ōs-kā\ (b. Nov. 29, 1815, Hikone, Japan—d. March 24, 1860, Edo [now Tokyo]) Japanese daimyo and statesman who made the last attempt to reassert the traditional political role of the shogunate (military ruler). In response to Commodore Matthew Perry's demand that Japan end its centuries-old policy of isolation, Ii favoured developing relations. The Tokugawa shogun signed the Perry Convention (1854), which opened two ports to U.S. ships, exposing the country to Western influence, and began negotiations with Townsend Harris over trade. In an unusual move, the shogunate had sought the emperor's consent to the treaty; when antitreaty forces blocked approval, Ii, as head of the shogunal governing body, authorized the signing. This outraged many daimyo; when Ii silenced them, he was beheaded by assassins. See also Tokugawa period; Meiji Restoration.

Iio Sōgi \'sō-gē\ *or* **Sōgi** (b. 1421, Japan—d. Sept. 1, 1502, Hakone) Japanese poet. Sōgi was a Zen monk in Kyōto before becoming, in his 30s, a professional renga (linked-verse) poet. He is considered the greatest master of *renga* because of two sequences, *Minase sangin* (1488; "Three Poets at Minase") and *Yuyama sangin* (1491; "Three Poets at Yuyama"), in each of which poets led by Sōgi took turns at composing short stanzas (links) to form a single poem with many shifts of mood and direction. The foremost poet of his age, he left more than 90 works, including anthologies, diaries, poetic criticism, and manuals.

Ijoid languages The smallest branch of the huge Niger-Congo language family. The Ijoid languages are found in the relatively narrow coastal Niger River delta region of Nigeria. They consist of a language cluster, Ijo, which is spoken by about two million people, and the solitary Defaka, spoken by very few. The Ijo were among the first West Africans to have contact with Europeans, and the Ijo language is believed to be one of the first Nigerian languages written.

IJssel River \'ā-səl,\ *English* \'ī-səl\ River, in The Netherlands. An important distributary of the Rhine River, it leaves the Lower Rhine (Neder Rijn) just southeast of Arnhem and flows northeastward for 70 mi (110 km) to enter the IJsselmeer. Zutphen, Deventer, and Zwolle are important cities along its course.

IJsselmeer \'ā-səl-ˌmer\ *English* **Lake Ijssel** Shallow freshwater lake, northern and central Netherlands. Fed by the IJssel River, it was formed from the southern part of the former Zuiderzee by a dam, which separates it from both the Waddenzee and the North Sea. It previously had a total area of 1,328 sq mi (3,440 sq km), though this has been reduced by reclamation projects that have increased the land area of The Netherlands by more than 600 sq mi (1,600 sq km). Regulated by sluices, the formerly brackish water has been replaced by fresh water from the IJssel River, and eel fisheries have been established.

ijtihād \ˌij-tē-'had\ In Islamic law, the analysis of problems not covered precisely in the Qurʾān, the Ḥadīth, or the scholarly consensus called the *ijmāʿ*. In the early Muslim scholarly community, every jurist had the right to exercise such original thinking, but the growth of legal schools prompted Sunnite Muslim authorities to declare that the principal legal issues had been settled by the 10th century. Shīʿite Muslims have always

© 2006 Encyclopædia Britannica, Inc.

recognized *ijtihād*, and jurists considered learned enough for this kind of analysis have great authority. In the 20th century an attempt was made to restore *ijtihād* among Sunnites to help Islam adapt to the modern world.

Ike Taiga \'ē-ke-'tī-gä\ *orig.* **Matajirō** (b. June 6, 1723, Kyōto, Japan—d. May 30, 1776, Kyōto) Japanese painter. From an early age he was taught calligraphy and the Chinese classics. He helped establish the *bunjin-ga* style of painting (see LITERATI), originally a Chinese style. His works consist of landscapes and portraits, including the screen pictures *The Five Hundred Disciples of Buddha* and a series of illustrations for *Jūben jūgichō* (1771; "Ten Advantages and Ten Pleasures Collection"), albums based on the poems of Li Liweng of the Qing dynasty (1644–1911). Ike became one of the leading calligraphers of the EDO CULTURE.

ikebana \ˌi-kā-'bä-nə\ Japanese art of flower arranging. It was introduced in Japan in the 6th century by Chinese Buddhist missionaries, who had formalized the ritual of offering flowers to the BUDDHA. The first school of flower arranging in Japan was founded in the early 7th century. The art is based on harmony of simple linear construction and appreciation of the subtle beauty of flowers and natural material (branches, stems). Several major schools, with differing histories and theories of artistic style, exist to this day. In its highest form, ikebana is spiritual and philosophical in nature, but in modern Japan it is more often practiced as a sign of refinement by marriageable young women or older matrons.

Ikhwān \iḵ-'wän\ *Arabic* **"Brethren"** Religious and military brotherhood that helped IBN SAʿŪD unite the Arabian Peninsula. First organized in 1912, its members were settled in colonies around oases in an effort to break down tribal loyalties and force the BEDOUIN to abandon their nomadic way of life. They also embraced the arch-traditionalist Islamic principles of Muḥammad ibn ʿAbd al-WAHHĀB. From 1919 they won many victories in Arabia and Iraq, with conquests including Mecca and Medina. By 1926 the Ikhwān were becoming uncontrollable, attacking Ibn Saʿūd for innovations such as telephones and automobiles. They staged a bloody revolt, which was not put down until 1930, and then only with British help. Members who had remained loyal were eventually absorbed into the National Guard of Saudi Arabia.

Ikhwān al-Muslimūn, al- See MUSLIM BROTHERHOOD

Ikhwān al-Ṣafāʾ \iḵ-'wän-ȧs-sa-'fa\ Secret Arab brotherhood founded in Basra, Iraq, in the 10th century. The beliefs of the group diverged sharply from orthodox Islam, incorporating elements of NEOPLATONISM, GNOSTICISM, ASTROLOGY, and the occult sciences. The brotherhood is best known for having produced a philosophical and religious encyclopedia, *Epistles of the Brethren of Purity and Loyal Friends*, whose purpose was to provide enlightenment that would purify the soul and provide happiness in the next life.

ikki \'ik-ē\ Peasant uprisings in Japan beginning in the KAMAKURA PERIOD (1192–1333) and continuing through the TOKUGAWA PERIOD (1603–1867). Though the welfare of the city dweller improved during Tokugawa (Edo) times, the welfare of poor peasants worsened: excessive taxation and rising numbers of famines drove them first to peaceful and then to violent demonstrations. They sometimes received redress for particular hardships, but their spokesmen would forfeit their lives for their audacity.

Il Rosso See Giovanni Battista ROSSO

ilang-ilang See YLANG-YLANG

ileitis \ˌi-lē-'ī-təs\ Chronic INFLAMMATION of part of the SMALL INTESTINE or LARGE INTESTINE (strictly, of the ILEUM). A more serious type, regional ileitis (Crohn disease), involves both small and large intestines. Ileitis symptoms include chronic or intermittent, sometimes bloody, diarrhea and abdominal cramps. Fever, weight loss, and anemia may occur. Crohn disease may involve progressive deterioration. Obstructions or abnormal connections between loops of intestine may develop. Simple ileitis has short-term causes, and many patients recover completely. In Crohn disease, which may result from an autoimmune defect, remissions and relapses continue for years, causing the intestine's wall to thicken, its channel to narrow, and its lining to ulcerate. X-ray films or colonoscopy showing these features are diagnostic. Drug treatment may help, but there is no known cure, and the disease often requires removal of part of the intestine.

ileum \'i-lē-əm\ Final and longest segment of the SMALL INTESTINE. It is the site of absorption of vitamin B_{12} (see VITAMIN B COMPLEX) and reabsorption of about 90% of conjugated BILE salts. It extends about 13 ft (4 m), from the jejunum (middle section of the small intestine) to the ileocecal valve, where it joins the LARGE INTESTINE. Disorders produce vitamin B_{12} deficiency and extensive diarrhea (since bile salts in the large intestine interfere with water absorption).

Iliamna \ˌi-lē-'am-nə\ **Lake** Lake, Alaska, U.S. The largest lake in Alaska and the second largest freshwater lake entirely within the U.S., it is 80 mi (129 km) long and 25 mi (40 km) wide and covers an area of 1,000 sq mi (2,600 sq km). Located west of Cook Inlet in southwestern Alaska, it drains southwest into Bristol Bay and the Bering Sea. The active Iliamna Volcano, 10,016 ft (3,053 m) high, lies northeast of the lake. It was named by Tanaina Indians, whose mythology held that it was inhabited by a giant blackfish capable of biting holes in canoes.

Ilium See TROY

Illinois State (pop., 2000: 12,419,293), midwestern U.S. Bordered by Wisconsin, Indiana, Kentucky, Missouri, and Iowa, it covers 57,918 sq mi (150,008 sq km). Its capital is SPRINGFIELD. The MISSISSIPPI RIVER forms the state's western boundary, the OHIO RIVER and WABASH RIVER form its southeastern border, and the ILLINOIS RIVER traverses the state; Lake Michigan lies to the northeast. Located on its northeastern border is CHICAGO, the nation's third largest city. Indian settlement dates from 8000 BC. The MISSISSIPPIAN CULTURE was centred at Cahokia c. AD 1300; all the tribes inhabiting the area at the time of European settlement were of Algonquian stock. The French explorers JACQUES MARQUETTE and LOUIS JOLLIET entered the territory in 1673. France controlled it until 1763, when it passed to Britain after the FRENCH AND INDIAN WAR. It became part of the Northwest Territory in 1783 and part of Indiana Territory in 1800; Illinois Territory was formed in 1809, and it became the 21st state in 1818. Although politically divided during the AMERICAN CIVIL WAR, Illinois remained part of the Union. In the 20th century, intense party rivalry (between Republicans and Democrats) and the state's large electoral vote made it a major battleground in presidential elections (see REPUBLICAN PARTY; DEMOCRATIC PARTY). It is one of the largest U.S. industrial centres and a top manufacturer of nonelectrical machinery. It is also a major insurance centre.

Illinois Central Gulf Railroad Co. (IC) U.S. railroad formed by the merger of the Illinois Central Railroad Co. and the Gulf, Mobile, and Ohio Railroad Co. The Illinois Central was chartered in 1851, and its first line was built from Galena to Cairo, Ill. A spur line to Chicago was built as part of the acquisition of a federal land grant. It eventually absorbed more than 100 smaller railroads across the Midwest and south to the Gulf of Mexico. After merging with the Gulf, Mobile, and Ohio in 1972, the railroad operated in 13 states. In 1985 it sold its line extending from Chicago to Iowa and Nebraska. The IC ships freight and operates passenger trains for AMTRAK. It was a subsidiary of IC Industries, Inc. (later Whitman Corp.), a HOLDING COMPANY formed in 1962. The railroad was privatized in 1989 and merged with CANADIAN NATIONAL RAILWAY CO. (CN) in 1999.

Illinois River River, northeastern Illinois, U.S. Formed by the junction of the DES PLAINES RIVER and Kankakee River in Illinois, it flows southwest across the state, joining the MISSISSIPPI RIVER after a course of 273 mi (440 km). It drains an area of 25,000 sq mi (65,000 sq km) and occasionally broadens into wide expanses, such as Peoria Lake.

illuminated manuscript Handwritten book decorated with gold or silver, brilliant colours, elaborate designs, or miniature paintings. "Illumination" originally denoted embellishment of text with gold or silver, which gave the impression that the page had been literally illuminated. In the Middle Ages those who "historiated" (illustrated texts with paintings) were differentiated from those who "illuminated" (embellished the initial capital letters with gold leaf or powder). Today the term denotes the illustration and decoration of early manuscripts in general, whether or not with gold. With the development of printing in Europe in the 15th century, illumination was superseded by printed illustrations.

Illuminated initial "U" for "Uerba" (*i.e.*, "Verba") in the book of Jeremiah, from the Winchester Bible, English, 12th century; in the Cathedral Library, Winchester, England (MS. 17, fol. 148R)

Illustrated London News Historic magazine of news and the arts, published in London. Founded in 1842 as a weekly, it became a monthly in 1971. A pioneer in the use of various graphic arts, it was London's first illustrated periodical, the first periodical to make extensive use of woodcuts and engravings, and the first to use photographs. In 1912 it became the first periodical using rotogravure to publish an integrated picture and text section. Initially focused mainly on English social life, it later broadened its scope to embrace general news and cultural activities.

illuviation Accumulation of dissolved or suspended soil materials in one area or layer as a result of leaching (percolation) from another. Usually CLAY, iron, or HUMUS wash out and form a line with a different consistency and color. These lines are important for studying the composition and ages of rock strata.

Illyria \ə-'lir-ē-ə\ Ancient country, northwestern BALKAN PENINSULA, SOUTHEASTERN EUROPE. It was inhabited from the 10th century BC by the Illyrians, an Indo-European people who later practiced piracy on Roman shipping. After a series of wars with Rome, it was defeated in 168 BC and established as the Roman province of Illyricum. When the Roman Empire was divided in AD 395, Illyria east of the DRINA RIVER became part of the Eastern Empire. It was occupied by the Slavs from the 6th century, and its name changed in the 8th–11th centuries to Arbëri and finally to Albania.

Illyrian \ə-'lir-ē-ən\ **Provinces** Former territory, Dalmatian coast of Europe. When the French victory in 1809 compelled Austria to cede part of its southern Slav lands to France, Napoleon combined CARNIOLA, West Carinthia, Görz, ISTRIA, and parts of CROATIA, DALMATIA, and Ragusa to form the Illyrian Provinces, which he incorporated into his empire. The end of the French administration in 1814 returned them to the Austrian Empire.

ʿilm al-ḥadīth \'ilm-ål-hå-'dēth\ Form of analysis established by 9th-century Muslim traditionalists to verify the merits of the ḤADĪTH. Of the many accounts of MUHAMMAD's statements and actions that constituted the Ḥadīth, some were thought to be forgeries or of doubtful reliability. Scholars judged their merit by scrutinizing the ISNĀDS that detailed the chain of authority through which the story had been handed down.

Ilmen \'il^{y}-mən^{y}**, Lake** Lake, northwestern Russia. It occupies the centre of the Ilmen Plain, a glacial lowland drained by nearly 50 rivers, including the Msta, Pola, and Lovat, that flow into the lake; the lake in turn provides the headwaters of the Volkhov River. Its area—between 283 and 807 sq mi (733 and 2,090 sq km)—varies according to river flow. The lake is navigable in summer and has an average depth of 33 ft (10 m).

ilmenite \'il-mə-ˌnīt\ Iron-black, heavy, metallic OXIDE MINERAL, composed of iron and titanium oxide ($FeTiO_3$), which is the major source of TITANIUM. It is found disseminated or in veins in GABBRO, DIORITE, or ANORTHOSITE, as in Quebec, New York state, and Norway. It also forms large masses, as in Iron Mountain, Wyoming, and in the Ilmen Mountains, Russia, from which it derives its name. Smaller quantities are present in copper-ore veins, pegmatites, black beach sands, and placer deposits.

Iloilo \ˌē-lō-'ē-lō\ City (pop., 2000: 365,820), PANAY island, Philippines. Pre-Spanish settlement was extensive, but the seaport remained small until 1855, when it was opened to foreign trade. For a time it rivaled CEBU CITY as the main port of the VISAYAN ISLANDS. It is a major fishing port and is known also for its raw-silk and pineapple-fibre fabrics.

Ilorin \ē-'lō-rēn\ City (pop., 2002 est.: 756,400), western Nigeria. It is located on a minor tributary of the NIGER RIVER. Founded by the YORUBA in the late 18th century and the capital of a Yoruba kingdom, it passed to Britain in 1897. Surrounded by a mud wall and mainly inhabited by Muslim Yoruba people, it is an industrial, commercial, and educational centre.

Ilumquh \i-'lům-kü\ Arabian god of the moon. Deemed superior to the gods associated with the sun and Venus, he was the protector of cities and patron god of the capital cities of southern Arabia. Pilgrimages were made to his temples, where worshipers often sought divine guidance from oracles. He had many different names and epithets, including Wadd, Amm, and Sin.

image processing Set of computational techniques for analyzing, enhancing, compressing, and reconstructing images. Its main components are importing, in which an image is captured through scanning or digital photography; analysis and manipulation of the image, accomplished using various specialized software applications; and output (e.g., to a printer or monitor). Image processing has extensive applications in many areas, including astronomy, medicine, industrial ROBOTICS, and remote sensing by satellites. See also PATTERN RECOGNITION.

imaginary number Any number of the form bi where b is a real number, i is the square root of -1, and b is not zero. See also COMPLEX NUMBER.

Imagism \'im-i-ˌjiz-əm\ Movement in U.S. and English poetry characterized by the use of concrete language and figures of speech, modern subject matter, metrical freedom, and avoidance of romantic or mystical themes. It grew out of the SYMBOLIST MOVEMENT and was initially led by EZRA POUND, who, inspired by the criticism of T. E. Hulme (1883–1917), formulated its credo c. 1912; HILDA DOOLITTLE was also among the founders. Around 1914 AMY LOWELL largely took over leadership of the group. Imagism influenced the works of CONRAD AIKEN, T. S. ELIOT, MARIANNE MOORE, D. H. LAWRENCE, WALLACE STEVENS, and others.

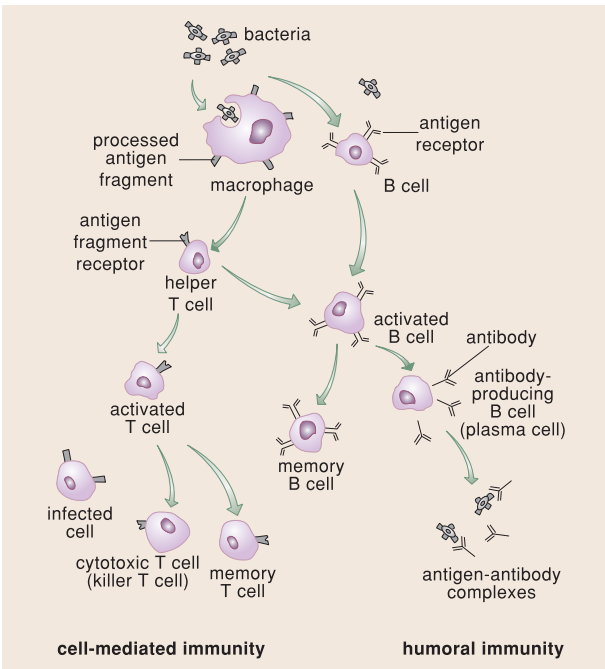
imam \i-'mäm\ Head of the Muslim community. In SUNNITE Islam the imam was identical with the CALIPH, designating the political successor of MUHAMMAD. The Sunnites held the imam to be a man capable of error but deserving obedience provided he maintained the ordinances of Islam. In SHIʿITE Islam the imam became a figure of absolute religious authority, possessed of unique insights into the Qur'ān and divinely appointed and preserved from sin. With the historical disappearance of the last imam, there arose a belief in the hidden imam, who is identified with the MAHDI. The term *imam* is also given to Muslims who lead prayers in mosques and has been used as an honorary title.

Imam Bondjol \'bōn-jəl\ (b. 1772, Kampung Tandjung Bunga, Sumatra—d. Nov. 6, 1864, Manado, Celebes) Leader in a religious war that divided the MINANGKABAU people of Sumatra. A convert to reformist Wahhābī Islam, known in Sumatra as the Padri sect, he established the fortified community of Bondjol, from which he took his name, as a centre from which to wage holy war. The secular government called on the Dutch to help, but the Dutch were preoccupied with the Java War (1825–30), and Imam Bondjol's forces expanded the area under their control. The Dutch eventually turned their attention to the Padris and defeated them; Imam Bondjol surrendered (1837), and the Minangkabau territory was added to the Dutch colonial holdings.

imamis See ITHNA ASHARIYA

Imeni Ismail Samani Peak *formerly* **Communism Peak** *or* **Stalin Peak** Peak, western PAMIRS, northeastern Tajikistan. Located in the Akademiya Nauk Range, it rises to 24,590 ft (7,495 m) and is the highest point in Tajikistan and in the range. It was first climbed by a Russian team in 1933.

IMF See INTERNATIONAL MONETARY FUND



Imhotep \im-'hō-ˌtep\ *Greek* **Imouthes** (fl. 27th century BC, Memphis, Egypt) Egyptian sage and astrologer, later worshiped as the god of medicine. In Greece he was identified with ASCLEPIUS. Imhotep was chief minister to the Egyptian king Djoser and is remembered as a skilled physician as well as the architect of the step-pyramid at SAQQARA in Memphis. Deified around the time of the Persian conquest in 525 BC, he was said to be the son of PTAH and the war goddess Sekhmet. The cult of Imhotep reached its zenith in Greco-Roman times, when sick people slept in his temples with the hope that the god would reveal remedies to them in dreams.

Immaculate Conception In ROMAN CATHOLICISM, the dogma that MARY was not tainted by ORIGINAL SIN. Early exponents included St. JUSTIN MARTYR and St. IRENAEUS; St. BONAVENTURE and St. THOMAS AQUINAS were among those who opposed it. In 1439 the Council of BASEL stated that the belief was in accordance with Catholic faith, and in 1709 Pope Clement XI made the feast of the Immaculate Conception a holy day of obligation. In 1854 PIUS IX issued a papal bull making it official church dogma. See also VIRGIN BIRTH.

immune system Cells, cell products, organs, and structures of the body involved in the detection and destruction of foreign invaders, such as bacteria, viruses, and cancer cells. IMMUNITY is based on the system's ability to launch a defense against such invaders. For the system to function properly, it must be able to distinguish between the material of its own body (self) and material that originates outside of it (nonself). Failure to make this distinction can result in AUTOIMMUNE DISEASES. An exaggerated or inappropriate response by the immune system to nonharmful substances (e.g., pollen, animal dander) can result in ALLERGIES. The system's principal cells include LYMPHOCYTES that recognize ANTIGENS and

© 2006 Encyclopædia Britannica, Inc.

related accessory cells (such as phagocytic macrophages, which engulf and destroy foreign material). Lymphocytes arise in the BONE MARROW from stem cells, with T lymphocytes (T CELLS) migrating to the THYMUS to mature and B lymphocytes (B CELLS) maturing in the bone marrow. Mature lymphocytes enter the bloodstream, and many become lodged, along with accessory cells, in various body tissues, including the SPLEEN, LYMPH NODES, TONSILS, and intestinal lining. Organs or tissues containing such concentrations are termed *lymphoid*. Within these organs and tissues the lymphocytes are confined within a delicate network of connective tissue that channels them so they come into contact with antigens. T cells and B cells can mature and multiply further in LYMPHOID TISSUE when suitably stimulated. Fluid (LYMPH) draining from lymphoid tissues is conveyed to the blood through lymphatic vessels. Lymph nodes distributed along these vessels filter the lymph, exposing macrophages and lymphocytes contained within to any antigen present. The spleen plays a similar role, sampling the blood for the presence of antigens. The capability of lymphocytes to pass between lymphoid tissue, the blood, and lymph is an important element in the system's functioning. See also IMMUNODEFICIENCY; IMMUNOLOGY.

Acquired immunity depends on the activities of T and B lymphocytes (T and B cells). One part of acquired immunity, humoral immunity, involves the production of antibodies by B cells. The other part, cell-mediated immunity, involves the actions of T cells. When an antigen (such as a bacterium) enters the body, it is attacked and engulfed by macrophages, which process and display parts of it on their cell surface. A helper T cell, recognizing the antigen displayed, initiates maturation and proliferation of other T cells. Cytotoxic (killer) T cells develop and attack foreign and infected cells. B cells stimulated by the presence of antigen are activated by helper T cells to divide and form antibody-producing cells (plasma cells). Released antibody binds to antigen, marking the cell for destruction. Helper T cells also induce the development of memory T and B cells needed to mount future immune responses on reinfection with the same pathogen.

© MERRIAM-WEBSTER INC.

immunity Ability to resist attack or overcome infection by invading microbes or larger parasites. Immunity is based on the proper functioning of the body's IMMUNE SYSTEM. In natural or innate immunity, immune mechanisms present at birth work against a wide variety of microbes whether or not they have been encountered before. Acquired immune responses, tailored to act against a specific microbe or its products, are stimulated by the prior presence of that microbe. Previous infection with a particular pathogen, as well as VACCINEs, produce this type of immunity. The mechanisms of innate immunity include physical barriers (including the skin) and chemical barriers (such as bactericidal enzymes present in saliva). Microbes that penetrate the body's natural barriers encounter substances (such as interferon) that inhibit their growth or reproduction. Phagocytes (particle-engulfing cells) surround and destroy invading microbes, and natural killer cells pierce the microbe's outer membrane. Innate immunity does not confer lasting resistance, or immunity, to the body. Acquired immunity is based on the recognition of ANTIGEN by B CELLS and T CELLS and is activated when innate mechanisms are insufficient to stem further invasion by pathogens. Killer or cytotoxic T cells destroy infected and foreign cells. Helper T cells induce B cells stimulated by the presence of antigen to proliferate into antibody-secreting cells, or plasma cells. ANTIBODIES produced by plasma cells bind to antigen-bearing cells, marking them for destruction. Acquired immunity relies on the long-term survival of sensitized T and B memory cells, which can proliferate quickly upon reinfection by the same pathogen. See also IMMUNODEFICIENCY; IMMUNOLOGY; LEUKOCYTE; RETICULOENDOTHELIAL SYSTEM.

immunity In law, exemption or freedom from liability. Under international treaty, a diplomatic representative is exempt from local laws, both civil and criminal. In many countries, judges, legislators, and government officials, including the heads of state, enjoy limited or absolute immunity at home to protect them from personal liability for wrongful acts or omissions that arise from the performance of their duties. A public prosecutor may grant immunity from prosecution to a witness who is suspected of criminal activity in return for testimony against other suspected criminals.

immunodeficiency Defect in IMMUNITY that impairs the body's ability to resist infection. The IMMUNE SYSTEM may fail to function for many reasons. Immune disorders caused by a genetic defect are usually evident early in life. Others can be acquired at any age through infections (e.g., AIDS) or IMMUNOSUPPRESSION. Aspects of the immune response that may be affected include LYMPHOCYTES, other LEUKOCYTES, ANTIBODIES, and COMPLEMENT. Severe combined immunodeficiency (SCID), which arises from several different genetic defects, disrupts all of these. Depending on the cause, treatment for immunodeficiency may be administration of immunoglobulins, bone-marrow transplant, or therapy for the underlying disease.

immunology Science dealing with the body's defenses against disease-causing microorganisms and disorders of those defenses. Starting with EDWARD JENNER's use of a VACCINE against SMALLPOX in 1796, immunology has arrived at a comprehensive and sophisticated understanding of the role of microorganisms in disease and of the formation, mobilization, action, and interaction of ANTIBODIES and antigen-reactive cells. It covers treatment of ALLERGIES, IMMUNOSUPPRESSION after organ TRANSPLANTS to prevent rejection, and study of AUTOIMMUNE DISEASES and IMMUNODEFICIENCIES. AIDS has stimulated intensive research in the last of these.

immunosuppression Suppression of IMMUNITY with drugs, usually to prevent rejection of an organ TRANSPLANT. Its aim is to allow the recipient to accept the organ permanently with no unpleasant side effects. In some cases the dosage can be reduced or even stopped without causing rejection. Other uses are in the treatment of certain AUTOIMMUNE DISEASES and for prevention of ERYTHROBLASTOSIS FETALIS. Its main drawback is the increased risk of infection for the duration of treatment and of LYMPHOMA in the case of long-term immunosuppression.

impact test Test of the ability of a material to withstand impact, used by engineers to predict its behaviour under actual conditions. Many materials fail suddenly under impact, at flaws, cracks, or notches. The most common impact tests use a swinging pendulum to strike a notched bar; heights before and after impact are used to compute the energy required to FRACTURE the bar (see STRENGTH OF MATERIALS). In the Charpy test, the test piece is held horizontally between two vertical bars, much like the lintel over a door. In the Izod test, the specimen stands erect, like a fence post. See also TESTING MACHINE.

impala \im-'pa-lə\ Swift-running, graceful ANTELOPE (*Aepyceros melampus*) found in large herds, usually near water, on the savannas and open woodlands of central and southern Africa. Impalas are noted for their jumping ability; when alarmed, they bound off in leaps up to 30 ft (9 m) long and 10 ft (3 m) high. Lightly

Herd of male impalas (*Aepyceros melampus*) in Nairobi National Park, Kenya
JAMES P. ROWAN

© 2006 Encyclopædia Britannica, Inc.

built, the impala stands 30–40 in. (75–100 cm) high at the shoulder. It has a golden to reddish brown coat, white underparts, a vertical black stripe on each thigh, and a black tuft behind each hind hoof. The male has long, lyre-shaped horns.

impatiens \im-'pā-shənz\ Any of about 900 species of herbaceous plants in the genus *Impatiens* (BALSAM family), so named because the seed-pod bursts when slightly touched. Garden balsam (*I. balsamina*), native to the tropics of Asia, is a favourite showy annual in U.S. gardens; its flowers are irregular, single or clustered, and of almost every colour but blue. Familiar related weeds in eastern North America are spotted jewelweed (*I. biflora* or *I. capensis*) and pale TOUCH-ME-NOT. Most impatiens have weak, hollow stems and require high moisture. Close relatives are GERANIUMS and NASTURTIUMS.

impeachment Criminal proceeding instituted against a public official by a legislative body. In the U.S. the president, vice president, and other federal officers, including judges, may be impeached by the U.S. House of Representatives. The House draws up articles of impeachment that itemize the charges and their factual bases. Once approved by a majority of House members, the articles are submitted to the Senate, which holds a trial. At its conclusion, each member votes for or against conviction on each article; conviction requires a two-thirds majority. A convicted official can be removed from office. The CONSTITUTION OF THE UNITED STATES specifies that an officer is to be impeached for "high crimes and misdemeanors"; experts agree that impeachment is permitted for noncriminal misconduct (e.g., violation of the Constitution). Two U.S. presidents, ANDREW JOHNSON and BILL CLINTON, were impeached; both were acquitted. In 1974, articles of impeachment were drawn up against Pres. RICHARD NIXON, who resigned before formal proceedings could begin. In Britain, where the House of COMMONS prosecutes and the House of LORDS judges impeachment proceedings, impeachment was formerly a means by which Parliament could get rid of unpopular ministers, usually court favourites protected by the monarch. The procedure fell into disuse in the early 19th century, when cabinet ministers became responsible to Parliament rather than to the sovereign.

Imperial Chemical Industries PLC (ICI) Major British chemical corporation. It was founded in 1926 as Imperial Chemical Industries Ltd. to amalgamate four major British chemical companies. Between World Wars I and II, ICI was a major competitor of IG FARBEN. Today it produces industrial chemicals, paints, and explosives; its drug, pesticide, and specialty chemical concerns were split off into a new corporation, Zeneca Group PLC, in 1993. ICI's headquarters are in London.

Imperial Conferences Periodic meetings held between 1907 and 1937 by the dominions within the British Empire and later the COMMONWEALTH. Convened to discuss mutual defense and economic issues, they passed nonbinding resolutions. However, the Statute of WESTMINSTER implemented decisions made at the 1926 and 1930 conferences that described the self-governing dominions (Canada, Australia, New Zealand, South Africa, Ireland, and Newfoundland) as "autonomous communities within the British empire." After World War II, meetings between the countries' prime ministers replaced the conferences.

Imperial Valley Valley extending from southeastern California, U.S., to Mexico. It forms part of the Colorado Desert. Intensive irrigation began in 1901 with the opening of the Imperial Canal, which diverted water from the COLORADO RIVER. Floodwaters in 1905–07 destroyed the irrigation channels and created the SALTON SEA. The valley is now watered by the HOOVER DAM and the All-American Canal. With 3,000 mi (4,800 km) of irrigation canals, it contains 500,000 acres (200,000 hectares) of cultivated land.

imperialism State policy, practice, or advocacy of extending power and dominion, especially by direct territorial acquisition or by gaining political and economic control of other areas. Because imperialism always involves the use of power, often in the form of military force, it is widely considered morally objectionable, and the term accordingly has been used by states to denounce and discredit the foreign policies of their opponents. Imperialism in ancient times is clear in the unending succession of empires in China, western Asia, and the Mediterranean. Between the 15th century and the middle of the 18th, England, France, the Netherlands, Portugal, and Spain built empires in the Americas, India, and the East Indies. Russia, Italy, Germany, the United States, and Japan became imperial powers in the period from the middle of the 19th century to World War I. The imperial designs of Japan, fascist Italy, and Nazi Germany in the 1930s culminated in the outbreak of World War II. After the war the Soviet Union consolidated its military and political control of the states of eastern Europe (see IRON CURTAIN). From the early 20th century the U.S. was accused of imperialism for intervening in the affairs of developing countries in order to protect the interests of U.S.-owned international corporations (see UNITED FRUIT CO.). Economists and political theorists have debated whether imperialism benefits the states that practice it and whether such benefits or other reasons ever justify a state in pursuing imperialist polices. Some theorists, such as NICCOLÒ MACHIAVELLI, have argued that imperialism is the justified result of the natural struggle for survival among peoples. Others have asserted that it is necessary in order to ensure national security. A third justification for imperialism, offered only infrequently after World War II, is that it is a means of liberating peoples from tyrannical rule or bringing them the blessings of a superior way of life. See also COLONIALISM; SPHERE OF INFLUENCE.

impetigo \im-pə-'tī-ˌgō, im-pə-'tē-ˌgō\ Bacterial inflammatory skin disease, the most common skin infection in children. Initial blisters rupture, drying to a crust. Caused by STAPHYLOCOCCUS or STREPTOCOCCUS, it is very contagious in newborns, becoming less so with age. Poor hygiene, crowding, and humid, hot weather may promote its spread. A broad-spectrum antibiotic applied to the blisters can treat simple impetigo; more extensive cases, especially in infants, may require a systemic antibiotic.

Imphal \'imp-ˌhəl\ City (pop., 2001 prelim.: 217,275), capital of MANIPUR state, northeastern India. Located east-northeast of KOLKATA (Calcutta), it lies in the Manipur River valley at an elevation of 2,500 feet (760 meters). It was the seat of the kings of Manipur before the region came under British rule. In 1944 it was the site of a victory for the Anglo-Indian forces over the Japanese on the Burmese front. Imphal is a major trade centre, noted for its weaving, brass ware, and bronze ware.

implication In LOGIC, a relation that holds between two propositions when they are linked as antecedent and consequent of a true conditional proposition. Logicians distinguish two main types of implication, material and strict. Proposition p materially implies proposition q if and only if the material conditional $p \supset q$ (read "if p then q") is true. A proposition of the form $p \supset q$ is false whenever p is true and q is false; it is true in the other three possible cases (i.e., p true and q true; p false and q true; p false and q false). It follows that whenever p is false, $p \supset q$ is automatically true: this is a peculiarity that makes the material conditional inadequate as an interpretation of the meaning of conditional sentences in ordinary English. On the other hand, proposition p strictly implies proposition q if and only if it is *impossible* for p to be true without q also being true (i.e., if the conjunction of p and not-q is impossible).

impotence \'im-pə-təns\ Inability to achieve or maintain erection of the PENIS; hence, inability to participate fully in SEXUAL INTERCOURSE. Erectile impotence (failure to achieve erection) may have either physical causes (e.g., alcoholism, endocrine disease) or psychological ones (e.g., anxiety, hostility toward the partner). Ejaculatory impotence (inability to reach orgasm, sometimes with an erection maintained for a long time) nearly always has an emotional cause. See also VIAGRA.

Impressionism Movement in art that developed in France in the late 19th century. In painting it included works produced c. 1867–86 by a group of artists who shared approaches, techniques, and discontent with academic teaching, originally including CLAUDE MONET, PIERRE-AUGUSTE RENOIR, CAMILLE PISSARRO, ALFRED SISLEY, and BERTHE MORISOT. Later ÉDOUARD MANET, whose earlier style had strongly influenced several of them, MARY CASSATT, EDGAR DEGAS, PAUL CÉZANNE and others joined them. The identifying feature of their work was an attempt to record a scene accurately and objectively, capturing the transient effects of light on colour and texture. To this end they abandoned the traditional muted browns, grays, and greens in favour of a lighter, more brilliant palette; stopped using grays and blacks for shadows; built up forms out of discrete flecks and dabs of colour; and often painted out of doors, rather than in the studio. They abandoned traditional formal compositions in favour of a more casual and less contrived disposition of objects within the picture frame, and their subject matter included landscapes, trees, houses, and even urban street scenes and railroad stations. After the French Academy's SALON consistently rejected most of their works, they held their own exhibition in 1874; seven others followed. A critic described them derisively as "impressionists," and they adopted the name as an accurate description of their intent. Before dissolving in the late 1880s, the group had revolutionized Western painting. See also POST-IMPRESSIONISM; SALON DES INDÉPENDANTS.

Impressionism In music, a style initiated by French composer CLAUDE DEBUSSY at the end of the 19th century. The term, which is somewhat vague in reference to music, was introduced by analogy with contemporaneous

© 2006 Encyclopædia Britannica, Inc.

French painting; it was disliked by Debussy himself. Elements often termed *impressionistic* include static harmony, emphasis on instrumental timbres that creates a shimmering interplay of "colours," melodies that lack directed motion, surface ornamentation that obscures or substitutes for melody, and an avoidance of traditional musical form. Impressionism can be seen as a reaction against the rhetoric of ROMANTICISM, disrupting the forward motion of standard harmonic progressions. The other composer most often associated with Impressionism is MAURICE RAVEL. Impressionistic passages are common in earlier music by FRÉDÉRIC CHOPIN, FRANZ LISZT, and RICHARD WAGNER, and in music by later composers such as CHARLES IVES, BÉLA BARTÓK, and GEORGE GERSHWIN.

impressment Enforcement of military or naval service on unwilling men. Until the early 19th century, it flourished in port towns everywhere, as "recruiters" searched through waterfront boardinghouses, brothels, and taverns. They often chose vagabonds or prisoners. Impressed men were forced into service through violence or coercion and were held to their duty by brutal discipline. In the early 19th century, ROYAL NAVY ships halting U.S. vessels to search for British deserters frequently impressed naturalized U.S. citizens, one cause of the WAR OF 1812. Impressment declined in the 19th century as states adopted more systematic recruiting methods. See also CONSCRIPTION.

imprinting Form of learning wherein a very young animal fixes its attention on the first object with which it has visual, auditory, or tactile experience and thereafter follows that object. In nature, the object is almost always a parent; in experiments, other animals and inanimate objects have been used. Imprinting has been studied extensively only in birds, but a comparable form of learning apparently takes place among many mammals and some fishes and insects. Ducklings and chicks, which can imprint in a few hours, lose receptivity to imprinting stimuli within 30 hours of hatching.

improvisation Creation of music in real time. Improvisation usually involves some preparation beforehand, particularly when there is more than one performer. Despite the central place of notated music in the Western tradition, improvisation has often played a role, from the earliest ORGANUM through the use of CONTINUO (partially improvised accompaniment played on a bass line) in the 17th and 18th centuries. It has taken forms such as creation of a melody over a bass line for dancing, elaborate ORNAMENTATION added to a repeated section in an aria, keyboard variations on popular songs, concerto cadenzas, and free solo FANTASIAS. Perhaps at its lowest ebb in the 19th century, improvisation returned to concert music in "experimental" compositions and in "authentic" performances of older music. Its most important contemporary Western form is JAZZ. It is also a defining feature of the RAGA.

in vitro fertilization (IVF) \in-'vē-trō\ *or* **test-tube conception** Procedure, used to overcome INFERTILITY, in which EGGS are removed from a woman, fertilized with SPERM outside the body, and inserted into the UTERUS of the same or another woman. The first child thus conceived was born in 1978. IVF includes extraction of eggs, collection of sperm, fertilization in culture, and introduction into the uterus at the eight-cell stage. In a successful procedure, the embryo is implanted in the uterine wall, and pregnancy begins. The most common problem is failed implantation. IVF has been a source of moral, ethical, and religious controversy since its development.

Inari \ē-'nä-rē\ In Japanese mythology, the patron god of rice cultivation and prosperity. He was worshiped especially by merchants and tradesmen, and he also served as patron deity of swordsmiths, brothels, and entertainers. Inari was variously depicted as a bearded old man riding a fox or as a woman with long hair, carrying sheaves of rice. The fox is sometimes identified as his messenger. The god's most popular shrine is the Fushimi Inari Shrine near Kyōto.

COURTESY OF THE MUSEE GUIMET, PARIS

inbreeding Mating of closely related individuals. The opposite is outbreeding, the mating of unrelated organisms. Inbreeding is useful in keeping desirable characteristics or eliminating undesirable ones, but it often results in decreased vigour, size, and fertility of the offspring because of the combined effect of harmful GENES that were recessive in both parents (see RECESSIVENESS). The closest type of inbreeding is SELF-FERTILIZATION. In linebreeding, mates are selected on the basis of their relationships to a certain superior ancestor. The backcross (crossing a first-generation hybrid with one of the parental types) is a common method of inbreeding.

Inca Group of South American Indians who ruled an empire that extended along the Pacific coast and ANDES MOUNTAINS from what is now northern Ecuador to central Chile. According to tradition (the Inca left no written records), the founder of the Incan dynasty led the tribe to Cuzco, which became their capital. Under the fourth emperor, they began to expand, and under the eighth they began a program of permanent conquest by establishing garrisons among the conquered peoples. Under Topa Inca Yupanqui and his successor, the empire reached its southernmost and northernmost extent. By the early 16th century the Inca controlled an empire of some 12 million subjects. They constructed a vast network of roads, their architecture was highly developed, and the remains of their irrigation systems, palaces, temples, and fortifications are still in evidence throughout the Andes. Incan society was highly stratified and featured an aristocratic bureaucracy. Their pantheon, worshiped in a highly organized state religion, included a sun god, a creator god, and a rain god. The Incan empire was overthrown in 1532 by the Spanish CONQUISTADORES, who made great use of the Incan road system during their conquests. The Inca's descendants are the Quechua-speaking peasants of the Andes (see QUECHUA). In Peru nearly half the population is of Incan descent. They are primarily farmers and herders living in close-knit communities. Their Roman Catholicism is infused with belief in pagan spirits and divinities. See also ANDEAN CIVILIZATION; ATAHUALLPA; AYMARA; CHIMÚ; FRANCISCO PIZARRO.

incandescent lamp Any of various devices that produce light by heating a suitable material to a high temperature. In an electric incandescent lamp, or lightbulb, a filament is enclosed in a glass shell that is either evacuated or filled with an inert gas. The filament gives off light when heated by an electric current. The first practical electric incandescent lamps were independently produced in the late 1870s by JOSEPH SWAN and THOMAS ALVA EDISON. Edison has received the major credit because of his development of the power lines and other equipment needed for a lighting system. Inefficient in comparison with FLUORESCENT LAMPS and ELECTRIC DISCHARGE LAMPS, incandescent lighting is today reserved mainly for domestic use. See also HALOGEN LAMP.

Incarnation Central Christian doctrine that God became man in the form of JESUS, the son of God and the second person of the Holy TRINITY. In Jesus the divine and human nature are joined but neither is changed or diminished. This difficult doctrine gave rise to a variety of HERESIES, some denying Jesus's divine nature, others his human nature. For orthodox believers the conflict was settled at the Councils of NICAEA (AD 325) and CHALCEDON (AD 451).

incense Grains of RESINS (sometimes mixed with spices) that burn with a fragrant odor, widely used as religious offerings. Historically, the chief substances used as incense have been resins such as FRANKINCENSE and myrrh, along with fragrant wood and bark, seeds, roots, and flowers.

incest Sexual relations between persons who, because of the nature of their KINSHIP ties, are prohibited by law or custom from intermarrying. The incest taboo is generally universal, although it is imposed differently in different societies. Usually, the closer the genetic relationship between two people, the stronger and more highly charged is the TABOO prohibiting or discouraging sexual relations. Some sociobiologists consider that inbred populations have diminished reproductive success and become gene pools for hereditary disorders. Some cultural anthropologists argue instead that the incest prohibition, with the corresponding rules of EXOGAMY, acts to require males to seek sexual and marital partners outside the group, thereby establishing useful alliances. Other theories emphasize the need to control sexual jealousies within the family or to prepare children to function with restraint in adult society. No single explanation seems satisfactory, causing some to question whether incest should be treated as a unitary subject. Most cases of incest that come before criminal courts concern sexual intercourse between fathers and relatively young daughters (see CHILD ABUSE).

© 2006 Encyclopædia Britannica, Inc.

inch Unit of measure equal to 1/36 YARD and since 1959 defined officially as 2.54 cm (see METRE). DAVID I of Scotland (c. 1150) defined the inch as the breadth of a man's thumb at the base of the nail; usually the thumb breadths of three men—one small, one medium, and one large—were added and then divided by three. During the reign of England's EDWARD II, the inch was defined as "three grains of barley, dry and round, placed end to end lengthwise." At various times it has also been defined as the combined lengths of 12 poppy seeds. See also FOOT; INTERNATIONAL SYSTEM OF UNITS; MEASUREMENT; METRIC SYSTEM.

In'chŏn \'in-ˌchän\ *or* **Incheon** *formerly* **Jinsen** \'jin-ˌsen\ *or* **Chemulpo** \jə-'mùl-pō\ Seaport city (pop., 2002 est.: 2,596,102), South Korea, near SEOUL. A fishing port since the 14th century, it was a Korean treaty port in 1883 and developed as an international commercial port before the Japanese occupation (1910–45). During the KOREAN WAR it was the site of a successful UN troop landing in 1950. It now has metropolitan city (provincial) status. Its industries produce iron and steel, glass, chemicals, and lumber.

inchworm See LOOPER

incidental music Music composed to accompany a play. The practice dates back to ritualistic Greek drama, and it is thus connected to the use of music in other kinds of ritual. Sometimes limited to the role of introduction or interlude (setting a mood or a historical period, for example), it may also accompany spoken dialogue (see MELODRAMA). Film and television music is sometimes considered incidental music.

Inclán, Ramón María del Valle- See Ramón María del VALLE-INCLÁN

income statement In accounting, the activity-oriented financial statement issued by businesses. Covering a specified time, such as three months or one year, the income statement is a summary of revenues and expenses. It also lists gains and losses from other transactions, such as the sale of assets or the repayment of debt. Standard accounting rules govern the procedures for recording each item.

income tax Levy imposed by public authority on the incomes of persons or corporations within its jurisdiction. In nations with an advanced system of private enterprise, income taxes represent the chief source of government revenue. Income tax levied on individuals or family units is known as personal income tax. In 1799 Britain enacted a general income tax to finance the Napoleonic Wars. In the U.S. an income tax was first tried during the Civil War; the Supreme Court held it to be constitutional in 1881 but declared another income tax unconstitutional in 1894. In 1913 the 16th Amendment to the Constitution made the personal income tax permanent. The fairness of personal income taxation is based on the premise that one's income is the best single index of one's ability to contribute to the support of the government; most personal income taxes are conceived on the theory that when people's financial circumstances differ, their tax liabilities should also differ. Thus U.S. income taxes are PROGRESSIVE TAXes, falling more heavily on those who earn more money, and individual income tax deductions are allowed for items such as interest paid on home MORTGAGE debt, unusual medical expenses, philanthropic contributions, and state and local income and property taxes. Enforcement has been facilitated by withholding the tax from wages and salaries. See also CAPITAL GAINS TAX; CAPITAL LEVY; CORPORATE INCOME TAX; REGRESSIVE TAX; SALES TAX; VALUE-ADDED TAX.

incomes policy Collective governmental effort to control the incomes of LABOUR and CAPITAL, usually by limiting increases in wages and PRICES. The term often refers to policies directed at the control of INFLATION, but it may also indicate efforts to alter the distribution of income among workers, industries, locations, or occupational groups. See also WAGE-PRICE CONTROL.

incontinence Inability to control EXCRETION. Starting and stopping URINATION relies on normal function in pelvic and abdominal muscles, diaphragm, and control nerves. Babies' nervous systems are too immature for urinary control. Later incontinence may reflect disorders (e.g., NEURAL TUBE DEFECT causing "neurogenic bladder"), paralysis of URINARY SYSTEM muscles, long-term bladder distension, or certain urogenital malformations. Weak pelvic muscles can allow small urine losses on coughing or sneezing ("stress incontinence"). Uncontrolled DEFECATION can result from spinal or bodily injuries, old age, extreme fear, or severe DIARRHEA. See also ENURESIS.

incubus and succubus Demons (male and female, respectively) who seek to have sexual intercourse with sleeping humans. In medieval Europe some believed that union with an incubus resulted in the birth of witches, demons, and deformed human offspring. MERLIN was said to have been fathered by an incubus.

incunabulum \ˌin-kyə-'nab-yə-ləm\ Book printed before 1501. The date, though convenient, is arbitrary and unconnected to any development in the printing art. The term was probably first applied to early printing in general c. 1650. The total number of editions produced by 15th-century European presses is generally estimated at above 35,000, excluding ephemeral literature (e.g., single sheets, ballads, and devotional tracts) that is now lost or exists only in fragments in places such as binding linings.

Indépendants, Salon des See SALON DES INDÉPENDANTS

Independence City (pop., 2000: 113,288), western Missouri, U.S. Settled in 1827, it served as the starting point for the SANTA FE TRAIL and the OREGON TRAIL and was a rendezvous for wagon trains during the California GOLD RUSH. Home of a MORMON colony (1831–33), it is now the world headquarters of the Community of Christ (formerly Reorganized Church of Jesus Christ of Latter Day Saints). It was occupied by Union troops during the AMERICAN CIVIL WAR and was the scene of two skirmishes with Confederates. The hometown of Pres. HARRY TRUMAN, it is the site of the Harry S. Truman Library and Museum.

Independence, Declaration of See DECLARATION OF INDEPENDENCE

Independence Day *or* **Fourth of July** Anniversary of the adoption of the U.S. DECLARATION OF INDEPENDENCE by the Second CONTINENTAL CONGRESS (July 4, 1776). It is the greatest secular holiday in the country. Celebrating the day became common only after the War of 1812. Thereafter, civic-minded groups worked to link the ideals of democracy and citizenship to the patriotic spirit of the day.

independent counsel *formerly* **special prosecutor** Official appointed by the court at the request of the U.S. attorney general to investigate and prosecute criminal violations by high government officials, members of Congress, or directors of a presidential election campaign after an investigation by the attorney general finds evidence that a crime may have been committed. The counsel is intended to ensure an impartial investigation in situations in which the attorney general would face a conflict of interest. The law establishing the office was passed after the firing of Archibald Cox by Pres. RICHARD NIXON during the WATERGATE SCANDAL. Independent counsels played a prominent role in the IRAN-CONTRA AFFAIR in the 1980s. In 1999, in the wake of controversy over perceived abuses of the office during the Whitewater investigation of Pres. BILL CLINTON, Congress declined to renew the independent counsel law.

Index librorum prohibitorum \'in-deks-lī-'brō-rəm-prō-ˌhi-bə-'tō-rəm\ *Latin* **Index of Forbidden Books** List of books considered dangerous to the faith or morals of Catholics. Compiled by official Roman Catholic censors, the *Index* was never a complete catalog of forbidden reading; it contained only works that the ecclesiastical authority was asked to act on. Though the church's concern over books is much older, the first catalog of banned books to be called an index was published in 1559. Publication of the list ceased in 1966, and it was relegated to the status of a historic document.

indexation Comparison of PRICE levels over time. In FISCAL POLICY, indexation is used as a means of offsetting the effect of INFLATION or DEFLATION on SOCIAL SECURITY payments and taxes by measuring the real value of money from a fixed point of reference, usually a PRICE INDEX. Without indexing, recipients of social security benefits, for example, would suffer during times of inflation if their benefits remained at a fixed rate. Indexation is used in some countries to offset "bracket creep," which occurs in any PROGRESSIVE TAX system when inflation pushes taxpayers into higher tax brackets. Indexation may also refer to the linking of wage rates and financial instruments to a price index.

India *officially* **Republic of India** Country, South Asia. It fronts the Bay of BENGAL on the southeast and the ARABIAN SEA on the southwest. Area: 1,222,559 sq mi (3,166,414 sq km). Population (2005 est.): 1,103,371,000. Capital: NEW DELHI. The peoples of India comprise widely

© 2006 Encyclopædia Britannica, Inc.

varying mixtures of ethnic strains drawn from peoples settled in the subcontinent before the dawn of history or from invaders. Languages: Hindi, English (both official), and other Indo-European languages, including Bengali, Kashmiri, Marathi, and Urdu; Dravidian languages; hundreds from several other language families. Religions: Hinduism; also Islam, Christianity, Sikhism, Buddhism, Jainism. Currency: rupee. India has three major geographic regions: the Himalayas, along its northern border; the Indo-Gangetic Plain, formed by the alluvial deposits of three great river systems, including the Ganges (Ganga); and the southern region, noted for the Deccan plateau. Agricultural products include rice, wheat, cotton, sugarcane, coconut, spices, jute, tobacco, tea, coffee, and rubber. The manufacturing sector is highly diversified and includes both heavy and high-technology industries. India is a republic with two legislative houses; its chief of state is the president, and the head of government is the prime minister. India has been inhabited for thousands of years. Agriculture in India dates to the 7th millennium BC, and an urban civilization, that of the Indus valley, was established by 2600 BC. Buddhism and Jainism arose in the 6th century BC in reaction to the caste-based society created by the Vedic religion and its successor, Hinduism. Muslim invasions began c. AD 1000, establishing the long-lived Delhi sultanate in 1206 and the Mughal dynasty in 1526. Vasco da Gama's voyage to India in 1498 initiated several centuries of commercial rivalry between the Portuguese, Dutch, English, and French. British conquests in the 18th and 19th centuries led to the rule of the British East India Co., and direct administration by the British Empire began in 1858. After Mohandas K. Gandhi helped end British rule in 1947, Jawaharlal Nehru became India's first prime minister, and Nehru, his daughter Indira Gandhi, and his grandson Rajiv Gandhi guided the nation's destiny for all but a few years until 1991. The subcontinent was partitioned into two countries—India, with a Hindu majority, and Pakistan, with a Muslim majority—in 1947. A later clash with Pakistan resulted in the creation of Bangladesh in 1971. In the 1980s and '90s, Sikhs sought to establish an independent state in Punjab, and ethnic and religious conflicts took place in other parts of the country as well. The Kashmir region in the northwest has been a source of constant tension.

India rubber plant See rubber plant

Indian buffalo See water buffalo

Indian law Legal practices and institutions of India. Indian law draws on a number of sources, beginning with the customs of the ancient Vedas and later accretions of Hindu law, which largely concern social matters such as marriage and succession. After the Arab invasions of the 8th century, Islamic law (see Sharīʿah) was introduced in some areas, particularly in the north. English common law became the residual law in jurisdictions under British colonial control, while the Portuguese and French used their own laws in their colonies. Since independence (1947), India has aimed at developing a unified civil code and updating its criminal code.

Indian licorice See rosary pea

Indian Mutiny *or* **Sepoy Mutiny** (1857–58) Widespread rebellion against British rule in India begun by Indian troops (sepoys) in the service of the English East India Company. The mutiny began when sepoys refused to use new rifle cartridges (which were thought to be lubricated with grease containing a mixture of pigs' and cows' lard and thus religiously impure). They were shackled and imprisoned, but their outraged comrades shot their British officers and marched on Delhi. The ensuing fighting was ferocious on both sides and ended in defeat for the mutineers. Its immediate result was that the East India Company was abolished in favour of direct rule of India by the British government; in addition, the British government began a policy of consultation with Indians. British-imposed social measures that had antagonized Hindu society (e.g., a proposed bill that would remove legal obstacles to the remarriage of Hindu women) were also halted.

Indian National Congress *or* **Congress Party** Broadly based political party of India, founded in 1885. The Congress Party was a moderate reform party until 1917, when it was taken over by its "extremist" Home Rule wing (see Bal Gangadhar Tilak). In the 1920s and '30s, under Mohandas K. Gandhi, it promoted noncooperation to protest the feebleness of the constitutional reforms of 1919. During World War II, the party announced that India would not support the war until granted complete independence. In 1947 an Indian independence bill became law, and in 1950 the constitution took effect. Jawaharlal Nehru dominated the party from 1951 to 1964. The Indian National Congress formed most of India's governments from 1947 to 1996, but at the end of the 20th century, its support plummeted. After several years out of power, it returned to government in 2004.

Indian Ocean Body of salt water stretching between Africa in the west, Australia in the east, Asia in the north, and Antarctica in the south. With an area of 28,360,000 sq mi (73,440,000 sq km), it covers approximately

© 2006 Encyclopædia Britannica, Inc.

one-seventh of the Earth's surface, and it is the smallest of the world's three major oceans (see ATLANTIC OCEAN; PACIFIC OCEAN). Its greatest depth (24,442 ft [7,450 m]) is in the Java Trench. Its chief marginal seas include the RED SEA, ARABIAN SEA, PERSIAN GULF, ANDAMAN SEA, Bay of BENGAL, and the GREAT AUSTRALIAN BIGHT. Its major islands and island groups include MADAGASCAR, SRI LANKA, and the Mascarenes.

Indian paintbrush *or* **paintbrush** Any plant of the genus *Castilleja* (SNAPDRAGON FAMILY), which contains about 200 species of partially or wholly parasitic wildflowers that obtain nourishment from the roots of other plants. The small, tubular, two-lipped flowers are surrounded by brightly coloured upper leaves, giving the plant the appearance of having been dipped in a pot of red, orange, yellow, pink, or white paint.

Indian philosophy Any of the numerous philosophical systems developed on the Indian subcontinent, including both orthodox (*astika*) systems, namely, the NYAYA, VAISHESHIKA, SAMKHYA, YOGA, MIMAMSA, and VEDANTA schools of philosophy, and unorthodox (*nastika*) systems, such as BUDDHISM and JAINISM. The history of Indian philosophy may be divided into three periods: the prelogical (to the beginning of the Christian era), the logical (1st–11th century), and the ultralogical (11th–18th century). What Dasgupta calls the prelogical stage covers the pre-Mauryan and the Mauryan periods (c. 321–185 BC) in Indian history. The logical period begins roughly with the Kusanas (1st–2nd century AD) and was developed most fully in the Gupta era (3rd–5th century) and in the age of imperial Kanauj (7th century). In the 19th century, newly founded universities introduced Indian intellectuals to Western thought, particularly British EMPIRICISM and UTILITARIANISM. Indian philosophy in the early 20th century was influenced by German IDEALISM. Later Indian philosophers made significant contributions to ANALYTIC PHILOSOPHY.

Indian pipe Nongreen herbaceous plant (*Monotropa uniflora*) that is saprophytic (living on the remains of dead plants). Clusters grow in moist, shady, wooded areas of North America and Asia. The entire plant is white or grayish, occasionally pink, and turns black as it dries out. A single odourless, cup-shaped flower droops from the tip of a stalk 6–10 in. (15–25 cm) tall. The leaves, which lack CHLOROPHYLL and do not perform PHOTOSYNTHESIS, are small scales. The name reflects the resemblance of this plant to a miniature Indian peace pipe with its stem stuck in the ground.

Indian Removal Act (May 28, 1830) First major legislation that reversed the U.S. policy of respecting the rights of American Indians. The act granted tribes unsettled western prairie land in exchange for their territories within state borders, mainly in the Southeast. Some tribes refused to trade their land, and U.S. troops forced tribes such as the CHEROKEE to march westward in what became known as the TRAIL OF TEARS (1838–39). In Florida the SEMINOLES fought resettlement in the SEMINOLE WARS (1835–42).

Indian Reorganization Act (June 18, 1934) Measure enacted by the U.S. Congress to decrease federal control of American Indians and to increase tribal self-government. The act sought to strengthen tribal structure by encouraging written constitutions and to undo the damage caused by the DAWES GENERAL ALLOTMENT ACT by returning surplus lands to the tribes rather than homesteaders. It gave Indians the power to manage their internal affairs and established a revolving credit fund for tribal land purchases and educational assistance. It remains the basic legislation concerning Indian affairs.

Indian Territory Former territory, U.S. West, including most of modern Oklahoma. The CHOCTAW, CREEK, SEMINOLE, CHEROKEE, and CHICKASAW tribes were forcibly moved to this area between 1830 and 1843, and an 1834 act set aside the land as Indian country. In 1866 its western half was ceded to the U.S.; this portion was opened to white settlers in 1889 and became the Territory of Oklahoma in 1890. The two territories were united and admitted to the Union as the state of Oklahoma in 1907.

Indiana State (pop., 2000: 6,080,485), midwestern U.S. Bordered by Michigan, Ohio, Kentucky, and Illinois, it covers 36,420 sq mi (94,328 sq km). Its capital is INDIANAPOLIS. The WABASH RIVER and the OHIO RIVER define its southwestern and southern borders, respectively; Lake Michigan lies to the northwest. Indiana was originally inhabited by Indians speaking ALGONQUIAN LANGUAGES, including the MIAMI, Potawatomi, and DELAWARE peoples. The French explorer LA SALLE explored the region in 1679 and claimed it for France. It passed to Britain in 1763 and then to the U.S. in 1783, and it became a territory in 1800. In 1811 U.S. forces won a final victory over the Indians at the Battle of TIPPECANOE. After it was admitted to the Union as the 19th state in 1816, its population began to grow. From 1850 its agriculture expanded, as did industrialization after the AMERICAN CIVIL WAR. For much of the 20th century, steelmaking (see GARY) was important economically.

Indiana, Robert *orig.* **Robert Clark** (b. Sept. 13, 1928, New Castle, Ind., U.S.) U.S. painter, sculptor, and graphic artist. After studies at the Art Institute of Chicago, he settled in New York City and became a leading exponent of POP ART. He achieved wide recognition for paintings and prints featuring geometric shapes emblazoned with lettering and vivid colours. In 1964 he collaborated with ANDY WARHOL on the film *Eat* and was commissioned to produce an *EAT* sign for the New York pavilion at the New York World's Fair. His most famous image, *LOVE*, first lettered on canvas in 1965, became a universal symbol for the hippie generation.

Indiana Dunes State park and national lakeshore, southern shore of Lake MICHIGAN, northern Indiana, U.S. The state park (founded 1925) comprises 2,182 acres (883 hectares) of shoreline, marshland, dunes, and forests. At the Big Blowout in the eastern end of the park, lake winds drift sands over a wooded area, creating a "graveyard of trees"; the dunes may reach heights of 200 ft (60 m). The national lakeshore (founded 1966) encloses the state park on three sides. Now covering more than 12,857 acres (5,205 hectares), it includes beaches and wooded ravines.

Indianapolis City (pop., 2000: 791,926) and capital of Indiana, U.S. Located on the White River near the centre of the state, it was founded in 1821 and made the state capital in 1825. It is a hub of road, rail, and air transportation. It is a leading grain market and an industrial centre, with manufactures including pharmaceuticals, machinery, and transportation and electrical equipment. The annual INDIANAPOLIS 500 automobile race is an international event; the Speedway Hall of Fame Museum is located there. Indianapolis is the site of several colleges and universities.

Indianapolis 500 U.S. automobile race. It has been held annually since 1911 at the Indianapolis Motor Speedway, a 2.5-mi (4-km) asphalt oval with banked quarter-mile turns. The "Indy 500" is a 500-mi (805-km) race for top international competitors using specially designed Formula One cars (open-wheel, open-cockpit, rear-engine vehicles). Traditionally held on or near Memorial Day, the race is one of the most prestigious on the international racing circuit, drawing large crowds (about 300,000) and offering substantial prizes (more than $1.5 million).

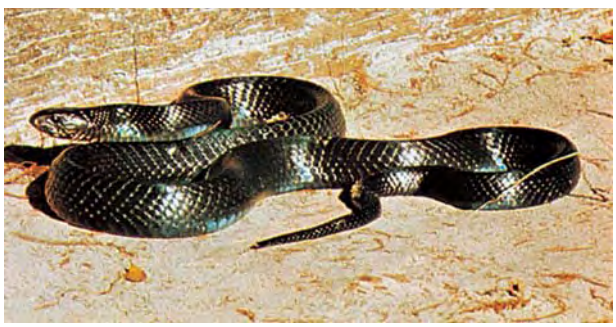
Indic writing systems Set of several dozen scripts used now or in the past to write many South and Southeast Asian languages. Aside from the Kharoshthi (Kharosthi) script, used c. 4th century BC–3rd century AD, all extant writing of the region descends from the Brahmi script, first attested in the Middle Indo-Aryan rock inscriptions of ASHOKA (3rd century BC). In the first six centuries after Ashoka, Brahmi appears to have diversified into northern and southern variants. The northern types gave rise to the so-called Gupta scripts (4th–5th centuries), which are ultimately the progenitors of the Devanagari script (now used to write SANSKRIT, HINDI, Marathi, and Nepali), the BENGALI and Oriya scripts, and Gurmukhi, the script of the SIKH scriptures, used also for modern Punjabi in India. The southern types gave rise to the Sinhalese, TELUGU, and Kannada scripts on the one hand, and to the Pallava script on the other. The latter formed the basis of numerous other scripts, including those of the TAMIL and MALAYALAM languages, a host of Southeast Asian scripts (e.g., those used to write Mon, Burmese, KHMER, Thai, and Lao), and a number of AUSTRONESIAN LANGUAGES.

indicator, economic See ECONOMIC INDICATOR

indictment In criminal law, a formal written accusation of a crime affirmed by a GRAND JURY and handed up to the court for trial of the accused. In the U.S., the indictment is one of three principal methods of charging offenses, the others being the information (a written accusation resembling an indictment, prepared and presented to the court by a prosecuting official) and, for petty offenses, a complaint by the aggrieved party or by a police officer. An indictment may contain several counts.

Indies, Laws of the Entire body of law promulgated by the Spanish crown in the 16th–18th centuries for the governance of its colonies. It consists of a compendium of decrees on church government and education, upper and lower courts, political and military administration, Indians, finance, navigation, and commerce. A summary promulgated in 1681 contained 6,377 laws; though criticized for its inconsistencies, for excessive attention to unenforceable details, and for depriving colonists of a responsible role in government, it was the most comprehensive law code

© 2006 Encyclopædia Britannica, Inc.



ever instituted for a colonial empire, and it set forth humane (if often ignored) principles for treatment of Indians.

Indigenismo \ēn-ˌdē-hā-ˈnēs-mō\ Latin American movement pressing for a dominant social and political role for Indians in countries where they constitute a majority. Its adherents draw a sharp distinction between Indians and people of European ancestry, who have dominated the Indian majorities since the 16th-century Spanish and Portuguese conquest. The movement became influential in Mexico with the revolution of 1910–20; it was particularly strong during the presidency of Lázaro Cárdenas (1934–40), who made serious efforts to reconstitute the country in accordance with its Indian heritage. In Peru it is associated with the APRA movement.

indigo \ˈin-di-ˌgō\ Blue vat dye, obtained until about 1900 entirely from some species of the indigo plant. Extraction of the dye was important to the economy of colonial America and remained so in India until the early 20th century. Synthetic indigo has replaced the natural dye; it is reduced chemically to the soluble yellow compound leucoindigo, in which form it is applied to textile fibres and reoxidized to indigo (see oxidation-reduction).

indigo plant Any shrub or herb in the genus *Indigofera* of the pea family (see legume). Most occur in warm climates and are silky or hairy. The leaves are usually divided into smaller leaflets. Small rose, purple, or white flowers are borne in spikes or clusters. The fruit is a pod. Some species, particularly *I. sumatrana* and *I. arrecta*, were once an important source of indigo dye, a deep navy blue.

indigo snake Nonvenomous snake (*Drymarchon corais*, family Colubridae) found from the southeastern U.S. to Brazil. The largest snake in the U.S., it has a record length of 9.2 ft (2.8 m). In the U.S. it is blue-black; southward it may have brown forepart, and in the tropics it is often called brown snake. It kills small vertebrates, including venomous snakes, by crushing with its jaws and the weight of its coils, but is not a constrictor. In defense it hisses and vibrates its tail but rarely strikes. It may share a burrow with a gopher tortoise, for which it is often called gopher snake. It has been listed as an endangered species since the 1970s.

Indigo snake (*Drymarchon corais*)
LEONARD LEE RUE III

indiscernibles, identity of See identity of indiscernibles

indium Metallic chemical element, chemical symbol In, atomic number 49. Of a brilliant, silvery-white lustre, it is so soft that it can be scratched with a fingernail. Its most common isotope, indium-115, is very weakly radioactive, with a half-life measured in billions of years. Like tin, the pure metal emits a high-pitched "cry" when bent, and, like gallium, molten indium wets glass and other surfaces, which makes it valuable for producing seals between glass, metals, quartz, ceramics, and marble. The metal is used in coating high-performance engine bearings and is an ingredient in low-melting-point alloys for sprinkler heads, fire-door links, and fusible plugs. In various combinations with elements such as gallium, phosphorus, and arsenic, it forms compounds having semiconductor properties useful in electronics, including solid-state light-emitting devices. Transparent electrodes made from an oxide of indium and tin are widely employed in liquid crystal displays.

individualism Political and social philosophy that emphasizes individual freedom. Modern individualism emerged in Britain with the ideas of Adam Smith and Jeremy Bentham, and the concept was described by Alexis de Tocqueville as fundamental to the American temper. Individualism encompasses a value system, a theory of human nature, and a belief in certain political, economic, social, and religious arrangements. According to the individualist, all values are human-centred, the individual is of supreme importance, and all individuals are morally equal. Individualism places great value on self-reliance, on privacy, and on mutual respect. Negatively, it embraces opposition to authority and to all manner of controls over the individual, especially when exercised by the state. As a theory of human nature, individualism holds that the interests of the normal adult are best served by allowing him maximum freedom and responsibility for choosing his objectives and the means for obtaining them. The institutional embodiment of individualism follows from these principles. All individualists believe that government should keep its interference in the lives of individuals at a minimum, confining itself largely to maintaining law and order, preventing individuals from interfering with others, and enforcing agreements (contracts) voluntarily arrived at. Individualism also implies a property system according to which each person or family enjoys the maximum of opportunity to acquire property and to manage and dispose of it as he or they see fit. Although economic individualism and political individualism in the form of democracy advanced together for a while, in the course of the 19th century they eventually proved incompatible, as newly enfranchised voters came to demand governmental intervention in the economic process. Individualistic ideas lost ground in the later 19th and early 20th century with the rise of large-scale social organization and the emergence of political theories opposed to individualism, particularly communism and fascism. They reemerged in the latter half of the 20th century with the defeat of fascism, the fall of communism in the Soviet Union and eastern Europe, and the worldwide spread of representative democracy. See also libertarianism.

individuation Determination that an individual identified in one way is numerically identical with or distinct from an individual identified in another way (e.g., Venus, known as "the morning star" in the morning and "the evening star" in the evening). Since the concept of an individual seems to require that it be recognizable as such in several possible situations, the problem of individuation is of great importance in ontology and logic. The problem of identifying an individual existing at two different times (transtemporal identity) is one of many forms that the problem of individuation can take: What makes that caterpillar identical with this butterfly? What makes the person you are now identical with the person you were a decade ago? In modal logic, the problem of transworld individuation (or transworld identity) is of importance because the standard model of theoretic semantics for systems of modal logic assumes that it makes sense to speak of the same individual existing in more than one possible world.

Indo-Aryan languages *or* **Indic languages** Major subgroup of the Indo-Iranian branch of the Indo-European language family. Indo-Aryan languages are spoken by more than 800 million people, principally in India, Nepal, Pakistan, Bangladesh, and Sri Lanka. The Old Indo-Aryan period is represented by Sanskrit. Middle Indo-Aryan (c. 600 BC–AD 1000) consists principally of the Prakrit dialects, including Pali. Modern Indo-Aryan speech is largely a single dialect continuum spread over an undivided geographical space, so demarcations between languages and dialects are somewhat artificial. Complicating the situation are competing distinctions between languages with an old literary tradition, local language identification by native speakers (as in censuses), supraregional languages such as Modern Standard Hindi and Urdu, and labels introduced by linguists, particularly those of George Abraham Grierson. In the centre of the Indo-Aryan speech area (the "Hindi zone"), covering northern India and extending south as far as Madhya Pradesh, the most common language of administration and education is Modern Standard Hindi. Important regional languages in the northern Indian plain are Haryanvi, Kauravi, Braj, Awadhi, Chhattisgarhi, Bhojpuri, Magahi, and Maithili. Regional languages in Rajasthan include Marwari, Dhundhari, Harauti, and Malvi. In the Himalayan foothills of Himachal Pradesh are Grierson's Pahari languages. Surrounding the Hindi zone, the most significant languages are, moving clockwise, Nepali (East Pahari), Assamese, Bengali, Oriya, Marathi, Gujarati, Sindhi, the speech of southern, northwestern, and northern Punjab province in Pakistan (called West Punjabi or Lahnda by Grierson), Punjabi, and Dogri. In Jammu and Kashmir and the far north of Pakistan are the Dardic languages; the most important are Kashmiri, Kohistani, Shina, and Khowar. The Nuristani languages of northwestern Afghanistan are sometimes considered a separate branch of Indo-Iranian. Sinhalese (spoken in Sri Lanka), Divehi (spoken in the Maldive Islands), and Romany are also Indo-Aryan languages.

© 2006 Encyclopædia Britannica, Inc.

Indo-European languages Family of languages with the greatest number of speakers, spoken in most of Europe and areas of European settlement and in much of southwestern and southern Asia. They are descended from a single unrecorded language believed to have been spoken more than 5,000 years ago in the steppe regions north of the Black Sea and to have split into a number of dialects by 3000 BC. Carried by migrating tribes to Europe and Asia, these developed over time into separate languages. The main branches are ANATOLIAN, Indo-Iranian (including INDO-ARYAN and IRANIAN), GREEK, ITALIC, GERMANIC, ARMENIAN, CELTIC, ALBANIAN, the extinct TOCHARIAN LANGUAGES, BALTIC, and SLAVIC. The study of Indo-European began in 1786 with Sir WILLIAM JONES's proposal that Greek, Latin, Sanskrit, Germanic, and Celtic were all derived from a "common source." In the 19th century linguists added other languages to the Indo-European family, and scholars such as RASMUS RASK established a system of sound correspondences. Proto-Indo-European has since been partially reconstructed via identification of roots common to its descendants and analysis of shared grammatical patterns.

Indo-Gangetic Plain See GANGETIC PLAIN

Indochina *or* **Indochinese Peninsula** Region of mainland SOUTHEAST ASIA. The term, now largely superseded by the name Southeast Asia, was used mainly by Westerners to describe the intermingling of Indian and Chinese cultural influences in the region. Indochinese Peninsula typically referred to Cambodia, Laos, and Vietnam (see FRENCH INDOCHINA), though it was sometimes expanded to include Myanmar (Burma), Thailand, and the mainland portion of Malaysia.

Indochina wars 20th-century conflicts in Vietnam, Laos, and Cambodia. The first conflict (1946–54; often called the French Indochina War) involved France, which had ruled Vietnam as its colony (FRENCH INDOCHINA), and the newly independent Democratic Republic of Vietnam under HO CHI MINH; the war ended in Vietnamese victory in 1954. Vietnam was then divided into the communist-dominated north and the U.S.-supported south; war soon broke out between the two. North Vietnam won the war (the VIETNAM WAR) despite heavy U.S. involvement, and the country was reunited in 1976. Cambodia experienced its own civil war between communists and noncommunists during that period, which was won by the communist KHMER ROUGE in 1975. After several years of horrifying atrocities under POL POT, the Vietnamese invaded in 1979 and installed a puppet government. Fighting between the Khmer Rouge and the Vietnamese continued throughout the 1980s; Vietnam withdrew its troops by 1989. In 1993 UN-mediated elections established an interim government, and Cambodia's monarchy was reestablished. In Laos, North Vietnam's victory over South Vietnam brought the communist Pathet Lao into complete control in Laos.

Indonesia *officially* **Republic of Indonesia** *formerly* **Netherlands East Indies** Archipelago country, located off the coast of mainland SOUTHEAST ASIA. It comprises some 17,500 islands, of which about 6,000 are uninhabited. Area: 730,024 square miles (1,890,754 square km). Population (2005 est.): 222,781,000. Capital: JAKARTA (on JAVA). Indonesia has more than 300 ethnic groups, which in the western islands fall into three broad divisions: the inland rice-growing peoples of Java and neighbouring islands; the Muslim coastal peoples, including the MALAYS of Sumatra; and the DAYAK and other tribal groups. In the east the distinction is between coastal and interior peoples. Languages: Bahasa Indonesia (official), some 250 languages from different ethnic groups. Religions: Islam; also Christianity, Hinduism, traditional beliefs. Currency: rupiah. The Indonesian archipelago stretches 3,200 miles (5,100 km) from west to east. Major islands include SUMATRA, JAVA (with more than half of Indonesia's population), BALI, LOMBOK, SUMBAWA, about three-fourths of BORNEO (Kalimantan), CELEBES (Sulawesi), the MOLUCCAS, and the western portions of TIMOR and NEW GUINEA. The islands are characterized by rugged volcanic mountains and tropical rainforests. Geologically unstable, Indonesia has frequent earthquakes and 220 active volcanoes, including KRAKATOA (Krakatau). Roughly one-fifth of its land is arable, and rice is the staple crop. Petroleum, natural gas, timber products, garments, and rubber are major exports. Indonesia is a republic with two legislative houses; its head of state and government is the president.

Austronesian-speaking peoples began migrating to Indonesia about the 3rd millennium BC. Commercial relations were established with Africa about the 1st century AD, and Hindu and Buddhist cultural influences from India began to take hold. Indian traders also brought Islam to the islands, and by the 13th century it was spreading throughout the islands—except BALI, which retained its Hindu religion and culture. Indonesia now has the largest Muslim population of any country. European influence began in the 16th century, and the Dutch gradually established control of Indonesia from the late 17th century until 1942, when the Japanese invaded. SUKARNO declared Indonesia's independence in 1945, which the Dutch granted, with nominal union to The Netherlands, in 1949; Indonesia dissolved this union in 1954. The suppression of an alleged coup attempt in 1965 resulted in the deaths of hundreds of thousands of people the government claimed to be communists, and by 1968 Gen. SUHARTO had taken power. His government forcibly incorporated EAST TIMOR into Indonesia in 1975–76, with much loss of life. In the 1990s the country was beset by political, economic, and environmental problems, and Suharto was deposed in 1998. Muslim leader Abdurrahman Wahid was elected president in 1999 but was replaced in 2001 by his vice president, Megawati Sukarnoputri, the eldest daughter of Sukarno. In 2004 she was succeeded by Susilo Bambang Yudhoyono. In 1999 the people of EAST TIMOR voted for independence from Indonesia, which was granted; after a period under UN supervision, it achieved full sovereignty in 2002. In 2004 a large tsunami generated by an earthquake off the western coast of Sumatra caused widespread death and destruction. See map on following page.

Indonesian language See MALAY LANGUAGE

Indore \in-'dōr\ City (pop., 2001 prelim.: metro. area, 1,639,044), western MADHYA PRADESH state, central India. Located northeast of MUMBAI (Bombay), it was founded in 1715 as a trade market by local landowners, who erected Indreshwar Temple, from which the city's name is derived. It became the capital of the princely state of Indore belonging to the Maratha Holkars. Under the British, it served as the headquarters of the British Central India Agency. The largest city in the state, it is an important commercial and industrial centre.

Indra In the ancient VEDIC RELIGION of India, chief of the gods and patron of warriors. Armed with lightning and thunderbolts and strengthened by drinking the elixir SOMA, he vanquished demonic enemies and killed the dragon that kept the monsoon rains from breaking. In later Hinduism Indra was demoted to a rain god and regent of the heavens. He was father to ARJUNA, hero of the *MAHABHARATA*. Indra also appears in Buddhist and Jain mythologies.

Indre River \'a^{n}dr^{ə}\ River, central France. It is a tributary of the LOIRE RIVER. Rising on the northern flanks of the plateau region known as the MASSIF CENTRAL, it flows northwest through agricultural lands and joins the Loire after a total course of 165 mi (265 km).

inductance Property of a CONDUCTOR, sometimes in the shape of a coil, that is measured by the size of the ELECTROMOTIVE FORCE (emf), or voltage, induced in it, compared with the rate of change of the ELECTRIC CURRENT that produces the voltage. A steadily changing electric current produces a varying MAGNETIC FIELD, which induces an emf in a conductor that is present in the field. The magnitude of this voltage is proportional to the rate of change of the current. The inductance is the proportionality factor. The unit of inductance is the henry, named after JOSEPH HENRY; one henry is equivalent to one volt divided by one ampere per second.

induction In LOGIC, a type of nonvalid inference or argument in which the premises provide some reason for believing that the conclusion is true. Typical forms of inductive argument include reasoning from a part to a whole, from the particular to the general, and from a sample to an entire population. Induction is traditionally contrasted with DEDUCTION. Many of the problems of inductive logic, including what is known as the problem of INDUCTION, have been treated in studies of the methodology of the natural sciences. See also JOHN STUART MILL; philosophy of SCIENCE; SCIENTIFIC METHOD.

induction See ELECTROMAGNETIC INDUCTION, ELECTROSTATIC INDUCTION

induction, problem of Problem of justifying the inductive inference from the observed to the unobserved. It was given its classic formulation by DAVID HUME, who noted that such inferences typically rely on the assumption that the future will resemble the past, or on the assumption that events of a certain type are necessarily connected, via a relation of causation, to events of another type. (1) If we were asked why we believe that the sun will rise tomorrow, we would say that in the past the Earth turned on its axis every 24 hours (more or less), and that there is a uniformity in nature that guarantees that such events always happen in the same way. But how do we know that nature is uniform in this sense? We might answer that, in the past, nature has always exhibited this kind of uniformity, and so it will continue to be uniform in the future. But this

© 2006 Encyclopædia Britannica, Inc.

inference is justified only if we assume that the future must resemble the past. How do we justify this assumption? We might say that in the past, the future turned out to resemble the past, and so in the future, the future will again turn out to resemble the past. The inference is obviously circular: it succeeds only by tacitly assuming what it sets out to prove, namely that the future will resemble the past. (2) If we are asked why we believe we will feel heat when we approach a fire, we would say that fire causes heat—i.e., there is a "necessary connection" between fire and heat, such that whenever one occurs, the other must follow. But, Hume asks, what is this "necessary connection"? Do we observe it when we see the fire or feel the heat? If not, what evidence do we have that it exists? All we have is our observation, in the past, of a "constant conjunction" of instances of fire being followed by instances of heat. This observation does not show that, in the future, instances of fire will continue to be followed by instances of heat; to say that it does is to assume that the future must resemble the past. But if our observation is consistent with the possibility that fire may not be followed by heat in the future, then it cannot show that there is a necessary connection between the two that makes heat follow fire whenever fire occurs. Thus we are not justified in believing that (1) the sun will rise tomorrow or that (2) we will feel heat when we approach a fire. It is important to note that Hume did not deny that he or anyone else formed beliefs about the future on the basis of induction; he denied only that we could know with certainty that these beliefs are true. Philosophers have responded to the problem of induction in a variety of ways, though none has gained wide acceptance.

induction heating Method of raising the temperature of an electrically conductive material by subjecting it to an alternating ELECTROMAGNETIC FIELD. Energy in the ELECTRIC CURRENTS induced in the object is dissipated as HEAT. Induction heating is used in metalworking to heat METALS for soldering, tempering, and annealing, and in induction furnaces for melting and processing metals. The principle of the induction-heating process resembles that of the transformer. A water-cooled coil (inductor), acting as the primary winding of a transformer, surrounds the material to be heated (the workpiece), which acts as the secondary winding. Alternating current flowing in the primary coil induces eddy currents in the workpiece, causing it to become heated. The depth to which the eddy currents penetrate, and therefore the distribution of heat within the object, depend on the frequency of the primary alternating current and the magnetic permeability, as well as the resistivity, of the material.

indulgence In ROMAN CATHOLICISM, the remission of temporal punishment for a SIN after the sin has been forgiven through the SACRAMENT of penance. The theology of indulgences is based on the concept that, even though the sin and its eternal punishment are forgiven through penance, divine justice demands that the sinner pay for the crime either in this life or in PURGATORY. The first indulgences were intended to shorten times of penance by substituting periods of FASTING, private prayers, almsgiving, and monetary payments that were to be used for religious purposes. Pope URBAN II granted the first plenary, or absolute, indulgence to participants in the First CRUSADE, and subsequent popes offered indulgences on the occasion of the later Crusades. After the 12th century they were more widely used, and abuses became common as indulgences were put up for sale to earn money for the church or to enrich unscrupulous clerics. JAN HUS opposed them, and MARTIN LUTHER's NINETY-FIVE THESES (1517) were in part a protest against indulgences. In 1562 the Council of TRENT put an end to the abuses but not to the doctrine itself.

Indus civilization (c. 2500–c. 1700 BC) Earliest known urban culture of the Indian subcontinent and the most extensive of the world's three earliest civilizations. It stretched from near the present-day Iran-Pakistan border on the Arabian Sea in the west to near Delhi in the east, and 500 mi (800 km) to the south and 1,000 mi (1,600 km) to the northeast. It is known to have included two large cities, Harappa and MOHENJO DARO (in what is now Pakistan), whose large size suggests centralization in two large states or one state with two capitals. Alternatively, Harappa may have succeeded Mohenjo Daro. It was a literate civilization; the language has been tentatively identified as Dravidian. Wheat and barley were grown, many animals (including cats, dogs, and cattle) were domesticated, and cotton was cultivated. The best-known artifacts are seals depicting real and imaginary animals. How and when the civilization came to an end is unclear; Mohenjo Daro was attacked and destroyed in the mid-2nd millennium BC, but in the south there was continuity between the Indus civilization and the COPPER AGE civilizations of central and western India.

Indus River Trans-Himalayan river of southern Asia. It is one of the world's longest rivers, with a length of 1,800 mi (2,900 km). Its annual flow of 272 billion cu yd (207 billion cu m) is twice that of the NILE. It rises in southwestern Tibet and flows northwest through valleys of the

© 2006 Encyclopædia Britannica, Inc.

Himalayas. After crossing into the Kashmir region, it continues northwestward through the Indian- and Pakistani-administered areas and then turns south into Pakistan. Swelled by tributaries from the Punjab region, including the Jhelum, Chenab, Ravi, Beas, and Sutlej rivers, it widens and flows more slowly. It has supplied water for irrigation on the plains of Pakistan since early times.

industrial and organizational relations *or* **organizational relations** Study of human behaviour in the workplace, focusing especially on the influence such relations have on an organization's productivity. Classical economics viewed workers as instruments of production, subject to the laws of supply and demand. Industrial relations did not become the subject of scholarly attention until the late 1920s, when Elton Mayo (1880–1949) studied productivity at Western Electric Co.'s Hawthorne Works. Concluding that merely being chosen to participate in the study improved workers' productivity (the "Hawthorne effect"), Mayo became the first scholar to show workers responding to psychosocial stimuli. Other aspects of industrial and organizational relations include human resources management, which involves the development of job descriptions and organizational structures; recruiting, training, and general oversight of employees; negotiating terms of employment, planning for the future, and the study of managerial styles.

industrial design Design of products made by large-scale industry for mass distribution. Among the considerations for such products are structure, operation, appearance, and conformance to production, distribution, and selling procedures; appearance is the principal consideration in industrial design. The International Council of Societies of Industrial Design was founded in London in 1957 and within 25 years had members in more than 40 countries. Two significant trends have persisted: streamlining, a design principle pioneered by Raymond Loewy and others in the 1930s; and planned obsolescence, design changes that tempt owners to replace goods with new purchases more frequently than would normally be necessary.

industrial ecology Discipline that traces the flow of energy and materials from their natural resources through manufacture, the use of products, and their final recycling or disposal. Research in industrial ecology began in the early 1990s. Life-cycle analysis traces the flow of materials; design for the environment works to minimize energy use, pollution, and waste. Industrial ecologists aim to create industries in which every waste is a raw material for another product.

industrial engineering Application of engineering principles and techniques of scientific management to the maintenance of high levels of productivity at optimum cost in industrial enterprises. Frederick W. Taylor pioneered in the scientific measurement of work, and Frank (1868–1924) and Lillian (1878–1972) Gilbreth refined it with time-and-motion studies. As a result, production processes were simplified, enabling workers to increase production. The industrial engineer selects tools and materials for production that are most efficient and least costly to the company. The engineer may also determine the sequence of production and the design of plant facilities or factories. See also ergonomics.

industrial espionage Acquisition of trade secrets from business competitors. Industrial spying is a reaction to the efforts of many businesses to keep secret their designs, formulas, manufacturing processes, research, and future plans. Trade secrets may find their way into the open market through disloyal employees or through various other means. Penalties against those found guilty range from an injunction against further use of the knowledge to substantial damages. See also patent.

industrial medicine *or* **occupational medicine** Branch of medicine dealing with workers' health and the prevention and treatment of diseases and injuries in the workplace. Workplace hazards include exposure to dangerous materials including asbestos and coal dust, radiation exposure, and machinery capable of causing injuries ranging from minor to life-threatening. Industrial medical programs mandate protective devices around machines' moving parts, proper ventilation of work areas, use of less toxic materials, containment of production processes, and protective equipment and clothing. Good industrial medical programs improve labour-management relations, increase workers' overall health and productivity, and reduce insurance costs.

industrial melanism \'me-lə-ˌni-zəm\ Darkness of the skin, feathers, or fur developed by a population of animals living in an industrial region where the environment is soot-darkened. The melanization of a population increases the probability that its members will survive and reproduce because it offers protection in the form of camouflage; it takes place over the course of many generations as the result of natural selection of the lighter, more conspicuous animals by predators.

industrial-organizational psychology *or* **I-O psychology** Application of the concepts and methods of experimental, clinical, and social psychology to the workplace. I-O psychologists are concerned with such matters as personnel evaluation and placement, job analysis, worker-management relations (including morale and job satisfaction), workforce training and development (including leadership training), and productivity improvement. They may work closely with business managers, industrial engineers, and human-resources professionals.

Industrial Revolution Process of change from an agrarian, handicraft economy to one dominated by industry and machine manufacture. It began in England in the 18th century. Technological changes included the use of iron and steel, new energy sources, the invention of new machines that increased production (including the steam engine and the spinning jenny), the development of the factory system, and important developments in transportation and communication (including the railroad and the telegraph). The Industrial Revolution was largely confined to Britain from 1760 to 1830 and then spread to Belgium and France. Other nations lagged behind, but, once Germany, the U.S., and Japan achieved industrial power, they outstripped Britain's initial successes. Eastern European countries lagged into the 20th century, and not until the mid-20th century did the Industrial Revolution spread to such countries as China and India. Industrialization effected changes in economic, political, and social organization. These included a wider distribution of wealth and increased international trade; political changes resulting from the shift in economic power; sweeping social changes that included the rise of working-class movements, the development of managerial hierarchies to oversee the division of labour, and the emergence of new patterns of authority; and struggles against externalities such as industrial pollution and urban crowding.

Industrial Workers of the World (IWW) *known as* **the Wobblies** Radical labour organization founded in Chicago in 1905. The founders, who opposed the moderate policies of the AFL (see AFL-CIO), included William Haywood of the Western Federation of Miners, Daniel De Leon of the Socialist Labor Party, and Eugene V. Debs. In 1908 the IWW split, and a militant group led by Haywood prevailed. To reach its goal of worker control of the means of production, it advocated general strikes, boycotts, and sabotage. Its tactics led to arrests and adverse publicity, though it made gains through strikes in the mining and lumber industries. It opposed U.S. participation in World War I, and some of its leaders were prosecuted. By the 1920s membership had dwindled greatly.

industrialization Process of converting to a socioeconomic order in which industry is dominant. The changes that took place in Britain during the Industrial Revolution of the late 18th and 19th century led the way for the early industrializing nations of western Europe and North America. Industrialization entailed both technology and profound social developments. The freeing of labourers from feudal and customary obligations created a free market in labour, with a pivotal role for the entrepreneur. Cities attracted large numbers of people, massing workers in new industrial towns and factories. Later industrializers attempted to manipulate some of the elements: the Soviet Union eliminated the entrepreneur; Japan stimulated and sustained the entrepreneur's role; Denmark and New Zealand industrialized primarily by commercializing and mechanizing agriculture.

industry Group of productive organizations that produce or supply goods, services, or sources of income. In economics, industries are customarily classified as primary, secondary, and tertiary; secondary industries are further classified as heavy and light. Primary industry includes agriculture, forestry, fishing, mining, quarrying, and extracting minerals. Secondary or manufacturing industry processes the raw materials supplied by primary industries into consumer goods, or further processes goods from other secondary industries, or builds capital goods used to manufacture consumer and nonconsumer goods; secondary industry also includes energy-producing industries and the construction industry. Tertiary or service industry includes banking, finance, insurance, investment, and real estate services; wholesale, retail, and resale trade; transportation, information, and communications services; professional, consulting, legal, and personal services; tourism, hotels, restaurants, and entertainment; repair

© 2006 Encyclopædia Britannica, Inc.

and maintenance services; education and teaching; and health, social welfare, administrative, police, security, and defense services.

Indy \aⁿ-ˈdē**, (Paul-Marie-Theodore-) Vincent d'** (b. March 27, 1851, Paris, France—d. Dec. 1, 1931, Paris) French composer and teacher. Trained in organ and composition, he rejected the prevailing French style as frivolous by comparison with the German musical tradition. He wrote several important stage works, including *Fervaal* (1895) and *The Legend of Saint Christopher* (1915), but orchestral works such as *Symphony on a French Mountain Air* (1886), *Summer Day in the Mountains* (1905), and *Istar* (1896) remain better known. In 1894 he cofounded the music academy called the Schola Cantorum in Paris, where many of France's foremost composers and musicians would be trained.

inequality In mathematics, a statement of an order relationship—greater than, greater than or equal to, less than, or less than or equal to—between two numbers or algebraic expressions. Inequalities can be posed either as questions, much like EQUATIONS, and solved by similar techniques, or as statements of fact in the form of THEOREMS. For example, the triangle inequality states that the sum of the lengths of any two sides of a triangle is greater than or equal to the length of the remaining side. Mathematical ANALYSIS relies on many such inequalities (e.g., the CAUCHY-SCHWARZ INEQUALITY) in the proofs of its most important theorems.

inert gas See NOBLE GAS

inertia \i-ˈnər-shə\ Inherent property of a body that makes it oppose any force that would cause a change in its motion. A body at rest and a body in motion both oppose forces that might cause ACCELERATION. The inertia of a body can be measured by its MASS, which governs its resistance to the action of a force, or by its moment of inertia about a specified axis, which measures its resistance to the action of a TORQUE about the same axis.

inertia, moment of Quantitative measure of the rotational INERTIA of a body. As a rotating body spins about an external or internal axis (either fixed or unfixed), it opposes any change in the body's speed of rotation that may be caused by a TORQUE. It is defined as the sum of the products obtained by multiplying the mass of each particle of matter in a given body by the square of its distance from the axis of rotation.

inertial guidance system An electronic system that continuously monitors the position, velocity, and acceleration of a vehicle, usually a submarine, missile, or airplane, and thus provides navigational data or control. The basic components of an inertial guidance system are GYROSCOPES, ACCELEROMETERS, and a computer.

infancy In humans, the period of life between birth and the acquisition of language usually one to two years later. The average newborn infant weighs 7.5 lbs (3.4 kg) and is about 20 in (51 cm) long. At birth, infants display a set of inherited reflexes involving such acts as sucking, blinking, and grasping. They are sensitive to light-dark visual contrasts and movements and show a noticeable preference for gazing at the human face; they also begin to recognize the human voice. By 4 months of age most babies are able to sit up, and most begin crawling in 7–10 months; by 12 months most are able to start walking. Virtually all infants begin to comprehend some words several months before they themselves speak their first meaningful words.

infanticide Killing of the newborn. Infanticide has often been interpreted as a primitive method of BIRTH CONTROL and a means of ridding a group of its weak or undesirable children; but most societies actively welcome children and put them to death (or allow them to die) only under exceptional circumstances—e.g., when there is little or no likelihood of being able to provide support. As late as the 18th century in European countries unwanted infants were disposed of by abandonment and exposure. Firstborn SACRIFICE, or the offering of one's most precious possession to the deities, is known from the Bible and from the histories of Egypt, Greece, Rome, and India.

infantile paralysis See POLIOMYELITIS

infantry Troops who fight on foot. The term applies both to soldiers armed with hand weapons such as the spear and sword in ancient times and to troops armed with automatic rifles and rocket launchers in modern times. Their objective has always been to seize and hold ground and, when necessary, to occupy enemy territory. Apart from the temporary dominance of CAVALRY in the feudal period, it has been the largest single element in Western armies since ancient times.

infection Invasion of the body by various agents—including BACTERIA, fungi (see FUNGUS), PROTOZOANS, VIRUSES, and WORMS—and its reaction to them or their TOXINS. Infections are called subclinical until they perceptibly affect health, when they become infectious diseases. Infection can be local (e.g., an ABSCESS), confined to one body system (e.g., PNEUMONIA in the lungs), or generalized (e.g., SEPTICEMIA). Infectious agents can enter the body by inhalation, ingestion, sexual transmission, passage to a fetus during pregnancy or birth, wound contamination, or animal or insect bites. The body responds with an attack on the invader by LEUKOCYTES, production of ANTIBODIES or ANTITOXINS, and often a rise in temperature. The antibodies may result in short-term or lifelong IMMUNITY. Despite significant progress in preventing and treating infectious diseases, they remain a major cause of illness and death, particularly in regions of poor sanitation, poor nutrition, and crowding.

inferiority complex Acute sense of personal inferiority, often resulting in either timidity or (through overcompensation) exaggerated aggressiveness. Though once a standard psychological concept, particularly among followers of ALFRED ADLER, it has lost much of its usefulness through imprecise popular misuse.

infertility Inability of a couple to conceive and reproduce. It is defined as failure to conceive after one year of regular intercourse without CONTRACEPTION. Inability to conceive when desired can result from a defect at any of the stages required for FERTILITY (see REPRODUCTIVE SYSTEM). About one in every eight couples is infertile. Most cases involve the female partner, 30–40% involve the male, and 10% are caused by unknown factors. In women, causes include ovulation or hormone problems, fallopian-tube disorders, and a chemical balance that is hostile to SPERM; in men, causes include IMPOTENCE, low sperm count, and sperm abnormalities. Either partner can have a blockage of the pathways the sperm must travel, often treatable by surgery. Emotional factors may contribute; return of normal fertility may require only counseling. Fertility drugs can stimulate the release of EGGS (often more than one, leading to MULTIPLE BIRTHS). Low sperm count may be overcome by limiting intercourse to the time of ovulation, the most fertile period. If these methods are unsuccessful, couples may try ARTIFICIAL INSEMINATION, IN VITRO FERTILIZATION, or SURROGATE MOTHERHOOD, or they may choose ADOPTION instead.

infinite series In mathematics, the sum of infinitely many numbers, whose relationship can typically be expressed as a formula or a FUNCTION. An infinite series that results in a finite sum is said to converge (see CONVERGENCE). One that does not, diverges. Mathematical ANALYSIS is largely taken up with studying the conditions under which a given function will result in a convergent infinite series. Such series (e.g., the FOURIER SERIES) are particularly useful in solving DIFFERENTIAL EQUATIONS.

infinity In mathematics, the useful concept of a process with no end. As represented by the symbol ∞, it is often mistakenly thought to be the largest number or a place on the real number line. Instead, it is the idea of a limit, as in the expression $x \to \infty$, which suggests that the variable x increases without bound. For example, the function $f(x) = 1/x$, or the reciprocal of x, tends toward 0 as x approaches infinity as a limit. This process of approaching is crucial to the definition of the DERIVATIVE and the INTEGRAL in calculus, as well as to many other concepts of mathematical ANALYSIS.

inflammation Local reaction of living tissues to injury or illness, including burns, pneumonia, leprosy, tuberculosis, and rheumatoid arthritis. Its major signs are heat, redness, swelling, and pain. The process begins with brief contraction of nearby arterioles (see ARTERIES). Dilation follows, flushing the CAPILLARIES with blood, from which fluid, PLASMA proteins, and LEUKOCYTES pass into the injured tissues, causing swelling as they attack the cause of injury. Initial acute inflammation can have any of four outcomes: resolution (return to normal), organization (new tissue buildup; see SCAR), suppuration (pus formation; see ABSCESS), or chronic inflammation. Sometimes treatment—including ANTIBIOTICS for bacteria, or surgical removal of an irritating foreign body—can eliminate the cause. If not, anti-inflammatory drugs (e.g., CORTISONE or ASPIRIN) may be given, or simple remedies (e.g., hot or cold compresses) may be applied.

inflation In COSMOLOGY, a hypothesized period of exponential expansion of the universe, shortly after the BIG BANG, which may account for some of the universe's observed properties, such as the distribution of energy and matter. GRAND UNIFIED THEORIES of the forces of nature suggest that inflation could have occurred during the first 10^{-32} second after the universe began, when the STRONG FORCE was decoupling from the WEAK and ELECTROMAGNETIC forces. During this time, the universe would have expanded by

© 2006 Encyclopædia Britannica, Inc.

more than 100 orders of magnitude. Interpreted in the context of general RELATIVITY, inflation occurred while the universe existed in a state of nonzero energy density (false vacuum).

inflation In economics, increases in the level of PRICES. Inflation is generally thought of as an inordinate rise in the general level of prices. Four theories are commonly used to explain inflation. The first and oldest, the quantity theory, promoted in the 18th century by DAVID HUME, assumes that prices will rise as the supply of money increases. MILTON FRIEDMAN refined the quantity theory in the mid-20th century, arguing that the prescription for stable prices is to increase the money supply at a rate equal to that at which the economy is expanding. A second approach is JOHN MAYNARD KEYNES's theory of income determination, which assumes that inflation occurs when the demand for goods and services is greater than the supply. It calls for the government to control inflation by adjusting levels of spending and taxation and by raising or lowering interest rates. A third approach is the cost-push theory. It traces inflation to a phenomenon known as the price-wage spiral, in which workers' demands for wage increases lead employers to increase prices to reflect their higher costs, thereby sowing the seeds of a further round of wage demands. A fourth approach is the structural theory, which emphasizes structural maladjustments in the economy, as when in developing countries imports tend to increase faster than exports, pushing down the international value of the developing country's currency and causing prices to rise internally. See also DEFLATION, PRICE INDEX.

inflorescence \ˌin-flə-ˈre-sᵊns\ Cluster of flowers on one or a series of branches, which together make a large showy blossom. Categories depend on the arrangement of flowers on an elongated main axis (peduncle) or on sub-branches from the main axis, and on the timing and position of flowering. In determinate inflorescences, the youngest flowers are at the bottom or outside (e.g., ONION flowers). In indeterminate inflorescences, the youngest flowers are at the top or in the center (e.g., SNAPDRAGON, LILY OF THE VALLEY, and *Astilbe* flowers). Other indeterminate inflorescences are the dangling male and female CATKINS of OAK trees, the spike of BARLEY, and the flat head (capitulum) of the DANDELION.

influenza *or* **flu** *or* **grippe** Acute viral INFECTION of the upper or lower respiratory tract. Influenza VIRUSES A (the most common), B, and C produce similar symptoms, but infection with or vaccination against one does not give immunity against the others. Chills, fatigue, and muscle aches begin abruptly. The temperature soon reaches 38–40 °C (101–104 °F). Head, muscle, abdominal, and joint aches may be accompanied by sore throat. Recovery starts in three to four days, and respiratory symptoms become more prominent. Bed rest, high fluid intake, and aspirin or other antifever drugs are standard treatment. Influenza A tends to occur in wavelike annual pandemics. Mortality is usually low, but in rare outbreaks (see INFLUENZA EPIDEMIC OF 1918–19) it reaches immense proportions. Most deaths result from PNEUMONIA or BRONCHITIS.

influenza epidemic of 1918–19 *or* **Spanish influenza epidemic** Most severe INFLUENZA outbreak of the 20th century. It apparently started as a fairly mild strain in a U.S. army camp in early March 1918. Troops sent to fight in World War I spread the virus to western Europe. Outbreaks occurred in nearly every inhabited part of the world, spreading from ports to cities along transportation routes. PNEUMONIA often developed quickly and killed within two days. Among the most deadly epidemics in history, it left an estimated 25 million dead; unusually, half the deaths were among 20- to 40-year-olds.

information processing Acquisition, recording, organization, retrieval, display, and dissemination of information. Today the term usually refers to computer-based operations. Information processing consists of locating and capturing information, using software to manipulate it into a desired form, and outputting the data. An Internet SEARCH ENGINE is an example of an information-processing tool, as is any sophisticated INFORMATION-RETRIEVAL system. See also DATA PROCESSING.

information retrieval Recovery of information, especially in a DATABASE stored in a computer. Two main approaches are matching words in the query against the database index (keyword searching) and traversing the database using HYPERTEXT or hypermedia links. Keyword searching has been the dominant approach to text retrieval since the early 1960s; hypertext has so far been confined largely to personal or corporate information-retrieval applications. Evolving information-retrieval techniques, exemplified by developments with modern Internet SEARCH ENGINES, combine natural language, hyperlinks, and keyword searching. Other techniques that seek higher levels of retrieval precision are studied by researchers involved with ARTIFICIAL INTELLIGENCE.

information science Discipline that deals with the processes of storing and transferring information. It attempts to bring together concepts and methods from such varied disciplines as library science, computer science and engineering, linguistics, and psychology to develop techniques and devices to aid in the handling of information. In its early stages in the 1960s, information science was concerned primarily with applying the then-new computer technology to the processing and managing of documents. The applied computer technologies and theoretical studies of information science have since permeated many other disciplines. Computer science and engineering still tend to absorb its theory- and technology-oriented subjects, and management science tends to absorb information-systems subjects.

information theory See COMMUNICATION THEORY

infrared \ˌin-frə-ˈred\ **astronomy** Study of astronomical objects by observing the INFRARED RADIATION they emit. Its techniques enable examination of many celestial objects that give off energy at wavelengths in the infrared region of the ELECTROMAGNETIC SPECTRUM but that cannot otherwise be seen from Earth because they do not emit much visible light or because that light is blocked by dust clouds, which infrared radiation can penetrate. Infrared astronomy originated in the early 19th century with the work of William Herschel (see HERSCHEL FAMILY), who discovered infrared radiation while studying sunlight. The first systematic infrared observations of other stars were made in the 1920s; modern techniques, such as the use of interference filters for ground-based telescopes, were introduced in the early 1960s. Because atmospheric water vapour absorbs many infrared wavelengths, observations are carried out with telescopes sited on high mountaintops and from airborne and space-based observatories. Infrared astronomy allows studies of the dust-obscured core of the MILKY WAY GALAXY and the hearts of star-forming regions and has led to many discoveries including BROWN DWARF candidates and disks of matter around certain stars.

infrared radiation Portion of the ELECTROMAGNETIC SPECTRUM that extends from the MICROWAVE range to the red end of the visible light range. Its wavelengths vary from about 0.7 to 1,000 micrometres. Most of the radiation emitted by a moderately heated surface is infrared, and it forms a continuous spectrum. Molecular excitation produces extensive infrared radiation but in a discrete spectrum of lines or bands. Infrared wavelengths are useful for night-vision equipment, heat-seeking missiles, molecular SPECTROSCOPY, and INFRARED ASTRONOMY, among other things. The trapping of infrared radiation by atmospheric gases is also the basis of the GREENHOUSE EFFECT.

Inge \ˈinj**, William (Motter)** (b. May 3, 1913, Independence, Kan., U.S.—d. June 10, 1973, Hollywood Hills, Calif.) U.S. playwright and screenwriter. He worked as a schoolteacher (1937–49) and moonlighted as drama editor of the *St. Louis Star-Times* (1943–46). His first play, *Farther Off from Heaven* (1947), was revised for Broadway as *The Dark at the Top of the Stairs* (1957; film, 1960). He is best known for his plays *Come Back, Little Sheba* (1950; film, 1952), *Picnic* (1953, Pulitzer Prize; film, 1956), and *Bus Stop* (1955; film, 1956), and for his original screenplay for *Splendor in the Grass* (1961, Academy Award). He was one of the first dramatists to explore small-town life in the Midwest.

Inglewood City (pop., 2000: 112,580), southwestern California, U.S., situated southwest of LOS ANGELES. Settled by Daniel Freeman in 1873, it was laid out by the Centinela-Inglewood Land Co. in 1887 and incorporated in 1908. It developed along with the Los Angeles metropolitan area and is the site of Hollywood Park racetrack.

ingot \ˈiŋ-gət\ Mass of METAL cast into a size and shape such as a bar, plate, or sheet convenient to store, transport, and work into a semifinished or finished product. The term also refers to a MOLD in which metal is so cast. Steel ingots range in size from small rectangular blocks weighing a few pounds (or kilograms) to huge, tapered, octagonal masses weighing more than 500 tons (450 metric tons).

Ingres \ˈaⁿgrᵊ**, Jean-Auguste-Dominique** (b. Aug. 29, 1780, Montauban, France—d. Jan. 14, 1867, Paris) French painter. He studied with JACQUES-LOUIS DAVID in Paris before attending the École des Beaux-Arts (1799–1801), where he won a Prix de Rome scholarship. Critics condemned one of his first public works, the awe-inspiring portrait *Napoleon on His Imperial Throne* (1806), as stiff and archaic, but its style was one he developed intentionally. In Italy (1806–24) he prospered with portraits and history paintings. His small-scale portrait drawings are meticu-

© 2006 Encyclopædia Britannica, Inc.

lously rendered. Back in Paris he received critical acclaim at last and won admission to the academy with *The Vow of Louis XIII* (1824). He succeeded David as the leader of French NEOCLASSICAL painting, a style that was the antithesis of the lush ROMANTICISM of contemporary artists such as EUGÈNE DELACROIX, Ingres's chief rival. In 1825 he opened a teaching studio, which became one of the largest in Paris. By the mid 1840s he was France's most sought-after society portraitist. Some of his most notable later works are female nudes, which are often notable for their elongated distortion. None of his many students attained distinction, but his influence is seen in the work of EDGAR DEGAS, PIERRE-AUGUSTE RENOIR, and PABLO PICASSO.

Valpinçon Bather, oil painting by Jean-Auguste-Dominique Ingres, 1808; in the Louvre, Paris.
GIRAUDON/ART RESOURCE

inheritance Devolution of property on an heir or heirs upon the death of its owner. In civil law jurisdictions it is called succession. The concept depends on a common acceptance of the notion of private ownership of goods and property. Under some systems, land is considered communal property and rights to it are redistributed, rather than bequeathed, on the death of a community member. In many countries, a minimum portion of the decedent's estate must be assigned to the surviving spouse and often to the progeny as well. Intestacy laws, which govern the inheritance of estates whose distribution is not directed by a WILL, universally view kinship between the decedent and the beneficiary as a primary consideration. Inheritance usually entails payment of an inheritance tax. See also INHERITANCE TAX; INTESTATE SUCCESSION; PROBATE.

inheritance tax Levy on the property accruing to each beneficiary of the estate of a deceased person. Inheritance tax may be more difficult to administer than ESTATE TAX because the value passing to each beneficiary must be fixed, and this often requires complex actuarial calculations. Inheritance taxes date back to the Roman Empire. In the U.S. inheritance taxes have always been collected by the individual states, while the federal government has imposed an estate tax. The first state inheritance tax was imposed by Pennsylvania in 1826.

inhibition In enzymology, a phenomenon in which a compound (an inhibitor), usually similar in structure to the substance on which an ENZYME acts (substrate), interacts with the enzyme so that the resulting complex cannot undergo the usual reaction or cannot form the usual product. The inhibitor may function by combining with the enzyme at the site at which the reaction usually occurs (competitive inhibition) or at another site (noncompetitive inhibition). See also ALLOSTERIC CONTROL, FEEDBACK INHIBITION, REPRESSION.

inhibition In psychology, the conscious or unconscious suppression of free or spontaneous thought or behaviour through the operation of psychological impediments, including internalized social controls. Inhibition serves useful social functions such as protecting oneself and others from harm and enabling the delay of gratification from pleasurable activities. Both extreme lack of inhibition and excessive inhibition can be personally destructive. Inhibition also plays an important role in LEARNING, since an organism must learn to restrain certain instinctual behaviours or previously learned patterns in order to master new patterns. In PHYSIOLOGICAL PSYCHOLOGY, inhibition refers to the suppression of neural electrical activity.

initiation See rite of PASSAGE, SECRET SOCIETY

injunction In civil proceedings, a court order compelling a party to do or to refrain from doing a specified act. It is an equitable remedy for harm for which no adequate remedy exists in law. Thus it is used to prevent a future harmful action (e.g., disclosing confidential information, instituting a national labour strike, or violating a group's civil rights) rather than to compensate for an injury that has already occurred. It also provides relief from harm for which an award of money damages is not a satisfactory solution. A defendant who violates an injunction may be cited for contempt. See also EQUITY.

ink Fluid or paste of various colours (usually black or dark blue) used for writing and PRINTING, composed of a PIGMENT or DYE in a liquid "vehicle." Early inks used lampblack (a form of CARBON) or coloured juices, extracts, or suspensions of plant, animal, and mineral substances. Modern writing inks usually contain ferrous sulfate (see IRON) with a small amount of an acid; on paper, they darken and bond, becoming permanent. Coloured and washable inks usually contain soluble synthetic dyes. Printing inks are formulated for various requirements (including colour, opacity, fade resistance, pliability, odourlessness, drying behaviour, and health and environmental safety) for uses in OFFSET, LETTERPRESS, screen, ink-jet, laser, and other printing.

Inkatha \in-'kä-tə\ **Freedom Party** Political party in South Africa consisting largely of the ZULU. It originated in 1924 as a cultural movement under King Dinizulu. His grandson, MANGOSUTHU G. BUTHELEZI, revived it in 1974 as a political party after breaking with the AFRICAN NATIONAL CONGRESS (ANC). Under Buthelezi, Inkatha advocated a struggle against APARTHEID but a willingness to accept power-sharing arrangements short of majority rule. From the late 1980s Inkatha and ANC followers were regularly involved in bloody clashes with strong ethnic (Zulu v. non-Zulu) overtones. In 1991 the white South African government admitted that it had secretly subsidized Inkatha.

Inland Passage See INSIDE PASSAGE

Inn River Major tributary of the DANUBE RIVER. It rises in Switzerland and flows 317 mi (510 km) northeast across western Austria and southern Germany. Its Swiss section is called the Engadin. In Austria it travels past INNSBRUCK and along the Bavarian ALPS, entering Germany in BAVARIA, where it flows northeast. It forms part of the Austro-German border as it joins the Danube at Passau.

inner ear *or* **labyrinth of the ear** Part of the EAR containing organs of HEARING and equilibrium. The bony labyrinth has three sections (semicircular canals, vestibule, and cochlea); within each structure is a corresponding part of the membranous labyrinth (semicircular ducts, two saclike structures in the vestibule, and cochlear duct). Sound vibrations are transmitted from the middle ear through the membrane-covered oval window to fluid in the snail-shell-shaped cochlea, whose motion stimulates hair cells in the cochlea. The hair cells trigger nerve impulses that travel to the brain, which interprets them as sound. The vestibule and semicircular canals also have organs with hair cells. Those in the vestibule indicate the head's position with respect to the rest of the body (see PROPRIOCEPTION). The three semicircular canals, at right angles to each other, signal motion of the head in three-dimensional space. Continued stimulation after motion stops causes a mismatch with visual input, experienced as dizziness or MOTION SICKNESS.

Inner Mongolia *Chinese* **Nei Mongol** \'nā-'mùŋ-'gòl\ *or* **Neimeng-ku** \'nā-'məŋ-'gü\ Autonomous region (pop., 2002 est.: 23,790,000), China. Stretching some 1,800 mi (2,900 km) across northeastern China, it has an area of 454,600 sq mi (1,177,500 sq km); its capital is HOHHOT. Mongols and Chinese make up the bulk of the population, most of which is concentrated in the agricultural belt near the HUANG HE (Yellow River). Inner Mongolia is an inland plateau lying at an elevation of about 3,300 ft (1,000 m); it is fringed by mountains and valleys. Its northern portion lies within the GOBI DESERT, and its southern border is partly marked by the GREAT WALL. Inner Mongolia was separated from MONGOLIA (Outer Mongolia) in 1912 and was established as an autonomous region in 1947. Its harsh climate restricts intensive agriculture; some industrial development has occurred there.

inner product space In mathematics, a VECTOR SPACE or function space in which an operation for combining two vectors or FUNCTIONS (whose result is called an inner product) is defined and has certain properties. Such spaces, an essential tool of FUNCTIONAL ANALYSIS and vector theory, allow analysis of classes of functions rather than individual functions. In mathematical ANALYSIS, an inner product space of particular importance is a Hilbert space, a generalization of ordinary space to an infinite number of dimensions. A point in a Hilbert space can be represented as an infinite sequence of coordinates or as a vector with infinitely many components. The inner product of two such vectors is the sum of the products of corresponding coordinates. When such an inner product is zero, the vectors are said to be orthogonal (see ORTHOGONALITY). Hilbert spaces are an essential tool of MATHEMATICAL PHYSICS. See also DAVID HILBERT.

Innes, Michael See J.I.M. STEWART

© 2006 Encyclopædia Britannica, Inc.

Inness, George (b. May 1, 1825, Newburgh, N.Y., U.S.—d. Aug. 3, 1894, Bridge of Allen, Stirling, Scot.) U.S. landscape painter. He was largely self-taught. His early paintings were influenced by the Hudson River school. He spent much time in Europe studying the works of the Barbizon school, and from c. 1855 to 1874 he developed the luminous, atmospheric quality for which his landscapes are known. The influence of Camille Corot is evident in his intimately rendered images of far-reaching expanses. His later works are marked by the ascendancy of colour over form. His sense of mysticism intensified over time, and the pictures tended to dissolve into shimmering colour with no outlines or formal construction. See also luminism.

Inniskilling See Enniskillen

Innocent III *orig.* **Lothar of Segni** (b. 1160/61, Gavignano Castle, Campagna di Roma, Papal States—d. July 16, 1216, Perugia) Pope (1198–1216). Innocent, who was trained in both theology and law, brought the medieval papacy to the height of its prestige and power. He crowned Otto IV as Holy Roman emperor, but Otto's determination to unite Germany and Sicily angered him, and in 1212 he gave his support to the Hohenstaufen candidate, Frederick II. After Innocent excommunicated King John of England for refusing to recognize Stephen Langton as archbishop of Canterbury, John was obliged to submit and to declare England a fief of the Holy See (1213). Innocent launched the Fourth Crusade, which captured Constantinople, and the Albigensian Crusade, which attempted to suppress heresy in southern France. He approved the Mendicant orders founded by St. Dominic and St. Francis of Assisi, and he convoked the fourth Lateran Council, which promulgated the doctrine of transubstantiation and endorsed annual confession for all Christians.

Innocent IV *orig.* **Sinibaldo Fieschi** (b. 12th century, Genoa—d. Dec. 7, 1254, Naples) Pope (1243–54). His clash with Holy Roman Emperor Frederick II formed an important chapter in the conflict between papacy and empire. Frederick wanted the newly elected pope to lift his excommunication, but Innocent interrupted the negotiations and fled Rome for France (1244); he later condemned Frederick and urged the election of a new emperor. Concerned with the evangelization of the East, he persuaded Louis IX to lead a Crusade and sent a mission to the Mongols. He returned to Rome in 1253 and gave the Sicilian throne to Edmund, son of Henry III of England, but the papal army was defeated by Manfred, Frederick's son, in 1254.

innovation In technology, an improvement to something already existing. Distinguishing an element of novelty in an invention remains a concern of patent law. The Renaissance was a period of unusual innovation: Leonardo da Vinci produced ingenious designs for submarines, airplanes, and helicopters and drawings of elaborate trains of gears and of the patterns of flow in liquids. Technology provided science with instruments that greatly enhanced its powers, such as Galileo's telescope. New sciences have also contributed to technology, as in the theoretical preparation for the invention of the steam engine. In the 20th century, innovations in semiconductor technology increased the performance and decreased the cost of electronic materials and devices by a factor of a million, an achievement unparalleled in the history of any technology.

Inns of Court Four societies of British students and practitioners of law that have the exclusive right to admit people to practice. The four are Lincoln's Inn, Gray's Inn, Inner Temple, and Middle Temple. All are located in London and trace their origins to the Middle Ages. Until the 17th century, when the Inn of Chancery developed (for training in the framing of writs and other legal documents used in the courts of chancery, or equity courts), the Inns of Court had a monopoly over legal education. By the 19th century, modern law schools had emerged.

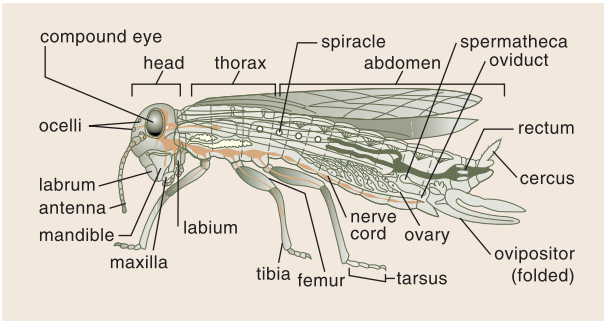
Innsbruck City (pop., 2001: 113,392), on the Inn River in western Austria, southwest of Salzburg. A small market town in the 12th century, it was located beside a bridge (*Brücke*) over the Inn. It was chartered in 1239, passed to the Habsburgs in 1363, and in 1420 became the capital of Tirol. Napoleon gave the city to Bavaria in 1806, and in 1809 it was the site of an uprising of Tirolian patriots against the Bavarians and the French. The old town has narrow streets lined with medieval houses and arcades. A winter sports centre, Innsbruck was the site of the Winter Olympic Games in 1964 and 1976.

İnönü \i-nœ-'nü**, İsmet** (b. Sept. 24, 1884, Smyrna, Ottoman Empire—d. Dec. 25, 1973, Ankara, Tur.) Turkish army officer and statesman. On the surrender of the Ottoman Empire in World War I (1918), he was undersecretary of war. He became prime minister in 1923, and president and permanent chairman of the Republican People's Party in 1938 on Mustafa Kemal Atatürk's death. In 1950 he was replaced as president by Celâl Bayar and led the opposition, assuming the role of defender of democracy. Following a 1960 coup d'état, he formed three coalition governments, but in the 1965 and 1969 elections his party suffered overwhelming defeats.

inorganic compound Any substance in which two or more chemical elements other than carbon are combined, nearly always in definite proportions (see bonding), as well as some compounds containing carbon but lacking carbon-carbon bonds (e.g., carbonates, cyanides). Inorganic compounds may be classified by the elements or groups they contain (e.g., oxides, sulfates). The major classes of inorganic polymers are silicones, silanes, silicates, and borates. Coordination compounds (or complexes), an important subclass of inorganic compounds, consist of molecules with a central metal atom (usually a transition element) bonded to one or more nonmetallic ligands (inorganic, organic, or both) and are often intensely coloured. See also organic compound.

inosilicate \ˌin-ō-'si-lə-kət, ˌī-nō-'si-lə-kət\ *or* **chain silicate** Any of a class of inorganic compounds that have structures characterized by silicate tetrahedrons (a central silicon atom surrounded by four oxygen atoms at the corners of a tetrahedron) arranged in chains. Two of the oxygen atoms of each tetrahedron are shared with other tetrahedrons, forming a chain that is potentially infinite in length. Mineral examples include the pyroxenes and the amphiboles.

Inoue Enryō \ē-'nō-ü-e-'en-'ryō\ (b. March 18, 1858, Echigo province, Japan—d. June 6, 1919, Dairen, Manchuria) Japanese philosopher. After studying at the main temple of Pure Land Buddhism in Japan, he earned a degree in philosophy at Tokyo Imperial University. He opposed the Westernization of Japan and the conversion of officials to Christianity. He founded the Philosophical Institute in 1887 to promote the study of Buddhism. As part of his campaign to rid Japan of superstitions associated with folklore and mythology, he established the Ghost Lore Institute in Tokyo.



input-output analysis Economic analysis developed by Wassily Leontief, in which the interdependence of an economy's various productive sectors is observed by viewing the product of each industry both as a commodity for consumption and as a factor in the production of itself and other goods. For example, input-output analysis will break down a nation's total production of trucks, showing that some trucks are used in the production of more trucks, some in farming, some in the production of houses, and so on. An input-output analysis is usually summarized in a gridlike table showing what various industries buy from and sell to one another.

Inquisition In the Middle Ages, a judicial procedure that was used to combat heresy; in early modern times, a formal Roman Catholic judicial institution. *Inquisito*, a Latin term meaning investigation or inquest, was a legal procedure that involved the assemblage of evidence and the prosecution of a criminal trial. Use of the procedure against the heresies of the Cathari and Waldenses was approved by Pope Gregory IX in 1231. Suspected heretics were arrested, interrogated, and tried; the use of torture was approved by Innocent IV in 1252. Penalties ranged from prayer and fasting to imprisonment; convicted heretics who refused to recant could be executed by lay authorities. Medieval inquisitors functioned widely in northern Italy and southern France. The Spanish Inquisition was authorized by Sixtus IV in 1478; the pope later tried to limit its powers but was opposed by the Spanish crown. The auto-da-fé, the public ceremony at which sentences were pronounced, was an elaborate celebration, and the grand inquisitor Tomás de Torquemada was responsible for burning about 2,000 heretics at the stake. The Spanish Inquisition was also introduced into Mexico, Peru, Sicily (1517), and the Netherlands (1522), and it was not entirely suppressed in Spain until the early 19th century.

insanity In criminal law, a disease, defect, or condition of the mind that renders one unable to understand the nature of a criminal act or the fact that it is wrong. Tests of insanity are not intended as medical diagnoses but rather only as determinations of whether a person may be held criminally responsible for his or her actions. The most enduring definition of insanity in Anglo-American law was that proposed by Alexander Cockburn (1843). Many U.S. states and several courts have adopted a standard under which the accused must lack "substantial capacity either to appreciate the criminality of his conduct or to conform his conduct to the requirements of the law." Some states have abolished the insanity plea, and others allow a finding of "guilty but mentally ill." See also diminished responsibility.

© 2006 Encyclopædia Britannica, Inc.

insect Any member of the class Insecta, the largest ARTHROPOD class, including nearly 1 million known species (about three-fourths of all animals) and an estimated 5–10 million undescribed species. Insect bodies have three segments: head, thorax (which bears three pairs of legs and usually two pairs of wings), and many-segmented abdomen. Many species undergo complete METAMORPHOSIS. There are two subclasses: Apterygota (primitive, wingless forms, including SILVERFISH and bristletails) and Pterygota (more advanced, winged or secondarily wingless forms). The approximately 27 orders of Pterygota are generally classified by wing form: e.g., Coleoptera (BEETLES), Diptera (DIPTERANS), Heteroptera (BUGS). Insects are found in almost all terrestrial and freshwater and some marine habitats.

Body plan of a generalized insect. The body is usually divided into a head, thorax, and abdomen. The head bears appendages modified into mouthparts and antennae bearing sense organs. Mouthparts include the toothed mandibles and bladelike maxillae found behind the "upper lip," or labrum. A second pair of maxillae, partly fused, form the "lower lip," or labium. An adult usually has both simple eyes (ocelli) and more-complex faceted compound eyes, as well as a pair of wings on the thorax. The tarsal segment of the jointed leg often has claws with adhesive pads, enabling the insect to hold onto smooth surfaces. In some insects (including crickets and cockroaches), a pair of feelers (cerci) bearing sense organs are located at the rear of the abdomen. Tiny openings (spiracles) on the thorax and abdomen allow passage of oxygen to and release of carbon dioxide from internal air-filled tubules or tracheae. Sperm from the male is stored in the female's spermatheca until an egg released from the ovary passes through the oviduct. The female may have an ovipositor for depositing eggs.

© MERRIAM-WEBSTER INC.

insecticide Any of a large group of substances used to kill INSECTS. Such substances are mainly used to control pests that infest cultivated plants and crops or to eliminate disease-carrying insects in specific areas. Inorganic insecticides include ARSENIC, LEAD, and COPPER compounds. Some organic insecticides are natural, such as rotenone, pyrethrins, and NICOTINE (see TOXIN). Others are synthetic, such as chlorinated HYDROCARBONS (e.g., DDT, dieldrin, lindane); carbamates, related to UREA (e.g., carbaryl, carbofuran); and parathions, organic PHOSPHORUS ESTERS. Insect HORMONES may be included as a class. Insecticides may affect the NERVOUS SYSTEM, inhibit essential ENZYMES, or prevent LARVAE from maturing (e.g., juvenile hormone). Some are stomach POISONS, some inhalation poisons, and others contact poisons. Agents such as inert oils act mechanically, simply blocking the breathing pores. Insecticides vary widely not only in effectiveness against target insects (which may develop resistance) but also in toxicity to nontarget species (including humans) and environmental effects; many of the worst (e.g., DDT) have been banned or their use curtailed.

insectivore \in-'sek-tə-ˌvōr\ Any member of the mammalian order (Insectivora) that includes the HEDGEHOGS, MOLES, and sometimes SHREWS (some of which are considered PRIMATES by some authorities), or, more generally, any animal that eats mainly insects. The mammalian insectivores are generally small, active, and nocturnal. They are found in most parts of the world except Antarctica, Australia, and South America. Most species are solitary (except during the breeding season) and short-lived.

insei *Japanese* **"cloistered government"** Rule by retired emperors who have taken Buddhist vows and retired to cloisters. During the late 11th and the 12th century, governmental control of Japan passed from the FUJIWARA FAMILY, which had maintained power through marriages to the imperial family, to cloistered emperors. By abdicating, these emperors escaped the control of Fujiwara regents and chancellors; once inside a temple or monastary, they surrounded themselves with capable non-Fujiwara aristocrats. It was the edicts of the cloistered emperor, not the reigning one, that were obeyed, insofar as any orders were obeyed in a period of increasing collapse of central authority. The practice came to an end with the reign of the emperor GO-DAIGO (1318–39). See also SHOEN.

inside contracting System of manufacturing intermediate between the putting-out system and full factory production. A factory proprietor supplies to an artisan who then hires the workers needed to make a particular part under a contract with the proprietor. Inside contracting was used extensively in the U.S. in the 19th century.

Inside Passage *or* **Inland Passage** Natural sheltered sea route along the U.S.-Canadian coast from SEATTLE, Wash., to Skagway, Alaska. Extending northwest for more than 1,000 mi (1,600 km), it comprises channels and straits between the mainland and islands (including VANCOUVER ISLAND) that protect it from Pacific storms. It is the favoured route for coastal shipping to Alaska. Ports in British Columbia include VICTORIA, VANCOUVER, and Prince Rupert; those in Alaska include Ketchikan, Wrangell, and JUNEAU.

insider trading Illegal use of insider information for profit in financial trading. Since 1934, the SECURITIES AND EXCHANGE COMMISSION has prohibited trading while in possession of material nonpublic information. See also ARBITRAGE, MICHAEL R. MILKEN.

insolvency Condition in which liabilities exceed assets so that creditors cannot be paid. It is a financial condition that often precedes BANKRUPTCY. In the context of equity, insolvency is the inability to pay debts as they become due; insolvency under the balance-sheet approach means that total liabilities exceed total assets.

insomnia Inability to sleep adequately. The causes may include poor sleeping conditions, circulatory or brain disorders, breathing disorders (e.g., sleep apnea), mental distress (e.g., tension or depression), or physical discomfort. Mild insomnia may be treated by improving sleeping conditions or through traditional remedies such as warm baths, milk, or systematic relaxation. Apnea and its associated insomnia may be treated surgically or mechanically with breathing apparatus. Severe or chronic insomnia may necessitate the temporary use of barbiturates or tranquilizers, but such drugs are often addictive and may be decreasingly effective as the body builds up tolerance. Other methods of treatment include PSYCHOTHERAPY and HYPNOSIS.

instinct Involuntary response by an animal, resulting in a predictable and relatively fixed behaviour pattern. Instinctive behaviour is an inherited mechanism that serves to promote the survival of an animal or species. It is most apparent in fighting and sexual activity. The simplest form is the REFLEX. All animals have instinct, but, in general, the higher the animal form, the more flexible the behaviour. Among mammals, learned behaviour often prevails over instinctive behaviour.

Institut Canadien \a^{n}-stē-'tüē-kä-nȧd-'ya^{n}\ Literary and scientific society that came into conflict with the Catholic Church in 19th-century French Canada. It was founded in Montreal in 1844 as a discussion forum and free library, and it established branches throughout French-speaking Canada. It criticized the institutionalism of the church in Quebec and displayed books considered undesirable. Church leaders, including Ignace Bourget, bishop of Montreal (1840–76), attacked the institute, which appealed to Rome for support. In 1869 the church condemned the movement, and most members withdrew.

institutional economics School of economics that flourished in the U.S. in the 1920s and '30s, which viewed the evolution of economic institutions as part of the broader process of cultural development. THORSTEIN VEBLEN laid the foundation for institutionalism with his criticism of traditional economic theory. He tried to replace the concept of people as the makers of economic decisions with a more realistic image of people as influenced by changing customs and institutions. JOHN R. COMMONS emphasized the collective action of various groups in the economy, viewed within a system of continually evolving institutions and laws. Other U.S. institutional economists include REXFORD TUGWELL and WESLEY C. MITCHELL. See also CLASSICAL ECONOMICS, GERMAN HISTORICAL SCHOOL OF ECONOMICS.

Institutional Revolutionary Party (PRI) Political party that dominated Mexico's political life for most of the time since its founding in 1929. It was established as a result of a shift of power from political-military chieftains to state party units following the MEXICAN REVOLUTION (1910–20). Until the late 1990s, nomination to public office by the PRI virtually guaranteed election, but in 1997 Mexico City elected its first non-PRI mayor. At

© 2006 Encyclopædia Britannica, Inc.

the national level, the president, as leader of the party, typically selected the party's next presidential candidate—thus effectively choosing his own successor. Pres. Ernesto Zedillo broke from that tradition in 1999, and the following year opposition candidate Vicente Fox won the presidency, although the PRI maintained control of several state governments.

instrumentalism *or* **experimentalism** Philosophy advanced by John Dewey holding that what is most important in a thing or idea is its value as an instrument of action and that the truth of an idea lies in its usefulness. Dewey favored these terms over the term pragmatism to label the philosophy on which his views of education rested. His school claimed that cognition has evolved not for speculative or metaphysical purposes but for the practical purpose of successful adjustment. Ideas are conceived as instruments for transforming the uneasiness arising from facing a problem into the satisfaction of solving it.

instrumentation In technology, the development and use of precise measuring, analysis, and control equipment. Among the oldest known instruments of measurement was the armillary sphere, an astronomical instrument used in ancient China and Greece. The compass was a striking advance in navigational instrumentation made about the 11th century. Theodolites made accurate determination of locations possible in the 18th century. Instrumentation developed rapidly in the Industrial Revolution. Manufacturing required precision instruments, such as the screw micrometer, which could measure 0.0001 in. (0.0025 mm). The industrial application of electricity required instruments to measure current, voltage, and resistance. Today most manufacturing processes rely on instrumentation for monitoring chemical, physical, and environmental properties. Instruments used in medicine and biomedical research are just as varied as those in industry. See also analysis.

insulator Substance that blocks or retards the flow of electric current or heat. An insulator is a poor conductor because it has a high resistance to such flow. Electrical insulators are commonly used to hold conductors in place, separating them from one another and from surrounding structures to form a barrier between energized parts of an electric circuit and confine the flow of current to wires or other conducting paths. Electrical insulators include rubber, plastic, porcelain, and mica. Thermal insulators. which break up the heat-flow path by absorbing radiant heat, include fiberglass, cork, and rock wool.

insulin Polypeptide hormone (see peptide) that regulates blood glucose levels. Secreted by the islets of Langerhans (see Langerhans, islets of) in the pancreas when blood glucose rises, as after a meal, it helps transfer the glucose into the body's cells to be oxidized (see oxidation-reduction) for energy or converted and stored as fatty acids or glycogen. When blood glucose falls, insulin secretion stops and the liver releases more glucose into the blood. Insulin has various related functions in the liver, muscles, and other tissues, controlling the balance of glucose with related compounds. Insulin-related disorders include diabetes mellitus and hypoglycemia. Frederick Banting and J.J.R. Macleod won a Nobel Prize in 1923 for discovering insulin, and Frederick Sanger won one in 1958 for determining its amino acid sequence.

Insull \'in-səl**, Samuel** (b. Nov. 11, 1859, London, Eng.—d. July 19, 1938, Paris, France) British-born U.S. public-utilities magnate. He moved to the U.S. in 1881 to become the private secretary of Thomas Alva Edison and rose to become president of the Chicago Edison Co. in 1892. By 1907 he had taken control of Chicago's transit system. By 1912 his vast electric-power system, enlarged by various mergers, was operating several hundred power plants. He vigorously promoted the stock of his holding companies. When they collapsed in 1932, he fled to Europe; extradited in 1934, he was tried three times for fraud, violation of bankruptcy laws, and embezzlement but was acquitted each time.

insurance Contract that, by redistributing risk among a large number of people, reduces losses from accidents incurred by an individual. In return for a specified payment (premium), the insurer undertakes to pay the insured or his beneficiary a specified amount of money in the event that the insured suffers loss through the occurrence of an event covered by the insurance contract (policy). By pooling both the financial contributions and the risks of a large number of policyholders, the insurer is able to absorb losses much more easily than is the uninsured individual. Insurers may offer insurance to any individual able to pay, or they may contract with members of a group (e.g., employees of a firm) to offer special rates for group insurance. Marine insurance, covering ships and voyages, is the oldest form of insurance; it originated in ancient times with loans to shipowners that were repayable only on safe completion of a voyage, and it was formalized in medieval Europe. Fire insurance arose in the 17th century, and other forms of property insurance became common with the spread of industrialization in the 19th century. It is now possible to insure almost any kind of property, including homes, businesses, motor vehicles, and goods in transit. See also casualty insurance; health insurance; liability insurance; life insurance.

intaglio \in-'tal-yō\ Engraved or incised work on gemstones, glass, ceramics, stone, or similar material in which the design is sunk beneath the surface, the opposite of cameo and relief. It is the most ancient form of gem engraving; the earliest known Babylonian cylinder seals date from c. 4000 BC. The term intaglio is also used to describe printmaking processes in which the design is cut, scratched, or etched into a printing surface of copper, zinc, or aluminum; ink is then rubbed into the incisions or grooves, the surface is wiped clean, and the paper is embossed into the incised lines with pressure from a roller press. Intaglio processes are the most versatile of printmaking methods, as they can produce a wide range of effects.

intarsia \in-'tär-sē-ə\ Form of wood inlay. Italian intarsia, or inlaid mosaic of wood, which probably derived from East Asian ivory and wood inlay, found its richest expression during the Renaissance in Italy (c. 1400–1600). It was often used in panels over the backs of choir stalls and in private studies and chapels of princes.

integer Whole-valued positive or negative number or 0. The integers are generated from the set of counting numbers 1, 2, 3, . . . and the operation of subtraction. When a counting number is subtracted from itself, the result is zero. When a larger number is subtracted from a smaller number, the result is a negative whole number. In this way, every integer can be derived from the counting numbers, resulting in a set of numbers closed under the operation of subtraction (see group theory).

integral Fundamental concept of calculus related to areas and other quantities modeled by functions. A definite integral gives the area between the graph of a function and the horizontal axis between vertical lines at the endpoints of an interval. It also calculates the net change in a system over an interval, thus leading to formulas for the work done by a varying force or the distance traveled by an object moving at varying speeds. When only the function is given, with no interval, it is known as an indefinite integral. The process of solving either a definite or an indefinite integral is called integration. According to the fundamental theorem of calculus, a definite integral can be calculated by using its antiderivative (a function whose rate of change, or derivative, equals the function being integrated). Integrals extend to higher dimensions through multiple integrals. See also line integral; surface integral.

integral, line See line integral

integral, surface See surface integral

integral calculus Branch of calculus concerned with the theory and applications of integrals. While differential calculus focuses on rates of change, such as slopes of tangent lines and velocities, integral calculus deals with total size or value, such as lengths, areas, and volumes. The two branches are connected by the fundamental theorem of calculus, which shows how a definite integral is calculated by using its antiderivative (a function whose rate of change, or derivative, equals the function being integrated). For example, integrating a velocity function yields a distance function, which enables the distance traveled by an object over an interval of time to be calculated. As a result, much of integral calculus deals with the derivation of formulas for finding antiderivatives. The great utility of the subject emanates from its use in solving differential equations.

integral equation In mathematics, an equation with an unknown function within an integral. An example is

$$f(x) = \int_{-\infty}^{\infty} \cos(xt)\,\varphi(t)\,dt$$

where $f(x)$ is known and $\varphi(t)$ is to be found, given certain conditions on f. Such equations are useful in solving differential equations.

integral transform In mathematics, a function that results when a given function is multiplied by a so-called kernel function, and the product is integrated (see integration) between suitable limits. Its value lies in its ability to simplify intractable differential equations (subject to particular

© 2006 Encyclopædia Britannica, Inc.

boundary conditions) by transforming the DERIVATIVES and boundary conditions into terms of an ALGEBRAIC EQUATION that may easily be solved. The solution yielded must be converted to the final solution using an inverse transformation. Several integral transforms are named for the mathematicians who introduced them (FOURIER TRANSFORM, LAPLACE TRANSFORM).

integrated circuit (IC) *or* **microcircuit** *or* **chip** *or* **microchip** Assembly of microscopic electronic components (TRANSISTORS, DIODES, capacitors, and resistors) and their interconnections fabricated as a single unit on a wafer of semiconducting material, especially silicon. Early ICs of the late 1950s consisted of about 10 components on a chip 0.12 in. (3 mm) square. Very large-scale integration (VLSI) vastly increased circuit density, giving rise to the MICROPROCESSOR. The first commercially successful IC chip (Intel, 1974) had 4,800 transistors; Intel's Pentium (1993) had 3.2 million, and more than a billion are now achievable.

integrated pest management Technique for agricultural disease- and PEST-control in which as many pest-control methods as possible are used in an ecologically harmonious manner to keep infestation within manageable limits. Integrated pest management addresses the serious ecological problems created by the extensive use of powerful chemical PESTICIDES. It minimizes their use and combines them with biological methods of pest control, including the breeding of pest-resistant crop varieties, the development of crop culture methods that inhibit pest proliferation, the release of predators or parasites of the pest species, and the placement of traps baited with the pest's own sex attractants (PHEROMONES). Chemical insecticides generally are applied only as a last resort.

Integrated Services Digital Network See ISDN

integration In CALCULUS, the process of finding a FUNCTION whose DERIVATIVE is a given function. The term, sometimes used interchangeably with "antidifferentiation," is indicated symbolically with the integral sign $\int$. (The DIFFERENTIAL dx usually follows to indicate x as the VARIABLE.) The basic rules of integration are: (1) $\int(f + g)dx = \int f dx + \int g dx$ (where f and g are functions of the variable x), (2) $\int kf dx = k\int f dx$ (k is a constant), and (3)

$$\int x^n dx = \left(\frac{1}{n+1}\right)x^{n+1} + C$$

(C is a constant). Note that any constant value may be added onto an indefinite integral without changing its derivative. Thus, the indefinite integral of $2x$ is $x^2 + C$, where C can be any real number. A definite integral is an indefinite integral evaluated over an interval. The result is not affected by the choice for the value of C. See also DIFFERENTIATION.

integument \in-'teg-yù-mənt\ Covering of the body, which protects it from the outside world and from drying out. In humans and other mammals it consists of the SKIN (including outer epidermis and inner dermis) and its related structures, including HAIR, NAILS, and SEBACEOUS and SWEAT glands.

Intel Corp. U.S. manufacturer of semiconductor computer circuits. Intel was founded in 1968 as NM Electronics by ROBERT NOYCE and Gordon Moore, inventors of the integrated circuit, to manufacture large-scale integrated (LSI) circuits. In the early 1970s it introduced the most powerful semiconductor chips then known, which soon replaced the magnetic cores previously used in computer memories. IBM chose to use Intel's 8088 MICROPROCESSOR (introduced 1978) in its first PERSONAL COMPUTER (the IBM PC), and Intel microprocessors became standard for all PC-type machines. Although other manufacturers eventually developed Intel-compatible microprocessors, Intel continued to power more than 75% of PCs at the beginning of the 21st century.

intellectual property Property that derives from the work of an individual's mind or intellect. Early COPYRIGHT law aimed to protect the economic interests of book publishers rather than the intellectual rights of authors. Modern copyright law protects the labour of elaborating an idea, but not the idea itself. The concept of discovery also plays a role in intellectual property rights: a PATENT is awarded to one who can demonstrate that he or she has invented something not previously known. The WORLD TRADE ORGANIZATION requires members to establish and enforce minimum levels of copyright, patent, and TRADEMARK protection within their jurisdictions. The World Intellectual Property Organization, which began operations in 1970, promotes the worldwide protection of both industrial property (inventions, trademarks, and designs) and copyrighted materials (literary, musical, photographic, and other artistic works).

intelligence In education, the ability to learn or understand or to deal with new or challenging situations. In psychology, the term may more specifically denote the ability to apply knowledge to manipulate one's environment or to think abstractly as measured by objective criteria (such as the IQ test). Intelligence is usually thought of as deriving from a combination of inherited characteristics and environmental (developmental and social) factors. The subject remains hotly debated, and many have tried to show that either biology (especially genes) or environment (especially conditions reflecting socioeconomic class) are more or less exclusively responsible for producing differences in intelligence. Particularly contested have been studies purporting to show links between ethnic heritage and intelligence, most of which have not been accepted in the scientific community. General intelligence is often said to comprise various specific abilities (verbal ability, ability to apply logic in solving problems, etc.), but critics contend that such compartments fail to reflect the nature of cognition and that other models, perhaps based on INFORMATION PROCESSING, are needed. High intelligence (as measured by tests) is sometimes shown to correlate with social achievement, but most experts believe other factors are important and that intelligence is no guarantor of success (and its lack is no guarantor of failure). See also ARTIFICIAL INTELLIGENCE; CREATIVITY.

intelligence In government and military operations, evaluated information concerning the strength, activities, and probable courses of action of international actors that are usually, though not always, enemies or opponents. The term also refers to the collection, analysis, and distribution of such information and to the secret intervention in the political or economic affairs of other countries, an activity commonly known as "covert action." Intelligence is an important component of national power and a fundamental element in decision making regarding national security, defense, and foreign policies. It is conducted on three levels: strategic, tactical, and counterintelligence. Despite the public image of intelligence operatives as cloak-and-dagger secret agents, much intelligence work involves an undramatic search of "open" sources, such as radio broadcasts and various publications. Among covert sources of intelligence are imagery intelligence, which includes aerial and space reconnaissance, signals intelligence, which includes electronic eavesdropping and CODE breaking, and human intelligence, which involves the secret agent working at the classic spy trade. Leading national intelligence organizations are the CENTRAL INTELLIGENCE AGENCY (CIA) in the U.S.; the Federal Security Service in Russia; MI5 and MI6 in Britain; and the MOSSAD in Israel.

intelligence quotient See IQ

intelligent design Argument intended to demonstrate that living organisms were created in more or less their present forms by an "intelligent designer." Intelligent design was formulated in the 1990s, primarily in the United States, as an explicit refutation of the Darwinian theory of biological EVOLUTION. Building on a version of the ARGUMENT FROM DESIGN for the existence of God, proponents of intelligent design observed that the functional parts and systems of living organisms are "irreducibly complex" in the sense that none of their component parts can be removed without causing the whole system to cease functioning. From this premise they inferred that no such system could have come about through the gradual alteration of functioning precursor systems by means of random mutation and NATURAL SELECTION, as the standard evolutionary account maintains; therefore, living organisms must have been created all at once by an intelligent designer. Proponents of intelligent design generally avoided identifying the designer with the God of Christianity or other monotheistic religions, in part because they wished the doctrine to be taught as a legitimate scientific alternative to evolution in public schools in the United States, where the government is constitutionally prohibited from promoting religion. Critics of intelligent design argued that it rests on a fundamental misunderstanding of natural selection, that it ignores the existence of precursor systems in the evolutionary history of numerous organisms, and that it is ultimately untestable and therefore not scientific. See also CREATIONISM.

intensive care unit *or* **critical care unit** Hospital facility for care of critically ill patients at a more intensive level than is needed by other patients. Staffed by specialized personnel, the intensive care unit contains a complex assortment of monitors and life-support equipment that can sustain life in once-fatal situations, including adult RESPIRATORY DISTRESS SYNDROME, KIDNEY FAILURE, multiple organ failure, and sepsis (see SEPTICEMIA).

intention In Scholastic logic and psychology, a concept used to describe a mode of being or relation between a mind and an object. In knowing, the mind is said to "intend" or "tend toward" its object, and a thing as

© 2006 Encyclopædia Britannica, Inc.

known, or in the knowing mind, has "intentional being," as with squaring the circle, which, though impossible, can be an object of intention. In action theory, intention is taken in a different but related sense, as in acting with the intention of accomplishing a specific purpose. An important question in action theory is that of the relation between having a specific intention in doing something and doing the same thing intentionally. Is an intention necessary for intentional action and, if so, is it a cause of such action or some other kind of ground of it?

intentionality Property of being directed toward an object. Intentionality is exhibited in various mental phenomena. Thus, if a person experiences an emotion toward an object, he has an intentional attitude toward it. Other examples of intentional attitudes toward an object are, looking for, believing in, and thinking about. Intentional attitudes also include PROPOSITIONAL ATTITUDES. One characteristic of intentionality is "inexistence": A person may be intentionally related to an object that does not exist. Thus, what a person looks for (and intentionally seeks) may not exist, and an event he believes to occur may not occur at all. Another characteristic is referential opacity: A sentence truly ascribing an intentional state to a person may become false when some alternative description of the object of that state is substituted for it. Suppose that his pen is the millionth pen produced this year, so that "his pen" and "the millionth pen produced this year" have the same reference. It may be true to say that he is in the intentional state of searching for his pen but false to say that he is in the intentional state of searching for the millionth pen produced this year; similarly, he may believe that this is his pen and yet not believe this is the millionth pen produced this year.

interaction, fundamental See FUNDAMENTAL INTERACTION

interactionism In sociology, a theoretical perspective that derives social processes (such as conflict, cooperation, identity formation) from human interaction. It was GEORG SIMMEL who first stated that "society is merely the name for a number of individuals connected by interaction." In the U.S., JOHN DEWEY, Charles H. Cooley, and especially GEORGE HERBERT MEAD developed symbolic interactionism, the theory that mind and self are not part of the innate human equipment but arise through social interaction—i.e., communication with others using SYMBOLS. For symbolic interactionists, the individual is always engaged in socialization or the modification of one's mind, role, and behaviour through contact with others. Other theorists, such as ALFRED SCHUTZ, drew on PHENOMENOLOGY to extend interactionism, an effort that led to the creation of fields such as SOCIOLINGUISTICS and ethnomethodology, the study of people's sense-making activities. See also ERVING GOFFMAN.

interactionism In philosophy of MIND, a species of mind-body DUALISM that holds that mind and body, though separate and distinct substances, causally interact. Interactionists assert that a mental event (as when a person forms the intention to put his hand in a fire) can be the cause of a physical action. Conversely, the physical event (his hand coming into contact with the fire) can be the cause of a mental event (his feeling an intense pain). The classical formulation of interactionism is due to RENÉ DESCARTES, who could not satisfactorily explain how the interaction takes place, apart from the speculation that it occurs in the pineal gland. This problem led some philosophers to deny that mind and body really interact and to explain appearances to the contrary by appealing to divine intervention to create mental or physical effects for physical or mental causes (see OCCASIONALISM) or to a divinely ordained "preestablished harmony" between the courses of mental and physical events. BENEDICT DE SPINOZA argued for a monistic theory on which mind and body were both attributes of a single underlying substance. See also DUALISM; MIND-BODY PROBLEM.

Inter-American Development Bank (IDB) international organization founded in 1959 by 20 governments in North and South America to finance economic and social development in the Western Hemisphere. The largest charter subscribers were Argentina, Brazil, Mexico, Venezuela, and the U.S. Subscribers now include nearly 30 countries in North and South America and more than 15 countries in Europe, as well as Japan and Israel. The IDB group also includes the Inter-American Investment Corp. and the Multilateral Investment Fund. It is headquartered in Washington, D.C.

interchangeable parts Identical components that can substitute one for another, particularly important in MANUFACTURING. MASS PRODUCTION, which transformed the organization of work, came about by the development of the MACHINE-TOOL industry by a series of 19th-century innovators. With precision equipment, large numbers of identical parts could be produced at low cost and with a small workforce. See also AMERICAN SYSTEM OF MANUFACTURE; ARMOURY PRACTICE; AUTOMOBILE industry; FACTORY; HENRY FORD; HENRY LELAND.

intercolumniation In architecture, the space between columns that support an ARCH or ENTABLATURE. Classical, Renaissance, and Baroque architecture used a system codified by VITRUVIUS in which the measurement is expressed in terms of the columns' diameters (e.g., two columns might be described as being three diameters apart). The system conveniently expressed the measurement of a unit of space whose size varied from building to building according to the Classical ORDER used.

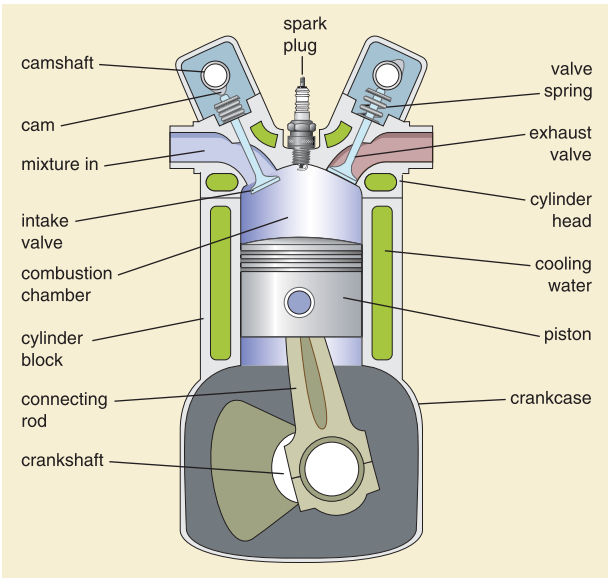
intercontinental ballistic missile See ICBM

interest Price paid for the use of CREDIT or MONEY. It is usually figured as a percentage of the money borrowed and is computed annually. Interest is charged by the lender as payment for the loss of his or her money for a period of time. The interest rate reflects the risk of lending and is higher for loans that are considered higher-risk, a relationship known as the risk/return tradeoff. Like the prices of goods and services, interest rates are responsive to SUPPLY AND DEMAND. Theories explaining the need for interest include the time-preference theory, according to which interest is the inducement to engage in time-consuming but more productive activities, and the LIQUIDITY-PREFERENCE theory of JOHN MAYNARD KEYNES, according to which interest is the inducement to sacrifice a desired degree of liquidity for a nonliquid contractual obligation. Interest rates may also be used as a tool for implementing MONETARY POLICY (see DISCOUNT RATE). High interest rates may dampen the economy by making it difficult for consumers, businesses, and home buyers to secure loans, while lower rates tend to stimulate the economy and encourage both INVESTMENT and CONSUMPTION.

interference In physics, the net effect of combining two or more WAVE trains moving on intersecting or coincident paths. Constructive interference occurs if two components have the same FREQUENCY and PHASE; the wave amplitudes are reinforced. Destructive interference occurs when the two waves are out of phase by one-half period (see PERIODIC MOTION); if the waves are of equal amplitude, they cancel each other. Two waves moving in the same direction but having slightly different frequencies interfere constructively at regular intervals, resulting in a pulsating frequency called a BEAT. Two waves traveling in opposite directions but having equal frequencies interfere constructively in some places and destructively in others, resulting in a standing wave.

interferon \ˌin-tər-'fir-ˌän\ Any of several related PROTEINS produced by all VERTEBRATES and possibly some invertebrates. They play an important role in resistance to infection. The body's most rapidly produced and important defense against VIRUSES, they can also combat BACTERIA and parasites (see PARASITISM), inhibit cell division, and promote or impede cell differentiation. Interferon's effect is indirect—it reacts with susceptible cells, which then resist virus multiplication—in contrast to ANTIBODIES, which act by combining directly with a specific virus. Various types of interferons are distinguished by their characteristics as proteins and by which cells produce them. Some are now produced by GENETIC ENGINEERING. Initial hopes that interferon would be a wonder drug for a wide variety of diseases were deflated by its serious side effects, but a few rare conditions respond to it.

interior design Design of interior spaces, closely related to architecture and sometimes including interior decoration. The designer's goal is to produce a coordinated and harmonious whole in which the architecture, site, function, and visual aspects of the interior are unified, pleasing to mind and body, and appropriate to the activities to be pursued there. Design criteria include harmony of colour, texture, lighting, scale, and proportion. Furnishings must be in proportion to the space they occupy and to the needs and lifestyles of the residents. The design of such nonresidential spaces as offices, hospitals, stores, and schools places clear organization of functions ahead of purely aesthetic concerns.



interleukin \ˌin-tər-'lü-kən\ Any of a class of naturally occurring PROTEINS important in regulation of LYMPHOCYTE function. Several known types are recognized as crucial constituents of the body's immune system (see IMMUNITY). ANTIGENS and microbes stimulate production of interleukins, which induce production of various types of lymphocytes in a complex series of reactions that ensure a plentiful supply of T CELLS that fight specific infectious agents.

intermediate goods See PRODUCER GOODS

© 2006 Encyclopædia Britannica, Inc.

intermediate-range nuclear weapons Class of NUCLEAR WEAPONS with a range of 620–3,400 mi (1,000–5,500 km). Some multiple warheads developed by the Soviet Union could strike several targets anywhere in Western Europe in less than 10 minutes. The U.S. could send a single nuclear warhead from central Europe to Moscow in less than 10 minutes. Both were regarded as offensive, first-strike weapons. U.S.-Soviet arms-control negotiations (1980–87) led to the intermediate nuclear forces (INF) treaty, signed by MIKHAIL GORBACHEV and RONALD REAGAN, to completely remove and dismantle these and shorter-range weapons.

internal-combustion engine Any ENGINE in which a fuel-air mixture is burned in the engine proper so that the hot gaseous products of combustion act directly on the surfaces of its moving parts, such as those of pistons (see PISTON AND CYLINDER) or TURBINE rotor blades. Internal-combustion engines include GASOLINE ENGINES, DIESEL ENGINES, gas turbine engines, pure JET ENGINES, and ROCKET engines and motors, and are one class of heat engines. They are commonly divided into continuous-combustion engines and intermittent-combustion engines. In the first type (e.g., jet engines) fuel and air flow steadily into the engine, where a stable flame is maintained for continuous combustion. In the second (e.g., gasoline–reciprocating-piston engines), discrete quantities of fuel and air are periodically ignited. See also AUTOMOBILE industry, MACHINE, STEAM ENGINE.

Cross section showing one cylinder of a four-stroke internal-combustion engine. In the first stroke (shown), a cam (left) compresses a valve spring, opening the intake valve to admit the fuel-air mixture to the cylinder. Both valves then close, the mixture is compressed by the piston, and current is sent to the spark plug. Ignited by the spark plug, the burning mixture forces the piston down, producing power to turn the crankshaft and run the car. Another cam (right) opens the exhaust valve and the burned exhaust gases exit.

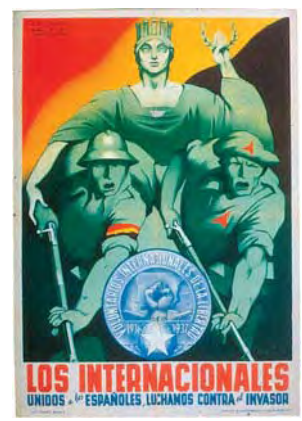
© MERRIAM-WEBSTER INC.

internal medicine Medical specialty dealing with the entire patient rather than a particular organ system, covering DIAGNOSIS and medical (rather than surgical) treatment in adults. Its development began in the 17th century with THOMAS SYDENHAM's concept of disease, but until disease-specific therapies were developed in the 20th century, internists could do little to treat diseases. As more specific treatments became available, medical knowledge increased, and subspecialties in specific organ systems were defined, internal medicine became recognized as a specialty.

internal reflection, total See TOTAL INTERNAL REFLECTION

Internal Revenue Service (IRS) Agency of the U.S. Department of the Treasury charged with administering and enforcing federal tax laws, except those relating to alcohol, tobacco, firearms, and explosives. It issues rulings and regulations to supplement the provisions of the Internal Revenue Code; determines, assesses, and collects internal revenue taxes; and determines exempt organization status.

International, Communist See FIRST INTERNATIONAL, SECOND INTERNATIONAL, COMINTERN



international agreement Instrument by which nation-states and international organizations regulate matters of concern. They are governed by INTERNATIONAL LAW, and their purposes include the development and codification of international law, the creation of international bodies, and the resolution of actual and potential international conflict. The most comprehensive agreement is a TREATY; others, including conventions (e.g., the GENEVA CONVENTIONS), charters (e.g., the UN charter), and pacts (e.g., the KELLOGG-BRIAND PACT), are less formal and rely primarily on goodwill. Agreements may be negotiated between states, between an organization and a state, between organizations, or between any of those and a NONGOVERNMENTAL ORGANIZATION.

International Atomic Energy Agency (IAEA) International organization officially founded in 1957 to promote the peaceful use of NUCLEAR ENERGY. Based in Vienna, its activities include research on the applicability of nuclear energy to medicine, agriculture, water resources, and industry; provision of technical assistance; development of radiation safeguards; and public relations programs. Following the FIRST PERSIAN GULF WAR, IAEA inspectors were called on to certify that Iraq was not manufacturing nuclear weapons. The IAEA and its director general, Mohamed ElBaradei, were awarded the Nobel Prize for Peace in 2005.

International Bank for Economic Cooperation (IBEC) International bank instituted by an agreement signed by Bulgaria, Hungary, East Germany, Mongolia, Poland, Romania, Czechoslovakia, and the Soviet Union in 1963 to facilitate economic cooperation among member countries and promote their development. Cuba and Vietnam joined later. Its functions included making multilateral settlements in transferable rubles, advancing credit to members with temporary trade imbalances, accepting deposits in transferable rubles and in gold and convertible currencies, and conducting ARBITRAGE and other financial operations. After the fall of the Soviet Union it became a Russian bank with a new charter.

International Bank for Reconstruction and Development (IBRD) Main component organization of the WORLD BANK. The IBRD lends money to middle-income and creditworthy poorer countries. Most of its funds come from sales of bonds in international capital markets. More than 180 countries are members of the IBRD. Each member's voting power is linked to its capital subscription; the U.S., with some one-sixth of the shares in the IBRD, has veto power over any proposed changes to the bank. See also INTERNATIONAL MONETARY FUND; UNITED NATIONS DEVELOPMENT PROGRAMME.

International Brigades Groups of foreign volunteers who fought on the Republican side against the Nationalist forces in the SPANISH CIVIL WAR (1936–39). So-called because their members initially came from some 50 countries, the International Brigades were recruited, organized, and directed by the COMINTERN, with headquarters in Paris. The U.S. contingent called itself the Abraham Lincoln Batallion. Many of the mostly young recruits were communists before they became involved in the conflict; more joined the party during the course of the war. The total number of volunteers reached about 60,000. The brigades were formally withdrawn from Spain late in 1938.

"The Internationals—United with the Spaniards We Fight the Invader," poster by Parrilla, published by the International Brigades, 1936–37.

COURTESY OF THE ABRAHAM LINCOLN BRIGADE ARCHIVES, BRANDEIS UNIVERSITY LIBRARY

International Court of Justice (ICJ) *or* **World Court** Principal judicial body of the UNITED NATIONS, located at The Hague. Its predecessor organization was the Permanent Court of International Justice, the judicial body of the LEAGUE OF NATIONS. Its first session was held in 1946. Its jurisdiction is limited to disputes between states willing to accept its authority on matters of INTERNATIONAL LAW. Its decisions are binding, but it has no enforcement power; appeals must be made to the UN Security

© 2006 Encyclopædia Britannica, Inc.

Council. Its 15-member body of judges, each of whom serves a nine-year term, is elected by countries party to the court's founding statute. No two judges may come from the same country. See also European Court of Justice.

International Criminal Court (ICC) Permanent judicial body established by the Rome Statute of the International Criminal Court (1998) to prosecute individuals accused of genocide, war crimes, and crimes against humanity. The court commenced operations on July 1, 2002, after the requisite number of countries (60) ratified the Rome Statute (some 140 countries signed the agreement). The ICC was established as a court of last resort to prosecute the most heinous offenses in cases where national courts fail to act. It is headquartered in The Hague. By 2002 China, Russia, and the U.S. had declined to participate in the ICC, and the U.S. had campaigned actively to have its citizens exempted from the court's jurisdiction.

International Date Line Imaginary line from the North Pole to the South Pole that arbitrarily separates each calendar day from the next. It corresponds along most of its length to the 180th meridian of longitude but deviates to the east through the Bering Strait to avoid dividing Siberia and then deviates to the west to include the Aleutian Islands with Alaska. South of the Equator, another eastward deviation allows certain island groups to have the same day as New Zealand. The date line is a consequence of the worldwide use of timekeeping systems arranged so that local noon corresponds approximately to the time at which the Sun crosses the local meridian of longitude. See also standard time.

international exchange See foreign exchange

International Harvester Co. See Navistar International Corp.

International Herald Tribune Daily newspaper published in Paris. It has long been the staple source of English-language news for American expatriates, tourists, and businesspeople in Europe. Its roots are in the *Paris Herald* (established 1887); a merger in 1924 between its parent, the *New York Herald*, and the *New York Tribune* created the *New York Herald-Tribune* and the *Paris Herald Tribune*. The Paris edition, which was faring well at the time of its parent's demise in 1966, was renamed when it was rescued by a joint venture of the *New York Times*, the *Washington Post*, and Whitney Communications. The New York Times Co. and the Washington Post Co. became half-owners of the paper in 1991. The New York Times Co. became the full owner in 2003.

International Labour Organization (ILO) Specialized agency of the United Nations system dedicated to improving labour conditions and living standards throughout the world. Established in 1919 through the Treaty of Versailles as an agency of the League of Nations, the ILO became the first specialized agency affiliated with the UN in 1946. Its activities include compiling labour statistics, protecting international migrants, and safeguarding trade-union rights. Its delegates come from member governments (50%), labour (25%), and employers (25%). About 175 countries are represented in the ILO. It received the Nobel Prize for Peace in 1969.

International Ladies' Garment Workers' Union (ILGWU) Former industrial union in the U.S. and Canada that represented workers in the women's clothing industry. When it was formed in 1900, most of its members were Jewish immigrants working in sweatshops. Successful ILGWU strikes in New York in 1909–10 secured higher wages and shorter hours. Under the leadership of David Dubinsky (president 1932–66), the union grew from 45,000 members to almost half a million. Active in the effort to organize mass-production industries, it was expelled from the AFL in 1937 but returned in 1940. From the 1970s, membership shrank as U.S. firms moved garment production overseas, and in 1995 the ILGWU merged with the Amalgamated Clothing and Textile Workers' Union to form the Union of Needletrades, Industrial and Textile Employees. See also AFL-CIO.

international law Body of legal rules, norms, and standards that apply between sovereign states and other entities that are legally recognized as international actors. The term was coined by the English philosopher Jeremy Bentham. Important elements of international law include sovereignty, recognition (which allows a country to honour the claims of another), consent (which allows for modifications in international agreements to fit the customs of a country), freedom of the high seas, self-defense (which ensures that measures may be taken against illegal acts committed against a sovereign country), freedom of commerce, and protection of nationals abroad. International courts, such as the International Court of Justice, resolve disputes on these and other matters, including war crimes. See also asylum; immunity.

International Monetary Fund (IMF) Specialized agency of the United Nations system. It was conceived at the Bretton Woods Conference (1944) and officially founded in 1945 as a voluntary cooperative institution to help ensure the smooth international buying and selling of currency. More than 180 countries are members of the IMF. Its principal functions are stabilizing currency-exchange rates, financing the short-term balance-of-payments deficits of member countries, and providing advice and technical assistance to borrowing countries. Members contribute operating funds and receive voting rights according to their volume of international trade, national income, and international reserve holdings; the U.S. holds in excess of one-sixth of the voting rights, more than twice the percentage of any other member. The IMF has no coercive power over members, but it can refuse to lend money to members that do not agree to adhere to its policies; as a last resort it can ask members to withdraw from the organization. Critics of the IMF contend that the austerity and privatization measures it requires of borrowing countries reduce economic growth, deepen and prolong financial crises, and create severe hardships for the world's poorest people. See also International Bank for Reconstruction and Development; World Bank.

international organization Institution drawing membership from at least three states, having activities in several states, and whose members are held together by a formal agreement. Only a few existed before 1850; several thousand were active in the early 21st century. Some are intergovernmental (e.g., the United Nations), and some are nongovernmental (e.g., Amnesty International). Some have multiple worldwide or regional purposes (e.g., the European Union), and some have single purposes (e.g., the World Intellectual Property Organization). One effect of their proliferation is a stronger sense of interdependence among states, which in turn has stimulated recognition of the need for cooperation to address international and global problems.

International Organization for Standardization (ISO) Organization for determining standards in most technical and nontechnical fields. Founded in Geneva in 1947, its membership includes more than 100 countries. An appropriate national body represents each country; for example, the U.S. member is the American National Standards Institute (ANSI). Standardization affects units of measurement, alphabetization and transliteration, and specifications for parts, materials, surfaces, processes, tools, methods of testing, and machines. The ISO publishes the results of its work as "International Standards" (IS). ISO standards are optimally reviewed every five years.

international payment Payment made between countries, whether in settlement of a trade debt, as a unilateral transfer of funds, for capital investment, or for some other purpose. The reasons for such payments and the methods of making them and accounting for them are matters of concern to economists and national governments. International debts are settled either from accumulated balances of foreign currency or claims on foreign currency, or by loans from creditor to debtor, or by drawing on the International Monetary Fund, or by movements of gold. How a country balances its international accounts is one of the most important decisions for its balance of payments.

International Phonetic Alphabet (IPA) Set of symbols intended as a universal system for transcribing speech sounds. The promulgation and updating of the IPA has been a principal aim of the International Phonetic Association (Association Phonétique Internationale), founded in Paris in 1886. The first IPA chart was published in 1888. IPA symbols are based on an extended version of the Latin alphabet, with modifications of some letters and the use of additional symbols, some of which had been used in earlier phonetic alphabets. Diacritics are used primarily to show various kinds of secondary articulation.

International Refugee Organization (IRO) Temporary specialized agency of the United Nations system (1946–52). The IRO assisted refugees and displaced persons in Europe and Asia who could not or would not return home after World War II. Taking over the work of its principal predecessor, the United Nations Relief and Rehabilitation Administration, it also assumed responsibility for the legal protection and resettlement of refugees previously carried out by the Intergovernmental Committee on Refugees. It was succeeded by the Office of the United Nations High Commissioner for Refugees.

© 2006 Encyclopædia Britannica, Inc.

international relations Study of the relations of states with each other and with international organizations and certain subnational entities (e.g., bureaucracies and political parties). It is related to a number of other academic disciplines, including political science, geography, history, economics, law, sociology, psychology, and philosophy. The field emerged at the beginning of the 20th century largely in the West and particularly in the U.S. as that country grew in power and influence. The study of international relations has always been heavily influenced by normative considerations, such as the goal of reducing armed conflict and increasing international cooperation. At the beginning of the 21st century, research focused on issues such as TERRORISM, religious and ethnic conflict, the emergence of substate and nonstate entities, the spread of weapons of mass destruction and efforts to counter nuclear proliferation, and the development of international institutions.

International Space Station (ISS) Space station assembled from modules in Earth orbit largely by the U.S. and Russia, with assistance and components from a multinational consortium. The project, which began as a U.S. effort, was long delayed by funding and technical problems. Originally called Freedom in the 1980s, it was redesigned in the 1990s to reduce costs and expand international involvement, at which time it was renamed. In-orbit construction started in late 1998 with the launches of a Russian control module and a U.S.-built connecting node, which were linked in orbit by SPACE SHUTTLE astronauts. In mid 2000 a habitat and control-centre module was added, and later in the year the ISS received its first resident crew, comprising two Russians and an American. Other elements were subsequently joined to the station, with the overall plan calling for a complex of laboratories and habitats crossed by a long truss supporting four large solar power arrays. Station construction involved at least 16 countries, including Canada, Japan, Brazil, and 11 members of the EUROPEAN SPACE AGENCY. Much of the early work aboard the ISS would focus on long-term life-sciences and material-sciences research in the weightless environment. It was expected to serve as the basis for human operations in Earth orbit for at least the first quarter of the 21st century.

International Standard Book Number (ISBN) Ten-digit number assigned before publication to a book or edition thereof. The ISBN identifies various elements of the work, grouping it within a national, geographic, language, or other convenient category and revealing its publisher, title, edition, and volume number. The ISBN is part of the International Standard Bibliographic Description (ISBD), which was prescribed by the International Organization for Standardization; delegates adopted the numbering system in 1969. The numbers are assigned by publishers and administered by designated national standard book numbering agencies such as the R.R. Bowker Co. in the U.S. and the Standard Book Numbering Agency Ltd. in Britain.

International Style Architectural style that developed in Europe and the U.S. in the 1920s and '30s and dominated Western architecture in the mid 20th century. The term was first used in 1932 by Henry-Russell Hitchcock and PHILIP JOHNSON in their essay "The International Style: Architecture Since 1922." The style's most common characteristics are rectilinear forms, open interior spaces, large expanses of glass, steel, and REINFORCED-CONCRETE construction, and light, taut plane surfaces devoid of applied ornamentation. WALTER GROPIUS, Ludwig MIES VAN DER ROHE, and LE CORBUSIER are among the architects most clearly associated with the style. See also BAUHAUS.

International System of Units *or* **Système International d'Unités** \sēs-'tem-a^{n}-ter-nȧ-syȯ-'nȧl-dūˉ-nēˉ-'tā\ *or* **SI system** International decimal system of weights and measures derived from and extending the METRIC SYSTEM of units. Adopted by the 11th General Conference on Weights and Measures in 1960, it was developed to eliminate overlapping but different systems of units of measures fostered by rapid advances in science and technology in the 19th–20th centuries. Its fundamental units include the metre (m) for length, the kilogram (kg) for mass, and the second (sec) for time. Derived units include those for force (newton, N), energy (joule, J), and power (watt, W). See table on opposite page.

International Telecommunication Union (ITU) UNITED NATIONS agency headquartered in Geneva. Its roots can be traced to 1865, when the International Telegraph Union was established to coordinate international development of the telegraph. It acquired its present name in 1934 and became a UN specialized agency in 1947. Its activities include regulating allocation of radio frequencies, setting standards on technical and operational matters, and assisting countries in developing their own telecommunications systems.

International Telephone and Telegraph Corp. (ITT) Former U.S. telecommunications company. It was founded in 1920 by Sosthenes and Hernand Behn as a HOLDING COMPANY for their Caribbean-based telephone and telegraph companies. It expanded into the European market and became a major telecommunications manufacturer. In the 1960s and '70s ITT became a conglomerate, acquiring firms including the Sheraton Corp. and the Hartford Fire Insurance Co. It divested its telecommunications businesses in 1987, and in 1995 it split into three companies: ITT Hartford Group Inc. (insurance); ITT Industries Inc. (defense electronics and auto parts); and a "new" ITT Corp., which merged with Starwood Lodgings in 1997.

international unit Any of several precision standards used in measuring physical quantities, such as mass, length, and time (see INTERNATIONAL SYSTEM OF UNITS), and also lighting systems, radiation processes, and pharmacology. The luminous intensity or candlepower of a light is expressed in candelas. The second is based on the frequency of radiation emitted by cesium-133 atoms. In radioactive decay, the international unit is the number of disintegrations per second in a sample. In pharmacology, the international unit is the quantity of a substance (vitamin, hormone, or toxin) that produces a specified effect when tested according to an internationally accepted procedure.

International Whaling Commission (IWC) An intergovernmental organization created in 1946 to control the rapid escalation of whaling. The original purpose of the IWC was to preserve whale stocks for commercial whalers. Whale populations, however, continued to decline, and in 1986 the IWC instituted a moratorium on commercial whaling that remains in effect. At the beginning of the 21st century, 40 countries belonged to the commission, but membership has fluctuated over the years. The commission's success has been limited by governments leaving the IWC, ignoring its policies, or breaching regulations.

Internet Publicly accessible computer NETWORK connecting many smaller networks from around the world. It grew out of a U.S. Defense Department program called ARPANET (Advanced Research Projects Agency Network), established in 1969 with connections between computers at the University of California at Los Angeles, Stanford Research Institute, the University of California-Santa Barbara, and the University of Utah. ARPANET's purpose was to conduct research into computer networking in order to provide a secure and survivable communications system in case of war. As the network quickly expanded, academics and researchers in other fields began to use it as well. In 1971 the first program for sending E-MAIL over a distributed network was developed; by 1973, the year international connections to ARPANET were made (from Britain and Norway), e-mail represented most of the traffic on ARPANET. The 1970s also saw the development of mailing lists, NEWSGROUPS and BULLETIN-BOARD SYSTEMS, and the TCP/IP communications PROTOCOLS, which were adopted as standard protocols for ARPANET in 1982–83, leading to the widespread use of the term Internet. In 1984 the DOMAIN NAME addressing system was introduced. In 1986 the National Science Foundation established the NSFNET, a distributed network of networks capable of handling far greater traffic, and within a year more than 10,000 hosts were connected to the Internet. In 1988 real-

microgram	μg	0.000001	0.000015 grain

*For metric equivalents of U.S. units, see Weights and Measurements table

time conversation over the network became possible with the development of Internet Relay Chat protocols (see CHAT). In 1990 ARPANET ceased to exist, leaving behind the NSFNET, and the first commercial dial-up access to the Internet became available. In 1991 the WORLD WIDE WEB was released to the public (via FTP). The Mosaic BROWSER was released in 1993, and its popularity led to the proliferation of World Wide Web sites and users. In 1995 the NSFNET reverted to the role of a research network, leaving Internet traffic to be routed through network providers rather than NSF supercomputers. That year the Web became the most popular part of the Internet, surpassing the FTP protocols in traffic volume. By 1997 there were more than 10 million hosts on the Internet and more than 1 million registered domain names. Internet access can now be gained via radio signals, cable-television lines, satellites, and fibre-optic connections, though most traffic still uses a part of the public telecommunications (telephone) network. The Internet is widely regarded as a development of vast significance that will affect nearly every aspect of human culture and commerce in ways still only dimly discernible.

Internet Protocol address See IP ADDRESS

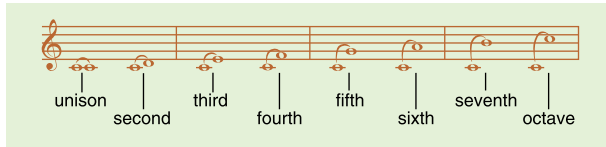
Internet service provider (ISP) Company that provides INTERNET connections and services to individuals and organizations. For a monthly fee, ISPs provide computer users with a connection to their site (see DATA TRANSMISSION), as well as a log-in name and password. They may also provide software packages (such as BROWSERS), E-MAIL accounts, and a personal WEB SITE or home page. ISPs can host Web sites for businesses and can also build the Web sites themselves. ISPs are all connected to each other through network access points, public network facilities on the Internet backbone.

Interpol *officially* **International Criminal Police Organization** International organization whose purpose is to fight international crime. Interpol promotes the widest possible mutual assistance between the criminal police authorities of affiliated countries and seeks to establish and develop all institutions likely to contribute effectively to the prevention and suppression of ordinary crime. The organization traces its

© 2006 Encyclopædia Britannica, Inc.

history to 1914, when a congress of international criminal police, attended by delegates from 14 countries, was held in Monaco. Interpol was formally founded in Austria in 1923 with 20 member countries; after World War II its headquarters moved to Paris and, in 1989, to Lyon, France. By the early 21st century, its membership exceeded 180 countries. Interpol pursues criminals who operate in more than one country (e.g., smugglers), those who stay in one country but whose crimes affect other countries (e.g., counterfeiters of foreign currency), and those who commit a crime in one country and flee to another.

interpolation In mathematics, ESTIMATION of a value between two known data points. A simple example is calculating the mean (see MEAN, MEDIAN, AND MODE) of two population counts made 10 years apart to estimate the population in the fifth year. Estimating outside the data points (e.g., predicting the population five years after the second population count) is called extrapolation. If more than two data points are available, a curve may fit the data better than a line. The simplest curve that fits is a POLYNOMIAL curve. Exactly one polynomial of any given degree—an interpolating polynomial—passes through any number of data points.



interrogation In CRIMINAL LAW, process of formally and systematically questioning a suspect in order to elicit incriminating responses. The process is largely outside the governance of law, though in the U.S. relatively elaborate safeguards have been placed on police interrogatory powers in order to protect the rights of the ACCUSED.

interstate commerce In the U.S., any commercial transaction or traffic that crosses state boundaries or that involves more than one state. Government regulation of interstate commerce is founded on the commerce clause of the Constitution (Article I, section 8), which authorizes Congress "To regulate Commerce with foreign Nations, and among the several States, and with Indian Tribes." The INTERSTATE COMMERCE COMMISSION, established in 1887, was originally intended to regulate the railroad industry; its jurisdiction was later expanded to include trucks, ships, freight forwarders, and other interstate carriers. The Sherman Act (1890), followed by the Clayton Act (1914), made illegal any act that tended to interfere with free competition between and among industries, businesses, and any interstate commercial venture. The Federal Trade Commission (FTC) was established by the Federal Trade Commission Act of 1914, which gave the FTC powers—judicial, legislative, and executive—to administer the Sherman and Clayton acts. The Federal Communications Commission (FCC) was created to protect the right of the public to the airwaves through licensing and oversight of the practices of broadcasters in radio and television. In the 20th century, court decisions tended to interpret interstate commerce broadly, thus allowing Congress to regulate a wide variety of activities by which interstate commerce could be affected, even if they took place within the borders of a single state. One such decision was *Heart of Atlanta Motel* v. *U.S.* (1964), in which the Supreme Court upheld the prohibition of discrimination in public accommodations contained in the 1964 Civil Rights Act on the ground that the discriminatory practices of a business operating in only one state could affect interstate commerce.

Interstate Commerce Commission (ICC) (1887–1995) First REGULATORY AGENCY established in the U.S. and a prototype for independent government regulatory bodies. An agency of the U.S. Department of Transportation, it was responsible for the economic regulation of interstate surface transportation, including railroads, trucking companies, and buslines. It certified carriers, regulated rates, oversaw mergers, and approved railroad construction. The ICC was dissolved in 1995.

interstellar medium Content of the region between the stars, including vast, diffuse clouds of gases and minute solid particles. Such tenuous matter in the MILKY WAY GALAXY accounts for about 5% of its total mass. By no means a complete vacuum, the interstellar medium contains mainly hydrogen gas, with a smaller amount of helium and sizable quantities of dust particles of uncertain composition. Primary COSMIC RAYS also travel through interstellar space, and magnetic fields extend across much of it. Most interstellar matter occurs in cloudlike concentrations, which can condense to form STARS. Stars, in turn, continually lose mass through stellar winds (see SOLAR WIND). SUPERNOVAS and PLANETARY NEBULAE also feed mass back to the interstellar medium, where it mixes with matter that has not yet formed stars (see POPULATIONS I AND II).

interval In music, the inclusive distance between one tone and another, whether sounded successively (melodic interval) or simultaneously (harmonic interval). In Western music, intervals are generally named according to the number of scale-steps within a given KEY that they embrace; thus, the ascent from C to G (C–D–E–F–G) is called a fifth because the interval embraces five scale degrees. There are four perfect intervals: prime, or unison; octave; fourth; and fifth. The other intervals (seconds, thirds, sixths, sevenths) have major and minor forms that differ in size by a half step (semitone). Both perfect and major intervals may be augmented, or enlarged by a half tone. Perfect and minor intervals may be diminished, or narrowed by a half tone.

Examples of simple musical intervals.
© MERRIAM-WEBSTER INC.

intestate succession In the law of INHERITANCE, transmission of property or property interests of a decedent as provided by statute, as distinguished from transfer according to the decedent's WILL. Modern laws of intestacy, though they vary widely, share the common principle that the estate should devolve upon persons standing in some kinship relation with the decedent; modern practice tends to favour the rights of the surviving spouse.

intestinal gas Volatile material (mostly swallowed air, partly digestive by-products) in the digestive tract, which normally contains 150–500 cc of gas. Air in the stomach is either belched out or passed to the intestines. Some of its oxygen is absorbed into the blood along the way. Carbon dioxide produced by DIGESTION is added. Nitrogen, the major component, is inert and usually passed on. Obstructions in the small intestine can trap gas in distended pockets, causing severe pain. In the large intestine, bacterial fermentation products are added—mostly hydrogen but also methane, hydrogen sulfide, ammonia, and sulfur-containing mercaptans. Excess gas in the colon is eventually expelled from the body.

intestinal obstruction Blockage of the SMALL INTESTINE or LARGE INTESTINE, resulting from either lack of PERISTALSIS or mechanical obstruction (e.g., by narrowing, foreign objects, or HERNIA). Obstruction near the start of the small intestine often causes VOMITING. Near the end or in the large intestine, backed-up waste and swallowed air cause intestinal distention; the resulting pressure may cause necrosis (death of intestinal wall tissue). Waste products may escape into the bloodstream. Symptoms and treatment depend on the obstruction's nature and location.

intestine See LARGE INTESTINE, SMALL INTESTINE

intifāḍah \ˌin-ti-ˈfä-də\ *Arabic* **"shaking off"** Palestinian revolt (1987–93, 2000–) against the Israeli occupation in the GAZA STRIP and WEST BANK. Initially a spontaneous reaction to 20 years of occupation and worsening economic conditions, it was soon taken over by the PALESTINE LIBERATION ORGANIZATION (PLO). Its tactics included strikes, boycotts, and confrontations with Israeli troops. The International Red Cross estimated that some 800 Palestinians, more than 200 under the age of 16, had been killed by Israeli security forces by 1990. Several dozen Israelis were killed during the same period. *Intifāḍah* pressure is credited with helping make possible the 1993 Israeli-PLO agreement on Palestinian self-rule. A breakdown in further negotiations in late 2000 led to another outburst of violence, which quickly became known as the Aqṣā *intifāḍah*, named for the Aqṣā Mosque in Jerusalem, where the fighting began. See also YĀSIR ʿARAFĀT; FATAH; ḤAMĀS.

Intolerable Acts *or* **Coercive Acts** (1774) Four punitive measures enacted by the British Parliament against the American colonies. Boston's harbour was closed until restitution was made for the tea destroyed in the BOSTON TEA PARTY; the Massachusetts colony's charter was annulled and a military governor installed; British officials charged with capital offenses could go to England for trial; and arrangement for housing British troops in American houses was revived. The QUEBEC ACT added to these oppressive measures. The acts, called "intolerable" by the colonists, led to a convening of the CONTINENTAL CONGRESS.

intonation In PHONETICS, the melodic pattern of an utterance. Intonation is primarily a matter of variation in the pitch level of the voice (see TONE), but in languages such as English, stress and rhythm are also involved. Intonation conveys differences of expressive meaning (e.g., surprise,

© 2006 Encyclopædia Britannica, Inc.

doubtfulness). In many languages, including English, intonation serves a grammatical function, distinguishing one type of phrase or sentence from another. Thus, "it's gone" is an assertion when spoken with a drop in pitch at the end, but a question when spoken with a rise in pitch at the end.

introvert and extravert Basic personality types, according to the theories of Carl Gustav Jung. The introvert, who directs thoughts and feelings inward, is often shy, contemplative, and reserved. The extravert, who directs attention toward other people and the outside world, is usually outgoing, responsive, and aggressive. This typology is now regarded as simplistic because almost no one can be described as wholly introverted or extraverted.

intrusive rock Igneous rock formed from magma forced into older rocks at depths within the Earth's crust, which then slowly solidifies below the Earth's surface, though it may later be exposed by erosion. Igneous intrusions form a variety of rock types. See also extrusive rock.

intuition In philosophy, the power of obtaining knowledge that is not or cannot be acquired either by inference or observation. As such, intuition is thought of as an original, independent source of knowledge, since it is designed to account for just those kinds of knowledge that other sources do not provide. Knowledge of some necessary truths and basic moral principles is sometimes explained in this way. A technical sense of intuition, deriving from Immanuel Kant, refers to immediate acquaintance with individual entities; intuition (*Anschauung*) in this sense may be empirical (e.g., consciousness of sense-data) or pure (e.g., consciousness of space and time a priori as forms of all empirical intuitions). As conceived by Benedict de Spinoza and Henri Bergson, intuition is taken to be concrete knowledge of the world as an interconnected whole, as contrasted with the piecemeal, "abstract" knowledge obtained by science and observation.

intuitionism School of mathematical thought introduced by the Dutch mathematician Luitzen Egbertus Jan Brouwer (1881–1966). In contrast with mathematical Platonism, which holds that mathematical concepts exist independent of any human realization of them, intuitionism holds that only those mathematical concepts that can be demonstrated, or constructed, following a finite number of steps are legitimate. Few mathematicians have been willing to abandon the vast realms of mathematics built with nonconstructive proofs.

intuitionism In metaethics, a form of cognitivism that holds that moral statements can be known to be true or false immediately through a kind of rational intuition. In the 17th and 18th centuries, intuitionism was defended by Ralph Cudworth, Henry More (1614–87), Samuel Clarke (1675–1729), and Richard Price (1723–91); in the 20th century its supporters included H.A Prichard (1871–1947), G.E. Moore, and David Ross. Intuitionists have differed over the kinds of moral truths that are amenable to direct apprehension. For example, whereas Moore thought that it is self-evident that certain things are morally valuable, Ross thought that we know immediately that it is our duty to do acts of a certain type.

Inuit See Eskimo

Invar Trademark name for an alloy of iron (64% iron, 36% nickel) that expands very little when heated. Invar was formerly used for absolute standards of length measurement and is now used for surveying tapes and in watches and various other temperature-sensitive devices. The name expresses the invariability of its dimensions. It was developed by Charles-Édouard Guillaume (1861–1938), winner of the 1920 Nobel Prize for Physics.

inventory In business, any item of property held in stock by a firm, including finished goods held for sale, goods in the process of production, raw materials, and items that will be consumed in the process of producing salable goods. Inventories appear on a company's balance sheet as assets. Inventory turnover, which indicates the rate at which goods are converted into cash, is a key factor in appraising a firm's financial condition. For financial statements, inventories may be priced either at cost or at market value.

Inverness \,in-vər-'nes\ Royal burgh (pop., 2001: 44,084), Highland council area, in the historic county of Inverness-shire, northwestern Scotland. Located on the River Ness and the Caledonian Canal, it has long been the centre of the Scottish Highlands. In the 6th century it was the capital of the Pictish king Brude. By the 12th century it had become a burgh near the castle of Malcolm III Canmore. Inverness is now an educational and tourist centre. Its manufacturing has expanded in conjunction with the growth of offshore oil production.

The 19th-century castle on the River Ness, Inverness, Scotland.
J. ALLEN CASH—EB INC.

inverse function Mathematical function that undoes the effect of another function. For example, the inverse function of the formula that converts Celsius temperature to Fahrenheit temperature is the formula that converts Fahrenheit to Celsius. Applying one formula and then the other yields the original temperature. Inverse procedures are essential to solving equations because they allow mathematical operations to be reversed (e.g. logarithms, the inverses of exponential functions, are used to solve exponential equations). Whenever a mathematical procedure is introduced, one of the most important questions is how to invert it. Thus, for example, the trigonometric functions gave rise to the inverse trigonometric functions.

invertebrate Any animal that lacks a vertebral column, or backbone. They include the protozoans, annelids, cnidarians, echinoderms, flatworms, nematodes, mollusks, and arthropods. More than 90% of living animals are invertebrates. Worldwide in distribution, they range in size from minute protozoans to giant squids. Apart from the absence of a vertebral column, invertebrates have little in common. They are generally soft-bodied and have an external skeleton for muscle attachment and protection. See also vertebrate.

Investiture Controversy Struggle between the papacy and the secular rulers of Europe over the latter's presentation of the symbols of office to churchmen. Pope Gregory VII condemned lay investiture in 1078 as an unjustified assertion of secular authority over the church; the issue was pivotal in his dispute with King Henry IV and in the larger struggle over Henry's refusal to obey papal commands. Henry successfully drove Gregory from Rome and installed an antipope, but it would be Gregory's rejection of lay investiture that would ultimately prevail. Henry I of England renounced lay investiture (1106) in return for the guarantee that homage would be paid to the king before consecration, and the Concordat of Worms (1122) forged a similar compromise between Henry V and Calixtus II.

investment Process of exchanging income for an asset that is expected to produce earnings at a later time. An investor refrains from consumption in the present in hopes of a greater return in the future. Investment may be influenced by rates of interest, with the rate of investment rising as interest rates fall, but other factors more difficult to measure may also be important—for example, the business community's expectations about future demand and profit, technical changes in production methods, and expected relative costs of labour and capital. Investment cannot occur without saving, which provides funding. Because investment increases an economy's capacity to produce, it is a factor contributing to economic growth.

investment bank Firm that originates, underwrites, and distributes new security issues of corporations and government agencies. The Banking

© 2006 Encyclopædia Britannica, Inc.

Act of 1933 required the separation of investment banking and COMMERCIAL BANKing functions. Investment banks operate by purchasing all the new securities issued by a corporation at one price and selling fractions of the new issue to the investing public at prices high enough to yield a profit. The investment bank is responsible for setting the public offering price, which it bases on probable demand and assessments of the economic climate. A syndicate of investment banking firms underwrites and distributes most security issues in order to divide the RISK of the new issue. An initial public offering (IPO) refers to the issuance of the first public shares of a formerly nonpublic company. See also BANK; CENTRAL BANK; SAVINGS BANK; SECURITY.

investment casting Precision CASTING for forming METAL shapes with minutely precise details. Casting BRONZE or precious metals typically involves several steps, including forming a MOLD around the sculptured form; detaching the mold (in two or more sections); coating its inside with WAX; forming a second mold, of heat-resisting clay, around the wax shell, and filling the interior with a clay core; baking the assembly (hardening the clay and melting the wax, which escapes through openings in the outer mold); pouring molten bronze into the space vacated by the wax; and breaking the mold to expose the cast form. In modern foundries, plastics, or occasionally frozen mercury, are used instead of wax. See also LOST-WAX CASTING, DIE CASTING.

investment credit *or* **investment tax credit** Tax incentive that permits companies or individuals to deduct a specified percentage of certain investment costs from their tax liability in addition to the normal allowances for DEPRECIATION. Investment credits are similar to investment allowances, which permit investors or businesses to deduct a specified percentage of certain capital costs from taxable income. Both investment credits and investment allowances differ from accelerated depreciation by offering a percentage deduction at the time an asset is purchased. In effect, the credits are SUBSIDIES for investment. Investment credits and investment allowances were adopted by the U.S. in 1962 in order to protect domestic business from foreign competition but have since been applied toward the support of energy conservation, pollution control, or various forms of desirable economic development.

investment trust *or* **closed-end trust** Financial organization that pools the funds of its shareholders and invests them in a diversified portfolio of SECURITIES. It differs from a MUTUAL FUND, which issues units representing diversified holdings rather than shares in the company itself. Investment trusts have a fixed number of shares for sale; their price depends on the market value of the underlying securities and on the demand for and supply of shares. The first modern investment trusts were formed in England and Scotland as early as 1860. Many early U.S. investment trusts failed with the collapse of the stock market in 1929, but others have since prospered under stricter federal regulation.

Io \'ī-ō\ In GREEK MYTHOLOGY, the daughter of the river god Argos. Io drew HERA's jealousy when ZEUS fell in love with her. Zeus changed her into a white heifer to protect her. Hera sent the many-eyed creature Argus to watch over the heifer, but Zeus sent HERMES to lull Argus to sleep and kill him. Hera then sent a gadfly to pursue Io, who fled across Europe and crossed the bodies of water later named the Ionian Sea and the BOSPORUS ("Ford of the Cow") in her honour. When she arrived in Egypt she resumed her original form. She was later identified with the Egyptian goddess ISIS.

iodine Nonmetallic chemical ELEMENT, chemical symbol I, atomic number 53. The heaviest nonradioactive HALOGEN, it is a nearly black crystalline solid (diatomic molecule I_2) that sublimes (see SUBLIMATION) to a deep violet, irritating vapour. It is never found in nature uncombined. Its sources (mostly in brines and seaweeds) and compounds are usually iodides; iodates (small amounts in saltpeter) and periodates also occur. Dietary iodine is essential for THYROID GLAND function; in areas of the world where food contains insufficient iodine, an iodine compound such as potassium iodide (KI) is added to table salt (SODIUM CHLORIDE) to prevent IODINE DEFICIENCY. Elemental iodine is used in medicine, in synthesizing some organic chemicals, in manufacturing dyes, in analytical chemistry (see ANALYSIS) to measure FAT SATURATION (see HYDROGENATION) and to detect STARCH, and in photography. The radioactive ISOTOPE iodine-131 (see RADIOACTIVITY), with an eight-day HALF-LIFE, is very useful in medicine (see NUCLEAR MEDICINE) and other applications.

iodine deficiency Inadequate intake or metabolism of IODINE. It directly affects THYROID secretions, which influence heart action, nerve response, growth rate, and metabolism. Simple GOITRE, the most frequent result, is most common in areas without access to salt water and is rare along seacoasts. Severe, prolonged deficiency can cause hypothyroidism. Eating seafood regularly or using iodized table salt will prevent iodine deficiency. Some countries have made dietary iodine additives mandatory.

ion ATOM or group of atoms with one or more positive or negative ELECTRIC CHARGES. Positively charged ions are CATIONS, negatively charged ones ANIONS. Ions are formed when ELECTRONS are added to or removed from neutral MOLECULES or other ions, as sodium (Na) and chlorine (Cl) atoms react to form Na^+ and Cl^-; when ions combine with other particles, as hydrogen cations (H^+) and ammonia (NH_3) combine to form ammonium cations (NH_4^+); or when a COVALENT BOND between two atoms is ruptured in such a way that the resulting particles are charged, as water (H_2O) dissociates (see DISSOCIATION) into hydrogen and hydroxide ions (H^+ and OH^-). Many crystalline substances (see CRYSTAL) are composed of ions held in regular geometric patterns by the attraction of oppositely charged particles for each other. Ions migrate to the electrode of opposite charge in an ELECTRIC FIELD and are the conductors of current in electrolytic cells (see ELECTROLYSIS). Compounds that form ions are called ELECTROLYTES. Ions are also formed in gases when heated to very high temperatures or when an electrical discharge passes through them (see PLASMA).

ion-exchange resin Any of a wide variety of synthetic POLYMERS containing positively or negatively charged sites that can interact with or bind to an ION of opposite charge from a surrounding solution. Light, porous solids in granules, beads, or sheets, they absorb the solution and swell as they attract the target ions; when exhausted, they are removed from use and regenerated by an inexpensive brine or carbonate solution. A solid support of styrene-divinylbenzene copolymer to which are attached sulfonic or carboxylic acid groups is often used to attract and exchange CATIONS (e.g., ions of HYDROGEN or METALS). Quaternary ammonium groups on the solid matrix are used to attract ANIONS (e.g., ions of CHLORINE). Industrially, the resins are used to soften HARD WATER, purify SUGAR, and concentrate valuable elements (gold, silver, uranium) from their ORES. In the laboratory they are used to separate and concentrate substances and sometimes as catalysts. ZEOLITES are minerals with ion-exchange properties.

Ionesco \yò-nes-'kō**, Eugène** *orig.* **Eugen Ionescu** (b. Nov. 26, 1909, Slatina, Rom.—d. March 28, 1994, Paris, France) Romanian-born French playwright. He studied in Bucharest and Paris, where he lived from 1945. His first one-act "anti-play," *The Bald Soprano* (1950), inspired a revolution in dramatic techniques and helped inaugurate the THEATRE OF THE ABSURD. He followed it with other one-act plays in which illogical events create an atmosphere both comic and grotesque, including *The Lesson* (1951), *The Chairs* (1952), and *The New Tenant* (1955). His most popular full-length play, *Rhinoceros* (1959), concerns a provincial French town in which all the citizens are metamorphosing into rhinoceroses. Other plays include *Exit the King* (1962) and *A Stroll in the Air* (1963). He was elected to the Académie Française in 1970.

Eugène Ionesco, 1959.
MARK GERSON

Ionia \ī-'ō-nyə\ Ancient region, western coast of ASIA MINOR (modern Turkey) bordering the AEGEAN SEA. It consisted of a coastal strip that extended from the mouth of the Hermus River to the Halicarnassus Peninsula, a distance of 100 mi (160 km). In the 8th century BC there were 12 major Greek cities in the region, including PHOCAEA, ERYTHRAE, COLOPHON, and MILETUS on the mainland, and the islands CHIOS and SAMOS. It was very prosperous, and until 500 BC Ionic philosophy and architecture and the Ionic dialect were highly influential in Greece. In the mid-6th century BC it fell to LYDIA and then to the Persians. After a brief period of independence beginning in 334 BC, it became part of the SELEUCID kingdom. In 133 BC it passed to the Romans and became part of the Roman province of Asia. It was devastated during the Turkish conquest of Asia Minor.

Ionian Any ancient Greek inhabitant of IONIA, from the time of the collapse of Mycenae. Ionian cities colonized southern Italy and opened up the Black Sea from c. 700 BC. Their contributions to Greek culture

© 2006 Encyclopædia Britannica, Inc.

included the epics of HOMER and the earliest elegiac and iambic poetry. They began the study of geography, philosophy, and historiography in the 6th century. After Alexander the Great their literary language was the basis of KOINE, or "common speech," the language of practically all Greek writing to the present day.

Ionian \ī-'ō-nē-ən\ **Islands** *ancient* **Heptanesos** Group of seven Greek islands (pop., 2001: 214,274) in the Ionian Sea. They include CORFU, CEPHALONIA, Zacynthus, Leucas, Ithaca, Cythera, and Paxos and have a combined land area of 891 sq mi (2,307 sq km). Controlled by Venice in the 15th and 16th centuries, they were taken by Russian and Turkish forces in 1799. In 1815 the Treaty of Paris placed them under the control of Britain; the British ceded them to Greece in 1864.

Ionian revolt Uprising (499–494 BC) of some of the Ionian cities of Asia Minor against their Persian overlords. The cities deposed their own tyrants and, with help from Athens, tried unsuccessfully to throw off Persian domination. DARIUS I of Persia used Athens's involvement as a pretext for his invasion of Greece in 490, initiating the PERSIAN WARS, which resulted in a stronger Athenian influence in western Anatolia.

Ionian school School of Greek philosophers of the 6th–5th century BC, including THALES, ANAXIMANDER, ANAXIMENES, HERACLEITUS, ANAXAGORAS, Diogenes of Apollonia, Archelaus, and Hippon. Though IONIA was the original center of their activity, they differed so greatly from one another in their conclusions that they cannot truly be said to represent a specific school of philosophy, but their common concern to explain phenomena in terms of matter or physical forces distinguished them from later thinkers.

Ionian Sea Part of the MEDITERRANEAN SEA lying between Greece, Sicily, and Italy. Though once considered part of the ADRIATIC SEA, to which it connects by the Strait of Otranto, it is now considered a separate body. The Mediterranean reaches its greatest depth (16,000 ft or 4,900 m) in the Ionian south of Greece. Along its eastern shore are the IONIAN ISLANDS.

ionic bond Electrostatic attraction between oppositely charged IONS in a chemical COMPOUND. Such a bond forms when one or more ELECTRONS are transferred from one neutral ATOM (typically a METAL, which becomes a CATION) to another (typically a nonmetallic element or group, which becomes an ANION). The two types of ion are held together by electrostatic forces in a solid that does not comprise neutral MOLECULES as such; rather, each ion has neighbours of the opposite charge in an ordered overall crystalline structure. When, for example, CRYSTALS of common salt (SODIUM CHLORIDE, NaCl) are dissolved in water, they dissociate (see DISSOCIATION) into two kinds of ions in equal numbers, sodium cations (Na^+) and chloride anions (Cl^-). See also BONDING; COVALENT BOND.

ionization Process by which electrically neutral ATOMS or MOLECULES are converted to electrically charged atoms or molecules (IONS) by the removal or addition of negatively charged ELECTRONS. It is one of the principal ways in which RADIATION transfers energy to matter, and hence of detecting radiation. In general, ionization occurs whenever sufficiently energetic charged particles or radiant energy travels through gases, liquids, or solids. A certain minimal level of ionization is present in the earth's atmosphere because of continuous absorption of COSMIC RAYS from space and ULTRAVIOLET RADIATION from the sun.

ionization potential *or* **ionization energy** Amount of ENERGY required to remove an ELECTRON from an isolated ATOM or MOLECULE. There is an ionization potential for each successive electron removed, though that associated with removing the first (most loosely held) electron is most commonly used. The ionization potential of an ELEMENT is a measure of its ability to enter into chemical reactions requiring ION formation or donation of electrons and is related to the nature of the chemical bonding in the compounds formed by elements. See also BINDING ENERGY, IONIZATION.

ionosphere \ī-'än-ə-ˌsfir\ Region of the Earth's atmosphere in which the number of ions, or electrically charged particles, is large enough to affect the propagation of radio waves. The ionosphere begins at an altitude of about 30 mi (50 km) but is most distinct above about 50 mi (80 km). The IONIZATION is caused mainly by solar radiation at X-ray and ultraviolet wavelengths. The ionosphere is responsible for the long-distance propagation, by reflection, of radio signals in the shortwave and broadcast bands.

Iowa State (pop., 2000: 2,926,324), midwestern U.S. Bordered by Minnesota, Wisconsin, Illinois, Missouri, Nebraska, and South Dakota, it covers 56,276 sq mi (145,755 sq km). Its capital is DES MOINES. The DES MOINES RIVER flows across the state from northwest to southeast. The MISSISSIPPI RIVER forms its eastern boundary, while the MISSOURI RIVER and the Big Sioux River define portions of its western boundary. The SAUK, FOX, Iowa, and SIOUX Indians lived in the region when French explorers LOUIS JOLLIET and JACQUES MARQUETTE arrived in 1673. The U.S. acquired Iowa as part of the LOUISIANA PURCHASE in 1803. Following the Black Hawk War and purchase of eastern Iowa from the Sauk and Fox Indians in the 1830s, white settlement advanced rapidly. Iowa became a territory in 1838 and was made the 29th state in 1846. After the Civil War, railroad expansion drew large waves of immigrants from the east and from Europe. After World War I population growth slowed. Its economy is based on agriculture, and Iowa is a leader in the U.S. production of livestock.

IP address *in full* **Internet Protocol address** Number that uniquely identifies each computer on the INTERNET. A computer's IP address may be permanently assigned or supplied each time that it connects to the Internet by an INTERNET SERVICE PROVIDER. In order to accommodate the extraordinary growth in the number of devices connected to the Internet, a 32-bit protocol standard, known as IPv4, began to be replaced by a 128-bit protocol, IPv6, in 2000. See also TCP/IP; DOMAIN NAME; URL.

ipecac \'i-pi-ˌkak\ *or* **ipecacuanha** \ˌi-pi-ˌka-kyə-'wä-nə\ Dried RHIZOME and roots of either of two tropical New World plants (*Cephaelis acuminata* and *C. ipecacuanha*) of the MADDER FAMILY. It has been used since ancient times especially as a source of a drug to treat poisoning by inducing nausea and vomiting. The name also refers to the drug itself.

Iphigeneia \ˌi-fə-jə-'nī-ə\ In GREEK MYTHOLOGY, the eldest daughter of AGAMEMNON and Clytemnestra and sister of ELECTRA and ORESTES. When the Achaean fleet was becalmed at Aulis, Iphigeneia's father sacrificed her to ARTEMIS in order to secure favourable winds to carry the ships to Troy. Her mother later avenged her death by murdering Agamemnon. Iphigeneia's story is treated in plays by AESCHYLUS, SOPHOCLES, and EURIPIDES. According to Euripides, she did not die but was saved by Artemis; she went to the land of Tauris, where she became a priestess, and she saved Orestes from madness and death when he fled there after killing their mother.

Ipoh \'ē-pō\ City (pop., 2000 prelim.: 566,211), western MALAYSIA. Its name comes from a local tree, whose poisonous resin was once used by indigenous people for hunting. The modern city dates from the 1890s, when British tin-mining companies were set up. Immigrant Chinese were brought in to work the tin deposits, and their descendants now dominate the city. It is the country's mining capital.

Ipsus, Battle of (301 BC) Battle marking the defeat at Ipsus, Phrygia, of ANTIGONUS I MONOPHTHALMUS and his son DEMETRIUS I POLIORCETES at the hands of Lysimachus of Thrace, SELEUCUS I NICATOR of Babylon, PTOLEMY I SOTER of Egypt, and Cassander of Macedonia. Antigonus was killed and his Asian territory lost, but Demetrius kept territory in Greece and Macedonia. The battle was part of the struggle for control of territories that made up ALEXANDER THE GREAT's empire.

Ipswich Town and borough (pop., 2001: 117,074), administrative and historic county seat of SUFFOLK, England. Located northeast of LONDON, it was chartered in 1200. It prospered as a port for the export of East Anglian textiles from medieval times to the 17th century. It is now an agricultural market and service centre. Its landmarks include the 16th-century Christchurch mansion and the Great White Horse coaching inn mentioned in CHARLES DICKENS's *The Pickwick Papers*. It was the birthplace of Thomas Cardinal WOLSEY.

IQ *in full* **intelligence quotient** Number intended to represent a measure of relative INTELLIGENCE as determined by the subject's responses to a series of test problems. The IQ was originally computed as the ratio of a person's mental age to his or her chronological (physical) age, multiplied by 100, but use of the concept of mental age has been largely discontinued, and IQ is now generally assessed on the basis of the statistical distribution of scores. The most widely used intelligence tests are the Stanford-Binet test (1916), for children, and the Wechsler test (1939), originally for adults but now also for children. A score above 130 is considered to reflect "giftedness," while a score below 70 is considered to reflect mental impairment or MENTAL RETARDATION. Intelligence tests have provoked great controversy, particularly about what kinds of mental ability constitute intelligence and whether IQ adequately represents these abilities, and about cultural and class bias in test construction and standardization procedures.

© 2006 Encyclopædia Britannica, Inc.

Iqaluit \ē-'kä-lü-it\ *formerly* **Frobisher Bay** Town (pop., 2001: 5,236), capital of Nunavut territory, Canada. Situated on southeastern Baffin Island, it is the largest community in the eastern Canadian Arctic. It was established as a trading post in 1914 and became an air base during World War II. It later was the site of construction camps for the DEW (Distant Early Warning) line of radar stations. It is the site of a meteorological station and a hospital. It became Nunavut's capital in 1999.

Iqbal \'ik-ˌbäl**, Sir Muhammad** (b. Nov. 9, 1877, Si)lkot, Punjab, India—d. April 21, 1938, Lahore, Punjab, Pakistan) Indian poet and philosopher. He first won fame for his poetry, which was written in the classical style for public recitation and became known even among the illiterate. His perspective grew increasingly Pan-Islamic, as revealed in the long poem *The Secrets of the Self* (1915), which he wrote in Persian in order to address a broader Muslim audience. Calling for a revitalization of Islam, he advocated the separate Muslim state that would eventually be realized with the founding of Pakistan in 1947, and he was acclaimed after his death as the father of that country. His poetic masterpiece is "The Song of Eternity" (1932). He is considered the greatest 20th-century poet to write in Urdu.

iqṭāʿ \ik-'tä\ Type of land tenure system practiced in early Islamic societies. Under the *iqṭāʿ* system, which began in the 9th century, political leaders awarded the right of usufruct over land to an individual (usually in exchange for military service) for a limited period. It differed from feudal land tenure practiced in Europe by the fact that land in the Islamic system remained the property of the original owner, not the recipient or granter of the *iqṭāʿ*. The exact implementation of the system varied from region to region and changed over time.

IRA See Irish Republican Army

Iran *officially* **Islamic Republic of Iran** *formerly* **Persia** Country, Middle East, southwestern Asia. Area: 636,374 sq mi (1,648,200 sq km). Population (2005 est.): 69,515,000. Capital: Tehrān. Persians constitute

about one-third of its population; other ethnic groups include Azerbaijanians, Kurds, Lurs, Bakhtyārī, and Balochi. Languages: Persian (Farsi; official), numerous others. Religions: Islam (official; predominantly Shīʿite); also Zoroastrianism. Currency: rial. Iran occupies a high plateau, rising higher than 1,500 ft (460 m) above sea level, and is surrounded largely by mountains. More than half of its surface area consists of salt deserts and other wasteland. About one-tenth of its land is arable, and another one-fourth is suitable for grazing. Iran's rich petroleum reserves account for about one-tenth of world reserves and are the basis of its economy. It is an Islamic republic with one legislative house and several oversight bodies dominated by clergy. The head of state and government is the president, but supreme authority rests with the *rahbar*, a ranking cleric. Human habitation in Iran dates to some 100,000 years ago, but recorded history began with the Elamites c. 3000 BC. The Medes flourished from c. 728 but were overthrown in 550 by the Persians, who were in turn conquered by Alexander the Great in the 4th century BC. The Parthians (see Parthia) created an empire that lasted from 247 BC to AD 226, when control passed to the Sāsānian dynasty. Various Muslim dynasties ruled from the 7th century. In 1501 the Ṣafavid dynasty was established and lasted until 1736. The Qājār dynasty ruled from 1796, but in the 19th century the country was economically controlled by the Russian and British empires. Reza Khan (see Reza Shah Pahlavi) seized power in a coup (1921). His son Mohammad Reza Shah Pahlavi alienated religious leaders with a program of modernization and Westernization and was overthrown in 1979; Shīʿite cleric Ruhollah Khomeini then set up an Islamic republic, and Western influence was suppressed. The destructive Iran-Iraq War of the 1980s ended in a stalemate. Since the 1990s the government has gradually moved to a more liberal conduct of state affairs.

Iran-Contra Affair U.S. political scandal. In 1985 Robert McFarlane, head of the National Security Council (NSC), authorized sales of weapons to Iran in an attempt to secure the release of U.S. hostages held in Lebanon by pro-Iranian terrorist groups. The deal contravened stated policy regarding both dealings with terrorists and military aid to Iran. At the instigation of Oliver North, a NSC staff member, and with the approval of John M. Poindexter, part of the $48 million paid by Iran for the arms was diverted to the Nicaraguan contras, in direct violation of a 1984 law banning such assistance. A Senate investigation resulted in the conviction of North and Poindexter on charges of obstructing justice and related offenses, though their convictions were later overturned on the ground that testimony given at their trials had been influenced by information they had supplied to Congress under a limited grant of immunity. Pres. Ronald Reagan accepted responsibility for the arms-for-hostages deal but denied any knowledge of the diversion.

Iran hostage crisis (1979–81) Political crisis involving Iran's detention of U.S. diplomats. Anti-American sentiment in Iran—fueled in part by close ties between the U.S. and the unpopular leader Mohammad Reza Shah Pahlavi—peaked when Pahlavi fled Iran during the 1979 Iranian revolution. When the monarch entered the U.S. for medical treatment later that year, Islamic militants stormed the U.S. embassy in Tehrān and seized 66 Americans. The hostage-takers, who enjoyed the tacit support of the new Iranian regime of Ruhollah Khomeini, demanded the shah's extradition to Iran, but Pres. Jimmy Carter refused and froze all Iranian assets in the U.S. The Iranians released 13 women and African Americans on Nov. 19–20, 1979, and another hostage was released in July 1980. A rescue attempt in April 1980 failed. Negotiations for the hostages' return began after the shah died in July 1980, but the remaining 52 hostages were kept in captivity until Jan. 20, 1981, when they were released moments after the inauguration of Ronald Reagan. The crisis contributed to Carter's failure to win reelection. See also Iran-Contra Affair.

Iran-Iraq War (1980–90) Protracted and indecisive conflict prompted by Iraq's invasion of its eastern neighbour. Following the 1979 Iranian revolution, the Iraqi leadership sought to exploit Iran's military and political chaos in order to resolve border disputes, gain control of Iran's oil-rich western (largely Arab) province, and achieve hegemony in the Persian Gulf. Iraq was successful early (1980–82) but began to lose ground and sought to negotiate peace. Iran refused, and the war turned into a bloody stalemate that included the first use of chemical warfare since World War I (1914–18). After additional Iraqi advances, Iran agreed to a cease-fire in 1988. Peace was concluded only when Iraq invaded another neighbour, Kuwait, in 1990. See also Ṣaddām Ḥussein; Ruhollah Khomeini.

Iranian languages Major subgroup of the Indo-Iranian branch of the Indo-European language family. Iranian languages are probably spoken by more than 80 million people in southwestern and southern Asia. Only two Old Iranian languages are known, Avestan and Old Persian. A greater number of Middle Iranian languages (c. 300 BC–AD 950) are known; these are divided into a western and an eastern group. Modern Iranian languages fall into four groups. The southwestern group includes Modern Persian (Farsi), Dari (in northern Afghanistan), Tajiki (in Tajikistan and other Central Asian republics); Luri and Bakhtiari (in southwestern Iran); and Tat. The northwestern group includes Kurdish (spoken in Kurdistan) and Baluchi (in southwestern Pakistan, southeastern Iran, and southern Afghanistan). The southeastern group includes Pashto (in Afghanistan and

© 2006 Encyclopædia Britannica, Inc.

northwestern Pakistan) and the 10 or so Pamir languages (in eastern Tajikistan and adjacent parts of Afghanistan and China). The northeastern group includes Ossetic, spoken by the Ossetes in the central Caucasus Mountains, and Yaghnobi, formerly spoken in a single valley of the Pamirs. Nearly all the Modern Iranian languages have been written—if at all—in adaptations of the Arabic alphabet.

Iranian religions Ancient religions of the peoples of the Iranian plateau. The Medes and Persians were dominated by a powerful priestly tribe, the magi. The magi were responsible for chanting accounts of the origin and descent of the gods, and they were probably the source of the dualism that later characterized Zoroastrianism, the best known of the Iranian religions. The chief god of the pre-Zoroastrian pantheon was Ahura Mazda, the creator of the universe and the one who maintains the cosmic and social order. Mithra was the second most important deity and the protector of covenants. Other major deities included Anahita, the war goddess; Rashnu, the god of justice; and astral deities such as Tishtrya, identified with the star Sirius. The ancient Iranians did not build temples or make images of their gods, preferring to worship in the open. The central ritual was the *yazna*, which consisted of a festive meal at which the worshipers made animal sacrifices and invited the deity to attend as a guest. Fire was regarded as a sacred element. The sacred drink *hauma*, which contained a mind-altering drug, was used to inspire worshipers with insight into truth and to stimulate warriors going into battle.

Iraq *officially* **Republic of Iraq** Country, Middle East, southwestern Asia, northwest of the Persian Gulf. Area: 167,618 sq mi (434,128 sq km). Population (2005 est.): 27,818,000. Capital: Baghdad. The population consists mainly of an Arab majority and a Kurdish minority. Language: Arabic (official). Religions: Islam (official; mostly Shīʿite); also Christianity. Currency: dinar. The country can be divided into four major regions: the Tigris-Euphrates alluvial plains in central and southeastern Iraq; Al-Jazīrah, an upland region in the north between the Tigris and Euphrates rivers; deserts in the west and south, covering about two-fifths of the country; and highlands in the northeast. Iraq has the world's second largest proven reserves of petroleum, and it has substantial reserves of natural gas. Agriculture is also a major component of the economy. Iraq has a transitional government with one legislative house; its head of state is the president. Called Mesopotamia in Classical times, the region gave rise to the world's earliest civilizations, including those of Sumer, Akkad, and Babylon. Conquered by Alexander the Great in 331 BC, the area later became a battleground between Romans and Parthians, then between Sāsānians and Byzantines. Arab Muslims conquered it in the 7th century AD, and various Muslim dynasties ruled until the Mongols took over in 1258. The Ottoman Empire took control in the 16th century and ruled until the British occupied the country during World War I (1914–18). The British created the kingdom of Iraq in 1921 and occupied Iraq again during World War II (1939–45). The monarchy was restored following the war, but a revolution caused its downfall in 1958. Following a series of military coups, the socialist Baʿth Party, eventually led by Ṣaddām Ḥussein, took control and established totalitarian rule in 1968. The Iran-Iraq War in the 1980s and the First Persian Gulf War in 1990–91 caused extensive death and destruction. The economy languished under a UN economic embargo imposed on Iraq in the 1990s. The embargo began to erode by the early 21st century, and in 2003, during the Second Persian Gulf War, the Baʿth Party was driven from power.

Irbid Town (pop., 1994: 208,329), northern Jordan. Built on Early Bronze Age settlements, it may have been the biblical city of Beth Arbel and the Arbila of the ancient Decapolis. Modern Irbid is one of Jordan's industrial areas and an agricultural centre. The many springs in the area, in addition to the Yarmūk River, provide water for irrigation. It is the home of Yarmūk University.

Iredell \ˈīr-ˌdel\, **James** (b. Oct. 5, 1751, Lewes, Sussex, Eng.—d. Oct. 20, 1799, Edenton, N.C., U.S.) U.S. jurist. His family immigrated to North Carolina, where he was appointed comptroller of the customhouse at age 17. He helped draft and revise the laws of the new state of North Carolina and served as state attorney general (1779–81). He led the state's Federalists in supporting ratification of the U.S. Constitution, and his letters in its defense (signed "Marcus") are said to have prompted Pres. George Washington to appoint him to the U.S. Supreme Court (1790). He wrote several notable dissents, including those for *Chisholm* v. *Georgia* (1793; affirming the subordination of the states to the federal government) and *Ware* v. *Hylton* (1796; upholding the primacy of U.S. treaties over state statutes). His opinion in *Calder* v. *Bull* (1798) helped establish the principle of judicial review five years before it was actually tested in *Marbury* v. *Madison*.

Ireland Country, western Europe, occupying the greater part of the island of Ireland west of Great Britain. Area: 27,133 sq mi (70,273 sq km). Population (2005 est.): 4,096,000. Capital: Dublin. The northeastern portion of the island is occupied by Northern Ireland. Although Ireland has been invaded and colonized by Celts, Norsemen, Normans, English, and Scots, ethnic distinctions are nonexistent. Languages: Irish, English (both official). Religion: Christianity (predominantly Roman Catholic; also Protestant). Currency: euro. Ireland's topography consists largely of broad lowlands drained by rivers that include the Shannon; its coasts are fringed with mountains. Nearly three-fifths of the population is urban; agriculture

© 2006 Encyclopædia Britannica, Inc.

employs only a small percentage of the workforce. High technology, tourism, and other service industries are pivotal to the Irish economy, while mining, manufacturing, and construction also remain important. Ireland is a republic with two legislative houses; its chief of state is the president, and the head of government is the prime minister. Human settlement in Ireland began c. 6000 BC, and Celtic migration dates from c. 300 BC. ST. PATRICK is credited with having Christianized the country in the 5th century. Norse domination began in 795 and ended in 1014, when the Norse were defeated by BRIAN BORU. Gaelic Ireland's independence ended in 1175 when Roderic O'Connor, Ireland's high king, accepted English King Henry II as his overlord. Beginning in the 16th century, Irish Catholic landowners fled religious persecution by the English and were replaced by English and Scottish Protestant migrants. The United Kingdom of Great Britain and Ireland was established in 1801. The Irish Potato Famine of the 1840s led as many as 1.5 million people to emigrate, and the British government's grudging and ineffective relief measures built momentum for Irish HOME RULE. The EASTER RISING (1916) was followed by virtual civil war (1919–21), during which the Irish Republican Army used guerrilla tactics to force the British government to negotiate. The Catholic majority in southern Ireland favoured complete independence, and the Protestant majority in the north preferred continued union with Britain. Southern Ireland was granted dominion status and became the Irish Free State in 1921, and in 1937 it adopted the name Éire (Ireland) and became a sovereign independent country. It remained neutral during World War II. Britain recognized the status of Ireland in 1949 but declared that cession of the northern six counties (Northern Ireland) could not occur without the consent of the Parliament of Northern Ireland. In 1973 Ireland joined the European Economic Community (later the EUROPEAN COMMUNITY); it is now a member of the EUROPEAN UNION. The last decades of the 20th century were dominated by sectarian hostilities between the island's Catholics and Protestants over the status of Northern Ireland. The Irish government played a pivotal role in negotiating and winning public support for the Belfast Agreement (1998), which gave the country a consultative role in the affairs of Northern Ireland and modified Ireland's constitution to remove its claim to the territory of the entire island.

Irenaeus \ˌī-rə-ˈnē-əs, ˌī-rə-ˈnā-əs**, Saint** (b. c. 120/140, Asia Minor—d. c. 200/203, probably Lyon; Western feast day June 28; Eastern feast day August 23) Bishop and theologian. Born of Greek parents, he was a missionary to Gaul before being named bishop of Lugdunum (modern Lyon, France). All his major works, including *Against Heresies*, were written in opposition to GNOSTICISM. To counteract Gnostic influence, he promoted the development of an authoritative canon of the New Testament. His defense of the belief that the Christian God and the God of the Old Testament were identical led to the development of the Apostles' Creed. His writings against the Gnostics also supported the authority of the bishops, and he claimed that the bishops of various cities were known as far back as the APOSTLES (see APOSTOLIC SUCCESSION). His works have proved a valuable source of information on the Gnostics, because he gave accurate summaries of their beliefs before refuting them.

Ireton \ˈīr-tᵊn**, Henry** (b. 1611, Attenborough, Nottinghamshire, Eng.—d. Nov. 28, 1651, Limerick, County Limerick, Ire.) English politician, leader of the Parliamentary cause in the ENGLISH CIVIL WARS. Joining the Parliamentary army at the outbreak of war, he was involved in many victories. He was elected to Parliament in 1645 and married OLIVER CROMWELL's daughter in 1646. In 1647 he proposed a scheme for a constitutional monarchy; after its rejection by CHARLES I, Ireton provided the ideological foundations for the assault on the monarchy. He helped bring Charles to trial and was one of the signers of his death warrant. As lord deputy of Ireland and commander in chief (1650), he fought against the Roman Catholic rebels and died after the siege of Limerick.

Irgun Zvai Leumi \ir-ˈgün-tsvə-ˈē-lə-ˈmē\ *Hebrew* **"National Military Organization"** Jewish right-wing underground movement that advocated using force to establish a Jewish state on both sides of the Jordan River. It opposed the British and the Arabs; its activities included a 1946 attack on the King David Hotel that left 91 dead and a 1947 raid on an Arab village in which all 254 inhabitants were killed. In 1943 MENACHEM BEGIN became the movement's leader. With Israeli independence its units disbanded. Israel's Herut Party was its political incarnation. See also LIKUD; HAGANAH.

Irian Jaya See PAPUA

iridium \i-ˈri-dē-əm\ Metallic chemical ELEMENT, one of the TRANSITION ELEMENTS, chemical symbol Ir, atomic number 77. A very rare, precious, silvery white, hard, brittle METAL that resists most ACIDS, it is one of the densest substances known on Earth. It probably does not occur uncombined in nature but is found in natural ALLOYS with other noble (i.e., chemically inactive or inert) metals. The pure metal is too hard to work with to have any significant uses; alloys with platinum are used in jewelry, pen points, surgical pins and pivots, electrical contacts and sparking points, and extrusion dies. The international prototype kilogram, the primary standard (see WEIGHTS AND MEASURES) for weight, is made of an alloy comprising 90% platinum and 10% iridium. The discovery of abnormally high amounts of iridium in rocks dating to the boundary between the CRETACEOUS and TERTIARY periods led to a much-debated hypothesis that an iridium-containing ASTEROID striking Earth led to a catastrophic chain of events including the extinction of DINOSAURS and many other forms of life.

Irigaray \ē-rē-gȧ-ˈrā,\ *English* \ˈir-i-ˌgar-ē**, Luce** (b. 1932?, Belgium) French feminist psychoanalyst and philosopher. She examined the uses and misuses of language in relation to women in such works as *Speculum of the Other Woman* (1974), which argues that history and culture are written in patriarchal language and centred on men, and that the thinking of SIGMUND FREUD was based in misogyny. Among her other works are *An Ethics of Sexual Differences* (1984) and *Je, tu, nous* (1990).

Irigoyen \ˌir-i-ˈgō-yen**, Hipólito** *or* **Hipólito Yrigoyen** (b. July 12, 1852, Buenos Aires, Arg.—d. July 3, 1933, Buenos Aires) Argentine statesman and president (1916–22, 1928–30). A lawyer, teacher, rancher, and politician, he became leader of the Radical Party in 1896. Working relentlessly for electoral reform, he succeeded in 1912 in securing a secret-ballot vote. When he was elected president in 1916, he passed measures regulating labour conditions but failed to enforce them, and a serious strike was violently broken in 1919. Corruption and the failure to implement democratic reforms cost him support after his return to power in 1928, and he was further weakened by the GREAT DEPRESSION. A nearly bloodless military coup ended his career.

iris family Family Iridaceae, composed of about 1,700 species of perennial herbaceous plants, as well as a few shrubs, in some 80 genera. It is known for ornamentals such as irises (genus *Iris*), gladioli (see GLADIOLUS), CROCUSES, and FREESIAS. Irises have swordlike, smooth leaves and bear showy flowers in a great variety of colours and sizes on a smooth stem. Most abundant and diverse in Africa, they are found nearly worldwide across temperate, subtropical, and tropical zones. The underground stems may be RHIZOMES (e.g., New World *Iris* species), BULBS (e.g., southwestern European *Iris* species), or CORMS (e.g., *Gladiolus*).

Irish elk Any member of a genus (*Megaloceros*) of extinct giant DEER commonly found as fossils in Pleistocene deposits (1.8 million–10,000 years ago) in Europe and Asia. About the size of a modern MOOSE, the Irish elk had the largest antlers of any form of deer known, in some specimens about 13 ft (4 m) across. It may have survived until c. 700–500 BC.

Irish Free State See IRELAND

Irish Home Rule See Irish HOME RULE

Irish language *or* **Gaelic language** CELTIC LANGUAGE of Ireland, written in the LATIN ALPHABET introduced with Christianity in the 5th century. Irish is conventionally divided into three periods: Old Irish (600–c. 950), Middle Irish (c. 950–1200), and Modern Irish (from c. 1200). OGHAM WRITING predates Old Irish. Old and Middle Irish are the vehicles of a rich literature of prose tales and verse. Classical Modern Irish was the exclusive literary medium in Ireland and Scottish Gaeldom into modern times (see SCOTTISH GAELIC LANGUAGE). Literacy in Irish declined under English rule; by 1800 it was all but an unwritten language. The deaths and emigration resulting from the IRISH POTATO FAMINE and a massive shift to English afterward drastically reduced the number of Irish-speakers. Irish was revived as a literary language in the late 19th and early 20th centuries, and with Irish independence (1921) it was made official. Though it is a true community language only for a small number of people on Ireland's western coast in what are called Gaeltachts, hundreds of thousands of Irish citizens and people of Irish descent have some competence in Irish.

Irish literary renaissance Flowering of Irish literary talent in the late 19th and early 20th century. It was closely allied with a strong politi-

© 2006 Encyclopædia Britannica, Inc.

cal nationalism and a revival of interest in Ireland's Gaelic heritage (see Gaelic revival). Other factors in the renaissance were the retelling of ancient heroic legends in books such as Standish O'Grady's *History of Ireland* (1878, 1880) and Douglas Hyde's *A Literary History of Ireland* (1899), and the Gaelic League, formed in 1893 to revive the Irish language and culture. It developed into a vigorous literary force centred on William Butler Yeats; other important figures were Augusta Gregory, John Millington Synge, and Sean O'Casey. See also Abbey Theatre.

Irish Potato Famine (1845–49) Famine that occurred in Ireland when the potato crop failed in successive years. By the early 1840s almost half the Irish population, particularly the rural poor, was depending almost entirely on the potato for nourishment. A reliance on only one or two high-yielding varieties made the crop vulnerable to disease, including the late blight fungus, which ruined the crop. The British government provided minimal relief to the starving Irish, limited to loans and soup kitchens. The famine was a watershed in Ireland's demographic history: more than a million people died from starvation or famine-related diseases, and perhaps as many as 1.5 million emigrated to North America and Britain. Population continued to decline thereafter, and by independence in 1921 the Irish population was barely half of the 8.4 million it had been before the famine.

Irish Rebellion See Easter Rising

Irish Republican Army (IRA) Republican paramilitary organization, founded in 1919, seeking the end of British rule in Northern Ireland and the unification of the province with the republic of Ireland. The IRA used armed force to achieve the same objectives as Sinn Féin, though the two always operated independently. After the establishment of the Irish Free State (1922), the IRA refused to accept a separate Northern Ireland, and the violence continued. The IRA was declared illegal in 1931, and the Irish legislature provided for internment without trial for its members. It gained popular support in the 1960s when Roman Catholics in Northern Ireland began a civil rights campaign against discrimination by the dominant Protestant majority. In 1969 the IRA split into the Marxist Official wing, which eschewed violence, and the Provisionals (Provos), Ulster Catholics committed to the use of terror tactics against Ulster Protestants and the British military, tactics that included the 1979 assassination of Lord Mountbatten and the killing of some 1,800 people by the early 1990s. In 1994 the IRA declared a cease-fire, and its political representatives were included in multiparty talks beginning in 1997. Negotiations produced the Good Friday Agreement (1998), in which the IRA agreed to decommission (disarm). In the ensuing years the IRA destroyed some of its weapons but resisted decommissioning its entire armoury, hampering implementation of the peace agreement. In July 2005, however, the IRA announced that it was ending its armed campaign and instead would pursue only peaceful means to achieve its objectives.

Irish Sea Arm of the North Atlantic Ocean that separates Ireland from Great Britain. Connected with the Atlantic by North Channel and by St. George's Channel, it is about 130 mi (210 km) long and 150 mi (240 km) wide. Its total area is about 40,000 sq mi (100,000 sq km). Its greatest depth measures about 576 ft (175 m). The Isle of Man and Anglesey are its two principal islands.

Irish terrier Breed of terrier developed in Ireland, one of the oldest terrier breeds. It stands 16–18 in. (41.5–46 cm) high, weighs 22–26 lbs (10–12 kg), and has a wiry golden-red to reddish brown coat. Nicknamed the daredevil, it is reputedly adaptable, loyal, spirited, and recklessly courageous. It served as a messenger and sentinel in World War I, and has been used to hunt and to retrieve game.

Irish terrier
SALLY ANNE THOMPSON/EB INC.

Irish wolfhound Tallest of all dog breeds, a keen-sighted hound used in Ireland to hunt wolves and other game and noted for its speed and strength. An ancient breed, first mentioned about the 2nd century AD, it is similar in build to the greyhound but far more powerful. The female, substantially smaller than the male, stands at least 30 in. (76 cm) tall and weighs 105 lb (48 kg) or more. The rough coat is long on the brows and underjaw, and the colours include gray, brindle, red-brown, black, and white. The dog is valued as a gentle, even-tempered companion.

Irkutsk \ir-'kütsk\ City (pop., 2001 est.: 587,200), east-central Russia. Located on the Angara River, it was founded as a wintering camp in 1652. It soon became a commercial centre for the fur trade and a base on the Russian trade route to China and Mongolia. Its importance grew after the opening of the Trans-Siberian Railroad in 1898. An industrial and cultural centre, it is the seat of Irkutsk State University and the Siberian branch of the Academy of Sciences.

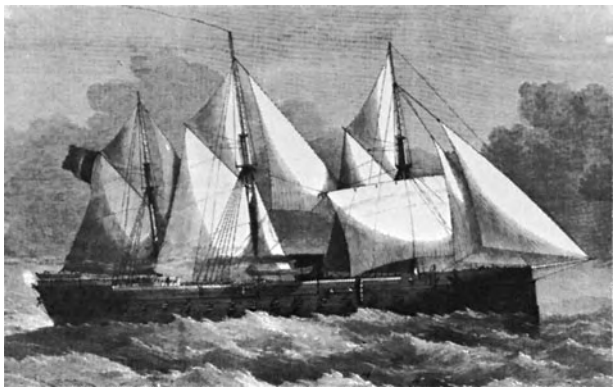
iron Metallic chemical element, one of the transition elements, chemical symbol Fe, atomic number 26. Iron is the most used and cheapest metal, the second most abundant metal and fourth most abundant element in Earth's crust. It occurs rarely as a free metal, occasionally in natural alloys (especially in meteorites), and in hundreds of minerals and ores, including hematite, magnetite, limonite, and siderite. The human body contains about one-sixth of an ounce (4.5 g) of iron, mostly in hemoglobin and its precursors; iron in the diet is essential to health. Iron is ferromagnetic (see ferromagnetism) at ordinary temperatures and is the only metal that can be tempered (see tempering). Its uses in steels of various types, as well as in cast and wrought iron (collectively, "ferrous metals"), are numerous. Alteration of its properties by impurities, especially carbon, is the basis of steelmaking. Iron in compounds usually has valence 2 (ferrous) or 3 (ferric). Ferrous and ferric oxides (FeO and Fe_2O_3, respectively) are used as pigments and the latter as jewelers' rouge. Rust is ferric oxide containing water; ferric oxide is widely used as a magnetic recording material in computer data-storage devices and magnetic tapes. Ferrous and ferric sulfates and chlorides are all of industrial importance as mordants, reducing agents, flocculating agents, or raw materials and in inks and fertilizers.

Iron Act (1750) Measure by the British Parliament to restrict the American colonial iron industry. Pig iron and iron bar could be exported to England duty-free to meet British needs. Further development of colonial manufacturing to produce finished iron goods was prohibited, as was the export of iron to other countries.

Iron Age Final technological and cultural stage in the Stone–Bronze–Iron-Age sequence (or Three-Age System) in which iron largely replaced bronze in implements and weapons. The start of the Iron Age varied geographically, beginning in the Middle East and southeastern Europe c. 1200 BC but in China not until c. 600 BC. Though the large-scale production of iron implements brought new patterns of more permanent settlement, use of iron for weapons put arms in the hands of the masses for the first time and set off a series of large-scale movements and conquests that did not end for 2,000 years and that changed the face of Europe and Asia. See also Bronze Age.

Iron Curtain Political, military, and ideological barrier erected by the Soviet Union after World War II to seal off itself and its dependent eastern European allies from open contact with the West and other noncommunist areas. Winston Churchill employed the term in a speech in Fulton, Mo., U.S., about the division of Europe in 1946. The restrictions and the rigidity of the Iron Curtain eased slightly after Joseph Stalin's death in 1953, though the construction of the Berlin Wall in 1961 restored them. The Iron Curtain largely ceased to exist in 1989–90 with the communists' abandonment of one-party rule in eastern Europe.

iron-deficiency anemia Most common type of anemia, which may develop in times of high iron loss and depletion of iron stores (e.g., rapid growth, pregnancy, menstruation) or in settings of low dietary iron intake or inefficient iron uptake (e.g., starvation, intestinal parasites, gastrectomy). Much of the world's population is iron-deficient to some degree. Symptoms include low energy level and sometimes paleness, shortness of breath, cold extremities, sore tongue, or dry skin. In advanced cases, red blood cells are small, pale, and low in hemoglobin, blood iron levels are reduced, and body iron stores are depleted. Treatment with iron usually brings quick improvement.



iron ore, bog See bog iron ore

iron pyrite See pyrite

ironclad Type of warship developed in Europe and the U.S. in the mid-19th century, characterized by the iron armour that protected the hull. In the Crimean War (1853–56) the French and British successfully attacked Russian fortifications with "floating batteries," ironclad barges mounting

© 2006 Encyclopædia Britannica, Inc.

heavy guns. In 1859 the French completed the first iron warship, the *Gloire*; its iron plates, 4.5 in. (11 cm) thick, were backed by heavy timber. Britain and the U.S. soon followed. Union forces launched armored gunboats on the Mississippi at the start of the American Civil War, and a flotilla captured Fort Henry (1862). The first battle between ironclads was the Battle of the *Monitor* and *Merrimack* (1862). Later refinements led to the BATTLESHIP. See also MONITOR.

Irons, Jeremy (b. Sept. 19, 1948, Cowes, Isle of Wight, Eng.) British actor. He made his London stage debut in *Godspell* (1973) and appeared on Broadway in *The Real Thing* (1984, Tony Award). After his screen debut in *Nijinsky* (1980), he won notice for *The French Lieutenant's Woman* (1981) and became widely popular in the television series *Brideshead Revisited* (1980–81). His performances were notable for their sensitivity and sophistication, and he offered deliciously wicked turns in *Dead Ringers* (1988) and *Reversal of Fortune* (1990, Academy Award). His later films include *Damage* (1992), *The Lion King* (1994), and *Lolita* (1997).

ironweed Any of about 500 species of perennial plants constituting the genus *Vernonia* (family Asteraceae). Small herbaceous (nonwoody) species are found throughout the world; shrubs and trees are found primarily in tropical regions. Ironweed species have lance-shaped, toothed leaves that alternate along the stem; clusters of flower heads composed only of disk flowers (no ray flowers); and a ring of overlapping BRACTS below the flower heads. Some autumn-blooming species are cultivated as border plants for their attractive white, purple, or pink flower clusters.

Western ironweed (*Vernonia fasciculata*)
DAN MORRILL

ironwood Any of numerous trees and shrubs, found worldwide, that have exceptionally tough or hard wood useful for timber, fence posts, and tool handles. Species include the eastern, or American, hop hornbeam (*Ostrya virginiana*), a small tree of northern Iran (*Parrotia persica*), and Ceylon ironwood (*Mesua ferrea*). Though these trees belong to different plant orders, all have bright yellow to orange and scarlet autumn foliage.

irony Language device in which the real intent is concealed or contradicted by the literal meaning of words or a situation. Verbal irony, either spoken or written, arises from an awareness of contrast between what is and what ought to be. Dramatic irony, an incongruity in a theatrical work between what is expected and what occurs, depends on the structure of a play rather than its use of words, and it is often created by the audience's awareness of a fate in store for the characters that they themselves do not suspect. See also FIGURE OF SPEECH.

Iroquoian \ˈir-ə-ˌkwȯi-ən\ **languages** Family of about 16 North American Indian languages aboriginally spoken around the eastern Great Lakes and in parts of the Middle Atlantic states and the South. Aside from the languages of the IROQUOIS CONFEDERACY (Mohawk, Oneida, Onondaga, Cayuga, and Seneca, all originally spoken in New York, along with Tuscarora, originally spoken in North Carolina) and Cherokee (originally spoken in the southern Appalachians), the Iroquoian languages are extinct, and with the exception of Huron and Wyandot, the extinct languages are poorly documented. Iroquoian languages are remarkable for their grammatical intricacy. Much of a sentence's semantic content is bound around a verbal base, so a single very long word may constitute a fairly complex utterance.

Iroquois \ˈir-ə-ˌkwȯi\ Any of six North American members of the IROQUOIS CONFEDERACY living mostly in southern Ontario and Quebec, Can., and in New York, Wisconsin, Ohio, and Oklahoma, U.S. The name Iroquois is a French derivation of Irinakhoiw, meaning "Rattlesnakes," their Algonquian enemy's epithet. They call themselves Hodenosaunee, meaning "People of the Longhouse." The Iroquois were semisedentary, practiced agriculture, palisaded their villages, and dwelled in LONGHOUSES that lodged many families. Women worked the fields and, when they became clan elders, helped determine the makeup of village councils. Men built houses, hunted, fished, and made war. Iroquoian mythology was largely preoccupied with supernatural aggression and cruelty, sorcery, torture, and cannibalism. Their formal religion consisted of agricultural festivals. Warfare was ingrained in Iroquois society, and war captives were often tortured for days or made permanent slaves. All together the various Iroquois tribes number about 70,000 members, with the MOHAWK making up more than half that figure.

Iroquois Confederacy *or* **League of the Iroquois** Confederation of five (later six) Indian tribes across upper New York that in the 17th–18th century played a strategic role in the struggle between the French and British for supremacy in North America. The five original nations were the MOHAWK, ONEIDA, Onondaga, Cayuga, and SENECA; the Tuscarora, a non-voting member, joined in 1722. According to tradition, the confederacy was founded between 1570 and 1600 by Dekanawidah, born a Huron (see WYANDOT), carrying out the earlier ideas of HIAWATHA, an Onondaga. Cemented mainly by their desire to stand together against invasion, the tribes united in a common council composed of 50 sachems; each original tribe had one vote, and unanimity was the rule. At first the confederacy barely withstood attacks from the Huron and MAHICAN, but by 1628 the Mohawk had defeated the Mahican and established themselves as the region's dominant tribe. When the Iroquois destroyed the Huron in 1648–50, they were attacked by the Huron's French allies. During the AMERICAN REVOLUTION, the Oneida and Tuscarora sided with the American colonists while the rest of the league, led by JOSEPH BRANT, fought for the British. The loyalist Iroquois were defeated in 1779 near Elmira, N.Y., and the confederacy came to an end.

irrational number Among the REAL NUMBERS, any of those that cannot be represented as quotients of integers. In decimal form, irrational numbers are represented by nonterminating, nonrepeating decimals. Examples include square roots of prime numbers and such TRANSCENDENTAL NUMBERS as π and e.

Irrawaddy \ˌir-ä-ˈwä-dē\ **River** River, Myanmar (Burma). It flows 1,350 mi (2,170 km) across the centre of the country and empties into the Bay of BENGAL. The country's most important commercial waterway, it is formed by the confluence of the Nmai and the Mali rivers; in the central dry zone it is joined by its major tributary, the CHINDWIN RIVER. Chief ports are MANDALAY, Chauk, Prome (Pyè), and Henzada.

irrigation Artificial supply of water to land, to maintain or increase yields of food crops, a critical element of modern agriculture. Irrigation can compensate for the naturally variable rate and volume of rain. Water is pumped from natural ponds, lakes, streams, and wells; basin systems and dams hold back larger streams and annual floods. Below the dam, gates to concrete-lined canals are opened, conveying the water over the land through gravity flow. More elaborate, expensive canals flow from huge constructed reservoirs, which hold a year-round water supply. Today portable irrigation systems of lightweight aluminum pipe are in wide use. Drip irrigation, a newer method, uses narrow tubing to supply water directly to the base of each plant. Agricultural irrigation, water towers, and machines invented to lift and distribute water are ancient innovations. Early Egyptians were irrigating with Nile River water by 5000 BC, and

© 2006 Encyclopædia Britannica, Inc.

such other ancient civilizations as Babylon and China seem to have developed largely as a result of irrigation-based agriculture.

irritable bowel syndrome *or* **IBS** Chronic disorder characterized by abdominal pain, intestinal gas, and diarrhea, constipation, or both. Other symptoms may include abdominal pain that is relieved after defecation or a sensation of incomplete rectal evacuation. IBS is caused by a motility disturbance of the intestines that may result from increased intestinal sensitivity to distension. Stress or the consumption of fatty foods, milk products, certain fruits or vegetables (e.g., broccoli and cabbage), alcohol, or caffeine may cause similar symptoms. Treatment includes relaxation, exercise, and avoidance of aggravating foods. Antidiarrheal medications or fibre supplements may help lessen symptoms. Although IBS may cause discomfort and emotional distress, the disorder does not result in any permanent intestinal damage.

Irtysh \ir-'təsh\ **River** *Kazakh* **Ertis** \er-'tis\ River rising in the Altai Mountains in Xinjiang autonomous region, China. It flows west across the Chinese border and then northwest through Kazakhstan into Russian Siberia, where it becomes the largest tributary of the Ob River. It is 2,640 mi (4,248 km) long and is navigable for most of its course. Its main ports include Tobolsk, Tara, Omsk, Pavlodar, Semey, and Öskemen.

Iruña See Pamplona

Irvine Royal burgh and seaport (pop., 1991: 32,988), North Ayrshire council area, on the Atlantic coast of Scotland. The last of Scotland's five new towns, it was designated in 1967 to house overflow population from Glasgow and provide a focus for the economic and industrial rehabilitation of the area. It had declined in the 18th and 19th centuries because of competition from other towns and the silting of the harbour. It became an industrial centre that produces chemicals, engineering, electrical goods, and clothing.

Irving City (pop., 2000: 191,615), northeastern Texas, U.S. Established in 1903 and incorporated in 1914, the city developed into an industrial hub during the 1950s. A suburb of Dallas, it is the site of the University of Dallas and DeVry University as well as of Texas Stadium, home of the Dallas Cowboys professional gridiron football team.

Irving, Sir Henry *orig.* **John Henry Brodribb** (b. Feb. 6, 1838, Keinton Mandeville, Somerset, Eng.—d. Oct. 13, 1905, Bradford, Yorkshire) British actor. He toured for 10 years with a stock company before making his London debut in 1866. With his success in *The Bells* (1871), he became a leading actor in H.L. Bateman's company (1871–77). As actor-manager of the Lyceum Theatre (from 1878), he made it London's most successful theatre. He formed a celebrated acting partnership with Ellen Terry that lasted until the company dissolved in 1902. They were noted for their Shakespearean roles, and their theatrical qualities complemented each other: he the brooding introvert, she the spontaneous charmer.

Irving, John (Winslow) (b. March 2, 1942, Exeter, N.H., U.S.) U.S. novelist. He taught at several universities before beginning to write full-time in the late 1970s. His best-selling *The World According to Garp* (1978; film, 1982) is notable, like his other works, for its engaging story line, colourful characterizations, macabre humour, and examination of contemporary issues. Later novels include *The Hotel New Hampshire* (1981; film, 1984), *The Cider House Rules* (1985; film, 1999), and *A Prayer for Owen Meany* (1989).

Irving, Washington (b. April 3, 1783, New York, N.Y., U.S.—d. Nov. 28, 1859, Tarrytown, N.Y.) U.S. author, called the "first American man of letters." He began his career as a lawyer but soon became a leader of the group that published *Salmagundi* (1807–08), a periodical containing whimsical essays and poems. After his comic *A History of New York...by Diedrich Knickerbocker* (1809), he wrote little until his very successful *The Sketch Book* (1819–20), containing his best-known stories, "The Legend of Sleepy Hollow" and "Rip Van Winkle." It was followed by a sequel, *Bracebridge Hall* (1822). He held diplomatic positions in Madrid, Spain, and writings such as *The Alhambra* (1832) reflect his interest in Spain's past.

COURTESY OF HISTORIC HUDSON VALLEY

Isaac \ī-'zäk**, Heinrich** (b. c. 1450, Brabant—d. 1517, Florence) Flemish composer. He spent much of his career in Italy, especially Florence, but was known as a leading representative of the Netherlandish style. As court composer to Emperor Maximilian I (from 1497), he was allowed to travel. He had many students, including Ludwig Senfl, and his historical importance in Germany is as the main disseminator of the progressive Northern style there. The beauty and quality of his works, which include over 100 masses, dozens of motets, and secular songs, have led some to regard him as second only to Josquin des Prez among his contemporaries.

Isaac II Angelus (b. c. 1135—d. February 1204) Byzantine emperor (1185–95). Proclaimed emperor by the Constantinople mob that murdered his cousin, Andronicus I Comnenus, he drove the Normans out of Greece (1185) but failed to regain Cyprus from rebels. He was forced to help Frederick I Barbarossa in the Third Crusade. He defeated the Serbians (1190), but before he could carry out a planned expedition against the Bulgarians, he was overthrown by his brother, who imprisoned and blinded him (1195). His son Alexius diverted the Fourth Crusade to restore him to power (1203), and father and son briefly ruled as co-emperors before being dethroned and killed in a revolution.

Isaac of Stella (b. c. 1100, England—d. c. 1169, Étoile, near Poitiers, Aquitaine) Monk, philosopher, and theologian. Isaac joined the Cistercians during the reforms carried out by St. Bernard de Clairvaux. His scholarly works make use of logical argumentation and are influenced by the Neoplatonism of St. Augustine. His principal work, *Letter to Alcher on the Soul* (1162), integrates Aristotelian and Neoplatonic psychological theories with Christian mysticism. A leader of humanism in his day, he suggests that the intellect enables humans to grasp eternal ideas in time and that intelligence allows humans to intuit the reality of God.

Isabela Island Island, Galapagos Islands, Ecuador. It is the largest of the Galapagos Islands, located in the eastern Pacific Ocean west of mainland Ecuador. It has an area of 2,249 sq mi (5,825 sq km), and its northern tip, Albemarle, is crossed by the Equator. It has unique species of flightless cormorants and penguins as well as large numbers of iguanas and a flamingo colony.

Isabella I *known as* **Isabella the Catholic** *Spanish* **Isabel la Católica** (b. April 22, 1451, Madrigal de las Altas Torres, Castile—d. Nov. 26, 1504, Medina del Campo, Spain) Queen of Castile (1474–1504) and of Aragon (1479–1504). Daughter of John II of Castile and León, she married Ferdinand V in 1469. Her reign began with civil war over her succession (1474–79), but in 1479 the kingdoms of Castile and Aragon came together in the persons of their rulers, though they remained separately governed. In a long campaign (1482–92), Isabella and Ferdinand succeeded in conquering Granada, the last Muslim stronghold in Spain. In 1492 Isabella approved support of Christopher Columbus's journey to the New World. That same year she was involved in the expulsion of the Jews under the Inquisition. Along with her spiritual advisers, she reformed the Spanish churches.

ARCHIVO MAS, BARCELONA

Isabella II *Spanish* **Isabel** \ē-sä-'bel\ (b. Oct. 10, 1830, Madrid, Spain—d. April 9, 1904, Paris, France) Queen of Spain (1833–68). She was the daughter of Ferdinand VII, and the issue of her succession to the throne precipitated the First Carlist War (see Carlism). During her minority (1833–43), her mother and Baldomero Espartero acted as regents; in 1843 Espartero was deposed by military officers, and Isabella was declared of age. dalous reports about her private life, and her arbitrary political interference led to the Revolution of 1868, which drove her into exile. She abdicated in favour of her son, Alfonso XII.

Isabella Farnese \fär-'nā-zā\ (b. Oct. 25, 1692, Parma, Duchy of Parma—d. July 11, 1766, Aranjuez, Spain) Queen consort of Philip V of Spain. A member of the ducal Farnese family of Parma, she became Philip's second wife in 1714 and quickly established ascendancy over her weak husband. Because his two sons by his first wife were in line to succeed him, she sought to secure Italian possessions for her own children, including Charles III. This quest embroiled Spain in wars and intrigues for three decades. However, she chose able and devoted ministers, who introduced beneficial internal reforms and improved Spain's economy. After Philip's death in 1746, she ceased to exert any real influence.

Isaiah \ī-'zā-ə\ (fl. 8th century BC, Jerusalem) Prophet of ancient Israel after whom the biblical book of Isaiah is named. He is believed to have written only some of the book's first 39 chapters; the rest are by one or more unknown authors. Isaiah's call to prophesy came c. 742 BC, when Assyria was beginning the westward expansion that later overran Israel. A contemporary of Amos, Isaiah denounced economic and social injustice among the Israelites and urged them to obey the Law or risk cancellation of God's covenant. He correctly predicted the destruction of Samaria, or northern Israel, in 722 BC, and he declared the Assyrians to be the instrument of God's wrath. The Christian Gospels lean more heavily on the book of Isaiah than on any other prophetic text, and its "swords-into-plowshares" passage has universal appeal.

Ischia \'is-kē-ə\ Island, southern Italy. Located in the Tyrrhenian Sea between the Gulf of Gaeta and the Bay of Naples, it has a circumference of 21 mi (34 km) and an area of 18 sq mi (47 sq km) and consists almost entirely of volcanic rock. It rises to 2,585 ft (788 m) at Monte Epomeo, an extinct volcano, which gives its name to the island's famous wine. Known for its mild climate and mineral springs, it is a popular resort area. The chief towns, including Ischia, are located in the north.

ISDN *in full* **Integrated Services Digital Network** Digital telecommunications network that operates over standard copper telephone wires or other media. ISDN connections are used to provide a variety of digital services to customers, including digital voice telephone, fax, e-mail, digital video, and access to the Internet. A wide range of data transfer rates are available, with speeds up to about 128 kilobits per second (kbps). ISDN is faster than an ordinary dial-up connection (at about 56 kbps), but much slower than cable modem or DSL connections (which typically exceed one megabit per second).

Ise Shrine *in full* **Grand Shrine of Ise** *Japanese* **Ise-daijingū** Foremost Shintō shrine in Japan, at Ise, in southern Honshu. The Inner Shrine (traditionally founded 4 BC) is dedicated to the sun goddess Amaterasu. The Outer Shrine (5th century), 4 mi (6 km) away, is dedicated to Toyuke Ōkami, god of food, clothing, and housing. At both shrines the main building is a thatched hut built in the ancient Japanese style of unpainted Japanese cypress (*hinoki*). A distinctive feature of Shintō architecture is the *chigi*, a scissor-shaped finial at the front and rear of the roof. Since the 7th century the buildings have been reconstructed every 20 or 21 years.

Entrance to the Outer Shrine of the Grand Shrine of Ise, Japan.
FPG-EB INC.

Iseo \ē-'zā-ō**, Lake** Lake, northern Italy. Situated at the southern foot of the Alps, it is fed by the Oglio River, which enters the northern end near Lovere and leaves the southern end at Sarnico. It is 15.5 mi (25 km) long, with a surface area of 24 sq mi (62 sq km). Monte Isola, a large island in the centre of the lake, is crowned by a chapel.

Isère River \ē-'zer\ River, southwestern France. Originating in the Savoy Alps on the Italian frontier, it flows 180 mi (290 km) southwest to its confluence with the Rhône River above Valence. It is unnavigable but used for hydroelectric power.

Iṣfahān See Eṣfahān

Isherwood, Christopher *orig.* **Christopher William Bradshaw** (b. Aug. 26, 1904, High Lane, Cheshire, Eng.—d. Jan. 4, 1986, Santa Monica, Calif., U.S.) British-born U.S. writer. Educated at Cambridge University, he became close friends with W.H. Auden, with whom he traveled and collaborated on three verse dramas, including *The Ascent of F6* (1936). He lived in Berlin from 1929 to 1933; his two novels about this period, later published together as *The Berlin Stories* (1946), inspired the play *I Am a Camera* (1951; film, 1955) and the musical *Cabaret* (1966; film, 1972). A pacifist, he moved to southern California at the beginning of World War II, where he taught and wrote screenplays. His later fiction and memoirs reflect his homosexuality. A follower of Swami Prabhavananda, he wrote and translated works on Indian Vedanta.

Ishikari \ˌē-shē-'kä-rē\ **River** River, Hokkaido, northern Japan. Rising near the centre of the Kitami Mountains, it flows southwest to empty into Ishikari Bay of the Sea of Japan (East Sea). It is 227 mi (365 km) long, the second longest river in Japan. Its name is derived from the Ainu term *ishikaribetsu* ("greatly meandering river").

Ishim \i-'shim\ **River** *Kazakh* **Esil** \'es-il\ River, north-central Kazakhstan and the Tyumen and Omsk provinces of south-central Russia. A tributary of the Irtysh River, it rises in the Niyaz Hills in the north of the Kazakh Uplands, flowing northwest before entering the Irtysh at Ust-Ishim. It is 1,522 mi (2,450 km) long.

Ishmael ben Elisha \'ish-mā-əl-ˌben-i-'lī-shə\ (fl. 2nd century AD) Jewish scholar. Born into a wealthy priestly family, he was taken captive by the Roman legions that sacked Jerusalem in AD 70, but he was ransomed by his former teacher and was sent back to Palestine to study. Ishmael founded a rabbinic school and wrote commentaries on the Torah, developing 13 rules of exegesis based on the 7 rules of Hillel. Known for his simple, literal approach to biblical scholarship, he sought to relieve hardship for observant Jews in the interpretation of the Law. He is often portrayed in dispute with Akiba ben Joseph for what he saw as the latter's excessive interpretations of superficial biblical words or phrases.

Ishtar In Mesopotamian religion, the goddess of war and sexual love. Known as Ishtar in Akkadia, she was called Astarte by western Semitic peoples and was identified with Inanna in Sumeria. In early Sumeria she was the goddess of the storehouse as well as of rain and thunderstorms. Once a fertility goddess, she evolved into a deity of contradictory qualities, of joy and sorrow, fair play and enmity. In Akkadia she was associated with the planet Venus and was the patroness of prostitutes and alehouses. Her popularity became universal in the ancient Middle East, and she was called Queen of the Universe.

Isidore of Sevilla, Saint (b. c. 560, Cartagena or Sevilla, Spain—d. April 4, 636, Sevilla; canonized 1598; feast day April 4) Spanish prelate and scholar, last of the Western Fathers of the Church. He became archbishop of Sevilla c. 600 and presided over several councils that shaped church policy, including the fourth Council of Toledo (633). He also promoted the conversion of the Visigoths from Arianism to orthodox Christianity. His best-known work was *Etymologies*, an encyclopedia that became a standard reference work in the Middle Ages. He also wrote theological works, biographies, and treatises on natural science, cosmology, and history. He was canonized in 1598 and declared a Doctor of the Church in 1722.

isinglass See muscovite

Isis \'ī-səs\ One of the major goddesses of ancient Egypt, the wife of Osiris. When Osiris was killed by Seth, she gathered up the pieces of his body, mourned for him, and brought him back to life. She hid their son Horus from Seth until Horus was fully grown and could avenge his father. Worshiped as a goddess of protection, she had great magical powers and was invoked to heal the sick or protect the dead. By Greco-Roman times she was dominant among Egyptian goddesses, and her cult reached much of the Roman world as a mystery religion.

ISKCON See Hare Krishna movement

Isla de Pasqua See Easter Island

Islam Major world religion founded by Muhammad in Arabia in the early 7th century AD. The Arabic word *islam* means "submission"—specifically, submission to the will of the one God, called Allah in Arabic. Islam is a strictly monotheistic religion, and its adherents, called Muslims, regard the Prophet Muhammad as the last and most perfect of God's messengers, who include Adam, Abraham, Moses, Jesus, and others. The sacred scripture of Islam is the Qur'ān, which contains God's revelations to Muhammad. The sayings and deeds of the Prophet recounted in the sunna are also an important source of belief and practice in Islam. The religious obligations of all Muslims are summed up in the Five Pillars of Islam, which include belief in God and his Prophet and obligations of prayer, charity, pilgrimage, and fasting. The fundamental concept in Islam is the Sharī'ah, or Law, which embraces the total way of life commanded by God. Observant Muslims pray five times a day and join in community worship on Fridays at the mosque, where worship is led by an imam. Every believer is required to make a pilgrimage to Mecca, the holiest city, at least once in a lifetime, barring poverty or physical incapacity. The month of Ramadan is set aside for fasting. Alcohol and pork are always forbidden, as are gambling, usury, fraud, slander, and the making of images. In addition to celebrating the breaking of the fast of Ramadan, Muslims celebrate Muhammad's birthday (see mawlid) and his ascension into heaven (see mi'rāj). The 'Īd al-Aḍḥā festival inaugurates the season of pilgrimage to Mecca. Muslims are enjoined to defend Islam against unbelievers through jihad. Divisions occurred early in Islam, brought about by disputes over the succession to the caliphate (see caliph). About 90% of Muslims belong to the Sunnite branch. The Shi'ites broke away in the 7th century and later gave rise to other sects, including the Ismā'īlīs. Another significant element in Islam is the mysticism known as Sufism. Since the 19th century the concept of the Islamic community has inspired Muslim peoples to cast off Western colonial rule, and in the late 20th century fundamentalist movements (see Islamic fundamentalism) threatened or toppled a number of secular Middle Eastern governments. In the early 21st century, there were more than 1.2 billion Muslims in the world.

Islam, Nation of See Nation of Islam

Islam, Pillars of Five duties incumbent on every Muslim. The first is the profession of faith in the one God and in Muhammad as his Prophet. The others are prayer five times a day, the giving of alms to the poor, fasting during the month of Ramadan, and the hajj, or pilgrimage to Mecca.

Islamabad \is-'lä-mə-ˌbäd\ Capital (pop., 1998: 524,500) of Pakistan, located northeast of Rawalpindi. Established in 1959 to replace Karachi as the capital, it was designed to blend modern and traditional Islamic architecture. The city itself is small, with an area of 25 sq mi (65 sq km), but the planned capital area is a 350-sq-mi (910-sq-km) expanse of natural terraces and meadows surrounding the city. It is the seat of the University of Islamabad (founded 1965).

Islāmbūlī \ˌis-lam-'bü-lē**, Khālid al-** *or* **Khaled Islambouli** (b. 1958, near Al-Minyā, Egypt—d. April 15, 1982, Egypt) Egyptian radical, assassin of Anwar el-Sādāt. Born into a family of rural notables, he attended Egypt's military academy and was assigned to the artillery corps as a lieutenant. Furious at the arrest of his brother, a leader of the Islamist opposition to Sādāt, he joined the radical Islamic Jihad Group (Jamā'at al-Jihād al-Islāmī), and, along with a group of accomplices, assassinated Sādāt during a parade in 1981. He was executed following a public trial.

Islamic arts Visual, literary, and performing arts of the populations that adopted Islam from the 7th century. Islamic visual arts are decorative, colourful, and, in religious art, nonrepresentational; the characteristic Islamic decoration is the arabesque. From AD 750 to the mid 11th century, ceramics, glass, metalwork, textiles, illuminated manuscripts, and woodwork flourished; lustred glass became the greatest Islamic contribution to ceramics. Manuscript illumination became an important and greatly respected art, and miniature painting flourished in Iran after the Mongol invasions (1220–60). Calligraphy, an essential aspect of written Arabic, developed in manuscripts and architectural decoration. Islamic architecture finds its highest expression in the mosque and related religious buildings. Early Islamic religious architecture drew upon Christian architectural features such as domes, columnar arches, and mosaics, but also included large courtyards for congregational prayer. Religious architecture came into its own in the period of the caliphates with the creation of the hypostyle mosque in Iraq and Egypt. Islamic literature is written in four main languages: Arabic, Persian, Turkish, and Urdu. Arabic is of overwhelming importance as the language of the revelation of Islam and of the Qur'ān. The Persians used the genres, forms, and rules of Arabic poetry in their own language but elaborated on them. They also developed a new genre, the *masnavī*, composed of a series of rhyming couplets, which they employed for epic poetry. Persian literature in turn influenced both Urdu and Turkish literature, especially with regard to vocabulary and metres. In the realm of popular literature, the best-known work is *The Arabian Nights' Entertainment*, a rich collection of fairy tales from different parts of the Muslim world. Islamic music is monophonic, devoid of harmony, and characterized by distinctive systems of rhythms and melodies, extensive ornamentation of the single melodic line, and virtuoso improvisation. It is usually performed by a small ensemble—a singer and several instrumentalists who alternate solo vocal and instrumental passages. While the theatre has not flourished as a major art under Islam—indeed, conservative Muslims have consistently disapproved of the theatre—there are traditions of folk dance, dance as an entertainment spectacle, and dance as an art form in most Islamic countries. One noteworthy form of devotional dance is that of the dervish. Popular traditions such as mime and shadow-puppet shows have also have persisted, and live popular drama has a strong tradition in Persia, where passion plays took root. See also hypostyle hall; Mozarabic art.

Islamic calendar See Muslim calendar

Islamic caste Any one of several units of social stratification among Muslims in India and Pakistan. Their development can be traced to the caste system of Hinduism and the tendency of Muslim converts from Hinduism to maintain social differences. The highest status is reserved for Muslim Arab immigrants, called ashraf. This level is itself divided into subgroups. The highest subgroup claims descent from Muhammad through his daughter, Fatima. The non-ashraf Muslim castes consist of three levels: converts from high Hindu castes, artisan castes, and the untouchables.

Islamic Resistance Movement See Ḥamās

Islamic Salvation Front *French* **Front Islamique du Salut (FIS)** Algerian Islamist political party. Known best by its French acronym, the organization was founded in 1989 by Ali Belhadj and Abbasi al-Madani. The party won a majority of the seats contested in local elections in 1990 and most of the seats in the National Assembly in the first round of balloting in 1991. The government canceled the second round, however, and arrested many of the group's leaders. The FIS and more extreme Islamist groups afterward waged a protracted guerrilla war, in which atrocities by both sides were alleged to have occured. The group was blamed for the assassination of Pres. Mohamed Boudiaf, but no clear proof was ever found. See also Armed Islamic Group; Liamine Zeroual.

island Any area of land smaller than a continent and entirely surrounded by water. Islands may occur in oceans, seas, lakes, or rivers. A group of

© 2006 Encyclopædia Britannica, Inc.

islands is called an archipelago. Continental islands are simply unsubmerged parts of a continental mass that are entirely surrounded by water; Greenland, the world's largest island, is of the continental type. Oceanic islands are produced by volcanic activity, when lava accumulates to enormous thickness until it finally protrudes above the ocean surface. The piles of lava that form Hawaii rise as high as 32,000 ft (9,700 m) above the ocean floor.

island arc Long, curved chain of oceanic ISLANDS associated with intense volcanic and seismic activity and mountain-building processes. Examples include the Aleutian-Alaska Arc and the Kuril-Kamchatka Arc. Most island arcs consist of two parallel rows of islands. The inner row is a string of volcanoes, and the outer row is made up of nonvolcanic islands. In the case of single arcs, many of the islands are volcanically active. An island arc typically has a landmass or a partially enclosed, unusually shallow sea on its concave side. Along the convex side there usually exists a long, narrow DEEP-SEA TRENCH.

Islands, Bay of Inlet, South Pacific Ocean, on the northeastern coast of NORTH ISLAND, New Zealand. The bay was formed when the sea flooded an old river valley system. It has a 500-mi (800-km) shoreline and about 150 islands. It opens to the ocean through a passage between Brett Cape and Wiwiki Cape. The first European to enter the bay was Capt. JAMES COOK in 1769. The bay was the site of the 1840 signing of the Treaty of Waitangi between Britain and native MAORI. It is now a popular resort area.

Ismāʿīl \is-'mä-ˌel\ **I** (b. July 17, 1487, Ardabīl, Azer.—d. May 23, 1524, Ardabīl, Ṣafavid Iran) Shah of Iran (1501–24) and founder of the ṢAFAVID DYNASTY. Born into a Shīʿite family with close ties to the Sunnite Sufi tradition, he became head of a Shīʿite military force, the Kizilbash, at age 14. He captured Tabrīz in 1501 and proclaimed himself shah of Iran, bringing the whole country and portions of modern-day Iraq under his control. In 1510 his troops defeated the Sunnite Uzbeks. His proclamation of Shīʿism as the official creed prompted the staunchly Sunnite sultan of the OTTOMAN EMPIRE to order an invasion of Iran in 1514. Ismāʿīl lost the Battle of Chaldiran, but mutiny among the Ottoman troops forced their withdrawal. The conflict between the Ṣafavids and their Sunnite neighbours continued for over a century.

Ismāʿīl Pasha \is-'mä-ˌel-pä-'shä\ (b. Dec. 31, 1830, Cairo, Egypt—d. March 2, 1895, Constantinople, Ottoman Empire) Viceroy of Egypt (1863–79) under the OTTOMAN EMPIRE. After an education in Paris and diplomatic missions in other parts of Europe, he was appointed viceroy and became involved with work on the SUEZ CANAL (1859–69). His plan to unify the Nile valley by creating a new southern Egyptian province in the Sudan failed. The sultan dismissed him because of his fiscal mismanagement; the enormous debt he brought on the country led the British to occupy Egypt in 1882.

Ismāʿīlī \ˌis-mä-'ē-lē\ Member of a sect of the SHIʿITE branch of Islam. It came into existence after the death of the sixth IMAM, JAʿFAR IBN MUHAMMAD, in 765. His son Ismāʿīl was accepted as successor only by a minority, who became known as Ismāʿīlites. Their doctrine, formulated in the late 8th and early 9th century, made a distinction between ordinary Muslim believers and the elect, who shared a secret wisdom. The Qarāmitāh subsect was popular in Iraq, Yemen, and Bahrain in the 9th–11th centuries, and the Fāṭimid subsect conquered Egypt in 969 and established the FĀṬIMID DYNASTY. A subgroup of the Fāṭimids was the Nizārīs, who gained control of fortresses in Iran and Syria in the late 11th century and were known as ASSASSINS. The major Nizārī line survived into modern times under the leadership of the AGA KHAN, moving from Iran to India in 1840. The DRUZE separated from the Ismāʿīlīs early in the 11th century and formed a closed society of their own.

Ismay \'iz-mā\ **(of Wormington), Hastings Lionel Ismay, Baron** (b. June 21, 1887, Naini Tal, India—d. Dec. 17, 1965, Broadway, Worcestershire, Eng.) British soldier. A career army officer, he served in India and Africa. As WINSTON CHURCHILL's chief of staff (1940–46) and closest military adviser, he participated in most major policy decisions of the Allied powers during World War II, particularly in the decision to make Germany the Allies' first-priority target and in planning for the invasion of France in 1944. After the war he served as secretary-general of NATO (1952–57).

isnād \is-'nad\ In Islam, a list of authorities who have transmitted accounts of the teachings or actions of MUHAMMAD, one of the COMPANIONS OF THE PROPHET, or of a later authority. Each of these accounts, known as ḤADĪTH, includes an *isnād* that gives the chain of authorities by which it has been handed down, using the form, "It has been related to me by A on the authority of B on the authority of C on the authority of D that Muhammad said…." See also ʿILM AL-ḤADĪTH.

ISO See INTERNATIONAL ORGANIZATION FOR STANDARDIZATION

isobaric spin See ISOSPIN

Isocrates \ī-'sä-krə-ˌtēz\ (b. 436, Athens—d. 338 BC, Athens) Athenian author, rhetorician, and teacher. His school, unlike PLATO's more philosophical Academy, provided an education for the practical needs of society; it was given over almost entirely to RHETORIC. He promoted Greek political unity and cultural superiority based on monarchy and advocated a unified Greek attack on Persia under PHILIP II of Macedonia to secure unity and peace in Greece. When Greece lost its independence after the Battle of CHAERONEA, Isocrates, in despair, starved himself to death.

isolationism National policy of avoiding political or economic entanglements with other countries. Isolationism has been a recurrent theme in U.S. history. It was given expression in the Farewell Address of Pres. GEORGE WASHINGTON and in the early 19th-century MONROE DOCTRINE. The term is most often applied to the political atmosphere in the U.S. in the 1930s. The failure of Pres. WOODROW WILSON's internationalism, liberal opposition to war as an instrument of policy, and the rigours of the GREAT DEPRESSION were among the reasons for Americans' reluctance to concern themselves with the growth of FASCISM in Europe. The Johnson Act (1934) and the Neutrality acts (1935) effectively prevented economic or military aid to any country involved in the European disputes that were to escalate into World War II. U.S. isolationism encouraged the British in their policy of APPEASEMENT and contributed to French paralysis in the face of the growing threat posed by Nazi Germany. See also NEUTRALITY.

Isole Eolie See EOLIE ISLANDS

isoleucine \ˌī-sō-'lü-ˌsēn\ One of the essential AMINO ACIDS, present in most common PROTEINS. It was first isolated in 1904 from fibrin, a protein involved in COAGULATION. It is used in medicine and biochemical research and as a nutritional supplement.

isomer \'ī-sə-mər\ One of two or more substances with identical molecular formulas but different CONFIGURATIONS, differing only in the arrangement of their component atoms. It usually refers to stereoisomers (rather than constitutional isomers or tautomers; see ISOMERISM, TAUTOMERISM), of which there are two types. Optical isomers, or enantiomers (see OPTICAL ACTIVITY), occur in mirror-image pairs. Geometric isomers are often the result of rigidity in the molecular structure; in organic compounds, this is usually due to a double bond (see BONDING) or a ring structure. In the case of a double bond between two carbon atoms, if each has two other groups bonded to it and all are rigidly in the same plane, the corresponding groups can be on the same side (*cis*) of the C═C bond or across the C═C bond (*trans*) from each other. An analogous distinction can be made for ring structures that are all in a plane, between isomers whose substituent groups are on the same side and isomers whose substituent groups are on both sides of the plane. Diastereomers that are not enantiomers also fall into this category. Most *cis-trans* isomers are organic compounds.

isomerism \ī-'sä-mə-ˌri-zəm\ Existence of sets of two or more substances with identical molecular formulas (see CHEMICAL FORMULA) but different CONFIGURATIONS and hence different properties. JONS JACOB BERZELIUS was the first to recognize and name it (1830). In constitutional (structural) isomerism, the molecular formula and molecular weight of the substances are the same, but their BONDING differs. For example, C_2H_6O is the molecular formula for both ETHANOL (CH_3CH_2OH) and methyl ETHER (CH_3OCH_3). Constitutional isomers that can be readily converted from one to another

© 2006 Encyclopædia Britannica, Inc.

are called tautomers (see TAUTOMERISM). In stereoisomerism, substances with the same atoms are bonded in the same ways but differ in their three-dimensional configurations. See also ISOMER.

Isonzo \ē-'zōnt-sō**, Battles of the** (1915–17) Twelve battles along the Isonzo River on the eastern sector of the Italian front in WORLD WAR I. The Isonzo River, running just inside Austria, is flanked by rugged peaks that the Austrians had fortified before Italy's entry into the war in 1915. Luigi Cadorna (1850–1928) led all the attacks against Austria, but the Italians could not penetrate the formidable natural barriers. Finally they struck with 51 divisions and dislodged the Austrians, but the Germans sent reinforcements and took the offensive, ending in the Battle of CAPORETTO.

isoprenoid \ˌī-sə-'prē-ˌnȯid\ *or* **terpene** Class of organic compounds made up of two or more structural units derived from isoprene. Isoprene is a five-carbon HYDROCARBON with a branched-chain structure, two double bonds (see BONDING), and the molecular formula C_5H_8. In isoprenoids, isoprene units (with one or neither of their double bonds) are linked into larger molecules having from two to thousands of five-carbon units that can take the form of both linear structures and rings. Many of these molecules play a wide variety of roles in plant and animal physiological processes and as intermediates in the biological synthesis of other important molecules. They contribute greatly to the flavours and fragrances of ESSENTIAL OILS and other plant-derived substances. Geraniol (a contributor to rose perfumes; from geranium oil), menthol (from peppermint oil), citral (from lemongrass oil), limonene (from lemon and orange oils), pinene (from TURPENTINE), and CAMPHOR each have two isoprene units. Examples with more units include phytol, a precursor of CHLOROPHYLL; squalene, the precursor of CHOLESTEROL and other STEROIDS; lycopene, the red pigment in tomatoes and an important phytochemical; and CAROTENE, the pigment in carrots and a precursor of VITAMIN A. Natural RUBBER and the related gutta-percha are polyisoprenes comprising many thousands of isoprene units.

isospin \'ī-sə-ˌspin\ *or* **isobaric spin** *or* **isotopic spin** Property characteristic of families of related SUBATOMIC PARTICLES differing mainly in the values of their ELECTRIC CHARGE. The families are known as isospin multiplets. The components of atomic nuclei, the NEUTRON and the PROTON, form an isospin doublet since they differ only in electric charge and subsidiary properties. They are considered different versions of the same object, called a nucleon. The isospin of a nucleon has a value of ½.

isostasy \ī-'säs-tə-sē\ Theory describing the mass balance in the Earth's CRUST, which treats all large portions of the crust as though they were floating on a denser underlying layer, about 70 mi (110 km) below the surface. In this theory, a mass above sea level is supported below sea level, so high mountains must be regions where the crust is very thick, with deep roots extending into the MANTLE. This is analogous to an iceberg floating on water, in which the greater part of the iceberg is under water.

isotope \'ī-sə-ˌtōp\ One of two or more species of ATOMS of a chemical ELEMENT having nuclei with the same number of PROTONS but different numbers of NEUTRONS. They have the same ATOMIC NUMBER and hence nearly identical chemical behaviour but different atomic MASSES. Most elements found in nature are mixtures of several isotopes; tin, for example, has 10 isotopes. In most cases, only stable isotopes of elements are found in nature. The radioactive forms break down spontaneously into different elements (see RADIOACTIVITY). Isotopes of all elements heavier than bismuth are radioactive; some occur naturally because they have long HALF-LIVES.

Isozaki \ˌē-sō-'zä-kē\ **Arata** (b. July 23, 1931, Ōita, Kyushu, Japan) Japanese avant-garde architect. He studied at the University of Tokyo and opened his own studio in 1963. His first notable building is the Ōita Prefectural Library (1966), which shows the influence of the METABOLIST SCHOOL. In his later works, which often synthesize Eastern and Western elements, he used bold geometric forms and frequently made historical allusions. Among his innovative structures are the Los Angeles Museum of Contemporary Art (1986) and Art Tower (1990) in Mito, Japan.

ISP See INTERNET SERVICE PROVIDER

Israel *officially* **State of Israel** Country, Middle East, at the eastern end of the Mediterranean Sea. Area: 8,367 sq mi (21,671 sq km). Population (2005 est.): 6,681,000 (includes population of GOLAN HEIGHTS and east Jerusalem; excludes population of the WEST BANK). Capital: JERUSALEM. Jews constitute some four-fifths of the population and Arabs about one-fifth. Languages: Hebrew, Arabic (both official). Religions: Judaism; also Islam, Christianity. Currency: new Israeli sheqel (NIS). Israel can be divided into four major regions: the Mediterranean coastal plain in the west; a hill region extending from the northern border into central Israel; the GREAT RIFT VALLEY, containing the JORDAN RIVER, in the east; and the arid NEGEV, occupying nearly the entire southern half of the country. Its major drainage system is the interior basin formed by the Jordan River; Lake TIBERIAS (Sea of Galilee) provides water to much of the country's agricultural land. Israel has a mixed economy based largely on services and manufacturing; exports include machinery and electronics, diamonds, chemicals, citrus fruits, vegetables, and textiles. Its population is nine-tenths urban and is concentrated largely in the Mediterranean coastal plain and around Jerusalem. It is a republic with one legislative house, the KNESSET; its chief of state is the president, and the head of government is the prime minister. The record of human habitation in Israel (see PALESTINE) dates to the Paleolithic Period. Efforts by Jews to establish a national state there began in the late 19th century. Britain supported ZIONISM and in 1923 assumed political responsibility for what was then called Palestine. Migration of Jews to Palestine, which increased during the period of NAZI persecution, led to deteriorating relations with Arabs. In 1947 the UN voted to partition the region into separate Jewish and Arab states. The State of Israel was proclaimed in 1948, and Egypt, Transjordan (later Jordan), Syria, Lebanon, and Iraq immediately declared war on it. Israel won that war (see ARAB-ISRAELI WARS) as well as the 1967 SIX-DAY WAR, in which it occupied the West Bank, GAZA STRIP, Golan Heights, and east Jerusalem. (Subsequent claims of Jerusalem as Israel's capital have not received wide international recognition.) Another war with its Arab neighbours followed in 1973, but the CAMP DAVID ACCORDS led to a peace treaty between Israel and Egypt in 1979. Israel invaded Lebanon in 1982 to expel the PALESTINE LIBERATION ORGANIZATION (PLO) from that country, and in late 1987 an uprising broke out among Palestinians of the occupied territories of the West Bank and Gaza Strip (see INTIFĀDAH). Peace negotiations between Israel and the Arab states and Palestinians began in 1991. Israel and the PLO agreed in 1993 to a five-year plan to extend self-government to the Palestinians of the occupied territories. Israel signed a peace treaty with Jordan in 1994. Israeli soldiers and a Lebanese militia, HEZBOLLAH, clashed throughout the 1990s. Israeli troops withdrew from Lebanon in 2000, and negotiations between Israel and the Palestinians broke down amid violence that claimed hundreds of lives. In an effort to stem the fighting, Israel in 2005 withdrew its soldiers and settlers from parts of the West Bank and from all of the Gaza Strip, which came under Palestinian control.

© 2006 Encyclopædia Britannica, Inc.

of Levi did not receive land in the settlement of CANAAN but instead was given the priestly office. To maintain the traditional number of 12 tribes, the line of Joseph was divided into the tribes of Ephraim and Manasseh. In Israel's later history, the tribes of Judah and Benjamin formed a southern kingdom called JUDAH with its capital at JERUSALEM, while the 10 northern tribes formed the kingdom of Israel. After being conquered by Assyria in 721 BC, the northern tribes were exiled from the kingdom and were assimilated by other peoples. Disappearing from history, they became known as the 10 lost tribes of Israel and remained part of Jewish folklore and eschatological beliefs. The tribes of Judah and Benjamin survived until NEBUCHADREZZAR's conquest of Judah in 586 BC, when many from the kingdom were exiled to Babylon.

Israel Labour Party Israeli political party founded in 1968 as the union of three socialist-labour parties. The Israel Labour Party and its predecessors led governing coalitions uninterruptedly from 1948 to 1977; since 1977 it has competed with the conservative LIKUD party. Its principal figures have included DAVID BEN-GURION, MOSHE DAYAN, GOLDA MEIR, SHIMON PERES, and YITZHAK RABIN.

Israeli, Isaac ben Solomon *or* **Isaac the Elder** (b. 832/855, Egypt—d. 932/955, Al-Qayrawān, Tun.) Egyptian Jewish physician and philosopher. He began his medical career as an oculist in Cairo and later became court physician to al-Mahdī, founder of the FĀṬIMID DYNASTY in northern Africa. He wrote several medical treatises in Arabic that were later translated into Latin and circulated in Europe. Schooled in Classical learning, he wrote philosophical works, including his *Book of Definitions*, which discusses Aristotle's four types of inquiry and then provides definitions of wisdom, intellect, soul, nature, love, and time. His interpretation of eschatological matters in light of Neoplatonic mysticism was very influential for later Jewish philosophers.

Israeli law Legal practices and institutions of modern Israel. The ancient people of Israel created the law of the TORAH and the MISHNA (the latter was later incorporated into the TALMUD). Contemporary Israeli law reflects a dual legal heritage: it is based on historic Jewish law and the laws of countries in which the Jews had for generations been living. It is derived from Ottoman and British legislation and precedents, religious court opinion, and Israeli parliamentary enactments. Courts are composed of professional judges only; juries are not used. Jewish law as such continues to be applied by the rabbinical courts within their jurisdiction in matters of personal status; it is applied also by the civil courts when called upon to deal with such matters concerning Jews.

Israelite In early Jewish history, a member of the 12 tribes of ISRAEL. After the establishment (930 BC) of two Jewish kingdoms (Israel and Judah) in Palestine, only the ten northern tribes constituting the kingdom of Israel were known as Israelites. When Israel was conquered by the Assyrians (721 BC), its population was absorbed by other peoples, and the term Israelite came to refer to those who were still distinctively Jewish—the descendants of the kingdom of Judah. In liturgical usage, an Israelite is a Jew who is neither a COHEN nor a Levite (see LEVI).

Issus, Battle of (333 BC) Battle on the Issus plain near the Gulf of Iskenderun (in present-day southern Turkey) in which ALEXANDER THE GREAT, on the offensive, defeated Darius III, last king of the ACHAEMENIAN DYNASTY. The Macedonians were said to have lost only 450 men. Darius escaped, but the victory led to Alexander's victories over Phoenicia and Egypt.

Istanbul *formerly* **Constantinople** *ancient* **Byzantium** City and seaport (pop., 2000: 8,803,468), Turkey. Situated on a peninsula at the entrance to the BLACK SEA, Turkey's largest city lies on either side of the BOSPORUS and thus is located in both Europe and Asia. Byzantium was founded as a Greek colony in the 8th century BC. Passing to the Persian Achaemenian dynasty in 512 BC and then to ALEXANDER THE GREAT, it became a free city under the Romans in the 1st century AD. The emperor CONSTANTINE I made the city the seat of the Eastern Roman Empire in 330, later naming it Constantinople. It remained the capital of the subsequent BYZANTINE EMPIRE after the fall of Rome in the late 5th century. In the 6th–13th centuries it was frequently besieged by Persians, Arabs, Bulgars, and Russians. It was captured by the Fourth CRUSADE (1203) and turned over to Latin Christian rule. It was returned to Byzantine rule in 1261. In 1453 it was captured by the OTTOMAN EMPIRE and made the Ottoman capital. When the Republic of Turkey was founded in 1923, the capital was moved to ANKARA, and Constantinople was officially renamed Istanbul in 1930. Many of the city's historic sites are located in the medieval walled city (Stamboul). Among its architectural treasures are the HAGIA SOPHIA, the Mosque of Süleyman, and the Blue Mosque. Its educational institutions include the University of Istanbul (founded 1453), Turkey's oldest university.

The Blue Mosque (Sultan Ahmed Mosque) with its distinctive ensemble of six minarets, Istanbul.

Isthmian Games \'is-mē-ən\ In ancient Greece, a festival of athletic and musical competitions in honor of the sea god POSEIDON. It was held in the spring of the second and fourth years of each Olympiad at Poseidon's legendary sanctuary on the Isthmus of Corinth. It died out when Christianity became dominant in the 4th century AD.

Istria Peninsula, extending into the northeastern Adriatic Sea. It has an area of 1,220 sq mi (3,160 sq km). Its northern portion is part of Slovenia, while the central and southern parts belong to Croatia. A tiny strip of coast in the northwest is the site of TRIESTE and belongs to Italy. Istria's ancient Illyrian inhabitants were overthrown by Romans in 177 BC, and Slavic peoples settled there from the 7th century AD. It passed through the hands of various Mediterranean powers until Austria gained control in 1797 and developed Trieste as a port. Istria was seized by Italy in 1919; Yugoslavia occupied most of the peninsula in 1947. Yugoslavian Istria became part of Croatia and Slovenia at those states' independence in 1991.

Itagaki Taisuke \ē-tä-'gä-kē-'tī-ske\ (b. April 17, 1837, Kōchi, Japan—d. July 11, 1919, Tokyo) Founder of Japan's first political party, the Liberal Party (Jiyūtō). In the 1860s he became military leader of the domain of TOSA, and under his command Tosa's troops participated in the MEIJI RESTORATION. He served sporadically in the new government, but discontent led him to found first a political club and then a national "Society of Patriots" in support of greater democracy. In 1881 he formed the Liberal Party. Though he retired in 1900, he remained its symbolic leader. See also ITŌ HIROBUMI; MEIJI CONSTITUTION; MEIJI PERIOD.

Italian Communist Party See DEMOCRATIC PARTY OF THE LEFT

Italian language ROMANCE LANGUAGE spoken in Italy (including Sicily and Sardinia) and in parts of Switzerland and France (including Corsica). Its 66 million speakers worldwide include many immigrants and their descendants in the Americas. Written Italian dates from the 10th century. The standard literary form is based on the dialect of Florence, but many Italians do not speak it, instead using regional dialects. These include Upper Italian (Gallo-Italian); Venetian in northeastern Italy; Tuscan; the dialects of Marche, Umbria, and Rome; of Abruzzi, Puglia, Naples, Campania, and Lucania; and of Calabria, Otranto, and Sicily. See also ITALIC LANGUAGES.

Italian Liberal Party (PLI) Moderately conservative political party that dominated Italian politics in the decades after unification (1861) and was a minor party after World War II. It was formed as a parliamentary group in 1848 by CAMILLO BENSO, COUNT DI CAVOUR; his followers favoured a centralized government, restricted suffrage, regressive taxation, and free trade. Left Liberals gained control of the party in 1876. Its strength declined after World War I, but beginning in 1944 it was a minor partner in most Christian Democratic coalition governments. Drawing its chief support from small businessmen, it favoured free enterprise; it also backed Italy's involvement in NATO. It was caught up in various corruption scandals after 1992 and was dissolved in the mid 1990s. Most former Liberals joined the centre-right Forza Italia party of SILVIO BERLUSCONI.

© 2006 Encyclopædia Britannica, Inc.

Italian Popular Party (PPI) *formerly (until 1993)* **Christian Democratic Party** Centrist political party whose several factions are united by their Roman Catholicism and anticommunism. They advocate programs ranging from social reform to the defense of free enterprise. The original party was founded in 1919 as the Italian Popular Party and quickly won popularity, but in 1926 the Fascists banned all political parties. After Italy's surrender in World War II, former party leaders, along with Catholic organizations, founded the Christian Democratic Party, which held power in Italy (usually in coalition with other parties) for most of the postwar era. In 1992–93 it was rocked by the involvement of some of its leading members in financial scandals and political corruption. In 1993 the struggling party reverted to its original name, but in the 1994 parliamentary elections it fell from power and was reduced to a minor party. In the late 1990s it participated in elections as part of the La Margherita coalition, which comprised one element of the leftist Olive Tree coalition.

Italian Socialist Party (PSI) *since 1998* **Italian Democratic Socialists (SDI)** Italian political party founded in 1893 by trade unions and socialists. In the early 20th century the left wing of the party clashed with the reformist wing and broke away to form the Italian Communist Party (1921). The PSI formed an alliance with the communists from 1934 until the mid 1950s, when it denounced the Soviet Union after its invasion of Hungary. From 1963 it joined or supported centre-left governments. In 1983 Bettino Craxi became the first Socialist premier, but after political scandals in the 1990s the PSI was reduced to a minor party. The party dissolved itself in 1994, and most of its membership joined a new party, the Italian Socialists. In 1998 the Italian Socialists merged with two other leftist parties to form the Italian Democratic Socialists. In the early 21st century, the party contested elections as part of the Olive Tree coalition.

Italian Somaliland Former Italian colony, eastern Africa. It extended south from Cape Asir to the boundary of Kenya, occupying an area of 178,218 sq mi (461,585 sq km). Italy obtained control of it in 1889 and it was incorporated as a state in Italian East Africa in 1936. Britain invaded in 1941 and retained control until it became a UN trust territory under Italian administration in 1950. In 1960 it was united with British Somaliland to form the independent Republic of Somalia.

Italian Wars (1494–1559) Series of violent wars for control of Italy. Fought largely by France and Spain but involving much of Europe, they resulted in the Spanish Habsburgs dominating Italy and shifted power from Italy to northwestern Europe and its Atlantic world. The wars began with the invasion of Italy by the French king Charles VIII in 1494. He took Naples, but an alliance between Maximilian I, Spain, and the pope drove him out of Italy. In 1499 Louis XII invaded Italy and took Milan, Genoa, and Naples, but he was driven out of Naples in 1503 by Spain under Ferdinand V. Pope Julius II organized the League of Cambrai (1508) to attack Venice, then organized the Holy League (1511) to drive Louis out of Milan. In 1515 Francis I was victorious at the battle of Marignano, and in 1516 a peace was concluded by which France held onto Milan and Spain kept Naples. Fighting began in 1521 between Emperor Charles V and Francis I. Francis was captured and forced to sign the Treaty of Madrid (1526), by which he renounced all claims in Italy, but, once freed, he repudiated the treaty and formed a new alliance with Henry VIII of England, Pope Clement VII, Venice, and Florence. Charles sacked Rome in 1527 and forced the pope to come to terms, and Francis gave up all claims to Italy in the Treaty of Cambrai (1529). By the Treaty of Cateau-Cambrésis (1559), the wars finally ended.

Italic \i-'ta-lik\ **languages** Indo-European languages spoken in the Apennine Peninsula (Italy) during the 1st millennium BC, after which only Latin survived. Traditionally thought to be a subfamily of related languages, these languages include Latin, Faliscan, Osco-Umbrian, South Picene, and Venetic. Latin, the language of Latium and Rome, began to emerge as the predominant language as early as the 3rd century BC. By AD 100 it had replaced all dialects (except Greek) between Sicily and the Alps. Until then, Oscan dialects were most widely spoken; Umbrian, in central Italy, was closely related to Oscan. Venetic was spoken in the region of Venice. These languages were written in various alphabets, including the Greek and Latin alphabets and modified versions of the Etruscan.

Italic War See Social War

Italo-Turkish War (1911–12) War undertaken by Italy to gain colonies in North Africa by conquering the Turkish provinces of Tripolitana and Cyrenaica (modern Libya). The conflict upset the precarious international balance of power just before World War I by revealing the weakness of Turkey and, within Italy, unleashed the nationalist-expansionist sentiment that guided government policy in the following decades. Turkey conceded its rights to the contested provinces in the peace terms.

Italy *officially* **Italian Republic** Country, south-central Europe. It comprises the boot-shaped peninsula extending into the Mediterranean Sea as well as Sicily, Sardinia, and a number of smaller islands. Area: 116,343 sq mi (301,328 sq km). Population (2005 est.): 57,989,000. Capital: Rome. The people are overwhelmingly Italian. Language: Italian (official). Religion: Christianity (predominantly Roman Catholic). Currency: euro.

More than three-fourths of Italy is mountainous or highland country. The Alps stretch from east to west along Italy's northern boundary, and the Apennines stretch southward the length of the peninsula. Most of the country's lowlands lie in the valley of its major river, the Po. Three tectonic plates converge in southern Italy and Sicily, creating intense geologic activity; southern Italy's four active volcanoes include Mount Vesuvius and Mount Etna. The economy is based largely on services and manufacturing; exports include machinery and transport equipment, chemicals, textiles, clothing and shoes, and food products (olive oil, wine, fruit, and tomatoes). Italy is a republic with two legislative houses. The chief of state is the president, and the head of government is the prime minister. Italy has been inhabited since Paleolithic times. The Etruscan civilization arose in the 9th century BC and was overthrown by the Romans in the 4th–3rd centuries BC (see Roman Republic and Empire). Barbarian invasions of the 4th–5th centuries AD destroyed the Western Roman Empire. Italy's political fragmentation lasted for centuries but did not diminish its impact on European culture, notably during the Renaissance. From the 15th to the 18th century, Italian lands were ruled by France, the Holy Roman Empire, Spain, and Austria. When Napoleonic rule ended in 1815, Italy was again a grouping of independent states. The Risorgimento successfully united most of Italy, including Sicily and Sardinia by 1861, and the unification of peninsular Italy was completed by 1870. Italy joined the Allies during World War I, but social unrest in the 1920s brought to power the Fascist movement of Benito Mussolini, and Italy allied itself with Nazi Germany in World War II. Defeated by the Allies in 1943, Italy proclaimed itself a republic in 1946. It was a charter member of NATO (1949) and of the European Community (now embedded in the European Union). It completed the process of setting up regional legislatures with limited autonomy in 1970s. After World War II it experienced rapid changes of government but remained socially stable.

Itami \ē-'tä-mē**, Juzo** *orig.* **Yoshihiro Ikeuchi** (b. May 15, 1933, Kyoto, Japan—d. Dec. 20, 1997, Tokyo) Japanese film director and screenwriter. He had a successful 20-year career as an actor in films such as *55 Days at Peking* (1963) before venturing into directing. His direc-

© 2006 Encyclopædia Britannica, Inc.

torial debut, *The Funeral* (1984), was acclaimed for its satire of social conventions, a novelty in Japanese cinema. He became an international success with his artful and entertaining *Tampopo* (1986) and *A Taxing Woman* (1987). His satire on Japan's crime syndicate, *The Gangster's Moll* (1992), provoked a near-deadly attack on him by gangsters.

Itanagar \ˌē-tə-ˈnə-gər\ Capital (pop. 2001 prelim.: 34,970) of Arunachal Pradesh state, northeastern India, situated west of the Brahmaputra River. The state government has established an industrial estate in the city in order to foster industrial development. It is the home of Arunachal University.

ITAR-TASS *formerly* **TASS** *in full* **Telegrafnoe Agentsvo Sovetskovo Soyuza (Russian: "Telegraph Agency of the Soviet Union")** As TASS, the official news agency of the Soviet Union from 1925 to 1991. It was renamed ITAR-TASS in 1992. The main source of news for all Soviet newspapers and radio and television stations, it was also a major international wire service. After the Soviet Union's 1991 breakup, TASS was reorganized into the Information Telegraph Agency of Russia (ITAR), reporting on news of Russia, and the Telegraph Agency of the Countries of the Commonwealth (TASS), reporting on news of other countries of the Commonwealth of Independent States. ITAR-TASS dispatches on matters of public policy and international affairs reflect the official position of the state.

Itasca \ī-ˈtas-kə**, Lake** Lake, northwestern Minnesota, U.S. Occupying an area of 1.8 sq mi (4.7 sq km), it is located 1,475 ft (450 m) above sea level. Henry Rowe Schoolcraft's theory that Lake Itasca is the source of the Mississippi River has been widely accepted. He is generally credited with originating the name Itasca, but Indian legend mentions I-tesk-ka, the daughter of Hiawatha, whose tears of anguish at being spirited away to the netherworld were the source of the Mississippi.

itching *or* **pruritus** \prü-ˈrīt-əs\ Stimulation of nerve endings in the skin, usually incited by histamine, that evokes a desire to scratch. It is often transient and easily relieved. Pathological itching with skin changes usually signals dermatologic disease. Generalized itching without skin changes can occur in systemic diseases (e.g., metabolic and endocrine conditions, cancer, drug reactions, and kidney, blood, and liver diseases). Dry skin often itches. Treatment depends on cause.

Iténez River See Guaporé River

Ithnā ʿAshariyyah \ˌith-na-ə-shə-ˈrē-ə\ *or* **Imāmīs** *English* **Twelvers** The largest school of Shiʿite Islam, believing in a succession of 12 imams beginning with ʿAlī ibn Abū Ṭālib, the fourth caliph and the son-in-law of Muhammad. The last of the 12 imams recognized by the school was Muḥammad al-Mahdī al-Ḥujjah, who disappeared in 873 and is thought by believers to be alive and in occultation, ready to return at the Last Judgment. The Ithnā ʿAshariyyah believe that imams are the preservers of the faith and the only interpreters of the esoteric meanings of law and theology. The imams are thought to influence the world's future, and pilgrimages to the tombs of the imams secure special rewards. This school became the state religion of Iran under the Ṣafavid dynasty (1501–1736). The Ithnā ʿAshariyyah also constitute a majority in Iraq and Bahrain, with sizable minorities in other Muslim countries. Compare Ismāʿīliyyah.

Itō Hirobumi \ˈē-tō-hē-ˈrō-bù-mē\ (b. Oct. 14, 1841, Suō province, Japan—d. Oct. 26, 1909, Harbin, Manchuria, China) Japanese statesman, prime minister, and writer of the Meiji Constitution. He played a minor role in the Meiji Restoration, through which he came in contact with Kido Takayoshi and Ōkubo Toshimichi. When Ōkubo was assassinated in 1878, Ito succeeded him as home minister. He persuaded the government to adopt a constitution, then traveled abroad to research constitutions. In 1889 the emperor promulgated the resultant document. Later, as prime minister, Itō negotiated an end to extraterritoriality with Britain; other Western nations followed suit, signaling that the West was beginning to treat Japan as an equal. Frustrated with the ability of the political parties to impede passage of government programs in the Diet, in 1900 Itō founded his own party, the Rikken Seiyūkai. This foray cost him control of the genro (elder statesmen) but made cooperation between high-ranking bureaucrats and party politicians acceptable. In 1906 Ito became resident general in Korea; he was assassinated in 1909 by a Korean nationalist.

Itō Jinsai \ˈē-tō-ˈjēn-ˌsī\ (b. Aug. 30, 1627, Kyōto, Japan—d. April 4, 1795, Kyōto) Japanese Confucian scholar. The son of a lumberman, he devoted himself to scholarship. He opposed the authoritarian Neo-Confucianism of the Tokugawa shogunate (see Tokugawa period) and advocated a return to the authentic teachings of Confucius and Mencius. He helped establish the Kogaku school of Neo-Confucianism and, with his son, founded the Kogi-dō academy in Kyōto, which was run by his descendants until 1904. His writings include *Gōmōjigi* (1683), a commentary on Confucianism that tried to develop a rational basis for morality and the pursuit of happiness.

Iturbide \ˌē-tůr-ˈbē-dā**, Agustín de** *or* **Agustín I** (b. Sept. 27, 1783, Valladolid, Viceroyalty of New Spain—d. July 19, 1824, Padilla, Mex.) Leader of the conservative factions in the Mexican independence movement and, briefly, emperor of Mexico (1822–23). An army officer when the independence movement emerged in 1810, he fought for the royalists, but in 1820, in reaction to a liberal coup in Spain, the conservatives did an about-face and advocated immediate independence. Iturbide joined forces with the insurgents and won Mexico's independence in 1821. In 1822 he crowned himself emperor, but his arbitrary and extravagant ways cost him support. His abdication in 1823 did not save him from execution. To Mexico's conservatives he remains the principal hero of Mexican independence.

Ivan Asen \å-ˈsān\ **II** (d. 1241) Tsar of the Second Bulgarian empire (1218–41). He took the throne after overthrowing and blinding his cousin Boril. A good soldier and administrator, Ivan restored order, controlled the boyars, and acquired much of Albania, Serbia, Macedonia, and Epirus (1230). He forged alliances through the marriages of his daughters, but a treaty to make him regent of the Latin empire was repudiated by Latins fearful of Bulgaria's growing power, and he afterward separated the Bulgarian church from Rome.

Ivan \ˈī-vən\ **III** *known as* **Ivan the Great** (b. Jan. 22, 1440, Moscow—d. Oct. 27, 1505, Moscow) Grand prince of Moscow (1462–1505). Determined to enlarge the territory he inherited from his father, Ivan led successful military campaigns against the Tatars in the south (1458) and east (1467–69). He subdued Novgorod (1478) and gained control of most of the remainder of Great Russia by 1485. He also renounced Moscow's subjection to the khan of the Golden Horde (1480) and won a final victory over the khan's sons in 1502. Stripping the boyars of much of their authority, he laid the administrative foundations of a centralized Russian state. Ivan IV the Terrible was his grandson.

Ivan IV *Russian* **Ivan Vasilyevich** *known as* **Ivan the Terrible** (b. Aug. 25, 1530, Kolomenskoye, near Moscow—d. March 18, 1584, Moscow) Grand prince of Moscow (1533–84) and first tsar of Russia (1547–84). Crowned tsar in 1547 after a long regency (1533–46), he embarked on wide-ranging reforms, including a centralized administration, church councils that systematized the church's affairs, and the first national assembly (1549). He also instituted reforms to limit the powers of the boyars. After conquering Kazan (1552) and Astrakhan (1556), he engaged in an unsuccessful war to control Livonia, fighting against Sweden and Poland (1558–83). After the defeat and the suspected treason of several Russian boyars, Ivan formed an *oprichnina*, a territory separate from the rest of the state and under his personal control. With a large bodyguard, he withdrew into his own entourage and left Russia's management to others. At the same time, he instituted a reign of terror, executing thousands of boyars and ravaging the city of Novgorod. During the 1570s he married five wives in nine years, and, in a fit of rage, he murdered his son Ivan, his only viable heir, in 1581.

Ivan V *Russian* **Ivan Alekseyevich** (b. Sept. 6, 1666, Moscow, Russia—d. Feb. 8, 1696, Moscow) Nominal tsar of Russia (1682–96).When his brother Tsar Fyodor III died, Ivan, a mentally deficient chronic invalid, was proclaimed coruler with his half brother Peter I, with Ivan's sister Sophia as regent. After Sophia's overthrow in 1689, Ivan was allowed to retain his official position, though he never participated in governmental affairs, devoting the bulk of his time to prayer, fasting, and pilgrimages.

Ivan VI *Russian* **Ivan Antonovich** (b. Aug. 23, 1740, St. Petersburg, Russia—d. July 16, 1764, Shlisselburg Fortress, near St. Petersburg) Infant emperor of Russia (1740–41). The grandnephew of Empress Anna, Ivan was proclaimed her heir and then emperor, with his mother as regent, when he was only eight weeks old. In 1741 they were deposed by Elizabeth, daughter of Peter I, and for the next 20 years he remained in solitary confinement in various prisons. In 1764, when an army officer tried to free Ivan to restore him to power and remove Catherine II, who had seized the throne in 1762, Ivan was assassinated by his jailers.

Ivanov \i-ˈvä-nəf**, Lev (Ivanovich)** (b. Feb. 18, 1834, Moscow, Russia—d. Dec. 24, 1901, St. Petersburg) Russian dancer and choreographer. He joined the Imperial Ballet in St. Petersburg in 1852 and became lead dancer in 1869. In 1885 he was appointed assistant ballet master under Marius Petipa. He is best known for his choreography of *The Nutcracker* (1892) and parts of *Swan Lake* (1895), which he based closely on the structure and emotional content of the music rather than emphasizing virtuoso technique.

Ivanov \i-ˈvä-nəf**, Vyacheslav Ivanovich** (b. Feb. 28, 1866, Moscow—d. July 16, 1949, Rome) Russian philosopher, scholar, and poet. He studied in Berlin and spent much of his life abroad, especially in Italy, where he converted to Roman Catholicism. His first volume of lyric poetry, *Pilot Stars* (1903), immediately established him as a key figure in the Russian Symbolist movement, a position strengthened by later works, including the important *Cor Ardens* (1911). He also produced poetic dramas, essays, criticism, and translations.

Ives, Burl *orig.* **Charles Icle Ivanhoe Ives** (b. June 14, 1909, Jasper county, Ill., U.S.—d. April 14, 1995, Anacortes, Wash.) U.S. singer and actor. Ives began performing at age four and learned Scottish, English, and Irish ballads from his grandmother. He left college to hitchhike around the U.S., collecting songs from hoboes and drifters. Soon after his postwar concert debut in New York City, he was hailed by Carl Sandburg as "the mightiest ballad singer of this or any other century." He recorded more than 100 albums and had hits with "I Know an Old Lady (Who Swallowed a Fly)," "The Blue Tail Fly," "Big Rock Candy Mountain," "Frosty the Snowman," and "A Little Bitty Tear." He appeared in many films—including *East of Eden* (1955), *Desire Under the Elms* (1958), *Cat on a Hot Tin Roof* (1958), and *The Big Country* (1958, Academy Award)—and on Broadway.

Ives, Charles E(dward) (b. Oct. 20, 1874, Danbury, Conn., U.S.—d. May 19, 1954, New York, N.Y.) U.S. composer. Ives claimed to be the product of training by his father, George, a highly imaginative former Union Army bandmaster. He received a solid classical grounding and began composing and performing at an early age. At Yale University he studied with the academic composer Horatio Parker (1863–1919) and composed his first symphony. Under the influence of Transcendentalism, he decided to forgo a music career, and in 1907 he founded a successful insurance firm. With music as a "sideline," he felt free to pursue his unusual interests, though he suffered from his amateur status and a lack of intelligent critiques. A heart attack in 1918 curtailed all activities, and he stopped composing c. 1926. His music is tonal despite much dissonance, atmospheric, and nostalgic, and it runs the gamut from sentimental or quirkily humorous songs to exciting tone poems (*The Fourth of July*, 1913) and weighty meditations (*Concord Sonata*, 1915). He apparently made many remarkable tonal innovations, though questions have been raised about whether he later predated his works to give a misleading impression. His music was rediscovered late in his life; the third of his four symphonies won a Pulitzer Prize in 1947.

IVF See in vitro fertilization

ivory Hard white substance, a variety of dentin, that makes up the tusks of such animals as elephants, walruses, and preserved mammoths. It is prized for its beauty, durability, and suitability for carving. In ancient times it was treasured as highly as gold and precious stones. Most ivory used commercially once came from Africa; sales of ivory declined in the 20th century as the populations of African elephants shrank, and worldwide concern about endangered elephant populations have led to bans on the export and import of ivory. The once-thriving markets of Europe have shifted to South Asia, where skilled artisans, often trading illegally, carve ivory into figurines and other objects.

Ivory, James (Francis) (b. June 7, 1928, Berkeley, Calif., U.S.) U.S. film director. While directing a documentary on India in the 1960s, he met a local producer, Ismail N. Merchant (b. 1936), beginning cinema's longest-lasting partnership. They made several films written by Ivory and Ruth Prawer Jhabvala before their first international success, *Shakespeare Wallah* (1965). It was followed by a series of well-received adaptations of noted literary works, including *The Europeans* (1979), *The Bostonians* (1984), *A Room with a View* (1986, Academy Award), *Maurice* (1987), *Howards End* (1992), and *The Remains of the Day* (1993). Ivory's films were noted for their attention to period detail and excellent acting.

ivory-billed woodpecker Black-and-white woodpecker (*Campephilus principalis*) with a flaring crest (red on the male) and a long whitish bill. The largest North American woodpecker, it was thought to be extinct, though there were unconfirmed sightings of the bird in the southern United States in the late 1990s; a small population on Cuba was last seen in the late 1980s. In 2005, however, researchers announced that it had been sighted in eastern Arkansas. The species' decline coincided with the logging of virgin forest, where it subsisted on deadwood insects. A subspecies, the Cuban ivory-billed woodpecker, is also believed to be extinct. A related species, the imperial woodpecker of Mexico, is critically endangered. All these birds appear to have required large trees and isolation from disturbance.

Ivory-billed woodpeckers (*Campephilus principalis*).
KENNETH W. FINK FROM ROOT RESOURCES

ivory carving Carving of ivory into decorative or utilitarian objects. It has flourished since prehistoric times. Most Stone Age carvings have been found in southern France, in the forms of small nude female figures and animals. A masterpiece of early Egyptian carving is an ivory statuette of Khufu, builder of the Great Pyramid. In China ivory carvings have been found in the tombs of the Shang dynasty (18th–12th century BC). The major artistic use of ivory in Japan was for netsukes, toggles used as fasteners on men's clothing. The early Inuit (Eskimos) produced such utilitarian objects as harpoon shafts and bucket handles out of ivory and often etched them with geometric or curving patterns. See also scrimshaw.

ivy Any of about five species of evergreen woody vines (rarely shrubs) that make up the genus *Hedera* in the ginseng family, commonly grown as ground covers and on stone walls, especially English ivy (*H. helix*), which climbs by aerial roots with adhering disks that develop on the stems. The tough, dark-green leaves of English ivy have three to five lobes and tend to droop horizontally from the stem. Unrelated plants called ivies include Boston ivy (*Parthenocissus*, or *Ampelopsis, tricuspidata*), a clinging woody vine in the grape family whose leaves turn bright scarlet in autumn, and poison ivy.

Iwo Jima Island, the middle of the three Volcano Islands, Japan. Situated in the western Pacific, it is about 5 mi (8 km) long, 800 yards to 2.5 mi (730 m–4 km) wide, and has an area of 8 sq mi (20 sq km). It was under Japanese control until 1945, when it was the scene of one of the severest campaigns of World War II. After extensive bombing by U.S. planes (December 1944–February 1945), it was invaded by U.S. marines and was finally completely taken by mid-March; it became a strategic base for U.S. planes en route to Japan. In 1968 it was returned to Japan.

Izabal \ˌē-sä-ˈbäl\, Lake Lake, Guatemala. The country's largest lake, it occupies the lowlands in northeastern Guatemala. Fed by the Polochic River, it drains through the Dulce River into the Caribbean Sea. It lies only 26 ft (8 m) above sea level and has an area of 228 sq mi (590 sq km). The main settlement on its shores is El Estor, which originated as a trading outpost of the United Fruit Company.

Izanagi and Izanami \ē-ˈzä-ˌnä-gē...ē-ˈzä-ˌnä-mē\ Brother and sister gods in the Japanese creation myth. They created the first land mass, and their sexual union produced many islands and deities. In giving birth to the fire god, Izanami was burned to death and went to the land of darkness. Izanagi tried to rescue her, but she had eaten the food of the place and could not leave; in disgust he left her rotting corpse and divorced her. As he bathed to purify himself afterwards, other deities were born from him, including the sun goddess Amaterasu, the moon god Tsukiyomi, and the storm god Susanoo. His bath is the basis for Shinto purification rites.

İzmir \iz-ˈmir\ *formerly* **Smyrna** City (pop., 1997: 2,081,556), western Turkey. On the Aegean seacoast, it is one of Turkey's largest ports and its third largest city. Founded as early as 3000 BC, it was settled by the Greeks before 1000 BC. It was captured by the Lydians c. 600 BC and ceased to exist until it was refounded by Alexander the Great in the 4th century BC. It became one of the principal cities of Anatolia. After being conquered in turn by the Crusaders and by Timur (Tamerlane), it was annexed to the Ottoman Empire c. 1425. It became part of the Republic of Turkey in 1923. It has grown rapidly since 1945 and has a large industrial economy and a growing tourist trade.

ʿIzrāʾīl \ˌiz-rȧ-ˈēl\ In Islam, the angel of death. One of the four archangels (with Jibrāʾīl, Mīkāʾīl, and Isrāfīl), he is of cosmic size, with 4,000 wings and a body formed from innumerable eyes and tongues. He was the only angel brave enough to go down to earth and face Iblīs in order to bring God the materials to create man. For this service he was made the angel of death and given a register of all mankind, which lists the blessed and the damned.

Izu \ˈē-zü\ **Peninsula** Peninsula, central Honshu, Japan. It extends 37 mi (60 km) into the Pacific Ocean and consists largely of volcanic rock and highly eroded volcanoes. It is part of the Fuji-Hakone-Izu National Park, and its hot springs and warm winter climate are major tourist attractions.

Izumo shrine \ˈē-zů-mȯ,\ *English* \ē-ˈzü-mō\ Oldest Shintō shrine in Japan (the present building is said to date from 1346), located northwest of Izumo on the island of Honshu. The temple complex covers 40 acres (16 hectares) and contains a valuable art collection. Enclosed by hills on three sides, it is approached through an avenue of pines. Most of its present buildings were constructed in the 19th century.

Izvestiya \iz-ˈves-tē-ə\ *formerly in full* **Izvestiya Sovetov Deputatov Trudyashchikhsya SSSR** (Russian: "News of the Councils of Working People's Deputies of the U.S.S.R.") Russian daily newspaper published in Moscow, the official national publication of the Soviet government until 1991. Founded in 1917, it grew rapidly in circulation. Restrictions during World War II and under Joseph Stalin slowed its growth, but it was transformed into a lively, readable daily under the editorship of Alexei Adzhubei, Nikita Khrushchev's son-in-law, while remaining an instrument of the state. Following the Soviet Union's breakup, it became an independent, employee-owned publication whose liberal editorial policy often put it at odds with both unreconstructed communists and Russian nationalists.

Izvolsky \iz-ˈvȯl-skē**, Aleksandr (Petrovich), Count** (b. March 18, 1856, Moscow, Russia—d. Aug. 16, 1919, Paris, France) Russian diplomat. He became minister of foreign affairs in 1906. In 1908 he secured Austria's support for the right of Russian warships to use the Dardanelles strait in return for his reluctant support of Austria's annexation of Bosnia and Herzegovina. While Austria succeeded in its annexation (see Bosnian crisis), Russia failed to gain access to the Dardanelles; Izvolsky's responsibility for Russia's diplomatic defeat increased tensions with Austria-Hungary prior to World War I. Dismissed in 1910, he served as ambassador to France until 1917.

Jabal al-Shaykh See Mount Hermon

Jabal River *or* **Baḥr al-Jabal** \ˌbär-el-ˈje-bel\ River, south-central Sudan. The river flows northward 594 mi (956 km) over the Fula Rapids, past Juba (the head of navigation), and through a vast swampy region. It receives the Ghazāl River at Lake No and then turns east to join the Sūbāṭ River of western Ethiopia, thereafter forming the White Nile River.

Jabotinsky \ˌyab-ə-ˈtin-skē**, Vladimir** (b. 1880, Odessa, Russian Empire—d. Aug. 3, 1940, near Hunter, N.Y., U.S.) Russian Zionist leader and founder of the Zionist Revisionist movement. He became a popular journalist and editorialist and by 1903 was expounding Zionism. In 1920 he organized and led Hagana, a Jewish militia. A Revisionist Zionist, he passionately advocated a Jewish state in an area both west and east of the Jordan River. See also Irgun Zvai Leumi.

Jabrail See Jibrīl

jacaranda \ˌja-kə-ˈran-də\ Any plant of the genus *Jacaranda* (family Bignoniaceae), especially the two ornamental trees *J. mimosifolia* and *J. cuspidifolia*. Jacarandas are grown widely in warm parts of the world and in greenhouses for their showy blue or violet flowers and attractive, oppositely paired, compound leaves. The genus includes about 50 species native to Central and South America and the West Indies. The name is also applied to several tree species of the genera *Machaerium* and *Dalbergia* in the pea family (see legume), the sources of commercial rosewood.

jack In practical mechanics, portable hand-operated device for raising heavy weights through short distances, exerting great pressures, or holding assembled work firmly in position. The ratio of the load to the amount of force applied to the handle can be made quite high by using a gear or screw to regulate the upward extension. A ratchet allows a heavy weight to be raised in short successive stages. Though limited by the requirements of portability and ease of manual operation, jacks may lift, or exert a force of, several tons. A familiar example is the automobile jack, used to raise one end of a car to change a tire.

jack Any of more than 150 species of fishes (family Carangidae, order Perciformes) found in temperate and tropical portions of the Atlantic, Pacific, and Indian oceans and occasionally in fresh or brackish water. Though body size and shape vary greatly, many species have small scales that create a smooth appearance, a laterally compressed body, rows of large spiky scales along the side near the tail fin, and a deeply forked tail. Many have a bluish green, silvery, or yellowish sheen. Jacks are important commercially and are favoured sport fishes. See also amberjack.

jack-in-the-pulpit North American plant (*Arisaema triphyllum*) of the arum family, noted for the unusual shape of its flower. One of the best-known perennial wildflowers of late spring in the eastern U.S. and Canada, it grows in wet woodlands and thickets from Nova Scotia to Minnesota and south to Florida and Texas. Three-part leaves on each of two long stalks overshadow the flower, which consists of a conspicuous green- and purple-striped structure called a spathe ("pulpit") that rises on a separate stalk. The spathe curves in a hood over a club-shaped spadix ("jack") that, at its base, bears minute flowers. In late summer the plant produces a cluster of brilliant red berries that are poisonous to humans but are eaten by many wild animals.

Jack the Ripper Pseudonymous murderer of at least five women, all prostitutes, in or near London's Whitechapel district, from Aug. 7 to Nov. 10, 1888. The throat of each victim was cut, and usually the body was mutilated in a manner indicating the murderer had considerable knowledge of human anatomy. Authorities received a series of taunting notes from a person calling himself Jack the Ripper and purporting to be the murderer. Although strenuous efforts were made to identify and trap the killer, he remained unknown. The unsolved case retained its hold on the popular imagination, becoming the subject of several motion pictures and more than 100 books, as well as a macabre tourist industry in London.

jackal Any of three canine species of the genus *Canis*. They inhabit open country and live alone, in pairs, or in packs. They hunt at night, feeding on small animals, plant material, or carrion. A pack can bring down larger prey. The golden, or Asiatic, jackal (yellowish) is found from eastern Europe and North Africa to South Asia. The black-backed jackal (rusty red with a black back) and side-striped jackal (grayish with a white-tipped tail and an indistinct stripe on each side) are found in southern and eastern Africa. Jackals are 34–37 in. (85–95 cm) long, including the 12–14-in. (30–35-cm) tail, and weigh 15–24 lbs (7–11 kg).

Black-backed jackal (*Canis mesomelas*).
LEONARD LEE RUE III

jackdaw *or* **daw** Crowlike black bird (*Corvus monedula*) with gray nape and pearly eyes. About 13 in. (33 cm) long, jackdaws breed in colonies in treeholes and on cliffs and tall buildings; their flocks fly in formation around the site. Their cry sounds like their name: "chak." The species ranges from the British Isles to central Asia. See also crow, grackle.

Jackdaw (*Corvus monedula*)
JOHN MARKHAM

jackrabbit Any of several large, common North American species of hares (e.g., *Lepus townsendii*, *L. californicus*). Jackrabbits have very long ears and long hind legs. They are widespread, particularly in the West, but are found most often in prairie and plains environments.

Jackson City (pop., 2000: 184,256), capital of Mississippi, U.S. It lies along the Pearl River in the west-central part of the state. Settled in 1792 by Louis Le Fleur, a French Canadian trader, it was a trading post called Le Fleur's Bluff until settlers began arriving in 1820. It was made the state capital in 1822 and was named for Andrew Jackson. During the American Civil War it was burned by Union forces (1863). The state's largest city, it is a railroad and distribution centre. It is the seat of Jackson State University (1877) and other educational institutions.

Jackson, A(lexander) Y(oung) (b. Oct. 3, 1882, Montreal, Que., Can.—d. April 5, 1974, Kleinburg, Ont.) Canadian landscape painter. He traveled to every region of Canada, including the Arctic; from 1921 on, he returned every spring to a favourite spot on the St. Lawrence River, where he produced sketches that he later executed in paint. Over a long career he became a leading artistic figure in his country. His easy style, featuring rolling rhythms and rich, full colour, exerted a strong influence on Canadian landscape painting.

Jackson, Andrew (b. March 15, 1767, Waxhaws region, S.C.—d. June 8, 1845, the Hermitage, near Nashville, Tenn., U.S.) Seventh president of the U.S. (1829–37). He fought briefly in the American Revolution near his frontier home, where his family was killed in the conflict. In 1788 he was appointed prosecuting attorney for western North Carolina. When the region became the state of Tennessee, he was elected to the U.S. House of Representatives (1796–97) and the Senate (1797–98). He served on the state supreme court (1798–1804) and in 1802 was elected major general of the Tennessee militia. When the War of 1812 began, he offered the U.S. the services of his 50,000-man volunteer militia. Sent to the Mississippi Territory to fight the Creek Indians, who were allied with the British, he defeated them after a short campaign (1813–14) at the Battle of Horseshoe Bend. After capturing Pensacola, Fla., from the

British-allied Spanish, he marched overland to engage the British in Louisiana. A decisive victory at the Battle of New Orleans made him a national hero; he was dubbed "Old Hickory" by the press. After the U.S. acquired Florida, Jackson was named governor of the territory (1821). One of four candidates in the 1824 presidential election, he won an electoral-vote plurality, but the House of Representative instead selected John Quincy Adams as president. Jackson's victory over Adams in the 1828 presidential election is commonly regarded as a turning point in U.S. history. Jackson was the first president from west of the Appalachian Mountains, the first to be born in poverty, and the first to be elected through a direct appeal to the mass of voters rather than through the support of a recognized political organization. The era of his presidency has come to be known as "Jacksonian Democracy." Upon taking office he replaced many federal officials with his political supporters, a practice that became known as the spoils system. His administration acquiesced in the illegal seizure of Cherokee land in Georgia and then forcibly expelled the Indians who refused to leave (see Trail of Tears). When South Carolina claimed a right to nullify a federally imposed tariff, Jackson asked for and received Congressional authority to use the military to enforce federal laws in the state (see nullification). His reelection in 1832 was partially the result of his controversial veto of a bill to recharter the Bank of the United States, which was unpopular with many of his supporters (see Bank War). The intensity of the political struggles during his tenure led to the strengthening of the Democratic Party and to the further development of the two-party system.

Jackson, Charles Thomas (b. June 21, 1805, Plymouth, Mass., U.S.—d. Aug. 28, 1880, Somerville, Mass.) U.S. physician, chemist, geologist, and mineralogist. He graduated from Harvard Medical School in 1829. Known for his contentiousness and litigiousness, he took credit for the first demonstration of surgical anesthesia with ether by a dental surgeon he had advised on it, and he claimed to have told Samuel F.B. Morse the basic principles of the telegraph. He worked many years as a geologist for the U.S. Geological Survey.

Jackson, Glenda (b. May 9, 1936, Birkenhead, Cheshire, Eng.) British stage and film actress. Discovered by Peter Brook, she was cast in his Theatre of Cruelty revue and soon appeared as the mad Charlotte Corday in his celebrated production of Peter Weiss's *Marat/Sade* (1964; film, 1967). She became known for her tense portrayals of complex women, gaining international acclaim in the film *Women in Love* (1969, Academy Award) and later successes such as *Sunday Bloody Sunday* (1971), *A Touch of Class* (1973, Academy Award), and the television series *Elizabeth R*. Her screen career continued until 1992, when she won a seat in the House of Commons.

Jackson, Jesse (Louis) *orig.* **Jesse Louis Burns** (b. Oct. 8, 1941, Greenville, S.C., U.S.) U.S. civil rights leader. He became involved with the civil rights movement as a college student. In 1965 he went to Selma, Ala., to march with Martin Luther King, Jr., and began working for King's Southern Christian Leadership Conference (SCLC). In 1966 he helped found the Chicago branch of Operation Breadbasket, the SCLC's economic arm; he was its national director from 1967 to 1971. Ordained a Baptist minister in 1968, he founded Operation PUSH (People United to Save Humanity) in 1971. In 1983 he led a voter-registration drive in Chicago that helped elect the city's first African American mayor, Harold Washington. In 1984 and 1988 Jackson entered the Democratic presidential primary, becoming the first African American man to make a serious bid for the U.S. presidency; he received 6.7 million votes in 1988. In 1989 he moved to Washington, D.C. and was elected the city's unpaid "statehood senator" to lobby Congress for statehood. From the late 1970s Jackson gained wide attention through his attempts to mediate in various international disputes, including in the Middle East. In the late 1990s he faced allegations of financial misconduct, and in 2001 he admitted fathering a child out of wedlock.

Jesse Jackson, 1988.

Jackson, Joe *in full* **Joseph Jefferson Jackson** *known as* **Shoeless Joe Jackson** (b. July 16, 1888, Greenville, S.C., U.S.—d. Dec. 6, 1951, Greenville) U.S. baseball player. Jackson started his career in 1908 and became an outfielder with the Chicago White Sox. An outstanding hitter, his career batting average of .356 is the third-highest (after Ty Cobb and Rogers Hornsby) in baseball history. Jackson was involved in the 1919 Black Sox scandal; though acquitted in 1921, he was banned from baseball for life by baseball commissioner Kenesaw Mountain Landis.

Jackson, John Hughlings (b. April 4, 1835, Green Hammerton, Yorkshire, Eng.—d. Oct. 7, 1911, London) British neurologist. He showed that most right-handed persons with aphasia had disease on the left side of the brain, confirming Paul Broca's findings. In 1863 he discovered Jacksonian epilepsy (spasms progressing through the body), tracing it to motor region damage. Electroencephalography has confirmed his 1873 definition of epilepsy as "a sudden, excessive, and rapid discharge" of electricity by brain cells.

Jackson, Mahalia (b. Oct. 26, 1911, New Orleans, La., U.S.—d. Jan. 27, 1972, Evergreen Park, Ill.) U.S. gospel music singer. As a child, Jackson sang in the choir of the New Orleans church where her father preached. She learned sacred songs but was also exposed to blues recordings by Bessie Smith and Ida Cox. In Chicago she worked at odd jobs while singing with a touring gospel quintet, and she opened several small businesses. Her warm, powerful voice first came to wide public attention in the 1930s, when she participated in a cross-country tour singing songs such as "He's Got the Whole World in His Hands." Closely associated with Thomas A. Dorsey, she sang many of his songs. "Move on up a Little Higher" (1948) sold more than a million copies, and she became one of the most popular singers of the 1950s and '60s. She first appeared at Carnegie Hall in 1950. Active in the civil rights movement from 1955, she sang at the epochal 1963 civil rights march on Washington.

Mahalia Jackson, 1961.
THE BETTMANN ARCHIVE

Jackson, Michael (Joseph) (b. Aug. 29, 1958, Gary, Ind., U.S.) U.S. singer and songwriter. The nine-year-old Jackson became the lead singer of The Jackson Five, a family group formed by his father. Their hits on the Motown label included "I Want You Back" and "ABC." Though Michael remained a member of the group until 1984, he began recording under his own name in 1971. His album *Off the Wall* (1979) sold millions; his next solo album, *Thriller* (1982), sold more than 40 million copies, becoming the best-selling album in history. The emerging format of the music video was an important aspect of Jackson's work; his videos for "Beat It" and "Billie Jean" (both 1983) featured his highly influential dancing style (notably his trademark "moonwalk"). He later released the albums *Bad* (1987), *Dangerous* (1991), and *HIStory* (1995). Despite his many efforts to speak out on social issues, Jackson's eccentric, secluded lifestyle stirred controversy in the early 1990s. His reputation was seriously damaged in 1993 when he was accused of child molestation by a 13-year-old boy. Several of his siblings, notably his sister Janet (b. 1966), have also enjoyed solo success.

Jackson, Reggie *in full* **Reginald Martinez Jackson** (b. May 18, 1946, Wyncote, Pa., U.S.) U.S. baseball player. Jackson excelled in track, football, and baseball in high school. In the major leagues, batting and throwing left-handed and playing outfield, he helped three teams (Oakland Athletics, 1968–75; New York Yankees, 1976–81; California Angels, 1982–87) win five World Series, six pennant races, and 10 divisional play-offs. Noted for his home-run hitting, he was nicknamed "Mr. October" for his reliable prowess in play-off and World Series games. He hit a career total of 563 home runs, placing him in the top ten of all-time home-run hitters.

Jackson, Robert H(oughwout) (b. Feb. 13, 1892, Spring Creek, Pa., U.S.—d. Oct. 9, 1954, Washington, D.C.) U.S. jurist. He pleaded his

© 2006 Encyclopædia Britannica, Inc.

first case while still a minor and was a lawyer by age 21. He became corporation counsel for Jamestown, N.Y. As general counsel for the U.S. Bureau of Internal Revenue (1934), he successfully prosecuted Andrew W. Mellon for income-tax evasion. He served as U.S. solicitor general (1938–39) and attorney general (1940–41). In 1941 he was appointed by Pres. Franklin Roosevelt to the U.S. Supreme Court, where he served until 1954. He infused his well-worded opinions with a blend of liberalism and nationalism. In 1945–46 he served as chief U.S. prosecutor in the Nürnberg trials.

Jackson, Shirley (Hardie) (b. Dec. 14, 1919, San Francisco, Calif., U.S.—d. Aug. 8, 1965, North Bennington, Vt.) U.S. novelist and short-story writer. She is best known for her story "The Lottery" (1948), a chilling tale that provoked outrage when first published, and *The Haunting of Hill House* (1959; film, 1963, 1999). These and her other five novels, including *We Have Always Lived in the Castle* (1962), confirmed her reputation as a master of gothic horror and psychological suspense.

Jackson, Stonewall *orig.* **Thomas Jonathan Jackson** (b. Jan. 21, 1824, Clarksburg, Va., U.S.—d. May 10, 1863, Guinea Station, Va.) U.S. and Confederate army officer. Despite little formal education, he secured an appointment to West Point. He served with distinction in the Mexican War. At the start of the American Civil War, he organized Virginia volunteers into an effective brigade. At the first Battle of Bull Run, he stationed his brigade in a strong line and withstood a Union assault, a feat that earned him a promotion to major general and the nickname "Stonewall." In 1862 he won campaigns in the Shenandoah Valley and later in the Seven Days' Battles. Robert E. Lee used Jackson's troops to encircle the Union forces to win the second Battle of Bull Run, and Jackson assisted Lee at Antietam and Fredericksburg. In April 1863, while moving his troops around the flank of the Union army at Chancellorsville, he was accidentally shot and mortally wounded by his own men.

Jackson, William Henry (b. April 4, 1843, Keesville, N.Y., U.S.—d. June 30, 1942, New York, N.Y.) U.S. photographer. As a boy, he worked for a photographic studio in Troy, N.Y. After the American Civil War he went west and opened a studio in Omaha. He was the official photographer for the U.S. Geological and Geographical Survey of the Territories (1870–78), and his photographs were instrumental in the establishment of Yellowstone National Park.

Jacksonville City (pop., 2000: 735,617), northeastern Florida, U.S. It is the site of Florida's first European (French Huguenot) settlement (1564). Named for Andrew Jackson, it was laid out in 1822 and incorporated in 1832. It was largely destroyed by fire in 1901. In 1968 it was consolidated with most of Duval county; it covers 841 sq mi (2,178 sq km), making it one of the largest U.S. cities in terms of land area. A deep-water port with major shipyards, it is Florida's chief transportation and commercial centre. It is the site of Jacksonville University, the University of North Florida, and Jones College.

Jacob Hebrew patriarch, son of Isaac and grandson of Abraham, and the traditional ancestor of the people of Israel. His story is told in the Book of Genesis. The younger twin brother of Esau, he used trickery to gain Isaac's blessing and Esau's birthright. On a journey to Canaan he wrestled all night with an angel, who blessed him and gave him the name Israel. Jacob had 13 children, 10 of whom founded tribes of Israel. His favorite son, Joseph, was sold into slavery in Egypt by his brothers, but the family was later reunited when a famine forced the brothers to go to Egypt to seek grain.

Jacob \zhȧ-'kȯb**, François** (b. June 17, 1920, Nancy, France) French biologist. After receiving his doctorate, he went to work at the Pasteur Institute in Paris. Beginning in 1958, he worked with Jacques Monod studying the regulation of bacterial enzyme synthesis. They discovered regulator genes, so called because they control the activities of other genes. Jacob and Monod also proposed the existence of an RNA messenger, a partial copy of DNA that carries genetic information to other parts of the cell. The two men shared a 1965 Nobel Prize with André Lwoff.

Jacob ben Asher (b. 1269?, Cologne?—d. 1340?, Toledo, Castile) Jewish legal scholar. He emigrated to Spain with his family in 1303, and his father became chief rabbi in Toledo. Jacob is believed to have made his living as a moneylender. He divided Jewish law into categories by subject, producing a codification known as *Tur*, which became a popular Jewish theological work of the 15th century. The basis for many rabbinic decisions, it was considered standard until superseded by the work of Joseph ben Ephraim Karo in the 16th century.

Jacobean \ˌja-kə-'bē-ən\ **age** Period in the visual and literary arts during the reign of James I (Latin Jacobus) of England (r. 1603–25). Jacobean architecture combines motifs from the late Gothic period with Classical details and Tudor pointed arches and interior paneling. Jacobean furniture, made of oak, featured heavy forms and bulbous legs. Inigo Jones, following the theories and works of Andrea Palladio, introduced the Classical style of Renaissance architecture into England. Most Jacobean portraitists and sculptors were foreign-born or foreign-influenced, and their efforts faded when such Flemish painters as Peter Paul Rubens and Anthony Van Dyck worked in England for James's successor, Charles I. See also Jacobean literature.

Jacobean \ˌja-kə-'bē-ən\ **literature** Body of works written during the reign of James I of England (1603–25). The successor to Elizabethan literature, Jacobean literature was often dark in mood, questioning the stability of the social order; some of William Shakespeare's greatest tragedies may date from the beginning of the period, and other dramatists, including John Webster, were often preoccupied with the problem of evil. The era's comedy included the acid satire of Ben Jonson and the varied works of Francis Beaumont and John Fletcher. Jacobean poetry included the graceful verse of Jonson and the Cavalier poets but also the intellectual complexity of the metaphysical poetry of John Donne and others. In prose, writers such as Francis Bacon and Robert Burton showed a new toughness and flexibility of style. The era's monumental prose achievement was the King James Version of the Bible (1611).

Jacobin \'ja-kə-bən\ **Club** *or* **Jacobins** Political group of the French Revolution, identified with extreme radicalism and violence. Formed in 1789 as the Society of the Friends of the Constitution, it was known as the Jacobin Club because it met in a former convent of the Dominicans (known in Paris as Jacobins). It was originally formed by deputies of the National Assembly to protect the Revolution's gains against a possible aristocratic reaction. Although it did not have a direct role in overthrowing the monarchy in 1792, the club later changed its name to Society of the Jacobins, Friends of Liberty and Equality. It admitted leftist Montagnard deputies of the National Convention and agitated for the king's execution and the overthrow of the Girondins. In 1793, with about 8,000 clubs and 500,000 members, the Jacobins became instruments of the Reign of Terror. The Parisian club supported Maximilien Robespierre, but it closed after his fall in 1794. Although officially banned, some local clubs lasted until 1800.

Jacobite In British history, a supporter of the exiled Stuart king James II (in Latin, Jacobus) and his descendants after the Glorious Revolution of 1688. The movement was strong in Scotland, Wales, and Ireland, and it included Catholics and Anglican Tories. The Jacobites, especially under William III and Queen Anne, could offer a feasible alternative title to the crown, and several attempts were made to restore the Stuarts. In 1689 James II landed in Ireland, but his army was defeated at the Battle of the Boyne. In the Fifteen Rebellion (1715), led by John Erskine, 6th earl of Mar (1675–1732), Jacobites tried to seize the crown for James Edward, the Old Pretender. In the Forty-five Rebellion (1745) Charles Edward, the Young Pretender, took Scotland, but the Jacobite army was crushed at the Battle of Culloden (1746).

Jacobs, Helen Hull (1908–1997) U.S. tennis player.Jacobs was the national junior tennis champion in 1924–25. She was first defeated by Helen Wills, who would prove to be her longtime rival, in the 1928 finals at Forest Hills, N.Y. Though Wills was virtually always victorious, Jacobs was a popular favourite. Her only victory over Wills came by default. Though often in Wills's shadow, Jacobs won four U.S. Open singles (1932–35), three doubles (1932 and 1934–35), and mixed doubles (1934) championships. She was ranked in the world's top 10 from 1928 to 1940. In 1933 she became the first woman to break with tradition by wearing man-tailored shorts at Wimbledon. Her autobiography, *Beyond the Game*, appeared in 1936.

Jacobs, Jane *orig.* **Jane Butzner** (b. May 4, 1916, Scranton, Pa., U.S.) U.S.-born Canadian urbanologist. She became active in urban community work while living in New York City with her architect husband. For 10 years she was an editor at *Architectural Forum*. Her highly influential *The Death and Life of Great American Cities* (1961) is a brash, passionate, and highly original reinterpretation of the multiple needs of modern urban places. *The Economy of Cities* (1969) discussed the importance of diversity to a city's prospects. Later works include *Cities and the Wealth of Nations* (1984) and *Edge of Empire* (1996). See also urban planning.

Jacopo da Pontormo See Jacopo da Pontormo

Jacopo della Quercia \'yä-kō-pō-dāl-lä-'kwer-chä\ *orig.* **Jacopo di Piero di Angelo** (b. c. 1374, Siena—d. Oct. 20, 1438, Bologna, Papal States) Italian sculptor active in Siena. He was the son of a goldsmith and wood carver. His earliest major work is the tomb of Ilaria del Carretto in Lucca Cathedral (c. 1406–08). His most important commission for Siena was the fountain known as Fonte Gaia (1408–19) in the Piazza del Campo. He worked with Donatello and Lorenzo Ghiberti on reliefs for the baptismal font in the Baptistery in Siena (1417–30). His last and greatest work was the sculptural reliefs around the portal of San Petronio in Bologna (1425–30). In 1435 he was appointed supervising architect of Siena Cathedral. He elevated Sienese sculpture to a place of prominence and influenced subsequent Sienese painters. The greatest non-Florentine sculptor of the 15th century, he was a major influence on the young Michelangelo.

Jacquard \zha-'kär,\ *English* \'ja-ˌkärd**, Joseph-Marie** (b. July 7, 1752, Lyon, Fr.—d. Aug. 7, 1834, Oullins) French inventor. In 1801 he demonstrated an automatic loom incorporating revolutionary new technology; it was declared public property in 1806, and Jacquard was rewarded with a pension and a royalty on each machine. His loom utilized interchangeable punched cards that controlled the weaving of the cloth so that any desired pattern could be obtained automatically. The Jacquard loom's technology became the basis of the modern automatic loom and a precursor of the modern computer. His punched cards were adapted by Charles Babbage as an input/output medium for his proposed analytical engine and by Herman Hollerith to feed data to his census machine, and punched cards were used for inputting data into early digital computers.

Jacquard \'ja-ˌkärd\ **loom** Loom incorporating a special device to control individual warp yarns. It enabled production of fabrics with intricate woven patterns such as tapestry, brocade, and damask, and has also been adapted to the production of patterned knitted fabrics. Developed in France by J.-M. Jacquard in 1804–05, it used interchangeable punched cards that controlled the weaving of the cloth so that any desired pattern could be obtained automatically. It aroused bitter hostility among weavers, who feared that its labour-saving capabilities would deprive them of jobs; the weavers of Lyon not only burned the machines but attacked Jacquard as well. Eventually the loom's advantages led to its general acceptance, and by 1812 there were 11,000 in use in France. Use of the loom spread to England in the 1820s and from there virtually worldwide.

Jacuí \zhä-'kwē\ **River** River, southern Brazil. It rises in the hills east of Passo Fundo and flows southward and eastward for 280 mi (450 km). At Pôrto Alegre it receives four other rivers and forms the Guaíba River, a shallow estuary that empties into the Atlantic Ocean. Navigable upstream as far as Cachoeira do Sul, it has one of the most heavily used river barge systems in Brazil.

jade Either of two tough, compact, typically green gemstones that take a high polish. Both have been carved into jewelry, ornaments, small sculptures, and utilitarian objects from earliest recorded times. The more highly prized of the two jadestones is jadeite; the other is nephrite. Both types may be white or colourless, but colours such as red, green, and gray may occur.

Dragon among clouds, carved jade medallion or button, Ch'ing dynasty, probably late 18th century (reign of Ch'ien-lung); in the Victoria and Albert Museum, London

RUNK/SCHOENBERGER—GRANT HEILMAN

jadeite \'jād-ˌīt\ Gem-quality silicate mineral in the pyroxene family that is one of the two forms of jade. Jadeite (imperial jade), sodium aluminum silicate ($NaAlSi_2O_6$), may contain impurities that give it a variety of colours: white, green, red, brown, and blue. The most highly prized variety is emerald green. Jadeite occurs only in metamorphic rocks, most often in those that have been subjected to the high pressures deep below the Earth's surface. The area around the city of Mogaung in northern Myanmar has long been the main source of gem-quality jadeite.

jaeger \'yā-gər\ Any of three species (genus *Stercorarius,* family Stercorariidae) of seabirds. They resemble dark gulls with a forward-set black cap and projecting central tail feathers. Jaegers have two colour phases: all brown or (more commonly) brown above and white below. They nest in the Arctic tundra and then go to sea, many as far as Australia and New Zealand. At sea they catch fish on their own, but, while nesting along coasts, they force terns and kittiwakes to disgorge their food, destroy the eggs and young of other seabirds, and capture land birds and rodents. The species range from 14 to 20 in. (35 to 50 cm) long. In Great Britain, jaegers are called skuas.

Long-tailed jaeger (*Stercorarius longicaudus*).

© ALAN WILLIAMS/NHPA

Ja'far ibn Muḥammad \'jä-fär-ˌi-bən-mù-'hä-məd\ (b. 699/700, Medina, Arabia—d. 765, Medina) Sixth imam of the Shī'ite branch of Islam and the last to be recognized by all the Shī'ite sects. He was the great-grandson of 'Alī. As a possible claimant to the caliphate, Ja'far was viewed as a threat to both the Umayyad and 'Abbāsid dynasties. He traveled to Baghdad in 762 to prove to the caliph that he was not seeking power, then returned to his native Medina, where his pupils included Abū Ḥanīfah. After his death the Shī'ites began to splinter. One sect, the Ismā'īliyyah, became followers of his son, Ismail. Another, the Ithnā 'Ashariyyah, traced a succession from Ja'far to the Twelfth Imam awaited at the Last Judgment.

Jaffa See Tel Aviv–Yafo

Jagannatha \'jə-gə-ˌnät-ə\ *or* **Jagannath** Form under which Krishna is worshiped at Puri, Orissa, a famous religious center of India. His temple at Puri dates from the 12th century. The Rathayatra, or Chariot Festival, is held in his honor each year in June or July. An image of the god is placed on a cart so heavy that it takes thousands of devotees several days to move it to the god's temple outside the city. According to legend, pilgrims sometimes throw themselves under the wagon in hopes of attaining instant salvation, a practice that gave rise to the English word juggernaut.

Jagiello I See Władysław II Jagiełło

Jagiellon \yäg-'ye-lòn\ **dynasty** Family of monarchs of Poland-Lithuania, Bohemia, and Hungary that became one of the most powerful in east-central Europe in the 15th–16th centuries. It was founded by Jogaila, grand duke of Lithuania, who became Władysław II Jagiełło of Poland after marriage to Queen Jadwiga (1373?–99) in 1386. Władysław III Warneńczyk (1424–44) extended the dynasty by also assuming the throne of Hungary (1440). He was succeeded by Casimir IV, who placed his son on the thrones of Bohemia (1471) and Hungary. During the reigns of Casimir's sons John Albert (1459–1501) and Alexander (1461–1506), the Jagiellon rulers lost much of their power in Poland to the nobility. When Sigismund I succeeded Alexander in 1506, he strengthened the government and saw the Teutonic Order convert its lands into the secular duchy of Prussia (1525), a Polish fief. In 1526 the death of Louis II ended Jagiellon rule in Bohemia and Hungary. In 1561 Sigismund II Augustus incorporated Livonia into Poland, but when he died, leaving no heirs, the Jagiellon dynasty ended (1572).

jagirdar \jə-'gir-ˌdär\ **system** Form of land tenancy introduced in India by the early sultans of Delhi in the early 13th century. Under the system, land, its revenues, and the power to govern it was assigned to an official of the state. The land reverted to the government on the official's death, but heirs could renew the land assignment by paying a fee. Feudalistic in character, the *jagirdar* system tended to enfeeble the central government by setting up quasi-independent baronies. Periodically abolished, it was always renewed. After Indian independence, measures were taken to abolish absentee landownership.

jaguar Largest New World cat. Once found in wooded regions from the U.S.-Mexican border south to Patagonia, the jaguar (*Panthera onca*) survives, in reduced numbers, only in remote areas of Central and South

© 2006 Encyclopædia Britannica, Inc.

America; the largest known population is in the Amazon rain forest. The male is 5.5–9 ft (1.7–2.7 m) long, including the 23–35-in. (60–90-cm) tail, and weighs 220–350 lbs (100–160 kg). The coat is typically orange-tan with black spots arranged in rosettes having a black spot in the centre. A solitary predator, the jaguar usually hunts rodents, deer, birds, and fish; it will also take cattle, horses, and dogs.

Jaguaribe \ˌzhä-gwä-ˈrē-bē\ **River** River, northeastern Brazil. Formed by the junction of the Carapateiro and Trici rivers, it flows northeastward for 350 mi (560 km) to enter the Atlantic Ocean at Aracati. Long periods of drought, during which much of the river is dry, are followed by catastrophic floods that inundate the towns along its lower course.

Jahāngīr \jə-ˈhän-gēr\ *or* **Jehangir** (b. Aug. 31, 1569, Fatehpur, Sikri, India—d. Oct. 28, 1627, en route to Lahore) Mughal emperor of India (1605–27). Though designated heir apparent, the impatient Jahāngīr revolted in 1599; his father, AKBAR, nevertheless confirmed him as his successor. Like Akbar, Jahāngīr managed diplomatic relations on the Indian subcontinent adroitly, was tolerant of non-Muslims, and was a great patron of the arts. He encouraged Persian culture in Mughal India. During the middle portion of his reign, politics were dominated by his Persian wife (Nūr Jahān), her father, and Jahāngīr's son Prince Khurram (the future SHAH JAHĀN).

Jahn \ˈyän**, Friedrich Ludwig** (b. Aug. 11, 1778, Lanz, Brandenburg, Prussia—d. Oct. 15, 1852, Freyburg an der Unstrut, Prussian Saxony) German educator who founded the Turnverein (gymnastic club) movement in Germany. As a teacher in Berlin from 1809, he began a program of outdoor exercise for students. He invented the parallel bars, rings, balance beam, horse, and horizontal bar, all of which have become standard equipment for GYMNASTICS. In 1819 he came under suspicion for his fervent nationalism and strong influence on youth. He was arrested and imprisoned for almost a year; his gymnastic club closed, and a national ban was placed on gymnastics (lifted in 1842). He was awarded the Iron Cross for military bravery (1840) and served in the national parliament (1848–49).

jahrzeit See YAHRZEIT

jai alai \ˈhī-ˌlī, ˌhī-ə-ˈlī\ *Basque* **"merry festival"** Court game resembling HANDBALL. Of Basque origin, it developed from pelota and was given its present name when it was imported to Cuba in 1900. It is played between two or four players with a ball and a hurling device consisting of a long, curved wicker basket strapped to the wrist. The use of this hurling device, called a cesta, allows the ball to reach speeds up to 240 km/hr (150 mph). The court, 53.3 m (58.3 yards) long, is three-walled. The object of the game is to bounce the ball off the front wall with such speed and spin that the opponent is unable to return it. PARI-MUTUEL betting on jai alai is permitted in the U.S.

Jaina vrata \ˈjī-nə-ˈvrə-tə\ In JAINISM, any of the vows taken by monks, nuns, and lay members. The first five are the *mahavratas*, or "great vows": nonviolence, truthfulness, not stealing, sexual purity, and renunciation of possessions. These are interpreted more moderately for lay members than for monks; for example, lay members need only remain sexually faithful to their spouses, while monks must practice celibacy. The remaining vows are designed to help in keeping the first five. The final vow is the promise to die in meditation during self-starvation when observance of the other vows is no longer possible.

Jainism \ˈjī-ˌni-zəm\ Religion of India established in the 6th century BCE. It was founded by Vardhamana, who was called MAHAVIRA, as a reaction against the VEDIC RELIGION, which required animal sacrifices. Jainism's core belief is AHIMSA, or noninjury to all living things. Jainism has no belief in a creator god, though there are a number of lesser deities for various aspects of life. Jains believe their religion is eternal and hold that it was revealed in stages by a number of Conquerors, of whom Mahavira was the 24th. Living as an ascetic, Mahavira preached the need for rigorous penance and self-denial as the means of perfecting human nature, escaping the cycle of rebirth, and attaining MOKSHA, or liberation. Jains view KARMA as an invisible material substance that interferes with liberation and can be dissolved only through asceticism. By the end of the 1st century CE the Jains had split into two sects, each of which later developed its own canon of sacred writings: the Digambaras, who held that an adherent should own nothing, not even clothes, and that women must be reborn as men before they can attain moksha; and the more moderate Svetambaras, who retained a few possessions such as a robe, an alms bowl, a whisk broom, and a *mukhavastrika* (a piece of cloth held over the mouth to protect against the ingestion and killing of small insects). In keeping with their principle of reverence for life, Jains are known for their charitable works, including building shelters for animals. Jainism preaches universal tolerance and does not seek to make converts. In the early 21st century Jainism had some 4.5 million followers.

Jaipur \ˈjī-ˌpůr\ Capital (pop., 2001 prelim.: 2,324,319) of RAJASTHAN state, northwestern India. A walled town surrounded by hills (except to the south), it was founded in 1727 by Maharaja Sawai Jai Singh to replace Amber as the capital of the princely state of Jaipur. The city, known for its beauty, is unique in its straight-line planning; its buildings are mostly rose-coloured, and it is sometimes called the "pink city." It is a popular tourist destination; historic structures include the city palace, the Hall of Winds, Ram Bagh palace, and Nahargarh, or Tiger Fort.

Jakarta \jə-ˈkär-tə\ *formerly (1949–72)* **Djakarta** Capital (pop., 1999 est.: 9,604,900) and largest city of Indonesia. Located on the northwestern coast of JAVA, it was founded in 1527 after the sultan of BANTAM defeated the Portuguese on the site. The Dutch took control in 1619, renaming it Batavia and establishing it as the headquarters of the Dutch EAST INDIA COMPANY. In 1949 the city was renamed and made Indonesia's capital. It grew rapidly, soon becoming one of the world's most populous cities. A major trade, industrial, and financial centre, it is also the seat of several universities.

Jakobson \ˈyä-kəb-sən**, Roman (Osipovich)** (b. Oct. 11, 1896, Moscow, Russia—d. July 18, 1982, Boston, Mass., U.S.) Russian-born U.S. linguist. Born and educated in Moscow, Jakobson moved to Prague in 1920; the European political situation forced him to flee to Scandinavia in 1938 and to the U.S. in 1941. He taught at Harvard University (1949–67). His interests ranged from folk epics and the cultural history of the Slavs to general PHONOLOGY, the MORPHOLOGY of the SLAVIC LANGUAGES, and speech acquisition. His preoccupation with contrast and opposition is reflected in his analysis of the Russian case system (1938), a brilliant analysis of the Russian verbal system (1948), and preeminently in his work on distinctive features in phonology.

Jalāl al-Dīn al-Rūmī See RŪMĪ

Jalapa \hä-ˈlä-pä\ *in full* **Jalapa Enríquez** City (pop., 2000: 373,076), capital of VERACRUZ state, east-central Mexico. It is located in the SIERRA MADRE Oriental about 4,700 ft (1,430 m) above sea level. A market city for locally grown coffee and tobacco, it was famous in colonial days for its annual fair, held to dispose of the goods brought from CÁDIZ, Spain, by the returning Spanish silver fleet. The massive Spanish-Moorish architecture of the city is reminiscent of viceregal days.

Jalisco \hä-ˈlēs-kō\ State (pop., 2000: 6,322,002), west-central Mexico. It covers 31,211 sq mi (80,836 sq km), and its capital is GUADALAJARA. The SIERRA MADRE Occidental mountain range traverses the state, separating the Pacific coast from a high plateau region. The Sierra Madre region is largely volcanic, and earthquakes are frequent. The state's many lakes include CHAPALA, Mexico's largest. First invaded by Spaniards in 1526, Jalisco was incorporated into Nueva Galicia. In 1889 its area was much reduced by the separation of the territory of Tepic (now NAYARIT state) from its coastal zone. Its economy is based on agriculture, livestock raising, forest products, and mining.

jam See JELLY AND JAM

Jamaica Island country, West Indies, located south of Cuba. The third largest island in the Caribbean, it is 146 mi (235 km) long and 35 mi (56 km) wide. Area: 4,244 sq mi (10,991 sq km). Population (2005 est.): 2,736,000. Capital: KINGSTON. The population consists mostly of descendents of African slaves. Languages: English (official), Jamaican Creole. Religions: Christianity (mainly Protestant; also Roman Catholic); also RASTAFARIANISM. Currency: Jamaica dollar. Jamaica has three major regions: the coastal lowlands, which encircle the island and are heavily cultivated; a limestone plateau, which covers half of the island; and the interior highlands, with forested mountain ranges, including the BLUE MOUNTAINS. Agriculture employs about one-fifth of the workforce, and the major agricultural export is raw sugar, with molasses and rum as by-products. Industry focuses on the production of bauxite and alumina and on the garment industry. Tourism is very important. Jamaica is a constitutional monarchy with two legislative houses. Its chief of state is the British monarch, represented by the governor-general, and its head of government is the prime minister. The island was settled by Arawak Indians c. AD 600. It was

© 2006 Encyclopædia Britannica, Inc.

sighted by Christopher Columbus in 1494; Spain colonized it in the early 16th century but neglected it because it lacked gold reserves. Britain gained control in 1655, and by the end of the 18th century Jamaica had become a prized colonial possession because of the volume of sugar produced by slave labourers. Slavery was abolished in the late 1830s, and the plantation system collapsed. Jamaica gained full internal self-government in 1959 and became an independent country within the British Commonwealth in 1962. In the late 20th century the government, led by Michael Manley, nationalized many businesses.

Jamaica Bay Inlet of the Atlantic Ocean. It occupies about 20 sq mi (50 sq km) along the southwestern shore of Long Island, in southeastern New York, U.S. Part of the Port of New York, it is sheltered on the south by Rockaway Peninsula and connects with the ocean through Rockaway Inlet. Near the entrance channel is Coney Island. On the northeastern shore, at Idlewild, is the John F. Kennedy International Airport.

Jamāl al-Dīn al-Afghānī \jə-'mäl-ål-'dēn-ål-af-'gå-nē\ (b. 1838, Asadābād, Persia—d. March 9, 1897, Istanbul) Muslim politician and journalist. He is thought to have adopted the name Afghānī to conceal the fact that he was of Persian Shī'ite origin. He lived in Afghanistan from 1866, and a year later he became counselor to the khan. Displaced after a change of rulers, he went to Istanbul and then to Cairo in 1871. After becoming known as a rabble-rouser and heretic, he was deported from Egypt in 1879. By 1883 he was in Paris, where he championed Islamic civilization in the face of European domination. In Russia (1887–89) he seems to have worked as an anti-British agitator. His next stop was Iran, from which he was deported as a heretic in 1892; four years later he avenged himself by instigating the shah's murder. He died in Istanbul after failing to interest the sultan in his pan-Islamic ideas.

James, C(yril) L(ionel) R(obert) (b. Jan. 4, 1901, Tunapuna, Trin.—d. May 31, 1989, London, Eng.) Trinidadian writer and political activist. As a young man he moved to Britain, where his first work, *The Life of Captain Cipriani*, was published in 1929. His study of Toussaint-Louverture, *The Black Jacobins* (1938), was a seminal work. During James's first stay in the U.S. (1938–53), he became friends with Paul Robeson. Eventually deported to Britain because of his Marxism and labour activism, James wrote on cricket for *The Guardian*. His *Beyond the Boundary* (1963) mixes autobiography with commentary on politics and sports. He returned to the U.S. in 1970 but eventually settled permanently in Britain.

James, Harry (Haag) (b. March 15, 1916, Albany, Ga., U.S.—d. July 5, 1983, Las Vegas, Nev.) U.S. trumpeter and leader of one of the most popular big bands of the swing era. He joined Benny Goodman's band in 1937, becoming one of its principal soloists before forming his own group in late 1938. The band achieved commercial success through recordings featuring Frank Sinatra, virtuoso set pieces, and ballads performed with James's trademark wide vibrato. He married actress Betty Grable in 1943 and appeared in several films. An accomplished and technically brilliant improviser, his music from the late 1940s reflected his renewed interest in jazz, and he continued to perform with his band for more than 40 years.

James, Henry (b. April 15, 1843, New York, N.Y., U.S.—d. Feb. 28, 1916, London, Eng.) U.S.-British novelist. Born to a distinguished family, the brother of William James, he was privately educated. He traveled frequently to Europe from childhood on; after 1876 he lived primarily in England. His fundamental theme was to be the innocence and exuberance of the New World in conflict with the corruption and wisdom of the Old. *Daisy Miller* (1879) won him international renown; it was followed by *The Europeans* (1879), *Washington Square* (1880), and *The Portrait of a Lady* (1881). In *The Bostonians* (1886) and *The Princess Casamassima* (1886), his subjects were social reformers and revolutionaries. In *The Spoils of Poynton* (1897), *What Maisie Knew* (1897), and *The Turn of the Screw* (1898), he made use of complex moral and psychological ambiguity. *The Wings of the Dove* (1902), *The Ambassadors* (1903), and *The Golden Bowl* (1904) were his great final novels. His intense concern with the novel as an art form is reflected in the essay "The Art of Fiction" (1884), his prefaces to the volumes of his collected works, and his many literary essays. Perhaps his chief technical innovation was his strong focus on the individual consciousness of his central characters, which reflected his sense of the decline of public and collective values in his time.

James, Jesse and James, Frank *in full* **Jesse Woodson James and Alexander Franklin James** (respectively b. Sept. 5, 1847, near Centerville, Mo., U.S.—d. April 3, 1882, St. Joseph, Mo.; b. Jan. 10, 1843, near Centerville, Mo.—d. Feb. 18, 1915, near Kearney, Mo.) Brothers who were among the most notorious outlaws of the American West. Jesse and Frank both fought as Confederate guerrillas in the American Civil War. In 1866 they and eight other men robbed a bank in Liberty, Mo. Joined by other outlaws in subsequent years, the James gang robbed banks from Iowa to Alabama and Texas. In 1873 the bandits began robbing trains; they also preyed upon stagecoaches, stores, and individuals. In 1876 Jesse led a failed attempt to rob a bank in Northfield, Minn.; though the brothers escaped, the rest of the gang was killed or captured. After assembling a new gang in 1879 the brothers resumed robbing, and in 1881 the governor of Missouri offered a $10,000 reward for the brothers' capture, dead or alive. In 1882 Jesse was shot in the back of the head and killed instantly by Robert Ford, a gang member, who claimed the reward. A few months later, Frank gave himself up. Tried and acquitted three times, he retired to a quiet life on his family's farm. The exploits of the James brothers were romanticized in pulp fiction and in movies.

James, Saint *or* **James the Great** (b. Galilee, Palestine—d. AD 44, Jerusalem; feast day July 25) One of the 12 Apostles of Jesus. He and his brother John (see St. John the Apostle) were fishermen on the Sea of Galilee and were among the first disciples to be called. As a member of the inner circle of disciples, he witnessed the major events in the ministry of Jesus, including the Transfiguration and the Agony in the Garden of Gethsemane. He was beheaded in AD 44 by order of Herod Agrippa. By tradition, his body was taken to Santiago de Compostela, Spain; his shrine there has long been a place of pilgrimage.

James, William (b. Jan. 11, 1842, New York, N.Y., U.S.—d. Aug. 26, 1910, Chocorua, N.H.) U.S. philosopher and psychologist. Son of the philosophical writer Henry James (1811–82) and brother of the novelist Henry James, he studied medicine at Harvard, where he taught from 1872.

© 2006 Encyclopædia Britannica, Inc.

His first major work, *The Principles of Psychology* (1890), treated thinking and knowledge as instruments in the struggle to live. His most famous work is *The Varieties of Religious Experience* (1902). In *Pragmatism* (1907), he generalized the theories of Charles Sanders Peirce to assert that the meaning of any idea must be analyzed in terms of the succession of experiential consequences to which it leads and that truth and error depend solely on these consequences (see pragmatism). He applied this doctrine to the analysis of change and chance, freedom, variety, pluralism, and novelty. His pragmatism was also the basis for his polemic against monism, the idealistic doctrine of internal relations, and all views that presented reality as a static whole. He was also a leader of the psychological movement known as functionalism.

James I *Spanish* **Jaime** *known as* **James the Conqueror** (b. Feb. 2, 1208, Montpellier, County of Toulouse—d. July 27, 1276) King of Aragon and Catalonia (1214–76). The most renowned of the medieval kings of Aragon, he was educated by the Knights Templar, and his great-uncle ruled as regent until 1218. James helped to subdue rebellious nobles and took over the government of his kingdoms in 1227. He reconquered the Balearic Islands (1229–35) and Valencia (1233–38) but renounced his claims to lands in southern France. He also helped Alfonso X to suppress a Moorish rebellion in Murcia (1266), and he undertook an unsuccessful Crusade to the Holy Land (1269).

James I (b. June 19, 1566, Edinburgh Castle, Edinburgh, Scot.—d. March 27, 1625, Theobalds, Hertfordshire, Eng.) King of Scotland, as James VI (1567–1625), and first Stuart king of England (1603–25). He was the son of Mary, Queen of Scots, and Lord Darnley, and at age one James succeeded his mother to the Scottish throne. Controlled by a succession of regents, he became the puppet of contending intriguers—Roman Catholics, who sought to bring his mother back to the throne, and Protestants. In 1583 he began to pursue his own policies as king, allying himself with England. On the death of Elizabeth I, he succeeded to the English throne as great-great-grandson of Henry VII. He quickly achieved peace and prosperity by ending England's war with Spain (1604). He presided over the Hampton Court Conference (1604), rejecting most of the Puritans' demands for reform of the Church of England but permitting preparation of a new translation of the Bible, the King James Version. His policies toward Catholics led to the Gunpowder Plot, and his growing belief in royal absolutism and his conflicts with an increasingly self-assertive Parliament led to his dissolution of Parliament from 1611 to 1621. With the death of Robert Cecil, he came under the influence of incompetent favourites.

James I (b. 1394—d. Feb. 20/21, 1437, Perth, Perth, Scot.) King of the Scots (1406–37). The son and heir of Robert III, he was captured by the English in 1406 and held prisoner in London until 1424. During the 13 years in which he truly ruled Scotland (1424–37), he established the first strong monarchy the Scots had known in nearly a century. He weakened the nobility but did not entirely subdue the Highland lords, and he greatly improved the administration of justice for the common people. His murder in a Dominican friary by a group of rival nobles led to a popular uprising in favour of his widow and six-year-old son, who succeeded him as James II.

James II *Spanish* **Jaime** *known as* **James the Just** (b. c. 1264—d. Nov. 3, 1327, Barcelona, Aragon) King of Aragon (1295–1327) and king of Sicily (as James I, 1285–95). He inherited the Sicilian crown on the death of his father (1285); when his brother died (1291) he inherited Aragon. He resigned Sicily (1295) and married the daughter of the king of Naples in order to make peace with the Angevins. Sardinia and Corsica were given to him in compensation for Sicily, but he was able to occupy only Sardinia (1324).

James II (b. Oct. 14, 1633, London, Eng.—d. Sept. 16/17, 1701, Saint-Germain, France) King of Great Britain (1685–88). He was brother and successor to Charles II. In the English Civil Wars he escaped to the Netherlands (1648). After the Restoration (1660) he returned to England and became lord high admiral in the Anglo-Dutch Wars. He converted to Catholicism c. 1668, and he resigned in 1673 rather than take the Test Act oath. By 1678 his Catholicism had created a climate of hysteria about a Popish Plot to assassinate Charles and put James on the throne, and successive Parliaments sought to exclude him from succession. By the time Charles died (1685), James came to the throne with little opposition and strong support from the Anglicans. Rebellions caused him to fill the army and high offices with Roman Catholics and suspend a hostile Parliament. The birth of his son, a possible Catholic heir, brought about the Glorious Revolution in 1688, and he fled to France. In 1689 he landed in Ireland to regain his throne, but his army was defeated at the Battle of the Boyne, and he returned to exile in France.

James II (b. Oct. 16, 1430, Edinburgh, Scot.—d. Aug. 3, 1460, Roxburgh Castle, Roxburgh) King of Scotland (1437–60). He succeeded to the throne on the assassination of his father, James I of Scotland. Because he was so young, the strong central authority his father had established quickly collapsed, and his first adult task was the restoration of monarchical authority. He strove to dominate the powerful Douglas family, and in 1452 he stabbed to death William, earl of Douglas, at Stirling Castle. He established a strong central government and improved the administration of justice. Turning his attention to the English, who had renewed their claims to rule Scotland, he attacked English outposts in Scotland and was killed during a siege of Roxburgh Castle.

James III (b. May 1452—d. June 11, 1488, near Stirling, Stirling, Scot.) King of Scotland (1460–88). He succeeded his father, James II. Unlike the latter, he was unable to restore strong central government after his long minority. A weak monarch, he was confronted with two major rebellions. He evidently offended his nobles by his interest in the arts and by taking artists for his favourites. In 1488 two powerful border families raised a rebellion and won to their cause his son, the future James IV; James III was captured and killed at age 36.

James IV (b. March 17, 1473—d. Sept. 9, 1513, near Branxton, Northumberland, Eng.) King of Scotland (1488–1513). He unified his country, gaining control over all northern and western Scotland by 1493. He fought border skirmishes with England (1495–97) in support of a pretender to the English throne. His marriage (1503) to Margaret Tudor, daughter of Henry VII, helped stabilize relations between the two countries, but in 1512 he allied with France against England. He invaded England in support of the French in 1513; his army was defeated at the Battle of Flodden, and James was killed.

James Bay Extension of Hudson Bay, located between northern Ontario and Quebec, Can. Generally less than 200 ft (60 m) deep, it is 275 mi (443 km) long and 135 mi (217 km) wide. It contains numerous islands, of which the largest is Akimiski Island. The many rivers that empty into the bay, including the Moose, are the cause of its low salinity. Visited by Henry Hudson in 1610, it is named for Capt. Thomas James, who explored it in 1631.

James Edward, the Old Pretender *orig.* **James Francis Edward Stuart** (b. June 10, 1688, London, Eng.—d. Jan. 1, 1766, Rome, Papal States) Claimant to the English and Scottish thrones. Son of the exiled James II of England, he was raised in France as a Catholic. On the death of his father (1701), he was proclaimed king of England by the French king Louis XIV, but the English Parliament passed a bill of attainder against him. He served with the French army in the War of the Spanish Succession. In the Jacobite uprising (1715), James landed in Scotland, but within two months the uprising collapsed and he returned to France. He lived thereafter in Rome under the pope's patronage. He became known as the "Old Pretender" to distinguish him from his son, Charles Edward, the Young Pretender.

James River *or* **Dakota River** River in the U.S. rising in central North Dakota and flowing southeast across South Dakota. It joins the Missouri River about 5 mi (8 km) below Yankton after a course of 710 mi (1,140 km). Major cities along the river include Jamestown, N.D., and Huron, S.D.

James River River, Virginia, U.S. Formed by the junction of the Jackson and Cowpasture rivers, it flows east across the Blue Ridge and past Richmond, then southeast to enter Chesapeake Bay through Hampton Roads after a course of 340 mi (550 km). The historic settlement of Jamestown lies on its lower course.

Jameson, Sir Leander Starr (b. Feb. 9, 1853, Edinburgh, Scot.—d. Nov. 26, 1917, London, Eng.) British administrator in southern Africa. As Cecil Rhodes's representative, Jameson successfully negotiated mineral concessions in Matabeleland and Mashonaland (present-day Zimbabwe) before becoming the first administrator of the new colony of Rhodesia in 1893. In 1895 Rhodes and Jameson plotted with Uitlander (British) leaders in the Transvaal to overthrow the Boer government of Paul Kruger; the original plan was postponed, but Jameson carried out his own invasion and was quickly captured with all his men. After imprisonment in England, he returned to participate in South African politics.

Jamestown Colony First permanent English settlement in North America. It was founded in May 1607 on a peninsula in the James River of Virginia. Named after King James I, Jamestown began cultivating tobacco and established the continent's first representative government (1619); the colony, its leader John Smith, and the Indian Pocahontas—who, according to lore, saved Smith's life—have been the subject of numerous novels, dramas, and films, many of them highly fanciful. When nearby Williamsburg replaced it as the capital of colonial Virginia in 1699, it fell into decline. By the mid-19th century, erosion had transformed the peninsula into Jamestown Island. In 1936 the site was incorporated into the Colonial National Historical Park.

Jāmī \'jȯ-ˌmē\ *orig.* **Mawlānā Nūr al-Dīn ʿAbd al-Raḥmān ibn Aḥmad** (b. Nov. 7, 1414, district of Jām—d. Nov. 9, 1492, Herāt, Timurid Afghanistan) Persian scholar, mystic, and poet. Despite offers of patronage by many Islamic rulers, he led a simple life, mostly in Herāt. His prose ranges from Qurʾānic commentaries to treatises on Sufism and music. His poetry expresses ethical and philosophical views in fresh, graceful language. His best known poetry collection is *The Seven Thrones* (or *Ursa Major*). He is often called the last great mystical poet of Iran.

Jamison, Judith (b. May 10, 1943, Philadelphia, Pa., U.S.) U.S. dancer and choreographer. In 1965 she joined Alvin Ailey's American Dance Theater; she became celebrated for her energetic grace and riveting stage presence and inspired many of Ailey's new dances, most notably *Cry* (1971). She left the company in 1980 to star in the Broadway musical *Sophisticated Ladies*. She toured worldwide in the 1980s and choreographed for various companies. In 1988 she founded her own troupe, the Jamison Project, but, after Ailey's death in 1989, she returned to the Ailey troupe as artistic director, becoming the first African American woman to direct a major modern dance company.

Jammu \'jə-mü\ City (pop., 2001 prelim.: 378,431) and winter capital of Jammu and Kashmir state, northwestern India. It lies along the Tawi River, south of Srinagar. Once the capital of the Dogra Rajput dynasty, it became part of Ranjit Singh's domain in the 19th century. It is now a railroad and manufacturing centre. Sites of interest include a fort, a palace of the rajas, and the University of Jammu (founded 1969).

Jammu and Kashmir State (pop., 2001: 10,143,700), northern India. With an area of 39,146 sq mi (101,387 sq km), it occupies the southern portion of the Kashmir region of the northwestern Indian subcontinent and is bordered by the portions of Kashmir administered by Pakistan and China and by the Indian states of Himachal Pradesh and Punjab. The land is predominantly mountainous and includes segments of the Karakoram and Himalaya ranges. Much of Kashmir's Ladakh region is included in the state. There are two major lowland areas: the Jammu plain and the fertile and heavily populated Vale of Kashmir. The majority of the state's people are Muslims, although Hindus predominate in the southeastern Jammu area, and northeastern Ladakh is largely Buddhist. Formerly a princely state created in the 1840s, Jammu and Kashmir became an Indian state in 1947, even as India and Pakistan were fighting for control of the entire Kashmir region. A cease-fire line, established in 1949, has since served as the state's boundary with the Pakistan-administered area. Tension has remained high in the region, and there have been periodic outbreaks of border fighting.

Janáček \'yä-nə-ˌchek**, Leoš (Eugen)** (b. July 3, 1854, Hukvaldy, Moravia, Austrian Empire—d. Aug. 12, 1928, Ostrava, Czech.) Czech (Moravian) composer. Son of a church musician, he worked as a teacher and choral conductor until age 40. When his marriage ended in 1887, he began his first opera and spent the next year collecting folk songs. In 1894 he began his first mature opera, *Jenufa*, in a folk-influenced style; completed nearly a decade later, it had a successful premiere in Brno (1904), and he retired to compose full-time, becoming music's most extraordinary late bloomer. Major works of his last two decades include the *Glagolitic Mass* (1927) and the operas *Kát'a Kabanová* (1921), *The Cunning Little Vixen* (1924), *The Makropulos Affair* (1925), and *From the House of the Dead* (1928). A late love affair inspired the *Kreutzer* and *Intimate Pages* string quartets (1923, 1928).

Jane Seymour (b. 1509?, England—d. Oct. 24, 1537, Hampton Court, London) Third wife of Henry VIII of England. A lady-in-waiting to Henry's wives Catherine of Aragon and Anne Boleyn, she first attracted Henry's attention c. 1535 but refused to be his mistress. This probably hastened Anne Boleyn's downfall and execution (1536), after which Jane and Henry were married privately. She restored Henry's daughter Mary (later Mary I) to his favour and gave birth to his only male heir, the future Edward VI, but she died 12 days later, to Henry's genuine sorrow.

Janissary \'ja-nə-ˌser-ē\ *also spelled* **Janizary** \'ja-nə-ˌzer-ē\ *Turkish* **Yeniçeri ("New Troop")** Elite corps of the Ottoman Empire's army from the late 14th to the early 19th century. Its original soldiers were prisoners of war, but a system soon was developed (the *devşirme*) wherein Christian youths were levied from Balkan vassals, converted to Islam, and—though paid a regular salary—inducted into the ranks of the sultan's slaves. They were, for the most part, infantry troops conscripted to replace the often-unreliable Turkish tribal cavalry (spahi). Strict early rules of behaviour, including celibacy, were later abandoned, and the Janissaries became active in court politics. In 1826 they rebelled rather than accept the reform of the army along European lines. The revolt was violently put down, and most of the Janissaries were killed.

Jansen \'yän-sən,\ *English* \'jan-sən**, Cornelius Otto** (b. Oct. 28, 1585, Acquoi, near Leerdam, Holland—d. May 6, 1638, Ypres, Flanders, Spanish Neth.) Flemish leader of the Roman Catholic reform movement known as Jansenism. He studied at the University of Louvain, where he absorbed the teachings of St. Augustine, especially those concerning original sin and the need for grace. He spent 1611–14 in Bayonne, France, where he directed the episcopal college. After studying theology three more years, he returned to Louvain. He became rector of the university in 1635 and a year later was appointed bishop of Ypres. In 1638 he died of the plague. His major work, the *Augustinus,* was published in 1640; in 1642 Pope Urban VIII forbade the reading of the book.

Jansenism Roman Catholic reform movement inspired by the writings of Cornelius Jansen. Influenced by the works of St. Augustine and especially by Augustine's attacks on Pelagianism and the doctrine of free will, Jansen adopted Augustine's doctrines of predestination and the necessity of God's grace, a stance considered uncomfortably close to Calvinism by Roman Catholic authorities, who banned his book the *Augustinus* in 1642. After Jansen's death in 1638, his followers made their base at the abbey in Port-Royal, France. Blaise Pascal, the most famous Jansenist, defended their teachings in his *Provincial Letters* (1656–57). In 1709 Louis XIV ordered the Port Royal abbey demolished. Followers of Jansen started a Jansenist church in 1723, which endured into the late 20th century.

Jansky, Karl (Guthe) (b. Oct. 22, 1905, Norman, Okla., U.S.—d. Feb. 14, 1950, Red Bank, N.J.) U.S. engineer. He graduated from the University of Wisconsin and went to work for Bell Telephone Laboratories. Assigned to track down sources of static that could interfere with radiotelephone communication, he discovered (1931) the first extraterrestrial source of radio waves, emanating from the constellation Sagittarius in the direction of the Milky Way Galaxy's centre. The discovery proved that celestial bodies could emit radio waves and marked the beginning of radio astronomy.

Janus \'jā-nəs\ Roman god of doorways and archways, after whom the month of January is named. Often depicted as a double-faced head, he was a deity of beginnings. The worship of Janus dated back to the earliest years of Rome, and the city had many freestanding ceremonial gate-

Japan Island country, East Asia, western Pacific Ocean. Its four main islands are Hokkaido, Honshu, Shikoku, and Kyushu. It is separated from the Asian mainland by the Sea of Japan (East Sea). Area: 145,903 sq mi (377,887 sq km). Population (2005 est.): 128,085,000. Capital: Tokyo. The Japanese overwhelmingly are a single Asian ethnic group. Language: Japanese (official). Religions: Shintō, Buddhism; also Christianity. Currency: yen. Situated in one of Earth's most geologically active zones, Japan experiences volcanic eruptions and earthquakes. Mountain ranges cover some four-fifths of its land surface; its highest mountain is Mount Fuji. The economy, one of the world's biggest, is based largely on manufacturing and services; exports include electronic and electrical equipment, motor vehicles, chemicals, and iron and steel products. The government's involvement in banking results in unique cooperation between the public and private sectors. Japan is one of the world's principal seagoing nations, with an important marine fishing sector. It is a constitutional monarchy with two legislative houses; its symbol of state is the emperor, and the head of government is the prime minister. Human habitation in Japan is thought to date to at least 30,000 years ago. The Yamato court established the first unified Japanese state in the 4th–5th century AD; during that period, Buddhism arrived in Japan by way of Korea. For centuries Japan borrowed heavily from Chinese culture, but it began to sever its links with the mainland by the 9th century. The Fujiwara family were dominant through the 11th century. In 1192 Minamoto Yoritomo established Japan's first bakufu, or shogunate (see Kamakura period). The Muromachi period (1338–1573) was marked by warfare among powerful families. Unification was achieved in the late 16th and early 17th centuries under the leadership of Oda Nobunaga, Toyotomi Hideyoshi, and Tokugawa Ieyasu. During the Edo (Tokugawa) period (1603–1867), the government imposed a policy of isolation. Under the leadership of the emperor Meiji (1867–1912), it adopted a constitution (1889) and began a program of modernization and Westernization. Japanese imperialism led to war with China (1894–95) and Russia (1904–05) as well as to the annexation of Korea (1910) and Manchuria (1931). During World War II Japan attacked U.S. forces in Hawaii and the Philippines (December 1941) and occupied European colonial possessions in Southeast Asia. In 1945 the U.S. dropped atomic bombs on Hiroshima and Nagasaki, and Japan surrendered to the Allies. A new democratic constitution was drafted (1947) during the U.S. postwar occupation. Japan also began rebuilding its ruined industrial base using new technology. A tremendous economic recovery followed, and Japan became one of the world's wealthiest countries. It was able to maintain a favourable balance of trade despite a long-term economic recession. See map on following page.

Japan, Sea of *or* **East Sea** Branch of the western Pacific Ocean, bounded by Japan, by Sakhalin Island, and by Russia and Korea on the Asian mainland. It has a surface area of about 377,600 sq mi (978,000 sq km), a mean depth of 5,748 ft (1,752 m), and a maximum depth of 12,276 ft (3,742 m). Its relatively warm waters contribute greatly to the mild climate of Japan. The growing trade among East Asian countries has increased its use as a commercial waterway.

Japanese beetle Scarab beetle (Popillia japonica) that is a major pest of plants. Introduced accidentally from Japan into the U.S. in 1916, Japanese beetles are known to feed on more than 200 species of plant. Their larvae feed underground on roots; adults feed on flowers, fruit, and foliage. They range from Maine to South Carolina, and infestations have occurred in other parts of North America. The adult, about 0.4 in. (10 mm) long, is bright metallic green with coppery-brown wing covers. Control efforts include the use of poisonous sprays and a disease-inducing bacterium and introduction of the beetle's natural enemies (certain parasitic wasp and fly species).

Japanese crab See king crab

Japanese language Language spoken by about 125 million people on the islands of Japan, including the Ryukyus. The only other language of the Japanese archipelago is Ainu (see Ainu), now spoken by only a handful of people on Hokkaido, though once much more widespread. Japanese is not closely related to any other language, though a distant genetic kinship to Korean is now thought probable by some scholars, and an even more remote relationship to the Altaic languages is possible. Japanese is first attested in the 8th century AD, when Middle Chinese characters were utilized solely for their phonetic value to write native Japanese words. Japanese retains a huge stock of loanwords from Middle Chinese, long adapted to native phonetics.

Japanese law Law as it has developed in Japan as a consequence of the combination of two cultural and legal traditions, one indigenous Japanese, the other Western. In the 8th century Japan borrowed and adapted the legal system of the Chinese Tang dynasty. With the rise of the warrior class, clan codes governing the behaviour and actions of warrior families were developed. After the Meiji Restoration (1868), Japan began to borrow heavily from European legal systems, particularly the German Civil Code. After World War II, largely as a result of the country's occupation by the U.S. military and later contacts with U.S. legal scholars, Japan incorporated aspects of the U.S. legal system, including various civil procedures and elements of labour and business law. Traditional extralegal dispute-resolution methods remain strong, and litigation plays a less pervasive role than in the U.S.

Japanese philosophy Conceptual expression of Japanese culture since early 6th century AD. Japanese philosophy is not generally indigenous; Japanese thinkers have always skillfully assimilated alien philosophical categories in developing their own systems. One of the two principal schools of Japanese thought arose from Buddhism and was highly tinged with a religious and often somewhat metaphysical character. The second school arose from Confucianism and was essentially a system of moral philosophy. Since the Meiji Restoration (1868), Western philosophy has been abundantly introduced into Japan. At first British and American philosophies predominated, but in the 20th century the influence of German philosophy became increasingly strong; leading Japanese philosophers were especially influenced by German idealism, phenomenology, and existentialism. To distinguish Western philosophy from Buddhist and Chinese thought, the term *tetsugaku* ("wise learning") was coined and has come into common use.

Japanese writing system System of modified Chinese characters used for writing the Japanese language. The Japanese developed a mixed system, partly logographic (based on the Chinese writing system) and partly syllabic. In the 9th or 10th century two sets of syllabic signs evolved: *hiragana*, simplified cursive versions of Chinese characters; and *katakana*, based on elements of Chinese characters. Modern Japanese is written with the two syllabaries and Chinese characters.

Japurá \ˌzhä-pü-ˈrä\ **River** River, northwestern South America. It rises as the Caquetá River in the Cordillera Central of the Andes Mountains in southwestern Colombia. Afterward it flows through southeastern Colombia and is joined by the Apaporis River at the Brazilian border, where it takes the name Japurá and flows eastward to join the Amazon River. Its total length, including the Caquetá, is about 1,750 mi (2,820 km). It has a strong current and is navigable by small boats in Brazil.

Jaques-Dalcroze \ˈzhäk-ˌdal-ˈkrōz**, Émile** (b. July 6, 1865, Vienna, Austria—d. July 1, 1950, Geneva, Switz.) Swiss music educator and composer. He studied composition with Anton Bruckner, Gabriel Fauré, and Léo Delibes, and in 1892 he became professor of harmony at the Geneva Conservatory. In the early 20th century he experimented with new methods of music education, which evolved into eurythmics, a system in which bodily movements are used to represent musical rhythms. In 1914, having left the conservatory, he founded the Institut Jaques-Dalcroze in Geneva to teach and promulgate his new method.

Jari River *or* **Jary** \zhä-ˈrē\ **River** River, northern Brazil. It flows southeast for about 350 mi (560 km) to join the Amazon River at Bôca do Jari. The Jari forms the border between Pará and Amapá states, and its lower course is navigable. Since the late 1960s the river's valley has been the focus of large-scale development for lumber production.

Jarrell \ja-ˈrel**, Randall** (b. May 6, 1914, Nashville, Tenn., U.S.—d. Oct. 14, 1965, Chapel Hill, N.C.) U.S. poet and critic. He taught at the

© 2006 Encyclopædia Britannica, Inc.

University of North Carolina (Greensboro) from 1947 until his death. As a critic, he revitalized the reputations of Robert Frost, Walt Whitman, and William Carlos Williams in the 1950s; his criticism is collected in *Poetry and the Age* (1953), *A Sad Heart at the Supermarket* (1962), and the posthumous *Third Book of Criticism* (1969). His poems appeared in *Little Friend, Little Friend* (1945) and *Losses* (1948), both drawing on his wartime experiences, and such later collections as *The Seven-League Crutches* (1951) and *The Woman at the Washington Zoo* (1960). He was killed when he stepped in front of a moving car.

Jarrett, Keith (b. May 8, 1945, Allentown, Pa., U.S.) U.S. jazz pianist, composer, and bandleader. He played with Art Blakey (1965–66) and with Miles Davis's jazz-rock group (1970–71) before making a series of solo recordings that won him broad popularity. His trio (from 1966) with bassist Charlie Haden (b. 1937) and drummer Paul Motian (b. 1931), later expanded to a quartet (1971–76), was highly regarded. By the 1980s his public performance had turned mainly to classical recitals.

Jarry \zhä-'rē**, Alfred** (b. Sept. 8, 1873, Laval, France—d. Nov. 1, 1907, Paris) French writer. He went to Paris to live on his inheritance at age 18; after exhausting it, he led a life of calculated buffoonery. His farce *Ubu Roi* (1896), considered a forerunner of theatre of the absurd and of Surrealism, featured the grotesque Père Ubu, who becomes king of Poland. Jarry followed it with two sequels, one of which was published posthumously. The brilliant imagery and wit of his stories, novels, and poems usually lapse into incoherence and unintelligible symbolism. A heavy drinker, he died at 34.

Jaruzelski \ˌyär-ü-'zel-skē**, Wojciech (Witold)** (b. July 6, 1923, Kurow, Pol.) Polish army general and chief of state (1981–89) and president (1989–90) of Poland. He rose through the ranks of the army and the Communist Party to be elected premier and first secretary of the party in 1981 as Poland came under increasing pressure from the Solidarity movement. He declared martial law (1981–83), carrying out mass arrests of dissidents. Unable to restore Poland's stagnant economy, he began negotiations in 1988 with Solidarity, culminating in agreements to reform Poland's political system. Elected president in 1989, he resigned his posts in the Communist Party. In 1990 Lech Wałęsa was elected president, and Jaruzelski relinquished the last of communist power in Poland.

jasmine \'jaz-mən\ Any of about 300 tropical and subtropical species of fragrant, flowering, woody, climbing shrubs that make up the genus *Jasminum* of the olive family, native to all continents except North America. The jasmine used in perfumery and aromatherapy comes from the fragrant white flowers of common, or poet's, jasmine (*J. officinale*), native to Iran. The dried flowers of Arabian jasmine (*J. sambac*) make jasmine tea. Many fragrant-flowered plants from other families are also commonly called jasmine.

Winter jasmine (*Jasminum nudiflorum*)
VALERIE FINNIS

Jason In Greek legend, the leader of the Argonauts. He was the son of Aeson, king of Iolcos in Thessaly. Raised by Chiron after his father's half-brother Pelias seized Iolcos, he returned as a young man and was promised his inheritance if he could bring back the Golden Fleece. After an adventurous voyage, he won the fleece with the help of Medea. He married her, and the two returned to Iolcos, where Medea murdered Pelias. Driven out by Pelias's son, they sought refuge with King Creon of Corinth. When Jason deserted Medea for Creon's daughter, Medea killed her own children by Jason.

jasper Opaque, fine-grained or dense variety of the silica mineral chert that exhibits various colours, but chiefly brick red to brownish red. Long used for jewelry and ornamentation, it has a dull lustre but takes a fine polish; its physical properties are those of quartz. Jasper is common and widely distributed, occurring in the Ural Mountains, North Africa, Sicily, Germany, and elsewhere. For thousands of years, black jasper was used to test gold-silver alloys for their gold content. Rubbing the alloys on the stone, called a touchstone, produces a streak the colour of which determines the gold content within 1 part in 100.

Jasper National Park National park, western Alberta, Can. Located on the eastern slopes of the Rocky Mountains, it was established in 1907. It occupies 4,200 sq mi (10,878 sq km), including the Athabasca River valley and the surrounding mountains. It encompasses part of the great Columbia Icefield, the meltwaters of which feed rivers that flow to the Atlantic, Pacific, and Arctic oceans. The park's wildlife includes bear, elk, moose, caribou, and cougar.

Jaspers \'yäs-pərs**, Karl (Theodor)** (b. Feb. 23, 1883, Oldenburg, Ger.—d. Feb. 26, 1969, Basel, Switz.) German-Swiss philosopher and psychiatrist. As a research psychiatrist, he helped establish psychopathology on a rigorous, scientifically descriptive basis, especially in his *General Psychopathology* (1913). He taught philosophy at the University of Heidelberg from 1921 until 1937, when the Nazi regime forbade him to work. From 1948 he lived in Switzerland, teaching at the University of Basel. In his magnum opus, *Philosophy* (3 vol., 1969), he argued that the aim of philosophy is practical; its purpose is the fulfillment of human existence (*Existenz*). For Jaspers, philosophical illumination is achieved in the experience of limit situations, such as conflict, guilt, and suffering, that define the human condition. In its confrontation with these extremes mankind achieves its existential humanity. He is one of the most important figures of EXISTENTIALISM.

Jassy See IAŞI

Jassy \'yä-sē**, Treaty of** (Jan. 9, 1792) Pact signed at Jassy in Moldavia (modern Iaşi, Rom.), at the conclusion of the RUSSO-TURKISH WARS. The treaty confirmed Russian dominance in the Black Sea by advancing the Russian frontier to the Dniester River. It also restored Bessarabia, Moldavia, and Walachia to the Ottoman Turks.

jaundice Excess BILE pigments (bilirubin) in the bloodstream and tissues, causing a yellow to orange—even greenish—colour in the skin, the whites of the eyes, and the mucous membranes. Bilirubin may be overproduced or inadequately removed by the LIVER or leak into the bloodstream after removal; jaundice may also be due to impaired bile flow. Causes include ANEMIA, PNEUMONIA, and liver disorders (e.g., infection or CIRRHOSIS). While bilirubin excess usually does no harm, retention jaundice signals severe liver malfunction.

Jaurès \zhō-'res**, (Auguste-Marie-Joseph-) Jean** (b. Sept. 3, 1859, Castres, France—d. July 31, 1914, Paris) French socialist leader. He served in the Chamber of Deputies (1885–89, 1893–98, 1902–14) and at first adopted the ideas of ALEXANDRE MILLERAND. After 1899 the socialists split into two groups, and Jaurès headed the FRENCH SOCIALIST PARTY, advocating reconciliation with the state. In the newspaper *L'Humanité*, which he cofounded in 1904, he espoused democratic socialism, but when the SECOND INTERNATIONAL (1904) rejected his position he acquiesced. In 1905 the two French socialist parties united, and his authority continued to grow. On the eve of World War I, he espoused peace through arbitration and championed Franco-German rapprochement, which earned him the hatred of French nationalists, and he was assassinated in 1914 by a young nationalist fanatic. He wrote several books, including the influential *Socialist History of the French Revolution* (1901–07).

Jean Jaurès.
H. ROGER-VIOLLET

Java \'jä-vä\ *Indonesian* **Djawa** Island (pop., 2000 prelim.: 121,352,608), Indonesia. Lying southeast of SUMATRA, it is Indonesia's fourth largest island, and it contains more than half of the country's population. Its area, including offshore Madura Island, is 49,228 sq mi (127,499 sq km). The capital of Java and of Indonesia is JAKARTA. The island's highest point is Mount Semeru, an active volcano measuring 12,060 ft (3,676 m) high. It is inhabited by three major ethnic groups: the Javanese (who constitute 70% of the population), the Sundanese, and the Madurese. The fossilized remains of *HOMO ERECTUS*, or "Java man," indicate that the island was occupied some 800,000 years ago. Indian traders began arriving in the 1st century AD, bringing Hindu influences. The Majapahit dynasty was founded in eastern Java in 1293; it fell early in the 16th century when Muslim kingdoms arose. In 1619 the Dutch EAST INDIA COMPANY took control of Batavia (Jakarta) and extended its influence. Ruled by the Dutch until the 1940s when it was occupied by Japan, it became part of newly independent Indonesia in 1950.

Java Modular OBJECT-ORIENTED PROGRAMMING LANGUAGE developed by Sun Microsystems in 1995 specifically for the INTERNET. Java is based on the idea that the same SOFTWARE should run on many different kinds of computers, consumer gadgets, and other devices; its code is translated according to the needs of the machine on which it is running. The most visible examples of Java software are the interactive programs called "applets" that animate sites on the WORLD WIDE WEB, where Java is a standard creative tool. Java provides an interface to HTML.

Java man Common name of fossilized *HOMO ERECTUS* remains found in 1891 at Trinil, Java. The remains, a skullcap and thighbone, represent the first known fossils of *H. erectus* (though originally assigned to *Pithecanthropus erectus*) and, together with numerous other finds along the Solo River, suggest that *H. erectus* was present in eastern Asia some 1,000,000 years ago and persisted there for at least 500,000 years and possibly as long as 800,000 years. Java man predates the finds at ZHOUKOUDIAN (Peking Man) in China and is considered somewhat more primitive.

Java Sea Part of the western Pacific Ocean between JAVA and BORNEO islands. Measuring 900 mi (1,450 km) long by 260 mi (420 km) wide, it occupies a total area of 167,000 sq mi (433,000 sq km). A shallow sea, it has a mean depth of 151 ft (46 m). It was the scene of a World War II naval battle (1942) that resulted in an Allied defeat and Japan's invasion of Java.

Javanese Any member of the largest ethnic group on the island of JAVA, Indonesia. They speak an AUSTRONESIAN LANGUAGE. The Javanese are Muslim, though relatively few are strictly observant. Traditional Javanese social organization varied in structure from relatively egalitarian villages to the highly stratified society of the cities; these differences find expression in the many Javanese styles of speech still in use. Javanese villages are compact groups of single-family houses, generally built of bamboo, surrounding a central square. Rice is the main food crop. The growth of large cities in Java has produced an urban underclass who live in makeshift huts in enclosed neighbourhoods.

JavaScript Computer PROGRAMMING LANGUAGE developed by Netscape in 1995 for use in HTML pages. JavaScript is a scripting language (or interpreted language), which is not as fast as compiled languages (such as JAVA or C++) but easier to learn and use. It is only loosely related to Java, and is not a true object-oriented language (see OBJECT-ORIENTED PROGRAMMING). JavaScript can be quickly added to a pure HTML page to provide dynamic features, such as automatically calculating the current date or activating an action. The JavaScript code must be interpreted and executed by a BROWSER as it reads the Web page or by a Web server before it delivers the page to the browser.

javelin See PECCARY

javelin throw TRACK-AND-FIELD sport of throwing a wooden or metal spear for distance. It is hurled after a short run and must land point-first. The men's javelin is 8.5 ft (260 cm) long, the women's 7.2 ft (220 cm). Included in the ancient Greek Olympic Games as part of the PENTATHLON, the javelin throw has been part of the modern Olympic program since its inception in 1896. A women's event was added in 1932. See also DECATHLON; HEPTATHLON.

jaw Either of two bones that frame the MOUTH: a movable lower jaw (mandible) and a fixed upper jaw (maxilla). These hold the teeth (see TOOTH) and are used for biting and chewing and in speech. Vertical portions at the back of the lower jaw form hinge joints at the temples. The front of its arch thickens to form the chin. The upper jaw is attached to bones at the bridge of the nose, in the eye sockets and roof of the mouth, and the cheekbones. It contains the large maxillary SINUS.

Jawlān, Al- See GOLAN HEIGHTS

Jawlensky \yəv-'lān-skē**, Alexey** *orig.* **Aleksei Iavlenskii** (b. March 13, 1864, Torzhok, Russia—d. March 15, 1941, Wiesbaden, Ger.) Russian-born German painter. He gave up a military career to study painting, and in 1896 he moved to Munich, where he became affiliated with Der BLAUE REITER. In France in 1905 he worked with HENRI MATISSE. Back in Munich he produced works featuring flat areas of vibrant Fauve colour outlined with simple, thick contours. In Switzerland during World War I he painted a series of "variations" on the view from his window. Their meditative mood culminated in such semiabstract faces as *Looking Within Night* (1923), whose mystical intensity is reminiscent of Russian icon painting. In 1924 he joined VASILY KANDINSKY, PAUL KLEE, and LYONEL FEININGER to form Der Blaue Vier ("The Blue Four"); they exhibited together until arthritis forced Jawlensky to abandon painting.

Jaxartes River See Syr Darya

jay Any of 35–40 bird species (family Corvidae) that inhabit woodlands and are known for their bold, raucous manner. Most are found in the New World, but several are Eurasian. Jays are nearly omnivores; some steal eggs, and many store seeds and nuts for winter use. They make a twiggy, cuplike nest in trees. The 12-in. (30-cm) blue jay, blue and white with a narrow black neckline, is found in North America east of the Rockies; westward it is replaced by the dark-blue, black-crested Steller's jay. Another abundant species is the scrub jay, found throughout western North America and in Florida.

Blue jay (*Cyanocitta cristata*)
JOHN H. GERARD

Jay, John (b. Dec. 12, 1745, New York, N.Y.—d. May 17, 1829, New Bedford, N.Y., U.S.) U.S. jurist, first chief justice of the Supreme Court of the United States. He practiced law in New York City. Though he initially deplored the growing conflict between Britain and the colonies, he became a staunch supporter of independence once the revolution was launched. He helped assure the approval of the Declaration of Independence (1776) in New York, where he was a member of the provincial Congress. The following year he helped draft New York's first constitution and was elected the state's first chief justice, and in 1778 he was chosen president of the Continental Congress. In 1782 he joined Benjamin Franklin in Paris to negotiate terms of peace with Britain. On his return from abroad, Jay found that Congress had elected him secretary for foreign affairs (1784–90). Convinced of the need for a stronger centralized government, he urged ratification of the U.S. Constitution. Under the pseudonym Publius, he wrote five of the essays that later became known as the Federalist papers (the others were written by James Madison and Alexander Hamilton); published in New York newspapers in 1787–88, the essays were a masterly defense of the Constitution and republican government. As the first chief justice of the Supreme Court (1789–95), he set legal precedent by affirming the subordination of the states to the federal government. In 1794 he was sent to Britain to negotiate a treaty dealing with numerous commercial disputes. The Jay Treaty helped avert war, but critics contended that it was too favourable to Britain. Jay resigned from the court and was elected governor of New York (1795–1801).

Jaya, Mount *Indonesian* **Puncak Jaya** *formerly* **Mount Sukarno** Peak, Papua (Irian Jaya) province, Indonesia. Located on New Guinea, the 16,500-ft (5,030-m) peak is the highest in the South Pacific and the tallest island peak in the world.

Jayavarman \ˌjä-yä-'vär-män\ **VII** (b. c. 1120/25—d. c. 1215/19) King of the Khmer (Cambodian) empire of Angkor (r. 1181–c. 1215). Born into the royal family of Angkor, he settled in the Champa kingdom (present-day central Vietnam) in his young adulthood and engaged in military campaigns. In his late fifties he led his people in a struggle for independence after their subjugation by the Cham. He was crowned king of a reconstituted Khmer empire at 61. He ruled more than 30 years and brought the empire to its zenith in terms both of territorial extent and of royal architecture and construction. Champa, southern Laos, and portions of the Malay Peninsula and Myanmar (Burma) came under his control. He built temples, hospitals, and rest houses, and rebuilt the city of Angkor (now called Angkor Thom). His dedication to both the spiritual and physical needs of the people has made him a national hero to modern Cambodians.

Jayewardene \ˌjä-ye-'wär-di-nə**, J(unius) R(ichard)** (b. Sept. 7, 1906, Colombo, Ceylon—d. Nov. 1, 1996, Colombo, Sri Lanka) Prime minister (1977–78) and president (1978–89) of Sri Lanka. The son of a Supreme Court judge, he became minister of finance in 1948, when Ceylon (from 1972, Sri Lanka) became independent. As prime minister, he amended the constitution to give Sri Lanka an executive presidency and became the first elected president in 1978. His administration steered the country away from socialism, revitalizing the private sector and reducing government bureaucracy. When ethnic conflict erupted between the island's Sinhalese Buddhist majority and its Tamil Hindu minority, he was unable to end the violence, which continued after his retirement and death.

Jazā'irī, 'Abd al-Qādir ibn Muḥyī al-Dīn ibn Muṣṭafā al-Ḥasanī al- See Abdelkader

Jazeera, Al- *or* **al-Jazīrah** Arabic-language cable news network founded in Qatar in 1996. It was established by the emir of Qatar and was transmitted from its capital, Doha, and from bureaus around the world. It began continuous programming in 1999. The editorial freedom exercised by its staff was unique in the Middle East, and its broadcasts were occasionally blocked by Arab states. It was the only network to broadcast from Kabul during the 2001 U.S.-led campaign in Afghanistan.

Jazernicki, Yitzhak See Yitzhak Shamir

Jazīrah, Al- See Gezira

jazz Musical form, often improvisational, developed by African Americans and influenced by both European harmonic structure and African rhythms. Though its specific origins are not known, the music developed principally as an amalgam in the late-19th- and early 20th-century musical culture of New Orleans. Elements of the blues and ragtime in particular combined to form harmonic and rhythmic structures upon which to improvise. Social functions of music played a role in this convergence: whether for dancing or marching, celebration or ceremony, music was tailored to suit the occasion. Instrumental technique combined Western tonal values with emulation of the human voice. Emerging from the collective routines of New Orleans jazz (see Dixieland), trumpeter Louis Armstrong became the first great soloist in jazz; the music thereafter became primarily a vehicle for profoundly personal expression through improvisation and composition. Elaboration of the role of the soloist in both small and large ensembles occurred during the swing era (c. 1930–45), the music of pianist and bandleader Duke Ellington in particular demonstrating the combination of composed and improvised elements. In the mid-1940s saxophonist Charlie Parker pioneered the technical complexities of bebop as an outgrowth of the refinement of swing: his extremes of tempo and harmonic sophistication challenged both performer and listener. The trumpeter Miles Davis led groups that established the relaxed aesthetic and lyrical phrasing that came to be known as cool jazz in the 1950s, later incorporating modal and electronic elements. Saxophonist John Coltrane's music explored many of the directions jazz would take in the 1960s, including the extension of bebop's chord progressions and experimental free improvisation.

Jeans, Sir James (Hopwood) (b. Sept. 11, 1877, London, Eng.—d. Sept. 16, 1946, Dorking, Surrey) British physicist and mathematician. After teaching at Cambridge and Princeton, he worked as a research associate at the Mount Wilson Observatory (1923–44). He proposed that matter was continuously created throughout the universe (see steady-state theory). He wrote on a wide variety of phenomena but is perhaps best known as a writer of popular books about astronomy.

Jeddah See Jiddah

jeep Outstanding light vehicle of World War II, developed by the U.S. Army Quartermaster Corps. It weighed 1.25 tons, had a four-cylinder engine, and could climb 60° grades and operate on rough terrain thanks to its four-wheel drive and high clearance. The origin of it name is uncertain; one theory traces it to the military designation "vehicle, GP" (i.e., general-purpose). Since the war the jeep has been adapted for civilian use, though it has been replaced in the U.S. military by the High Mobility Multipurpose Wheeled Vehicle (HMMWV), or Humvee.

Jeffers, (John) Robinson (b. Jan. 10, 1887, Pittsburgh, Penn., U.S.—d. Jan. 20, 1962, Carmel, Calif., U.S.) U.S. poet. Born to a wealthy family, he was educated in literature, medicine, and forestry. His lyrics express contempt for humanity and love of the harsh, eternal beauties of nature, notably the California coast near Carmel, where he moved in 1916. His third book, *Tamar and Other Poems* (1924), cemented his reputation and revealed the unique style and eccentric ideas he later developed in *Cawdor* (1928), *Thurso's Landing* (1932), and *Be Angry at the Sun* (1941).

Jefferson, Thomas (b. April 13, 1743, Shadwell, Va.—d. July 4, 1826, Monticello, Va., U.S.) Third president of the U.S. (1801–09). He was a planter and became a lawyer in 1767. While a member of the House of Burgesses (1769–75), he initiated the Virginia Committee of Correspondence (1773) with Richard Henry Lee and Patrick Henry. In 1774 he wrote the influ-

© 2006 Encyclopædia Britannica, Inc.

ential *A Summary View of the Rights of British America*, stating that the British Parliament had no authority to legislate for the colonies. A delegate to the Second Continental Congress, he was appointed to the committee to draft the Declaration of Independence and became its primary author. He was elected governor of Virginia (1779–81) but was unable to organize effective opposition when British forces invaded the colony (1780–81). Criticized for his conduct, he retired, vowing to remain a private citizen. Again a member of the Continental Congress (1783–85), he drafted the first of the Northwest Ordinances for dividing and settling the Northwest Territory. In 1785 he succeeded Benjamin Franklin as U.S. minister to France. Appointed the first secretary of state (1790–93) by George Washington, he soon became embroiled in a bitter conflict with Alexander Hamilton over the country's foreign policy and their opposing interpretations of the Constitution. Their divisions gave rise to political factions and eventually to political parties. Jefferson served as vice president (1797–1801) under John Adams but opposed Adams's signing of the Alien and Sedition Acts (1798); the Virginia and Kentucky Resolutions, adopted by the legislatures of those states in 1798 and 1799 as a protest against the Acts, were written by Jefferson and James Madison. In the presidential election of 1800 Jefferson and Aaron Burr received the same number of votes in the electoral college; the decision was thrown to the U.S. House of Representatives, which chose Jefferson on the 36th ballot. As president, Jefferson attempted to reduce the powers of the embryonic federal government and to eliminate the national debt; he also dispensed with a great deal of the ceremony and formality that had attended the office of president to that time. In 1803 he oversaw the Louisiana Purchase, which doubled the land area of the country, and he authorized the Lewis and Clark Expedition. In an effort to force Britain and France to cease their molestation of U.S. merchant ships during the Napoleonic Wars, he signed the Embargo Act. In 1809 he retired to his plantation, Monticello, where he pursued his interests in science, philosophy, and architecture. He served as president of the American Philosophical Society (1797–1815), and in 1819 he founded and designed the University of Virginia. In 1812, after a long estrangement, he and Adams were reconciled and began a lengthy correspondence that illuminated their opposing political philosophies. They died within hours of each other on July 4, 1826, the 50th anniversary of the signing of the Declaration of Independence. Though a lifelong slaveholder, Jefferson was an anomaly among the Virginia planter class for his support of gradual emancipation. In January 2000 the Thomas Jefferson Memorial Foundation accepted the conclusion, supported by DNA evidence, that Jefferson had fathered at least one child with Sally Hemings, one of his house slaves.

Jefferson City City (pop., 2000: 39,636), capital of Missouri, U.S. Located on the Missouri River near the centre of the state, it was selected as the site of the state capital in 1821. Named for Thomas Jefferson, it was incorporated as a town in 1825 and as a city in 1839. Loyalties were divided during the American Civil War, but it remained in the Union. The Capitol, completed in 1918, contains murals by Thomas Hart Benton. It is the trading centre for surrounding farmlands and has diversified manufacturing. Lincoln University was founded there by black veterans of the Union army in 1866.

Jeffreys, Sir Harold (b. April 22, 1891, Fatfield, Durham, Eng.—d. March 18, 1989, Cambridge, Cambridgeshire) British astronomer and geophysicist. In astronomy, he established that the four large outer planets (Jupiter, Saturn, Uranus, and Neptune) are very cold, devised models of their planetary structure, and studied the origin of the solar system and the theory of latitude. In geophysics, he investigated the thermal history of the Earth, was coauthor (1940) of the standard tables of travel times for earthquake waves, and was the first to hypothesize that the Earth's core is liquid. He explained the origin of monsoons and sea breezes and showed how cyclones are vital to the general circulation of the atmosphere. Jeffreys also worked on probability theory and on methods of general mathematical physics.

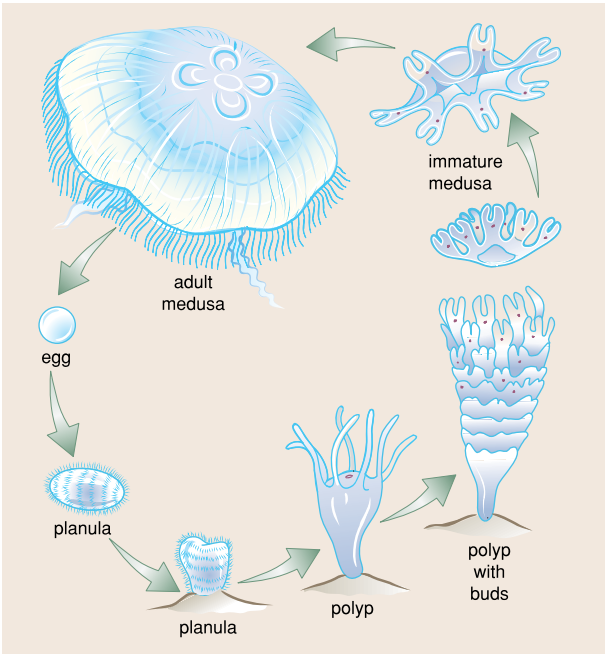
Jehangir See Jahāngīr

Jehovah's Witness Member of an international religious movement founded in Pittsburgh, Pa., by Charles T. Russell in 1872. The movement was originally known as the International Bible Students Association, but its name was changed by Russell's successor, Joseph Franklin Rutherford (1869–1942). The Witnesses are a millennialist group whose beliefs are based primarily on the apocalyptic sections of the Bible, notably Daniel and the Book of Revelation. They refuse to perform military service or salute the flag, actions which have brought them into direct conflict with governments around the world. They are famous for their door-to-door evangelizing and for refusing blood transfusions; they believe there is scriptural justification for all their actions and beliefs. Their goal is the establishment of God's kingdom on earth, and they hold that Jesus—who is believed to be God's first creation rather than one person in a trinity—is God's agent in this plan. Their national headquarters is in Brooklyn, N.Y.; their major publications, the *Watchtower* and *Awake!*, are published in about 80 languages. See also millennialism.

Jekyll, Gertrude (b. Nov. 29, 1843, London, Eng.—d. Dec. 8, 1932, London) British landscape architect. She pursued painting until 1891, when she turned to garden design. She helped the landscape designer William Robinson (1838–1935) in his writings about the natural garden and wrote several successful books on her own, including *Wood and Garden* (1899) and *Home and Garden* (1900). Her taste was for the simplicity and orderly disorder of cottage gardens. She later worked closely with Edwin L. Lutyens, developing a modern, informal style of garden marked by a rhythmic use of colour and form.

Jelinek, Elfriede (b. Oct. 20, 1946, Mürzzuschlag, Austria) Austrian novelist and playwright. At age 17 she suffered an emotional breakdown, and during her recovery she turned to writing as a form of self-expression and introspection. A polemical feminist, Jelinek often wrote about gender oppression and female sexuality. She also rejected the conventions of literary tradition in favour of linguistic and thematic experimentation. Among her notable novels are *Wonderful, Wonderful Times* (1980), *The Piano Teacher* (1983; filmed 2001), and *Lust* (1989). She also wrote a number of plays, including *Clara S.* (1984) and *Bambiland* (2003). In 2004 Jelinek won the Nobel Prize for Literature.

Jellicoe, John Rushworth Jellicoe, 1st Earl (b. Dec. 5, 1859, Southampton, Hampshire, Eng.—d. Nov. 20, 1935, London) British admiral. He entered the Royal Navy in 1872 and rose through the ranks to become commander of the fleet during World War I (1914–16). He won a crucial victory in the Battle of Jutland (1916), after which he was promoted to first sea lord of the Admiralty (1916–17) and admiral of the fleet (1919). He served as governor of New Zealand (1920–24).



Jellinek \'je-li-ˌnek**, Elvin M(orton)** (b. Aug. 15, 1890, New York, N.Y., U.S.—d. Oct. 22, 1963, Palo Alto, Calif.) U.S. physiologist. He studied at the University of Leipzig and worked in Budapest, Sierra Leone, and Honduras before returning to the U.S., where he studied alcoholism. He was an early proponent of the theory that alcoholism should be treated as a disease. He gathered and summarized his and others' research in the authoritative *Alcohol Explored* (1942) and *The Disease Concept of Alcoholism* (1960).

jelly and jam Thick preserves made from fruit and sugar. Jelly is semitransparent, consisting of the strained juice of various fruits (occasionally vegetables), singly or in combination, that is sweetened, slowly simmered, and congealed, often with the aid of pectin or gelatin. Jam differs from jelly in its inclusion of fruit pulp or whole fruit; whole-fruit jam is sometimes called preserve. Fruit jellies and jams are eaten on breakfast breads and in sandwiches and accompany the scones and other baked goods of the British tea meal. Vegetable and herb jellies traditionally complement lamb and other meat dishes.

jellyfish Any of about 200 described species of free-swimming marine cnidarians (in the classes Scyphozoa and Cubozoa), many of which have a bell-shaped body. The term is also frequently applied to other similar cnidarians (e.g., Portuguese man-of-war) and some unrelated forms (e.g., ctenophores and salps). In scyphozoan jellyfish, the free-swimming medusa form is the dominant stage, with the sessile polyp form found only during larval development. Jellyfish live in all oceans and include the familiar disk-shaped animals that are often found drifting along the shoreline. Most species are 1–16 in. (2–40 cm) in diameter; some are 6 ft (1.8 m) in diameter, with tentacles more than 100 feet (30 m) long. Though some jellyfish simply filter-feed, most feed on small animals (e.g., crustaceans) that they catch in their tentacles, whose stinging cells immobilize the prey; contact can be irritating and sometimes dangerous to humans. The cubozoan jellyfish comprise 50 species of box jellies (the rather spherical body is squared off at the edges), which are usually 1–2 in. (2–4 cm) in diameter. See illustration on following page.

Jemison, Mae (Carol) (b. Oct. 17, 1956, Decatur, Ala., U.S.) U.S. physician and astronaut. She received an M.D. from Cornell University and then served in the Peace Corps in Africa. In 1988 she was accepted to NASA's astronaut program and became the first black female astro-

© 2006 Encyclopædia Britannica, Inc.

Life cycle of the common jellyfish *Aurelia*. Eggs released by females pass out through the mouth and become lodged in pits on the tentacles. Sperm released from male jellyfish fertilize the eggs, which remain on the tentacles during early development. A fertilized egg develops into a ciliated larva, or planula, which settles on and attaches to a substrate (such as a rock) and develops into a polyp with a mouth and tentacles. The polyp reproduces asexually by budding off saucer-shaped immature medusae, which develop into mature sexually reproducing forms.

Jena and Auerstedt \'yä-nə...'aù-ər-ˌshtet**, Battles of** (1806) Military engagement of the NAPOLEONIC WARS, fought between French troops and Prussians and Saxons. In 1806 FREDERICK WILLIAM III of Prussia signed a secret alliance with Russia and joined the Third Coalition against NAPOLEON. As the Prussian army moved through Saxony to meet its Russian allies, it was forced to face a French attack from the rear. The Prussians split their forces between Auerstedt and Jena, and on October 14 Napoleon swept the Prussian troops off the field at Jena. At the same time, a secondary French force under LOUIS DAVOUT defeated a Prussian army more than twice its size at Auerstedt. Napoleon completed his conquest of Prussia in six weeks.

Jenkins, Fergie *in full* **Ferguson Arthur Jenkins** (b. Dec. 13, 1943, Chatham, Ont., Can.) Canadian-born U.S. baseball pitcher. In high school Jenkins excelled in amateur baseball, basketball, and hockey. He began his major league career with the Philadelphia Phillies in the early 1960s, before playing for the Chicago Cubs, the Texas Rangers, and the Boston Red Sox, winning at least 20 games in each of six consecutive seasons (1967–72) and setting several season records. He was awarded the Cy Young award in 1971 for his 24–13 won-lost record and 2.77 earned run average.

Jenkins (of Hillhead), Roy (Harris) Jenkins, Baron (b. Nov. 11, 1920, Abersychan, Monmouthshire, Eng.—d. Jan. 5, 2003, Oxfordshire) British politician. Elected to Parliament in 1948, he served in Labour Party governments (1964–70, 1974–76). A strong supporter of NATO and the European Community, he was president of the executive branch of the latter (1976–81). He resigned from the Labour Party, and in 1981, with other Labour dissidents, he formed the Social Democratic Party, which he led in 1982–83. After accepting a life peerage (1987), he became leader of the Social and Liberal Democratic Party in the House of Lords. He subsequently became chancellor of the University of Oxford.

Jenkins' Ear, War of War between Britain and Spain that began in 1739 and eventually merged into the War of the AUSTRIAN SUCCESSION. In 1738 Capt. Robert Jenkins appeared before a committee of the House of Commons and exhibited his own amputated ear, which he alleged was cut off by Spanish coast guards who boarded his ship in the West Indies in 1731. Public opinion had already been aroused by other Spanish outrages on British ships, and the incident was exploited by members of Parliament who opposed the government of ROBERT WALPOLE.

Jenner, Edward (b. May 17, 1749, Berkeley, Gloucestershire, Eng.—d. Jan. 26, 1823, Berkeley) English surgeon, discoverer of the smallpox vaccine. He was apprenticed to a surgeon at 13, and at 21 he became the house pupil of JOHN HUNTER, who gave him further training and stressed the need for experimentation and observation. Jenner had noticed as a youth that people who had been sick with the relatively harmless disease cowpox did not contract SMALLPOX. In 1796 he inoculated a young boy with matter taken from a dairymaid's fresh cowpox lesions. The boy caught cowpox and, when subsequently inoculated with smallpox, did not contract it. Despite early difficulties, the procedure spread and the death rate from smallpox fell. Jenner received worldwide recognition (though he was also subject to attacks and slander). He retired from public life in 1815 after the death of his wife.

Edward Jenner, detail of an oil painting by James Northcote, 1803; in the National Portrait Gallery, London.

Jensen \'yen-sən**, Georg** (b. Aug. 31, 1866, Raadvad, Den.—d. Oct. 2, 1935, Copenhagen) Danish silversmith and designer. At age 14 he was apprenticed to a goldsmith, and in 1904 he opened his own workshop in Copenhagen. Exhibiting his silverware and jewelry at major foreign exhibitions, he quickly built a reputation as an outstanding and original silversmith. He was the first to realize a profit from the manufacture of modern silverware and among the first to fashion steel into handsome, serviceable cutlery. By 1935 his firm had stores all over the world and carried more than 3,000 patterns. After his death the business was continued by his son, Søren Georg Jensen (b. 1917).

Jensen \'yen-sən**, Johannes V(ilhelm)** (b. Jan. 20, 1873, Farsø, Den.—d. Nov. 25, 1950, Copenhagen) Danish novelist, poet, and essayist. He initially studied medicine but later turned to writing. He first made an impression as a writer of tales, including the more than 100 published under the recurring title *Myths*. His early writings also include a historical trilogy, *The Fall of the King* (1900–01), about CHRISTIAN II of Denmark. His best-known work is *The Long Journey* (1908–22), a series of six novels that chronicles humanity's rise from primitive times to the time of CHRISTOPHER COLUMBUS's arrival in the Americas. He received the Nobel Prize for Literature in 1944.

Jephtha \'jef-thə\ One of the judges in ancient Israel. According to the Book of Judges, he was the son of a Gileadite and a prostitute. After being cast out by his father's legitimate sons, he joined a band of brigands. When the Gileadites were oppressed by an Ammonite army, they asked Jephtha to aid them. He led them to victory, having first promised God a sacrifice of whatever he first saw when he left his house; his first sight happened to be his daughter. His significance in the Book of Judges is as an exemplar of Israel's fidelity to God.

Jeremiah (b. probably after 650, Anathoth, Judah—d. c. 570 BC, Egypt) Hebrew PROPHET and reformer, author of the book of Jeremiah. Born into a priestly family in a village near Jerusalem, he began to preach c. 627 BC, charging his fellow citizens with injustice and false worship and calling on them to reform. He accurately predicted the destruction of JUDAH by Babylonia. After Jerusalem fell in 586 and much of its population was carried into exile, he remained behind under the protection of its new governor. When the governor was assassinated, Jeremiah was taken to

© 2006 Encyclopædia Britannica, Inc.

Egypt by Jews who feared reprisals, and he remained there until he died. His most significant prophecy looked to a time when God would make a new covenant with Israel.

Jericho *Arabic* **Arīḥā** Town (pop., 1997: 14,674), West Bank territory. Inhabited since c. 9000 BC, it is famous in biblical tradition as the first town attacked by the Israelites under Joshua after they crossed the Jordan River. It was abandoned or destroyed several times and rebuilt in the same area. Captured by the British in 1918, it became part of the British mandate of Palestine. Incorporated into Jordan in 1950, it became the site of two huge camps of Arab refugees following the first Arab-Israeli war (1948). In the Six-Day War (1967), the town was occupied by Israel, and much of the refugee population was dispersed. In 1994 it was turned over to the Palestinian Authority under an Israeli-Palestinian self-rule agreement.

Jerome, Chauncey (b. June 10, 1793, Canaan, Conn., U.S.—d. April 20, 1868, New Haven, Conn.) U.S. inventor and clockmaker. In 1824 he designed a popular bronze looking-glass clock, and he formed a company that soon became the leading U.S. clockmaker. He invented the one-day brass movement, an improvement over the wood clock. Applying mass-production techniques, he flooded the U.S. with low-priced brass clocks, which quickly spread to Europe and so astonished the English that "Yankee ingenuity" became a byword.

Jerome, Saint (b. c. 347, Stridon, Dalmatia—d. 419/420, Bethlehem, Palestine) Church Father and biblical translator. Born into a wealthy Christian family in Dalmatia, he was educated there and in Rome. Baptized c. 366, he spent most of the next 20 years in travel. He lived two years as a hermit in the desert of Chalcis. From 377 to 379 Jerome was in Antioch, where he studied biblical texts and translated the works of Origen and Eusebius. He lived in Rome (382–85), but theological controversy and opposition to his ascetic views led him to depart for the Holy Land, and he settled in Bethlehem, where he lived until his death. Traditionally regarded as the most learned of the Latin Fathers, he wrote numerous biblical commentaries and theological tracts on Pelagianism and other heresies. In 406 he completed his translation of the Bible into Latin, including his own translation of the Old Testament from Hebrew; Jerome's Latin Bible is known as the Vulgate.

Jersey Largest and southernmost of the Channel Islands, in the English Channel. Area: 44.9 sq mi (116.2 sq km). Population (2002 est.): 87,400. Capital: St. Helier (pop., 2001: 28,310). Separated from Normandy in 1204, it kept its Norman law and local customs but was administered for the British king by a warden. It was given legislative authority in 1771. It is now governed by a popularly elected assembly, which is presided over by a royally appointed bailiff. There is also a lieutenant governor, who represents the British monarch. Jersey fabric and Jersey cattle take their names from the island.

Jersey Breed of small, short-horned dairy cattle that originated on Jersey in the English Channel. They are believed to have descended from French cattle. Jerseys are usually fawn- or cream-coulored, but darker shades are common. They were introduced in large numbers into England c. 1811 and into the U.S. in 1850. Adaptable to a wide range of conditions, the Jersey is found worldwide. Its milk is remarkably high in butterfat, and it is an important breed wherever butter is produced (including New Zealand and Denmark).

Jersey City City (pop., 2000: 240,055), northeastern New Jersey, U.S. It lies opposite New York City. First settled by Dutch trappers (1618) and known as Paulus Hook, it was purchased from the Delaware Indians and established as a permanent settlement by 1660. In 1779, during the American Revolution, Henry Lee won a victory there over the British. Renamed Jersey City in 1820, it is a manufacturing centre.

Jerusalem *Hebrew* **Yerushalayim** \ye-ˌrü-shä-ˈlī-im\ *Arabic* **Al-Quds** \ȧl-ˈküts\ City (pop., 2005 est.: 704,900), capital of Israel (see below). Located in the heart of historic Palestine, it is nestled between the West Bank and Israel. The Old City is a typical walled Middle Eastern enclosure; the modern city is an urban agglomeration of high-rises and housing complexes. It is holy to Judaism as the site of the Temple of Jerusalem, to Christianity because of its association with Jesus, and to Islam because of its connection with the Miʿrāj (the Prophet Muhammad's ascension to heaven). Jewish shrines include the Western Wall. Islamic holy places include the Dome of the Rock. In 1000 BC David made it the capital of Israel. Razed by the Babylonians in the 6th century BC, it thereafter enjoyed only brief periods of independence. The Romans devastated it in the 1st and 2nd centuries AD, banishing the Jewish population. From 638 it was ruled by various Muslim dynasties, except for short periods during the Crusades when it was controlled by Christians. Rule by the Ottoman Empire ended in 1917, and the city became the capital of the British mandate of Palestine. It was thereafter the subject of competing Zionist and Palestinian national aspirations. Israel claimed the city as its capital after the Arab-Israeli War in 1948 and took the entire city during the Six-Day War of 1967. Its status as Israel's capital has remained a point of contention: official recognition by the international community has largely been withheld pending final settlement of regional territorial rights.

Jerusalem, Council of Conference of the Christian Apostles at Jerusalem c. AD 50, which decreed that Gentile Christians did not have to observe the Mosaic law of the Jews. It was occasioned by the controversy over whether circumcision was necessary for Gentile converts to Christianity. Led by Sts. Peter the Apostle and James, the council decided the issue in favor of St. Paul and the Gentile Christians, thus helping to separate early Christianity from Judaism.

Jerusalem, Temple of Either of two temples that were at the centre of worship and national identity in ancient Israel. When David captured Jerusalem, he moved the Ark of the Covenant there. As the site for a temple, he selected Mount Moriah, or the Temple Mount, where it was believed that Abraham had built his altar to sacrifice Isaac. The First Temple was constructed under David's son Solomon and was completed in 957 BC. It contained three rooms: a vestibule, the main room for religious services, and the Holy of Holies. From the time of Josiah, it was designated as the only place for sacrifice in Judah. It was destroyed during the Babylonian conquest in 586 BC. When the Jews returned from exile in 538, they built the Second Temple (finished 515). Its desecration by Antiochus IV in 167 BC set off the Maccabees' revolt, after which it was cleansed and rededicated. In 54 BC Marcus Licinius Crassus plundered the Temple. It was rebuilt and enlarged by Herod the Great; construction lasted 46 years. The Jewish rebellion in AD 66 led to its destruction by Roman legions in AD 70. All that remains is part of the Western Wall, a site of pilgrimage. The Temple Mount is now occupied by a Muslim mosque, Al-Aqṣā, and the Dome of the Rock.

Jerusalem artichoke Sunflower (*Helianthus tuberosus*) native to North America and grown for its edible tubers. The aboveground part of the plant is a coarse, usually multibranched, frost-tender perennial, 7–10 ft (2–3 m) tall. The numerous showy flower heads have yellow ray flowers and yellow, brownish, or purplish disk flowers. The underground tubers vary in shape, size, and colour. Jerusalem artichoke is popular as a cooked vegetable in Europe and has long been cultivated in France as livestock feed. In the U.S. it is rarely cultivated.

Jervis Bay Inlet of the Tasman Sea, southeastern New South Wales, Australia. It is about 10 mi (16 km) long and 6 mi (10 km) wide. It was discovered in 1770 and named Long Nose by Capt. James Cook, but in 1791 it was renamed for Adm. John Jervis. In 1915 it was transferred from the jurisdiction of New South Wales to the Australian Commonwealth to provide the Australian Capital Territory with access to the sea. The bay is a resort area and the site of the Royal Australian Naval College (founded 1915).

Jespersen \'yes-pər-sən**, (Jens) Otto (Harry)** (b. July 16, 1860, Randers, Den.—d. April 30, 1943, Roskilde) Danish linguist. He led a movement for basing foreign-language teaching on conversational speech rather than textbook study of grammar and vocabulary, helping to revolutionize language teaching in Europe. An authority on English grammar, Jespersen contributed greatly to the advancement of phonetics and linguistic theory. His many published works include *Modern English Gram-*

mar, 7 vol. (1909–49), *Language: Its Nature, Development, and Origin* (1922), and *The Philosophy of Grammar* (1924). He originated Novial, an international language.

jester See FOOL

Jesuit \'je-zü-ət\ Member of the Roman Catholic order of religious men called the Society of Jesus. First organized by St. Ignatius of LOYOLA in 1534 at the University of Paris, the order was approved by Pope Paul III in 1540. It discontinued many practices of medieval religious life, such as obligatory penances and fasts and a common uniform, and instead focused on military-style mobility and adaptability. Its organization was characterized by centralized authority, probation lasting many years before final vows, and special obedience to the pope. The Jesuits served as a preaching, teaching, and missionary society, actively promoting the COUNTER-REFORMATION, and by the time of Ignatius's death in 1556 their efforts were already worldwide. The success of their enterprise and their championship of the pope earned them much hostility from both religious and political foes. Under pressure from France, Spain, and Portugal, Pope Clement XIV abolished the order in 1773, but it was restored by Pius VII in 1814. The Jesuits have since become the largest male religious order.

Jesuit Estates Controversy Canadian dispute between Protestants and Roman Catholics after reestablishment of the JESUIT order. After the pope suppressed the Jesuits in 1773, their landholdings in Canada were transferred to the British government. The pope restored the order in 1814, and some Jesuits returned to Canada in 1842. Restitution for their land was discussed, and the Jesuits' Estates Act (1888) gave $400,000 in compensation.

Jesus In CHRISTIANITY, the son of God and the second person of the Holy TRINITY. Christian doctrine holds that by his CRUCIFIXION and resurrection he paid for the sins of all mankind. His life and ministry are recounted in the four GOSPELS of the NEW TESTAMENT. He was born a Jew in Bethlehem before the death of HEROD the Great in 4 BC, and he died while Pontius Pilate was Roman governor of Judaea (AD 28–30). His mother, MARY, was married to Joseph, a carpenter of Nazareth (see St. JOSEPH). Of his childhood after the birth narratives in Matthew and Luke, nothing is known, except for one visit to Jerusalem with his parents. He began his ministry about age 30, becoming a preacher, teacher, and healer. He gathered disciples in the region of GALILEE, including the 12 APOSTLES, and preached the imminent arrival of the KINGDOM OF GOD. His moral teachings, outlined in the SERMON ON THE MOUNT, and his reported miracles won him a growing number of followers, who believed that he was the promised MESSIAH. On Passover he entered Jerusalem on a donkey, where he shared the Last Supper with his disciples and was betrayed to the Roman authorities by JUDAS ISCARIOT. Arrested and tried, he was condemned to death as a political agitator and was crucified and buried. Three days later visitors to his tomb found it empty. According to the Gospels, he appeared several times to his disciples before ascending into heaven.

jet engine Any of a class of INTERNAL-COMBUSTION ENGINES that propel aircraft by means of the rearward discharge of a jet of fluid, usually hot exhaust gases generated by burning fuel with air drawn in from the atmosphere. Jets rely on the third of NEWTON'S LAWS OF MOTION (action and reaction are equal and opposite). The first jet-powered airplane was introduced in 1939 in Germany. The jet engine, consisting of a gas-turbine system, significantly simplified propulsion and enabled substantial increases in aircraft speed, size, and operating altitudes. Modern types of jet engines include TURBOJETS, turbofans, TURBOPROPS, turboshafts, and RAMJETS. See AIRPLANE. See also DRAG; GASOLINE ENGINE; LIFT.

jet lag Period of adjustment of BIOLOGICAL RHYTHM after moving from one time zone to another, experienced as fatigue and lowered efficiency. It reflects a delay in the synchronization of changes in the level of blood cortisol, the major STEROID produced by the adrenal cortex (see ADRENAL GLAND), with the local day-night cycle. Duration and severity depend on how much distance is covered in how little time. Travel by jet, after which the phenomenon may persist for some days, first made it noticeable, accounting for the name.

jet stream Any of several long, narrow, high-speed air currents that flow eastward in a generally horizontal zone in the STRATOSPHERE or upper TROPOSPHERE. Jet streams are characterized by wind motions that generate strong vertical shearing action, considered largely responsible for the clear-air turbulence experienced by aircraft. They also have an effect on weather patterns. Jet streams circle the Earth in meandering paths, shifting position as well as speed with the seasons. In the winter they are nearer the Equator and their speeds are higher than in the summer. There are often two, sometimes three, jet-stream systems in each hemisphere.

Jew Any person whose religion is JUDAISM. In a wider sense the term refers to any member of a worldwide ethnic and cultural group descended from the ancient Hebrews who traditionally practiced the Jewish religion. The Hebrew term *Yehudi*, translated as *Judaeus* in Latin and *Jew* in English, originally referred to a member of the tribe of JUDAH. In Jewish tradition, any child born of a Jewish mother is considered a Jew; in REFORM JUDAISM a child is considered a Jew if either parent is Jewish.

Jewel Cave National Monument National monument, southwestern South Dakota, U.S. Established in 1908, it occupies an area of 2 sq mi (5 sq km). It is noted for its limestone caverns, a series of chambers joined by narrow passages. The known length of the caverns is 77 mi (124 km).

jewelry Objects designed for the adornment of the body, usually made of gold, silver, or platinum, often with precious or semiprecious stones and such organic substances as pearls, coral, and amber. Jewelry evolved from shells, animal teeth, and other objects used as adornment in prehistoric times. Over the centuries it came to be a sign of social or religious rank. In Renaissance Italy, jewelry making reached the status of a fine art; many Italian sculptors trained as goldsmiths. From the 17th century the decorative function of jewelry again came to the fore, overshadowing its symbolic significance. By the 19th century, industrialization brought jewelry within the reach of the middle class. Firms opened by jewelers such as CARL FABERGÉ and LOUIS COMFORT TIFFANY achieved great success by making fine jewelry for the wealthy.

Jewett, (Theodora) Sarah Orne (b. Sept. 3, 1849, South Berwick, Maine, U.S.—d. June 24, 1909, South Berwick) U.S. writer. Concerned to capture the folkways of a vanishing culture, she wrote realistic sketches of aging Maine natives, whose manners, idioms, and pithiness she recorded with pungency and humour. Outstanding among her 20 volumes are *Deephaven* (1877), *A White Heron* (1886), and *The Country of the Pointed Firs* (1896).

jewfish Any of several large fishes of the SEA BASS family (Serranidae), especially *Epinephelus itajara*, found on the Atlantic coast of the New World tropics. They may reach a length of 8 ft (2.4 m) and a weight of about 700 lbs (320 kg). The adult is dull olive-brown with faint spots and bands and is usually solitary. The South Pacific jewfish (*E. lanceolatus*) may exceed 12 ft (3.7 m) in length. The Warsaw GROUPER (*E. nigritus*) and giant sea bass (*Stereolepis gigas*) are both occasionally called jewfish, and three Australian species in the genera *Johnius* and *Glaucosoma* are called jewfish.

Jewish calendar See Jewish CALENDAR

Jewish philosophy Any of various kinds of reflective thought engaged in by those identified as being Jews. In the Middle Ages, this meant any methodical and disciplined thought pursued by Jews, whether on specifically Judaic themes or not; in modern times, philosophers who do not discuss Judaism are not ordinarily classified as Jewish philosophers. Philosophy arose in Judaism under Greek influence, though a philosophical approach may be discerned in early Jewish religious works apparently uninfluenced by the Greeks. From the Bible, the books of Job and Ecclesiastes were favourite works of medieval philosophers; the book of Proverbs introduces the concept of Wisdom (*Hokhma*), which was to have primordial significance for Jewish philosophical thought; and the Wisdom of Solomon had considerable influence on Christian theology. Major figures of Jewish philosophy include PHILO JUDAEUS, SAADIA BEN JOSEPH, MOSES MAIMONIDES, and BENEDICT DE SPINOZA.

Jezebel \'je-zə-ˌbel\ (d. c. 843 BC) In the Hebrew scriptures, the wife of King AHAB of Israel. The daughter of the priest-king Ethbaal of Tyre and Sidon, she persuaded Ahab to introduce the worship of the Tyrian god Baal-Melkart into Israel, thus interfering with the exclusive worship of Yahweh. The book of 1 Kings tells how she was opposed by ELIJAH. After Ahab's death Jezebel's son Jehoram became king of Israel, but ELISHA encouraged a general, Jehu, to revolt. Jehoram was killed, and Jezebel was thrown from a window to her death. Dogs consumed most of her body, fulfilling a prophecy by Elijah. In history and literature she became the archetype of the wicked woman.

Jhabvala \'jäb-vä-lə**, Ruth Prawer** *orig.* **Ruth Prawer** (b. May 7, 1927, Cologne, Ger.) German-born British-U.S. novelist and screen-

writer. Born to a family of Polish Jews, she immigrated to England with her family in 1939. She married an Indian architect and moved to India, where she lived until 1975. Thereafter she lived in New York. Many of her novels, including *Heat and Dust* (1975, Booker Prize), are set in India. She has written original screenplays for such films as *Shakespeare-Wallah* (1965) and film adaptations of such novels as *The Bostonians* (1984), *A Room with a View* (1985), *Howards End* (1992), *The Remains of the Day* (1993), and *The Golden Bowl* (2000).

Jharkhand State (pop., 2001 prelim.: 26,909,428), northeastern India. It is bordered by Bihar, West Bengal, Orissa, Chhattisgarh, and Uttar Pradesh states and occupies 28,833 sq mi (74,677 sq km); its capital is Ranchi. The state lies mainly on the Chota Nagapur Plateau, a series of plateaus, hills, and valleys. Many aboriginal peoples live there. The area now constituting Jharkhand was a part of Bihar state after Indian independence in 1947 until it was made into a separate state in 2000. It is rich in minerals (notably copper), although most of the population is engaged in agriculture.

Jhelum \ˈjā-ləm\ **River** River, India and Pakistan. The westernmost of the "Five Rivers" of the Punjab region, it rises in the Himalayas in the Indian state of Jammu and Kashmir. It meanders northwest in the Pakistani-administered sector of the Kashmir region. Bending southward, it joins the Chenab River, having traveled a course of 450 mi (725 km). It is believed to be the Hydaspes mentioned by Arrian, Alexander the Great's historian, and the Bidaspes mentioned by Ptolemy.

Jhering \ˈyā-riŋ**, Rudolf von** (b. Aug. 22, 1818, Aurich, Hanover—d. Sept. 17, 1892, Göttingen, Ger.) German legal scholar. He taught Roman law at Giessen (1852–68), at Göttingen (from 1872), and at four other universities (including the University of Vienna) for briefer periods. He examined the relationship between law and social change in *The Spirit of Roman Law* (1852–65) and between individual and social interests in *Law as a Means to an End* (1877–83). He maintained that the purpose of law is to protect individual and societal interests by coordinating them and thus minimizing occasions for conflict. He is sometimes called the father of sociological jurisprudence.

Jia Xian (fl. c. 1050, China) Mathematician and astronomer active at the beginning of the greatest period of traditional Chinese mathematics. He held a relatively low military office during the reign (1022/23–1063/64) of Emperor Renzong of the Song dynasty. He was a pupil of mathematician and astronomer Chu Yan, who contributed to the revision of the Chongtian calendar in 1023, and he served in the Imperial Astronomical Bureau. Jia's name was mainly quoted in connection with his method of extracting roots (solutions) of polynomials of degree higher than three and with the related Jia Xian triangle, which contains the binomial coefficients for equations up to the sixth degree (see binomial theorem). This diagram is similar to Blaise Pascal's triangle, which was discovered independently later in the West.

Jiang Jieshi See Chiang Kai-shek

Jiang Jinguo See Chiang Ching-kuo

Jiang Qing \jē-ˈäŋ-ˈchiŋ\ *or* **Chiang Ch'ing** *orig.* **Li Jinhai** (b. 1914?, Zhucheng, Shandong, China—d. May 14, 1991, Beijing) Third wife of Mao Zedong and member of the radical Gang of Four. Jiang married Mao in the 1930s but entered politics only in the 1960s. As first deputy head of the Cultural Revolution, Jiang acquired far-reaching powers over China's cultural life and oversaw the total suppression of a wide variety of traditional cultural activities. Arrested after Mao's death and accused of fomenting the widespread civil unrest that characterized the Cultural Revolution, she refused to confess guilt and received a suspended death sentence that was commuted to life imprisonment. Her death was reported as a suicide.

Jiang Zemin \jē-ˈäŋ-zə-ˈmin\ (b. Aug. 17, 1926, Yangzhou, Jiangsu, China) General secretary of the Chinese Communist Party (CCP; 1989–2002) and president of China (1993–2003). He started his career in Shanghai as an engineer, received training abroad, and gradually rose through the ranks of the CCP. He was named mayor of Shanghai in 1985 and chairman of China's Central Military Commission in 1989. It is thought that Jiang was a compromise candidate to replace Zhao Ziyang as general secretary in June 1989 following the Tiananmen Square incident. He combined a commitment to continued free-market reform with a determination to preserve the CCP's monopoly on political power. After serving the maximum two five-year terms as president, Jiang was succeeded by Hu Jintao. He remained in charge of the Central Military Commission until stepping down in favour of Hu in 2004.

Jiangsu \jē-ˈäŋ-ˈsü\ *or* **Chiang-su** *conventional* **Kiangsu** Province (pop., 2000 est.: 74,380,000), eastern China. It lies on the Yellow Sea and is also bordered by Shandong, Anhui, and Zhejiang provinces and Shanghai municipality. With an area of 39,600 sq mi (102,600 sq km), it is one of the smallest and most densely populated provinces of China, and it is also one of the wealthiest. Its capital is Nanjing (Nanking). It occupies a wide alluvial plain that is divided into two sections by the estuary of the Yangtze River (Chang Jiang). Once a part of the ancient state of Wu, the region was part of the Nanjing province under the Ming dynasty (1368–1644). It became a separate province in 1667 and served as the headquarters (1853–64) for the Taiping Rebellion. It was an important base for China's Nationalist Party, which made Nanjing the nation's capital from 1928 to 1937 and again from 1946 to 1949. The province was occupied by Japan during the Sino-Japanese War (1937–45) and came under communist control in 1949. It produces steel, electronics, and agricultural products.

Jiangxi \jē-ˈäŋ-ˈshē\ *or* **Chiang-hsi** *conventional* **Kiangsi** Province (pop., 2000 est.: 41,400,000), south-central China. It is bordered by Hubei, Anhui, Zhejiang, Fujian, Guangdong, and Hunan provinces. It has an area of 63,600 sq mi (164,800 sq km), and its capital is Nanchang. Located in the drainage basin of the Gan River, it is one of China's richest agricultural provinces, and it is also renowned for its porcelain industry, which dates from the 11th century. The opening of the Grand Canal under the Tang dynasty (618–907) set it on the main trade route between northern and southern China. During the Mongol dynasty (1206–1368), it included part of Guangdong; its current boundaries were established in the Ming dynasty. It was taken in 1926 by Chiang Kai-shek and was fought over by the Nationalists and the communists. It was occupied by the Japanese from 1938 to 1945 and came under communist control in 1949. Agricultural production, as well as a thriving timber industry, contribute to the economy.

Jibrīl \ji-ˈbrēl\ *or* **Jabrail** In Islam, the archangel who acts as intermediary between God and humankind and who bore divine revelations to Muhammad and previous prophets. His biblical counterpart is Gabriel. Jibrīl aided Muhammad in times of crisis and guided him during his ascent into heaven. Muslim belief holds that Jibrīl appeared to Adam after his expulsion from Paradise to show him how to write, raise wheat, and work iron and also that Jibrīl aided Moses in delivering the Israelites from Egypt.

jícama \ˈhē-kə-mə\ Vine (*Pachyrhizus erosus*, or *P. tuberosus*), also called yam bean. A legume native of Mexico and Central and South America, it is grown for its edible root. The irregularly globular, brown-skinned tubers are white-fleshed, crisp, and juicy. There are two varieties, those with clear juice and those with milky juice. Both have a mild flavour and are eaten raw or cooked. Sometimes very young seedpods of the plant are eaten, but the mature seeds are highly toxic.

Jiddah *or* **Jeddah** City (pop., 1992: 2,046,251), western Saudi Arabia. Located on the Red Sea, it is a major port and the country's diplomatic capital. It takes its name (which means "ancestress" or "grandmother") from the reputed tomb of Eve, which was located there until it was destroyed by the Saudi government in 1928. Jiddah has long been a point of entry for Muslim pilgrims journeying to the holy cities of Mecca and Medina. It belonged to the Ottoman Empire until 1916, when it surrendered to British forces during World War I (1914–18). It was captured by the tribal leader Ibn Saʿūd in 1925 and was incorporated into Saudi Arabia in 1927.

jigs and fixtures Components of machine-tool installations, specially designed in each case to position the workpiece, hold it firmly in place, and guide the motion of the power tool (e.g., a punch press). Jigs can also be guides for tools or templates, as in the furniture industry. Special cramping jigs that ensure squareness are set up so that, for example, a wardrobe can be glued up in one operation by power-driven rams. See also assembly line, interchangeable parts, mass production.

jihad \ji-ˈhäd\ In Islam, the central doctrine that calls on believers to combat the enemies of their religion. According to the Qurʾān and the Ḥadīth, jihad is a duty that may be fulfilled in four ways: by the heart, the tongue, the hand, or the sword. The first way (known in Sufism as the "greater jihad") involves struggling against evil desires. The ways of the tongue and hand call for verbal defense and right actions. The jihad of the sword

© 2006 Encyclopædia Britannica, Inc.

involves waging war against enemies of Islam. Believers contend that those who die in combat become martyrs and are guaranteed a place in paradise. In the 20th and 21st centuries the concept of jihad has sometimes been used as an ideological weapon in the effort to combat Western influences and secular governments and to establish an ideal Islamic society.

Jīlī \jē-'lē**, al-** (b. 1365—d. c. 1424) Islamic mystic. Little is known of his life, though he is believed to have visited India in 1387 and to have studied in Yemen (1393–1403). Influenced by Ibn al-ʿArabī, he developed his doctrine of the "perfect man," which he outlined in his *Studies in Islamic Mysticism*. He asserted that the perfectly moral individual can attain unity with God, a unity already experienced by Muhammad and the other prophets, and then become a channel by which the whole community can enjoy contact with the divine being.

Jilin \'je-'lin\ *or* **Chi-lin** *conventional* **Kirin** \'kē-rin\ Province (pop., 2000 est.: 27,280,000), northeastern China. It is bordered by Russia and North Korea, Heilongjiang and Liaoning provinces, and Inner Mongolia. With an area of 72,200 sq mi (187,000 sq km), it is China's most urbanized province; its capital is Changchun, and its second largest city is Jilin. Its major river is the Sungari River, a tributary of the Amur. It was made a province in 1907. Occupied by the Japanese army in 1931, it became part of the puppet state of Manchukuo (1932–45). Chinese communist forces seized the province from the Nationalists in 1948. Industrialization since the late 20th century has been rapid.

Jim Crow Law Law that enforced racial segregation in the U.S. South between 1877 and the 1950s. The term, taken from a minstrel-show routine, became a derogatory epithet for African Americans. After Reconstruction, Southern legislatures passed laws requiring segregation of whites and "persons of colour" on public transportation. These later extended to schools, restaurants, and other public places. In 1954 the U.S. Supreme Court declared segregation in public schools unconstitutional in *Brown v. Board of Education*; later rulings struck down other Jim Crow laws.

Jiménez \kē-'mā-nās,\ *English* \hē-'mā-nəs**, Juan Ramón** (b. Dec. 24, 1881, Moguer, Spain—d. May 29, 1958, San Juan, P.R.) Spanish poet. His early poetry reflects the influence of Rubén Darío; this highly emotional style gave way to a more austere tone c. 1917. He achieved popularity in America with *Platero and I* (1917), a prose story of a man and his donkey. During the Spanish Civil War (1936–39), he allied himself with Republican forces; after their defeat he moved to Puerto Rico, where he spent most of the rest of his life. His poetic output was immense. He was awarded the Nobel Prize for Literature in 1956.

Jiménez de Quesada \kē-'mā-nās-thā-kā-'sä-thä**, Gonzalo** (b. c. 1495, Córdoba or Granada, Spain—d. Feb. 16, 1579, Mariquita, New Granada) Spanish conquistador. He went to the New World as a colonial chief magistrate, then in 1536 he led an expedition of 900 men up the Magdalena River into the central plain of New Granada (modern Colombia), defeating the Chibcha Indians to win the land for Spain. In 1538 two rival conquistadores challenged his claim of conquest; the case was submitted to the crown in Madrid and was inconclusively settled, but Jiménez became the most influential person in New Granada. In 1569 he set out in search of the mythical El Dorado with 500 men; he returned in 1571 with only 25 of his original company.

Jimmu \'jēm-ˌmü\ Legendary first emperor of Japan and founder of the imperial dynasty. He is credited with establishing his state in 660 BC on the plains of Yamato. (An actual state on the Yamato plains dates from the 3rd century AD.) Jimmu was believed to be a descendant of Ninigi, who was in turn the grandson of the sun goddess Amaterasu.

Jin \'jin\ **dynasty** *or* **Chin dynasty** First of two major Chinese dynasties to bear the name Jin. The dynasty had two distinct phases: the Western Jin (AD 265–317) and the Eastern Jin (AD 317–420). The latter is considered one of the Six Dynasties that ruled China between the fall of the Han (AD 220) and the establishment of the Sui (581). China was reunited under Sima Yan (Ssu-ma Yen), first of the Jin emperors, but after his death the empire rapidly crumbled. The Xiongnu nomads of the north overran the Jin capital of Luoyang and later defeated the Jin again at Chang'an. For the next two centuries China was divided into two societies, northern (plagued by barbarian invasions) and southern. The Eastern Jin, founded by another Sima prince at Nanjing, suffered revolts, court intrigues, and frontier wars, but also saw the flourishing of Buddhism in China and the birth of China's first great painter, Gu Kaizhi (344–406?). See also Juchen dynasty.

Jina See Tirthankara

Jinan \'jē-'nän\ *or* **Chi-nan** *conventional* **Tsinan** City (pop., 2003 est.: 2,345,969), capital of Shandong province, eastern China. It dates to the Zhou dynasty (c. 11th–3rd century BC) and earlier and has been an administrative centre since the 8th century BC. Nearby Mount Tai was one of China's greatest holy mountains; many Buddhist cave temples were built in the hills south of the city in the 4th–7th centuries AD. It was made the capital of Shandong under the Ming dynasty (1368–1644). Opened to foreign commerce in 1904, it developed further after becoming a railroad junction in 1912. It is now a major administrative and industrial centre and Shandong's chief cultural centre, with agricultural, medical, and engineering colleges and a large university (1926).

jingxi *or* **ching-hsi,** *also called* **Beijing opera** *or* **Peking opera** *Chinese* **"opera of the capital"** Traditional Chinese theatre, originally devised in 1790 as part of the Qianlong emperor's birthday celebration. Highly conventionalized and symbolic, it combines orchestral music, speech, song, dance, and acrobatics. The performers enact dramas based on historical epics, legend, and myth. The characters' roles and social ranks are conveyed through elaborate costumes and stylized makeup. The actor Mei Lanfang brought its influence to the West through his tours of Russia and the U.S. in the 1930s. *Jingxi* traditionally employed an all-male cast with female impersonators, but in the late 20th century it expanded its scope to admit female actors.

jinja In the Shintō religion, a place where a god is enshrined or to which it is summoned. Originally rural sites of great natural beauty, *jinja* now include urban shrines. They vary in size from small roadside places of prayer to large building complexes such as the Grand Ise Shrine. There are more than 97,000 such shrines in Japan.

Jinnah, Mohammed Ali (b. Dec. 25, 1876, Karachi, India—d. Sept. 11, 1948, Karachi, Pak.) Indian Muslim politician, founder and first governor-general of Pakistan (1947–48). He was educated in Bombay (now Mumbai) and London, where he became a lawyer at age 19. After returning to India, he practiced law and was elected to India's Imperial Legislative Council in 1910. Committed to home rule for India and to maintaining Hindu-Muslim unity, he joined the Muslim League in 1913 and worked to ensure its collaboration with the Indian National Congress. He was opposed to Mohandas K. Gandhi's noncooperation movement and withdrew from the Congress. In the late 1920s and early '30s, he was seen as too moderate by some Muslims but too Muslim by the Congress Party. From 1937, when the Congress Party refused to form coalition governments with the Muslim League in the provinces, Jinnah began to work for the partitioning of India and on creating a Muslim state. Pakistan emerged as an independent country in 1947, and Jinnah became its first head of state. He died in 1948, revered as the father of the nation.

jinni *or* **genie** *plural* **jinn** In Arabic mythology, any of the supernatural spirits less powerful than angels or devils. Evil spirits of air or fire, they could take animal or human form and could dwell in inanimate objects or under the earth. They had the bodily needs of human beings and could be killed but were otherwise free of physical restraints. Jinn delighted in punishing humans for any harm done to them, but people who knew the proper magical procedure could exploit them to their own advantage. The jinn were popular subjects for folklore, notably in the tale of Aladdin in *The* Thousand and One Nights.

Jinsha River, *or* **Kinsha River**, *or* **Chin-sha River** \'jin-'shä\ River, China. The westernmost major headwater stream of the Yangtze River (Chang Jiang), it rises in western Qinghai province south of the Kunlun Mountains. and flows south to form the western border of Sichuan province for some 250 mi (400 km). It then flows into Yunnan province, and swings northeast to join the Min River at Yibin and form the Yangtze.

jitō \'jē-tō\ In feudal Japan, a land steward appointed by the central military government to each of the estates (*shōen*) into which the countryside was divided. The *jitō* collected taxes and maintained the peace; he was also entitled to a portion of the taxes collected. The position, created by Minamoto Yoritomo in 1184, came to be hereditary. As time went by, the *jitō* came to have closer ties with local leaders than with the central government, which contributed to the weakening of the Kamakura shogunate (see Kamakura period).

jitterbug Dance variation of the two-step in which couples swing, balance, and twirl in standardized patterns to syncopated music in ¼ time. It originated in the U.S. in the mid 1930s and became internationally

© 2006 Encyclopædia Britannica, Inc.

popular in the 1940s. It originally included acrobatic lifts and swings, but it became modified in ballroom versions. Its step patterns varied and could include the lindy hop and the jive.

Jiulong See KOWLOON

jiva \'jē-və\ In JAINISM, the SOUL or living spirit. Jivas are believed to be eternal and infinite in number. Many are bound to earthly existence by KARMA that requires them to move through the cycle of rebirth in successive bodies. Eventually a jiva may obtain release, whereupon a replacement is promoted from the lowest class of jivas, the tiny invisible souls called *nigoda*s that fill the whole space of the world.

Jīzah \ȧl-'jē-zə**, Al-** *or* **Giza** \'gē-zə\ City (pop., 1996: 2,221,868), Upper Egypt. Located on the western bank of the Nile River, it is a suburb of CAIRO. A noted entertainment district, it is also the centre of Egypt's motion-picture industry. Rising 5 mi (8 km) west of the city are the Great Sphinx and the Pyramids of Giza (see PYRAMID), built during Egypt's 4th dynasty (c. 2613–c. 2494 BC).

jizya *or* **jizyah** \'jiz-yə\ Poll tax that early Islamic rulers demanded from their non-Muslim subjects. This tax applied especially to followers of Judaism, Christianity, and Zoroastrianism, who were tolerated in the practice of their religion because they were "peoples of the book." Originally intended to be used for charitable purposes, the revenues from the jizya were paid into the private treasuries of rulers, and the Ottoman sultans used the proceeds to pay military expenses. Many converted to Islam in order to escape the tax.

Joachim \ˌyō-ä-'kēm**, Joseph** (b. June 28, 1831, Kittsee, near Pressburg, Austria-Hungary—d. Aug. 15, 1907, Berlin, German Empire) Austro-Hungarian violinist. A prodigy, he began study as a child in Pest, continuing later in Vienna and Leipzig, where he was associated with FELIX MENDELSSOHN. He was concertmaster at Weimar under FRANZ LISZT (1850–52), but their tastes in music diverged radically. He became close to JOHANNES BRAHMS, who sought Joachim's advice about his violin concerto. Joachim wrote cadenzas that are still used for a number of concertos. As the longtime head of Berlin's Hochschule (1868–1905), he developed it into a first-rank conservatory.

Joachim of Fiore \yō-'ä-kēm...'fyō-rā\ (b. c. 1130/35, Celico, Kingdom of Naples—d. 1201/02, Fiore) Italian mystic, theologian, and philosopher of history. After a pilgrimage to the Holy Land, he became a Cistercian monk, and by 1177 he was abbot at Corazzo, Sicily. He retired into the mountains to follow a contemplative life in 1191, and in 1196 he founded the order of San Giovanni in Fiore. His *Book of Harmony of the New and Old Testaments* outlined a theory of history and traced correspondences in the Old and New Testaments. In his *Exposition of the Apocalypse* he examined the symbols of the ANTICHRIST, and in *Psaltery of Ten Strings* he expounded his doctrine of the HOLY TRINITY. A man of vivid imagination, he was both acclaimed as a prophet and denounced as a heretic.

Joan I *or* **Joanna I** *Italian* **Giovanna** (b. 1326—d. May 22, 1382, Lucania, Kingdom of Naples) Countess of Provence and queen of Naples (1343–82). She belonged to the house of Anjou, and her marriage to the brother of the king of Hungary was intended to reconcile Hungarian and Angevin claims on Naples. Suspected of her husband's murder, she fled to Avignon (1348). She sold Avignon to the papacy in return for being cleared of the crime, then went back to Naples in 1352. She recognized the antipope Clement VII in 1378, and Pope URBAN VI crowned Charles of Durazzo king of Naples in 1381. When Charles captured Naples, he imprisoned Joan and had her killed.

Joan, Pope Legendary female pontiff who supposedly reigned, as Pope John VIII, for about 25 months from 855 to 858. The tale held that she was an Englishwoman who fell in love with a Benedictine monk, disguised herself as a man, and joined his order. After acquiring great learning she moved to Rome, where she became cardinal and then pope. In the earliest version of the story, she was pregnant at the time of her election and gave birth during the procession to the Lateran, whereupon she was dragged out of Rome and stoned to death. The legend, regarded as fact until the 17th century, has since been proved to be apocryphal.

Joan of Arc, Saint *French* **Jeanne d'Arc** \zhän-'dȧrk\ (b. c. 1412, Domrémy, Bar, Fr.—d. May 30, 1431, Rouen; canonized May 16, 1920; feast day May 30) French military heroine. She was a peasant girl who from an early age believed she heard the voices of Sts. Michael, Catherine, and Margaret. When she was about 16, her voices began urging her to aid France's DAUPHIN (crown prince) and save France from the English attempt at conquest in the HUNDRED YEARS' WAR. Dressed in men's clothes, she visited the Dauphin and convinced him, his advisers, and the church authorities to support her. With her inspiring conviction, she rallied the French troops and raised the English siege of Orléans in 1429. She soon defeated the English again at Patay. The Dauphin was crowned king at Reims as CHARLES VII, with Joan beside him. Her siege of Paris was unsuccessful, and in 1430 she was captured by the Burgundians and sold to the English. Abandoned by Charles, she was turned over to the ecclesiastical court at Rouen, controlled by French clerics who supported the English, and tried for witchcraft and heresy (1431). She fiercely defended herself but finally recanted and was sentenced to life imprisonment; when she again asserted that she had been divinely inspired, she was burned at the stake. She was not canonized until 1920.

Job \'jōb\ Central character of the Book of Job in the OLD TESTAMENT, known for his faithfulness to God despite his many afflictions. At the beginning, Job is a wealthy man with a large family. Satan challenges God to allow him to take away Job's blessings as a test of his faith. Soon Job is desolate, covered with boils, his wealth gone and his family dead. Three friends arrive to comfort him; he disputes with them, denying he has done anything to deserve this misery but maintaining his faith in God. At the end, in a confrontation with God, the power and mystery of the deity are memorably reasserted, but the problem of why the innocent suffer is left unresolved. The book dates from the 6th–4th century BC.

Jobim \zhō-'bi^{n}**, Antonio Carlos** (b. Jan. 25, 1927, Rio de Janeiro, Braz.—d. Dec. 8, 1994, New York, N.Y., U.S.) Brazilian songwriter and composer. He performed on guitar and piano in Rio de Janeiro clubs before becoming music director of Odeon Records. In 1959 he and Luís Bonfá composed the score for the film *Black Orpheus*, and his worldwide success soon followed. He transformed samba music into bossa nova ("new wrinkle" or "new wave"), a fusion of understated samba pulse (quiet percussion, unamplified guitars playing subtly complex rhythms), gentle singing, and the melodic and sophisticated harmonies of cool jazz; the style found a long-lasting niche in popular music. He collaborated with FRANK SINATRA, STAN GETZ, and Astrud Gilberto, and he also composed classical works and film scores. His more than 400 songs include "One-Note Samba," "Meditation," and "The Girl from Ipanema."

Jobs, Steven Paul (b. Feb. 24, 1955, San Francisco, Cal., U.S.) U.S. businessman. Adopted in infancy, he grew up in Los Altos. He dropped out of Reed College and went to work for Atari Corp. designing video games. In 1976 he cofounded (with STEPHEN WOZNIAK) Apple Computer, Inc. The first Apple computer, created when Jobs was only 21, changed the public's idea of a computer from a huge machine for scientific use to a home appliance that could be used by anyone. Apple's Macintosh computer, which appeared in 1984, introduced a GRAPHICAL USER INTERFACE and MOUSE technology that became the standard for all applications interfaces. In 1980 Apple became a public corporation, and Jobs became the company's chairman. Management conflicts led him to leave Apple in 1985 to form NeXT Computer Inc., but he returned to Apple in 1996 and became CEO in 1997. The striking new iMac computer (1998) revived the company's flagging fortunes.

Jōchō \'jō-ˌchō\ (d. 1057, Japan) Japanese Buddhist sculptor. The son and pupil of a sculptor, he worked primarily for the FUJIWARA FAMILY. He was awarded unprecedented honours for sculptures executed for Kyōto's Hōjō Temple and for the Fujiwara family temple in Nara. He was instrumental in improving the social standing of Buddhist sculptors by organizing a guild, and he perfected the so-called *kiyosehō*, or joined-wood technique. His only extant work is a carved Amida (Buddha) figure (c. 1053) in the Byōdō Temple at Uji.

Joel Second of the 12 Minor Prophets in the Hebrew scriptures, author of the book of Joel. (His prophecy is part of a larger book, The Twelve, in the Jewish canon.) He lived sometime during the period of the Second Temple of JERUSALEM (516 BC–AD 70), but nothing is known of his life. He opens his prophecy by describing a plague of locusts, an allegory of the disasters to come upon a faithless people. His message is simple: salvation will come to Judah only when the people truly turn to Yahweh. The end of the book looks forward to the final days, when all Israel will share in the knowledge of God.

Joffre \'zhȯfr^{ə}**, Joseph (-Jacques-Césaire)** (b. Jan. 12, 1852, Rivesaltes, France—d. Jan. 3, 1931, Paris) French commander in chief on the Western Front in World War I. He was responsible for the calamitous

© 2006 Encyclopædia Britannica, Inc.

campaign with which the French army began operations in 1914 against Germany, but he shifted his forces and created a new French army under his direct command that won a great victory in the First Battle of the Marne (1914). As commander in chief (1915–16), he ordered the French armies to burst through the German positions, at ruinous cost. His prestige waned, and, because of the lack of French preparation for the Battle of Verdun (1916), he was stripped of his direct command and resigned. He was created a marshal of France in 1916.

Joffre, detail of a portrait by H. Jacquier, 1915
H. ROGER-VIOLLET

Joffrey, Robert *orig.* **Abdullah Jaffa Bey Khan** (b. Dec. 24, 1930, Seattle, Wash., U.S.—d. March 25, 1988, New York, N.Y.) U.S. dancer and choreographer, founder-director of the Joffrey Ballet. He was the son of an Afghan father and an Italian-born mother. He studied dance in Seattle and later in New York, opened a ballet school in 1953, and in 1954 formed the first of several groups. In 1956 he founded the Robert Joffrey (later simply Joffrey) Ballet with Gerald Arpino (b. 1928). The company gained international fame and toured widely. In 1965 it became affiliated with the New York City Center. Joffrey's ballets include *Persephone* (1952), *Astarte* (1967), *Remembrances* (1973), and *Postcards* (1980). After Joffrey's death, Arpino became director; in 1995 he moved the company to Chicago, renaming it the Joffrey Ballet of Chicago.

Jōgan \'jō-ˌgän\ **style** Japanese sculptural style of the early Heian period, seen primarily but not exclusively in Buddhist sculptures. The massive figures, carved from single blocks of wood, are columnar, erect, and symmetrical and have large round faces, large lips, wide noses, and wide eyes, almost geometrically simplified. The drapery, composed of alternating series of small and large waves, is its most distinguishing feature. The technique was first seen on the drapery of the colossal image of the Buddha at Bāmīān, Afg.; Chinese and Japanese pilgrims brought back holy images and used them as prototypes for their own sacred images.

jogging Aerobic exercise involving running at an easy pace. *Jogging* (1967) by Bill Bowerman and W.E. Harris boosted jogging's popularity for fitness, weight loss, and stress relief. Many medical authorities endorse jogging, but others warn of risks to feet, shins, knees, and backs. Jogging only every other day, warming up properly, and using well-designed shoes and proper technique can reduce risks.

Johanan ben Zakkai \jō-'ha-nən-ben-'za-kā-ˌī\ (fl. 1st century AD) Palestinian Jewish sage. A leading representative of the Pharisees, he helped preserve and develop Judaism in the years after the destruction of the Second Temple of Jerusalem (AD 70). He is said to have been smuggled out of the besieged city in a coffin and to have visited the Roman camp and persuaded the future emperor Vespasian to allow him to set up an academy at Jamnia near the Judaean coast. He established an authoritative rabbinic body there and was revered as a great teacher and scholar.

Johannesburg City (pop., 2001: metro. area, 3,225,810), northeastern South Africa. The capital of Gauteng province and one of the country's largest cities, it bestrides a highland region called the Witwatersrand. It was founded in 1886 after the discovery of gold nearby and was occupied by the British during the South African War in 1900. It was a legally segregated city until 1991; nonwhites were restricted to living in outlying areas called townships, including Soweto. Greater Johannesburg extends more than 600 sq mi (1,600 sq km) and includes more than 500 suburbs and townships. It is a leading industrial and financial centre. Its cultural and educational institutions include the Johannesburg Art Gallery, the Civic Theatre, the University of the Witwatersrand, and the University of Johannesburg.

Johannsen, Wilhelm Ludvig (b. Feb. 3, 1857, Copenhagen, Den.—d. Nov. 11, 1927, Copenhagen) Danish botanist and geneticist. He supported Hugo de Vries's discovery that variation in genotype can occur by mutation; the new character, while independent of natural selection in its initial occurrence, is then subject to natural selection. Johannsen's *Elements of Heredity* (1909) became an influential text, and his terms *phenotype* and *genotype* are now a part of the language of genetics.

Johansson, (Per) Christian (b. May 20, 1817, Stockholm, Swed.—d. 1903, St. Petersburg, Russia) Swedish-born ballet dancer and teacher. Johansson trained under August Bournonville. He was engaged at the Imperial Russian Ballet in 1841. In his prime his innate nobility and grace were unsurpassed. In 1860 he turned his attention to teaching at the Imperial Ballet School. Over the next four decades he brought a new polish to the Russian style, providing it with a firm base in the French method that he had learned from Bournonville.

John *known as* **John Lackland** (b. Dec. 24, 1167, Oxford, Eng.—d. Oct. 18/19, 1216, Newark, Nottinghamshire) King of England (1199–1216). The youngest son of Henry II, he joined his brother Richard (later Richard I) in a rebellion against Henry (1189). John became lord of Ireland, and, when Richard was imprisoned in Germany on his way back from the Third Crusade, he tried to seize control of England (1193). On Richard's return, John was banished (1194), but the two were later reconciled. Crowned king in 1199, John lost Normandy (1204) and most of his other French lands in a war with Philip II (Philip Augustus). After Innocent III excommunicated him for refusing to recognize Stephen Langton as archbishop of Canterbury, John was obliged to declare England a fief of the Holy See (1213). He launched a military campaign against France in 1214 but made no lasting gains. His heavy taxes and aggressive assertion of feudal privileges led to the outbreak of civil war (1215). The barons forced him to sign the Magna Carta, but the civil war continued until his death.

John *or* **John de Balliol** (b. c. 1250—d. April 1313, Château Galliard, Normandy, Fr.) King of Scotland (1292–96). He was one of 13 claimants to the throne but won by primogeniture. John paid homage to Edward I of England but soon refused his request for military aid in Gascony and instead signed a treaty with the French. When Edward invaded Gascony in 1296, the Scots raided northern England. Within months Edward's army had captured strategic castles in Scotland, and John was forced to resign his kingdom to Edward. He was held in the Tower of London until 1299.

John I *Portuguese* **João** *known as* **John of Aviz** \ə-'vēzh\ (b. April 11, 1357, Lisbon—d. Aug. 14, 1433, Lisbon) King of Portugal (1385–1433) and founder of the Aviz dynasty. The illegitimate son of Pedro I, he was elected king in 1385 despite the rivalry of Castilian candidates. He fought off a Castilian invasion (1385) and preserved Portugal's independence. He made an alliance with England (1386), but a joint invasion of León was unsuccessful. John signed a 10-year truce with Castile in 1389, but frontier warfare was intermittent until 1411. He and his sons (including the youngest, later Henry the Navigator) captured Ceuta in Morocco in 1415, thus beginning the era of Portuguese expansion.

John II *French* **Jean** *known as* **John the Good** (b. April 16, 1319, near Le Mans, France—d. April 8, 1364, London, Eng.) King of France (1350–64). At odds with England and Navarre, he tried to make peace with the Navarrese king Charles II, then had him imprisoned in 1356. Edward the Black Prince, son of Edward III of England, led an invasion of southern France, defeating and capturing John at the Battle of Poitiers (1356). John was forced to sign the treaties of Brétigny and Calais (1360), which fixed an extravagant ransom and surrendered most of southwestern France to the English. See also Hundred Years' War.

John II Comnenus \käm-'nē-nəs\ (b. Sept. 13, 1087—d. April 8, 1143) Byzantine emperor (1118–43). The son of Alexius I Comnenus, he made it his mission to reconquer Byzantine territory lost to the Arabs, Turks, and Crusaders. He cancelled Venetian trading privileges in the empire but was forced to restore them after the Venetians launched a fleet to retaliate against him. John allied himself with the German emperor against Roger II of Sicily (1130). He reconquered Cilicia (1137) and won homage from Antioch, but he failed to defeat the Syrian Turks.

John III Ducas Vatatzes \'dyü-kəs-və-'tat-sēz\ (b. c. 1193—d. Nov. 3, 1254, Nymphaion) Emperor of Nicaea (1222–54). He succeeded Theodore I Lascaris and defeated rivals for the imperial throne in 1223. Two years later he triumphed over Latin forces loyal to his rivals and gained control of Asia Minor. He allied with Ivan Asen II against Epirus (1230) and besieged Constantinople (1235), prompting Asen to go to war with him (1235–37). He acquired territory in Bulgaria (1241) and Epirus

© 2006 Encyclopædia Britannica, Inc.

(1242) and supported a cultural revival from his capital at Nicaea, paving the way for the eventual reestablishment of the Byzantine Empire. Venerated by his people, he was canonized in the Eastern church.

John III Sobieski \sȯb-'yā-skē\ *Polish* **Jan Sobieski** (b. Aug. 17, 1629, Olesko, Pol.—d. June 17, 1696, Wilanów) Elective king of Poland (1674–96). Named commander in chief of the Polish army (1668), he distinguished himself by victories over the Cossacks and Turks. His reputation was so great that he was elected king in preference to the Habsburgs' candidate. In 1683 he concluded a treaty with Emperor Leopold I against the Ottoman Turks. When a Turkish army approached Vienna later that year, he rushed there with troops, took command of the entire relief force, and achieved a brilliant victory, briefly restoring the kingdom of Poland-Lithuania to greatness for the last time. He was unsuccessful in a Hungarian campaign (1683–91) to liberate Moldavia and Walachia from Ottoman rule. Later rebellion within his own family, with nobles fighting each other rather than the Turks, led finally to Poland's downfall in the 18th century.

John V Palaeologus \ˌpā-lē-'ä-lə-gəs\ (b. June 18, 1332, Didymoteichon—d. Feb. 16, 1391, Constantinople) Byzantine emperor (1341–91). The son of Andronicus III Palaeologus, he inherited the throne at age nine; John VI Cantacuzenus served as his regent and coemperor (1347–54). After the Ottoman Turks gained control of Galliopoli and threatened Constantinople, John V appealed to the West for help, proposing to end the schism between the Byzantine and Latin churches. Impoverished by war, he was detained as a debtor when he visited Venice (1369). In 1371 he was forced to recognize Turkish overlords, who later helped him to regain the throne (1379) after he was deposed by his son.

John VI Cantacuzenus \ˌkan-tə-kyü-'zē-nəs\ (b. c. 1292—d. June 15, 1383, Mistra, Byzantine Empire) Byzantine emperor (1347–54). As chief adviser (1328–41) to Andronicus III Palaeologus, he directed both domestic and foreign policy. He fought to serve as regent for the young John V Palaeologus, triumphing over John's mother, Anna of Savoy, only by enlisting Turkish aid. From 1347 he ruled as coemperor with John V, but in 1354 he crowned his own son coemperor. With Venetian aid, John V then forced him to abdicate, and Cantacuzenus retired to a monastery, where he wrote his memoirs.

John VIII Palaeologus \ˌpā-lē-'ä-lə-gəs\ (b. Dec. 17/18, 1392—d. Oct. 31, 1448, Constantinople) Byzantine emperor (1421–48). The son of Manuel II Palaeologus, he was crowned coemperor with his father in 1408 and took effective control of the empire in 1421. He became sole emperor after his father's death in 1425. Of the diminished and fragmented empire, he ruled only Constantinople and the surrounding area. The city was besieged by the Ottoman Turks (1422), and, when Thessaloníki fell to Turkish forces (1430), John appealed to the West for help. He united the Byzantine and Latin churches (1439), but joint efforts against the Turks failed, and the Byzantines refused to submit to the pope. John died amid intrigues over succession.

John XXII *orig.* **Jacques Duèse** (b. Cahors, France—d. Dec. 4, 1334, Avignon) Second Avignon pope (1316–34). The successor to Clement V, he established the papal court at Avignon on a permanent basis (see Avignon papacy). He condemned the Spiritual Franciscans' interpretation of the poverty of Christ and his Apostles and upheld papal authority over imperial elections against the opposition of the emperor, Louis IV. When John excommunicated Louis, the emperor retaliated by declaring him deposed (1328) and sponsoring the election of an antipope. John's views on the beatific vision provoked accusations of heresy (1331–32). He is remembered for centralizing church administration and adding to the body of canon law.

John XXIII *orig.* **Angelo Giuseppe Roncalli** (b. Nov. 25, 1881, Sotto il Monte, Italy—d. June 3, 1963, Rome; beatified Sept. 3, 2000; feast day October 11) Pope (1958–63). He studied theology in Rome, was ordained a priest in 1904, and held a variety of church offices. In 1944 he was named papal nuncio to newly liberated France, where he successfully revived sympathy for the Vatican. Made a cardinal in 1953, he was elected pope after the death of Pius XII (1939–58). Because of his advanced age, he was expected to be little more than a caretaker in the office, but instead he became the major reforming pope of the century. Eager to lead the church into the modern era, he called the Second Vatican Council in 1962, inviting Eastern Orthodox and Protestant observers to join Catholic delegates. He also sought to repair relations with the Jews. The council went on to make major reforms in Catholic liturgy and administration, though John died before its conclusion. An energetic advocate of world peace, he was one of the most popular popes in history. In 2000 he was beatified by John Paul II (1978–2005).

John XXIII, 1963
KEYSTONE

John, Augustus (Edwin) (b. Jan. 4, 1878, Tenby, Pembrokeshire, Wales—d. Oct. 31, 1961, Fordingbridge, Hampshire, Eng.) Welsh painter, portraitist, muralist, and draftsman. By the age of 20 he had won a reputation for his brilliant drawing technique. A colourful personality, he roamed Britain, living with Roma and learning their customs and language; the painting *Encampment on Dartmoor* (1906) is based on these experiences. He is best known for his portraits of leading European personalities, including those of James Joyce and George Bernard Shaw.

John, Sir Elton (Hercules) *orig.* **Reginald Kenneth Dwight** (b. March 25, 1947, Pinner, Middlesex, Eng.) British rock singer, pianist, and songwriter. He played piano by ear as a child, winning a scholarship to the Royal Academy of Music at age 11. In the late 1960s he began a successful partnership with lyricist Bernie Taupin (b. 1950) that would produce hit albums such as *Goodbye Yellow Brick Road* (1973) and songs such as "Rocket Man," "Bennie and the Jets," and "Philadelphia Freedom." The two returned with more hits in the early 1980s, including "I Guess That's Why They Call It the Blues." In 1997 John performed a new version of "Candle in the Wind" (1973) at the funeral of his friend Diana, princess of Wales; his recording immediately became the best-selling single of all time.

John, Saint See Saint John the Apostle

John Birch Society Organization founded in 1958 by Robert H. Welch, Jr. (1899–1985), a retired American candymaker, to combat communism and promote ultraconservative causes. It was named for an American missionary and army intelligence officer killed by Chinese Communists in 1945, considered by the society the first hero of the Cold War. Its membership reached more than 70,000 in the 1960s. Its many publications warned of communist infiltration of the U.S. government and called for the impeachment of officials such as Earl Warren. *The New American* is the organization's biweekly magazine.

John Maurice of Nassau *Dutch* **Johan Maurits van Nassau** (b. June 17, 1604, Dillenburg, Nassau—d. Dec. 20, 1679, Cleves, Brandenburg) Dutch colonial governor and military commander. He fought after 1621 in the campaigns of his cousin Frederick Henry, prince of Orange, against Spain. As colonial governor in Brazil, recently conquered from Portugal, he secured control of vast areas for the Dutch West India Company in 1636–44, bringing the Dutch empire in Latin America to the peak of its power. He also sponsored the seizure of Angola (1641) and of several key

ports on the western African coast to supply slaves for Brazilian plantations, and he led a Dutch army in 1665 in the Anglo-Dutch Wars.

John of Aviz See John I (Portugal)

John of Brienne \brē-'en\ (b. c. 1170—d. March 1237, Constantinople) Count of Brienne (in northeastern France) and later titular king of Jerusalem (1210–25) and Latin emperor of Constantinople (1231–37). The penniless younger son of a French count, he married the queen of the Crusader state of Jerusalem, with the support of Phillip II, and after her death became regent for their infant daughter. He arranged a truce with Egypt (1212) and participated in the unsuccessful Fifth Crusade. In 1228 he became regent and coemperor of Constantinople, and he was crowned emperor three years later. He fended off attacks by Ivan Asen II and John III Ducas Vatatzes.

John of Damascus, Saint *or* **Saint John Damascene** (b. c. 675, Damascus—d. Dec. 4, 749, near Jerusalem; Western feast day December 4) Monk and theological doctor of the Greek and Latin churches. He spent his entire life under Muslim rule. As a writer of hymns and theology, he had great influence in the Eastern and Western churches, especially through *Exposition of the Orthodox Faith*, a summary of the teachings of the Greek Fathers. He also wrote against the Iconoclasts (see iconoclasm).

John of Gaunt, duke of Lancaster (b. March 1340, Ghent—d. Feb. 3, 1399, London, Eng.) English prince, the fourth son of Edward III. John's additional name, "Gaunt" (a corruption of the name of his birthplace, Ghent), was not used after he was three years old; it became the popularly accepted form of his name, however, through its use in William Shakespeare's play *Richard II*. John served as a commander in the Hundred Years' War against France, then returned to become an important influence in his father's last years as king and in the reign of his nephew Richard II. Through his first wife, John acquired the duchy of Lancaster in 1362, and he was the immediate ancestor of the three 15th-century monarchs of the house of Lancaster: Henry IV, Henry V, and Henry VI.

John of Paris *or* **Jean de Paris** \'zhäⁿ-də-pà-'rē\ *or* **John the Deaf** *or* **John Quidort** \kē-'dȯr\ (b. c. 1255, Paris, France—d. Sept. 22, 1306, Bordeaux, Gascony) Dominican monk and disciple of St. Thomas Aquinas. A lecturer at the University of Paris, he wrote on the separation of church and state and the limits of papal authority. His controversial view on the nature of the Eucharist was censured, and he was sentenced to perpetual silence; he died before his appeal could be decided.

John of Salisbury \'sȯlz-ˌber-ē\ (b. 1115/20, Salisbury, Wiltshire, Eng.—d. Oct. 25, 1180, Chartres, France) English prelate and scholar. A noted Latinist who studied with Peter Abelard and other important theologians in Paris, John was a leading figure in the renaissance of the 12th century. He served as secretary to Theobald and St. Thomas Becket, archbishops of Canterbury. He wrote *Historia pontificalis* (c. 1163) and the *Policraticus* and the *Metalogicon* (both 1159) His defense of Becket and of ecclesiastical liberties led Henry II to exile him to France (1163). He returned to England after the reconciliation of Henry and Becket and was in Canterbury Cathedral when Becket was assassinated. He later wrote a hagiography of Becket and promoted the cult of the murdered archbishop. As bishop of Chartres (from 1176), he was active in the third Lateran Council.

John of the Cross, Saint *Spanish* **San Juan de la Cruz** *orig.* **Juan de Yepes y Álvarez** (b. June 24, 1542, Fontiveros, Spain—d. Dec. 14, 1591, Ubeda; canonized 1726; feast day December 14) Spanish mystic, poet, Doctor of the Church, and reformer of monasticism. He became a Carmelite monk at Medina del Campo and was ordained a priest in 1567. Joining St. Teresa of Ávila in her effort to restore the Carmelites to their original austerity, he cofounded the Discalced Carmelite order in 1568. He opened the first Discalced Carmelite monastery at Duruelo a year later, but reform caused friction within the order and led to his imprisonment at Toledo. He escaped in 1578 and later won high office in the order. In his great mystical poetry, including "The Dark Night of the Soul," he traced the steps of the soul's ascent to union with God.

John o'Groat's Village, Scotland. Near Dunnet Head, it was settled in 1793 by John de Groat and his two brothers. It was once considered Britain's most northerly point, giving rise to the expression "from Land's End to John o'Groat's."

John Paul II *orig.* **Karol Wojtyła** (b. May 18, 1920, Wadowice, Pol.—d. April 2, 2005, Vatican City) Pope (1978–2005), the bishop of Rome and head of the Roman Catholic church, the first non-Italian pope in 455 years and the first ever from a Slavic country. He studied for the priesthood at an underground seminary in Kraków during World War II and was ordained in 1946. He earned a doctorate in philosophy in Rome (1948) and returned home to serve in a parish, earning a second doctorate (also 1948), in sacred theology, from the Jagiellonian University. He became archbishop of Kraków in 1964 and cardinal in 1967. Elected pope after the 33-day pontificate of John Paul I (b. 1912—d. 1978), he became known for his energy, charisma, and intellect as well as for his conservative theological views and fervent anticommunism. In 1981 John Paul was shot in St. Peter's Square by a Turkish gunman, but he recovered, resumed his work, and forgave his would-be assassin. His trips abroad attracted some of the largest crowds ever assembled. His nonviolent activism spurred movements that contributed to the peaceful dissolution of the Soviet Union in 1991. He championed economic and political justice in developing nations. In naming 44 cardinals from five continents (February 2001), John Paul reached out to cultures around the world. He also canonized more saints, from more parts of the world, than had any other pope. His ecumenical efforts, including meetings with Jewish, Muslim, and Eastern Orthodox religious leaders, were widely praised, but he often drew criticism for his traditionalist views on issues of gender and sexuality. Although afflicted with Parkinson disease since the early 1990s, John Paul remained active and made a historic trip to Jerusalem in March 2000, during which he sought to improve relations between the Roman Catholic church and Jews.

John Paul II, 1979.
LOCHON-FRANCOLON-SIMON/GAMMA-LIAISON

John the Apostle, Saint *or* **St. John the Evangelist** *or* **St. John the Divine** (fl. 1st century AD) One of the original Twelve Apostles of Jesus, traditionally credited with writing the fourth Gospel and three New Testament epistles. The book of Revelation was also traditionally assigned to him. His father was a Galilean fisherman. John and his brother James (see St. James) were among the first disciples called by Jesus, and John appears to have held a position of authority in the early church after the resurrection. Later accounts of his life are based on legend. He is said to have died in Ephesus, and his tomb became a site of pilgrimage. John's Gospel, unlike the other three, presents a well-developed theological point of view, on a level with the letters of St. Paul. After a prologue in which he identifies God with the Word (Logos), he offers selected episodes from Jesus' life and ministry. His explications of theological issues such as the significance of the Son of God greatly influenced the development of Christian doctrine.

John the Baptist, Saint (b. 1st century AD) Jewish prophet revered in Christianity as the forerunner of Jesus. Sources for his life are the four Gospels, the Acts of the Apostles, and the historian Josephus. His mother, Elizabeth, was perhaps a relative of Mary; his father was the priest Zechariah. As a young man John lived in the Judaean desert, either as a hermit or as part of a Jewish monastic community such as the Essenes. He attracted much public notice c. AD 28 as a prophet in the Jordan Valley. He preached the imminent wrathful judgment of God and called on his hearers to repent and be baptized. Jesus himself came to be baptized by John and shortly afterward began his own mission. John was imprisoned for criticizing the illegal marriage of Herod Antipas and was executed after Herod's stepdaughter, Salome, demanded his head as a reward for dancing for the king's guests.

medical research centres. Besides medicine, the university has schools of arts and sciences, engineering, public health, nursing, music, international studies, and continuing education.

Johns, Jasper (b. May 15, 1930, Augusta, Ga., U.S.) U.S. painter, sculptor, and printmaker. He began his career as a commercial artist, producing displays for New York City shop windows. In 1958 he had his first one-man exhibition, a rousing success. The paintings Johns went on to produce depict commonplace, two-dimensional subjects such as flags, targets, maps, numbers, and letters of the alphabet. He was able to raise these objects to the level of icons through his paint handling and manipulation of surface texture, which he obtained through the encaustic technique. In their willful and ironic banality and their rejection of emotional expression, these early works were a radical departure from the then-dominant Abstract Expressionist style. Johns's unabashed depiction of commonplace emblems and objects was emulated by many Pop art artists. From 1961 he began to attach real objects to his canvases. In the 1970s he produced paintings composed of clusters of parallel lines that he called "crosshatchings"; in the 1980s he experimented with figuration.

Johnson, Andrew (b. Dec. 29, 1808, Raleigh, N.C., U.S.—d. July 31, 1875, near Carter Station, Tenn.) 17th president of the U.S. (1865–69). Born in poverty, he never attended school, and he taught himself to read and write. After a short apprenticeship as a tailor, he moved with his family to Greeneville, Tenn., where he opened his own tailor shop. Before he was 21 he organized a workingman's party. Elected to the state legislature (1835–43), he became a spokesman for small farmers. He then served in the U.S. House of Representatives (1843–53) and as governor of Tennessee (1853–57). Elected to the U.S. Senate (1857–62), he opposed antislavery agitation, but, in 1860, after the election of Pres. Abraham Lincoln, he vehemently rejected Southern secession, a position he maintained even after Tennessee seceded in 1861. During the American Civil War he was the only Southern senator who refused to join the Confederacy. In 1862 he was appointed military governor of Tennessee, then under Union control. In 1864 he was selected to run for vice president with President Lincoln; he assumed the presidency after Lincoln's assassination. During Reconstruction he favoured a moderate policy of readmitting former Confederate states to the Union with few provisions for reform or civil rights for freedmen. In 1867, Johnson's vetoes of legislation to establish a Freedmen's Bureau and other civil rights measures angered moderate as well as Radical Republicans; in response, they united to pass the Tenure of Office Act (1867), which forbade the president from removing civil officers without senatorial consent. In 1868, in defiance of the act, Johnson dismissed secretary of war Edwin M. Stanton, an ally of the Radicals. The House then voted to impeach the president—the first such occurrence in U.S. history. In the subsequent Senate trial, the charges proved weak, and the necessary two-thirds vote needed for conviction failed by one vote. Johnson remained in office until 1869, but he had lost the ability to lead. He returned to Tennessee, where he won reelection to the Senate shortly before he died.

Andrew Johnson.
Library of Congress, Washington, D.C.

Johnson \'yōn-sòn**, Eyvind** (b. July 29, 1900, Svartbjörnsbyn, near Boden, Swed.—d. Aug. 25, 1976, Stockholm) Swedish novelist. He endured a grim boyhood of hard labour. His early novels evince feelings of frustration; *Bobinack* (1932) is an exposé of the machinations of modern capitalism, and *Rain at Daybreak* (1933) is an attack on modern office drudgery. *Return to Ithaca* (1946) and *The Days of His Grace* (1960) have been widely translated. Johnson's working-class novels experimented with new forms and techniques; they also introduced new themes to Swedish literature. He shared the 1974 Nobel Prize for Literature with Harry Martinson.

Johnson, Frank (Minis), Jr. (b. Oct. 30, 1918, Halyeville, Ala.—d. July 23, 1999, Montgomery, Ala.) U.S. judge. After graduating at the top of his law-school class at the University of Alabama in 1943, he joined the army, becoming an infantry lieutenant. After the war he returned to Alabama to practice law. Appointed to the federal district court for middle Alabama in 1955, he became widely known for his decisions in support of the civil rights movement. In 1955 he voted with the majority to strike down the bus-segregation law challenged by Rosa Parks, and in 1965 he issued the order that allowed Martin Luther King, Jr., to lead a historic civil rights march from Selma to Montgomery. He also ordered the desegregation of various public facilities in Alabama, and he was the first federal judge to dictate legislative reapportionment. He served on the U.S. District Court of Appeals from 1979 to 1992. In 1995 he received the Presidential Medal of Freedom.

Johnson, Jack *in full* **John Arthur Johnson** (b. Mar. 31, 1878, Galveston, Tex., U.S.—d. June 10, 1946, Raleigh, N.C.) U.S. boxer, the first black to hold the title for the heavyweight championship of the world. Johnson's career was marked from the beginning by racial discrimination; until his match with Tommy Burns, he had a difficult time getting fights. Johnson won the heavyweight crown in 1908 by knocking out Burns and kept it until 1915, when he was knocked out by Jess Willard in 26 rounds. At the height of his career, Johnson was excoriated by the press for having twice married white women, and he further offended white supremacists by knocking out former champion James J. Jeffries, who was induced to come out of retirement as a "Great White Hope." In 1912 Johnson was convicted of violating the Mann Act for transporting his wife-to-be across state lines before their marriage. He was sentenced to a year in prison and was released on bond; he fled to Canada, made his way to Europe, and was a fugitive for seven years. He defended the championship three times in Paris before agreeing to fight Willard in Havana, Cuba. Some observers thought that Johnson, mistakenly believing that the charge against him would be dropped if he yielded the championship to a white man, deliberately lost to Willard. Johnson surrendered to U.S. authorities in 1920 to serve a one-year sentence. From 1897 to 1928, Johnson had 114 bouts, winning 80, 45 by knockouts.

UPI COMPIX

Johnson, James P(rice) (b. Feb. 1, 1894, New Brunswick, N.J., U.S.—d. Nov. 17, 1955, New York, N.Y.) U.S. pianist and composer, a chief figure in the transition of ragtime to jazz. Johnson was performing in saloons and at parties in New York City's African American community while still in his teens. He created the stride piano technique, a development of ragtime that used two-beat left-hand rhythms to accompany wide-ranging right-hand lines, in pieces such as "Carolina Shout" and "Harlem Strut." He composed and orchestrated music for stage revues, including *Keep Shufflin'* (1928) with his student Fats Waller. His songs include "The Charleston" (largely responsible for the 1920s dance craze) and "Old Fashioned Love"; his large-scale works include the *Harlem Symphony* (1932).

Johnson, James Weldon (b. June 17, 1871, Jacksonville, Fla., U.S.—d. June 26, 1938, Wiscasset, Maine) U.S. writer. He practiced law in Florida before moving with his brother, the composer J. Rosamond Johnson (1873–1954), to New York; there the two collaborated on some 200 songs for the Broadway stage. Johnson held diplomatic posts in Venezuela and Nicaragua and served as executive secretary of the NAACP (1920–30). From 1930 he taught at Fisk University. His writings include the novel *Autobiography of an Ex-Colored Man* (1912), *Fifty Years and Other Poems* (1917), and his best-known work, *God's Trombones* (1927), a group of dialect sermons in verse. The brothers collaborated on the pioneering anthologies *Book of American Negro Poetry* (1922) and *American Negro Spirituals* (1925, 1926). Their most famous original song, "Lift Every Voice and Sing," became an anthem of the civil rights movement.

Johnson \'jän-sən**, John H(arold)** (b. Jan. 19, 1918, Arkansas City, Ark., U.S.—d. Aug. 8, 2005, Chicago, Ill.) U.S. magazine and book publisher. He moved to Chicago with his family and became a journalist. In 1942 he introduced *Negro Digest*, a periodical for blacks. Three years later he launched *Ebony*, a magazine he modeled on *Life*; by 2004 it had a circulation of some 1.7 million. Through Johnson Publishing Co., he also published black-oriented books and other magazines, and he later moved into radio broadcasting, insurance, and cosmetics manufacturing.

Johnson, Lyndon B(aines) (b. Aug. 27, 1908, Gillespie county, Texas, U.S.—d. Jan. 22, 1973, San Antonio, Texas) 36th president of the U.S. (1963–69). He taught school in Houston, Texas, before going to Washington, D.C., in 1932 as a congressional aide. In Washington he was befriended by Sam Rayburn, speaker of the House of Representatives, and his political career blossomed. He won a seat in the U.S. House (1937–49) as a supporter of the New Deal, which was under conservative attack. His loyalty impressed Pres. Franklin D. Roosevelt, who made Johnson his protégé. He won election to the U.S. Senate in 1949 in a vicious campaign that involved fraud on both sides. As Democratic whip (1951–55) and majority leader (1955–61), he developed a talent for consensus building through methods both tactful and ruthless. He was largely responsible for passage of the civil rights bills of 1957 and 1960, the first in the 20th century. In 1960 he was elected vice president under John F. Kennedy; he became president after Kennedy's assassination in 1963. In his first few months in office he won passage of the Civil Rights Act of 1964, the most comprehensive and far-reaching legislation of its kind in American history. Later that year he announced his Great Society program of social-welfare and civil rights legislation. His attention to domestic matters, however, was diverted by the country's escalating involvement in the Vietnam War (see Gulf of Tonkin Resolution), which provoked large student demonstrations and other protests, beginning in the late 1960s. Meanwhile, discontent and alienation among the young and racial minorities increased as the promises of the Great Society failed to materialize. By 1967 Johnson's popularity had declined steeply, and in early 1968 he announced that he would not seek reelection. He retired to his Texas ranch.

Johnson, Magic *orig.* **Earvin Johnson, Jr.** (b. Aug. 14, 1959, Lansing, Mich., U.S.) U.S. basketball player. He led Michigan State University to the collegiate championship in 1979 and led the NBA Los Angeles Lakers to five championships in the 1980s. Standing 6 ft 9 in. (2.06 m) tall, he was exceptionally tall for a point guard and was able to use his size to rebound and score inside. However, he was best known for his creative passing and expert floor leadership. He was named Most Valuable Player three times (1987, 1989, 1990). He retired after being diagnosed with HIV in 1991, though he returned to the Lakers for brief stints as a player and as a coach.

Johnson, Michael (Duane) (b. Sept. 13, 1967, Dallas, Texas, U.S.) U.S. sprinter. For much of the 1990s he was virtually unbeaten in the 200-m and 400-m races. He shared an Olympic gold medal in 1992 on the world-record-setting 4 × 400-m relay team, and at the 1996 Olympics he became the first man to win gold medals in both the 200 m and 400 m, setting a world record of 19.32 seconds in the 200 m. In 1999 he set a new world record of 43.18 seconds in the 400 m. In the 2000 Olympics he again won two gold medals.

Johnson, Philip C(ortelyou) (b. July 8, 1906, Cleveland, Ohio, U.S.—d. January 25, 2005, New Canaan, Conn.) U.S. architect and critic. He studied philosophy and architecture at Harvard University. As coauthor of *The International Style: Architecture Since 1922* (1932) and director of the architecture department (1932–34, 1946–54) at the Museum of Modern Art in New York City, he did much to familiarize Americans with modern European architecture. He gained fame with his own Glass House (1949), which struck a balance between the influence of Ludwig Mies van der Rohe (later his collaborator on the Seagram Building) and Classical allusion. His style took a striking turn with the AT&T headquarters, New York (1984), a controversial postmodernist landmark. In 1979 Johnson became the first recipient of the Pritzker Architecture Prize.

Rafer Johnson, putting the shot in the Olympic decathlon, 1960
AP/WIDE WORLD PHOTOS

Johnson, Rafer (Lewis) (b. Aug. 18, 1935, Hillsboro, Texas, U.S.) U.S. decathlete. While a student at UCLA, he won the decathlon gold medal at the 1955 Pan-American Games. At the 1960 Olympic Games he became the first African American athlete to carry the U.S. flag in the Olympic procession, and he captured the decathlon gold medalby narrowly defeating his UCLA teammate, Yang Chuan-kwang of Taiwan.

Johnson, Richard M(entor) (b. 1780, near Louisville, Va., U.S.—d. Nov. 19, 1850, Frankfort, Ky.) U.S. politician. He practiced law in Kentucky before being elected to the U.S. House of Representatives (1807–19, 1829–37). As a colonel in the War of 1812, he was wounded in the Battle of the Thames, where he reputedly killed Tecumseh. He returned to his congressional seat and later was elected to the Senate (1819–29). He was a loyal supporter of Pres. Andrew Jackson, who chose him as Martin Van Buren's running mate in the 1836 election. None of the four vice-presidential candidates won an electoral-vote majority, and the outcome was decided by the Senate, the only such occurrence in U.S. history. Johnson served one term in the office.

Johnson, Robert (b. c. 1911, Hazlehurst, Miss., U.S.—d. Aug. 16, 1938, near Greenwood, Miss.) U.S. blues guitarist, singer, and songwriter. Born to a sharecropping family, he learned harmonica and guitar, probably influenced by personal contact with Delta bluesmen such as Eddie "Son" House and Charley Patton. He traveled widely throughout the South and as far north as Chicago and New York City, playing at house parties, juke joints, and lumber camps. In 1936–37 he recorded songs by House and others, as well as originals such as "Me and the Devil Blues," "Hellhound on My Trail," and "Love in Vain." He is said to have died, at age 27, after drinking strychnine-laced whiskey (possibly the work of a jealous husband) in a juke joint. His eerie falsetto and masterly slide guitar influenced many later blues and rock musicians.

Johnson, Robert Wood (b. Feb. 15, 1845, Carbondale, Pa., U.S.—d. Feb. 7, 1910, New Brunswick, N.J.) U.S. manufacturer. He began his career as a pharmacist and drug broker. In 1885 he founded medical supply company Johnson & Johnson with his brothers, and he served as its president until his death. An early proponent of the teachings of Joseph Lister, Johnson worked to make his products as germ-free as possible, and the firm's high-quality and inexpensive medical supplies, including antiseptic bandages and dressings, proved of great value to surgery. The Robert Wood Johnson Foundation is a major philanthropic institution.

Johnson, Samuel *known as* **Dr. Johnson** (b. Sept. 18, 1709, Lichfield, Staffordshire, Eng.—d. Dec. 13, 1784, London) British man of letters, one of the outstanding figures of 18th-century England. The son of a poor bookseller, he briefly attended Oxford University. He moved to London after the failure of a school he and his wife had started. He wrote for periodicals and was hired to catalog the great library of the earl of Oxford. In 1755, after eight years of labour, he produced his monumental *Dictionary of the English Language* (1755), the first great English dictionary, which brought him fame. He continued to write for such periodicals as *The Gentleman's Magazine* and *The Universal Chronicle*, and he almost single-handedly wrote and edited the biweekly *The Rambler* (1750–52). He also wrote plays, none of which succeeded on the stage. In 1765 he produced a critical edition of William Shakespeare with a famous preface that did much to establish Shakespeare as the centre of the literary canon. His travel writings include *A Journey to the Western Islands of Scotland* (1775). His *Lives of the Most Eminent English Poets*, 10 vol. (1779–81), was a significant critical work. A brilliant conversationalist, he helped found the Literary Club (c. 1763), which became famous for its members of distinction, including David Garrick, Edmund Burke, Oliver Goldsmith, and Joshua Reynolds. His aphorisms helped make him one of the most frequently quoted of English writers. The biography of Johnson written by his contemporary James Boswell is one of the most admired biographies of all time.

Johnson, Virginia See William Masters and Virginia E(shelman) Johnson

Johnson, Walter (Perry) (b. Nov. 6, 1887, Humboldt, Kan., U.S.—d. Dec. 10, 1946, Washington, D.C.) U.S. baseball pitcher. Johnson had perhaps the greatest fastball in the history of the game. A right-handed thrower with a sidearm delivery who batted right as well, Johnson pitched for the Washington Senators of the American League from 1907 through 1927. He holds the all-time record for most shutouts (110), ranks second to Cy Young in wins (416), and established the record for his time for most strikeouts (3,508; broken in 1983). After his playing career, he became a manager with the Senators and later with the Cleveland Indians. See photograph on opposite page.

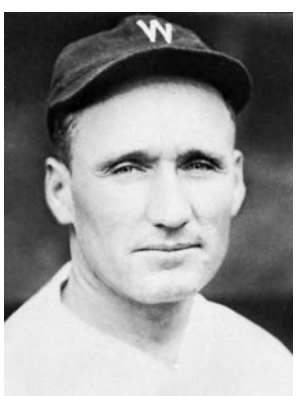
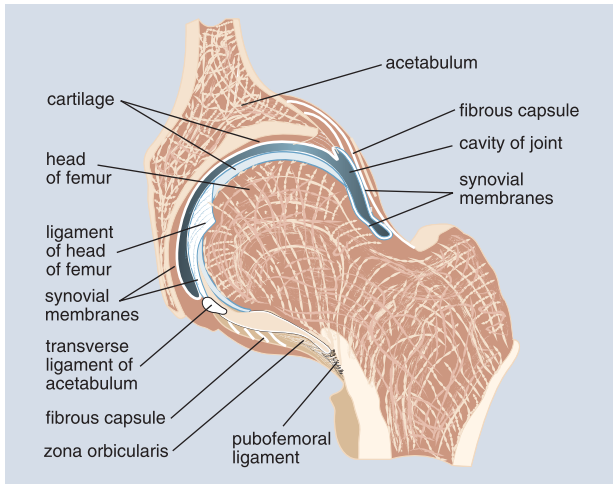
Johnson, Sir William, 1st Baronet (b. 1715, Smithtown, County Meath, Ire.—d. July 11, 1774, near Johnstown, N.Y.) British colonial official. In 1737 he emigrated from Ireland and settled in New York's Mohawk Valley. He purchased his first tract of land two years later, thus beginning the acquisitions that eventually made him one of the largest landholders and wealthiest settlers in British America. He fostered friendly relations with the Indians; his ties with them were further cemented when, following the death of his first wife, he married successively two Mohawk women. In 1746 he was appointed colonel of the Iroquois Confederacy. In the French and Indian War he defeated French forces at Lake George, N.Y. (1755), and captured Fort Niagara (1759). He was appointed superintendent of the Six Iroquois Nations (1756–74), helped subdue the Indian uprising called Pontiac's War (1763–64), and negotiated the first Treaty of Fort Stanwix (1768).



Johnston, Joseph E(ggleston) (b. Feb. 3, 1807, near Farmville, Va., U.S.—d. March 21, 1891, Washington, D.C.) U.S. Army officer. He graduated from West Point and served in the Mexican War. At the start of the American Civil War he resigned his commission to serve the Confederacy. Appointed brigadier general, he won the first Confederate victory at the Battle of Bull Run. He was promoted to general but remained at odds with Confederate Pres. Jefferson Davis. He defended Richmond in the Peninsular Campaign and was badly wounded at the Battle of Fair Oaks (1862). In 1863 he was sent to conduct the Vicksburg Campaign. His order to evacuate the city was countermanded by Davis, but Johnston was blamed for the city's fall. As commander of the Army of the Tennessee, he avoided defeat as the Union advanced toward Atlanta, Ga., but he was removed from command for failing to defeat the invaders. Restored to duty in 1865, he was forced to surrender to William T. Sherman.

Johnstown Flood Disastrous flood (1889) in the town of Johnstown, Pa., U.S. Johnstown lies at the confluence of the Conemaugh River and Stony Creek; at the time of the flood it was a leading U.S. steelmaking centre. At 3:10 PM on May 31, the South Fork Dam, a poorly maintained earthfill dam holding a major upstream reservoir, collapsed after heavy rains, sending a wall of water rushing down the Conemaugh Valley at speeds of 20–40 mph (30–60 kph). A 30-ft (9-m) wall of water smashed into Johnstown at 4:07 PM, killing 2,209 people.

Johore \jə-'hōr\ **Strait** Northern arm of the Singapore Strait between the Republic of Singapore and the southern tip of the Malay Peninsula. It is 30 mi (50 km) long and 0.75–3 mi (1.2–5 km) wide. Its eastern portion has a deepwater access channel to Changi naval base on Singapore's northeastern coast. During World War II it was the scene of heavy fighting in 1942, when the Japanese were driving to conquer Singapore. A causeway now links Singapore to the Malaysian mainland.



joint In geology, a brittle fracture surface in rocks along which little or no displacement has occurred. Present in nearly all surface rocks, joints extend in various directions, generally more vertical than horizontal. Joints may have smooth, clean surfaces, or they may be scarred by slickensides, or striations. Jointing does not extend very far into the Earth's crust, because at about 7.5 mi (12 km) even rigid rocks tend to flow plastically in response to stress.

joint Structure connecting two or more bones. Most joints, including synovial (fluid-containing) joints and those between vertebrae, which incorporate a disk, can move. Immovable joints include the sutures of the skull (see fontanel). Ligaments connect the bones of a joint, but muscles keep them in place. Joint disorders include various forms of arthritis, injuries (e.g., sprains, fractures, and dislocations), congenital disorders, and vitamin deficiencies. See illustration above.

Walter Johnson.
UPI

joints and joinery In architecture, the connection of construction materials. All joints are carefully detailed by the architect with concern for strength, movement, penetration by the elements, and incompatibilities. The term joinery refers especially to carpentry. Common types of joints include the dovetail, used for interlocking two flat members at right angles, as in the sides of a drawer; the doweled joint, in which doweling is employed for mechanical strength; and the mortise and tenon, in which a projecting piece fits into a groove, used to join a horizontal member with the vertical member of a frame. See illustration on following page.

Section through a hip joint. The hip joint, a synovial joint, is of the ball-and-socket type, the head of the femur articulating with the cup-shaped acetabulum. The joint cavity is enclosed by a fibrous capsule lined with a type of connective tissue (synovial membrane) that produces a fluid (synovial fluid) which lubricates the cartilage-covered opposing surfaces of bone. The fibrous capsule is made up of internal circular fibres (zona orbicularis) and external longitudinal fibres, strengthened by ligaments, and covered by muscles.

Joinville \zhwa^{n}-'vēl**, Jean, sire de** (b. c. 1224, Joinville, Champagne—d. Dec. 24, 1317, Joinville) French chronicler. A member of the lesser nobility of Champagne, Joinville became friends with Louis IX while taking part in the Seventh Crusade (1248–54). His famous *Histoire de Saint Louis*, completed c. 1309, is a prose chronicle that provides a supreme account of that Crusade, including vivid descriptions of the financial hardships, the dangers of sea voyages, the ravages of disease, the confusion and lack of discipline in the Crusading army, and Muslim customs. On his return he was made seneschal of Champagne and divided his time between the royal court and his fief of Joinville.

Joliba River See Niger River

Joliot-Curie \zhȯl-yȯ-kyu̇-'rē**, (Jean-) Frédéric** *orig.* **Jean-Frédéric Joliot** (b. March 19, 1900, Paris, France—d. Aug. 14, 1958, Arcouest) French physical chemist. In 1926 he married Irène Curie (1900–58), daughter of Pierre and Marie Curie; he would eventually append her name to his. In 1932 he first observed production of an electron-positron pair. Frédéric and Irène are remembered for their discovery of new radioactive isotopes prepared artificially, for which they were jointly awarded a 1935 Nobel Prize. Frédéric served in the Resistance during World War II and became a member of the Communist Party; in the postwar years he served as the highest government official in the realm of atomic energy but was dismissed for his political beliefs. From 1946 to 1956 Irène directed the Radium Institute, where she had first worked in 1918; Frédéric succeeded her in the post. Both died of conditions caused by their long exposure to radioactivity.

Jolliet \zhȯl-'yā**, Louis** (b. before Sept. 21, 1645, probably Beaupré, near Quebec—d. after May 1700, Quebec province) French Canadian explorer and cartographer. He led an expedition in the Great Lakes region in 1669. In 1672 he was commissioned by the governor of New France to explore the Mississippi in the company of Jacques Marquette and five others. In 1673 the party set out in birchbark canoes across Lake Michigan, following the Fox and Wisconsin rivers to the Mississippi, then down the Mississippi to its confluence with the Arkansas. They concluded that the river flowed south to the Gulf of Mexico and not, as hoped, into the Pacific Ocean. After their return, Jolliet explored areas of Hudson Bay and the Labrador coast.

Some common woodworking joints. The dado joint is made by inserting the end of one piece into a rectangular groove (dado) in another. The rabbet joint involves joining pieces along a channel or notch (rabbet) along an edge of one or both members. The miter joint is formed by butting two ends cut at an angle. The finger joint is used to lengthen a board by interlacing fingerlike projections. The mortise-and-tenon joint is made by inserting a projection (tenon) on one piece into a notch or hole (mortise) in the other. The dovetail joint consists of one or more fan-shaped tenons fitting tightly into corresponding mortises.

Jolson, Al *orig.* **Asa Yoelson** (b. May 26, 1886, Srednike, Russia—d. Oct. 23, 1950, San Francisco, Calif., U.S.) Russian-born U.S. singer, songwriter, and blackface comedian. Jolson's family arrived in the U.S. in 1893 and settled in Washington, D.C., where Jolson made his first stage appearance in 1899, performing in VAUDEVILLE before joining a minstrel troupe (see MINSTREL SHOW) in 1909. In New York City he was featured in musicals such as *La Belle Paree* (1911), *Honeymoon Express* (1913), and *Big Boy* (1925). In *Sinbad* (1918) he transformed the unsuccessful GEORGE GERSHWIN song "Swanee" into his trademark number. In *Bombo* (1921) he introduced "My Mammy," "Toot, Toot, Tootsie," and "California, Here I Come." In 1927 he starred in *The Jazz Singer*, the first feature film with synchronized speech as well as music and sound effects. His later films include *The Singing Fool* (1928), *Mammy* (1930), and *Swanee River* (1940).

Jomini \ˌzhō-mə-'nē**, (Antoine-) Henri, baron de** (b. March 6, 1779, Payerne, Switz.—d. March 24, 1869, Passey, France) Swiss-French general and military theorist. After a volunteer stint with the French army (1798–1800), he wrote his *Treatise on Grand Military Operations*, 5 vol. (1805). He was appointed staff colonel in 1805 by NAPOLEON I, who had read his book. He was created a baron after the Treaties of Tilsit (1807). He rose to the post of chief of staff, but unjust treatment by his superiors prompted him to resign (1813), and thereafter he fought for France's enemy, Russia. Of his numerous later works on military history and strategy, the best known are *Principles of Strategy* (1818) and *Summary of the Art of War* (1838). He was the first to fix divisions between STRATEGY, TACTICS, and LOGISTICS, and his systematic attempt to define the principles of warfare made him a founder of modern military thought.

Jōmon \'jō-ˌmän\ **culture** (c. 7500–c. 250 BC) MESOLITHIC culture characterized by pottery decorated with cord patterns (*jōmon*). Jōmon artifacts have been found from Hokkaido to the Ryukyu Islands. The Jōmon people lived in sunken pit dwellings and subsisted primarily by hunting, fishing, and gathering. They used chipped-stone and later polished-stone tools and made clothing of bark. Though their pottery was technically primitive, it demonstrated diverse forms and imaginative designs and decorations. Many contemporary AINU believe themselves to be descended from the Jōmon people. See also YAYOI CULTURE.

Jonah (fl. c. 785 BC) One of the 12 Minor Prophets in the OLD TESTAMENT, whose story is told in the book of Jonah. (His narrative is part of a larger book, The Twelve, in the Jewish canon, and he is first mentioned in the book of Kings.) God orders Jonah to prophesy against the wickedness of NINEVEH, but Jonah refuses to believe that the people of this hated foreign city deserve salvation, and he sails away on a ship in the opposite direction. When a great storm threatens to destroy the ship, he confesses his fault and asks the crew to throw him overboard. A great fish swallows him, but he prays for deliverance and the fish spews him out on dry ground. He goes on to Nineveh and preaches God's message; its sinful people repent and are saved by God. Jonah is angered over the salvation of the Ninevites and hopes that the city will be destroyed, for which God rebukes him. The book, which opposes the narrow Jewish nationalism of the time, was probably written in the 5th or 4th century BC.

Jonathan In the Hebrew scriptures, the eldest son of King SAUL and friend of DAVID. A warrior in the Israelite army, he is first mentioned as victor over the Philistines at Geba. After David joined Saul's household, he and Jonathan became close friends. Saul became jealous of David's popularity and sought to kill him, but Jonathan prevented him. When the two met for the last time, they planned that David would be the next king of Israel and Jonathan his prime minister, but Saul and Jonathan were killed in battle at Mount Gilboa.

Jones, Bill T. *orig.* **William Tass Jones** (b. Feb. 15, 1952, Bunnell, Fla., U.S.) U.S. dancer and choreographer. He trained in dance and theatre at the State University of New York, Binghamton. In 1982, with his companion, Arnie Zane (1948—88), he cofounded the Bill T. Jones/Arnie Zane Dance Co. All his performances have been in works he has choreographed alone or with a collaborator; they include *Runner Dreams* (1978) and *Open Spaces* (1980). His works often make explicit reference to social issues; his controversial *Still/Here* (1995) deals with the sufferings caused by HIV, with which Jones is infected and which was the cause of Zane's death.

Jones, Bobby *in full* **Robert Tyre Jones, Jr.** (b. March 17, 1902, Atlanta, Ga., U.S.—d. Dec. 18, 1971, Atlanta) U.S. golfer. Jones won 13 major championships between 1923 and 1930, a feat unequaled until 1973. In 1930 he became the first golfer to achieve the grand-slam of his time—the British and U.S. Open and Amateur championships—after which he retired from competitive golf at the age of 28, having never become a professional. Jones helped establish the MASTERS TOURNAMENT, one of the four major tournaments that make up the modern grand-slam of golf (the other three being the British Open, the U.S. Open, and the PGA Championship).

Bobby Jones

UPI/EB INC.

Jones, Chuck *in full* **Charles Martin Jones** (b. Sept. 21, 1912, Spokane, Wash., U.S.—d. Feb. 22, 2002, Corona del Mar, Calif.) U.S. animator. He became a cartoonist for Warner Brothers (1933–62), where he helped develop characters such as Bugs Bunny, Road Runner, and Wile E. Coyote. Three of his cartoon films, noted for their speed and action, won Academy Awards. He was head of animation for MGM in the 1960s, then formed his own company and directed animated features such as *The Phantom Tollbooth* (1971) and specials for television. Jones received an Academy Award for lifetime achievement in 1996.

Jones, Deacon *orig.* **David Jones** (b. Dec. 9, 1939, Eatonville, Fla., U.S.) U.S. football player. He stood 6 ft 5 in. (1.96 m) tall and weighed

© 2006 Encyclopædia Britannica, Inc.

250 lbs (113 kg) and could run the 100-yard dash in 9.7 seconds. He excelled at tackling the quarterback behind the line of scrimmage (for which he coined the term *sack*). As a defensive end for the Los Angeles Rams (1961–71), he was regarded as one of the sport's premier defensemen and was named All-NFL six consecutive times (1965–70). He later played for the San Diego Chargers (1972–73) and Washington Redskins (1974).

Jones, (Alfred) Ernest (b. Jan. 1, 1879, Rhosfelyn, Glamorgan, Wales—d. Feb. 11, 1958, London, Eng.) Welsh psychoanalyst. After he became a member of London's Royal College of Physicians, his interest gradually shifted to psychiatry. With Carl Gustav Jung he organized the first psychoanalytic conference (Salzburg, 1908), where he met Sigmund Freud. Jones was instrumental in introducing psychoanalysis to Britain and North America; in 1919 he founded the British Psycho-Analytical Institute, and in 1920 he founded the *International Journal of Psycho-Analysis*,which he edited until 1939. After the Nazi takeover of Austria, he helped the ailing Freud and his family to escape to London. His biography of Freud, entitled *The Life and Work of Sigmund Freud* (3 vol., 1953–57), was for many years the standard biography.

Jones, George (Glenn) (b. Sept. 12, 1931, Saratoga, Texas, U.S.) U.S. country music singer and songwriter. He was born to an impoverished family, which moved to Beaumont, Texas, when he was 11 years old. He sang on the streets as a youngster, and he began recording in the early 1950s. His first hit, "Why, Baby, Why" (1955), was followed by "She Thinks I Still Care," "He Stopped Loving Her Today," and many others. In 1957 he joined the Grand Ole Opry. He continued to have hits into the 1980s, including many with his former wife Tammy Wynette. His rocky personal life and career only increased his fans' enduring affection.

Jones, Inigo (b. July 15, 1573, Smithfield, London, Eng.—d. June 21, 1652, London) British painter, architect, and designer. The son of a clothworker, he studied painting in Italy and attracted the patronage of the king of Denmark, for whom he apparently designed two palaces before returning to England. Beginning in 1605, he designed the scenes and costumes for masques by Ben Jonson and others. From 1615 to 1642, he was the King's Surveyor of Works. His first important undertaking was the Queen's House at Greenwich (begun 1616), England's first Palladian-style building. His greatest achievement, the Banqueting House at Whitehall (1619–22), consists of one great raised chamber with colonnades set against the walls, which support a flat, beamed ceiling. For his design for Covent Garden (1630), London's first square, Jones is credited with the introduction of town planning in England.

Jones, James Earl (b. Jan. 17, 1931, Arkabutla, Miss., U.S.) U.S. actor. He studied acting in New York City and made his Broadway debut in 1957. He was praised for his performance in *Othello* (1964) and in roles with the New York Shakespeare Festival (1961–73). He starred as the black boxer in *The Great White Hope* (1969, Tony Award; film, 1970). After returning to Broadway in *Paul Robeson* (1978) and *Fences* (1985, Tony Award), he starred in the television series *Paris* (1979–80) and *Gabriel's Fire* (1990–91, Emmy Award). He has appeared in numerous films; his sonorous voice lent gravity to the character of Darth Vader in *Star Wars* (1977) and its sequels and to the Mufasa role in *The Lion King* (1994).

Jones, Jennifer *orig.* **Phyllis Isley** (b. March 2, 1919, Tulsa, Okla., U.S.) U.S. film actress. She played leads in minor films from 1939 before coming to the notice of David O. Selznick, who cast her in *The Song of Bernadette* (1943, Academy Award). Selznick continued to choose her roles, and she starred in such films as *Love Letters* (1945), *Duel in the Sun* (1946), and *Love Is a Many-Splendored Thing* (1955). She married Selznick in 1949 and appeared in films into the 1960s.

Jones, Jim *orig.* **James Warren Jones** (b. May 13, 1931, near Lynn, Ind., U.S.—d. Nov. 18, 1978, Jonestown, Guyana) U.S. leader of a New Religous Movement. He became a preacher in Indianapolis. He established the People's Temple, which was affiliated with the Disciples of Christ and opposed racism and poverty. The group moved to San Francisco in 1971. Accused of defrauding church members, Jones led his group to Guyana in 1977 and set up the agricultural commune of Jonestown, using threats and force to control his followers. In 1978 U.S. Congressman Leo Ryan went to Jonestown to investigate allegations against Jones. Ryan and four others were killed when they reached the airport to return to the U.S. In the aftermath, most of the Jonestown residents, in a mass rite of murder-suicide, were shot or poisoned; Jones died of a gunshot wound. The death toll was 913, including many children.

Jones, John Paul *orig.* **John Paul** (b. July 6, 1747, Kirkbean, Kirkcudbright, Scot.—d. July 18, 1792, Paris, France) American naval hero. He went to sea at age 12 and became a ship's master at age 21. He joined his brother in Virginia in 1775. When the American Revolution began, he joined the new Continental Navy under Esek Hopkins. In 1776 he sailed the *Providence* along the Atlantic coast, capturing eight British ships and sinking eight more. Appointed by Congress to the newly built *Ranger*, he made a spectacular cruise through St. George's Channel and the Irish Sea (1777–78), where he took a number of prizes. In 1779 he commanded the *Bonhomme Richard* and intercepted a merchant fleet. Though outgunned by an escort ship, the *Serapis*, he forced its surrender after a fierce battle, answering its challenge to surrender with "I have not yet begun to fight!" His ship sank soon after, and he sailed two British prizes to the Netherlands. In 1790 he retired, in ill health, to France.

Jones, Mary Harris *orig.* **Mary Harris** *known as* **Mother Jones** (b. May 1, 1830, Cork, Ire.—d. Nov. 30, 1930, Silver Spring, Md., U.S.) Irish-born U.S. labour organizer. She was brought to the U.S. as a child in 1835. In 1867 she lost her children and husband (an ironworker) in a yellow-fever epidemic in Memphis, Tenn.; four years later she lost all her possessions in the great Chicago fire. She turned for assistance to the Knights of Labor, which led to her becoming a highly visible figure in the U.S. labour movement. She traveled across the country, organizing for the United Mine Workers and supporting strikes wherever they were being held. At 93 she was still working among striking coal miners in West Virginia. She actively supported legislation to prohibit child labour. She was a founder of the Social Democratic Party (1898) and the Industrial Workers of the World (1905). Her autobiography was published in 1925. She died at the age of 100 and was buried in the Union Miners' Cemetery in Mount Olive, Ill.

Jones, Quincy *orig.* **Quincy Delight Jones, Jr.** (b. March 14, 1933, Chicago, Ill., U.S.) U.S. composer, bandleader, and producer. Jones joined a combo with his friend Ray Charles in his early teens, and he later studied music in Seattle and Boston. In the early 1950s he played trumpet with Lionel Hampton. He became an arranger for Dizzy Gillespie and others and ultimately formed his own big band and worked with figures such as Count Basie, Sarah Vaughan, and Dinah Washington. In the early 1960s he began writing scores for films, including *Walk Don't Run* (1966), *In Cold Blood* (1967), and *The Color Purple* (1985). Beginning in the mid-1970s he principally worked as a producer, and among his projects were enormously successful albums for Michael Jackson and Frank Sinatra. By the early 21st century, Jones had won more than 25 Grammy Awards. He also founded the music magazine *Vibe* and the record label Qwest.

Jones, Spike *orig.* **Lindley Armstrong Jones** (b. Dec. 14, 1911, Long Beach, Calif., U.S.—d. May 1, 1965, Los Angeles, Calif.) U.S. bandleader known for his novelty recordings. Jones played drums in radio bands in the late 1930s and soon became known for adding anarchically comical sounds such as car horns, cowbells, and anvils to his percussion. In 1942 he formed Spike Jones and His City Slickers, and the band soon had a hit recording with "Der Fuehrer's Face." Jones's comic hits continued into the 1950s, when he also had his own TV show. Later switching from comedy to Dixieland, the band continued to record into the 1960s.

Jones, Sir William (b. Sept. 28, 1746, London, Eng.—d. April 27, 1794, Calcutta) British orientalist, linguist, and jurist. He completed an authoritative *Grammar of the Persian Language* in 1771. For financial reasons he then turned to the study and practice of law. His *Moallakât*, a translation of seven famous Arabic odes, was published in 1782, and the following year he was knighted and sailed for Calcutta (now Kolkata) as judge of the Supreme Court. He founded the Asiatic Society of Bengal

© 2006 Encyclopædia Britannica, Inc.

to encourage Asian studies and published scholarly works on Hindu and Muslim law. His proposition (1786) that there was a common source for languages ranging from Celtic to Sanskrit led to recognition of the Indo-European language family.

jongleur \zhōⁿ-'glœr,\ *English* \'jäŋ-glər\ Professional storyteller or public entertainer in medieval France. His roles included those of musician, juggler, acrobat, and reciter of literary works. Jongleurs performed in marketplaces on public holidays, in abbeys, and in castles of nobles, who sometimes retained them in permanent employment. Jongleurs were most important in the 13th century; in the 14th century, the various facets of their role were taken over by other performers. See also goliard; trouvère.

jonquil Popular garden flower (*Narcissus jonquilla*), a Mediterranean perennial bulbous herb of the amaryllis family. Bearing long linear leaves, it is widely cultivated for its yellow or white, fragrant, short-tubed, clustered flowers. An oil from jonquil flowers is used in perfumes. See also narcissus.

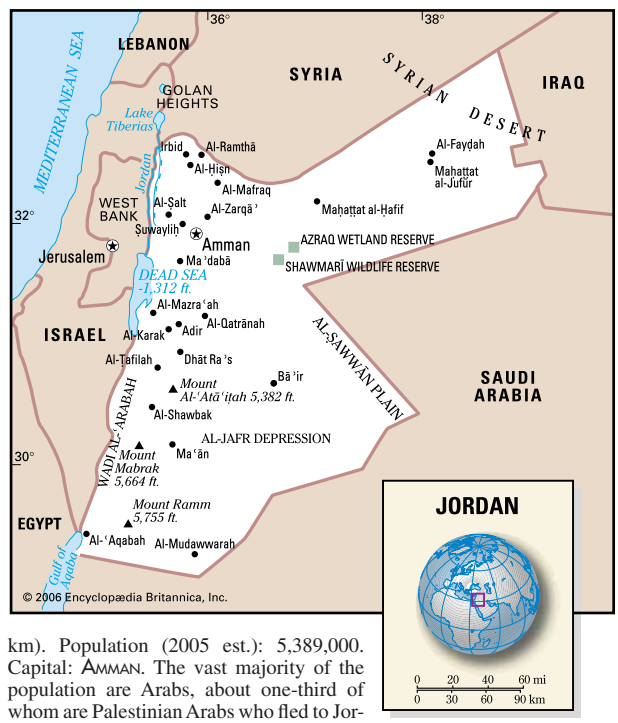
Jonson, Ben(jamin) (b. June 11?, 1572, London, Eng.—d. Aug. 6, 1637, London) British playwright, poet, and critic. After learning stagecraft as a strolling player, he wrote plays for Philip Henslowe's theatres. In 1598 his comedy *Every Man in His Humour* established his reputation. He wrote several masques for the court of James I and created the "antimasque" to precede the masque proper. His classic plays *Volpone* (1605–06), *The Alchemist* (1610), and *Bartholomew Fair* (1614) use satire to expose the follies and vices of his age, attacking greed, charlatanism, and religious hypocrisy as well as mocking the fools who fall victim to them. Regarded as the era's leading dramatist after William Shakespeare, Jonson influenced later playwrights, notably in the dramatic characterization of Restoration comedies (see Restoration literature). He was also a lyric poet whose works include two famous elegies for his son and daughter.

Jöntürkler See Young Turks

Jooss \'yōs**, Kurt** (b. Jan. 12, 1901, Wasseralfingen, Ger.—d. May 22, 1979, Heilbronn, W.Ger.) German dancer, teacher, and choreographer. After studying dance with Rudolf Laban (1920–24), he established a school and company. He became ballet master at the Essen Opera House in 1930, where he choreographed his signature ballet, *The Green Table* (1932). He moved his school and company to England in 1934, and his renamed Ballets Jooss toured worldwide until disbanding in 1947. He returned in 1949 to Essen, where he continued to choreograph works that combined ballet and modern dance in an Expressionist style.

Jooss in *The Green Table*, c. 1935
H. ROGER-VIOLLET

Joplin, Janis (Lyn) (b. Jan. 19, 1943, Port Arthur, Texas, U.S.—d. Oct. 4, 1970, Los Angeles, Calif.) U.S. rock and blues singer. Born to a middle-class family, she ran away from home at age 17 and began singing in Austin, Texas, and later in Los Angeles. She joined the band Big Brother and the Holding Company in San Francisco in 1966 and soon became famous for her raw, powerful, emotional blues style. The album *Cheap Thrills* (1968) contains some of her best-known recordings. After leaving the band, she continued to record hit songs, including "Me and Bobby McGee." She died from an overdose of heroin at age 27.



Joplin, Scott (b. Nov. 24, 1868, Bowie county, Texas, U.S.—d. April 1, 1917, New York, N.Y.) U.S. pianist and composer, the outstanding exponent of ragtime music. Joplin was a classically trained pianist and composer. His compositions, including "Maple Leaf Rag" (1899), ragtime's first hit, and "The Entertainer" (1902), show an acute logic that transcends the sometimes mechanical dimension of the genre. He also wrote a ballet and two operas, including *Treemonisha* (1911), as well as several didactic works. He suffered a nervous collapse in 1911 and was institutionalized in 1916.

Jordaens \'yȯr-ˌdȧns**, Jacob** (b. May 19, 1593, Antwerp, Spanish Netherlands—d. Oct. 18, 1678, Antwerp) Flemish painter active in Antwerp. He was admitted to the painters' guild in 1615 and by the 1620s had a flourishing studio with many students. After the death of Peter Paul Rubens, to whose Baroque style he was indebted, he became the leading painter in Flanders. His paintings, crowded with robust figures, are noted for strong contrasts of light and shade and an air of sensual vitality bordering on coarseness. He also produced religious paintings and portraits. His most important commissions were two enormous murals for the royal residence called the Huis ten Bosch, near The Hague. His later works tend to be mediocre and were frequently executed by assistants.

Jordan *officially* **Hashemite Kingdom of Jordan** Country, Middle East, southwestern Asia, lying east of the Jordan River. Jordan has 16 miles (26 km) of coastline on the Gulf of Aqaba. Area: 34,495 sq mi (89,342 sq km). Population (2005 est.): 5,389,000. Capital: Amman. The vast majority of the population are Arabs, about one-third of whom are Palestinian Arabs who fled to Jordan from neighbouring Israel and the West Bank as a result of the Arab-Israeli wars. Language: Arabic (official). Religion: Islam (official; predominantly Sunni). Currency: Jordan dinar. Four-fifths of the country is desert; less than one-tenth of the land is arable. The

© 2006 Encyclopædia Britannica, Inc.

highest point of elevation, Mount Ramm (5,755 ft [1,754 m]), rises in the uplands region on the east bank of the Jordan River. The Jordan Valley region contains the Dead Sea. Jordan's economy is based largely on manufacturing and services (including tourism); exports include phosphate, potash, pharmaceuticals, fruits and vegetables, and fertilizers. Jordan is a constitutional monarchy with two legislative houses; the head of state and government is the king, assisted by the prime minister. Jordan shares much of its history with Israel, since both occupy parts of the area known historically as Palestine. Much of present-day Jordan was once part of the kingdom of Israel under David and Solomon (c. 1000 BC). It fell to the Seleucids in 330 BC and to Muslim Arabs in the 7th century AD. The Crusaders extended the kingdom of Jerusalem east of the Jordan River in 1099. The region became part of the Ottoman Empire during the 16th century. In 1920 the area comprising Jordan (then known as Transjordan) was established within the British mandate of Palestine. Britain recognized Transjordan's partial independence in 1923, although the British mandate did not end until 1948. In 1950, after the end of hostilities with the new State of Israel, Jordan annexed the West Bank and east Jerusalem, administering the territory until Israel gained control of it in the Six-Day War of 1967. In 1970–71 Jordan was wracked by fighting between the government and guerrillas of the Palestine Liberation Organization (PLO), a struggle that ended with the PLO being expelled from Jordan. In 1988 King Hussein renounced all Jordanian claims to the West Bank in favour of the PLO. In 1994 Jordan and Israel signed a full peace agreement.

Jordan, Barbara C(harline) (b. Feb. 21, 1936, Houston, Texas, U.S.—d. Jan. 17, 1996, Austin, Texas) U.S. lawyer and politician. She earned a law degree from Boston University in 1959, served in the Texas state senate (1966–72), and then won election to the U.S. House of Representatives (1973–79), becoming the first African American congresswoman to be elected from the Deep South. She became a national figure in 1974, when she participated in televised hearings of the House Judiciary Committee on the possible impeachment of Pres. Richard Nixon. Her keynote address at the 1976 Democratic National Convention confirmed her reputation as a commanding and articulate public speaker. She retired from the House to teach at the University of Texas.

Jordan, David Starr (b. Jan. 19, 1851, near Gainesville, N.Y., U.S.—d. Sept. 19, 1931, Stanford, Calif.) U.S. educator and ichthyologist. He studied at Cornell University and taught at universities in Indiana until 1885, when he became president of Indiana University. In 1891 he became the first president of Stanford University, and served until 1913. His extensive field trips led to his naming 1,085 genera and more than 2,500 species of fishes. He was coauthor (with B.W. Evermann) of *The Fishes of North and Middle America* (1896–1900) and author of *Manual of the Vertebrates of the Northern United States* (13 editions, 1876–1929). He devoted his later career mainly to the cause of international peace, acting as chief director of the World Peace Foundation.

Jordan, Michael (Jeffrey) (b. Feb. 17, 1963, Brooklyn, N.Y., U.S.) U.S. basketball player. As a freshman in 1982, he helped the University of North Carolina win the collegiate national championship. Drafted by the Chicago Bulls in 1984, he won 10 scoring titles and 5 Most Valuable Player awards while leading the Bulls to six championships (1991–93, 1996–98). He was also part of the 1984 and 1992 U.S. Olympic basketball teams that won gold medals. He retired briefly in 1993, hoping to play professional baseball, but returned to the Bulls in 1995. He retired again in 1999, but, after a stint as an owner and general manager of the Washington Wizards, Jordan returned to play for that team in 2001. Known as "Air Jordan" for his exceptional leaping ability, he combined acrobatic play with a fierce competitive spirit and was considered among the game's greatest players. His success on the court and in the business world made him one of the most popular and recognized athletes of all time.

Jordan River River, Middle East. It rises in Syria, flows through the Lake Tiberias (Sea of Galilee), and then receives its main tributary, the Yarmūk River. It drains into the Dead Sea at 1,312 ft (400 m) below sea level after a total course of 223 mi (360 km). In Christianity it is known as the place where John the Baptist baptized Jesus.

José Bonifácio See Jose Bonifacio de Andrada e Silva

Joseph In the Old Testament, the son of the patriarch Jacob and his wife, Rachel. He was favoured by his father, and his brothers became bitterly jealous when he was given a resplendent "coat of many colors" (literally, coat with flowing sleeves). They sold him into slavery in Egypt, telling Jacob he had been killed by a wild beast. In Egypt Joseph gained favour with the pharaoh and rose to high office, owing to his ability to interpret dreams, and his acquisition of grain supplies enabled Egypt to withstand a famine. When famine forced Jacob to send his sons to Egypt to buy grain, the family was reconciled with Joseph and settled there. The story of Joseph, told in Genesis 37–50, depicts the preservation of Israel and begins the history of the Israelites in Egypt that is continued in Exodus.

Joseph II (b. March 13, 1741, Vienna—d. Feb. 20, 1790, Vienna) Holy Roman emperor (1765–90). He succeeded his father, Francis I, and initially coruled with his mother, Maria Theresa (1765–80). After his mother's death he tried to continue her work of reform. Considered a practicioner of "enlightened despotism," he abolished serfdom, established religious equality before the law, granted freedom of the press, and emancipated the Jews. He came into conflict with the Roman Catholic church by attempting to impose state controls over it, and traditional countries such as the Austrian Netherlands and Hungary resisted his far-reaching reforms. His foreign policies were generally failures; he tried to exchange the Austrian Netherlands for Bavaria but was stopped by Prussia. An alliance with Catherine II of Russia engaged Austrian troops in a war with Turkey, but Joseph had to return home to head off revolutionary unrest in Hungary and the Austrian Netherlands.

Joseph, Chief (b. c. 1840, Wallowa Valley, Ore.Terr.—d. Sept. 21, 1904, Colville Reservation, Wash., U.S.) Nez Percé chief. In 1877 the U.S. attempted to force the Nez Percé to move to a reservation in Idaho. Chief Joseph at first agreed but later decided instead to lead his followers on a trek to Canada. During the three-month, 1,000-mile journey, he outmaneuvered and outfought federal troops, and his humane conduct won the admiration of many whites. His group was finally surrounded near the Canadian border and subsequently removed to Indian Territory (Oklahoma). In 1885 they were relocated to a reservation in Washington.

Joseph, Father *orig.* **François-Joseph le Clerc du Tremblay** (b. Nov. 4, 1577, Paris, France—d. Dec. 18, 1638, Rueil) French mystic and religious reformer. He joined the Capuchins in 1599. His fervent ambition to convert European Protestants to Roman Catholicism coincided with cardinal de Richelieu's plans for French domination of Europe, and he became Richelieu's secretary in 1611. He became known as the "Gray Eminence" (for his gray Capuchin cloak), and his close collaboration with Richelieu (the "Red Eminence") gave him powers akin to those of a foreign minister, especially during Richelieu's campaign to finance France's participation in the Thirty Years' War, which Joseph's policies did much to bring about.

Joseph, Saint (fl. 1st century AD, Nazareth, Galilee region of Palestine; principle feast day March 19; Feast of St. Joseph the Worker May 1) In the New Testament, the husband of Mary and the earthly father of Jesus. Descended from the house of David, he was a carpenter in Nazareth. Betrothed to Mary when he found her already pregnant, an angel appeared to him in a vision and told him the expected child was the son of God. He and Mary journeyed to Bethlehem to be counted in the Roman census, and while they were there the child was born. The last mention of Joseph occurs in the Gospel of Luke, when he and Mary take the 12-year-old Jesus to Jerusalem.

Joseph Bonaparte Gulf Inlet of the Timor Sea, northern Australia. It spans 225 mi (360 km) east to west, and it indents the Australian coast for 100 mi (160 km). Entered by a Dutch navigator in 1644, it was visited in 1803 by Nicolas Baudin, a Frenchman who named it after Napoleon's brother Joseph Bonaparte.

Joséphine *orig.* **Marie-Josèphe-Rose Tascher de la Pagerie** (b. June 23, 1763, Trois Ilets, Mart.—d. May 29, 1814, Malmaison,

© 2006 Encyclopædia Britannica, Inc.

France) Consort of Napoleon and empress of the French. She married an army officer, Alexandre, vicomte de Beauharnais, in 1779. He was guillotined during the French Revolution, and Joséphine was imprisoned briefly. A leader of Paris society, she married Napoleon in a civil ceremony in 1796. She was an indifferent and extravagant wife, but during the Consulate she used her social position to advance her husband's political fortunes. After he became emperor (1804), she persuaded him to marry her again, with religious rites. She proved unable to give him a son, and in 1810 he arranged for their marriage to be nullified so that he could make a politically convenient marriage with Marie-Louise.

Joséphine, detail of an oil painting by François Gérard; in the Musée National de Malmaison, Paris.
GIRAUDON/ART RESOURCE, NEW YORK

Josephson, Brian D(avid) (b. Jan. 4, 1940, Cardiff, Wales) British physicist. He received a Ph.D. from the University of Cambridge and began building on earlier work done by Leo Esaki of IBM and Ivar Giaever (b. 1929) of General Electric. For his discovery of what is now called the Josephson effect in superconductivity, he shared a Nobel Prize with Esaki and Giaever in 1973. He was elected a fellow of the Royal Society in 1970 and was named a professor at Cambridge in 1974.

Josephson effect Flow of electric current between two pieces of superconducting material (see superconductivity) separated by a thin layer of insulating material. This flow was predicted by the British physicist Brian Josephson in 1962, based on the BCS theory (see John Bardeen). According to Josephson, pairs of electrons can move from one superconductor to the other across the insulating layer (tunneling). The locus of this action is called a Josephson junction. The Josephson current flows only if no battery is connected across the two conductors. A major application of this discovery is in superfast switching devices used in computers, which can be 100 times faster than ordinary semiconducting circuits.

Josephus \jō-'sē-fəs**, Flavius** *orig.* **Joseph Ben Matthias** (b. AD 37/38, Jerusalem—d. c. 100, Rome) Jewish priest, scholar, and historian. Born of a priestly family, Josephus joined the Pharisees. While on a diplomatic mission he was impressed by the culture and sophistication of Rome, and in the Jewish revolt of AD 66–70 he eventually attached himself to the Roman cause. Favoured in the courts of emperors Vespasian, Titus, and Domitian, he wrote valuable historical works. His *History of the Jewish War* (79) is the principal source on the revolt and includes much on Roman tactics and strategy. *The Antiquities of the Jews* (93), his greatest work, traces Judaism from creation up to the revolt. *Against Apion* defends Judaism against Hellenism.

Joshua Leader of the Israelite tribes after the death of Moses. According to the biblical book of Joshua, Joshua led the people of Israel westward across the Jordan River to invade Canaan. Under his leadership the Israelites conquered the Canaanites and gained control of the Promised Land. The book begins by recounting the battles, including the famous demolition of the walls of Jericho. Joshua then divides Canaan among the 12 tribes of Israel, makes his farewell speech, and dies. The book was compiled much later than the events described, perhaps during the Babylonian Exile in the 6th century BC.

Joshua Tree National Park National park, southeastern California, U.S. Situated on the border between the Mojave and Colorado deserts, it has an area of 1,241 sq mi (3,214 sq km). It was designated a national monument in 1936 and a national park in 1994. It is noted for its variety of desert plant life, including the Joshua tree, creosote bush, and Mojave yucca. Its fauna include coyotes, bobcats, and tarantulas.

Josiah \jō-'sī-ə\ (b. c. 640 BC—d. 609 BC) King of Judah and religious reformer. He became king at age 8 after the assassination of his father, Amon. As the Assyrian empire crumbled, Judah gained a measure of independence, and in 621 BC Josiah began a program of national renewal. He drove out foreign cults, abolished local sanctuaries, and centred the worship of Yahweh in the Temple of Jerusalem. As his reforms were under way, parts of the book of Deuteronomy were discovered in the Temple, giving added impetus to his efforts to revive observance of Mosaic law. Josiah hoped to reunify Judah and Israel, but he was killed in a battle against the Egyptians.

Jospin, Lionel (b. July 12, 1937, Meduon, France) French Socialist Party politician who served as the country's prime minister (1997–2002). He was educated at the elite École Nationale d'Administration. He joined the foreign service and later taught economics at the University Institute of Technology of Paris-Sceaux. He was elected to the National Assembly in 1977 and later was appointed head of the party by Pres. François Mitterrand. He served as minister of education and narrowly lost the presidential election in 1995 to Jacques Chirac. After the Socialists and their allies won a majority in the National Assembly in 1997, he was appointed prime minister by Chirac. He resigned in 2002 after an unsuccessful presidential bid.

Josquin des Prez \zhōs-'ka^{n}-de-'prā\ (b. c. 1445, Condé-sur-l'Escaut?, Burgundian Hainaut—d. Aug. 27, 1521, Condé-sur-l'Escaut) Northern French composer. Perhaps a student of Johannes Ockeghem, he spent his life working as a singer, moving from post to post in Italy, including the Milan Cathedral (1459–72) and the Papal Chapel (1486–94), before returning to Condé in 1504, where he would spend the rest of his life. Josquin was able to balance complexity of imitative counterpoint with an inexhaustible melodic gift. He left over 60 motets (including *Absalon, fili mi*), some 18 complete masses (including *Missa Pange lingua*), and many superb secular songs in the chordal "Italian" style (including "El grillo"). The first music printer, Ottaviano Petrucci, devoted an entire volume to Josquin's works, an honour accorded to no other composer. His posthumous reputation, as attested by Martin Luther and others, was the greatest of any composer up to his time, and his works were closely imitated throughout the 16th century.

Josquin des Prez, drawing by Joris van der Straeten, 16th century.
THE BETTMANN ARCHIVE

Jotunheim \'yō-t^{n}-ˌhām\ **Mountains** Mountain range, south-central Norway. It is the highest range in Scandinavia and extends 80 mi (130 km); its tallest peaks are Glitter Mountain (8,045 ft [2,452 m]) and Galdhø Mountain (8,100 ft [2,470 m]). The mountains are mentioned in early Norse sagas, but they were not fully explored until the early 19th century.

Joule \'jül**, James (Prescott)** (b. Dec. 24, 1818, Salford, Lancashire, Eng.—d. Oct. 11, 1889, Sale, Cheshire) English physicist. After studying under John Dalton, in 1840 he described "Joule's law," which stated that the heat produced in a wire by an electric current is proportional to the product of the resistance of the wire and the square of the current. In 1843 he published his value for the amount of work required to produce a unit of heat, called the mechanical equivalent of heat, and established that heat is a form of energy. He established that the various forms of energy are basically the same and can be changed from one into another, a discovery that formed the basis of the law of conservation of energy, the first law of thermodynamics. In his honour, the value of the mechanical equivalent of heat is usually represented by the letter *J*, and a standard unit of work is called the joule.

journalism Collection, preparation, and distribution of news and related commentary and feature materials through media such as pamphlets, newsletters, newspapers, magazines, radio, film, television, and books. The term was originally applied to the reportage of current events in printed form, specifically newspapers, but in the late 20th century it came to include electronic media as well. It is sometimes used to refer to writing characterized by a direct presentation of facts or description of events without an attempt at interpretation. Colleges and universities confer degrees in journalism and sponsor research in related fields such as media studies and journalism ethics.

jousting Medieval Western European mock battle between two horsemen who charged at each other with leveled lances in an attempt to unseat the other. It probably originated in France in the 11th century, superseding the mêlée, in which mock battles were held between two bodies of armed horsemen, and it flourished in much of Europe in the 12th–15th century.

© 2006 Encyclopædia Britannica, Inc.

Though the lances were blunted, knights were often seriously wounded or killed. Tournaments were mounted only by royalty and nobility; ladies of the court would sponsor individual knights, for whom jousting became a ritual of COURTLY LOVE. Characterized by striking panoply and pageantry, jousting tournaments represented the preeminent display of CHIVALRY.

Jove See JUPITER

Joyce, James (Augustine Aloysius) (b. Feb. 2, 1882, Dublin, Ire.—d. Jan. 13, 1941, Zürich, Switz.) Irish novelist. Educated at a Jesuit school (though he soon rejected Catholicism) and at University College, Dublin, he decided early to become a writer. In 1902 he moved to Paris, which would become his principal home after years spent in Trieste and Zürich. His life was difficult, marked by financial troubles, chronic eye diseases that occasionally left him totally blind, censorship problems, and his daughter Lucia's mental illness. The remarkable story collection *The Dubliners* (1914) and the autobiographical novel *Portrait of the Artist as a Young Man* (1916), his early prose volumes, were powerful examples of his gift for storytelling and his great intelligence. With financial help from friends and supporters, including EZRA POUND, Sylvia Beach (1887–1962), and Harriet Shaw Weaver (1876–1961), he spent seven years writing *Ulysses* (1922), the controversial masterpiece (initially banned in the U.S. and Britain) now widely regarded by many as the greatest English-language novel of the 20th century. It embodies a highly experimental use of language and exploration of such new literary methods as interior monologue and STREAM-OF-CONSCIOUSNESS narrative. He spent 17 years on his final work, the extraordinary *Finnegans Wake* (1939), famous for its complex and demanding linguistic virtuosity.

Joyner, Florence Griffith See Florence GRIFFITH JOYNER

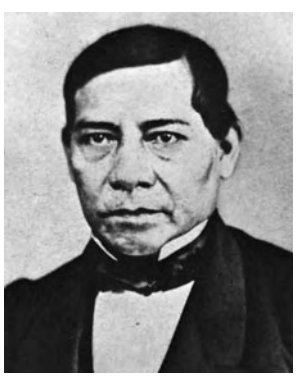
Joyner-Kersee, Jackie *orig.* **Jacqueline Joyner** (b. March 3, 1962, East St. Louis, Ill., U.S.) U.S. athlete. She won four consecutive National Junior Heptathlon championships and starred in basketball and track and field at UCLA. In 1986 she became the first HEPTATHLON competitor ever to score 7,000 points. She broke that barrier six times, four times establishing a new world record. She won heptathlon gold medals at the 1988 and 1992 Olympics, becoming the first heptathlete ever to achieve consecutive Olympic wins. Her best events were the long jump (world record, 1987; Olympic gold medal, 1988), 100-m hurdles, 200-m run, and high jump. Many consider her to be the finest female athlete in history.

JPEG \'jā-ˌpeg\ *in full* **Joint Photographic Experts Group** Standard computer file format for storing graphic images in a compressed form for general use. JPEG images are compressed using a mathematical ALGORITHM. A variety of encoding processes can be used, depending on whether the user's goal is the highest quality of image (lossless) or smallest file size (lossy). The JPEG and GIF formats are the most commonly used graphics formats on the Internet for lossy and lossless DATA COMPRESSION, respectively.

JPMorgan Chase & Co. U.S. financial services corporation. Formed in 2000 by the merger of investment bank J.P. Morgan and consumer bank CHASE MANHATTAN CORP., the resulting firm ranked as one of the largest financial services companies in the U.S. The company increased its holdings by purchasing Bank One in 2004.

Juan Carlos I (b. Jan. 5, 1938, Rome, Italy) King of Spain from 1975. The grandson of ALFONSO XIII, he lived in exile until 1947. After FRANCISCO FRANCO abolished the republic and declared Spain a representative monarchy, he prepared Juan Carlos for his future role, paying particular attention to his military education. In 1969 Juan Carlos was designated prince; he acceded to the Spanish throne two days after Franco's death. Although he had sworn loyalty to Franco's National Movement, he proved to be relatively liberal and helped restore parliamentary democracy. In 1981 he deflated a potential military coup and preserved the democracy. He became the first Spanish king to visit the Americas and was the first crowned monarch to make an official visit to China. Throughout his tenure as king, he traveled abroad on many goodwill missions and was very popular at home.

Juan de Austria \ˌhwän-thā-'aůs-trē-ä\ (b. Feb. 24, 1547, Regensburg—d. Oct. 1, 1578, Bouges, near Namur, Spanish Netherlands) Illegitimate son of Emperor CHARLES V and half brother of PHILIP II. After Charles's death, Philip gave him the name Don Juan de Austria (1559). He served as a Spanish military commander, and in 1571 he was appointed head of naval forces of the Holy League against the Ottoman Turks, achieving victory in the Battle of LEPANTO. In 1576 he was appointed governor-general of the Netherlands, then in open revolt against Spanish authority. When his attempts at diplomacy failed, he resumed the war.



Juan de Fuca Strait \ˌhwän-də-'fyü-kə\ Strait, North Pacific Ocean. Located between the Olympic Peninsula of Washington, U.S., and Canada's VANCOUVER ISLAND, it is 11–17 mi (18–27 km) wide and 80–100 mi (130–160 km) long. It is named for a Greek who sailed in the service of Spain and who may have visited the passage in 1592. It is used by ships bound for VANCOUVER and SEATTLE. Settlements along its banks include VICTORIA, B.C., and Port Angeles, Wash.

Juan Fernández Islands Island group, South Pacific Ocean. Located 400 mi (650 km) west of Chile, it consists of two islands and an islet. They were discovered in 1563 by Spanish navigator Juan Fernández. In 1704 Alexander Selkirk, a Scottish seaman, was stranded there alone until 1709; his adventures are believed to have inspired DANIEL DEFOE's *Robinson Crusoe*. Possessions of Chile since the early 19th century, they have often been used as penal settlements.

Juan José \ˌhwän-hō-'sā\ **de Austria** (b. April 7, 1629, Madrid, Spain—d. Sept. 17, 1679, Madrid) Spanish nobleman, the most famous of the illegitimate children of PHILIP IV. He served as a military commander from 1647, and in 1651 he led the royal forces besieging Barcelona. He served as governor of the Netherlands (1656–58). After 1665 he played an active part in the political intrigues surrounding the new king, his half brother CHARLES II, and he served as Charles's chief minister (1677–79).

Juárez *or* **Ciudad Juárez** \ˌsyü-'thäth-'hwär-ˌes\ City (pop., 2000: 1,187,275), northern CHIHUAHUA state, Mexico. Located on the RIO GRANDE opposite EL PASO, Texas, it was formerly known as El Paso del Norte and was renamed in 1888 for Mexico's national hero, BENITO JUÁREZ, who headquartered there in 1865. Today it is an important border city and functions as the marketing centre for a cotton-growing area. The city has grown greatly since the 1970s because of the increase in the number of export-oriented assembly plants (maquiladoras) located there. It contains the Guadalupe mission (1662).

Juárez \'hwär-əs**, Benito (Pablo)** (b. March 21, 1806, San Pablo Guelatao, Oaxaca, Mex.—d. July 18, 1872, Mexico City) National hero and president (1861–72) of Mexico. A ZAPOTEC Indian, Juárez initially studied for the priesthood but later took a law degree and became a legislator, a judge, and a cabinet minister. He led La REFORMA, a liberal political and social revolution in Mexico, and, when liberal forces gained control of the national government in 1855, he was able to implement his ideas. In 1857 he was elected head of the Supreme Court, which, under a new constitution, placed him first in the order of presidential succession. In 1858 a coup by conservative forces sent Mexico's president into exile, but Juárez succeeded him and headed a liberal government that opposed the regime installed by the conservatives. After three years of civil war, the liberals prevailed. Juárez was elected president in 1861 and twice reelected. Early in his first term, the French under NAPOLEON III invaded and occupied Mexico, putting MAXIMILIAN of Austria in power in 1864. When Napoleon later withdrew his troops, Juárez

Benito Juárez.

defeated Maximilian's armies and had him executed in 1867. Juárez's final years were marred by a loss of popular support and by personal tragedy. He died in office.

Jubayl See Byblos

Jubba River \'jü-bä\ River, Somalia. Originating in southern Ethiopia, it flows south 545 mi (875 km) to the Indian Ocean just north of Kismaayo, one of Somalia's three main ports. It is the only river in the region that is reliably navigable.

Juchen dynasty \'zhü-'jen\ *or* **Jin dynasty** (1115–1234) Dynasty that ruled an empire formed by the Tungus Juchen tribes of Manchuria. It covered much of Inner Asia and all of northern China. Like the Liao, an earlier Inner Asian dynasty, the Juchen maintained a Chinese-style bureaucracy to rule over the southern part of their conquests and a tribal state to rule in Inner Asia. Very conscious of preserving their ethnic identity, they maintained their language, developed their own script, and banned Chinese clothes and customs from their army.

Judaea *or* **Judea** \jü-'dē-ə\ Southern division of ancient Palestine successively under Persian, Greek, and Roman rule. It was bounded on the north by Samaria and on the west by the Mediterranan Sea. It succeeded the Hebrew kingdom of Judah, which was destroyed by the Babylonians. The revived kingdom of Judaea was established by the Maccabees, who resisted the suppression of Judaism under foreign rule. Family disputes led to Roman intervention in 63 BC. Under Roman control, Herod (the Great) was made king of Judaea in 37 BC. After Herod's death the country was ruled alternately by his descendants (see Herod Antipas; Herod Agrippa I) and by Roman procurators. As a result of the Jewish revolt in AD 66, the city of Jerusalem was destroyed (AD 70). The name Judaea is used by Israelis to describe approximately the same area in the modern West Bank territory.

Judah One of the 12 tribes of Israel, descended from Judah, the fourth son of Jacob. The tribe of Judah entered Canaan with the other Israelites after the escape from Egypt and settled in the region south of Jerusalem. It eventually became the most powerful tribe, producing the kings David and Solomon, and it was prophesied that the messiah would come from among its members. After the 10 northern tribes were dispersed by the Assyrian conquest of 721 BC, the tribes of Judah and Benjamin were left as the sole inheritors of the Mosaic covenant. Judah flourished until 586 BC, when it was overrun by the Babylonians and many of its people were carried into exile. Cyrus II allowed them to return in 538 BC, and the Temple of Jerusalem was rebuilt. The history of Judah from that time forward is the history of the Jews and Judaism. The kingdom of Judah was succeeded by Judaea.

Judah ben Samuel (d. 1217) Jewish mystic and scholar. He was a member of the Kalonymos family, which provided medieval Germany with many Jewish mystics and spiritual leaders. Around 1195 he settled in Regensburg, where he founded a yeshiva and gathered disciples such as Eleazar ben Judah of Worms. He was the founder of 12th-century German Hasidism, an ultrapious movement not directly related to 18th-century Hasidism. *Book of the Pious*, a compilation of the writings of Judah, his father, and Eleazar of Worms, offers a detailed manual of conduct for observant Jews; it is one of the most important documents of medieval Judaism.

Judah ha-Nasi \'jü-də-ˌhä-nä-'sē\ (b. AD 135—d. c. 220) Palestinian Jewish scholar. A descendant of the great sage Hillel, he was patriarch of the Jewish community in Palestine and head of its Sanhedrin, and he became an important figure in early rabbinic Judaism. He spent over 50 years studying the oral law and is said to have compiled it into six sections divided by subject matter, thus creating the Mishna. His exact role in the Mishna's redaction is not known; other scholars such as Meïr and Akiba ben Joseph were probably also involved.

Judaism \'jü-də-ˌi-zəm, 'jü-dē-ˌi-zəm\ Religious beliefs and practices of the Jews. One of the three great monotheistic world religions, Judaism began as the faith of the ancient Hebrews, and its sacred text is the Hebrew Bible, particularly the Torah. Fundamental to Judaism is the belief that the people of Israel are God's chosen people, who must serve as a light for other nations. God made a covenant first with Abraham and then renewed it with Isaac, Jacob, and Moses. The worship of Yahweh (God) was centred in Jerusalem from the time of David. The destruction of the First Temple of Jerusalem by the Babylonians (586 BCE) and the subsequent exile of the Jews led to hopes for national restoration under the leadership of a messiah. The Jews were later allowed to return by the Persians, but an unsuccessful rebellion against Roman rule led to the destruction of the Second Temple in 70 CE and the Jews' dispersal throughout the world in the Jewish Diaspora. Rabbinic Judaism emerged to replace the beliefs and practices associated with the Temple at Jerusalem, as the Jews carried on their culture and religion through a tradition of scholarship and strict observance. The great body of oral law and commentaries were committed to writing in the Talmud and Mishna. The religion was maintained despite severe persecutions by many nations.

Two branches of Judaism emerged in the Middle Ages: the Sephardic, centred in Spain and culturally linked with the Babylonian Jews; and the Ashkenazic, centred in France and Germany and linked with the Jewish culture of Palestine and Rome. Elements of mysticism also appeared, notably the esoteric writings of the Kabbala and, in the 18th century, the movement known as Hasidism. The 18th century was also the time of the Jewish Enlightenment (Haskala). Conservative and Reform Judaism emerged in 19th-century Germany as an effort to modify the strictness of Orthodox Judaism. By the end of the 19th century Zionism had appeared as an outgrowth of reform. European Judaism suffered terribly during the Holocaust, when millions were put to death by the Nazis, and the rising flow of Jewish emigrants to Palestine led to the declaration of the State of Israel in 1948. In the early 21st century there were nearly 15 million Jews worldwide.

Jewish Festivals

Tishri (Sept.–Oct.)	1–2	Rosh Hashanah (New Year)
	3	Fast of Gedaliah
	10	Yom Kippur (Day of Atonement)
	15–21	Sukkot (Tabernacles)
	22	Shemini Atzereth (Eighth Day of Solemn Assembly)
	23	Simhath Torah (Rejoicing of the Law)
Kislev (Nov.–Dec.)	25	Hanukkah (Festival of Lights) begins
Tebet (Dec.–Jan.)	2 or 3	Hanukkah ends
	10	Fast
Shebat (Jan.–Feb.)	15	New Year for Trees
Adar (Feb.–Mar.)	13	Fast of Esther
	14–15	Purim (Feast of Lots)
Second Adar (Adar Sheni) or Veadar (intercalated month); Adar holidays fall in Veadar during leap years.		
Nisan (Mar.–Apr.)	15–22	Pesach (Passover)
Iyar (Apr.–May)	5	Israel Independence Day
	18	Lag b'Omer (33rd Day of the Omer Counting)
Sivan (May–June)	6–7	Shabuoth (Feast of Weeks, or Pentecost)
Tammuz (June–July)	17	Fast
Ab (July–Aug.)	9	Fast

Judas Iscariot (d. c. AD 30) Disciple who betrayed Jesus. He was one of the original 12 disciples. Judas made a deal with the Jewish authorities to betray Jesus into their custody; in return for 30 pieces of silver, he brought the armed guard to the Garden of Gethsemane and identified Jesus with a kiss. He later regretted his deed and committed suicide; according to Matthew 27, he returned the money to the priests before hanging himself. His surname may mean "man of Kerioth," or it may link him to the Sicarii, a band of radical Jewish terrorists.

Judas Maccabaeus \ˌma-kə-'bē-əs\ (d. 161/160 BC) Leader of a Jewish rebellion against the Syrians. The son of an aged priest who took to the mountains in rebellion when Antiochus IV Ephiphanes tried to impose the Greek religion on the Jews, Judas became leader of the rebels on his father's death and won a series of victories over the Syrians in 166–164 BC. In 166 he purified the Temple of Jerusalem, an event celebrated at Hanukkah. On Antiochus's death in 164, the Seleucids offered the Jews freedom of worship, but Judas continued the war, hoping to gain political freedom. He was killed soon thereafter, but his brothers carried on the struggle. The history of the dynasty is told in the two books of Maccabees in the Apocrypha.

Judd, Donald (b. June 3, 1928, Excelsior Springs, Mo., U.S.—d. Feb. 12, 1994, New York, N.Y.) U.S. sculptor. He studied at Columbia University and the Art Students League. He had his first one-man exhibition in 1957. In 1959 he began writing reviews for *Art News* and *Arts Magazine*. In 1960–62 he made the transition from painting to sculpture and became a leading exponent of Minimalism. Much of his work consists of simple cubes or other geometric units that stand on the floor or are cantilevered from the wall, often in stacks or horizontal progressions. His

© 2006 Encyclopædia Britannica, Inc.

materials included painted steel, Plexiglas, iron, wood, and concrete. In the 1970s he began to fill the land around his studio in Marfa, Texas, with large-scale sculptures; this area is now a museum.

Judea See JUDAEA

judge Public official vested with the authority to hear, determine, and preside over legal matters brought in court. In JURY cases, the judge presides over the selection of the panel and instructs it concerning pertinent law. The judge may also rule on motions made before or during a trial. In the U.S., judges are elected or appointed. Most federal judges are appointed for life by the president with the advice and consent of the SENATE. The highest-ranking judge in the U.S. legal system is the CHIEF JUSTICE of the SUPREME COURT. See also JUDGMENT, JUDICIARY, MAGISTRATE'S COURT, MISSOURI PLAN.

judgment In law, a formal decision or determination on a matter or case by a court. Judgments are classified as *in personam*, *in rem*, and *quasi in rem*. A judgment *in personam* determines the rights and liabilities of a particular person. A judgment *in rem* affects the status of a particular thing (e.g., an item of property). The designation *quasi in rem* describes a judgment in which a person's property is subject to court control to satisfy a claim against the person. The court has at its disposal the power to punish for CONTEMPT any party that does not adhere to its orders. See also APPEAL; DECLARATORY JUDGMENT; DEMURRER.

Judgment, Day of In Christianity, the final judgment of God on all people at the end of history. It will occur at the second coming of Christ, when the dead are resurrected. It is especially important in millennialist denominations (see MILLENNIALISM). In Islam, the Day of Judgment is described in the QURAN and the HADITH. Religions that include REINCARNATION (e.g., HINDUISM) lack a Day of Judgment; the determination of how an individual is to be reborn being a particular judgment on the merit of the life just lived (see KARMA).

judgment tale See DILEMMA TALE

judicial review Examination by a country's courts of the actions of the legislative, executive, and administrative branches of government to ensure that those actions conform to the provisions of the constitution. Actions that do not conform are unconstitutional and therefore null and void. The practice is usually considered to have begun with the ruling by the SUPREME COURT OF THE UNITED STATES in *MARBURY* v. *MADISON* (1803). Several constitutions drafted in Europe and Asia after World War II incorporated judicial review. Especially subject to scrutiny in the U.S. have been actions bearing on civil rights (or CIVIL LIBERTY), DUE PROCESS of law, EQUAL PROTECTION under the law, freedom of religion, FREEDOM OF SPEECH, and rights of PRIVACY. See also CHECKS AND BALANCES.

judiciary Branch of government in which judicial power is vested. The principal work of any judiciary is the adjudication of disputes or controversies. Regulations govern what parties are allowed before a judicial assembly, or court, what evidence will be admitted, what trial procedure will be followed, and what types of judgments may be rendered. Typically present in court are the presiding JUDGE, the parties to the matter (sometimes called litigants), the lawyers representing the parties, and other individuals including witnesses, clerks, bailiffs, and jurors when the proceeding involves a JURY. Though the courts' stated function is to administer justice according to rules enacted by the legislative branch, courts also unavoidably make law. In deciding, for example, how legislative provisions are to be applied to specific cases, the courts in effect make law by laying down rules for future cases; this is known as the doctrine of precedent. In some jurisdictions, courts have the power of JUDICIAL REVIEW, enabling them to declare unconstitutional legislation or acts of the executive.

Judith Legendary Jewish heroine, the central character in the Book of Judith in the APOCRYPHA. (The book is excluded from the Hebrew Bible.) A beautiful Jewish widow whose city is besieged by the Assyrians under their general, Holofernes, Judith leaves the city in pretended flight and foretells victory to Holofernes. Invited into his tent, she cuts off his head as he lies in a drunken sleep, and the Jews defeat the leaderless Assyrians. Probably fictional, the story may have been written in the 2nd century BC, after the end of the Maccabean revolt.

judo MARTIAL ART that emphasizes the use of quick movement and leverage to throw an opponent. Its techniques are generally intended to turn an opponent's force to one's own advantage rather than to oppose it directly. The opponent must be thrown cleanly, pinned, or mastered through the application of pressure to arm joints or the neck. Judo is now practiced primarily as sport. It became an Olympic sport in 1964; women's judo was added in 1992. The sport evolved out of JUJITSU in late-19th-century Japan.

juge d'instruction \ˈzhüzh-daⁿ-strük-syōⁿ\ *French* **"judge of inquiry"** In France, a magistrate responsible for conducting the investigative hearing that precedes a criminal trial. In this hearing the major evidence is presented, witnesses are heard, and depositions are taken. If at the end of the hearing the magistrate is not convinced that the evidence of guilt is sufficient to warrant a trial, no trial occurs. This process differs from the GRAND JURY hearing in the Anglo-American system.

Jugendstil \ˈyü-gənt-ˌshtēl\ Artistic style that arose near the end of the 19th century in Germany and Austria. Its name was derived from the Munich magazine *Die Jugend* ("Youth"), founded in 1896, which featured ART NOUVEAU designs. Its early phase, primarily floral in character, was rooted in English Art Nouveau and Japanese prints; a more abstract phase emerged after 1900. Primarily a style in architecture and the decorative arts, it also included the great Austrian painter GUSTAV KLIMT.

juggler Entertainer who keeps several plates, knives, balls, or other objects in the air at once by tossing and catching them. The art of juggling has been practiced since antiquity. Through the 18th century jugglers performed at fairs and marketplaces, and in the 19th century they found larger audiences in CIRCUSES and MUSIC HALLS. In these training grounds the art advanced in technical perfection, producing outstanding performers such as Enrico Rastelli, who could juggle 10 balls. Modern jugglers introduced variations such as performing while blindfolded on horseback, on a high wire, or on a unicycle.

Jugurtha \jü-ˈgər-thə\ (b. c. 160 BC—d. 104, Rome) Ruler of the North African kingdom of NUMIDIA under the Romans (118–105 BC). After the death of his uncle Micipsa, then ruler of Numidia, Jugurtha shared rule with his two cousins. He had one killed and captured the capital city of the other. Rome intervened with troops, which Jugurtha successfully outwitted until he was captured in 105 BC. See also Gaius MARIUS; Lucius Cornelius SULLA Felix.

Juilliard \ˈjü-lē-ˌärd\ **School** Internationally renowned school of the performing arts in New York, New York, U.S. It has its roots in the Institute of Musical Art (founded 1905) and a graduate school (1924) founded through an endowment from the financier Augustus D. Juilliard (1840–1919). It is now the professional educational arm of the LINCOLN CENTER FOR THE PERFORMING ARTS. It offers bachelor's degrees in music, dance, and drama and postgraduate degrees in music. The Juilliard String Quartet (founded 1946) was important to the development of chamber music in the U.S.

jujitsu \jü-ˈjit-sü\ MARTIAL ART that employs holds, throws, and paralyzing blows to subdue or disable an opponent. It evolved among the SAMURAI warrior class in Japan from about the 17th century. A ruthless form of fighting, its techniques included the use of hard or tough parts of the body (e.g., knuckles, fists, elbows, and knees) against an enemy's vulnerable points. Jujitsu declined in the mid-19th century, but many of its concepts and methods were incorporated into JUDO, KARATE, and AIKIDO.

Julia (b. 39 BC—d. AD 14, Rhegium) Only child of AUGUSTUS. She wed MARCELLUS, who died in 23 BC, then AGRIPPA (21), Augustus's chief lieutenant. Their two eldest sons were adopted by Augustus (17) and became his heirs. When Agrippa died (12 BC), Augustus's second wife persuaded him to favour her sons (his stepsons), TIBERIUS and Drusus, as heirs. Augustus forced Tiberius to divorce his wife and marry Julia (11 BC). The unhappy Julia became promiscuous, and Tiberius went into self-imposed exile. When Augustus discovered Julia's behaviour, he banished her to an island off Campania (2 BC), then to Rhegium. On becoming emperor, Tiberius withheld her allowance, and she starved to death.

Julian *or* **Julian the Apostate** *Latin* **Julianus Apostata** *orig.* **Flavius Claudius Julianus** (b. AD 331/332, Constantinople—d. June 26/27, 363, Ctesiphon, Mesopotamia) Roman emperor (361–363), noted scholar and military leader. The nephew of CONSTANTINE I, he was raised a Christian but converted to mystical paganism. As caesar (subemperor) in the west, he restored the Rhine frontier and was proclaimed Augustus (senior emperor) by his armies. Though Constantius II initially objected to Julian as his successor, he accepted him on his deathbed (361). As emperor Julian proclaimed freedom of worship for pagans and Christians in 361; he nevertheless promoted paganism over Christianity, against

© 2006 Encyclopædia Britannica, Inc.

which he committed acts of violence and persecution. He introduced austerity to government, reducing imperial staff and overhauling imperial finances. To reassert Roman power in the east he attacked Persia; the effort failed, and he was killed in a retreat near Baghdad.

Julian the Apostate, detail of a marble statue; in the Louvre, Paris
GIRAUDON/ART RESOURCE, NEW YORK

Julian, George W(ashington) (b. May 5, 1817, Wayne county, Ind., U.S.—d. July 7, 1899, Irvington, Ind.) U.S. politician. He was admitted to the bar in 1840 and practiced law in several Indiana towns. By the mid-1840s he was a Whig member of the Indiana state legislature and a frequent author of antislavery newspaper articles. Elected to the U.S. House of Representatives as a member of the Free Soil Party in 1848, he was that party's vice-presidential candidate in 1852. In 1856 he helped form the Republican Party. Again serving in the House (1861–71), he played an important role in making emancipation a Northern war aim in the American Civil War. In 1867 he helped prepare articles of impeachment against Pres. Andrew Johnson. He later wrote books and articles on reform causes, including women's suffrage.

Julian Alps Range of the eastern Alps. It extends southeast from the Carnic Alps in northeastern Italy to the city of Ljubljana, Slvn. The highest peak is Triglav (9,396 ft [2,864 m]), also the highest point in Slovenia.

Julian of Norwich *or* **Juliana of Norwich** (b. 1342, probably Norwich, Norfolk, Eng.—d. after 1416) English mystic. After being healed of a serious illness (1373), she wrote two accounts of her visions; her *Revelations of Divine Love* is remarkable for its clarity, beauty, and profundity. She spent her later life as a recluse in Norwich.

Juliana (Louise Emma Marie Wilhelmina) (b. April 30, 1909, The Hague, Netherlands—d. March 20, 2004, Baarn) Queen of The Netherlands (1948–80). During World War II she took refuge in Ottawa while her husband, Prince Bernhard, remained with Queen Wilhelmina's government, which had relocated to London. Returning to The Netherlands in 1945, Juliana acted as regent during her mother's illness and became queen when Wilhelmina abdicated. In 1980 she abdicated in favour of her daughter Beatrix.

Julio-Claudian dynasty (AD 14–68) Successors of Augustus, the first Roman emperor: Tiberius, Caligula, Claudius, and Nero. It was a loosely defined set of kin relations rather than a direct bloodline. Tiberius's rule was competent, with notable accomplishments, but it ended in cruel tyranny. The insane Caligula was wild and capricious. Under Claudius, Rome experienced marked development. Under Nero the empire prospered, but he was given to excesses, and his reign ended amid rebellion and civil war.

Julius II *orig.* **Giuliano della Rovere** (b. Dec. 5, 1443, Albisola, republic of Genoa—d. Feb. 21, 1513, Rome) Pope (1503–13). The nephew of Sixtus IV, he fled Rome in 1494 to escape assassination by Alexander VI. Elected pope in 1503, Julius set out to restore the Papal States, subjugating Perugia and Bologna (1508) and defeating Venice (1509) with the aid of the League of Cambrai. His first effort to expel the French from northern Italy failed, but a popular revolt drove them out in 1512, and Parma and Piacenza were added to the Papal States. The greatest art patron of all the popes, Julius was a close friend of Michelangelo, from whom he commissioned the sculpture of Moses and the paintings in the Sistine Chapel. He also commissioned Raphael's Vatican frescoes.

Julius Caesar See Julius Caesar

July Days (1917) Period in the Russian Revolution of 1917 during which Petrograd workers and soldiers staged armed demonstrations against the provisional government that resulted in a temporary decline of Bolshevik influence and in the formation of a new provisional government headed by Aleksandr Kerensky. To undermine Bolshevik popularity, the government produced evidence that Vladimir Ilich Lenin had ties with the German government. The public reacted against the Bolsheviks, Lenin fled to Finland, and Leon Trotsky and other leaders were jailed. The reorganized government was overthrown by the Bolsheviks in October.

July Plot *or* **Rastenburg Assassination Plot** Abortive attempt on July 20, 1944, by German military leaders to assassinate Adolf Hitler, seize control of the government, and seek more favourable peace terms from the Allies. According to plan, Col. Claus von Stauffenberg (1907–44) left a bomb in a briefcase in a conference room at the field headquarters at Rastenburg, East Prussia, where Hitler was meeting with top military aides. But the briefcase was pushed behind a table support, and Hitler survived the blast with minor injuries. Meanwhile, the other conspirators in Berlin failed to act. The chief conspirators, including Stauffenberg, Gen. Ludwig Beck, Gen. Erwin Rommel, and other top officers, were promptly shot or forced to commit suicide. In subsequent days, Hitler's police rounded up about 200 conspirators, who were shot, hanged, or viciously strangled.

July Revolution (1830) Insurrection that brought Louis-Philippe to the throne of France. It was precipitated on July 26 by Charles X's publication of restrictive ordinances contrary to the spirit of the Charter of 1814. Demonstrations were followed by three days of fighting (July 27–29), Charles's abdication, and the proclamation of Louis-Philippe as king. The bourgeoisie secured a political and social ascendancy that was to characterize the subsequent July Monarchy.

jump rope *or* **skip rope** Children's game in which players hold a rope (jump rope) at each end and twirl it in a circle, while one or more players jump over it each time it reaches its lowest point. Dating from the 19th century, it is traditionally a girl's sidewalk or playground game that usually involves the chanting of a counting rhyme (e.g., "One, two, touch my shoe"). There are many types of jumps, including single, double, and backward; in "double Dutch," two ropes are twirled simultaneously in opposite directions. Single-rope jumping, or rope skipping, is popular with boxers to develop the lungs and legs and improve coordination and footwork.

Junayd \jù-ˈnīd**, Shaykh** (b. 1430, Iranian Azerbaijan?—d. March 4, 1460, near the Kura River) Fourth head of the Ṣafavid order of Sufi mystics. He became head of the order on his father's death in 1447 and set out to turn a society known for piety and learning into a political force. The arming of his followers led to a conflict with Jahān Shāh (died 1467), ruler of Iranian Azerbaijan, and resulted in the expulsion of Junayd and his followers from Ardabīl, the traditional centre of the Ṣafavid order, in 1448. He continued his military adventurism in the lands of present-day Syria and Turkey and was finally killed in battle against a force of Christian Circassians. His policies were carried on by his son, Ḥaydar, and eventually culminated in the founding of the Ṣafavid dynasty under Junayd's grandson, Ismāʿīl I, assuring the dominance of Shīʿite Islam in Iran.

junco Any of several species of finchlike birds (genus *Junco*, family Fringillidae), about 6 in. (15 cm) long, of Canada and the U.S. Juncos are usually a shade of gray; they have white outer tail feathers that are flashed in flight to the accompaniment of snapping or twittering calls. They are common winter birds. Their favored habitat is mixed or coniferous forest, though they are often found in fields, thickets, and city parks.

Dark-eyed junco (*Junco hyemalis*)
STEVE AND DAVE MASLOWSKI

June beetle *or* **May beetle** *or* **June bug** Any insect of the genus *Phyllophaga*, belonging to a widely distributed, plant-feeding scarab beetle subfamily (Melolonthinae). These red-brown beetles commonly appear in the Northern Hemisphere on warm spring evenings and are attracted to lights. Heavy-bodied, they are 0.5–1 in. (1.2–2.5 cm) long and have shiny wing covers. They feed on foliage and flowers at night,

June beetle (*Phyllophaga rugosa*).
HARRY ROGERS

© 2006 Encyclopædia Britannica, Inc.

sometimes causing considerable damage. The larvae live in the soil, and can destroy crops and kill lawns and pastures by severing the grasses from their roots; they are considered excellent fish bait.

June Days (June 23–26, 1848) In French history, a brief and bloody civil uprising in Paris in the early days of the SECOND REPUBLIC. The new government instituted numerous radical reforms, but the new assembly, composed mainly of moderate and conservative candidates, was determined to cut costs and end risky experiments such as public works programs to provide for the unemployed. Thousands of Parisian workers—suddenly cut off from the state payroll—were joined by radical sympathizers and took to the streets in spontaneous protest. The assembly gave Gen. LOUIS-EUGÈNE CAVAIGNAC authority to suppress the uprising, and he brought up artillery against the protesters' barricades. At least 1,500 rebels were killed, 12,000 were arrested, and many were exiled to Algeria. See also REVOLUTIONS OF 1848.

Juneau \'jü-nō\ City (pop., 2000: 30,711), capital of Alaska, U.S. Located in southeastern Alaska, it was settled in 1880 when Joe Juneau and Richard Harris discovered gold nearby. Mining was important until the Alaska-Juneau gold mine closed in 1944. Juneau was made the state capital in 1959. Fishing, forestry, and government activities are important, as is tourism. In 1970 Juneau merged with Douglas, on an island across the channel, to form the largest U.S. city in area (3,108 sq mi [8,050 sq km]).

Jung \'yůŋ**, Carl (Gustav)** (b. July 26, 1875, Kesswil, Switz.—d. June 6, 1961, Küsnacht) Swiss psychiatrist. As a youth he read widely in philosophy and theology. After taking his medical degree (1902), he worked in Zürich with EUGEN BLEULER on studies of mental illness. From this research emerged Jung's notion of the *complex*, or cluster of emotionally charged (and largely unconscious) associations. Between 1907 and 1912 he was SIGMUND FREUD's close collaborator and most likely successor, but he broke with Freud over the latter's insistence on the sexual basis of neuroses. In the succeeding years Jung founded the field of ANALYTIC PSYCHOLOGY, a response to Freud's PSYCHOANALYSIS. Jung advanced the concepts of the introvert and extravert personality, archetypes, and the collective unconscious (the pool of human experience passed from generation to generation). He went on to formulate new psychotherapeutic techniques designed to reacquaint the person with his unique "myth" or place in the collective unconscious, as expressed in dream and imagination. Sometimes dismissed as disguised religion and criticized for its lack of verifiability, Jung's perspective nonetheless remains influential in religion and literature as well as psychiatry. His important works include *The Psychology of the Unconscious* (1912; revised as *Symbols of Transformation*), *Psychological Types* (1921), *Psychology and Religion* (1938), and *Memories, Dreams, Reflections* (1962).

jungle fowl Any of four species of Asian birds (genus *Gallus*) that differ from other species in the PHEASANT family in having, in the male, a fleshy comb, lobed wattles hanging below the bill, and a high-arched tail. The red jungle fowl is the ancestor of the CHICKEN. The cock has shining silky plumage, red on the head and back and green-black elsewhere; the hen is rusty brown with speckled neck and minimal comb.

junior college *or* **community college** Educational institution that provides up to two years of COLLEGE-level academic, technical, and vocational instruction with emphasis on career preparation. Roots of the junior college may be traced to the CHAUTAUQUA MOVEMENT and other adult-education programs created after the American Civil War. The first junior college opened in Joliet, Ill., in 1901. The vast majority of junior colleges are publicly supported; called community colleges, they offer a variety of flexible programs that are often nontraditional in style and content. They have pioneered in offering part-time study, evening sessions, instruction by television, weekend workshops, and other services for members of their communities. Students rarely live on campus. Graduates of junior or community colleges ordinarily earn an associate's degree. They then transfer to a four-year college or enter the workforce. See also CONTINUING EDUCATION.

juniper Any of about 60–70 species of aromatic evergreen trees or shrubs that make up the genus *Juniperus* of the CYPRESS family, found throughout the Northern Hemisphere. Juvenile leaves are needle-like; mature leaves are awl-shaped, spreading, and arranged in pairs or in whorls of three. Common juniper (*J. communis*) is a sprawling shrub whose fragrant, spicy-smelling berries are used to flavour foods and alcoholic beverages, particularly GIN. The fragrant wood of eastern red cedar (*J. virginiana*) is made into cabinets, fence posts, and pencils. *J. horizontalis* is a popular U.S. ornamental creeping juniper, and wood of the Mediterranean Phoenician juniper (*J. phoenicea*) is burned as incense.

Juniper berry (*Juniperus communis*)
INGMAR HOLMASEN

junk Classic Chinese sailing vessel of ancient unknown origin, still in wide use. High-sterned, with a projecting bow, the junk carries up to five masts on which are set square sails consisting of panels of linen or matting flattened by bamboo strips. Each sail can be spread or closed at a pull, like a venetian blind. The massive rudder takes the place of a keel. Chinese junks were sailing to Indonesian and Indian waters by the early Middle Ages.

Modern junk with traditional matting sails and a European-type jib

junk bond BOND paying a high yield but also presenting greater risk than comparable securities. Junk bonds can be identified through the lower grades assigned by rating services (e.g., BBB instead of AAA for the highest quality bonds). Because the possibility of default is great, junk bonds are usually considered too risky for investment by the large institutional investors (SAVINGS AND LOAN ASSOCIATIONS, PENSION funds, INSURANCE companies, and MUTUAL FUNDS) that provide U.S. corporations with much of their investment capital. Junk bonds are often issued by smaller, newer companies.

Juno In ROMAN RELIGION, the chief goddess and female counterpart of JUPITER. She was identified with the Greek goddess HERA. With Jupiter and MINERVA she was a member of the Capitoline triad of deities traditionally introduced into Rome by the ETRUSCANS. She was connected with all aspects of the lives of women, particularly marriage. Individualized, she became a female guardian spirit; as every man had his GENIUS, so every woman had her juno. Her temple in Rome eventually housed the Roman mint, and she was invoked as the savior of the state. Her sacred bird was the peacock.

Jupiter *or* **Jove** Chief god of ancient Rome and Italy. Like his Greek counterpart, ZEUS, he was worshiped as a sky god. With JUNO and MINERVA he was a member of the triad of deities traditionally believed to have been introduced into Rome by the ETRUSCANS. Jupiter was associated with treaties, alliances, and oaths; he was the protecting deity of the republic and later of the reigning emperor. His oldest temple was on the Capitoline Hill in Rome. He was worshiped on the summits of hills throughout Italy, and all places struck by lightning became his property. His sacred tree was the oak.

Jupiter Fifth PLANET from the Sun, the largest nonstellar object in the SOLAR SYSTEM. It has 318 times the mass and more than 1,400 times the volume of Earth. Its enormous mass gives it nearly 2.5 times the gravity of Earth (measured at the top of Jupiter's atmosphere), and it exerts strong effects on other members of the solar system. It is responsible for the KIRKWOOD GAPS in the asteroid belt and changes in the orbits of COMETS; it may act as

© 2006 Encyclopædia Britannica, Inc.

a "sweeper," pulling in bodies that might otherwise collide with other planets. Jupiter has more than 60 moons (see GALILEAN SATELLITE) and a diffuse ring system discovered in 1979 by the VOYAGER spacecraft. The planet is a gas giant, composed mainly of hydrogen and helium in proportions near those of the Sun, which it orbits every 11.9 years at an average distance of 483 million mi (778 million km). Its rapid rotation (9 hr 55.5 min) acts on electric currents to give it the largest magnetic field of any of the planets and causes intense storms, including one that has lasted hundreds of years (the GREAT RED SPOT). Little is known of its interior, but it is presumed to have a deep layer of metallic hydrogen and a dense core. Its central temperature is estimated to be 45,000 °F (25,000 °C); it radiates twice as much heat as it receives from the Sun, probably largely heat left over from its formation.

Jupiter Dolichenus \ˌdō-li-ˈkā-nəs\ God of a Roman mystery cult. He was originally a Hittite-Hurrian god of fertility and thunder worshiped at Doliche in Anatolia. He also became identified with the Zoroastrian god AHURA MAZDA as a lord of the universe. Returning legions carried his cult to Rome, where it became popular in the 2nd–3rd century AD. In Roman MYSTERY RELIGION he was believed to control military success and safety. He was usually represented standing on a bull holding a double ax and thunderbolt.

Jura Mountains Mountain range, central Europe. It extends 225 mi (360 km) along the boundary of France and Switzerland. Its highest peak is Mount Neige, some 5,650 ft (1,700 m) high, located in France. Its western slopes are the source of the DOUBS and Ain rivers in France.

Jurassic Period Interval of geologic time, 206–144 million years ago, that is one of the three major divisions of the MESOZOIC ERA, preceded by the TRIASSIC PERIOD and followed by the CRETACEOUS. During the Jurassic, PANGEA began to break up into the present-day continents. Marine invertebrates flourished, and large reptiles dominated many marine habitats. On land, FERNS, MOSSES, CYCADS, and CONIFERS thrived, some developing flowerlike structures in place of cones. The DINOSAURS rose to supremacy on land, and by the end of the Jurassic the largest species had evolved. ARCHAEOPTERYX, the first primitive bird, appeared before the end of the period. Early mammals, tiny shrewlike creatures that appeared near the close of the preceding Triassic, managed to survive and evolve.

Jurchen dynasty See JUCHEN DYNASTY

jurisdiction Authority of a court to hear and determine cases. This authority is constitutionally based. Examples of judicial jurisdiction are: appellate jurisdiction, in which a superior court has power to correct legal errors made in a lower court; concurrent jurisdiction, in which a suit might be brought to any of two or more courts; and federal jurisdiction. A court may also have authority to operate within a certain territory. Summary jurisdiction, in which a magistrate or judge has power to conduct proceedings resulting in a conviction without jury trial, is limited in the U.S. to petty offenses.

jurisprudence Science or philosophy of law. Jurisprudence may be divided into three branches: analytical, sociological, and theoretical. The analytical branch articulates axioms, defines terms, and prescribes the methods that best enable one to view the legal order as an internally consistent, logical system. The sociological branch examines the actual effects of the law within society and the influence of social phenomena on the substantive and procedural aspects of law. The theoretical branch evaluates and criticizes law in terms of the ideals or goals postulated for it.

jury In law, a body of individuals selected and sworn to inquire into a question of fact and to render a verdict according to the evidence. Juries may deal with questions of law in addition to questions of fact, though federal juries in the U.S. are usually limited to dealing with questions of fact. The modern jury can vary in size depending on the proceeding but usually has either 6 or 12 members. By U.S. law, federal grand juries and petit juries must be "selected at random from a fair cross-section of the community in the district or division wherein the court convenes." State jury selection varies somewhat. The SUPREME COURT OF THE UNITED STATES has stated in a series of decisions that a jury is to be composed of "peers and equals" and that systematic exclusion from a jury of a particular class of people (e.g., on the basis of sex, skin colour, or ancestry) violates the EQUAL-PROTECTION clause of the 14th Amendment to the CONSTITUTION OF THE UNITED STATES and the defendant's right to a jury trial. A defendant is not, however, entitled to a jury of any particular composition. See also GRAND JURY; PETIT JURY; VOIR DIRE.

just-in-time manufacturing (JIT) Production-control system, developed by TOYOTA MOTOR CORP. and imported to the West, that has revolutionized MANUFACTURING methods in some industries. By relying on daily deliveries of most supplies, it eliminates waste due to overproduction and lowers warehousing costs. Supplies are closely monitored and quickly altered to meet changing demands, and small and accurate resupply deliveries must be made just as they are needed. Because there are no spares, the components must be free of defects. Plants wholly dedicated to the JIT concept require a logistics staff to schedule production, balancing product demand with plant capacity and availability of inputs. JIT has worked most effectively for large automobile manufacturers, which may have several thousand suppliers feeding parts into 100 factories that assemble components for 20 assembly lines.

just war theory Set of conditions under which a resort to war is morally legitimate (*jus ad bellum*); also, rules for the moral conduct of war (*jus in bello*). Among the proposed conditions for the just resort to war are that the cause be just (e.g., self-defense against an attack or the threat of imminent attack), that the authority undertaking the war be competent, that all peaceful alternatives be exhausted, and that there be a reasonable hope of success. Two of the most important conditions for the just conduct of war are that the force used be "proportional" to the just cause the war is supposed to serve (in the sense that the evil created by the war must not outweigh the good represented by the just cause) and that military personnel be discriminated from innocents (noncombatant civilians), who may not be killed. The concept of just war was developed in the early Christian church; it was discussed by St. AUGUSTINE in the 4th century and was still accepted by HUGO GROTIUS in the 17th century. Interest in the concept thereafter declined, though it was revived in the 20th century in connection with the development of nuclear weapons (the use of which, according to some, would violate the conditions of proportionality and discrimination) and the advent of "humanitarian intervention" to put an end to acts of genocide and other crimes committed within the borders of a single state.

justice In philosophy, the concept of a proper proportion between a person's deserts (what is merited) and the good and bad things that befall or are allotted to him or her. ARISTOTLE's discussion of the virtue of justice has been the starting point for almost all Western accounts. For him, the key element of justice is treating like cases alike, an idea that has set later thinkers the task of working out which similarities (need, desert, talent) are relevant. Aristotle distinguishes between justice in the distribution of wealth or other goods (distributive justice) and justice in reparation, as, for example, in punishing someone for a wrong he has done (retributive justice). The notion of justice is also essential in that of the just state, a central concept in POLITICAL PHILOSOPHY. See also LAW.

justice of the peace In Anglo-American legal systems, a local magistrate empowered chiefly to administer justice in minor cases. In the U.S., justices of the peace are elected or appointed and hear minor civil matters and petty criminal cases. They may also officiate at weddings, issue arrest warrants, deal with traffic offenses, and hold inquests.

justification In Christian theology, the passage of an individual from SIN to a state of GRACE. Some theologians use the term to refer to the act of God in extending grace to the sinner, while others use it to define the change in the condition of a sinner who has received grace. St. PAUL used the term to explain how people moved from sin to grace through the death and resurrection of JESUS and not through any human effort. St. AUGUSTINE saw it as an act of God that makes sinners righteous, while MARTIN LUTHER stressed justification through faith alone.

Justin II (d. Oct. 4, 578) Byzantine emperor (565–78). He tolerated the MONOPHYSITE HERESY until 571, then began to persecute its followers. Despite an alliance with the Franks, Justin lost parts of Italy to the Lombards after 568. He also suffered defeats at the hands of the AVARS, to whom he promised to pay tribute (574), and the Western Turks, who seized lands in the Crimea. He invaded Persia in 572, but the Persians repulsed his army and invaded Byzantine territory, capturing Dara in 573. He became insane, and his general Tiberius (his adopted son) was effective ruler of the empire after 574.

Justin Martyr, Saint (b. c. 100, Flavia Neapolis, Palestine—d. c. 165, Rome; feast day June 1) Early Christian Apologist and theologian. A pagan born in Palestine, he studied philosophy before becoming a Christian in 132, probably at Ephesus. He then spent years as an itinerant preacher and teacher. One of the earliest Christian APOLOGISTS, he was the

© 2006 Encyclopædia Britannica, Inc.

first to blend Greek philosophy and Christian doctrine. He wrote two *Apologies* addressed to Roman emperors, which asserted that Christian faith can be in harmony with human reason and that Christianity is a purer form of the truth glimpsed in pagan philosophy. In his *Dialogue with Trypho* he tried to prove the truth of Christianity to a scholarly Jew named Trypho. While living in Rome, he was denounced as subversive and condemned to death.

Justinian I *orig.* **Petrus Sabbatius** (b. 483, Tauresium, Dardania—d. Nov. 14, 565, Constantinople) Byzantine emperor (527–565). Determined to regain former Roman provinces lost to barbarian invaders, Justinian conquered the Vandals in northern Africa in 534 and enjoyed an initial victory over the Ostrogoths in Italy in 540. War with the Goths, however, lasted another two decades and brought great devastation before Justinian gained control of the whole of Italy in 562 . He was unable to prevent Bulgars, Slavs, Huns, and Avars from carrying out raids along the empire's northern frontier. He also carried on an intermittent war with Persia until 561. He reorganized the imperial government and commissioned the reform and codification of the great body of Roman law known as the Code of Justinian. His efforts to root out corruption triggered a revolt in Constantinople in 532 that nearly toppled his government; his wife, Theodora, helped him put down the revolt. Like all Roman emperors, Justinian was an active builder, and his many public works projects included the reconstruction of cities and the construction of the church of Hagia Sophia, one of the finest and most famous buildings in the world.

Justinian I, detail of a mosaic, 6th century; in the Basilica of San Vitale, Ravenna
ALINARI-GIRAUDON FROM ART RESOURCE

Justinian, Code of Collections of laws and legal interpretations developed under the sponsorship of the Byzantine emperor Justinian I from 529 to 565. Strictly speaking, they did not constitute a new legal code. Rather, Justinian's committees of jurists provided basically two reference works that contained collections of past laws and extracts of the opinions of the great Roman jurists. Also included were an elementary outline of the law and a collection of Justinian's new laws.

jute Either of two herbaceous annuals (*Corchorus capsularis* and *C. olitorius*, in the linden family), or their fibre. The plants grow 10–12 ft (3–4 m) high and have long, serrated, tapered, light green leaves and small yellow flowers. Jute has been grown and processed in the Bengal area of India and Bangladesh since ancient times. Its biggest use is in burlap sacks and bags, which are used to ship and store many agricultural products. High-quality jute cloths are used as backing for tufted carpets and hooked rugs. Coarser jute fibres are made into twines, rough cordage, and doormats.

Jutland *Danish* **Jylland** \'yüt-ˌlən\ Peninsula, northern Europe. Forming the Danish mainland and the German state of Schleswig-Holstein, it is bounded to the west and north by the North Sea. Politically, its name applies only to the mainland of Denmark. It has an area of 11,496 sq mi (29,775 sq km) and is divided into several administrative regions. In World War I, the Battle of Jutland was fought off its coast.

Jutland, Battle of (May 31–June 1, 1916) Only major encounter between the British and German fleets in World War I, fought in the Skagerrak, an arm of the North Sea off the coast of Jutland (Denmark). The battle came to an indecisive end, and both sides claimed victory. Germany destroyed and crippled more ships and men, but Britain retained control of the North Sea. The tactics of the British admiral John R. Jellicoe were criticized at the time, but his strategic victory left the German high-seas fleet ineffective for the rest of the war.

Juvenal \'jü-və-nəl\ *orig.* **Decimus Junius Juvenalis** (b. c. AD 55—d. 130) Roman poet. He is believed to have been born into a wealthy family, to have become an army officer, and to have grown embittered by his failure to receive a promotion. He is chiefly known for his 16 *Satires*, indignant attacks on human brutality and folly, particularly the corruption of Roman society under Domitian and his more humane successors Nerva, Trajan, and Hadrian. Juvenal's verses are technically fine, vivid, and often ruthless, and they have been admired and imitated since the 5th century. Many of his phrases and epigrams ("bread and circuses," "who will guard the guards themselves?" etc.) have entered common parlance.

juvenile court Special court handling problems of delinquent, neglected, or abused children. Two types of cases are processed by a juvenile court: civil matters, often concerning care of an abandoned or impoverished child, and criminal matters, arising from antisocial behaviour by the child. Most statutes provide that all persons under a given age (often 18 years) must first be processed by the juvenile court, which can then, at its discretion, assign the case to an ordinary court. Before the creation of the first juvenile court, in Chicago in 1899, and the subsequent creation of other such courts in the United States and other countries (e.g., Canada in 1908; England in 1908; France in 1912; Russia in 1918; Poland in 1919; Japan in 1922; and Germany in 1923), juveniles were tried in the same courts as adults.

© 2006 Encyclopædia Britannica, Inc.

K2 *or* **Dapsang** \ˌdäp-ˈsäng\ Mountain in the Karakoram Range. The world's second highest peak, it reaches 28,251 ft (8,611 m); it lies partly in China and partly in the Pakistani-administered portion of the Kashmir region. It was discovered and measured in 1856 by Col. T.G. Montgomerie and was given the symbol K2 because it was the second peak measured in the Karakoram Range. In 1954 the Italians Achille Compagnoni and Lino Lacedelli became the first climbers to reach its summit.

Ka'bah Most sacred Muslim shrine, located near the centre of the Great Mosque in Mecca. All Muslims face toward it in their daily prayers. The cube-shaped structure, made of gray stone and marble, has its corners roughly oriented to the points of the compass; the interior contains only pillars and silver and gold lamps. Pilgrims to Mecca walk around the Ka'bah seven times and on its eastern side touch the Black Stone of Mecca, which may date from the pre-Islamic religion of the Arabs. Tradition holds that the Ka'bah was built by Abraham and Ishmael. In 630 Muhammad purged the place of its pagan idols and rededicated it to Islam.

Kabalega National Park \ˌkä-bä-ˈlā-gä\ National park, northwestern Uganda. Established in 1952, it occupies 1,483 sq mi (3,840 sq km) of rolling grassland. Its central feature is the Kabalega Falls on the lower Victoria Nile River. The falls are about 20 ft (6 m) wide and drop 130 ft (40 m) in the first of three cascades.

Kabbala *or* **Cabbala** \kä-ˈbä-lə\ Jewish mysticism as it developed in the 12th century and after. Essentially an oral tradition, it laid claim to secret wisdom of the unwritten Torah communicated by God to Adam and Moses. It provided Jews with a direct approach to God, a notion regarded as heretical and pantheistic by Orthodox Judaism. A major text was the 12th-century *Book of Brightness*, which introduced the doctrine of transmigration of souls to Judaism and provided Kabbala with extensive mythical symbolism. In 13th-century Spain the tradition included the *Book of the Image*, which asserted that each cycle of history had its own Torah, and the *Book of Splendour*, which dealt with the mystery of creation. In the 16th century the centre of Kabbala was Safed, Galilee, where it was based on the esoteric teachings of the greatest of all Kabbalists, Isaac ben Solomon Luria. The doctrines of Lurianic Kabbala, which called for Jews to achieve a cosmic restoration (Hebrew: *tiqqun*) through an intense mystical life and an unceasing struggle against evil, were influential in the development of modern Hasidism.

Kabila \kə-ˈbē-lə**, Laurent (Désiré)** (b. 1939, Jadotville, Belgian Congo—d. Jan. 18?, 2001, en route to Harare, Zimb.) Rebel leader and president (1997–2001) of Congo (Kinshasa). He attended schools abroad, including military school in China, before participating in several Marxist-inspired uprisings in Zaire in the 1960s and '70s. He later became a trader in precious minerals and ivory. In the Rwandan civil war, Kabila collaborated with Paul Kagame in attacking Hutu guerrilla groups in Zaire as well as Zairean government forces. His troops ousted Mobutu Sese Seko in 1997, and Kabila proclaimed himself president and renamed the country. His repressive policies soon led to a new and larger war, in which many African states sent troops and aid to both sides. His assassination was apparently engineered by his own officers; his son Joseph (b. 1971) succeeded him.

Kabir \kə-ˈbir\ (b. 1440, Varanasi, Jaunpur, India—d. 1518, Maghar) Indian mystic and poet. A weaver who lived in Benares, he preached the essential oneness of all religions and was critical of both Hinduism and Islam for meaningless rites and mindless repetition. From Hinduism he accepted the ideas of reincarnation and the law of karma but rejected idolatry, asceticism, and the caste system. From Islam he accepted the idea of one God and the equality of all men. Revered by both Hindus and Muslims, he is also considered a forerunner of Sikhism, and some of his poetry was incorporated into the Adi Granth. His ideas led to the founding of several sects, including the Kabir Panth, which regards Kabir as its principal guru or as a divinity.

kabuki \kä-ˈbü-kē\ Popular Japanese entertainment that combines music, dance, and mime in highly stylized performances. The word is written using three Japanese characters—*ka* ("song"), *bu* ("dance"), and *ki* ("skill"). Kabuki dates from the end of the 16th century, when it developed from the nobility's nō theatre and became the theatre of townspeople. In its early years it had a licentious reputation, its actors often being prostitutes; women and young boys were consequently forbidden to perform, and kabuki is today performed by an adult all-male cast. Its texts, unlike nō texts, are easily understood by its audience. The lyrical but fast-moving and acrobatic plays, noted for their spectacular staging, elaborate costumes, and striking makeup in place of masks, are vehicles in which the actors demonstrate a wide range of skills. Kabuki employs two musical ensembles, one onstage and the other offstage. It shares much of its repertoire with bunraku, a traditional puppet theatre.

Kabul \ˈkä-bəl\ City (pop., 1993 est.: 700,000), capital of Afghanistan. Located on the Kābul River in a valley strategically located between mountain passes, it has existed for some 3,500 years. It became the capital of the Mughal dynasty in the 16th century, and it remained under Mughal rule until 1738, when it was captured by the Iranian conqueror Nādir Shah. Kabul has been the capital of Afghanistan since 1776. When the Soviet Union invaded Afghanistan in 1979, it established a military command in Kabul. After the Soviet withdrawal in 1989, factional fighting among Afghan guerrillas continued intermittently and the city suffered widespread destruction. In 1996 the Taliban captured Kabul and imposed an austere form of Islamic rule. The city began to recover from years of violence only when the Taliban government was overthrown in 2001.

Kābul River River in eastern Afghanistan and northwestern Pakistan. Rising west of the city of Kabul, it flows east into Pakistan and, after a course of 435 mi (700 km), joins the Indus River northwest of Islamabad. The Kābul River valley is a natural route for travel between Afghanistan and Pakistan; Alexander the Great used it to invade India in the 4th century BC. For much of its course, the river is tapped for irrigation.

Kabyle \kə-ˈbīl\ Berber people of northeastern Algeria. Most are Muslim, though a few are Christian. They are predominantly agricultural, growing grains and olives and herding goats. Village government is run by an assembly of adult males. Villages are divided into clans, and the society is organized into classes. The current population is about 2.5 to 3 million.

Kachchh, Rann of *or* **Rann of Kutch** \ˈkəch\ Large salt marsh, west-central India and southern Pakistan. The northern portion, Great Rann, occupies an area of 7,000 sq mi (18,000 sq km) in Gujarat state, India. The eastern section, Little Rann, occupies 2,000 sq mi (5,100 sq km) of Gujarat. Originally an extension of the Arabian Sea, it has been closed off by centuries of silting. A 1965 dispute between India and Pakistan over the boundary line of Great Rann ended when an international tribunal awarded about 10% of the border area to Pakistan and the remainder to India.

Kachin \kä-ˈchin\ Any member of a group of tribal peoples occupying parts of northeastern Myanmar and contiguous areas of India (Arunachal Pradesh and Nagaland) and China (Yunnan). Numbering more than 700,000, they speak a variety of languages of the Tibeto-Burman group of Sino-Tibetan languages. Traditional Kachin society largely subsisted on the shifting cultivation of hill rice, supplemented by the proceeds of banditry and feudal warfare. The traditional Kachin religion is a form of animistic ancestor cult entailing animal sacrifice.

kachina \kə-ˈchē-nə\ Ancestral spirit of the Pueblo Indians. There are more than 500 of these spirits, who

Hopi kachina of *laqán*, or squirrel spirit, *c.* 1950; in the Museum of the American Indian, Heye Foundation, New York City

act as intermediaries between humans and the gods. Each tribe has its own kachinas, which are believed to reside with a tribe for half of each year. They can be seen by the community if men properly perform a ritual while wearing kachina masks. The spirit depicted on the mask is thought to be actually present with the performer, temporarily transforming him. Kachinas are also represented by small wooden dolls, carved and decorated by the men of the tribe.

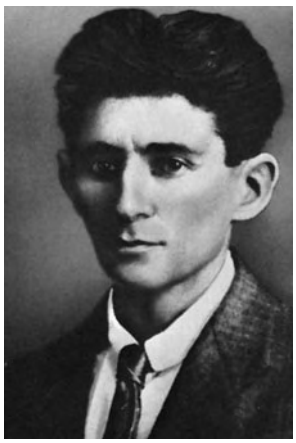
Kaczynski \kə-'zin-skē**, Theodore** *known as* **the Unabomber** (b. May 22, 1942, Evergreen Park, Ill., U.S.) U.S. criminal. He attended Harvard University and earned a doctorate in mathematics from the University of Michigan. He taught at the University of California-Berkeley (1967–69) then abruptly left for rural Montana, where he lived in a tiny, isolated shack. Over a period of 17 years, he sent mail bombs to people he perceived as enemies of humanity, most of them professors and researchers in science and technology, killing 3 people and injuring 23. His manifesto excoriating industrial society was published widely in 1995. Arrested in 1996 on a tip from his younger brother, he was sentenced to life in prison.

Kádár \'kȧ-ˌdȧr\ **János** *orig.* **Czermanik János** (b. May 26, 1912, Fiume, Hung.—d. July 6, 1989, Budapest) Premier of Hungary (1956–58, 1961–65) and first secretary (1956–88) of Hungary's Communist Party. He joined the then-illegal Communist Party in 1931 and entered the Hungarian Politburo in 1945. In 1950 he came into conflict with the Stalinists and was expelled from the party and jailed (1951–53). Rehabilitated in 1954, he joined the short-lived government of Nagy Imre. After Soviet troops took over the country in 1956, Kádár formed a new government with Soviet backing and quelled a popular revolt. He later convinced the Soviet Union to withdraw its troops and allow Hungary a modicum of internal independence.

Kadare, Ismail (b. Jan. 28, 1936, Gjirokastër, Alb.) Albanian novelist and poet. The son of a post-office worker, Kadare became a journalist. Unhappy with the political environment in Albania, he eventually made his home in Paris. Among his better-known works are the novels *The General of the Dead Army* (1963), about post-World War II Albania, and *The Castle* (1970), which explores Albanian nationalism. The stories in *Elegy for Kosovo* (1999) concern a 14th-century battle between Balkan leaders and the Ottoman Empire. He was the only Albanian writer to have an international following in the 20th century.

Kaddish \'kä-dish\ Jewish doxology (hymn of praise to God) that is usually recited in Aramaic at the end of principal sections of all synagogue services. Originally recited in the rabbinical academies, it later became a regular feature of the synagogue service. The prayer expresses, in addition to the praise of God, the plea for the speedy realization of the messianic age. The prayer's association with the arrival of the messiah and the resurrection of the dead led to its becoming the prayer of mourners. There are four other forms of the Kaddish used in worship services.

Kadesh \'kā-ˌdesh\ Ancient city, western Syria. Located just southwest of modern Ḥimṣ, it was seized by the Egyptian king Thutmose III in the 15th century BC. It remained an outpost of Egypt until it came under Hittite rule in the mid-14th century BC. The Egyptian king Seti I captured the city, and in 1275 BC it was the scene of a battle between Ramses II and the Hittite Muwatallis. After invasion by the Sea Peoples c. 1185 BC, Kadesh disappeared from history.



Kadesh-barnea *or* **Kadesh** City of ancient Palestine. Its precise location is unknown, but it was situated in the country of the Amalekites, southwest of the Dead Sea and on the western edge of the wilderness of Zin. It twice served as an encampment for the Israelites.

Kadet See Constitutional Democratic Party

Kaduna River \kä-'dü-nä\ River, central Nigeria. The main tributary of the Niger River, it rises on the Jos Plateau, flowing northwest and then southwest before completing its 340-mi (550-km) course at the Niger in Mureji. The Kaduna (meaning "crocodiles" in the Hausa language) is navigable only part of the year.

Kael \'kāl**, Pauline** (b. June 19, 1919, Petaluma, Calif., U.S.—d. Sept. 3, 2001, Great Barrington, Mass.) U.S. film critic. She managed an art-film theatre (1955–60) in Berkeley, Calif., while writing film reviews for magazines and broadcasting her reviews on network radio. After a collection of her reviews and essays, *I Lost It at the Movies* (1965), gained her national attention, she moved to New York and became film critic for *The New Yorker* (1968–91). Her witty, biting, highly opinionated, and sharply focused reviews (of which five more collections were eventually published) made her arguably the most influential American film critic of her time.

Kafka \'käf-kä**, Franz** (b. July 3, 1883, Prague, Bohemia, Austria-Hungary—d. June 3, 1924, Kierling, near Vienna, Austria) Czech writer who wrote in German. Born into a middle-class Jewish family, he earned a doctorate and then worked successfully but unhappily at a government insurance office from 1907 until he was forced by a case of tuberculosis to retire in 1922. The disease caused his death two years later. Hypersensitive and neurotic, he reluctantly published only a few works in his lifetime, including the symbolic story *The Metamorphosis* (1915), the allegorical fantasy *In the Penal Colony* (1919), and the story collection *A Country Doctor* (1919). His unfinished novels *The Trial* (1925), *The Castle* (1926), and *Amerika* (1927), published posthumously against Kafka's wishes, express the anxieties and alienation of 20th-century humanity. His visionary tales, with their inscrutable mixture of the normal and the fantastic, have provoked a wealth of interpretations. Kafka's posthumous reputation and influence have been enormous, and he is regarded as one of the great European writers of the 20th century.

Kafka
ARCHIV FUR KUNST UND GESCHICHTE, BERLIN

Kafue \kä-'fü-ā\ **National Park** National park, south-central Zambia. Located west of Lusaka, it was established in 1950. It occupies an area of 8,650 sq mi (22,400 sq km) and consists of a vast plateau, situated along the middle reaches of the Kafue River. The park is noted for its lush vegetation and abundant wildlife, including hippopotamuses, zebras, elephants, black rhinoceroses, and lions. Safaris are conducted on foot.

Kafue River River rising on the Democratic Republic of the Congo-Zambia border. It meanders south and eventually flows southeast to join the Zambezi River near Chirundu, Zimbabwe, after a course of 600 mi (960 km). It cuts through the plateau of central Zambia, and its basin contains Kafue National Park. It is one of Zambia's major rivers, and its waters are used for irrigation and hydroelectric power.

Kagame \kä-'gä-mā**, Paul** (b. October 1957, Rwanda) President of Rwanda from 2000. An ethnic Tutsi, Kagame grew up in exile in Uganda, where in 1986 he helped overthrow Milton Obote in favour of Yoweri Museveni. In 1990 he helped direct an unsuccessful coup in Rwanda, and following the 1994 genocide that left almost one million Rwandans dead (most of them Tutsi), he assumed control of the joint Tutsi-Hutu opposition forces that soon controlled all of Rwanda. In July 1994 he was named vice president and minister of defense under Hutu president Pasteur Bizimungu. After Bizimungu resigned in 2000, Kagame was named president. In 1997 he was instrumental in the overthrow of Mobutu Sese Seko in neighbouring Zaire (Congo) and the installation of Laurent Kabila as president.

Kaganovich \kə-gə-'nȯ-vich**, Lazar (Moiseyevich)** (b. Nov. 22, 1893, Kabany, near Kiev, Ukraine, Russian Empire—d. July 25, 1991, Moscow, Russia, U.S.S.R.) Soviet political leader. He joined the Bolsheviks in 1911 and became head of the Soviet government of Tashkent in 1920. As head of the Moscow party organization (1930–35), he brought it firmly under Joseph Stalin's control and with Vyacheslav Molotov formed the core of Stalin's "post-purge" Politburo (see purge trials). Until 1953 he was largely responsible for heavy industry in the Soviet Union. Under Nikita Khrushchev, he held administrative posts, but he opposed de-Stalinization and joined the unsuccessful attempt to depose Khrushchev in 1957, as a result of which he lost all his offices.

Kagera River \kä-'gā-rä\ River, northwestern Tanzania. The most remote headstream of the Nile River and the largest tributary of Lake Victoria, it rises in Burundi near the northern tip of Lake Tanganyika and flows north, constituting the boundary between Tanzania and Rwanda. Turning

© 2006 Encyclopædia Britannica, Inc.

east, it forms the boundary between Tanzania and Uganda before emptying into Lake Victoria. It is about 250 mi (400 km) long.

kagura \'kä-gü-ˌrä\ In Shintō, a traditional style of music and dancing used in religious ceremonies. Kagura dances dedicated to native deities are a reenactment of the propitiatory dance that lured the sun goddess Amaterasu from her cave in ancient myth. Largely unchanged for the past 1,500 years, the dances are performed to the accompaniment of chants, drums, brass gongs, and flutes. The music is of two types: one to praise the spirits or seek their aid, the other to entertain the gods.

Kahlo \'kä-lō\ (y Calderón de Rivera), (Magdalena Carmen) Frida (b. July 6, 1907, Coyoacán, Mex.—d. July 13, 1954, Coyoacán) Mexican painter. The daughter of a German Jewish photographer, she had polio as a child and at 18 suffered a serious bus accident. She subsequently underwent some 35 operations; during her recovery, she taught herself to paint. She is noted for her intense self-portraits, many reflecting her physical ordeal. Like many artists working in post-revolutionary Mexico, Kahlo was influenced by Mexican folk art; this is apparent in her use of fantastical elements and bold use of colour, and in her depictions of herself wearing traditional Mexican, rather than European-style, dress. Her marriage to painter Diego Rivera (from 1929) was tumultuous but artistically rewarding. The Surrealists André Breton and Marcel Duchamp helped arrange exhibits of her work in the U.S. and Europe, and though she denied the connection, the dreamlike quality of her work has often led historians to identify her as a Surrealist. She died at 47. Her house in Coyoacán is now the Frida Kahlo Museum.

Kahn, Albert (b. March 21, 1869, Rhaunen, Westphalia—d. Dec. 8, 1942, Detroit, Mich., U.S.) German-born U.S. industrial architect. In 1904 he received a commission for the Packard Motor Car Co. auto factory; his design, with its reinforced concrete frame, represented an innovative departure from traditional masonry factory construction. Kahn was the principal architect for most of the large American automobile companies for 30 years. His firm designed more than a thousand projects for Ford, among them the fabrication and assembly plant in River Rouge, Mich., which was one of the largest industrial complexes in the world. By 1937 his firm was producing 19% of all architect-designed industrial buildings in the U.S., and he received commissions for factories, foundries, and warehouses from all continents. Kahn's firm designed 521 factories in the U.S.S.R. and trained more than a thousand Soviet engineers during the 1930s.

Kahn, Herman (b. Feb. 15, 1922, Bayonne, N.J., U.S.—d. July 7, 1983, Chappaqua, N.Y.) U.S. physicist and strategist. He studied at the California Institute of Technology and joined the RAND Corp., where he studied the application to military strategy of new analytic techniques such as game theory, operations research, and systems analysis. He won public notice with *On Thermonuclear War* (1960), in which he contended that thermonuclear war differs only in degree from conventional war and ought to be analyzed and planned in the same way. In 1961 he established the Hudson Institute for research into matters of national security and public policy.

Kahn, Louis I(sadore) (b. Feb. 20, 1901, Osel, Estonia, Russian Empire—d. March 17, 1974, New York, N.Y., U.S.) Estonian-born U.S. architect. He came to the U.S. as a child and graduated from the University of Pennsylvania. One of the century's most original architects, Kahn turned from the International Style to a timeless, elegant Brutalism evocative of ancient ruins. His Richards Medical Research Building (1960–65) at the University of Pennsylvania isolated "servant" spaces (stairwells, elevators, vents, and pipes) in four towers distinct from "served" spaces (laboratories and offices). His fortresslike National Assembly Building in Dhaka, Bangl. (1962–74), utilized geometric shapes to admit light to its inner domed mosque. Like R. Buckminster Fuller, Kahn was concerned about wasteful use of natural resources; his urban-planning schemes proposed geodesic skyscrapers and huge car "silos." He taught at Yale University (1947–57) and the University of Pennsylvania (1957–74), where appreciation for his intellect gained him a cult status.

Kahneman, Daniel (b. March 5, 1934, Tel Aviv, Israel) Israeli-born psychologist. He attended Hebrew University (B.A., 1954) in Jerusalem and the University of California, Berkeley (Ph.D., 1961). He later taught at such institutions as Princeton University and was on the editorial board of several academic journals. In the late 1960s he began conducting research to increase understanding of how people make economic decisions. His work with Amos Tversky on decision making under uncertainty resulted in the formulation of a new branch of economics, prospect theory. Using surveys and experiments, Kahneman showed that people were incapable of analyzing complex decision situations when the future consequences were uncertain. Instead, they relied on heuristic, or rule-of-thumb, shortcuts. In 2002 he shared the Nobel Prize for Economics with Vernon L. Smith.

Kaibara Ekiken \'kī-bä-rä-e-'kē-ˌken\ (b. Dec. 17, 1630, Fukuoka, Japan—d. Oct. 5, 1714, Japan) Japanese philosopher, travel writer, and pioneer botanist. Trained as a physician, he left the medical profession in 1657 to study the Neo-Confucian writings of Zhu Xi. He wrote about 100 philosophical works, which stressed the hierarchical nature of society and translated Confucian doctrine into terms understood by Japanese of all social classes. His writings include *The Great Learning for Women*, a tract on obedience long considered the most important ethical text for Japanese women. He is regarded as the father of botany in Japan.

Kaieteur \'kī-ə-ˌtůr\ **Falls** Cataract on the Potaro River, west-central Guyana. After a sheer drop of 741 ft (226 m), the falls pass into a gorge 5 mi (8 km) long, which descends another 81 ft (25 m). The falls are 300 to 350 ft (90 to 105 m) wide at the top and are the central feature of Kaieteur National Park (1930).

Kaifeng \'kī-'fəŋ\ *or* **K'ai-feng** City (pop., 2003 est.: 594,887), northern Henan province, China. In the 4th century BC it became the capital of the state of Wei, and the first of its canals was built. It was destroyed by the Qin dynasty in the late 3rd century BC, and until the 5th century AD it was only a market town. It became an important commercial centre in the 7th century, enriched by traffic along the Grand Canal, and it was the capital of the Five Dynasties and the Song dynasty. Kaifeng was the site of China's only well-documented Jewish community (12th–16th centuries).

Kaikei \'kī-ˌkā\ (fl. 1183–1236, Japan) Japanese sculptor who helped establish the traditional pattern of Buddhist sculpture. His technique, known as the Anami style, is noted for its gentleness and grace. Together with his teacher, Kokei, and his colleague Unkei, he made statues for the temples of Kōfuku and Tōdai in Nara, Japan's ancient capital. He later became a monk and assumed the name Anami Butsu.

Kairouan \ker-'wän\ *or* **Al-Qayrawān** City (pop., 1994: 102,600), northeastern Tunisia. A religious centre of Islam, it was founded in 670 by the Arab general Sīdī ʿUqbah and became the first Arab city in the Maghrib. It was chosen as the Maghrib capital by the Aghlabid dynasty c. 800. It served as an administrative, commercial, religious, and intellectual centre under the Fāṭimid and Zīrid dynasties. The rise of Tunis, the new capital, led to Kairouan's decline and its devastation by Bedouin in the 11th century. It is the site of the 9th-century Great Mosque of the Qayrawān, one of the city's 150 mosques.

Kaiser \'kī-zər**, Henry J(ohn)** (b. May 9, 1882, Sprout Brook, N.Y., U.S.—d. Aug. 24, 1967, Honolulu, Hawaii) U.S. industrialist and founder of more than 100 companies, including Kaiser Aluminum, Kaiser Steel, and Kaiser Cement and Gypsum. He undertook his first public-works projects beginning in 1914, eventually building dams in California, levees on the Mississippi River, and highways in Cuba. Between 1931 and 1945 he organized combinations of construction companies to build the Hoover, Bonneville, and Grand Coulee dams and other large public projects. During World War II he ran seven shipyards, making steel in an integrated steel mill and using assembly-line production to build ships in less than five days. He established the first health maintenance organization, the Kaiser plan, for his shipyard employees; it served more than a million people and became a model for later federal programs. In the postwar era he dealt profitably in aluminum, steel, and automobiles.

Kakinomoto Hitomaro \'kä-kē-nō-ˌmō-tō- 'hē-tō-ˌmä-rō\ *known as* **Hitomaro** (d. 708, Japan) Japanese poet. He entered the service of the

© 2006 Encyclopædia Britannica, Inc.

imperial court and later became a provincial official. Japan's first great literary figure, he lived when Japan was moving from a preliterate to a literate, civilized society. His writings, on a wide range of subjects, balance the homely qualities of primitive song with sophisticated interests and literary techniques. All 77 poems accepted as indisputably his, and many others attributed to him, appear in the *Man'yoshu*, the first and largest of Japan's anthologies of native poetry.

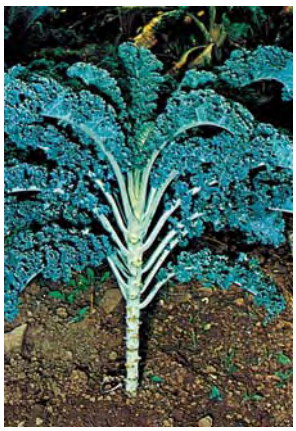
Kalacuri \ˌkä-lə-ˈkü-rē\ **dynasty** *or* **Kalachuri dynasty** Any of several dynasties in Indian history. Apart from the dynastic name and perhaps a belief in common ancestry, there is little in known sources to connect them. The earliest known Kalacuri family ruled c. 550–620 in central and western India; its power ended with the rise of one branch of the Calukyas. The rise of another Kalacuri dynasty (1156–81), centred in Karnataka, coincided with the rise of the Lingayat, or Virashaiva, Hindu sect. The best-known Kalacuri family ruled in central India with its base at the ancient city of Tripuri (modern Tewar); it originated in the 8th century, expanded significantly in the 11th century, and declined in the 12th–13th centuries.

Kalahari Desert \ˌkä-lä-ˈhä-rē\ Desert region, southern Africa. It covers an area of 360,000 sq mi (930,000 sq km) and lies mostly in Botswana but also occupies portions of Namibia and South Africa. It was crossed by the British explorers David Livingstone and William C. Oswell in 1849. Although the region has no permanent surface water apart from the Boteti River, it supports trees, low scrub, and grasses as well as abundant wildlife. It includes the Kalahari Gemsbok National Park and the Gemsbok National Park.

kalām \kə-ˈläm\ Islamic speculative theology. It arose during the Umayyad dynasty over varying interpretations of the Qur'ān and over questions the Qur'ān provoked, including those on predestination, free will, and the nature of God. The most prominent early school was the 8th-century Muʿtazilah, which asserted the supremacy of reason, championed free will, and rejected an anthropomorphic characterization of God. The 10th-century school of Ashʿariyyah moved *kalām* back toward traditional faith, accepting, for example, the eternal, uncreated nature of the Qur'ān and its literal truth. The school also represented the successful adaptation of Hellenistic philosophical reasoning to Muslim orthodox theology.

Kalamukha See Kapalika and Kalamukha

kalanchoe \ˌka-lən-ˈkō-ē\ Any of several species of succulent plants that make up the genus *Kalanchoe* in the stonecrop family (Crassulaceae), popular for their easy indoor culture. Potted *K. blossfeldiana* plants are marketed widely for their winter-blooming bright red and orange flowers, which may remain fresh for as long as eight weeks. As succulents, kalanchoes require little care, needing only considerable direct sunlight (or at least bright indirect light) and occasional watering. On some species, young plants grow in notches on the leaves of parent plants, then drop to the soil below and begin root growth.



Kalanchoe blossfeldiana.

Kalaupapa \kä-ˌlä-ü-ˈpä-pä\ **Peninsula** Peninsula on the northern shore of Molokai island, Hawaii, U.S. Occupying a 5-sq-mi (13-sq-km) plateau, it is isolated from the rest of the island by 2,000-ft (600-m) cliffs. Kalawao village, now abandoned, was the site of the original leper colony (see leprosy) established by King Kamehameha V in 1866; Father Damien ministered to the lepers there 1873–89. The entire peninsula was occupied by the state leprosarium until 1969, when Hawaii's isolation laws were abolished.

Kalb \kälp,\ *English* \ˈkalb**, Johann** (b. June 29, 1721, Hüttendorf, near Erlangen—d. Aug. 19, 1780, Camden, S.C., U.S.) German army officer who fought in the American Revolution. He served in a German regiment of the French infantry from 1743. In 1768 the French sent him on a secret mission to the American colonies to determine their attitude toward Britain. In 1776 he obtained a commission in the Continental Army. He reached Philadelphia in July 1777 and was eventually appointed a major general by the Continental Congress. He became a strong admirer of Gen. George Washington and served with him at Valley Forge. In 1780 he joined Gen. Horatio Gates at Camden, S.C., in an abortive attack on British forces. After Gates was driven from the field, Kalb fought on and was mortally wounded.

kale Loose-leafed, edible plant (*Brassica oleracea*, Acephala group) derived from the cabbage, in the mustard family. Common (or Scotch) and Buda kale have stems up to 2 ft (60 cm) long that carry a rosette of elongated, dark bluish green, wavy or frilled leaves. Grown mainly for autumn and winter harvest because cold weather improves the quality of this hardy vegetable, kale is usually served cooked. It is highly nutritious. See also collard.

Kale (*Brassica oleracea*, Acephala group).
G.R. ROBERTS

kaleidoscope Optical device consisting of mirrors that reflect images of bits of coloured glass or other objects in a symmetrical geometric design through a viewer. The design may be changed endlessly by rotating the section containing the loose fragments. A simple kaleidoscope consists of two thin, wedge-shaped mirror strips touching along a common edge. The mirrors are enclosed in a tube with a viewing eyehole at one end. At the other end is a thin, flat box that can be rotated; it is made from two glass disks, the outer one ground to act as a diffusing screen. In this box are pieces of coloured glass, beads, etc. When the box is turned, the objects inside tumble into an arbitrary grouping, and when the diffusing screen is illuminated, the sixfold or eightfold multiplication creates a striking symmetrical pattern. The kaleidoscope was invented by Sir David Brewster c. 1816.

Kalevala \ˈkä-lā-ˌvä-lä\ Finnish national epic. It was compiled by Elias Lonnrot from the songs and ballads of Finland's oral tradition and published in complete form in 1849. Kalevala, the dwelling place for the poem's chief characters, is also a poetic name for Finland, meaning "land of heroes." The epic contains a creation story and adventures of legendary heroes. The main character is Väinämöinen, a musician and seer of supernatural origins. Other characters include Ilmarinen, a smith who forged the lids of heaven; Lemminkäinen, a warrior-adventurer and charmer of women; and Louhi, the female ruler of a land in the north. Though the *Kalevala* depicts conditions during the pre-Christian era, it also seems to foretell the decline of the old religions.

Kalf \ˈkälf**, Willem** *or* **Willem Kalff** (b. Nov. 3, 1619, Rotterdam, Neth.—d. July 31, 1693, Amsterdam) Dutch painter. He is among the best-known Dutch painters of still lifes. His early works depict kitchen interiors, with such elements as gourds and pots strewn on the floor. His later paintings feature luxurious, expensive objects such as Venetian glass and Chinese porcelain, painted with restraint and richness of texture. Though his still lifes followed an established formula, Kalf greatly enriched the genre with his use of simple composition, dark background, and acutely perceived highlights. In restraint and richness of texture, Kalf's still lifes were seldom, if ever, matched. Works such as *Still Life with a Nautilus Cup* (c. 1660) were popular among Amsterdam's wealthy.

Kali Destructive and devouring Hindu goddess. She is a terrifying aspect of Devi, who in other forms appears as peaceful and benevolent. Kali is commonly associated with

Kali, sandstone relief from Bheraghat, near Jabalpur, Madhya Pradesh state, India, 10th century AD.
PRAMOD CHANDRA

© 2006 Encyclopædia Britannica, Inc.

death, violence, sexuality, and, paradoxically, with motherly love. Noted for killing the demon Raktavija, she is usually depicted as a hideous, black-faced hag smeared with blood. In her four hands she holds, variously, a sword, a shield, the severed head of a giant, or a noose for strangling. Nearly naked, she wears a garland of skulls and a girdle of severed hands. She is often shown standing or dancing on her husband, SHIVA. Until the 19th century the thugs of India worshiped Kali and offered their victims to her. In the late 20th century she became a symbol of feminine empowerment in some circles.

Kalidasa \ˌkä-lē-ˈdä-sä\ (fl. c. 5th century) Indian poet and dramatist. Little is known about him; his poems suggest that he was a Brahman (priest). Many works are traditionally ascribed to him, but scholars have identified only six as genuine and one more as likely. The Sanskrit drama *The Recognition of Shakuntala*, his most famous creation, is traditionally judged the major Indian literary effort of any period, and Kalidasa is regarded as perhaps the greatest of all Indian writers.

Kalinga Ancient kingdom, northeastern India. It corresponds to the area of modern northern ANDHRA PRADESH, most of ORISSA, and a portion of CHHATTISGARH. It was conquered by Mahapadma, the founder of the NANDA DYNASTY, in the 4th century BC. Beginning in the mid-11th century AD, the Eastern GANGA DYNASTY assumed control. The temple of the sun-god at Konarak was built in the 13th century by Narasimha I. The dynasty collapsed when the sultan of Delhi invaded Kalinga from the south in 1324.

Kalinin \kə-ˈlē-nyən**, Mikhail (Ivanovich)** (b. Nov. 19, 1875, Verkhnyaya Troitsa, Russia—d. June 3, 1946, Moscow, Russia, U.S.S.R.) Russian communist leader and statesman. An early supporter of the BOLSHEVIKS, he participated in the RUSSIAN REVOLUTION OF 1905 and cofounded *PRAVDA*. After the RUSSIAN REVOLUTION OF 1917 he served as mayor of Petrograd (St. Petersburg). In 1919 he became chair of the central executive committee of the All-Russian Congress of Soviets, and thus titular head of the Soviet state, a position he kept until his death. From 1925 he was a member of the Politburo and supported JOSEPH STALIN in crucial votes, thus retaining his high party office.

Kaliningrad \kə-ˈlē-nin-ˌgrät\ *formerly* **Königsberg** \ˈkœ-niks-ˌberk\ City (pop., 1999 est.: 427,200), western Russia, situated on the Pregolya River. Founded in 1255 as Königsberg, it was the capital of the dukes of Prussia and later the capital of East Prussia. In 1724 it absorbed the nearby cities of Löbenicht and Kneiphof. Virtually destroyed by Soviet forces during World War II, it came under the sovereignty of the U.S.S.R. and was rebuilt in 1946 as Kaliningrad. It is the seat of the University of Kaliningrad and the birthplace of IMMANUEL KANT.

Kalliope See CALLIOPE

Kalmar \ˈkäl-ˌmär\ **Union** (1397–1523) Scandinavian union that joined the kingdoms of Norway, Sweden, and Denmark under the rule of a single monarch. Margaret I had become regent of the three kingdoms by 1388; she chose her grandnephew Erik of Pomerania to become their king, and he was crowned at Kalmar, Swed., in 1397. Each country kept its own laws, customs, and administration. Sweden rebelled and claimed independence under GUSTAV I VASA in 1523, and Norway became a Danish province in 1536.

Kaloyan \ˈkä-lȯ-yän\ *or* **Kalojan** (d. Oct. 1207, near Thessaloníki) Tsar of Bulgaria (1197–1207). The younger brother of the founders of the Second Bulgarian Empire, Kaloyan sought to maintain Bulgarian independence. Although he recognized papal authority and was crowned by papal legates in 1204, Kaloyan reverted to Orthodoxy not long after his coronation. He proposed an alliance with the armies of the Fourth CRUSADE but then led a Bulgarian-Greek uprising in the Balkan Peninsula that defeated the Crusaders at Adrianople (1205) and resulted in the capture of BALDWIN I, the Latin emperor. Kaloyan's success against the Crusaders contributed to the ultimate demise of the Latin empire of Constantinople. He died besieging Thessaloníki during his continuing struggle to expanded the empire.

Kama In Indian mythology, the god of love. In the Vedic age he personified cosmic desire or the creative impulse, and he was called the firstborn of primeval chaos. He was later often depicted as a handsome youth attended by heavenly nymphs, who shot love-producing flower arrows from a sugarcane bow. He was once killed by SHIVA, who was enraged when Kama disturbed his meditation on a mountaintop, but the great god later relented and brought Kama back to life.

Kama River River, west-central Russia. The largest tributary of the VOLGA RIVER, it rises in Udmurtiya and flows for 1,122 mi (1,805 km) until it enters the Volga below Kazan. Navigation is possible for about 955 mi (1,535 km). It is one of the most important rivers of Russia, historically as the route to the Urals and Siberia and economically as part of the vast Volga system of waterways.

Kamakura \ˌkä-mä-ˈkůr-ä\ **period** (1192–1333) Period of Japanese history marked by the country's first era of military government. The Kamakura shogunate was established by MINAMOTO YORITOMO after his 1185 defeat of a rival warrior family, the Taira (see TAIRA KIYOMORI); its headquarters was in Kamakura. To assert his authority, Yoritomo had *JITŌ* (stewards) assigned to all the estates (*SHŌEN*) in the land to collect taxes, and *shugo* (protectors) assigned to one or more provinces to lead them in times of war. This system was improved by the HŌJŌ FAMILY, which took control of the shogunate on Yoritomo's death. The creation of the Kamakura shogunate marks the start of Japan's medieval or feudal period, characterized by a warrior ethic of duty, loyalty, and stoicism. Many elements of Japanese culture that Westerners now associate with the country—including ZEN Buddhism, SAMURAI (warriors), SEPPUKU (ritual disembowelment), and the TEA CEREMONY—date from this period. The True Pure Land and NICHIREN sects of Buddhism, which emphasized salvation through faith alone, provided solace to the masses, while tales of warrior exploits provided them with entertainment. See also *BUSHIDŌ*.

Kamchatka \kəm-ˈchät-kə\ **Peninsula** Peninsula, eastern Russia. It lies between the Sea of Okhotsk on the west and the Pacific Ocean and BERING SEA on the east. It is 750 mi (1,200 km) long and 300 mi (480 km) across at its widest point, and it has an area of 140,000 sq mi (370,000 sq km). Mountain ranges extend along it; of its 127 volcanoes, 22 are active, including Klyuchevskaya Volcano (15,584 ft [4,750 m]), the highest peak in SIBERIA.

Kamehameha \kä-ˈmā-hä-ˈmā-hä\ **I** *orig.* **Paiea** *known as* **Kamehameha the Great** (b. November 1758?, Kohala district, Hawaii island—d. May 8, 1819, Kailua) Hawaiian conqueror and king who united all the Hawaiian Islands. His birth came soon after the return of Halley's Comet (1758), whose appearance led seers to prophesy the coming of a great conqueror. As a young man, he fought his cousin over control of the island of Hawaii; by 1795 he had defeated his cousin and conquered all but two of the Hawaiian Islands, and in 1810 the remaining islands were ceded to him. He retained the harsh traditional legal system but protected the common people from the brutality of powerful chiefs and outlawed human sacrifice. He enriched his kingdom through a government monopoly on the sandalwood trade and through port duties imposed on visiting ships and maintained its independence throughout the difficult period of European discovery and exploration of the islands. He founded the most enduring and best-documented line of rulers of HAWAII.

Kamehameha IV *orig.* **Alexander Liholiho** (b. Feb. 9, 1834, Ewa, Oahu, Hawaiian Islands—d. Nov. 30, 1863, Honolulu, Oahu) Hawaiian ruler (1855–63). Adopted as a child by his uncle, Kamehameha III (1813–54), he was educated by Protestant missionaries. As king, he sought to curb the power of the U.S. missionaries. He expanded trade with other countries and, to offset U.S. influence, invited the Church of England to establish itself in the

islands. A popular and benevolent ruler, he improved harbours to accommodate Hawaii's growing whaling industry and provided free medical care for Hawaiians. He resolutely opposed the annexation of Hawaii by the U.S.

Kamenev \'kä-myə-ˌnyef**, Lev (Borisovich)** *orig.* **Lev Borisovich Rosenfeld** (b. July 18, 1883, Moscow, Russia—d. Aug. 24, 1936, Moscow, Russia, U.S.S.R.) Russian political leader. A member of the Bolsheviks from 1903, he worked with Vladimir Ilich Lenin in Europe (1909–14), then returned to Russia, where he was arrested and sent to Siberia. After the Russian Revolution of 1917, he served as head of the Moscow soviet (1919–25). When Lenin became seriously ill in 1922, Kamenev joined Joseph Stalin and Grigory Y. Zinovyev to form the ruling triumvirate, attacking Leon Trotsky. In 1925 Stalin shifted his attack to Kamenev and Zinovyev, removng Kamenev as Moscow party head. In 1926 Kamenev was expelled from the party after conspiring with Zinovyev and Trotsky against Stalin. In 1936 he was tried in the first of the purge trials and confessed to fabricated charges, hoping to save his family. He was executed, and his wife, Trotsky's sister, perished in the Gulag.

Kamerlingh Onnes \ˌkä-mər-liŋ-'ò-nəs**, Heike** (b. Sept. 21, 1853, Groningen, Neth.—d. Feb. 21, 1926, Leiden) Dutch physicist. He taught at the University of Leiden (1882–1923), and in 1884 he founded the Cryogenic Laboratory (now known by his name) that established Leiden as the world's principal research centre for low-temperature physics. He was the first to produce liquid helium (1908), and he discovered superconductivity. He also investigated the equations describing the states of matter and the general thermodynamic properties of fluids over a wide range of temperatures and pressures. He was awarded the 1913 Nobel Prize for Physics.

kamikaze \ˌkä-mi-'kä-zē\ Any of the Japanese pilots in World War II who made deliberate suicidal crashes into enemy targets, usually ships. The word means "divine wind," a reference to a typhoon that dispersed a Mongol invasion fleet threatening Japan from the west in 1281. The practice was most prevalent in the final year of the war. Most kamikaze planes were ordinary fighter aircraft or light bombers, usually loaded with bombs or extra gasoline tanks before their suicidal dive. Such attacks sank 34 ships and damaged hundreds of others; at Okinawa they inflicted the greatest losses ever suffered by the U.S. Navy in a single battle, killing almost 5,000 men. See also Zero.

Kammu \'kä-mů\ (b. 737, Nara, Japan—d. April 9, 806, Heian-kyō [Kyōto]) Emperor of Japan (781–806). To curb the power of the Buddhist temples located in Nara, he moved the capital from Heijō-kyō (Nara) to Nagaoka in 784 and then to the city of Heian-kyō in 794. The establishment of the capital in Heian-kyō marked the start of the Heian period.

Kamo Chomei \'kä-mō-'chō-mā\ (b. 1155, Japan—d. July 24, 1216, Kyōto) Japanese poet and critic. He is best known for *An Account of My Hut* (1212), a poetic diary describing his life in seclusion written after he left a court office to take Buddhist orders and become a hermit. His poetry is representative of the best of an age that produced many poets of the first rank. His *Nameless Notes* (1208/09) is an extremely valuable collection of critical comments, anecdotes, and poetic lore.

Kampala \käm-'pä-lä\ City (pop., 1998: 1,154,000), capital of Uganda. The country's largest city, it is in southern Uganda, north of Lake Victoria. It was selected in 1890 by Capt. Frederick Lugard as the headquarters of the British East Africa Company. Lugard's fort on Old Kampala Hill remained the Ugandan colonial administrative headquarters until 1905. In 1962 Kampala became the capital of independent Uganda. It is the site of the headquarters of most of Uganda's large firms and of Makerere University (1922) and the Uganda Museum.

Kanawha \kə-'nó-wə\ **River** River, West Virginia, U.S. Formed by the confluence of the New and Gauley rivers, it flows northwest for 97 mi (156 km), entering the Ohio River at Point Pleasant. It has dams and locks and is navigable to Kanawha Falls, located 30 mi (48 km) above Charleston, W.Va. The Kanawha River valley has extensive deposits of salt brines and natural gas and oil wells.

Kanchenjunga \ˌkən-chən-'jəŋ-gə\ Peak in the Himalayas. The world's third highest mountain, it reaches 28,169 ft (8,586 m). It is located on the border between Nepal and Sikkim state, India, northwest of Darjiling. Rinzin Namgyal, a 19th-century explorer, made the first map of the peak. In 1955 a British expedition led by Charles Evans made the first successful climb.

Kandel, Eric (b. Nov. 7, 1929, Vienna, Austria) Austrian-born U.S. neurobiologist. He received his M.D. from New York University. Kandel's research revealed the role of synaptic transmission in learning and memory. He showed that weak stimuli give rise to certain chemical changes in synapses, forming the basis for short-term memory, and that stronger stimuli cause different synaptic changes, which result in a form of long-term memory. Along with Paul Greengard and Arvid Carlsson, Kandel was awarded a Nobel Prize in 2000. The findings of the three men resulted in the development of new drugs for parkinsonism and other disorders.

Kander, John (b. March 18, 1927, Kansas City, Mo., U.S.) U.S. songwriter. He studied music at Oberlin College and Columbia University and later wrote arrangements for plays. With lyricist Fred Ebb, a native New Yorker who also studied at Columbia and wrote lyrics for revues, he wrote the scores for some of Broadway's most successful musicals, including *Cabaret* (1966; film, 1972), *Zorba* (1968), *Chicago* (1975; film, 2002), and *Kiss of the Spider Woman* (1992), and for films such as *Funny Lady* (1975) and *New York, New York* (1977).

Kandinsky \kan-'din-skē**, Vasily (Vasilievich)** (b. Dec. 4, 1866, Moscow, Russia—d. Dec. 13, 1944, Neuilly-sur-Seine, France) Russian painter, a pioneer of pure abstraction in modern painting. Trained in the law and offered a law professorship, he chose painting instead and set out for Germany. After art studies in Munich, by 1909 he began his lifelong pursuit: a kind of painting in which colours, lines, and shapes, freed from the distracting business of depicting recognizable objects, might evolve into a visual "language" capable of expressing general ideas and evoking deep emotions. In his book *Concerning the Spiritual in Art* (1912) he set forth these ideas, comparing the expressiveness of forms and colour to qualities in music. In 1911 he and Franz Marc founded an informally organized group of like-minded artists called Der Blaue Reiter ("The Blue Rider"). From 1921 to 1933 he taught at the influential Bauhaus in Weimar; during this period Kandinsky continued to evolve in the general direction of geometric abstraction, but with a dynamism and a taste for detail. When the Nazis closed the Bauhaus, he immigrated to Paris. During this final period his painting became a synthesis of the organic manner of the Munich period and the geometric manner of the Bauhaus period. The visual language that he had been aiming at since at least 1910 turned into collections of signs that look like almost-decipherable messages written in pictographs and hieroglyphs. His influence on 20th-century art and abstract art in general was profound.

Kändler \'ken-dler**, Johann Joachim** (b. 1706, Fischbach, Saxony—d. May 18, 1775, Meissen) German Baroque sculptor. In 1731 he was engaged to reorganize the modeling department of the porcelain factory at Meissen; he held the position of chief modeler there from 1733 until his death. It was largely through Kändler's genius that Meissen porcelain gained world renown. Among his best-known works are his commedia dell'arte figurines, largely done between 1736 and 1744.

Kandy in 1803 failed; in 1815 Kandyan chiefs invited the British to overthrow a tyrannical king, and in 1818 those chiefs' rebellion against the British was suppressed.

Kane, Paul (b. Sept. 3, 1810, Mallow, Ire.—d. Feb. 20, 1871, Toronto, Ont., Can.) Irish-born Canadian painter. His family immigrated to Canada in 1819. He worked mainly in Toronto but traveled as far as the Pacific coast depicting landscapes, Native American subjects, fur traders, and missionaries; he published an account of his adventures in *Wanderings of an Artist* (1859). Half of his paintings are portraits, works of great historical value in which he recorded the dress and ornaments of his subjects in accurate detail. He excelled at composing large figurative groups in a style similar to contemporary European genre painting.

Kanem-Bornu \'kä-ˌnem-'bōr-nü\ Former African empire around Lake Chad. It was ruled by the Sef dynasty in the 9th–19th century. Its territory at various times included what is now southern Chad, northern Cameroon, northeastern Nigeria, eastern Niger, and southern Libya. Probably founded in the mid-9th century, it became an Islamic state at the end of the 11th century. Its location made it a trading hub between North Africa, the Nile Valley, and the sub-Saharan region. From the 16th century Kanem-Bornu, sometimes called simply Bornu, was extended and consolidated. The Sef dynasty died out in 1846.

Kang \'käŋ-'yō-'wā\ **Youwei** *or* **K'ang Yu-wei** (b. March 19, 1858, Guangdong province, China—d. March 31, 1927, Qingdao, Shandong) Chinese scholar, a key figure in the intellectual development of modern China. In 1895 Kang led hundreds of provincial graduates to protest the humiliating terms of China's treaty with Japan after the Sino-Japanese War and to petition for reforms to strengthen the nation. In 1898 the Qing emperor launched a reform program that included streamlining the government, strengthening the armed services, promoting local self-government, and opening Beijing University. The empress Cixi annulled the reforms and had six reform leaders executed, and Kang had to flee the country. In exile, he opposed revolution; instead, he favoured rebuilding China through science, technology, and industry. He returned in 1914 and participated in an abortive restoration of the emperor. His fears of a divided country led him to oppose the government of Sun Yat-sen in southern China. Kang is also known for his reappraisal of Confucius, whom he saw as a reformer.

kangaroo Most specifically, any of six large Australasian marsupials of the family Macropodidae. The term is also used to refer to any of the family's 54 species. Most kangaroos graze on the Australian plains, but tree kangaroos are arboreal; they climb trees and leap from branch to branch. Kangaroos generally have long, powerful hind legs and feet and a long tail, thickened at the base. The hind legs enable their spectacular leaps and are also useful for self-defense; the tail is used for balance. The head is small, the ears large and rounded, and the fur soft and woolly. Females have one young (called a joey) annually; it is suckled in its mother's pouch for six months and often returns to be carried in the pouch later as well. The gray kangaroo, the best-known and second-largest species, can leap more than 30 ft (9 m). The red kangaroo is the largest species; the male may stand 6 ft (1.8 m) tall and weigh 200 lbs (90 kg). Millions are killed annually for their meat and hides and because they compete with livestock for forage. See also wallaby; wallaroo.

Western gray kangaroo (*Macropus fuliginosus*).
WARREN GARST/TOM STACK AND ASSOCIATES

Kangaroo Island Island (pop., 1996: 4,118), South Australia. Located at the entrance to the Gulf St. Vincent, southwest of Adelaide, Kangaroo Island is 90 mi (145 km) long with an area of 1,680 sq mi (4,350 sq km). Visited in 1802 by the English explorer Matthew Flinders, it was named for its many kangaroos. Nepean Bay was the site of the state's first settlement in 1836.

kangaroo rat Any of about 25 species (genus *Dipodomys*, family Heteromyidae) of rodents that leap about on their hind legs; found in dry regions of North America. They have large heads, large eyes, short forelimbs, long hind limbs, and fur-lined external cheek pouches that open alongside the mouth. They are 4–6.5 in. (10–16 cm) long without the long tail, which usually ends in a furry tuft. They are pale buff to brown above and white below, with a white stripe on each hip. They forage by night for seeds, leaves, and other vegetation, carrying food in their cheek pouches to store in their burrows, but seldom drink water.

Kangaroo rat (*Dipodomys*).
ANTHONY MERCIECA FROM ROOT RESOURCES

KaNgwane \käŋ-'gwä-nā\ Former black enclave, eastern Transvaal, South Africa. It was created under the apartheid system in 1977 as a homeland for those Swazi people not residing in Swaziland. The 1994 constitution of South Africa abolished the black enclaves created under the apartheid system, and it is now part of Mpumalanga province.

Kangxi \'käŋ-'shē\ **emperor** *or* **K'ang-hsi emperor** (b. May 4, 1654, Beijing, China—d. Dec. 20, 1722, Beijing) Second emperor of the Qing dynasty. His personal name was Xuanye. One of China's most capable rulers, Kangxi (r. 1661–1722) laid the foundation for a long period of political stability and prosperity. Under his reign, the Treaty of Nerchinsk was signed with Russia, parts of Outer Mongolia were added to China's territory, and control was extended over Tibet. Domestically, Kangxi's reign was a time of large-scale public works, such as repairing the Grand Canal to permit transportation of rice to feed the northern population, and dredging and banking the Huang He (Yellow River) to prevent destructive flooding. Kangxi reduced taxes many times and opened four ports to foreign ships for trade. Though an ardent proponent of Neo-Confucianism, he also welcomed Jesuit missionaries, whose accomplishments led him to permit the propagation of Roman Catholicism in China. He commissioned many books, including the Kangxi dictionary and a history of the Ming dynasty. See also Dga'l-dan; Manchu; Qianlong emperor.

Kaniṣka \kə-'nish-kə\ *or* **Kanishka** (fl. 1st century AD) Greatest king of the Kushān dynasty that ruled over the northern part of the Indian subcontinent, Afghanistan, and possibly regions north of Kashmir in Central Asia. He is thought to have taken the throne between AD 78 and 144 and to have ruled for 23 years. Kaniṣka is noted for having convened a Buddhist council that marked the beginnings of Mahayana Buddhism. He was a tolerant king who honoured the Zoroastrian, Greek, and Brahmanic deities as well as Buddha. During his reign, trade with the Roman Empire increased significantly, and contact between him and the Chinese in Central Asia may have inspired the transmission of Buddhism to China.

Kannada \'kä-nə-də\ **language** *formerly* **Kanarese** \ˌka-nə-'rēz\ **language** Dravidian language, the official language of the Indian state of Karnataka. It is spoken by more than 33 million people in Karnataka; an additional 11 million Indians may speak it as a second language. The earliest inscriptional records in Kannada are from the 6th century. Kannada script is closely akin to Telugu script in origin. Like other major Dravidian languages, Kannada has a number of regional and social dialects and marked distinctions between formal and informal usage.

Kannon See Avalokitesvara

Kano \'kä-nō\ City (pop., 1991: 2,166,554), northern Nigeria. Its traditional founder was Kano, a blacksmith of the Gaya people who in ancient times came to Dalla Hill in search of iron. It became the capital of the Hausa state of Kano in the early 12th century. It was the capital of an emirate in the 19th century before being captured by the British in 1903. Modern Kano is a major commercial and industrial centre. The old city is enclosed by a massive city wall dating from the 15th century; the central mosque there is Nigeria's largest.

Kanō school Japanese painting style of the 15th–19th centuries. It was practiced by a family of artists that served the Ashikaga shoguns of the Muromachi period and also Oda Nobunaga, Toyotomi Hideyoshi, and the shoguns of the Tokugawa period. Bold, large-scale designs were executed on the folding screens and sliding panels that acted as space dividers in

© 2006 Encyclopædia Britannica, Inc.

the castles of the day. Chinese-style ink painting was blended with polychromatic Yamato-e ("Japanese painting"); some artists used a background of gold leaf for even more striking effects.

Kanphata Yogi Member of an order of religious ascetics that venerate the Hindu god Shiva. They are followers of Gorakhnath, a master yogi of the 12th century or earlier. Their ideology incorporates elements of magic, mysticism, and alchemy absorbed from both Hindu and Buddhist esoteric systems. Members focus on acquiring supernatural powers rather than following the more orthodox practices of meditation and devotion. They are distinguished by large earrings worn in the hollow of the ear.

Kanpur \'kän-ˌpůr\ *or* **Cawnpore** City (pop., 2001 prelim.: 2,532,138), Uttar Pradesh, northern India. The British acquired it in 1801 and made it one of their frontier stations. In 1857, during the Indian Mutiny, it was the site of the massacre of British troops and civilians by native forces. One of the largest cities in India, it is a hub of road and rail transportation and a major commercial and industrial centre. Its educational institutions include a university and the Indian Institute of Technology.

Kansas State (pop., 2000: 2,688,418), central U.S. Bordered by Nebraska, Missouri, Oklahoma, and Colorado, it covers 82,282 sq mi (213,110 sq km); its capital is Topeka. It is located on the Great Plains, rising more than 3,000 ft (915 m) from its eastern prairies to the high plains of the west. The region was occupied by the Kansa, Osage, Pawnee, and Wichita Indians before European settlement. The first European explorer was Francisco Vázquez de Coronado, who came from Mexico in 1541 in search of gold. La Salle claimed the region for France in 1682. Kansas was acquired by the U.S. as part of the Louisiana Purchase in 1803. In the early 19th century the federal government relocated displaced eastern Indians to Kansas. The Kansas-Nebraska Act of 1854 created the Kansas Territory and opened it to white settlement. It was the site of conflicts over slavery, including one spurred by John Brown (see Bleeding Kansas). It entered the Union as the 34th state in 1861. After the Civil War, the coming of the railroads promoted the growth of cow towns; Texas cattlemen drove herds to Wichita and Abilene to reach the railheads. Agriculture became important as farmers worked on the Great Plains. During and following World War II, airplane production expanded, and farm products remained strong.

Kansas, Bleeding See Bleeding Kansas

Kansas City City (pop., 2000: 441,545), western Missouri, U.S., on the Missouri River. The city is contiguous with Kansas City, Kan. First settled by French fur traders in 1821, it was known as Westport, prospering as a river port and as the terminus for the Santa Fe Trail and the Oregon Trail. Chartered in 1850 as the town of Kansas and as a city in 1853, it was renamed Kansas City in 1889 to distinguish it from the territory. The state's largest city, it is an important marketing and shipping centre for a vast agricultural region and has extensive grain-storage and food-processing facilities. It is the seat of the University of Missouri at Kansas City and the world headquarters for the Church of the Nazarene.

Kansas-Nebraska Act (1854) Legislation that organized the territories of Kansas and Nebraska according to the doctrine of popular sovereignty. Introduced by Sen. Stephen A. Douglas to stop the sectional division over slavery, the act was criticized by antislavery groups as a capitulation to proslavery advocates. Groups on both sides rushed to settle Kansas Territory with their adherents, leading to the chaotic Bleeding Kansas period. Passage of the act led to the formation of the Republican Party as a political organization opposed to the expansion of slavery to any U.S. territory.

Kansas River *or* **Kaw River** River, northeastern Kansas, U.S. It flows east and empties into the Missouri River at Kansas City. It is 169 mi (272 km) long, and it drains an area of 61,300 sq mi (158,770 sq km), including northern Kansas and parts of southern Nebraska and eastern Colorado.

Kansu See Gansu

Kant \'känt**, Immanuel** (b. April 22, 1724, Königsberg, Prussia—d. Feb. 12, 1804, Königsberg) German philosopher, one of the foremost thinkers of the Enlightenment. The son of a saddler, he studied at the university in Königsberg and taught there as privatdocent (1755–70) and later as professor of logic and metaphysics (1770–97). His life was uneventful. His *Critique of Pure Reason* (1781) discusses the nature of knowledge in mathematics and physics and demonstrates the impossibility of knowledge in metaphysics as it was traditionally conceived. Kant argued that the propositions of mathematics and physics, but not those of metaphysics, are "synthetic a priori," in the sense that they are about objects of possible experience (synthetic) but at the same time knowable prior to, or independently of, experience (a priori), thus making them also necessarily true, rather than merely contingently true (see necessity). Mathematics is synthetic and a priori because it deals with space and time, both of which are forms of human sensibility that condition whatever is apprehended through the senses. Similarly, physics is synthetic and a priori because in its ordering of experience it uses concepts ("categories") whose function is to prescribe the general form that sensible experience must take. Metaphysics in the traditional sense, understood as knowledge of the existence of God, the freedom of the will, and the immortality of the soul, is impossible, because these questions transcend any possible sense experience. But though they cannot be objects of knowledge, they are nevertheless justified as essential postulates of a moral life. Kant's ethics, which he expounded in the *Critique of Practical Reason* (1788) and the earlier *Groundwork of the Metaphysics of Morals* (1785), was based on the principle known as the "categorical imperative," one formulation of which is, "Act only on that maxim through which you can at the same time will that it should become a universal law." His last great work, *The Critique of Judgment* (1790), concerns the nature of aesthetic judgment and the existence of teleology, or purposiveness, in nature. Kant's thought represents a turning point in the history of philosophy. In his own words, he effected a Copernican revolution: just as the founder of modern astronomy, Nicolaus Copernicus, had explained the apparent movements of the stars by ascribing them partly to the movement of the observers, so Kant had accounted for the existence of a priori synthetic knowledge by demonstrating that in knowing, it is not the mind that conforms to things but instead things that conform to the mind. See also analytic-synthetic distinction; deontological ethics; idealism; Kantianism.

Kantianism \'kan-tē-ə-ˌni-zəm, kän-tē-ə-ˌni-zəm\ System of critical philosophy created by Immanuel Kant and the philosophies that have arisen from the study of his writings. Kantianism comprises diverse philosophies that share Kant's concern to explore the nature and limits of human knowledge in the hope of raising philosophy to the level of a science. Each submovement of Kantianism has tended to focus on its own selection and reading of Kant's many concerns. In the 1790s there emerged in Germany the so-called semi-Kantians, who altered features of Kant's system they viewed as inadequate, unclear, or even wrong; its members included Friedrich Schiller, Friedrich Bouterwek (1766–1828), and Jakob Friedrich Fries (1773–1843). The period from 1790 to 1835 was the age of the post-Kantian idealists (see idealism). A major revival of interest in Kantian philosophy began c. 1860. See also Johann Gottlieb Fichte; G.W.F. Hegel; Neo-Kantianism; Friedrich Wilhelm Joseph von Schelling.

Kantorovich \ˌkän-tə-'rō-vich**, Leonid (Vitalyevich)** (b. Jan. 19, 1912, St. Petersburg, Russia—d. April 7, 1986, U.S.S.R.) Soviet mathematician and economist. A professor at Leningrad State University (1934–60), he developed the linear programming model as a tool of economic planning. He used mathematical techniques to show how decentralization of decision making in a planned economy ultimately depends on a system in which prices are based on the relative scarcity of resources. His nondogmatic critical analyses of Soviet economic policy often clashed with the views of his orthodox Marxist colleagues. His most notable work is *The Best Use of Economic Resources* (1959). In 1975 he and Tjalling Koopmans (1910–85) shared the Nobel Prize for their work on optimal allocation of scarce resources.

Kanuri \kə-'nůr-ē\ People of northeastern Nigeria and southeastern Niger, with smaller numbers in Chad, Cameroon, and Sudan. They number about four million. Their language, Kanuri, is one of the Nilo-Saharan languages. The Kanuri developed the powerful empire of Kanem-Bornu, which reached its peak in the 16th century. They have been Muslims since the 11th century. The Kanuri economy is based on millet agriculture and trade with the Fulani and Arab herders.

Kao-hsiung \'kaů-'shyůŋ\ Port city (pop., 2002 est.: 1,504,061), southwestern Taiwan. It is Taiwan's leading port and a major industrial centre. Settled late in the Ming dynasty, it became a treaty port in 1863 and a customs station in 1864. It grew in importance during the Japanese occupation (1895–1945) and served as the southern terminus of the main north-south railway line. The city was named Takao by the Japanese and was made a municipality in 1920. It came under Chinese rule in 1945.

kaolinite \'kā-ə-lə-ˌnīt\ Group of common CLAY MINERALS that are hydrous aluminum silicates and constitute the principal ingredients of kaolin (china clay). The group includes kaolinite, dickite, nacrite, halloysite, and allophane. They are natural alteration products of feldspars, feldspathoids, and other silicates.

Kapalika and Kalamukha \kä-'pä-li-kə...'kä-lä-ˌmù-kə\ Members of either of two groups of extreme Hindu ascetics, prominent in India in the 8th–13th century. They were an offshoot of the Shaivites (see SHAIVISM), who worshiped SHIVA, and their notorious practices included human sacrifice. After sacrificing a BRAHMAN or other high-ranking person, they embraced a 12-year vow of self-abnegation that included eating and drinking from the skull of the sacrificed person and following tantric practices such as going about naked, eating the flesh of the dead, and smearing themselves with the ashes of corpses. Their modern successors are the Aghoris, or Aghorapanthis.

Kapila \'kə-pē-lə\ (fl. 550 BC?) Founder of the SAMKHYA school of Vedic philosophy in India. Legend says he was a descendant of MANU, the primal human being, and a grandson of the creator god, BRAHMA. He has also been thought of as an incarnation of VISHNU. In Buddhist sources he was a well-known philosopher whose students built Kapilavastu, the birthplace of BUDDHA Gautama. He lived as a hermit, and his ascetic regimen was said to have given him an inner store of such intense heat that he was capable of reducing 60,000 men to ashes.

Kaplan, Mordecai Menahem (b. June 11, 1881, Švenčionys, Lithu.—d. Nov. 8, 1983, New York, N.Y., U.S.) Lithuanian-born U.S. theologian. He came to the U.S. with his family in 1889. Ordained at the Jewish Theological Seminary, he later taught there for 50 years. In 1916 he organized the Jewish Center in New York as a secular community organization with a synagogue as its nucleus. In 1922 he founded the Society for the Advancement of Judaism, which became the core of RECONSTRUCTIONISM. Denying the literal accuracy of the BIBLE, he called for a new conception of God in an attempt to adapt Judaism to the modern world. He founded the journal *The Reconstructionist* in 1935; his books include *Judaism as a Civilization* (1934) and *Judaism without Superstition* (1958).

kapok \'kā-ˌpäk\ Fibre obtained from the large, tropical silk cotton, or kapok, tree (*Ceiba pentandra*, family Bombacaceae), which bears hundreds of seedpods filled with fibrous seeds. The tree is grown chiefly in Asia and Indonesia. Sometimes called silk cotton or Java cotton, this moisture-resistant, quick-drying, resilient, buoyant fibre has been used in life preservers and other water-safety equipment. Kapok is also used to stuff pillows, mattresses, and upholstery, as insulation, and as a cotton substitute in surgery. However, it is highly flammable, and the fibres are too brittle for spinning. Its importance has decreased with the development of foam rubber, plastics, and man-made fibres.

Kapoor, Raj (b. Dec. 14, 1924, Peshawar, India—d. June 2, 1988, New Delhi) Indian film actor and director. In the 1930s Kapoor worked as a clapper boy for Bombay Talkies and as an actor for Prithvi Theatres, two companies owned by his father. Kapoor's first major screen role was in *Aag* (1948; "Fire"), which he also produced and directed. In 1950 he formed his own Bombay (now Mumbai) film studio, RK, and the next year he achieved romantic stardom in *Awara* (1951; "The Vagabond"). He wrote, produced, directed, and starred in many successful films. Although he portrayed romantic leads in his early movies, his best-known characters were based on CHARLIE CHAPLIN's tramp. His use of sexual imagery often challenged traditionally strict Indian film standards, and many of his film songs became musical hits.

Kaposi \'ka-pə-sē\ **sarcoma** Usually lethal CANCER appearing as red-purple or blue-brown spots on the skin and other organs. It has been linked to one of the herpes viruses, and there is considerable debate about how it should be classified. When described in 1872 by Moritz Kaposi, it was extremely rare, confined to specific Mediterranean and African populations. Since c. 1980 it has become common in AIDS patients. More homosexual male HIV patients have developed it than heterosexual intravenous-drug-using HIV patients. Remissions have occurred, but there is no known cure.

Kapp Putsch \'käp-'půch\ (1920) In Germany, a coup d'état that attempted to overthrow the fledgling WEIMAR REPUBLIC. Its immediate cause was the government's attempt to demobilize two FREIKORPS brigades. One of the brigades took Berlin, with the cooperation of the Berlin army district commander. Wolfgang Kapp (1858–1922), a reactionary member of the Reichstag, formed a government with ERICH LUDENDORFF, and the legitimate republican regime fled to southern Germany. Within four days, a general strike by labour unions and the refusal by civil servants to follow Kapp's orders led to the coup's collapse.

Kara Koyunlu *or* **Qara Qoyunlu** \'kä-rä-ˌkȯ-yůn-'lü\ *Turkish* **"Black Sheep"** Turkmen tribal federation that ruled Azerbaijan and Iraq (c. 1375–1468). Their second leader, Kara Yūsuf (r. 1390–1400, 1406–20), secured their independence by seizing Tabrīz, the capital of the Jalāyrid dynasty. He was beaten back by the armies of TIMUR but regained Tabrīz in 1406. He captured Baghdad in 1410. His successor, Jihān Shah, died in battle against a rival Turkmen federation, the Ak Koyunlu, in 1466, and the empire fell in 1468.

Karachi \kä-'rä-chē\ City (pop., 1998: 9,269,265), Pakistan. Located in southern Pakistan on the Arabian Sea northwest of the mouth of the INDUS RIVER, it was a small fishing village when traders arrived in the early 18th century. It was captured by the British in 1839 and was a major port of the British Empire by 1914. The provincial capital of Sind from 1936, it was also the first capital of independent Pakistan (1947–59). It is Pakistan's principal seaport and a major industrial and commercial centre, and it is one of the world's most populous cities. It is the seat of the University of Karachi and the terminus of Pakistan's railway system.

Karadjordjević \ˌkar-ə-'jōr-jə-ˌvich\ **dynasty** Rulers descended from the Serbian rebel leader Karadjordje (1762–1817). It rivaled the OBRENOVIĆ DYNASTY for control of Serbia during the 19th century and ruled that country and its successor state, the Kingdom of SERBS, CROATS, AND SLOVENES (later Yugoslavia), in 1842–58 and 1903–45. See also ALEXANDER I; PETER I; PETER II.

Karadžić \kä-'rä-jēt^{y},\ *English* \kä-'rad-zich**, Radovan** (b. June 19, 1945, Petnjica, Yugos.) Bosnian Serb politician. He trained as a psychiatrist and also wrote poetry and children's books. In 1990 he helped found the Serbian Democratic Party of Bosnia and Herzegovina. In 1992, when the Bosnian Serbs declared an independent state, he became its president. With the support of Yugoslav Pres. SLOBODAN MILOŠEVIĆ and with Bosnian Serb military leader Gen. Ratko Mladic, Karadžić undertook a campaign of ETHNIC CLEANSING in Bosnia to purge it of non-Serbian peoples. In 1995 he was indicted by a UN war crimes tribunal. He was pressured into signing the Dayton peace accords and forced to resign as state president and party head in 1996. However, he continued to influence the Serb-controlled part of Bosnia and Herzegovina from a mountain hideaway outside Sarajevo. Despite attempts to arrest him, he was able to evade capture through the 1990s and into the early 21st century.

Karadžić \kä-'rä-jēt^{y},\ *English* \kä-'rad-zich**, Vuk Stefanović** (b. Nov. 6, 1787, Tršić, Serbia, Ottoman Empire—d. Feb. 6, 1864, Vienna) Serbian language scholar and folklorist. He was largely self-taught as a writer. After the failure of a Serb revolt against Turkish rule, he left for Vienna (1813), where he was introduced to formal scholarship by the Slavist Jernej Kopitar. In 1814 he published a grammar of Serbian (see SERBO-CROATIAN LANGUAGE) and in 1818 a dictionary; both promulgated a reformed CYRILLIC ALPHABET and a new literary language based on colloquial Serbian rather than the prevailing literary language, which mixed archaic Serbian with Russian Church Slavic (see OLD CHURCH SLAVONIC LANGUAGE). After decades of resistance and polemicizing, the renascent Serbian state accepted his reforms in 1868.

Karaganda See QARAGHANDY

Karaism *or* **Qaraism** \'kar-ə-ˌi-zəm\ Jewish religious movement that denied the authenticity of the oral law and defended the Hebrew Bible as the only basis of doctrine and practice. It originated in 8th-century Persia, where its members were called Ananites after Anan ben David, who worked out a code of life independent of the TALMUD. Members later adopted the name Karaites from the Hebrew *qara* ("to read"), emphasizing their reliance on a personal reading of the Bible. The movement spread through Egypt and Syria, winning only small numbers of followers and enduring many schisms. It still has about 10,000 members in Israel.

Karajan \'kär-ə-ˌyän**, Herbert von** (b. April 5, 1908, Salzburg, Austria—d. July 16, 1989, Anif, near Salzburg) Austrian conductor. A child prodigy on the piano, he attended Salzburg's Mozarteum. He took his first conducting post in Ulm in 1929. In 1933 he joined the Nazi Party, and under the Third Reich his reputation grew swiftly. After World War II he initially was not allowed to conduct, but in 1947 he began record-

© 2006 Encyclopædia Britannica, Inc.

ing with the Vienna Philharmonic, the start of a legacy of some 800 recordings. His U.S. debut in 1955 was attended by controversy over his Nazi-era activities. That same year he became Wilhelm Furtwängler's successor at the Berlin Philharmonic, and he headed the Salzburg Festival from 1964 until his death.

Karak See Kaya

Karakoram Range Mountain system, south-central Asia. Extending 300 mi (480 km) from eastern Afghanistan to the Kashmir region, it is one of the highest mountain systems in the world; its loftiest peak is K2, at 28,251 ft (8,611 m), the world's second highest peak. Surrounded by other steep mountain ranges, the Karakorams are virtually inaccessible, although the completion of the Karakoram Highway in 1978 improved transportation in the region. Because of the harsh environment, the area is thinly populated.

Karakorum \ˌkä-rä-ˈkōr-əm\ Ancient capital, Mongol empire. Its ruins lie on the upper Orhon River in north-central Mongolia. It was settled c. 750. Genghis Khan established his headquarters there in 1220. In 1235 his son and successor, Ögödei, enclosed the city with walls and built a palace. Chinese forces invaded Mongolia and destroyed Karakorum in 1388. It was later partially rebuilt but was abandoned by the 16th century. The ruins are included in a regional UNESCO World Heritage site designated in 2004.

Karakul \ˈkar-ə-kəl\ Breed of sheep that originated in central or western Asia. They are raised chiefly for the skins of very young lambs, which have a glossy, tightly curled black coat (the "Persian lamb" of the fur trade). The wool of mature Karakul sheep, classified as carpet wool, is a mixture of coarse and fine fibres 6–10 in. (15–25 cm) long and varies from black to brown and gray.

Karakum Desert *or* **Kara-Kum Desert** \ˌkär-ə-ˈküm\ Desert area, Central Asia. Located in Turkmenistan, it is bounded to the east by the Amu Darya valley. It can be divided into three major regions: the elevated and wind-eroded Trans-Unguz in the north, the low-lying central plain, and the salt marshes of the southeast. It is populated by formerly nomadic Turkmen, who live by fishing in the Caspian Sea or raising livestock.

Karamanlis \ˌkär-ə-män-ˈlēs**, Konstantinos** *or* **Constantine Caramanlis** (b. March 8, 1907, Próti, near Sérrai, Macedonia, Ottoman Empire—d. April 23, 1998, Athens, Greece) Greek prime minister (1955–63, 1974–80) and president (1980–85, 1990–95). In various cabinet posts after World War II (1946–55), he helped rebuild Greece's wartorn economy. Chosen prime minister in 1955, he formed a government and a new conservative party, the National Radical Union. In 1960 he established an independent republic on Cyprus to ease tensions with Britain and Turkey over the island. He resigned in 1963 and lived in exile in Paris until 1974. Recalled as prime minister, he subordinated the military to civilian authority to restore democracy, averted war with Turkey over Cyprus, and oversaw the adoption of a new constitution that strengthened the presidency. In 1975 he held a referendum that resulted in the abolition of the monarchy. In 1980 he resigned as prime minister and was elected president. He helped effect Greece's entry into the European Community in 1981. He resigned in 1985, then was reelected president in 1990.

karaoke \ˌkar-ē-ˈō-kē\ *Japanese* **"empty orchestra"** Use of a device that plays instrumental accompaniments to songs with the vocal tracks removed, permitting the user to sing the lead. Karaoke apparently first appeared in the amusement quarter of Kōbe, Japan, where it became popular among businessmen in the late 1970s. It gained widespread popularity in the U.S. in the late 1980s. It is usually featured at bars, where patrons can perform on a stage and sing popular hits by reading lyrics electronically displayed on a monitor. A video film often accompanies the music.

karate Martial art in which an attacker is disabled by crippling kicks and punches. Emphasis is on concentration of as much of the body's power as possible at the point and instant of impact. Striking surfaces include the hand (particularly the knuckles and the hand's outer edge), ball of the foot, heel, forearm, knee, and elbow. In sporting matches (usually lasting about three minutes) and in sparring, blows and kicks are stopped short of contact. Performances are scored by a panel of judges. Karate evolved in East Asia over a period of centuries, becoming systematized in Okinawa in the 17th century, probably by people forbidden to carry weapons. It was imported into Japan in the 1920s and spread from there to other countries. See also tae kwon do.

Karbalāʾ \ˌkär-bä-ˈlä**, Battle of** (Oct. 10, 680) Brief engagement in which an Ummayad army sent by Yazīd I killed al-Ḥusayn ibn ʿAlī and a small group of his family and followers. Al-Ḥusayn, a grandson of the Prophet Muhammad, was on his way to Al-Kūfah, where he had been invited to press his claim to the caliphate, when he and his party were attacked and killed near the town of Karbalāʾ, Iraq. Most Shīʿites regard the anniversary of the battle as a holy day of mourning, and on that day they ritually reenact al-Ḥusayn's death; his tomb in Karbalāʾ is likewise considered a place of great sanctity. See also ʿAlī; *fitnah*; Muʿāwiyah I.

Kardelj \ˈkär-ˌdel^{y}**, Edvard** (b. Jan. 27, 1910, Ljubljana, Slvn., Austria-Hungary—d. Feb. 10, 1979, Ljubljana) Yugoslav revolutionary and administrator. He joined the outlawed Communist Party in 1926, was imprisoned from 1930 to 1932, and fled to the Soviet Union in 1934. Returning to Yugoslavia in 1937, he helped organize resistance to the German occupation in World War II and joined Tito in much of the Partisans' fighting. In 1946 he drew up the Soviet-inspired constitution after Tito became premier, and he directed the creation of all succeeding constitutions. He was the main architect of socialist self-management, which distinguished Yugoslavia's political and economic system from the Soviet system. In foreign affairs, he pioneered the concept of Yugoslav nonalignment.

Karen \kə-ˈren\ Any member of a variety of tribal peoples of southern Myanmar (Burma). Constituting the second largest minority in Myanmar, the Karen are not a unitary group in any ethnic sense, as they differ among themselves linguistically, religiously, and economically. Rather, they have defined themselves in terms of their common distrust of political domination by Myanmar, which has persisted since the country attained independence in 1948.

Karisimbi \ˌkä-rē-ˈsim-bē**, Mount** Peak, Virunga Mountains, east-central Africa. The highest peak in the Virungas, at a height of 14,787 ft (4,507 m), it lies on the boundary between Rwanda and Congo (Kinshasa) in Virunga National Park. It is the habitat of gorillas and is known for its exotic plants.

Karkar *or* **Qarqar** \ˈkär-ˌkär\ Ancient fortress on the Orontes River, western Syria. A strategic outpost, it was attacked by the Assyrians in 853 BC. It was defended by Aramaeans, led by Ben-hadad I of Damascus, and their allies, including King Ahab of Israel. In 720 BC it was the scene of a battle in which Sargon II of Assyria captured and burned it.

Karkūk \kir-ˈkük\ *or* **Kirkuk** City (pop., 2003 est.: 750,000), northeastern Iraq. Located north of Baghdad in the Kurdistan region, it is situated in one of the first areas in the Middle East where oil was discovered. Karkūk is a trade and export centre as well as a centre of Iraq's petroleum industry, with oil pipeline connections to Tripoli and to Yumurtalık on the Turkish coast. The city has traditionally had a Kurdish and Turkmen majority, but a large number of Arabs were resettled there in the late 20th century.

Karl-Marx-Stadt See Chemnitz

Karlfeldt \ˈkärl-felt**, Erik Axel** (b. July 20, 1864, Folkärna, Swed.—d. April 8, 1931, Stockholm) Swedish poet. His strong ties to the peasant culture of his rural homeland remained a dominant influence on his writing all his life. His essentially regional, tradition-bound poems, some published in English in *Arcadia Borealis* (1938), were very popular. He was elected to the Swedish Academy in 1904 and made its permanent secretary in 1912. He refused the Nobel Prize for Literature in 1918 but was awarded it posthumously in 1931.

Boris Karloff.
AP/WIDE WORLD PHOTOS

Karloff, Boris *orig.* **William Henry Pratt** (b. Nov. 23, 1887, London, Eng.—d. Feb. 2, 1969, Midhurst, West Sussex) British-U.S. actor. He immigrated to Canada from England in 1909 and acted with touring companies before moving to Hollywood, where he played minor

© 2006 Encyclopædia Britannica, Inc.

roles in films from 1919. His tender, sympathetic performance in Hollywood's first important monster film, James Whale's *Frankenstein* (1931), received so much critical praise that he became an overnight sensation. He acted in more than 100 films, specializing in horror pictures such as *The Mummy* (1932), *The Mask of Fu Manchu* (1932), *Bride of Frankenstein* (1935), and *Son of Frankenstein* (1939), and his name became synonymous with the horror genre. He returned to the stage for highly acclaimed performances on Broadway in *Arsenic and Old Lace* (1941) and as Captain Hook in *Peter Pan* (1950). His most famous television performance was in the animated special *How the Grinch Stole Christmas* (1966), for which he provided the voices of both the Grinch and the narrator.

Karlovy Vary \'kär-lȯ-vē-'vär-ē\ *German* **Karlsbad** *or* **Carlsbad** City (pop., 2001 prelim.: 53,857), western Czech Republic. A health resort with sulfur springs, it was developed in 1358 by Holy Roman Emperor Charles IV. The Carlsbad Decrees were drawn up there in 1819.

Karlowitz, Treaty of See Treaty of Carlowitz

karma In Indian philosophy, the influence of an individual's past actions on his future lives or reincarnations. It is based on the conviction that the present life is only one in a chain of lives (see samsara). The accumulated moral energy of a person's life determines his or her character, class status, and disposition in the next life. The process is automatic, and no interference by the gods is possible. In the course of a chain of lives, people can perfect themselves and reach the level of Brahma, or they can degrade themselves to the extent that they return to life as animals. The concept of karma, basic to Hinduism, was also incorporated into Buddhism and Jainism.

Karma-pa See Dge-lugs-pa

Kármán \'kär-mən**, Theodore von** (b. May 11, 1881, Budapest—d. May 6, 1963, Aachen, W.Ger.) Hungarian-born U.S. engineer. After directing the Aeronautical Institute at Aachen, Germany (1912–30), he immigrated to the U.S., where he taught at the California Institute of Technology (1930–44) and later headed NATO's Advisory Group for Aeronautical Research and Development (1951–63). His pioneering work in aeronautics and astronautics included important contributions to fluid mechanics, turbulence theory, supersonic flight, mathematics in engineering, and aircraft structures. His jet-assisted takeoff (JATO) rocket provided the prototype for engines used in present-day long-range missiles. He contributed to the first assisted takeoff of U.S. aircraft with solid- and liquid-propellant rockets, the flight of aircraft with rocket propulsion alone, and the development of spontaneously igniting liquid propellants (later used in the Apollo modules). In 1963 he was awarded the first National Medal of Science.

Karnak Village, Upper Egypt. Its name has been given to the northern part of the ruins of Thebes on the Nile River's eastern bank (the southern part is called Luxor). Among its many religious buildings stood the largest of all Egyptian temples, the Temple of Amon. Itself a complex of temples, added to and altered many times, it reflects the fluctuating fortunes of the Egyptian empire. There are no fewer than 10 pylons, separated by courts and halls. The most striking feature is the vast hypostyle hall commissioned by Ramses I (r. 1292–90 BC), with an area of some 54,000 sq ft (5,000 sq m). Twelve enormous columns, some 80 ft (24 m) high, raised the roofing slabs of the central aisle to produce a clerestory. Karnak is part of a UNESCO World Heritage site (designated 1979) centred on Thebes.

Karnali River See Ghaghara River

Karnataka \kär-'nä-tə-kə\ *formerly* **Mysore** \mī-'sōr\ State (pop., 2001 prelim.: 52,733,958), southwestern India. Lying on the Arabian Sea, it is bordered by the states of Goa, Maharashtra, Andhra Pradesh, Tamil Nadu, and Kerala. It has an area of 74,051 sq mi (191,791 sq km); its capital is Bangalore. It occupies the plateau region of the southern Deccan and the hill region of the Western Ghats. The area was ruled by a series of Hindu dynasties before coming under British control in 1831. Mysore returned to native rule in 1881 as a princely state. Its name was changed to Karnataka ("lofty land") in 1973. About 80% of the population is engaged in agriculture. Rice and sugarcane are cultivated on the coastal plain, and coffee and tea are grown in the hill region. The population is largely Dravidian, and the Kannada language is widely spoken.

Kärnten \'kernt-ᵊn\ *or* **Carinthia** State (pop., 2004 est.: 559,078), southern Austria. Bordered by Italy and Slovenia, it occupies an area of 3,682 sq mi (9,536 sq km) and has its capital at Klagenfurt. Originally inhabited by Celts, it became part of the Roman province of Noricum. Made a separate duchy in 976, it was a crown land of the Habsburgs in 1335. After World War I, parts were claimed by Yugoslavia and Italy.

Karo \'kä-rō**, Joseph ben Ephraim** (b. 1488, Spain—d. March 24, 1575, Safed, Palestine) Spanish-born Jewish scholar. When the Jews were expelled from Spain in 1492, he and his parents settled in Turkey. Around 1536 he emigrated to Safed in Palestine, where he studied the Talmud and systematized the vast body of material produced by post-Talmudic writers. He was the author of the last great codification of Jewish law, the *House of Joseph*, which was later condensed as *The Well-Laid Table* and is still authoritative for Orthodox Judaism.

Károlyi \'kȧ-rȯl-yē**, Mihály, Count** (b. March 4, 1875, Fót, Hung., Austria-Hungary—d. March 20, 1955, Vence, France) Hungarian statesman. A member of one of the wealthiest families of the Hungarian aristocracy, he entered parliament in 1910 and tried to advance radical ideas in a conservative state, advocating universal suffrage, concessions to Hungary's non-Magyar subjects, and a policy of friendship with states other than Germany. After World War I he served as prime minister in 1918–19, and he tried unsuccessfully to gain a favourable peace settlement from the Allies. After two months as president of the short-lived Hungarian republic in 1919, he resigned and was replaced by Béla Kun. He fled abroad, but he returned to Hungary in 1946 and served as ambassador to France (1947–49).

Karpov \'kär-ˌpȯf**, Anatoly (Yevgenyevich)** (b. May 23, 1951, Zlatoust, U.S.S.R.) Russian chess master. His first great success was winning the 1969 World Junior (under 20) Championship. Karpov was declared world champion in 1975 when the reigning champion Bobby Fischer and the International Chess Federation (FIDE) could not agree on conditions for their title match. Karpov defended the title several times before losing it in 1985 to Garry Kasparov. Karpov regained the FIDE championship in 1993 after Kasparov was stripped of the title. In 1999 Karpov refused to defend his FIDE title, which was won by Alexander Khalifman of Russia.

Karsavina \kär-'sä-və-nə**, Tamara (Platonovna)** (b. March 9/10, 1885, St. Petersburg, Russia—d. May 26, 1978, Beaconsfield, Buckinghamshire, Eng.) Russian-born British dancer. She trained at the Imperial Ballet School in St. Petersburg and joined the Mariinsky Theatre company in 1902. She joined the Ballets Russes at its formation in 1909; dancing with Vaslav Nijinsky until 1913, she created most of the leading roles in Michel Fokine's neo-Romantic repertoire, including *Les Sylphides*, *Carnaval*, *Le Spectre de la rose*, and *The Firebird*. She settled in London, where she helped found the Royal Academy of Dancing in 1920 and the Camargo Society in 1930 and later coached Margot Fonteyn.

Karsh, Yousuf (b. Dec. 23, 1908, Mardin, Tur.—d. July 13, 2002, Boston, Mass., U.S.) Turkish-born Canadian photographer. As an Armenian in Turkey, he endured persecution before emigrating at 16 to Canada, where he joined his photographer uncle. He worked for a Boston portrait photographer (1928–31) then returned to Canada and soon opened his own studio in Ottawa. In 1935 he was appointed official portrait photographer of the Canadian government. His portrait of Winston Churchill (1941) brought him international fame. "Karsh of Ottawa" went on to photograph hundreds of

the world's most prominent figures, including royalty, statesmen, artists, and writers, employing dramatic lighting techniques to produce idealized likenesses.

Karter *or* **Kartir** (fl. 3rd century AD, Iran) Persian high priest of Zoroastrianism. Under the protection of a series of Persian kings, he restored the purity of Zoroastrianism and tried to purge the kingdom of all other religions. His chief rival was the prophet Mani, founder of Manichaeism. At Karter's instigation, Mani was put in prison, where he eventually died. After Karter's death a degree of religious tolerance returned to Persia.

karting Driving and racing miniature, skeleton-frame, rear-engine automobiles called karts or GoKarts. The sport originated in the U.S. in the 1950s after the first kart had been assembled from unwanted lawn-mower parts. It thereafter developed into an international sport in Europe. Speeds of 100 mph (160 kph) are not uncommon.

Kārūn \kä-'rün\ **River** River, southwestern Iran. A tributary of the Shatt al-Arab, it rises in the Bakhtīārī Mountains and flows through mountains for 515 mi (829 km). The Ḥaffār Channel, dug in 986, changed its course, causing frontier disputes between Iran and the Ottoman Empire; Iran gained the right to the waterway by treaty in 1847.

Dam on the Kārūn River, Iran

Kasai River \kä-'sī\ River, central Africa. It is the chief southern tributary of the Congo River, measuring 1,338 mi (2,153 km) from its source in Angola to its confluence with the Congo. It runs east for its first 250 mi (400 km), then turns north to form the border between Angola and the Democratic Republic of the Congo (Zaire). It is unnavigable in the north, but water traffic is heavy from Kinshasa to Ilebo. After the Kasai is joined by the Kwango River, it is known as the Kwa.

Kasanje \kä-'sän-jā\ Historical African kingdom, on the upper Kwango River in what is now Angola. Founded in 1620 by a group from Lunda, its people became known as the Imbangala. By the mid-17th century, it had a thriving trade with the states of the interior and with Portuguese traders. Its monopoly of inland Portuguese-African trade lasted until 1850, when Ovimbundu opened alternative routes and markets. Occupied by the Portuguese, Kasanje was incorporated into Portuguese Angola in 1910–11.

Kasavubu \kä-sä-'vü-bü**, Joseph** (b. 1910?, Tshela, Belgian Congo—d. March 24, 1969, Boma) First president (1960–65) of independent Congo (Kinshasa). He held a variety of administrative posts before agreeing to serve as president in Patrice Lumumba's government. When Katanga province under Moise Tshombe seceded a few days after independence, Kasavubu threw his support to Tshombe and, together with Col. J. Mobutu (see Mobutu Sese Seko), ousted Lumumba. Four years later a split between Kasavubu and Tshombe enabled Mobutu to seize control.

Kasavubu

Kashmir Region of the northwestern Indian subcontinent. It is bounded to the northeast and east by China, to the south by India, to the west by Pakistan, and to the northwest by Afghanistan. The land is predominantly mountainous and includes K2 and other peaks of the Karakoram Range. India and Pakistan have disputed over the region since India's partition in 1947. Pakistan occupies the northern and western portions, and India administers the largest area, in the south and southeast, organized as the state of Jammu and Kashmir. In addition, China has held portions of the northeastern section since 1962.

kashruth \kä-'shrüt, 'kä-shrůth\ In Judaism, the rules forbidding the eating of certain foods and requiring that other foods be prepared in a specific way. These rules determine which foods can be called kosher. Most information regarding kashruth is found in the Hebrew Bible in the books of Leviticus, Deuteronomy, Genesis, and Exodus. Jews observing kashruth may eat only fish with scales and fins and animals that chew the cud and have cloven feet; shellfish and pork are thus forbidden. Animals and birds must be slaughtered according to ritual and with prayer. Meat and dairy products must be strictly separated; they may not be eaten at the same meal or from the same set of dishes. No restrictions apply to the use of fruits and vegetables. During Passover, bread and other baked goods must be made without leaven.

Kaskaskia \kas-'kas-kē-ə\ **River** River, Illinois, U.S. Rising near Urbana, it flows southwest to enter the Mississippi River after a course of 320 mi (515 km). The village of Kaskaskia, located near the junction of the river with the Mississippi, is near the site of a town founded by Jesuit missionaries in 1703. It was the capital of Illinois Territory (1809) and of the state (1818–20). It was severely damaged by floods several times.

Kasparov \kas-'pär-ôf**, Garry** (b. April 13, 1963, Baku, Azerbaijan, U.S.S.R.) Russian chess master. He became an international grandmaster following his victory in the 1980 World Junior (under 20) Championship. In 1984–85 Kasparov met world champion Anatoly Karpov in a match that was aborted after five months of play; in late 1985, Kasparov won a 24-game return match 13–11. The International Chess Federation (FIDE) stripped him of his title in 1993 in a conflict over the venue for a championship match, but the rest of the chess world still accepted him as champion. In 1996 Kasparov defeated IBM's custom-built chess computer Deep Blue in a match that attracted worldwide attention. In a 1997 rematch, an upgraded Deep Blue prevailed. In 2000 Kasparov lost a 16-game championship match to Vladimir Kramnik of Russia.

Katagum \kə-'tä-gəm\ Traditional emirate, northern Nigeria. The emirate became part of Katagum province under British rule in 1903. Its seat, also named Katagum, was transferred to Azare in 1916. The emirate became part of Bauchi state in 1926.

Kathiawar \ˌkä-tē-ə-'wär\ **Peninsula** Peninsula, southwestern Gujarat state, west-central India. Occupying an area of 23,000 sq mi (60,000 sq km), it is bounded by the Arabian Sea on the southwest. It was first occupied in prehistoric times and was settled in the 3nd–2nd millennium BC by Harappan peoples. It was ruled by many great dynasties beginning with the Mauryan empire in the 3rd century BC. The area came under Muslim rule in the 13th century and became part of the Mughal Empire in the 16th century. Many of its small princely states came under British protection after 1820. Made a part of Gujarat state in 1960, it is the site of a national park that contains the last wild Asiatic lions in India.

Kathmandu *or* **Katmandu** \ˌkat-man-'dü\ City (pop., 2000 est.: 701,499), capital of Nepal. Situated near the confluence of the Baghmati and Vishnumati rivers at an elevation of 4,344 ft (1,324 m), it was founded in 723. Its name refers to a temple (*kath*, "wood"; *mandir*, "temple") said to have been built from the wood of a single tree in 1596. The seat of the ruling Shah family of the Gurkha people since 1768, it is Nepal's most important business and commercial centre and the site of Tribhuvan University.

Katmai \'kat-ˌmī\ **National Park and Preserve** National park, southwestern Alaska, U.S., at the head of the Alaska Peninsula. Occupying an area of 4,090,000 acres (1,655,000 hectares), it was proclaimed a national monument in 1918 after the eruption of Novarupta in 1912. The eruption converted the valley into a wasteland known as the Valley of Ten Thousand Smokes, and the volcanic crater later became a lake. The park abounds in wildlife, including large numbers of brown and grizzly bears.

Katowice \ˌkä-tô-'vēt-sə\ City (pop., 2000 est.: 340,539), south-central Poland. Located in the midst of the coalfields of Upper Silesia, it was settled by 1598. It became a city in 1865, when coal mining began in the region. It became part of Poland in 1922 and has since incorporated surrounding villages. It is a centre of mining and heavy industry and an important rail junction.

Katsina \'kät-sē-nä\ City (pop., 1991: 259,315), northern Nigeria. Probably founded c. 1100, it was the capital of the kingdom of Katsina, one

© 2006 Encyclopædia Britannica, Inc.

of the earliest Hausa states, and an ancient centre of learning. The city's Fulani emirs retain traditional and advisory roles. It is a market for local agricultural products as well as a centre for traditional crafts and industry.

Katsura \'kät-sù-rä\ **Imperial Villa** Estate constructed in 1620–24 on the southwestern edge of Kyōto, Japan. It was an outstanding attempt to integrate the styles of the Heian period with the architectural innovations spurred by the development of the tea ceremony. Carefully planned meandering paths lead to and from the central structures and through gardens dotted with small pavilions and tea huts offering orchestrated views. The main buildings, set into a landscape created for them, include three attached structures in a typical *shoin-zukuri* style.

Kattegat Arm of the North Sea, between Sweden and Jutland, Denmark. Its maximum width is 88 mi (142 km). It is connected with both the North and Baltic seas. Chief ports on its shores are Göteborg and Halmstad in Sweden and Århus in Denmark. It is an important commercial navigation passage and a popular summer vacation area.

katydid Any of numerous species in several subfamilies of the long-horned grasshopper family (Tettigoniidae). Generally green with long wings, katydids live on trees, bushes, or grasses, and many species resemble leaves. They are powerful jumpers; many species do not fly but merely flutter their wings during leaps. They feed chiefly on plant matter, though some also eat other insects. The true katydids of eastern North America are considered great singers; each species has its own repetitive song, which is produced only at night.

Fork-tailed bush katydid (*Scudderia furcata*).
E.S. ROSS

Katyn \ka-'tin\ **Massacre** Mass killing of Polish military officers by the Soviet Union in World War II. After the German-Soviet Nonaggression Pact (1939) and Germany's defeat of Poland, Soviet forces occupied eastern Poland and interned thousands of Polish military personnel. After the German invasion of the Soviet Union (1941), the Polish government-in-exile agreed to cooperate with the Soviets against Germany, and the Polish general forming the new army asked to have the Polish prisoners placed under his command, but the Soviet government informed him in December 1941 that most of those prisoners had escaped to Manchuria and could not be located. In 1943 the Germans discovered mass graves in the Katyn forest in western Russia. A total of 4,443 corpses were recovered; the victims had apparently been shot from behind and then piled in stacks and buried. The Soviet government claimed the invading German army had killed them, but it refused Polish requests to have the Red Cross investigate. In 1992 the Russian government released documents proving that the Soviet secret police were responsible for the executions and cover-up.

Kauffmann \'kaùf-ˌmän**, (Maria Anna) Angelica (Catharina)** (b. Oct. 30, 1741, Chur, Switz.—d. Nov. 5, 1807, Rome, Papal States) Swiss-born Italian painter. She began studying art in Italy as a child, showing great precocity, and in 1766 her friend Joshua Reynolds took her to London. There she became known for her decorative work with architects such as Robert Adam. Her pastoral compositions incorporate delicate and graceful depictions of gods and goddesses; though her paintings are Rococo in tone and approach, her figures are Neoclassical (see Classicism and Neoclassicism). Her portraits of female sitters are among her finest works. After marrying the painter Antonio Zucchi (1726–95), she returned to Italy in 1781.

Kaufman, George S(imon) (b. Nov. 16, 1889, Pittsburgh, Pa., U.S—d. June 2, 1961, New York, N.Y.) U.S. playwright and director. He was drama critic for *The New York Times* (1917–30). Known for his caustic wit and talent for brilliant satire, he wrote many plays in collaboration with other writers, including Marc Connelly, Morrie Ryskind (1895–1985), and Edna Ferber. His most memorable collaboration was with Moss Hart, with whom he wrote *Once in a Lifetime* (1930), *You Can't Take It with You* (1936, Pulitzer Prize), and *The Man Who Came to Dinner* (1939).

Kaunas \'kaù-nəs\ *Russian* **Kovno** \'kȯv-nō\ City (pop., 2001: 378,943), southern Lithuania. Founded as a fortress in 1030, it passed to Russia in 1795 after the third partition of Poland. It was the capital of independent Lithuania (1920–40), then it was annexed by the Soviet Union. Many historic buildings survive in the Old Town. In addition to being an important industrial centre, it is an educational and cultural centre, with polytechnic, medical, and agricultural institutes.

Kaunda \kä-'ün-də**, Kenneth (David)** (b. April 28, 1924, Lubwa, near Chinsali, Northern Rhodesia) Political leader and first president (1961–91) of Zambia. Kaunda came to prominence in 1959–60 in the movement to stop Britain from establishing a federation of North and South Rhodesia and Nyasaland. As the first president of independent Zambia, he helped avert a civil war in the late 1960s but ended up imposing single-party rule. From the 1970s he led other southern African nations in confronting the white-minority governments of Rhodesia and South Africa. He increased Zambia's dependence on copper exports and on foreign aid, allowing agriculture, education, and social services to languish and poverty and unemployment to increase. Several attempted coups in the early 1980s were crushed; in 1990 he was forced to legalize opposition parties, and in 1991 he was voted out of office.

Kautsky \'kaùt-skē**, Karl** (b. Oct. 16, 1854, Prague, Bohemia—d. Oct. 17, 1938, Amsterdam, Neth.) German Marxist theorist and leader. He was the author of the Erfurt Program adopted by Germany's Social Democrat Party in 1891, which committed the party to an evolutionary form of Marxism that rejected both the radicalism of Rosa Luxemburg and the evolutionary socialism of Eduard Bernstein. He founded the Marxist review *Neue Zeit* in 1883, which he edited in various European cities until 1917, and wrote several books about Marx's doctrines and about St. Thomas More. He joined the Independent Social Democrats in opposing World War I.

kava *or* **kava kava** \'kä-və\ Nonalcoholic, yellow-green, somewhat bitter beverage made from the root of the pepper plant (mainly *Piper methysticum*) in most South Pacific islands. It is traditionally consumed in the kava ceremony, which includes the ritual making and drinking of kava and a ceremonial feast. It is taken to relieve stress and anxiety and as a mood elevator.

Kavaratti \ˌkə-və-'rə-tē\ **Island** Island of the Lakshadweep union territory of India. Located in the Amindivi Islands in the Arabian Sea, off the Malabar Coast of southern India, it is 3.5 mi (5.6 km) long and has a maximum width of 0.75 mi (1.2 km). Its only town, Kavaratti (pop., 2001: 10,119), is the administrative centre of Lakshadweep. The town is noted for the ornately carved pillars and roofs of its mosques.

Kaveri River \'kä-və-rē\ *or* **Cauvery River** \'kȯ-və-rē\ River, southern India. Rising in southwestern Karnataka state, it flows southeast some 475 mi (765 km) to enter the Bay of Bengal. East of the city of Mysore it forms the island of Sivasamudram, on either side of which are scenic falls that descend about 320 ft (100 m). The river is the source for an extensive irrigation system and of hydroelectric power. It is considered one of India's sacred rivers.

Kaw River See Kansas River

Kawabata \'kä-wä-ˌbä-tä\ **Yasunari** (b. June 11, 1899, Ōsaka, Japan—d. April 16, 1972, Zushi) Japanese novelist. His writing echoes

© 2006 Encyclopædia Britannica, Inc.

ancient Japanese forms in prose influenced by post-World War I French literary currents such as Dadaism (see DADA) and EXPRESSIONISM. His best-known novel is *Snow Country* (1948), the story of a forlorn geisha. His other major works (published together in 1952) are *A Thousand Cranes* and *The Sound of the Mountain*. The loneliness and preoccupation with death in many of his mature works may derive from his losing all his near relatives while he was young. He was awarded the Nobel Prize for Literature in 1968. He committed suicide shortly after his friend MISHIMA YUKIO.

Kawasaki \ˌkä-wä-'sä-kē\ City (pop., 2000 prelim.: 1,249,851) and port, Honshu, Japan. It lies on Tokyo Bay, between TOKYO and YOKOHAMA. Almost completely destroyed in World War II, it has since been rebuilt. It is a major industrial centre for machinery and chemicals manufacturing and has large shipbuilding facilities. It is the site of a 12th-century Buddhist temple.

Kawatake Mokuami \ˌkä-wä-'tä-kā-ˌmō-kü-'ä-mē\ *orig.* **Yoshimura Yoshisaburō** (b. March 1, 1816, Edo, Japan—d. Jan. 22, 1893, Tokyo) Japanese playwright. He apprenticed with the KABUKI playwright Tsuruya Namboku V and became chief playwright of the Kawarasaki Theatre (1843). He was noted for domestic plays that featured ordinary townspeople and picaresque plays that portrayed the lives of thieves. After 1868 he wrote historical plays that emphasized factual accuracy and pioneered the production of domestic plays that described the modernization and Westernization of early MEIJI PERIOD society. He retired in 1881 but continued to write dance dramas. He wrote more than 360 plays, and his works account for half the current kabuki repertory.

Kay, Alan (b. 1940, Springfield, Mass., U.S.) U.S. computer scientist. He received a Ph.D. from the University of Utah. In 1972 he joined Xerox's Palo Alto Research Center and continued work on the first OBJECT-ORIENTED PROGRAMMING language (Smalltalk) for educational applications. He contributed to the development of ETHERNET, laser printing, and CLIENT-SERVER ARCHITECTURE. He left Xerox in 1983 and became a fellow at Apple Computer in 1984. His design of a GRAPHICAL USER INTERFACE was used in Apple's Macintosh and later in Microsoft's Windows operating system. He was a fellow at the Walt Disney Co. (1996–2001) and the Hewlett-Packard Co. (from 2002).

Kay, John (b. July 16, 1704, near Bury, Lancashire, Eng.—d. 1764?, France) British machinist and engineer. In 1733 he received a patent for a "New Engine or Machine for Opening and Dressing Wool" that incorporated his FLYING SHUTTLE, an important step toward automatic WEAVING. Kay's invention so increased yarn consumption that it spurred the invention of spinning machines (including the SPINNING JENNY and SPINNING MULE), but its true importance lay in its adaptation in power LOOMS.

Kay, Ulysses (Simpson) (b. Jan. 7, 1917, Tucson, Ariz., U.S.—d. May 20, 1995, Englewood, N.J.) U.S. composer. A nephew of jazz cornetist KING OLIVER, he was an all-around musician from childhood. After graduating from the University of Arizona he went on to study at the Eastman School and with the composer PAUL HINDEMITH at Yale. He taught principally at the City University of New York, earning a reputation as a distinguished teacher. His music—Neoclassical in style but characterized by verve and warmth—received many awards; mostly orchestral or choral, it includes five operas and several film and television scores.

Kaya *or* **Karak** \'kä-räk\ *Japanese* **Mimana** Tribal league formed sometime before the 3rd century AD in southern Korea and lasting until its subjugation to SILLA in the 6th century. The people of Kaya are thought to have been closely related to the groups that crossed over from Korea to Japan a century or two earlier, and Kaya often enlisted Japan in its feuds with neighbouring Silla and PAEKCHE. The Kaya people invented a unique 12-stringed zither, the *kayagum*.

kayak \'kī-ˌak\ Type of CANOE covered by a deck except for a cockpit in which the paddler sits. It has a pointed bow and stern and no keel; the paddler faces forward, grasping a double-bladed paddle and dipping the blades alternately on either side. Usually built for one occupant, it can be designed for two or three. Kayaks were traditionally used for fishing and hunting by ESKIMOS, who stretched seal or other animal skins over a driftwood or whalebone frame and rubbed the skins with animal fat for waterproofing. The paddler wore an overlapping shield to allow the kayak to be righted without taking on water if it rolled over. Now often made of molded plastic or fiberglass, kayaks are widely used for recreation.

Kaye, Danny *orig.* **David Daniel Kaminski** (b. Jan. 18, 1913, New York, N.Y., U.S.—d. March 3, 1987, Los Angeles, Calif.) U.S. actor and comedian. He worked as a comic busboy in Catskills resorts from age 13 and later worked in vaudeville and nightclubs, developing his trademark pantomimes, rapid-fire nonsense songs, and physical antics. He was a success on Broadway in *The Straw Hat Revue* (1939) and *Lady in the Dark* (1940), in which he upstaged the legendary GERTRUDE LAWRENCE. His movie debut in *Up in Arms* (1944) was followed by starring roles in *The Secret Life of Walter Mitty* (1947), *The Inspector General* (1949), *Hans Christian Andersen* (1952), and *White Christmas* (1954). He starred on television in *The Danny Kaye Show* (1963–67). Much of his comedy material was written by his wife, Sylvia Fine. Kaye was awarded an honorary Academy Award in 1955. He began his long association with UNICEF in 1953 and logged thousands of miles (frequently piloting his own plane) on behalf of the organization. He was awarded the Jean Hersholt Humanitarian Award in 1982 and the French Legion of Honour in 1986.

Kaysone Phomvihan \kā-'sō-ne-'pȯm-vē-hän\ (b. Dec. 13, 1920, Na Seng, Laos—d. Nov. 21, 1992, Vientiane) Laotian revolutionary, prime minister (1975–91), and president (1991–92). Son of a Lao mother and a Vietnamese father, Kaysone met HO CHI MINH while studying law in Hanoi and returned to Laos to become the leader of the Pathet Lao, an anti-French revolutionary movement. In 1975 the Pathet Lao overthrew Laos's 600-year-old monarchy, and Kaysone became prime minister of the Lao People's Democratic Republic. He kept the country closely allied with Vietnam and isolated from Western influence until the end of the Cold War, when he first looked to France and Japan for financial aid. As president, he relaxed some government controls and released most political prisoners.

Kazakhstan *or* **Kazakstan** \kə-ˌzäk-'stän\ *officially* **Republic of Kazakhstan** Country, Central Asia. Area: 1,052,090 sq mi (2,724,900 sq km). Population (2005 est.): 15,186,000. Capital: ASTANA. Kazakhs, a

Turkic-speaking people who are the region's original inhabitants, make up more than half of the population; Russians constitute nearly one-third, as do small minorities of Ukrainians, Uzbeks, Germans, and others. Languages: Kazakh (official), Russian. Religions: Islam (mostly Sunni), Christianity. Currency: tenge. From the steppe and desert lands of western and central Kazakhstan, the terrain rises to high mountains in the southeast along the border with Kyrgyzstan and China. Its highest point is Mount Khan-Tengri, 22,949 ft (6,995 m) high. The country is intensively developed agriculturally, but much of the land area is used for pasture, with sheep and goats as the main livestock. Manufacturing includes cast iron and rolled steel; mining and oil drilling are also important. Kazakhstan is a republic with a parliament consisting of two chambers; its head of state and government is the president, assisted by the prime

© 2006 Encyclopædia Britannica, Inc.

minister. The area came under Mongol rule in the 13th century. The Kazakhs consolidated a nomadic empire in the 15th–16th century. Under Russian rule by the mid-19th century, it became part of the Kirgiz Autonomous Republic formed by the Soviets in 1920, and in 1925 its name was changed to the Kazakh Autonomous S.S.R. Kazakhstan obtained its independence from the Soviet Union in 1991. After several years of economic troubles, it began a period of sustained growth.

Kazan \kə-'zän^{y}\ City (pop., 2001 est.: 1,090,200), capital of the Tatarstan republic, western Russia. Located at the confluence of the Volga and Kazanka rivers, it was founded in the 13th century by Mongols of the Golden Horde; it became the capital of an independent khanate in the 15th century. In 1552 Ivan IV (the Terrible) captured Kazan and subjugated the khanate. The city was burned in a revolt (1773–74), but after its reconstruction it grew in importance as a trading centre, and by the beginning of the 20th century it was one of the chief manufacturing cities of Russia.

Kazan \kə-'zan**, Elia** *orig.* **Elia Kazanjoglous** (b. Sept. 7, 1909, Constantinople, Ottoman Empire—d. Sept. 28, 2003, New York, N.Y., U.S.) U.S. stage and film director. At age four he immigrated to the U.S. with his family. An actor with the Group Theatre (1932–39), he became a noted Broadway director with plays such as *The Skin of Our Teeth* (1942), *A Streetcar Named Desire* (1947; film, 1951), *Death of a Salesman* (1949, Tony Award), *J.B.* (1958, Tony Award), and *Sweet Bird of Youth* (1959). In 1947 he cofounded the Actors Studio. He was praised for his naturalistic style in movies such as *A Tree Grows in Brooklyn* (1945), *Gentleman's Agreement* (1947, Academy Award), *On the Waterfront* (1954, Academy Award), and *East of Eden* (1955). Though bitterly attacked for his cooperation with the House Un-American Activities Committee in the early 1950s, in which he turned over names of suspected communists, he received an honorary Academy Award for lifetime achievement in 1999.

Kazan River \kə-'zan\ River, central Canada. Rising in Nunavut, it flows through several lakes to empty into Baker Lake after a course of 455 mi (732 km). It is one of the main streams of the Barren Grounds, an area northwest of Hudson Bay that has treeless plains marked by many swamps and lakes.

Kazantzákis \kä-zänt-'zä-kēs**, Níkos** (b. Dec. 2, 1885, Iráklion, Crete, Ottoman Empire—d. Oct. 26, 1957, Freiburg im Breisgau, W.Ger.) Greek writer. Educated in law and philosophy, he traveled widely and finally settled on the island of Aegina before World War II. He is best known for his widely translated novels, including *Zorba the Greek* (1946; film, 1964), *The Greek Passion* (1954), and *The Last Temptation of Christ* (1955; film, 1988). His works also include essays, travel books, tragedies, and translations of classics such as Dante's *Divine Comedy* and Goethe's *Faust*.

Kazembe \kä-'zem-bē\ Largest and most organized kingdom of the Lunda empire (see Luba-Lunda states) in central Africa. At the height of its power (c. 1800), Kazembe occupied the territory now included in the Shaba region of the Democratic Republic of the Congo and in northern Zambia. Created c. 1740 by explorers from western Lunda, it grew more powerful by annexing neighbouring states and became an important centre of trade between the African interior and the Portuguese and Arabs on the eastern coast. Civil war erupted in 1850, and the kingdom was destroyed c. 1890.

Kazin \'kā-zən**, Alfred** (b. June 5, 1915, Brooklyn, N.Y., U.S.—d. June 5, 1998, New York, N.Y.) U.S. literary critic. His sweeping historical study of modern American literature, *On Native Grounds* (1942), won him instant recognition. Much of his criticism appeared in *Partisan Review*, *The New Republic*, and *The New Yorker*. His books include *Starting Out in the Thirties* (1965), *New York Jew* (1978), *A Writer's America* (1988), and *God and the American Writer* (1997).

Kazvīn See Qazvīn

kea \'kē-ə\ Large, stocky parrot (*Nestor notabilis,* subfamily Nestorinae) of New Zealand. It lives in mountain habitats and is known for its curious and playful character. However, the kea occasionally tears into sheep carcasses to get at the fat around the kidneys; sometimes it attacks live sheep.

Kean, Edmund (b. March 17?, 1789, London, Eng.—d. May 15, 1833, London) British actor. He acted with a touring stage company from 1805, and in 1814 he won acclaim in London with his innovative portrayal of Shylock in *The Merchant of Venice*. He went on to specialize in other Shakespearean villains, including Richard III, Iago, and Macbeth. He also excelled at playing Othello and Hamlet, as well as Barabas in Christopher Marlowe's *The Jew of Malta*. Though praised for his passionate and sensational stage portrayals, he became unpopular for his ungovernable behaviour offstage, marked by excessive drinking and a suit for adultery (1825). His son Charles (1811–68) was an actor-manager noted for his revivals of Shakespearean plays.

Edmund Kean, detail of a pencil drawing by Samuel Cousins, 1814; in the National Portrait Gallery, London.

Kearny \'kär-nē**, Stephen Watts** (b. Aug. 30, 1794, Newark, N.J., U.S.—d. Oct. 31, 1848, St. Louis, Mo.) U.S. Army officer. He served in the War of 1812 and later on the western frontier. At the outbreak of the Mexican War, he was ordered to seize New Mexico and California. Using diplomacy to persuade Mexican troops to withdraw, he marched unopposed to Santa Fe, where in 1846 he proclaimed a civil government for the province. Heading to California, he was informed that the conquest had already been completed by Robert F. Stockton and John C. Frémont. He arrived to discover that Mexican rebels had retaken most of the province. He then joined forces with Stockton to defeat the rebels in 1847. After initial opposition from Frémont, who had persuaded Stockton to appoint him governor, Kearny pacified the rest of California and established a stable civil government. He was then sent to Mexico, where he died of yellow fever.

Keaton, Buster *orig.* **Joseph Francis Keaton IV** (b. Oct. 4, 1895, Piqua, Kan., U.S.—d. Feb. 1, 1966, Woodland Hills, Calif.) U.S. film actor and director. He acted with his parents in vaudeville (1899–1917), where he developed his mastery of comic falls and subtle timing and his trademark deadpan expression. His film debut in Fatty Arbuckle's *The Butcher Boy* (1917) was followed by several short films (1917–19). As head of his own production company (1920–28) he directed and starred in classic silent movies such as *The Navigator* (1924), *Sherlock, Jr.* (1924), *The General* (1927), and *Steamboat Bill, Jr.* (1928). For MGM he made *The Cameraman* (1928), but he was denied artistic control over his films, and his career declined. He later appeared in *Sunset Boulevard* (1950) and *Limelight* (1952). From the late 1940s his comedies were gradually revived, and he is now regarded as one of the greatest silent comedy stars.

Keaton, Diane *orig.* **Diane Hall** (b. Jan. 5, 1946, Los Angeles, Calif., U.S.) U.S. film actress. She acted on Broadway in *Hair* (1968) and with Woody Allen in *Play It Again, Sam* (1969), reprising her role in the movie version (1972). She played a supporting role in *The Godfather* (1972) and its sequels. She starred in various Allen movies, including *Sleeper* (1973), *Annie Hall* (1977, Academy Award), *Interiors* (1978), and *Manhattan* (1979). Her other films include *Looking for Mr. Goodbar* (1977), *Reds* (1981), *Mrs. Soffel* (1984), *First Wives Club* (1996), and *The Other Sister* (1999). Initially noted for her quirky comic roles, she developed into one of Hollywood's most respected dramatic actresses.

Keats, John (b. Oct. 31, 1795, London, Eng.—d. Feb. 23, 1821, Rome, Papal States) English Romantic poet. The son of a livery-stable manager, he had a limited formal education. He worked as a surgeon's apprentice and assistant for several years before devoting himself entirely to poetry at age 21. His first mature work was the sonnet "On First Looking into Chapman's

© 2006 Encyclopædia Britannica, Inc.

Homer" (1816). His long *Endymion* appeared in the same year (1818) as the first symptoms of the tuberculosis that would kill him at age 25. During a few intense months of 1819 he produced many of his greatest works: several great odes (including "Ode on a Grecian Urn," "Ode to a Nightingale," and "To Autumn"), two unfinished versions of the story of the titan Hyperion, and "La Belle Dame Sans Merci." Most were published in the landmark collection *Lamia, Isabella, The Eve of St. Agnes, and Other Poems* (1820). Marked by vivid imagery, great sensuous appeal, and a yearning for the lost glories of the Classical world, his finest works are among the greatest of the English tradition. His letters are among the best by any English poet.

Keb See Geb

Kediri \kā-'dir-ē\ City (pop., 1995 est.: 253,760), eastern Java, Indonesia. It is located in the valley of the Brantas River, southwest of Surabaya. In the 11th to 13th centuries it lay at the heart of a powerful Hindu kingdom, also named Kediri; after 1830 it became the capital of a residency under Dutch administration. The modern city is a trading centre for local agricultural products, including sugar, coffee, and rice.

Keeling Islands See Cocos Islands

Keen, William (Williams) (b. Jan. 19, 1837, Philadelphia, Pa., U.S.—d. June 7, 1932, Philadelphia) First U.S. brain surgeon. He received his M.D. from Jefferson Medical College. He was one of the first to successfully remove a brain tumour (1888) and assisted in the removal of Pres. Grover Cleveland's left upper jaw (1893), which contained a malignant tumour. In addition to his teaching and medical work, he edited *Surgery: Its Principles and Practice* (8 vol., 1906–13).

Kegon \'kā-gōn\ Buddhist philosophy introduced into Japan from China in the 8th century. The name Kegon (meaning "flower ornament") is a translation of the Sanskrit *avatamsaka*, after the school's chief text, the Avatamsaka-sutra, which deals with the buddha Vairocana. The school was founded in China as Huayan in the late 6th century and reached Japan c. 740. Kegon taught that all living things are interdependent and that the universe is self-creating, with Vairocana at its centre. Though the Kegon school is no longer an active faith teaching a separate doctrine, it continues to administer the famous Tōdai Temple monastery at Nara.

Keillor \'kē-lər**, Garrison (Edward)** (b. Aug. 7, 1942, Anoka, Minn., U.S.) U.S. radio entertainer and writer. He began writing for *The New Yorker* in college and worked as a staff writer there until 1992. In 1974 he created and hosted the public-radio humour and variety show *A Prairie Home Companion*, about the fictional Minnesota town Lake Wobegon. He then created a new program, *The American Radio Company* (1987–91), but revived *A Prairie Home Companion* in 1993. His books include *Lake Wobegon Days* (1985), *Leaving Home* (1987), *The Sandy Bottom Orchestra* (1996), and *Me* (1999).

Keino \'kā-nō**, Kip** *orig.* **Hezekiah Kipchoge Keino** (b. Jan. 17, 1940, Nandi Hills, Kenya) Kenyan distance runner. He was originally a goatherd and trained for distance running in the hill country. At the high-altitude 1968 Olympics in Mexico City, he won a silver medal in the 5,000-m race and, in one of running's greatest upsets, a gold medal in the 1,500-m race, beating Jim Ryun of the U.S. At the 1972 Olympics, Keino won a silver medal in the 1,500-m and a gold in the 3,000-m steeplechase.

Keita \'kā-tä**, Modibo** (b. June 4, 1915, Bamako, French Sudan—d. May 16, 1977, Bamako, Mali) First president of Mali (1960–68). Keita was instrumental in obtaining independence for Mali (then called French Sudan) from France (1960). As president, he nationalized key sectors of the economy and established close ties with communist countries. During an economic crisis in 1967 he launched an unpopular Maoist-inspired cultural revolution, and in 1968 he was overthrown and imprisoned for life.

Keitel \kī-'tel**, Harvey** (b. May 13, 1939/41, Brooklyn, N.Y., U.S.) U.S. film actor. He served in the U.S. Marine Corps and then studied at the Actors Studio. He made his film debut in *Who's That Knocking at My Door?* (1968) under Martin Scorsese, with whom he often worked thereafter. Known for his signature accent and the intensity of his performances, he played supporting or starring roles in films such as *Mean Streets* (1973), *Taxi Driver* (1976), *Bad Timing* (1980), *Bugsy* (1991), *Thelma and Louise* (1991), *Reservoir Dogs* (1991), *The Piano* (1993), and *Red Dragon* (2002).

Keitel \'kī-t°l**, Wilhelm** (b. Sept. 22, 1882, Helmscherode, Ger.—d. Oct. 16, 1946, Nürnberg) German field marshal. After serving in World War I, he held administrative posts from 1918 to 1933, after which he became minister of war (1935) and head of the German armed forces high command (1938). Although one of Adolf Hitler's most trusted lieutenants, he was generally regarded as a weak officer and served chiefly as Hitler's lackey. He signed the act of Germany's military surrender in 1945. After the war he was convicted at the Nürnberg trials and executed as a war criminal.

Keizan Jōkin \'kā-zän-'jō-kēn\ (b. Nov. 13, 1268, Echizen province, Japan—d. Sept. 22, 1325, Noto province) Japanese Buddhist priest and founder of the Sōji Temple, one of the two head temples of the Sōtō sect of Zen Buddhism. He joined the priesthood at age 12; after completing his studies, he taught the Sōtō doctrine for 10 years. He was named head priest at Shogaku Temple, which he affiliated with the Sōtō sect in 1321. It was destroyed by fire in 1898 and later rebuilt on its present site at Yokohama. Keizan devoted himself to building temples and spreading Sōtō teachings to all parts of Japan. Now called Taiso ("Great Master"), he is revered as the restorer of the Sōtō sect.

Kekri \'ke-krē\ In ancient Finnish religion, a feast day marking the end of the agricultural season and coinciding with the time when cattle were brought in from pasture for the winter. It originally fell on September 29 but was later moved to November 1, or All Saints' Day. It was a time when the ancestor spirits visited their former homes and the living held feasts honoring the dead. Usually a family celebration, it was sometimes marked by a communal sacrifice of a sheep.

Kekule von Stradonitz \'kā-kü-lā-fòn-'shträ-dō-nits**, (Friedrich) August** *orig.* **(Friedrich) August Kekule** (b. Sept. 7, 1829, Darmstadt, Hesse—d. July 13, 1896, Bonn) German chemist who laid the groundwork for modern structural theory in organic chemistry. His early training in architecture may have helped him conceive his theories. In 1858 he showed that carbon has a valence of four and that its atoms can link together to form long chains. He is said to have dreamed in 1865 of a benzene molecule as a snake biting its own tail and thus conceptualized the six-carbon benzene ring; the facts of organic chemistry known up to that time then fell into place. He also did valuable work on mercury compounds, unsaturated acids, and thio acids and wrote a four-volume textbook.

Keller, Helen (Adams) (b. June 27, 1880, Tuscumbia, Ala., U.S.—d. June 1, 1968, Westport, Conn.) U.S. author and educator who was blind and deaf. Deprived by illness of sight and hearing at the age of 19 months, Keller soon became mute as well. Five years later she began to be instructed by Anne Sullivan (1866–1936), who taught her the names of objects by pressing the manual alphabet into her palm. Eventually Keller learned to read and write in Braille. She wrote several books, including *The Story of My Life* (1902). Her childhood was dramatized in William Gibson's play *The Miracle Worker* (1959; film, 1962).

Helen Keller at age 66.

Kellogg, Frank B(illings) (b. Dec. 22, 1856, Potsdam, N.Y., U.S.—d. Dec. 21, 1937, St. Paul, Minn.) U.S. lawyer and diplomat. He represented the U.S. government in antitrust cases before serving in the U.S. Senate (1917–23) and as U.S. ambassador to Britain (1923–25). Appointed U.S. secretary of state (1925–29) by Pres. Calvin Coolidge, he negotiated the multinational Kellogg-Briand Pact, for which he was awarded the Nobel Prize for Peace in 1929. He later served on the Permanent Court of International Justice (1930–35).

Kellogg, John Harvey and W(ill) K(eith) (respectively b. Feb. 26, 1852, Tyrone, Mich., U.S.—d. Dec. 14, 1943, Battle Creek; b. April 7, 1860, Battle Creek—d. Oct. 6, 1951, Battle Creek) U.S. breakfast-cereal manufacturers. John was a physician and vegetarian who in 1876 helped found a Seventh-Day Adventist sanitarium in Battle Creek, Mich.

© 2006 Encyclopædia Britannica, Inc.

There he developed various nut and vegetable products, including a flaked-wheat CEREAL to serve to patients, one of whom was C.W. POST. John's younger brother, W.K., founded the W.K. Kellogg Co. in 1906 to manufacture dry breakfast cereals, cornflakes being its sole product in the early years. It soon became a leading U.S. producer of these and other convenience foods; its current annual sales exceed $9 billion. The W.K. Kellogg Foundation is one of the country's largest philanthropic institutions.

Kellogg-Briand Pact \'kel-ˌäg-brē-'ä⁽ⁿ⁾\ *or* **Pact of Paris** (1928) International agreement not to use war as an instrument of national policy. It was conceived by ARISTIDE BRIAND, who hoped to engage the U.S. in a system of protective alliances to guard against aggression from a resurgent Germany. The U.S. secretary of state, FRANK KELLOGG, proposed a general multilateral treaty, and the French agreed. Most states signed the treaty, but its lack of enforceability and exceptions to its pacifist pledges rendered it useless. See also Pact of LOCARNO.

Kelly, Ellsworth (b. May 31, 1923, Newburgh, N.Y., U.S.) U.S. painter and sculptor. In 1948 the G.I. bill allowed him to travel to Paris, where he was exposed to various avant-garde developments. By 1949 he made his first completely abstract painting; he would create abstract work throughout his career. Kelly moved back to the U.S. in 1954. By the end of the decade he became a leading exponent of the hard-edge style of painting, in which abstract contours and large areas of flat colour are sharply and precisely defined. Influenced by the biomorphic abstractions of JEAN ARP and the paper cutouts of HENRI MATISSE, he used the clean geometric lines of his paintings in painted, cut-out sheet-metal sculptures. Kelly refined his pursuit of pure style throughout the late 20th century, eventually also pursuing printmaking and large-scale public sculpture.

Kelly, Gene *orig.* **Eugene Curran Kelly** (b. Aug. 23, 1912, Pittsburgh, Pa., U.S.—d. Feb. 2, 1996, Beverly Hills, Calif.) U.S. dancer, choreographer, actor, and movie director. After training at his mother's dance school in Pittsburgh, he moved to New York in 1938 and danced in Broadway musicals, creating the title role in *Pal Joey* in 1940. Beginning in 1942, his athletic style and carefree acting—exemplified in the popular *Anchors Aweigh* (1945), *On the Town* (1949), *An American in Paris* (1951), and *Singin' in the Rain* (1952), which he also helped choreograph and direct—became hallmarks of the movie musical. His achievements earned him a special Academy Award in 1951. He later choreographed and directed numerous other movies and created a ballet for the Paris Opéra (1960).

Kelly, George *orig.* **George Kelly Barnes, Jr.,** *known as* **Machine Gun Kelly** (b. 1897?, Memphis, Tenn., U.S.—d. July 17, 1954, Leavenworth, Kan.) U.S. gangster. He became notorious for committing a series of robberies and slayings in the Midwest. In 1933 he kidnapped the millionaire Charles F. Urschel; arrested soon afterward, he spent the rest of his life in prison. Though designated "Public Enemy No. 1," he was by no means the most dangerous criminal of his day.

Kelly, Grace *later* **Princess Grace of Monaco** (b. Nov. 12, 1929, Philadelphia, Pa., U.S.—d. Sept. 14, 1982, Monte Carlo, Monaco) U.S. film actress. She studied acting and made her Broadway debut in 1949. Her movie debut came in *Fourteen Hours* (1951). She gained critical and popular praise with her performances in *High Noon* (1952), *Mogambo* (1953), and *The Country Girl* (1954, Academy Award). ALFRED HITCHCOCK saw "sexual elegance" in her and put her in three of his films—*Dial M for Murder* (1954), *Rear Window* (1954), and *To Catch a Thief* (1955). She made her last movie, *High Society* (1956), before marrying Prince RAINIER III of Monaco. She died in a car accident after suffering a stroke on a winding mountain road in the Côte d'Azur.

Kelly, Walt(er Crawford) (b. Aug. 25, 1913, Philadelphia, Pa., U.S.—d. Oct. 18, 1973, Los Angeles, Calif.) U.S. cartoonist. From 1935 he produced animation drawings for Walt Disney Productions, and in the 1940s he worked as a commercial artist in New York. His best-known character, the opossum Pogo, first appeared in a comic book c. 1943. In 1948 *Pogo* began to be published as a daily comic strip in the *New York Star*, and it was soon appearing in many other newspapers. Skillfully drawn, with witty and literate text, it featured Pogo and his winning animal friends in Okefenokee Swamp, characters Kelly often used to satirize prominent political figures.

Kelly, William (b. Aug. 21, 1811, Pittsburgh, Pa., U.S.—d. Feb. 11, 1888, Louisville, Ky.) U.S. ironmaster. He purchased ironworks in Eddyville, Ky., and began experiments with an air blast to prepare pig for conversion to WROUGHT IRON. Because of the similarity of his apparatus to the first form of Bessemer converter (see BESSEMER PROCESS), he was awarded a U.S. patent on the pneumatic steel process. There is no evidence that he made steel in any of his trials.

kelp Any of about 30 genera of large seaweeds that make up the order Laminariales (brown ALGAE), found in colder seas. *Laminaria*, abundant along the Pacific coasts and the British Isles, is a source of commercial IODINE. Its stipe (stemlike structure) is 3–10 ft (1–3 m) long. The largest known kelp, *Macrocystis*, grows up to 215 ft (65 m) long. Its body, which has a large rootlike holdfast, a hollow stipe, and branching blades with hollow gas bladders, resembles that of higher plants. It is rich in minerals and algin, a complex carbohydrate used as an emulsifier to prevent crystal formation in ice cream. Species of kelp are widely eaten in East Asia.

Kelvin (of Largs), William Thomson, Baron *known as* **Lord Kelvin** (b. June 26, 1824, Belfast, County Antrim, Ire.—d. Dec. 17, 1907, Netherhall, Ayrshire, Scot.) British physicist. He entered the University of Glasgow at 10, published two papers by 17, and graduated from Cambridge University at 21. The next year he was awarded the chair of natural philosophy at the University of Glasgow, where he remained until retiring in 1899. He helped develop the second law of THERMODYNAMICS, and in 1848 he invented the absolute temperature scale named after him (see ABSOLUTE ZERO). He served as chief consultant for the laying of the first Atlantic cable (1857–58). His patent for a mirror galvanometer for receiving telegraph signals (1858) made him wealthy. His work in electricity and magnetism led ultimately to JAMES CLERK MAXWELL's theory of electromagnetism. He also contributed to the determination of the age of the Earth and the study of hydrodynamics. He was raised to the peerage in 1892. He published more than 600 scientific papers and received dozens of honorary degrees.

Kemal, Yashar *or* **Yasar Kemal** *orig.* **Kemal Sadik Gogçeli** (b. 1922, Hemite, Tur.) Turkish novelist of KURDISH descent. At age five Kemal saw his father murdered in a mosque and was himself blinded in one eye. He was arrested several times for his political activism. He is best known for his stories of village life and for his outspoken advocacy on behalf of the dispossessed. His novel *Memed, My Hawk* was translated into 20 languages and was filmed in 1984. Other works include *The Wind from the Plain* (1960), *The Undying Grass* (1968), and *To Crush the Serpent* (1976).

Kemeny \'kem-ə-nē**, John George** (b. May 31, 1926, Budapest, Hung.—d. Dec. 26, 1992, Hanover, N.H., U.S.) Hungarian-born U.S. mathematician and computer scientist. He emigrated to the U.S. with his family at 14. He took a year off from his undergraduate studies at Princeton University to work on the MANHATTAN PROJECT and was later a research assistant to ALBERT EINSTEIN. He received a Ph.D. in 1949 and joined the Dartmouth College faculty in 1953, where he worked to develop the mathematics department. In the mid 1960s he and Thomas E. Kurtz (b. 1928) developed the BASIC computer programming language. He was a pioneer in the promotion of "new math" and the use of computers in education. He served as president of Dartmouth (1970–91).

Kemp, Jack (French) (b. July 13, 1935, Los Angeles, Calif., U.S.) U.S. politician. He played professional gridiron football with the Buffalo (N.Y.) Bills. As a Republican member of the U.S. House of Representatives (1971–89), he championed conservative causes but also strongly supported civil rights legislation. After a failed presidential bid in 1988, he was appointed secretary of housing and urban development by Pres. George Bush (1989). In 1996 he ran unsuccessfully for vice president on a ticket with Republican BOB DOLE.

Kempe \'kemp**, Margery** (b. c. 1373—d. c. 1440) English mystic. She had 14 children before beginning a series of pilgrimages to Jerusalem, Rome, Germany, and Spain in 1414. Apparently illiterate, she dictated her autobiography, *Book of Margery Kempe*, describing her travels and her religious ecstasies in an unaffected style (c. 1432–36). It is one of the earliest autobiographies in English literature.

Kempton, (James) Murray (b. Dec. 16, 1917, Baltimore, Md., U.S.—d. May 5, 1997, New York, N.Y.) U.S. journalist. Educated at Johns Hopkins University, he was a reporter and then columnist with the *New York Post* from the 1940s. His political and social commentaries, noted for their uniquely rich and elegant style, moral insight, and sense of fair

© 2006 Encyclopædia Britannica, Inc.

play, touched on many subjects, especially current affairs. Excepting two periods when he left the *Post*, he continued there until 1981; thereafter he wrote for *Newsday*, winning a Pulitzer Prize in 1985. His books include *Part of Our Time* (1955), on 1930s radical movements in the U.S.; and *The Briar Patch* (1973, National Book Award), on New York's prosecution of the Black Panthers.

Kenai \ˈkē-ˌnī\ **Fjords National Park** National park, southern Alaska, U.S. Located on the southern coast of the Kenai Peninsula and established as a national monument in 1978, it became a national park in 1980. Its area of 670,000 acres (271,100 hectares) includes the Harding Icefield and its outflowing glaciers as well as coastal fjords. The park's wildlife includes sea otters, seals, and seabirds.

kendo Japanese sport of fencing with bamboo swords. Derived from the fighting methods of the ancient SAMURAI, it was introduced in the 18th century. Contestants wear traditional protective garments, and the sword (*shinai*) is held with both hands. Points are awarded for blows delivered to various parts of the upper body. The first combatant to score two points wins the match.

Kendrew, Sir John Cowdery (b. March 24, 1917, Oxford, Oxfordshire, Eng.—d. Aug. 23, 1997, Cambridge, Cambridgeshire) British biochemist. He received his Ph.D. from the University of Cambridge and as a Cambridge fellow (1947–75) went on to study the structure of proteins. He determined the structure of the muscle protein myoglobin, which stores oxygen for use by the muscles. Using X-ray diffraction techniques and computers, he devised a three-dimensional model of the arrangement of the amino acid units in the myoglobin molecule, an achievement for which he shared a 1962 Nobel Prize with MAX FERDINAND PERUTZ.

Kennan, George F(rost) (b. Feb. 16, 1904, Milwaukee, Wis., U.S.—d. March 17, 2005, Princeton, N.J.) U.S. diplomat and historian. After graduating from Princeton University in 1925, he entered the U.S. foreign service, studied Russian language and culture at the University of Berlin (1929–31), and was assigned to the U.S. embassy in Moscow (1933–35). He served in Vienna, Prague, Berlin, and Lisbon, returning to Moscow during and after World War II. His concept of CONTAINMENT was presented in a highly influential article, signed "X," that appeared in *Foreign Affairs* magazine in July 1947. Kennan questioned the wisdom of conciliatory U.S. policy toward the Soviet Union, which he considered appeasement, and advocated instead U.S. counterpressure wherever the Soviets threatened to expand; this approach became the basis of U.S. policy toward the Soviet Union during the first decades of the COLD WAR. After brief service as an adviser to the State Department, he joined the Institute for Advanced Study at Princeton as professor of historical studies (1956–74); his tenure there was interrupted by a stint as U.S. ambassador to Yugoslavia (1961–63). He won simultaneous Pulitzer Prizes and National Book Awards for *Russia Leaves the War* (1956) and *Memoirs, 1925–50* (1967).

Kennebec River River, west-central Maine, U.S. It rises from Moosehead Lake and flows south for about 150 mi (240 km) to the Atlantic Ocean. It was explored by SAMUEL DE CHAMPLAIN in 1604–05. With its main tributary, the Androscoggin River, it forms Merrymeeting Bay, which extends 16 mi (26 km) to the Atlantic.

Kennedy, Anthony M(cLeod) (b. July 23, 1936, Sacramento, Calif., U.S.) U.S. jurist. A graduate of Harvard Law School, he practiced law in San Francisco and Sacramento before being appointed to the U.S. Circuit Court of Appeals in 1975. He was nominated to the U.S. Supreme Court in 1988 by Pres. RONALD REAGAN. His record generally reflected his conservative outlook, and he consistently voted against policies such as AFFIRMATIVE ACTION and abortion rights. His episodic departure from conservative jurisprudence stemmed from his civil libertarian perspective on certain individual rights.

Kennedy, Edward M(oore) *known as* **Ted Kennedy** (b. Feb. 22, 1932, Brookline, Mass., U.S.) U.S. senator. He is the youngest son of JOSEPH P. KENNEDY and the brother of JOHN F. KENNEDY and ROBERT F. KENNEDY. He graduated from Harvard University in 1956 and received a law degree from the University of Virginia in 1959. In 1962 he was elected to the former U.S. Senate seat of his brother John, who became president in 1960. Elected Democratic majority whip in 1969, he was considered a front-runner for the 1972 Democratic presidential nomination. In 1970 he was involved in a car accident on Chappaquiddick Island, near Martha's Vineyard, Mass., in which a companion in his car was drowned. Kennedy was found guilty of leaving the scene of an accident. Though he was reelected to the Senate in 1970, he decided against seeking the presidency in 1972. He won a third full term in 1976 and was again a serious contender for the Democratic nomination in 1980, but he withdrew during the convention. In subsequent years his presidential prospects were limited by memories of the Chappaquiddick incident and by his somewhat raffish personal life. In the 1980s and '90s he continued to represent Massachusetts in the Senate, where he was a forceful spokesman for liberal causes, including civil rights, consumer protection, and national health insurance.

Kennedy, John F(itzgerald) (b. May 29, 1917, Brookline, Mass., U.S.—d. Nov. 22, 1963, Dallas, Texas) 35th president of the U.S. (1961–63). The son of JOSEPH P. KENNEDY, he graduated from Harvard University in 1940 and joined the navy the following year. He commanded a patrol torpedo (PT) boat in World War II and was gravely injured in an attack by a Japanese destroyer; he was later decorated for heroism. Elected to the U.S. House of Representatives in 1946 and the U.S. Senate in 1952, he supported social-welfare legislation and became increasingly committed to civil rights; in foreign affairs, he supported the COLD WAR policies of the Truman administration. In 1960 he won the Democratic nomination for president, beating out LYNDON B. JOHNSON, who became his running mate. In his acceptance speech Kennedy declared, "We stand on the edge of a New Frontier"; thereafter the phrase "New Frontier" was associated with his programs. After a vigorous campaign managed by his brother ROBERT F. KENNEDY and aided financially by his father, he narrowly defeated the Republican candidate, RICHARD NIXON. He was the youngest person and the first Roman Catholic elected president. In his inaugural address he called on Americans to "ask not what your country can do for you, ask what you can do for your country." His legislative program, including massive income-tax cuts and a sweeping civil-rights measure, received little support in the Congress, though he did win approval of the PEACE CORPS and the ALLIANCE FOR PROGRESS. In 1961 he committed the U.S. to land a man on the Moon by the end of the decade. In foreign affairs he approved a plan drawn up during the Eisenhower administration to land an invasion force of Cuban exiles on their homeland, but the BAY OF PIGS INVASION (1961) was a fiasco. Determined to combat the spread of communism in Asia, he sent military advisers and other assistance to South Vietnam. During the CUBAN MISSILE CRISIS (1962) he imposed a naval blockade on Cuba and demanded that the Soviet Union remove its nuclear missiles from the island. In 1963 he successfully concluded the NUCLEAR TEST-BAN TREATY with Britain and the Soviet Union. In November 1963, while riding in a motorcade in Dallas, he was assassinated by a sniper, allegedly LEE HARVEY OSWALD. The killing is considered the most notorious political murder of the 20th century. Kennedy's youth, energy, and charming family brought him world adulation and sparked the idealism of a generation, for whom the Kennedy White House became known as "Camelot." Revelations about his powerful family and his personal life, especially concerning his extramarital affairs, tainted his image in later years. See also JACKIE KENNEDY ONASSIS.

John F. Kennedy, 1961.
AP/WIDE WORLD

Kennedy, Joseph P(atrick) (b. Sept. 6, 1888, Boston, Mass., U.S.—d. Nov. 18, 1969, Hyannis Port, Mass.) U.S. businessman and financier. He graduated from Harvard University in 1912. He was a bank president by age 25 and a millionaire at age 30. He became a shipbuilder, a motion-picture tycoon, and a large contributor to the Democratic Party. During the 1920s he acquired a large fortune by speculating in the stock market; he is also alleged to have traded in bootleg liquor during PROHIBITION. Later, as chairman of the Securities and Exchange Commission (1934–35), he outlawed the speculative practices, including insider trading and stock manipulation, that had made him rich. He was the first Irish American to serve as ambassador to Britain (1937–40). With his wife, Rose, he encouraged academic and athletic competitiveness in his children and expected the boys in the family—including JOHN F. KENNEDY, ROBERT F. KENNEDY, and EDWARD KENNEDY—to pursue careers in public ser-

vice. His role in John Kennedy's narrow victory over Richard Nixon in the 1960 presidential election has long been the subject of controversy.

Kennedy, Robert F(rancis) (b. Nov. 20, 1925, Brookline, Mass., U.S.—d. June 6, 1968, Los Angeles, Calif.) U.S. politician. The son of Joseph P. Kennedy, he interrupted his education at Harvard University to serve in World War II; he was graduated from Harvard in 1948 and received a law degree from the University of Virginia in 1951. He managed the U.S. Senate campaign of his brother John F. Kennedy in 1952. In 1957 he became chief counsel to the Senate committee investigating labour racketeering; he resigned the post in 1960 to manage his brother's presidential campaign. As U.S. attorney general (1961–64), he led a drive against organized crime that resulted in the conviction of labour leader Jimmy Hoffa. In 1964 he was elected to the U.S. Senate from New York. He became a spokesman for liberal Democrats and a critic of the Vietnam policy of Lyndon B. Johnson. In 1968, while campaigning for the Democratic presidential nomination in Los Angeles, he was assassinated by Sirhan Sirhan, a Palestinian immigrant.

Kennedy, William (b. Jan. 16, 1928, Albany, N.Y., U.S.) U.S. novelist and journalist. He worked as a journalist in New York and Puerto Rico before returning in 1963 to his native Albany, N.Y., which he considered the source of his literary inspiration. His novels, which are set in Albany and contain elements of local history and the supernatural, include *The Ink Truck* (1969), *Legs* (1975), *Billy Phelan's Greatest Game* (1978), and *Ironweed* (1983, Pulitzer Prize; film, 1987).

Kennedy Center for the Performing Arts Huge cultural complex (opened 1971) in Washington, D.C., with a total of six stages, designed by Edward Durell Stone. The complex, surfaced in marble, makes use of the ornamental facade screens for which the architect was known. The three main theaters are entered from the Grand Foyer, which faces the Potomac River. The Concert Hall, the largest auditorium, has been designated a national monument; its acoustics are considered exceptional, and its embossed ceiling and crystal chandeliers have been much admired.

Kenneth I *or* **Kenneth MacAlpin** (d. c. 858, Forteviot, Scot.) First king of the united Scots of Dalriada and the Picts. He inherited (834?) the Scottish kingdom of Dalriada from his father, Alpin, who is thought to have been killed by the Picts. He also gained control over Pictavia, and from 843 the two kingdoms were gradually joined, an important step in the making of a unified Scotland. The union was probably accomplished both by intermarriage and by conquest.

Kent Administrative (pop., 2001: 1,329,653), geographic, and historic county, southeastern England. It lies along the English Channel. The Romans ruled the area from AD 43, using Canterbury as a base. It was invaded by Jutes and Saxons in the 5th century and became one of the kingdoms of Anglo-Saxon Britain. The king of Kent welcomed St. Augustine's Christian mission in 597; St. Thomas Becket was murdered in Canterbury cathedral in 1170. It has long been known as the "Garden of England," and such crops as apples, cherries, barley, and wheat are widely grown.

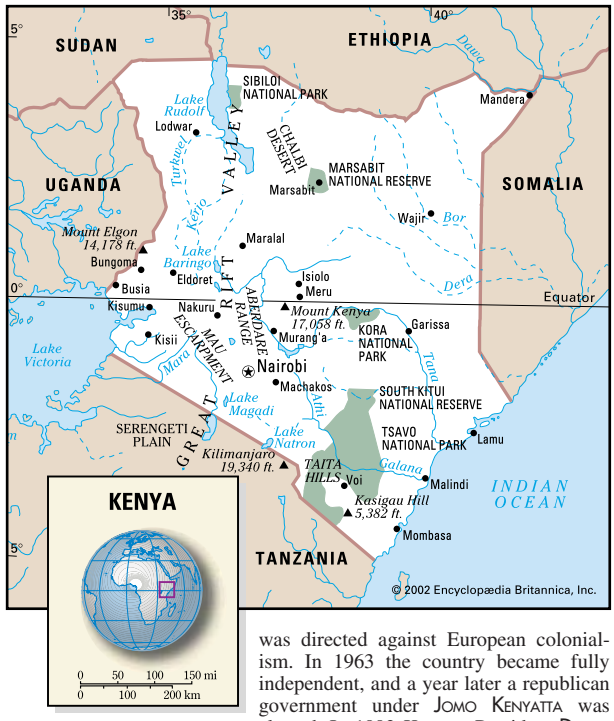
Kent, Earl of See Odo of Bayeux

Kent, James (b. July 31, 1763, Fredericksburgh, Putnam county, N.Y.—d. Dec. 12, 1847, New York, N.Y., U.S.) U.S. jurist who helped shape common law in the U.S. A lawyer at Poughkeepsie, N.Y., from 1785 and a New York state legislator from 1790, he taught law at Columbia University (1793–98, 1823–26) and later served as chief justice of the New York Supreme Court (1804–14) and chancellor of the Court of Chancery (1814–23), then the state's highest judicial office. As chancellor, he is said to have made U.S. equity jurisprudence effective for the first time. His *Commentaries on American Law* (1826–30) proved influential both in the U.S. and in England.

Kent, Rockwell (b. June 21, 1882, Tarrytown Heights, N.Y., U.S.—d. March 13, 1971, Plattsburgh, N.Y.) U.S. painter and illustrator. He studied architecture at Columbia University but later chose to study painting with William Merritt Chase and Robert Henri. He worked variously as an architectural draftsman, lobsterman, and ship's carpenter in Maine and traveled in Tierra del Fuego, Newfoundland, Alaska, and Greenland, gathering material for his paintings and travel books. His dramatic pen-and-ink drawings, strongly resembling woodcuts, appeared in many books by contemporary and classic writers and made him one of the most popular artists in the U.S., despite harassment for his radical leftist politics.

Kenton, Stan(ley Newcombe) (b. Feb. 19, 1912, Wichita, Kan., U.S.—d. Aug. 25, 1979, Los Angeles, Calif.) U.S. pianist, composer, arranger, and leader of one of the most popular and controversial big bands in jazz. Kenton formed his first band in 1941. The group exhibited the influence of Jimmy Lunceford's precise brass and gained a reputation for a bombastic orchestral approach. His players included saxophonist Art Pepper (1925–82), trumpeter Maynard Ferguson, drummer Shelly Manne (1920–84), and singers Anita O'Day (b. 1919) and June Christy (1925–90). His efforts to organize the training of student musicians represent some of the earliest instances of formal jazz education.

Kentucky *officially* **Commonwealth of Kentucky** State (pop., 2000: 4,041,769), southeastern central U.S. Bordered by Ohio, West Virginia, Virginia, Tennessee, Missouri, Illinois, and Indiana, it covers 40,411 sq mi (104,664 sq km); its capital is Frankfort. Among its geographical features are the Appalachian Mountains of the east, the interior lowlands, including the Bluegrass region, and the rich lowlands along the Mississippi River. Before the arrival of white settlers, the region was a hunting ground for Indian tribes, including the Shawnee, Iroquois, and Cherokee. Daniel Boone, among the first white settlers, arrived in 1769; a wave of immigration followed the American Revolution. Settlements began as part of a district of Virginia, but in 1792 Kentucky entered the Union as the 15th state. It was a border state during the American Civil War, remaining in the Union but providing troops to both sides. The opening of rail lines into the eastern coal country and the introduction of a tobacco economy spurred growth in the late 19th century. In the 1970s a nationwide energy shortage created a demand for coal, from which Kentucky prospered, but demand dropped in the 1980s and many jobs were lost. Manufacturing is the leading source of income, while tobacco is the chief crop. Kentucky is known for its bourbon whiskey and Thoroughbred horses; the Kentucky Derby is run annually at Churchill Downs.

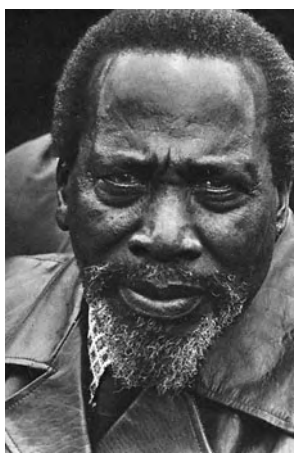


Kentucky Derby One of the classic U.S. Thoroughbred horse races. It was established in 1875 and run annually on the first Saturday in May at Churchill Downs track in Louisville, Ky. With the Preakness and the Belmont Stakes, it makes up U.S. racing's coveted Triple Crown. The field is limited to three-year-olds. The track distance is 1.25 mi (2,000 m).

Kentucky Lake Reservoir, western Kentucky and western Tennessee, U.S. One of the world's largest manmade lakes, it is 184 mi (296 km) long and has more than 2,300 mi (3,700 km) of shoreline. It was created in 1944 when the Kentucky Dam was built on the Tennessee River. The dam is the largest in the Tennessee Valley Authority system, and it regulates the flow from the Tennessee River into the Ohio River.

Kentucky River Tributary of the Ohio River in north-central Kentucky, U.S. It is formed by the confluence of North, Middle, and South forks, which originate in the Cumberland Mountains. It is navigable along its 259-mi (417-km) course by means of locks. It empties into the Ohio River at Carrollton.

Kenya *officially* **Republic of Kenya** Country, eastern Africa. Area: 224,961 sq mi (582,646 sq km). Population (2005 est.): 33,830,000. Capital: Nairobi. With a small group of European settlers' descendants, there are dozens of ethnic groups, including the Kikuyu, Luhya, Luo, Kamba, Kalenjin, and Masai. Languages: Swahili, English (both official), Kikuyu, Luhya, Luo, others. Religions: Christianity (Roman Catholic, Protestant, other Christians); also traditional beliefs, Islam. Currency: Kenya shilling. Kenya can be divided into five regions: the Lake Victoria basin in the southwest; the vast plateau of eastern Kenya; the 250-mi- (400-km-) long coastal belt along the Indian Ocean; the highlands of the Mau Escarpment on the western side of the Great Rift Valley in western Kenya; and the highlands and mountains of the Aberdare Range on the eastern side of the Rift Valley, including Mount Kenya. It is noted for such wildlife as lions, leopards, elephants, buffalo, rhinoceroses, zebras, hippopotamuses, and crocodiles. About one-tenth of the land is arable, and more than one-third is used for grazing cattle, goats, and sheep. Agriculture employs much of the workforce, and tea and coffee are the leading exports. Kenya is a republic with one legislative house; its head of state and government is the president. The coastal region was dominated by Arabs until it was seized by the Portuguese in the 16th century. The Masai people held sway in the north and moved into central Kenya in the 18th century, while the Kikuyu expanded from their home region in south-central Kenya. The interior was explored by European missionaries in the 19th century. After the British took control, Kenya was established as a British protectorate (1895) and a crown colony (1920). The Mau Mau rebellion of the 1950s



© 2006 Encyclopædia Britannica, Inc.

was directed against European colonialism. In 1963 the country became fully independent, and a year later a republican government under JOMO KENYATTA was elected. In 1992 Kenyan President DANIEL ARAP MOI allowed the country's first multiparty elections in three decades; however, the government continued to be marked by corruption and mismanagement.

Kenya, Mount *Swahili* **Kirinyaga** Extinct volcano, central Kenya. Lying just south of the Equator and rising to 17,058 ft (5,199 m), it is the highest mountain in Kenya. The first European to discover the mountain was Johann Ludwig Krapf in 1849. Mount Kenya National Park, occupying an area of 277 sq mi (718 sq km), contains a variety of large animals, including elephants and buffalo. The town of Nanyuki lies at the mountain's northwestern foot and is the chief base for ascents.

Kenyatta \ken-'yä-tə**, Jomo** (b. c. 1894, Ichaweri, British East Africa—d. Aug. 22, 1978, Mombasa, Kenya) First prime minister (1963–64) and then president (1964–78) of independent Kenya. Of KIKUYU descent, Kenyatta left the East African highlands c. 1920 to become a civil servant and political activist in Nairobi. He opposed a union of the British colonial territories of Kenya, Uganda, and Tanganyika. In 1945 he helped organize the sixth Pan-African Congress, attended by such figures as W.E.B. DU BOIS and KWAME NKRUMAH (see PAN-AFRICAN MOVEMENT). In 1953 he was sentenced to a seven-year prison term for directing the MAU MAU rebellion, though he denied the charges. In 1962 he negotiated the constitutional terms leading to Kenya's independence. As its leader he headed a strong central government, rejected calls to nationalize property, and made Kenya one of the most stable and economically dynamic African states. Critics complained of the dominance of his Kenya African National Union (KANU) party and the creation of a political and economic elite. Many of his policies were continued under his successor, DANIEL ARAP MOI.

Kenyatta
JOHN MOSS—BLACK STAR

Keokuk \'kē-ə-ˌkək\ (b. 1790?, along Rock River [near present-day Rock Island, Ill., U.S.]—d. 1848?, [in present-day Franklin county, Kan.]) SAUK Indian orator and politician. He engaged in a lifelong struggle for power with rival leader BLACK HAWK, who advocated resistance to white settlement on tribal lands. Keokuk instead urged accommodation and concession. Many Indians, witnessing the showering of gifts and honours on Keokuk by U.S. Indian agents and military leaders, turned to him for leadership. In 1832 Black Hawk led a short-lived resistance effort against white encroachments; Keokuk counseled peace and surrender, and he even provided advance warning to the U.S. of Black Hawk's intentions. For this assistance, the U.S. government named Keokuk leader of the Sauk nation in 1837. Keokuk responded by ceding the Illinois lands of his tribe and moving his people to Iowa. He continued to give away tribal land until his people were forced to settle on a reservation in Kansas, where he died in disgrace, despite the wealth and power he had accumulated.

Kepler, Johannes (b. Dec. 27, 1571, Weil der Stadt, Württemberg—d. Nov. 15, 1630, Regensburg) German astronomer. Born into a poor family, he received a scholarship to the University of Tübingen. He received an M.A. in 1594, after which he became a mathematics teacher in Austria. He developed a mystical theory that the cosmos was constructed of the five regular polyhedrons, enclosed in a sphere, with a planet between each pair. He sent his paper on the subject to TYCHO BRAHE, who invited Kepler to join his research staff. In attempting to understand atmospheric refraction of light, he became the first to explain accurately how light behaves within the eye, how eyeglasses improve vision, and what happens to light in a telescope. In 1609 he published his finding that the orbit of Mars was an ellipse and not the perfect circle hitherto presumed to be the orbit of every celestial body. This fact became the basis of the first of Kepler's three laws of planetary motion. He also determined that planets move faster as they near the Sun (second law), and in 1619 he showed that a simple mathematical formula related the planets' orbital periods to their distance from the Sun (third law). In 1620 he defended his mother from charges of witchcraft, thereby preserving his own reputation as well.

Kerala \'ker-ə-lə\ State (pop., 2001 prelim.: 31,838,619), southwestern India. Lying on the ARABIAN SEA, it is bordered by KARNATAKA and TAMIL NADU states, and it surrounds the coastal enclave of Mahe (part of PONDICHERRY union territory). It has an area of 15,005 sq mi (38,863 sq km), and its capital is TRIVANDRUM. During the 3rd century BC, it was an independent Dravidian kingdom known as Keralaputra. The Kulashekhara dynasty ruled the region in the 9th–12th centuries, when the regional MALAYALAM LANGUAGE took hold; it is still the dominant language. Portuguese intervention from 1498 was followed by Dutch rule in the 17th century. The Dutch were ousted in 1741 by the princely state of Travancore, which itself in the 1790s came under British protectorate status. It was given its present name in 1956. Kerala is one of India's most densely populated states.

keratin \'ker-ə-tən\ Fibrous structural PROTEIN of hair, nails, hooves, wool, feathers, and SKIN. A quarter of the AMINO ACIDS in keratin are cystine, whose ability to form strong bridging (disulfide) bonds with other cystine units accounts for keratin's great stability. Keratin does not dissolve in cold or hot water and does not easily undergo PROTEOLYSIS. Its fibres are 10–12% longer at maximum water content (about 16%) than when dry. The sulfurous smell of burning keratin is distinctive.

keratitis \ˌker-ə-'tī-təs\ INFLAMMATION of the cornea (see EYE). The conjunctiva may also be inflamed (keratoconjunctivitis). Depending on the cause, including dryness of the eye (from low tear production or inability to close the eye), chemical or physical injury, or certain diseases, it may or may not cause pain, VISUAL-FIELD DEFECTS (including blindness), and damage to the eye.

Kerensky \'ke-ryən-skē,\ *English* \ker-'en-skē**, Aleksandr (Fyodorovich)** (b. May 2, 1881, Simbirsk, Russia—d. June 11, 1970, New York, N.Y., U.S.) Russian political leader. A prominent lawyer, he joined the SOCIALIST REVOLUTIONARY PARTY and was elected to the fourth Duma (1912), where he became a noted orator. After the start of the RUSSIAN REVOLUTION OF 1917, he held posts in both the Petrograd soviet and the provisional government and became a popular figure. He became minister of war in May and prime minister in July. A moderate socialist, he sought to unify the factions but lost the support of the moderates and officers by dismissing the army commander in chief, LAVR KORNILOV, and of the left by refusing to implement their radical programs. When the BOLSHEVIKS seized power in October, he was unable to gather forces to defend

H | I | J | K

© 2006 Encyclopædia Britannica, Inc.

his government. He went into hiding, then emigrated to western Europe in 1918. In 1940 he moved to the U.S., where he lectured at universities and wrote books on the revolution.

Kerguelen \'kər-gə-lən\ **Islands** Archipelago, southern Indian Ocean. It consists of the island of Kerguelen (also called Desolation Island) and about 300 islets, which together cover about 2,400 sq mi (6,200 sq km). Kerguelen Island, about 100 mi (160 km) long, has active glaciers and peaks up to 6,445 ft (1,965 m) high. Discovered in 1772 by the French navigator Yves-Joseph de Kerguélen-Trémarec, the archipelago was annexed to France in 1893 and became part of the French Southern and Antarctic Territories in 1955. Port-aux-Français is a scientific base on the main island.

Kermadec \kər-'mä-dek\ **Islands** Volcanic island group, South Pacific Ocean. Located northeast of AUCKLAND, N.Z., it includes Raoul, Macauley, and Curtis islands and l'Esperance Rock, and it has a total land area of 13 sq mi (34 sq km). Explored in the late 18th century by the British and the French, the islands were annexed to New Zealand in 1887. A meteorological communications station was built on Raoul, the largest island, in 1937, but permanent settlement is discouraged.

Kern, Jerome (David) (b. Jan. 27, 1885, New York, N.Y., U.S.—d. Nov. 11, 1945, New York City) U.S. composer, one of the major U.S. creators of the MUSICAL. Kern studied music in his native New York City and in Heidelberg, Ger., and he later gained theatrical experience in London. Returning to New York, he worked as a pianist and salesman for music publishers and wrote new numbers for European operettas. In 1912 he composed *The Red Petticoat*, the first musical to contain only his own music; its success was surpassed by *Very Good Eddie* (1915). Subsequent musicals include *Oh, Boy!* (1917) and *Sally* (1920). In 1927 his *Show Boat*, based on EDNA FERBER's novel and with lyrics by OSCAR HAMMERSTEIN, became the first American musical with a serious plot drawn from a literary source; it represents a landmark in the history of musical theatre. It was followed by *The Cat and the Fiddle* (1931), *Music in the Air* (1932), and *Roberta* (1933). After 1933 he composed for Hollywood. Kern's classic songs include "The Song Is You," "All the Things You Are," "Smoke Gets in Your Eyes," and "Ol' Man River."

kerogen \'ker-ə-jən\ *or* **kerogen shales** *or* **kerogenites** \'ker-ə-jə-ˌnīts\ Complex mixture of compounds with large molecules containing mainly hydrogen and carbon but also oxygen, nitrogen, and sulfur. Kerogen is a precursor of PETROLEUM and the organic component of OIL SHALES. It is waxy and insoluble in water; upon heating, it breaks down into recoverable gaseous and liquid substances resembling petroleum. It consists of compacted organic material, such as algae and other low plant forms, pollen, spores and spore coats, and insects.

kerosene *or* **kerosine** Organic compound, a clear, oily, highly flammable liquid with a strong odour, distilled from PETROLEUM (10–25% of total volume). It is a mixture of about 10 different types of fairly simple HYDROCARBONS, depending on its source. It is less volatile than gasoline, boiling at 285–610 °F (140–320 °C). It is burned in lamps, heaters, and furnaces and is used as a fuel or fuel component for diesel and tractor engines, jet engines, and rockets and as a solvent for greases and insecticides.

Kerouac \'ker-ə-ˌwak**, Jack** *orig.* **Jean-Louis Lebris de Kerouac** (b. March 12, 1922, Lowell, Mass., U.S.—d. Oct. 21, 1969, St. Petersburg, Fla.) U.S. poet and novelist. Born to a French-Canadian family, he attended Columbia University, served as a merchant seaman, and roamed the U.S. and Mexico before his first book appeared. At Columbia he met ALLEN GINSBERG and other kindred spirits, and he became a spokesman of what would be dubbed the BEAT MOVEMENT (a term he coined). He celebrated its code of poverty and freedom in *On the Road* (1957); his best-known novel, and the first written in the nonstop, unedited style that he advocated, it enjoyed a huge success among young people, for whom Kerouac became a romantic hero. All his novels, including *The Dharma Bums* (1958), *The Subterraneans* (1958), and *Desolation Angels* (1965), are autobiographical. His death at age 47 resulted from alcoholism.

Kerr \'kär, 'kər**, Deborah** *orig.* **Deborah Jane Kerr-Trimmer** (b. Sept. 30, 1921, Helensburgh, Dunbartonshire, Scot.) Scottish actress. After performing in British films such as *Major Barbara* (1940) and *Black Narcissus* (1947), she moved to Hollywood, where she was often cast in prim roles, though her part in *From Here to Eternity* (1953) was a departure from her ladylike image. Known for the poise and serenity she exhibited in portraying complex characters, she appeared in later films including *The King and I* (1956), *Tea and Sympathy* (1956), *Heaven Knows, Mr. Allison* (1957), *Separate Tables* (1958), *The Sundowners* (1960), and *The Night of the Iguana* (1964). She retired from the screen in 1969. She received a special Academy Award in 1994.

Kertanagara \ˌker-tə-'nä-gə-rə\ (fl. 13th century, Java) Last king (1268–92) of Tumapel (Singhasari) in Java. His birth reunited the two halves of the Javanese kingdom, and his name means "Order in the Realm." To bolster his kingdom against KUBLAI KHAN, he expanded it, marrying a princess of Champa (central Vietnam), sending envoys to Malayu (Sumatra), and conquering Bali. He refused to pay homage to Kublai Khan but was killed by a vassal before Kublai's armed forces arrived to punish him. Two early Javanese chronicles give contradictory pictures of the king: one describes him as drunken and incompetent; the other depicts him as a wise king and zealous follower of Tantric Buddhism. He is still venerated as one of Java's greatest rulers.

Stone sculpture thought to be Kertanagara in the form of *hari-hara ardhanari*, *c.* early 14th century; acquired by the Museum für Völker Kunde, Berlin, in 1865.
ENCYCLOPÆDIA BRITANNICA, INC.

Kertész \ker-'tesh**, André** (b. July 2, 1894, Budapest, Austro-Hungarian Empire—d. Sept. 27, 1985, New York, N.Y., U.S.) Hungarian-born U.S. photographer and photojournalist. He moved from Budapest to Paris in 1925 in search of opportunity and became a major contributor to European illustrated periodicals. He became friendly with many influential artists, including MARC CHAGALL and PIET MONDRIAN; his access to such figures allowed him to create a definitive portrait of the Parisian cultural milieu of the period. In 1928 he bought a Leica, a small handheld camera. The lightweight camera gave him the freedom to move about the streets of Paris and capture spontaneous moments of urban life, a subject that would fascinate him throughout his career. He arrived in New York City in 1936 intending to work for a commercial studio for a year, but stayed on, doing largely fashion photography for major U.S. magazines. He returned to his pursuit of urban life c. 1962, and in 1964 the Museum of Modern Art gave an exhibition of his works. His spontaneous, unposed pictures exerted a strong influence on magazine photography.

kerygma and catechesis \kə-'rig-mə, 'kir-ig-mə...,ka-tə-'kē-səs\ In Christian theology, literally, preaching and teaching. Kerygma means the proclamation of the GOSPEL, especially by the APOSTLES as recorded in the NEW TESTAMENT. In the early church, catechesis referred to the oral instruction (geared to the general absence of literacy) given before BAPTISM to those who had accepted the message of salvation. As the practice of infant baptism spread, a shift took place to teaching the already baptized in preparation for full adult membership, and churches developed statements of basic doctrine called CATECHISMS.

Kesey \'kē-zē**, Ken (Elton)** (b. Sept. 17, 1935, La Junta, Colo., U.S.—d. Nov. 10, 2001, Eugene, Ore.) U.S. writer. He attended Stanford University and later served as an experimental subject and aide in a hospital, an experience that led to his novel *One Flew over the Cuckoo's Nest* (1962; film, 1975), which in the U.S. became one of the most widely read books of the 1960s. It was followed by *Sometimes a Great Notion* (1964) and several works of nonfiction that detailed Kesey's transformation from novelist to guru of the hippie generation. They recount psychedelic, fancy-free travels on a brightly painted bus with a group of friends, relatives, and fans who called themselves the Merry Pranksters. Their story is recounted in TOM WOLFE's *Electric Kool-Aid Acid Test* (1968), itself a minor classic of the era.

Kesselring, Albert (b. Nov. 20, 1885, Marktstedt, Bavaria, Ger.—d. July 16, 1960, Bad Nauheim, W.Ger.) German field marshal. He became

© 2006 Encyclopædia Britannica, Inc.

chief of the German air staff in 1936 and commanded early air attacks on Poland, France, Britain, and the Soviet Union. In 1941 he was appointed commander in chief, south, to bolster Italy's efforts in North Africa and against Malta. He codirected the Axis campaign in North Africa with Erwin Rommel. After the Allied invasions of Sicily and Italy in 1943, he fought an effective defensive action that prevented an Allied victory in that theatre until 1944. Appointed commander in chief, west, in 1945, he was unable to stop the Allies' drive into Germany and surrendered the southern half of the German forces in May 1945. He was imprisoned for war crimes (1947–52).

kestrel \'kes-trəl\ Any of several birds of prey (genus *Falco*) known for hovering while hunting. Kestrels prey on large insects, birds, and small mammals. The male is more colourful than the female. Kestrels are mainly Old World birds, but one species, the American kestrel (*F. sparverius*), often called the sparrow hawk in the U.S., is common throughout North and South America. It is about 12 in. (30 cm) long, white or yellowish below, and reddish brown and slate-gray above with colourful markings on the head. The common kestrel (*F. tinnunculus*) of the Old World is larger and less colourful. See also falcon.

Male common kestrel (*Falco tinnunculus*).
WERNER LAYER—BRUCE COLEMAN LTD.

Ket See Siberian peoples

ketone \'kē-ˌtōn\ Any of a class of organic compounds containing a carbonyl group (—C═O; see functional group) bonded to two carbon atoms. Ketones can participate in many chemical reactions, though to a lesser extent than the related aldehydes. Many more complex organic compounds have ketones as building blocks. Their chief industrial use is as solvents and in the manufacture of explosives, lacquers, paints, and textiles. Acetone is the most important ketone; several sugars and some natural and synthetic steroids are ketones. In ketosis, ketones produced by lipid metabolism accumulate in the blood and urine in abnormal amounts, usually because of starvation or a metabolic disease such as diabetes mellitus.

Kettering, Charles F(ranklin) (b. Aug. 29, 1876, Loudonville, Ohio, U.S.—d. Nov. 25, 1958, Dayton, Ohio) U.S. engineer. In 1904 he developed the first electric cash register. With Edward Deeds he founded Delco c.. 1910; in 1916 Delco became a subsidiary of General Motors Corp., and Kettering served as vice president and director of research for GM (1920–47). Many of his inventions were instrumental in the evolution of the modern automobile, including the first electric starter (1912), antiknock fuels, leaded gasoline, quick-drying lacquer finishes (with Thomas Midgley, Jr.), the high-speed, two-cycle diesel engine, and a revolutionary high-compression engine (1951). He later cofounded the Sloan-Kettering Institute for Cancer Research in New York City.

kettledrums See timpani

Kevlar Trademarked name of poly-para-phenylene terephthalamide, a nylonlike polymer first produced by Du Pont in 1971. Kevlar can be made into strong, tough, stiff, high-melting fibres, five times stronger per weight than steel; it is used in radial tires, heat- or flame-resistant fabrics, bulletproof clothing, and fibre-reinforced composite materials for aircraft panels, boat hulls, golf-club shafts, and lightweight bicycles.

Kevorkian, Jack (b. May 26, 1928, Pontiac, Mich., U.S.) U.S. pathologist, advocate and practitioner of physician-assisted suicide. He expressed early interest in experimentation on death-row inmates who had been rendered unconscious rather than executed; his ideas negatively affected his medical career. In the 1980s he devised his "suicide machine," with which a person could commit suicide by merely pushing a button, and in the 1990s he assisted in the deaths of over 100 terminally ill persons. His actions provoked furious controversy and led to legislation and referenda; he was tried, convicted twice, and jailed, and his medical license was revoked. In 1998 he was convicted of murder for administering a lethal injection himself and was sentenced to 10–25 years in jail.

Kew Gardens *officially* **Royal Botanic Gardens, Kew** Botanic garden located at Kew, site of a former royal estate in the London borough of Richmond upon Thames. In 1759 Augusta, dowager princess of Wales and mother of George III, laid out a portion of her estate as a botanic garden. It became an eminent scientific institution under the unofficial directorship of Joseph Banks. In 1840 the gardens were donated to the nation. Under Sir William Jackson Hooker (1785–1865), they became the world's leading botanical institution. Today they are home to 50,000 different types of plants, a herbarium of more than 5 million dried specimens, and a library of more than 130,000 volumes. The three museums at Kew are devoted largely to economic plant products and a laboratory of plant genetics and classification.

key In music, system of pitches and harmonies generated from a scale of seven tones, one of which is predominantly important. Keys are a basic element of tonality and represent an outgrowth of modal music (see church mode). When a given piece is "in C," C is its "tonic," or central tone. Most Western music after c. 1600 is written in either a major or a minor key. The major scale consists of the interval pattern tone-tone-semitone-tone-tone-tone-semitone. The minor scale consistently differs from it by beginning with the pattern tone-semitone-tone, producing a minor third rather than a major third above the tonic.

key, cryptographic Secret value used by a computer together with a complex algorithm to encrypt and decrypt messages. Since confidential messages might be intercepted during transmission or travel over public networks, they require encryption so that they will be meaningless to third parties in order to maintain confidentiality. The intended recipient, and only the recipient, must also be able to decrypt them. If someone encrypts a message with a key, only someone else with a matching key should be able to decrypt the message. See also data encryption.

Key, David M(cKendree) (b. Jan. 27, 1824, Greene county, Tenn., U.S.—d. Feb. 3, 1900, Chattanooga, Tenn.) U.S. politician. Admitted to the bar in 1850, he practiced law in Chattanooga and became active in Democratic Party politics. He opposed secession by the South but served in the Confederate army during the American Civil War, rising to the rank of lieutenant colonel. After the war he worked to heal sectional grievances and restore the Union. He was appointed to the U.S. Senate (1875), succeeding former president Andrew Johnson, but two years later was defeated in a bid to retain the seat. When the disputed 1876 presidential election was turned over to a special Electoral Commission, the Republican candidate, Rutherford B. Hayes, secured the support of Southern Democrats by promising, among other things, to appoint a Southerner to his cabinet. Key was thus appointed postmaster general in 1877. From 1880 to 1894 Key was a U.S. district judge in Tennessee.

Key, Francis Scott (b. Aug. 1, 1779, Frederick county, Md., U.S.—d. Jan. 11, 1843, Baltimore, Md.) U.S. lawyer, author of "The Star Spangled Banner." After the burning of Washington, D.C., in the War of 1812 he was sent to secure the release of a friend from a British ship in Chesapeake Bay. He watched the British shelling of Fort McHenry during the night of Sept. 13–14, 1814; when he saw the U.S. flag still flying the next morning, he wrote the poem "Defense of Fort M'Henry." Published in the *Baltimore Patriot*, it was later set to the tune of an English drinking song, "To Anacreon in Heaven." The song was adopted as the U.S. national anthem in 1931.

Key West City (pop., 2000: 25,478), southwestern Florida, U.S. The southernmost city of the continental U.S., it lies on an island about 4 mi (6.5 km) long and 1.5 mi (2.4 km) wide in the western Florida Keys. The name is an English corruption of Cayo Hueso ("Bone Islet"), as it was called by Spanish explorers who found human bones there. In 1822 a U.S. naval depot was set up on Key West as a base of operations against pirates. Now a winter resort, Key West is also a tourist destination. Many writers and artists have lived there, and the homes of Ernest Hemingway and John James Audubon have been preserved.

Keynes \'kānz**, John Maynard, Baron Keynes of Tilton** (b. June 5, 1883, Cambridge, Cambridgeshire, Eng.—d. April 21, 1946, Firle, Sussex) British economist, known for his revolutionary theories on the causes of prolonged unemployment. The son of the distinguished economist John Neville Keynes (1852–1949), he served in the British treasury during World War I and attended the Versailles Peace Conference. He resigned in protest over the Treaty of Versailles, denouncing its provisions in *The Economic Consequences of the Peace* (1919), and he returned to teaching at the University of Cambridge. The international economic crisis

© 2006 Encyclopædia Britannica, Inc.

of the 1920s and '30s prompted him to write *The General Theory of Employment, Interest and Money* (1935–36), the most influential economic treatise of the 20th century. It refuted laissez-faire economic theories, arguing that the treatment for economic DEPRESSION was either to enlarge private investment or to create public substitutes for private investment. Keynes argued that in mild economic downturns, MONETARY POLICY in the form of easier CREDIT and lower interest rates might stimulate investment. More severe crises called for deliberate public deficits (see DEFICIT FINANCING), either in the shape of public works or subsidies to the poor and unemployed. Keynes's theories were put into practice by many Western democracies, notably by the U.S. in the NEW DEAL. Interested in the design of new international financial institutions at the end of World War II, Keynes was active at the BRETTON WOODS CONFERENCE in 1944.

Kgalagadi Transfrontier Park Nature conservation area in the KALAHARI DESERT. It lies on the border of SOUTH AFRICA and BOTSWANA and occupies an area of 14,668 sq mi (37,991 sq km), with about three-quarters of it contained in Botswana. Its wildlife includes gemsboks, gnu (wildebeests), springbok, lions, jackals, and ostriches. It was officially established in 2000 by merging Kalahari Gemsbok National Park in South Africa with Gemsbok National Park in Botswana. Both parks were originally established in the 1930s to protect migratory animal populations that cross the border between the two countries.

KGB *Russian* **Komitet Gosudarstvennoy Bezopasnosti** ("Committee for State Security") Soviet agency responsible for intelligence, counterintelligence, and internal security. It was the descendant of earlier agencies. The Cheka was established in 1917 to investigate counterrevolution and sabotage. Its successor, the GPU (later OGPU), was the new Soviet Union's first secret-police agency (1923); it also administered corrective labor camps and oversaw the forcible collectivization of Russia's farms. By 1931 it had its own army and its spies and informers were ubiquitous. In 1934 it was absorbed into the NKVD, which carried out extensive purges. In 1941 the state-security and espionage functions were combined in the MGB. In 1954 the KGB was created. At its peak, it was the world's largest secret-police and espionage organization. It lost power under MIKHAIL GORBACHEV, especially after leading a failed coup d'état (1991). It was renamed after the dissolution of the Soviet Union, and its internal-security functions were segregated from its espionage and counterespionage operations.

Khābūr \'kä-ˌbu̇r\ **River** *Turkish* **Habur** River, southeastern Turkey and northeastern Syria. It rises in the mountains of southeastern Turkey and flows southeast to Syria, where it is joined by the Jaghjagh River; it then meanders south and empties into the EUPHRATES RIVER after a course of 200 mi (320 km). It is an important irrigation source for northeastern Syria.

Khachaturian \ˌkä-chə-'tu̇r-ē-ən**, Aram (Ilyich)** (b. June 6, 1903, Tbilisi, Georgia, Russian Empire—d. May 1, 1978, Moscow, U.S.S.R.) Soviet (Armenian) composer. He studied with Reinhold Glière (1875–1956) and Nikolay Myaskovsky (1881–1950). He gained international notice when SERGEY PROKOFIEV recommended one of his pieces for a Paris concert. Active in the composer's union, Khachaturian (along with DMITRY SHOSTAKOVICH and Prokofiev) was criticized by the government in 1948 for "formalist tendencies," though his music was in fact always conservative and accessible. After JOSEPH STALIN's death (1953), Khachaturian published a call for greater artistic freedom. His ballet scores include *Masquerade* (1944) and *Spartacus* (1954); *Gayane* (1943) contains the well-known "Sabre Dance." Other popular pieces include his piano and violin concertos.

Khama III (b. c. 1837, Mushu, Bechuanaland—d. Feb. 21, 1923, Serowe) South African chief. In 1885 he had Bechuanaland (now Botswana) declared a protectorate of the British Empire. He lent reinforcements to the British expedition that crushed LOBENGULA in 1893. His grandson Sir Seretse Khama (1921–80) was the first president of independent Botswana (r. 1966–80).

Khambhat \'kəm-bət**, Gulf of** *or* **Gulf of Cambay** \kam-'bā\ Inlet, ARABIAN SEA, on the western coast of INDIA, southeast of the KATHIAWAR PENINSULA. It is 120 mi (190 km) wide at its widest but narrows rapidly. It receives many rivers, including the Tapti and Mahi. Its orientation to the southwestern monsoon winds produces a high tidal range. All its ports have suffered from silting caused by tides and flood torrents. On its eastern side are Bharuch, one of India's oldest ports, and SURAT. At the gulf's head is the city of Khambhat (Cambay; pop., 2001: 80,452), which was mentioned by MARCO POLO as a busy port.

khan Historically, the ruler or monarch of a MONGOL tribe. Early on a distinction was made between the title of khan and that of *khākān*, or "great khan." Later the term *khan* was adopted by the SELJUQ and KHWĀREZM-SHĀH dynasties as a title for the highest nobility. Gradually it became an affix to the name of any Muslim property owner. Today it is often used as a surname.

Khanka \'kän-kə**, Lake** *Chinese* **Xingkai Hu** *or* **Hsing-K'ai Hu** \'shiŋ-'kī-'hü\ Lake on the boundary between Siberia and China. Most of the lake is in Russian territory while the northern shore is in China's HEILONGJIANG province. It varies in area from 1,500 to 1,700 sq mi (4,000 to 4,400 sq km), and much of its shore is swampland. Its outlet is a tributary of the USSURI RIVER.

Khanty See SIBERIAN PEOPLES

Khārijite \'kär-i-ˌjīt\ Member of the earliest Islamic sect, which emerged in the mid-7th century during conflicts over the succession of the caliphate (see CALIPH). The Khārijites ("separatists") took sides against ʿAlī, the Prophet's son-in-law (whose followers later made up the SHIʿITE branch of Islam), and led a series of uprisings, assassinating ʿAlī and harassing his rival MUʿĀWIYAH. They later caused further disruptions for the Umayyad caliphs. Their constant attacks on Muslim governments were based on their belief that the caliph should be chosen by the entire Muslim community. They called for a literal interpretation of the QUR'ĀN and were harsh and puritanical in the exercise of their religion. The movement's ʿIbādiyyah subsect survived into the 20th century in North Africa, Oman, and Zanzibar.

Kharj, Al- \ˌal-'kärj\ Oasis, east-central SAUDI ARABIA. It lies southeast of RIYADH and is administered with that city. Situated around a series of deep-water pools, it was chosen as the site of a government experimental farm in 1938. Its traditional dairy industry was greatly expanded in 1981 with inauguration of a meat and dairy combine.

Kharkiv \'kär-kəf\ City (pop., 2001: 1,470,000), northeastern Ukraine. Founded in 1655 as a military stronghold to protect Russia's southern borderlands, it became a seat of provincial government in 1732. It served as the capital of the Ukrainian Soviet Socialist Republic (1921–34). The second largest city in Ukraine, it is a heavy industry centre, manufacturing agricultural machinery and electrical equipment.

Khartoum \kär-'tüm\ City (pop., 2000 est.: 3,949,000), capital of The Sudan. Located just south of the confluence of the Blue and White NILE rivers, it was originally an Egyptian army camp (1821). The Mahdists besieged and destroyed the town in 1885, killing CHARLES GEORGE GORDON, the British governor-general. Reoccupied by the British in 1898, it served as the seat of the Anglo-Egyptian government until 1956, when it became the capital of the independent republic of The Sudan. A major trade and communications centre, it is the seat of several universities.

khat \'kät\ Slender, straight, East African tree (*Catha edulis*; family Celastraceae). Reaching a height of 80 ft (25 m), the khat tree has large, oval, finely toothed, bitter-tasting leaves. Its best-known relatives are the ornamentals EUONYMUS and BITTERSWEET. Khat leaves are chewed for the stimulants they contain, and the drug is central to social life in some countries.

Khatami \kä-tä-'mē**, Mohammad** *or* **Muḥammad Khātamī** (b. Sept. 29, 1943, Ardakān, Iran) President of Iran (1997–2005). After studying at a traditional *madrasah* in the holy city of Qom, he began political activities while studying philosophy at Eṣfahān University. He

© 2006 Encyclopædia Britannica, Inc.

headed the Islamic Centre Hamburg in Germany during the Iranian Revolution (1979) and returned home to seek election to the Majles (parliament) in 1980. He served in government posts during the IRAN-IRAQ WAR (1980–90), as cultural adviser to Pres. Ali Akbar Hashemi Rafsanjani, and as head of the National Library (1992–97) before winning the presidency on a platform of social and economic reform. He was reelected by an overwhelming margin in 2001.

Khayr al-Dīn See BARBAROSSA

Khayyam, Omar See OMAR KHAYYAM

Khazar \kə-'zär\ Any member of a confederation of Turkic-speaking tribes that established a commercial empire in European Russia in the late 6th century. A people of the northern Caucasus region, the Khazars allied with the Byzantines against the Persians in the 7th century and warred with the Arabs until the mid-8th century. Their empire extended westward along the Black Sea, and they controlled trade routes and exacted tribute from their neighbors. The ruling class adopted Judaism and maintained close relations with the Byzantine emperors. The Khazar empire began to decline in the 10th century and was crushed by Kiev in 965.

Khensu See KHONS

Khiḍr See BARBAROSSA

Khiḍr \'ki-dər**, al-** Legendary Islamic figure endowed with immortality who became a popular saint, especially among sailors and SUFI mystics. His legend is based on a narrative from the QUR'ĀN, which tells how a "man of God" helps Mūsā (MOSES) search for a fish and at the same time performs seemingly senseless actions such as sinking a boat and killing a young man. By questioning him, Mūsā forfeits his patronage. Arab commentators embellished the story, giving him the name Khiḍr ("Green") and claiming that he turned green upon diving into the spring of life. In Pakistan he is identified with a water deity who protects mariners and river travelers. Among Sufis he is associated with the ever-living spiritual function that can guide people on the spiritual path.

Khíos See CHIOS

Khitan See LIAO DYNASTY

Khmelnytsky \kmyel-'nit-skē**, Bohdan (Zinoviy Mykhaylovych)** (b. c. 1595, Chigirin, Ukraine—d. Aug. 16, 1657, Chigirin) Ukrainian COSSACK leader (1648–57). Although he was educated in Poland and served with the Polish military, he fled to the fortress of the Zaporozhian Cossacks in 1648 and organized a rebellion among them. After winning support from dissatisfied Ukrainian peasants and townspeople, he marched against Poland. After years of war, he sought aid from the Russians in 1654, and they subsequently invaded Poland, achieving the transfer of Ukrainian lands from Polish to Russian control. His attempts to secure autonomy for his Cossack followers resulted only in their later subjection to Russian rule.

Khmer \kə-'mer\ *or* **Cambodian** *or* **Kampuchean** Any member of the ethnolinguistic group that constitutes most of the population of Cambodia. Smaller numbers of Khmer also live in southeastern Thailand and the Mekong River delta of southern Vietnam. Traditional Khmer are a predominantly agricultural people, subsisting on rice and fish and living in villages. Their crafts include weaving, pottery making, and metalworking. They follow THERAVADA Buddhism, which coexists with pre-Buddhist animistic beliefs. Indian culture has historically been a strong influence on Khmer culture.

Khmer language *or* **Cambodian language** MON-KHMER LANGUAGE spoken by more than seven million people in Cambodia (where it is the national language), southern Vietnam, and parts of Thailand. Khmer is written in a distinctive script, which, like the writing systems of Burmese, Thai, and Lao, is descended from the South Asian Pallava script (see INDIC WRITING SYSTEMS); the earliest inscription in Old Khmer is from the 7th century. During the ANGKOR period (9th–15th centuries), Khmer lent many words to Thai, Lao, and other languages of the region (see TAI LANGUAGES). Khmer itself has borrowed many learned words from SANSKRIT and PALI.

Khmer Rouge \kə-'mer-'rüzh\ *French* **"Red Khmer"** Radical communist movement that ruled Cambodia from 1975 to 1979. The Khmer Rouge, under the leadership of POL POT, opposed the government of the popular NORODOM SIHANOUK. They gained support after Sihanouk was toppled by LON NOL (1970) and after U.S. forces bombed the countryside in the early 1970s. In 1975 the Khmer Rouge ousted Lon Nol. Their extraordinarily brutal regime led to the deaths (from starvation, hardship, and execution) of one to two million people. Overthrown in 1979 by the Vietnamese, they retreated to remote areas and continued their struggle for power in Cambodia. The last Khmer Rouge guerrillas surrendered in 1998.

Khnum \'knüm\ *or* **Khnemu** \'kne-mü\ Ancient Egyptian god of fertility, associated with water and procreation. Worshiped as early as 2800 BC, he was represented as a ram with twisting horns or as a man with a ram's head. He was believed to have created humankind from clay like a potter. His main temple was at Elephantine, near present-day Aswan, and he formed a triad of deities with the goddesses Satis and Anukis. Khnum also had an important cult at Esna, south of Thebes.

Khoekhoe \'kȯi-ˌkȯi\ *or* **Khoikhoi** *formerly* **Hottentot (pejorative)** Group of peoples, speaking closely related KHOISAN LANGUAGES, who were among the first indigenous southern Africans encountered by Europeans. The precontact Khoekhoe were pastoralists who tended large herds of cattle and sheep. By 1800 Khoekhoe societies south of the Orange River in Cape Colony had been largely destroyed by disease and warfare, with the remnants either serving as bonded labourers for white farmers or blending into frontier communities of mixed descent, such as the GRIQUA. North of the Orange River in Namibia, the Nama are the largest Khoekhoe ethnic group, numbering about 230,000.

Khoisan \'kȯi-ˌsän\ **languages** Group of more than 20 languages presently spoken by perhaps several hundred thousand KHOEKHOE and SAN peoples of southern Africa. A number of Khoisan languages are now either extinct or spoken by very few people. Their most distinctive linguistic characteristic is the original and extensive use of CLICK consonants. The genetic unity of the Khoisan languages remains disputed.

Khomeini \kō-'mā-nē**, Ruhollah** *orig.* **Ruhollah Musavi** (b. May 17, 1900?, Khomeyn, Iran—d. June 3, 1989, Tehrān) Shīʿite cleric and leader of IRAN (1979–89). He received a traditional religious education and settled in Qom c. 1922, where he became a Shīʿite scholar of some repute and an outspoken opponent first of Iran's ruler, REZA SHAH PAHLAVI (r. 1926–41), and then of his son, MOHAMMAD REZA SHAH PAHLAVI (r. 1941–79). Popularly recognized as a grand AYATOLLAH in the early 1960s, he was imprisoned and then exiled (1964) for his criticism of the government. He settled first in Iraq—where he taught at the shrine city of Al-Najaf for some years—and then, in 1978, near Paris, where he continued to speak out against the shah. During that time he also refined his theory of *velāyat-e faqīh* ("government of the jurist"), in which the Shīʿite clergy—traditionally politically quiescent in Iran—would govern the state. Iranian unrest increased until the shah fled in 1979; Khomeini returned shortly thereafter and was eventually named Iran's political and religious leader (*rahbar*). He ruled over a system in which the clergy dominated the government, and his foreign policies were both anti-Western and anticommunist. During the first year of his leadership, Iranian militants seized the U.S. embassy in Tehrān—greatly exacerbating tensions with the U.S.—and the devastating IRAN-IRAQ WAR (1980–90) began.

Khons \'kȯns\ *or* **Khensu** \'ken-sü\ *or* **Chons** \'kȯns\ Ancient Egyptian moon god. He was the son of the god AMON and the goddess MUT. He was usually depicted as a young man wearing a lunar disk and a rearing cobra on his head. He was also associated with baboons and was sometimes equated with THOTH, another moon god. In the late New Kingdom (c. 1100 BC) a major temple was built for Khons in the Karnak complex at Thebes.

Khorana \kō-'rä-nə**, Har Gobind** (b. Jan. 9, 1922, Raipur, India) Indian-born U.S. biochemist. He received his Ph.D. from the University of Liverpool and later taught in Canada and the U.S., from 1970 at MIT. He shared a 1968 Nobel Prize with MARSHALL WARREN NIRENBERG and ROBERT WILLIAM HOLLEY for research that helped show how the genetic components of the cell nucleus control the synthesis of proteins. His contribution was to synthesize small nucleic acid molecules whose exact structure was known. Combined with the proper materials, his synthetic nucleic acids caused protein synthesis, just as in the cell; comparing these proteins with the nucleic acid showed which portions of the nucleic acid were the codes for each part of the protein. In 1970 he prepared the first artificial copy of a yeast gene.

Khorāsān \ˌkȯr-ä-'sän\ *or* **Khurāsān** \ˌkůr-ä-'sän\ Province (pop., 1996: 6,048,000), northeastern Iran. Its capital is MASHHAD. The region

© 2006 Encyclopædia Britannica, Inc.

was first named by the Sāsānian dynasty, in whose language it means "Land of the Sun." It was overrun by Muslim armies c. 650. Under Arab rule, it encompassed a vast territory including what is now southern Turkmenistan and northern Afghanistan. It was conquered c. 1220 by Genghis Khan and c. 1380 by Timur. Its current frontiers, as a province of Iran, were defined in 1881. Its population is composed of many ethnic groups as a result of numerous migrations and invasions over the centuries. The languages spoken are Turkish, Persian, and Kurdish. The province gives its name to the handcrafted Khorāsān carpet.

Khorram-dīnān \ˌkȯr-ˌram-dē-ˈnän\ *or* **Khorramiyyeh** \ˌkȯr-ˌra-mē-ˈyeh\ Islamic sect that flourished in the 9th–11th centuries. Though they were Muslims, some members of this sect believed in transmigration of souls and in the Zoroastrian dualism of good and evil deities. Like the Shīʿites, they were partisans of ʿAlī in the succession of the caliphate, and they held that Islam should be led by descendants of Muhammad. They differed from the Shīʿites in insisting that the leadership should be hereditary in the person of Abū Muslim. Claiming to be a descendant of Abū, their leader Bābak led a rebellion against the Abbāsid Caliphate of Baghdad, which ended with his capture and execution in 838. The sect died out in the 11th century.

Khosrow \ˈkȯs-ˈraù\ **I** *or* **Khosrow Anūshīrvān** (d. 579) Persian king (r. 531–579) of the Sāsānian dynasty. He reformed taxation, reorganized the army, and launched military campaigns against the Hephthalites (a Central Asian people) and in Armenia, the Caucasus, and Yemen. He is said to have had Sanskrit texts imported for translation. Under his reign, chess was introduced from India, and astronomy, astrology, medicine, and philosophy flourished. The Avesta was purportedly codified under his reign, and in later eras his name became legend. Almost any pre-Islamic structure in Iran whose origin is unknown is credited to him.

Khosrow II *or* **Khosrow Parvīz** (d. 628) King of the Sāsānian dynasty (r. 590–628) whose military exploits extended the empire to its furthest extent. He came to the throne—assisted by Maurice, the emperor of the Byzantine Empire—in troubled times. When a new Byzantine emperor took the throne, however, Khosrow launched a war against the empire, seizing Armenia and central Anatolia. In 613 his forces took Damascus, and Jerusalem fell in 614. His fortunes suffered a reverse when Byzantine forces recaptured lost ground and killed his ablest generals. Revolution within the royal family followed, and Khosrow was executed. Under his reign, silverwork and carpet weaving reached a peak, and there is evidence of a renaissance in rock sculpture. After his death the empire rapidly declined, falling to the Arabs during the Islamic conquests in 640.

Khrushchev \krůsh-ˈchȯf,\ *English* \ˈkrüsh-chef**, Nikita (Sergeyevich)** (b. April 17, 1894, Kalinovka, Ukraine, Russian Empire—d. Sept. 11, 1971, Moscow, Russia, U.S.S.R.) Soviet leader. The son of a miner, he joined the Communist Party in 1918. In 1934 he was elected to its Central Committee, and in 1935 he became first secretary of the Moscow party organization. He participated in Joseph Stalin's purges of party leaders. In 1938 he became head of the Ukrainian party and in 1939 was made a member of the Politburo. After Stalin's death in 1953, he emerged from a bitter power struggle as the party's first secretary, and Nikolay Bulganin became premier. In 1955, on his first trip outside the Soviet Union, Khrushchev showed his flexibility and the brash, extraverted style of diplomacy that would become his trademark. At the party's Twentieth Congress in 1956, he delivered a secret speech denouncing Stalin for his "intolerance, his brutality, his abuse of power." Thousands of political prisoners were released. Poland and Hungary used de-Stalinization to reform their regimes; Khrushchev allowed the Poles relative freedom, but he crushed the Hungarian Revolution by force (1956) when Imre Nagy attempted to withdraw from the Warsaw Pact. Opposition within the party crystallized in 1957, but Khrushchev secured the dismissal of his enemies and in 1958 assumed the premiership himself. Asserting a doctrine of peaceful coexistence with capitalist nations, he toured the U.S. in 1959, but a planned Paris summit with Pres. Dwight D. Eisenhower in 1960 was canceled after the U-2 Affair. In 1962 he attempted to place Soviet missiles in Cuba; in the ensuing Cuban missile crisis, he retreated. Ideological differences and the signing of the Nuclear Test-Ban Treaty (1963) led to a split with the Chinese. Agricultural failures that necessitated importation of wheat from the West, the China quarrel, and his often arbitrary administrative methods led to his forced retirement in 1964.

Nikita Khrushchev, 1960.
WERNER WOLF/BLACK STAR

Khuddaka Nikaya \ˈkù-də-kə-ˈnē-kə-yə\ (Pali: "Short Collection") Collection of Buddhist texts. It constitutes the fifth and last section of the Pali-language Sutta Pitaka, one of the sacred texts of Theravada Buddhism. Written between 500 BC and the 1st century AD, its contents include sermons and doctrinal and ethical discourses attributed to the Buddha. It also contains all the major poetic works of the Pali canon (see Tripitaka).

Khulna \ˈkůl-nə\ City (pop., 2001: city, 811,490; urban agglom., 1,287,987), southwestern Bangladesh. Located east-northeast of Kolkata (Calcutta), India, it is an important river port and trade centre and is connected by river steamer, road, and rail to the major cities of the southern Ganges- (Ganga-) Brahmaputra delta. A municipality since 1884, it is the seat of a university.

Khurāsān See Khorāsān

Khurīyā Murīyā \kù-ˈrē-yä-mù-ˈrē-yä\ **Islands** *or* **Kuria Muria** \ˈkůr-ē-ə-ˈmůr-ē-ə\ **Islands** Island group, Oman. Located in the Arabian Sea off the country's southeastern coast, it comprises five mainly uninhabited islands with a total land area of 28 sq mi (73 sq km). Al-Ḥallānīyah Island, the largest, is sparsely inhabited. The sultan of Oman ceded the islands to Britain in 1854, and they became part of the British colony of Aden in 1937. Britain returned the islands to Oman in 1967.

Khwārezm \ˈkwä-ˌrez-ᵊm\ *or* **Khwārizm** \ˈkwä-ˌriz-ᵊm\ Historic region along the Amu Darya (ancient Oxus River), in modern Turkmenistan and Uzbekistan. It formed part of the empire of Achaemenian Persia in the 6th–4th centuries BC. The Arabs conquered it in the 7th century AD. In the following centuries it was ruled by many, including the Seljūqs, Khwārezm-shahs, Mongols, and Timurids, until the early 16th century, when it became the centre of the khanate of Khiva. In 1873 Russia conquered the region and made it a protectorate. After the Russian Revolution of 1917, the khanate was replaced by a Soviet republic, which was later dissolved and incorporated into the U.S.S.R.

Khwārezm-Shah \ˈkwä-ˌrez-ᵊm-ˈshä\ **dynasty** (c. 1077–1231) Dynasty that ruled Central Asia and Iran, first as vassals of the Seljūq dynasty and then independently. It was founded by a slave, Anūṣtegin Gharchaʾī, who was appointed governor of Khwārezm. At its peak under ʿAlāʾ al-Dīn Muḥammad (r. 1200–20) and his son Jalāl al-Dīn Mingburnu (1220–31), the dynasty's territory extended from India to Anatolia. It fell to Genghis Khan in 1231.

Khwarizmi, al- See al-Khwarizmi

Khyber \ˈkī-bər\ **Pass** Pass in the Spīn Ghār (Safīd Kūh) Range on the border between Afghanistan and Pakistan. About 33 mi (53 km) long, it has historically been the gateway for invasions of the Indian subcontinent from the northwest; it was traversed by Persians, Greeks, Mughals, and Afghans from the north and by the British from the south. The Pashtun Afridi people of the Khyber area long resisted foreign control, but during the Second Anglo-Afghan War in 1879, the Khyber tribes came under British rule. It is now controlled by Pakistan.

Kiarostami, Abbas (b. June 22, 1940, Tehrān, Iran) Iranian director. Kiarostami was hired in 1969 by the Institute for the Intellectual Development of Children and Young Adults to establish its film division. The institute produced his first film as a director, the lyrical short *The Bread and Alley* (1970), which featured elements that define his work— improvised performances, documentary textures, and real-life rhythms. His first feature, *Mosafer* (1974), is a portrait of a troubled adolescent. *Where Is the Friend's Home?* (1987) gained him international acclaim, and he followed with several masterful films, including *Close-up* (1990), *Through the Olive Trees* (1994), *The Taste of Cherry* (1997), and *The Wind Will Carry Us* (1999). In the 1980s Kiarostami created documentaries exam-

© 2006 Encyclopædia Britannica, Inc.

ining the lives of Iranian schoolchildren, and his film *ABC Africa* (2001) examined the blight of orphans in AIDS-ravaged Africa.

kibbutz \ki-'büts\ Israeli communal settlement in which all wealth is held in common and profits are reinvested in the settlement. The first kibbutz was founded in Palestine in 1909; most have since been agricultural. Adults live in private quarters; children are generally housed and cared for as a group. Meals are prepared and eaten communally. Members have regular meetings to discuss business and to take votes on matters requiring decisions. Jobs may be assigned by rotation, by choice, or by skill. The kibbutz movement declined dramatically in the late 20th century. But kibbutzim continued to play in important role in the tourism industry in Israel, attracting students and other short-term residents, mostly Jews from overseas seeking a link with the past. See also MOSHAV.

Kiche See QUICHE

Kickapoo North American Indian people related to the SAUK and FOX and living in Kansas, Oklahoma, and Texas, U.S., and northern Mexico. The name is a variant of the Algonquin word *kiwegapawa*, meaning "he stands about" or "he moves about." Their language is of the ALGONQUIAN family, and they formerly inhabited what is now south-central Wisconsin, U.S. The Kickapoo were formidable warriors, whose raids took them as far as the southern and northeastern U.S. About 1765, after dispatching the Illinois Indians, they settled near Peoria, Ill., but later moved under pressure from advancing whites to Missouri, Kansas, Oklahoma, Texas, and Mexico. By the 19th century, central tribal authority had broken down and chiefs of the various bands had become autonomous. The Kickapoo resisted acculturation and sought to retain their old ways. Some 3,500 people claimed sole Kickapoo descent in the 2000 U.S. census; this figure does not include those living in Mexico.

Kidd, Michael *orig.* **Milton Gruenwald** (b. Aug. 12, 1919, Brooklyn, N.Y., U.S.) U.S. dancer, choreographer, and director. He studied at the School of American Ballet, dancing with that company in 1937 and later with American Ballet Theatre, for which he choreographed *On Stage I* (1945). He choreographed many Broadway musicals, including four that won successive Tony Awards: *Guys and Dolls* (1951), *Can-Can* (1953), *Li'l Abner* (1956), and *Destry Rides Again* (1959). His film credits include *The Bandwagon* (1953), *Seven Brides for Seven Brothers* (1954), and *Hello, Dolly!* (1969).

Kidd, William *known as* **Captain Kidd** (b. c. 1645, Greenock, Renfrew, Scot.—d. May 23, 1701, London, Eng.) British privateer and pirate. He was sailing as a legitimate privateer for Britain when he was commissioned in 1695 to apprehend pirates who molested the ships of the East India Company. He himself turned pirate on the voyage, took several ships, and mortally wounded his gunner, William Moore. He surrendered in New York in 1699, having been promised a pardon. Sent to England for trial, he was found guilty of Moore's murder and five piracy counts, and he was hanged. Some of his treasure was recovered from Gardiners Island (off Long Island), but much has apparently never been found. After his death he attained semilegendary status and was romanticized as a dashing swashbuckler.

Kidder, Alfred V(incent) (b. Oct. 29, 1885, Marquette, Mich., U.S.—d. June 11, 1963, Cambridge, Mass.) U.S. archaeologist. Kidder received his Ph.D. from Harvard University (1914) for developing the first effective pottery typology relating to the prehistory of the southwestern U.S. He later extended these interests to a classic study (1924) of the development of the PUEBLO cultures and to the creation (1927) of a widely used archaeological classification system (the Pecos system) for the Southwest. In 1929 he also organized an interdisciplinary program that resulted in a far-reaching survey of cultural history in the Old and New Maya empires of Mexico and Central America. He taught at Phillips (Andover) Academy (1915–35) and at Harvard University (1939–50) and oversaw various programs at the Carnegie Institution (1927–50). He was considered the foremost archaeologist of the American Southwest and Mesoamerica of his generation.

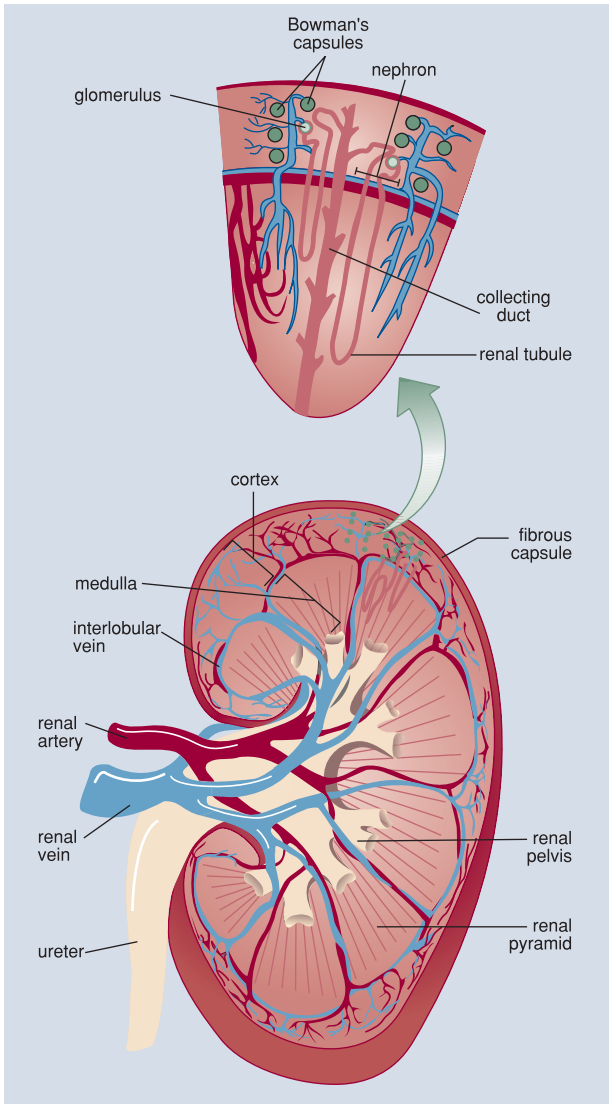
kiddush \'ki-dəsh, ki-'düsh\ Jewish prayer or blessing recited over a cup of wine immediately before the meal on the eve of the SABBATH or a major festival, acknowledging the sanctity of the day that is beginning. It is usually performed by the head of the household, but it may involve all family members. After the recitation, each person sips wine from the cup. In the ASHKENAZI tradition, two loaves of bread on the table signify the manna gathered by the Israelites during their years of wandering in the wilderness.

Kiderlen-Wächter \'kē-dər-lən-'veḵ-tər**, Alfred von** (b. July 10, 1852, Stuttgart, Württemberg—d. Dec. 30, 1912, Stuttgart) German diplomat. A career diplomat, he became foreign secretary in 1910 and pursued a belligerent foreign policy, working to establish Germany as the leading power in Europe through the TRIPLE ALLIANCE. In the second of the MOROCCAN CRISES (1911), he refused conciliatory offers by the French government and excluded Britain from negotiations. Although German expansionists denounced the peace treaty as too lenient, Kiderlen's brusque and forceful posturing during the crisis significantly aggravated the international tensions that led to World War I.

kidnapping Crime of seizing, confining, abducting, or carrying away a person by force or fraud, often to subject him or her to involuntary servitude, in an attempt to demand a ransom, or in furtherance of another crime. Most countries consider it a grave offense punishable by a long prison sentence or death.

kidney One of a pair of organs that maintain water balance and expel metabolic wastes. Human kidneys are bean-shaped organs about 4 in. (10 cm) long, in the small of the back. They filter the entire 5-quart (about 4.5-liter) water content of the blood every 45 minutes. Glucose, minerals, and needed water are returned to the blood by reabsorption. The remaining fluid and wastes pass into collecting ducts, flowing to the ureter and bladder as urine. Each kidney has over 1 million functional units (NEPHRONS) involved in the process of filtration and reabsorption. The kidneys also secrete renin, an enzyme involved in blood pressure regulation. Disorders include KIDNEY FAILURE, KIDNEY STONES, and NEPHRITIS. See also URINARY SYSTEM. See illustration on following page.

kidney failure *or* **renal failure** Partial or complete loss of KIDNEY function. Acute failure causes reduced URINE output and blood chemical imbalance, including UREMIA. Most patients recover within six weeks. Damage to various kidney structures can result from chemical exposure, major blood loss, CRUSH INJURY, HYPERTENSION, severe BURNS, severe kidney infections, DIABETES MELLITUS, renal artery or urinary tract blockage, and liver diseases. Complications include HEART FAILURE, pulmonary edema, and high potassium levels. Chronic failure usually results from long-term kidney diseases. The blood becomes too acidic, bones can lose calcium, and nerves can degenerate. The kidneys can sustain life until they lose about 90% of their function. If one is removed, the other increases in size and function to compensate. Failure of both usually requires DIALYSIS or KIDNEY TRANSPLANT.



kidney stone *or* **renal calculus** Mass of minerals and organic matter that may form in a KIDNEY. URINE contains many SALTS in solution, and low fluid volume or high mineral concentration can cause these salts to precipitate and grow, forming stones. Large stones can block urine flow, be a focus for infection, or cause renal colic (painful spasms). They can obstruct the URINARY SYSTEM at various points. Treatment deals with any underlying problem (e.g., infection or obstruction), tries to dissolve stones with drugs or ULTRASOUND (lithotripsy), or removes large ones surgically.

kidney transplant *or* **renal transplant** Replacement of a diseased or damaged KIDNEY with one from a living relative or a legally dead donor. The former's tissue type is more likely to match, reducing the chance of rejection; but removal puts the donor at risk, and a kidney from a dead donor is more likely to be available. The new kidney is implanted and its blood vessels and ureter sewn in place. A near-normal life may be resumed within two months, but the drugs that prevent rejection leave the patient vulnerable to infection. See also TRANSPLANT.

Kido Takayoshi \'kē-dō-ˌtä-kä-'yō-shē\ *or* **Kido Kōin** \'kō-ēn\ (b. Aug. 11, 1833, Chōshū, Nagato province, Japan—d. May 26, 1877, Tokyo) With SAIGŌ TAKAMORI and ŌKUBO TOSHIMICHI, one of the three giants of the MEIJI RESTORATION of 1868. He became head of the government of the *HAN* (domain) of Chōshū and in that capacity plotted with Saigō and Ōkubo of Satsuma to overthrow the Tokugawa shogunate. In the new government, Kido was responsible for transferring the capital from Kyōto to Edo (renamed Tokyo) and for persuading the heads of the large *han* to return their domains to the emperor. He visited Europe in 1871 and on returning helped block a plan to invade Korea. In the late 1870s he worked for establishing a Western-style constitution.

Kiefer \'kē-fər**, Anselm** (b. March 8, 1945, Donaueschingen, Ger.) German painter. In 1970 he studied under the conceptual artist JOSEPH BEUYS. In such huge paintings as *Germany's Spiritual Heroes* (1973) he used visual symbols, somber colours, and naive drawing to comment with irony and sarcasm on Germany's tragic past. In the 1980s his colossal

Cross section of a kidney. The kidney is made up of an outermost cortex, a middle medulla, and an inner pelvis. Blood enters via the renal artery, which branches into smaller vessels, each of which terminates in a tuft of capillaries (glomerulus). Fluids from the blood are forced out of the glomerulus into the surrounding Bowman's capsule during filtration. The glomerulus, Bowman's capsule, and associated renal tubule make up the nephron. Any important substances filtered from the blood (including glucose, minerals, and much of the water) are returned to it by reabsorption in the renal tubule. The medulla is divided into conical masses of tissue (renal pyramids) that contain the collecting ducts for the fluid (urine) not reabsorbed into the blood. Water is further removed from the urine as it passes through the collecting ducts into the funnel-shaped renal pelvis, which leads to the ureter.

paintings acquired an intense physical presence by means of perspectival devices and unusual textures. He is one of the most prominent figures in late 20th-century NEO-EXPRESSIONISM.

Kiel \'kēl\ City (pop., 2002 est.: 232,242), capital of SCHLESWIG-HOLSTEIN state, northern Germany. A port at the eastern end of the Kiel Canal, it was founded in 1242. It entered the HANSEATIC LEAGUE in 1284; in 1773 Kiel became part of Denmark. Schleswig-Holstein passed to Prussia in 1866, and Kiel became its capital in 1917. An important naval base, it was the target of Allied bombing during World War II. It is the site of St. Nicholas Church (c. 1240), a ducal palace (c. 1280), and the Christian-Albrechts University of Kiel (founded 1665).

Kielland, Alexander (Lange) (b. Feb. 18, 1849, Stavanger, Nor.—d. April 6, 1906, Bergen) Norwegian novelist, short-story writer, and dramatist. Kielland, who was born into an aristocratic family, took a degree in law in 1871 and was a businessman for almost a decade. After a trip to Paris, he began to write. His first book of short stories was published in 1879, and he soon became dedicated to social reform. His influential novels include *Garman and Worse* (1880) and *Skipper Worse* (1882), both of which are set in and around Stavanger. He was perhaps the foremost prose stylist of his day, and, together with HENRIK IBSEN, BJØRNSTJERNE BJØRNSON, and JONAS LIE, he is considered one of the "big four" of 19th-century Norwegian literature.

Kienholz \'kēn-ˌhōlts**, Edward** (b. Oct. 23, 1927, Fairfield, Wash., U.S.—d. June 10, 1994, Hope, Idaho) U.S. sculptor. He pursued painting until he moved to Los Angeles and began producing large wooden reliefs for walls (1954). His controversial environmental sculptures, begun in the late 1950s, were elaborately detailed three-dimensional assemblages that harshly indicted U.S. society. His most famous walk-in scenes include *Roxy's*, a replica of a 1943 Los Angeles bordello, and *The Beanery*, a reproduction of a decrepit bar with 17 figures, piped-in smells, jukebox music, and background conversation. Critics labeled some of his images repulsive or pornographic.

Kieran the Younger See St. CIARAN OF CLONMACNOISE

Kierkegaard \'kir-kə-ˌgärd**, Søren (Aabye)** (b. May 5, 1813, Copenhagen, Den.—d. Nov. 11, 1855, Copenhagen) Danish religious philosopher, regarded as the founder of EXISTENTIALISM. He studied theology at the University of Copenhagen. He is remembered for his critique of systematic rational philosophy, particularly Hegelianism, on the ground that actual life cannot be contained within an abstract conceptual system. With this stance, he intended to make possible an adequate consideration of faith and, accordingly, of religion—specifically Christianity. His works include *Either/Or* (1843), *Fear and Trembling* (1843), and *The Sickness unto Death* (1849). He insistently attacked the organized church in his later years; exhausted by the strain, he died at age 42. His work strongly influenced 20th-century Continental philosophers and theologians, including KARL BARTH, KARL JASPERS, MARTIN HEIDEGGER, and MARTIN BUBER.

Kiev \'kē-ef\ *Ukrainian* **Kyyiv** \'kyiv\ City (pop., 2001: 2,611,000), capital of UKRAINE. Located along the DNIEPER RIVER, it was founded in the 8th century, and by the late 9th century its princes had expanded their territory to establish the state of KIEVAN RUS. In 1240 it was destroyed by the Tatars of the GOLDEN HORDE; after being rebuilt, it came successively under Lithuanian, Polish, and Cossack rule. It was incorporated into Russia in 1793, and in 1934 it became the capital of the Ukrainian Soviet Socialist Republic. It became Ukraine's national capital after the country achieved its independence in 1991. An important industrial city, it is also an educational and cultural centre; it is the seat of a state university and the Academy of Sciences of Ukraine.

Kievan Rus \'kē-vən-'rüs\ First eastern Slavic state. It was founded by the Viking Oleg, ruler of NOVGOROD from c. 879, who seized SMOLENSK and KIEV (882), which became the capital of Kievan Rus. Extending his rule, Oleg united local Slavic and Finnish tribes, defeated the KHAZARS, and, in 911, arranged trade agreements with Constantinople. Kievan Rus peaked in the 10th and 11th centuries under VLADIMIR I and YAROSLAV, becoming eastern Europe's chief political and cultural centre. At Yaro-

slav's death in 1054, his sons divided the empire into warring factions. The 13th-century MONGOL conquest decisively ended its power.

Kigali \kē-'gä-lē\ City (pop., 1996 est.: 356,000), capital of RWANDA. Located in the middle of the country, it was a trading centre during the German colonial administration (after 1895) and a regional centre during the Belgian colonial period (1919–62). It became the capital of independent Rwanda in 1962. The fast-growing city was adversely affected by the country's political turmoil in the 1990s.

Kikuyu \ki-'kü-yü\ *or* **Gikuyu** Bantu-speaking people who live in the highland area of south-central Kenya, near Mount Kenya. Numbering some six million, they are the largest ethnic group in Kenya. They traditionally lived in separate domestic family homesteads, but during the MAU MAU rebellion the British colonial government moved them into villages for security purposes, and this arrangement became permanent. Their traditional economy rested on intensive hoe cultivation of millet and other crops; the main modern cash crops are coffee, corn, and fruits and vegetables. Many Kikuyu serve in government posts.

Kilauea \ˌkē-laù-'ā-ə\ Crater, eastern side of MAUNA LOA, HAWAII VOLCANOES NATIONAL PARK, U.S. The world's largest active volcanic crater, it is about 3 mi (5 km) long, 2 mi (3.2 km) wide, and 500 ft (150 m) deep, lying at an altitude of 4,090 ft (1,250 m). In its floor is the vent known as Halemaumau Pit, legendary home of the fire goddess Pele. Its frequent eruptions are usually contained within the vent as a boiling lake of lava, but occasionally the lava escapes; since 1983 a series of eruptions produced lava that reached the sea 30 mi (48 km) away.

Kilburn, Tom (b. Aug. 11, 1921, Dewsbury, Yorkshire, Eng.—d. Jan. 17, 2001, Manchester) British computer scientist. His book *A Storage System for Use with Binary Digital Computing Machines* (1947) influenced several U.S. and Russian organizations to adopt his techniques. With Frederic C. Williams (1911–77) he designed and built the Manchester Mark I (1949), the first stored-program computer, which led to the first commercial computer, the Ferranti Mark I (1949). In 1964 he formed Britain's first university computer science department and became its first professor. See also STORED-PROGRAM CONCEPT.

Kilby, Jack (St. Clair) (b. Nov. 8, 1923, Jefferson City, Mo., U.S.—d. June 20, 2005, Dallas, Texas) U.S. inventor. He studied at the University of Wisconsin. In 1958 he joined Texas Instruments; there he built the first INTEGRATED CIRCUIT, a device in which all of a circuit's components are integrated on a single semiconductor surface. He also coinvented a handheld calculator with a thermal printer that is used in portable data terminals. The owner of more than 60 patents, he received the National Medal of Science (1970), the Kyoto Prize (1993), and the Nobel Prize for Physics (2000), shared with HERBERT KROEMER and ZHORES ALFEROV.

kilim \kē-'lēm\ Pileless floor covering handwoven by TAPESTRY techniques in Anatolia, the Balkans, and parts of Iran. The name is also given to a variety of brocaded, embroidered, warp-faced, and other flat-woven rugs and bags. A common characteristic is a slit that occurs wherever two colours meet along a vertical line in the pattern. The finest examples are silk 16th–17th-century pieces from Kāshān, Iran. The largest kilims are produced in Turkey, as are smaller examples and prayer kilims (prayer rugs); Turkish weavers often use cotton for the white areas, and small details may be brocaded. The kilims of the southern Balkans, originally copies of Turkish types, gradually developed individual styles. Kilims become progressively less Asian in colour and pattern as the distance from Turkey increases.

Kilimanjaro \ˌki-lə-mən-'jä-rō\ Volcanic mountain, northeastern Tanzania. Situated in Kilimanjaro National Park (established 1973), it includes the peaks of three extinct volcanoes: Kibo, Mawensi, and Shira. Its highest peak is Kibo, which rises to 19,340 ft (5,895 m) and is the highest point in Africa. The first Europeans to see Kilimanjaro were German missionaries (1848). Kibo was first scaled in 1889 and Mawensi (16,896 ft [5,150 m]) in 1912.

Crater rim of Kilimanjaro at dawn.
GERALD CUBITT

killdeer Bird (*Charadrius vociferus*) that frequents grassy mudflats, pastures, and fields. Its name is suggestive of its loud, insistent whistle. It is about 10 in. (25 cm) long and has a brown back, a white belly, and two black breast bands. Killdeers breed throughout North America and in northwestern South America. They migrate only to escape snow, returning before most songbirds. They eat beetles, grasshoppers, dragonflies, and other insects. To protect their young from predators, killdeers will feign injury and flutter awkwardly away from the nest, luring predators with the promise of an easy kill.

killer whale *or* **orca** A species (*Orcinus orca*) of TOOTHED WHALE found in all seas from the Arctic to the Antarctic. Largest of the DOLPHINS, the male may be 30 ft (9 m) long and weigh over 10,000 lbs (4,500 kg). The killer whale is black, with white on the underparts, above each eye, and on each flank. The snout is blunt, and the strong jaws have 40–50 large, sharp, conical teeth. Killer whales live in groups of a few to about 50 individuals. They feed on fishes, cephalopods, penguins, and marine mammals; though they are fierce predators of seals and even other whales, there is no recorded instance of a killer whale attacking a human. They are often kept in captivity and trained as performers in marine shows.

Killer whale (*Orcinus orca*).
MIAMI SEAQUARIUM

killifish Any of a few hundred species of egg-laying topminnows (see GUPPY) in the family Cyprinodontidae. They are found worldwide in brackish, salt, and fresh water, including desert hot springs. Some species grow to 6 in. (15 cm) long. Killifish eat plant or animal material at the water's surface. Many species (e.g., the lyretail) are attractively coloured and are kept in home aquariums. Killifish are also valuable as bait and for mosquito control. Pupfish (*Cyprinodon*) inhabit California coasts and certain salt-lake shores in the western U.S. Some pupfish are listed as endangered; the Tecopa pupfish (*C. nevadensis*; 0.6 in. [1.5 cm] long) was declared extinct in 1981.

Killifish (*Fundulus chrysotus*)
GENE WOLFSHEIMER

Killy \kē-'lē**, Jean-Claude** (b. Aug. 30, 1943, Saint-Cloud, near Paris, France) French skier. Killy was reared in an Alpine ski resort. He became the European champion in 1965, and in 1966 he won the world combined championship (downhill, slalom, and giant slalom). In 1967 he won the first World Cup for men, repeating this triumph in 1968. In the 1968 Winter Olympics he became the second skier in history to sweep the Alpine events (after Austria's Toni Sailer in 1956). He retired in 1968 but returned as a professional in 1972.

kiln \'kiln, 'kil\ Oven for firing, drying, baking, hardening, or burning a substance, particularly clay products but originally also grain and meal. Modern kilns are used in ceramics to fire clay and porcelain objects, in metallurgy for roasting iron ores, for burning lime and dolomite, and in making portland cement.

kilt Knee-length, skirtlike garment worn by men as part of the traditional national garb, or Highland dress, of Scotland. It is made of permanently pleated wool and wrapped around the wearer's waist so that the pleats are in the back and the flat ends overlap in front. It is usually worn with the plaid, a rectangular length of cloth draped over the left shoulder. Both kilt and plaid are woven with a TARTAN pattern. The ensemble, which developed in the 17th century, is worn for ordinary purposes as well as for special occasions. Highland dress is the uniform of Scottish regiments in the British army; kilts were worn into battle as recently as World War II.

Kilwa (Kisiwani) \'kēl-wä\ Historical Islamic city-state, located on an island off the coast of what is now southern Tanzania. It became one of the most active commercial centres on the eastern coast of Africa by 1100, and gold coins were minted there. After being held briefly by the Portu-

© 2006 Encyclopædia Britannica, Inc.

guese in the 16th century, it declined in importance and was abandoned. Extensive ruins remain, including those of mosques, a Portuguese fort, and a 13th–14th-century palace. The town of Kilwa on the Tanzanian coast was the site of a major centre for the export of slaves in the 19th century.

Kim Dae Jung \'kim-'dī-'jəŋ\ (b. Jan. 6, 1924, Hayi-do, Korea) South Korean politician and the first opposition leader to become president. He first entered politics in 1954, opposing the policies of Syngman RHEE, but did not win a seat in government until 1961. After being arrested several times in the 1970s, Kim was sentenced to death on charges of sedition and conspiracy; that sentence was commuted to 20 years in prison. In 1985, after a brief exile in the U.S., he resumed his role as a leader of the political opposition. In 1997 he was elected president of South Korea, serving from 1998 to 2003. In 2000 he received the Nobel Prize for Peace.

Kim Il-sung \'kim-'il-'sùŋ\ (b. April 15, 1912, Man'gyŏndae, Korea—d. July 8, 1994, P'yŏngyang) Communist leader of North Korea from 1948 until his death. When Korea was effectively divided between a Soviet-occupied northern half and a U.S.-supported southern half at the end of World War II, Kim Il-sung helped establish a communist provisional government and became its first premier. He invaded South Korea in an attempt to reunify the country, but the subsequent KOREAN WAR ended without reunification. After the war, Kim introduced a philosophy of self-reliance (*juche*) under which North Korea tried to develop its economy with little help from foreign countries. His omnipresent personality cult enabled him to rule unchallenged for 46 years in one of the world's most isolated and repressive societies.

Kim Jong Il \'kim-'chəŋ-'il\ *or* **Kim Chong Il** (b. Feb. 16, 1941, Siberia, Russia, U.S.S.R.) Son of KIM IL-SUNG. He was designated his father's successor in 1980 and became North Korea's de facto leader on his father's death in 1994. Known in North Korea as the Dear Leader, he makes few public appearances. After the onset of a severe famine (1995–98), he began to relax his country's extreme isolationism.

Kim Young Sam \'kim-'yəŋ-'sam\ (b. Dec. 20, 1927, Kŏje Island [near Pusan], Korea) South Korean moderate opposition leader who served as president (1993–98) after his party merged with the ruling party. First elected to South Korea's National Assembly in 1954, he served there until his expulsion in 1979 by Pres. Park Chung Hee, which touched off riots and demonstrations that preceded Park's assassination. After the military takeover by Gen. Chun Doo Hwan in 1980, Kim was put under house arrest until 1983. In 1990 he merged his party with the ruling Democratic Justice Party, a move that helped him win the presidency in 1992. He enacted reforms to end political corruption, and his term was one of rising prosperity for Korea until 1997, when Korea became caught up in an Asian financial crisis.

Kimberley City (pop., 2005 est.: urban area, 185,000), South Africa. It is the capital of Northern Cape province. Founded in 1871 shortly after the discovery of diamonds in the area, it was the capital of Griqualand West (1873–80) before it became part of Cape Colony. It was besieged by the Boers for four months (1899–1900) during the SOUTH AFRICAN WAR. Kimberley is home to several historical memorials and museums that honour its diamond-mining past. It is still a centre for mining and cutting diamonds. Its outskirts are marked by immense pits and heaps of earth, the aftermath of mining operations. The now-defunct Kimberley mine (now called the Big Hole) is nearby.

kimberlite *or* **blue ground** Dark, heavy, often fragmented igneous rock that may contain DIAMONDS in the rock matrix. Kimberlite is a MICA peridotite, an ultrabasic rock type with a complex and often highly altered mineral composition. It occurs in the Kimberley district of South Africa and the Kimberley and Lake Argyle regions of Australia, as well as near Ithaca, N.Y.

kimono Garment worn by Japanese men and women from the Early Nara period (645–724) to the present. The essential kimono is an ankle-length gown with long, full sleeves and a V-neck. It is lapped left over right across the chest and secured at the waist by a broad sash known as an obi. The contemporary wide obi dates only from the 18th century. Though the kimono is originally of Chinese origin, its great beauty is attributable to 17th- and 18th-century Japanese designers.

kindergarten School or class intended for children age four to six as a prominent part of PRESCHOOL EDUCATION. The kindergarten originated in the early 19th century as an outgrowth of the ideas and practices of ROBERT OWEN in Britain, JOHANN HEINRICH PESTALOZZI in Switzerland and his pupil FRIEDRICH FROEBEL (who coined the term) in Germany, and MARIA MONTESSORI in Italy. Kindergartens generally stress the social and emotional growth of the child, encouraging self-understanding through play activities and creative expression.

Kindi, al- *in full* **Yakub ibn Ishaq al-Sabah al-Kindi** (died c. 870) First prominent Islamic philosopher. He worked in Iraq under the caliphs al-MAMUN and al-Mutasim. One of the first Arab students of the Greek philosophers, he translated important Greek works into Arabic and tried to combine the views of PLATO and ARISTOTLE into a new system. His short treatises considered the philosophical questions set forth by NEOPLATONISM. He also wrote over 270 scientific treatises on such subjects as astrology, Indian arithmetic, sword manufacturing, and cooking.

kinematics \ˌki-nə-'ma-tiks\ Branch of physics concerned with the geometrically possible motion of a body or system of bodies, without consideration of the forces involved. It describes the spatial position of bodies or systems, their VELOCITIES, and their ACCELERATION. See also DYNAMICS.

kinesiology \ki-ˌnē-zē-'ä-lə-jē\ Study of the mechanics and anatomy of human movement and their roles in promoting health and reducing disease. Kinesiology has direct applications to fitness and health, including developing exercise programs for people with and without disabilities, preserving the independence of older people, preventing disease due to trauma and neglect, and rehabilitating people after disease or injury. Kinesiologists also develop more accessible furniture and environments for people with limited movement and find ways to enhance individual and team efficiency. Kinesiology research encompasses the biochemistry of muscle contraction and tissue fluids, bone mineralization, responses to exercise, how physical skills are developed, work efficiency, and the anthropology of play.

kinetic energy \kə-'net-ik\ Form of energy that an object has by reason of its motion. The kind of motion may be translation (motion along a path from one place to another), rotation about an axis, vibration, or any combination of motions. The total kinetic energy of a body or system is equal to the sum of the kinetic energies resulting from each type of motion. The kinetic energy of an object depends on its MASS and VELOCITY. For instance, the amount of kinetic energy *KE* of an object in translational motion is equal to one-half the product of its mass *m* and the square of its velocity *v*, or $KE = \frac{1}{2}mv^2$, provided the speed is low relative to the speed of light. At higher speeds, RELATIVITY changes the relationship.

kinetic sculpture Sculpture in which movement (as of a motor-driven part or a changing electronic image) is a basic element. Actual movement became an important aspect of sculpture in the 20th century. Pioneers such as NAUM GABO, MARCEL DUCHAMP, LÁSZLÓ MOHOLY-NAGY, and ALEXANDER CALDER produced movement by such means as water, mechanical devices, and air currents (as in Calder's MOBILES). Neo-Dadaist works such as JEAN TINGUELY's self-destructing *Homage to New York* (1960) embody the concept of a sculpture that functions as both an object and an event—a "happening."

kinetic theory of gases Theory based on a simple description of a gas, from which many properties of gases can be derived. Established primarily by JAMES CLERK MAXWELL and LUDWIG BOLTZMANN, the theory is one of the most important concepts in modern science. The simplest kinetic model is based on the assumptions that (1) a gas is composed of a large number of identical MOLECULES moving in random directions, separated by distances that are large compared to their size; (2) the molecules undergo perfectly elastic (no energy loss) collisions with each other and with the walls of the container; and (3) the transfer of KINETIC ENERGY between molecules is heat. This model describes a PERFECT GAS but is a reasonable approximation to a real gas. Using the kinetic theory, scientists can relate the independent motion of molecules of gases to their pressure, volume, temperature, viscosity, and heat conductivity.

king Male sovereign over a nation or territory, of higher rank than any other ruler except an EMPEROR. A king's female counterpart is a queen. Some kings have been elected, as in medieval Germany, but most inherit the position. The community may concentrate all spiritual and political power in the sovereign, or power may be shared constitutionally with other government institutions. Some kings are heads of state but not heads of government. In the past, some were regarded as semidivine representatives of God on Earth; others were viewed as gods in their own right or supernatural beings who became gods after death (see DIVINE KINGSHIP).

© 2006 Encyclopædia Britannica, Inc.

Since the 17th century the power held by monarchs, particularly those in western Europe, has been widely regarded as deriving from the people. See also CONSTITUTIONAL MONARCHY; KHAN; MONARCHY; PHARAOH; TSAR.

King, B.B. *orig.* **Riley B. King** (b. Sept. 16, 1925, Itta Bena, near Indianola, Miss., U.S.) U.S. BLUES guitarist. Reared in the Mississippi Delta, he was influenced early by GOSPEL MUSIC. He worked for a time as a disc jockey in Memphis, where he acquired the nickname B.B. (for Blues Boy). His first hit, "Three O'Clock Blues" (1951), was followed by a long succession of others, including "Every Day I Have the Blues" and "The Thrill Is Gone." To his own impassioned vocal calls, King played single-string guitar responses with a distinctive vibrato, in a style influenced by Delta blues guitarists and jazz guitarist DJANGO REINHARDT. By the late 1960s rock guitarists were acknowledging his influence and introducing King and his guitar, Lucille, to the white public. He remains the most successful bluesman of all time.

B.B. King, 1972.

King, Billie Jean *orig.* **Billie Jean Moffitt** (b. Nov. 22, 1943, Long Beach, Calif., U.S.) U.S. tennis player. She won her first Wimbledon doubles championship in 1961 as part of the youngest team to do so. She went on to capture a record 20 Wimbledon titles (singles, women's doubles, and mixed doubles) from the mid-1960s to the mid-1970s; in 2003 her record was tied by MARTINA NAVRATILOVA. She also won several U.S. singles titles (1967, 1971–72, 1974) and the Australian (1968) and French (1972) titles. She was ranked first in the U.S. seven times and first in the world five times. In 1973 she defeated the 55-year-old former men's champion Bobby Riggs in a widely publicized "Battle of the Sexes." She was cofounder and first president (1974) of the Women's Tennis Association, and in 1974, with her husband, Larry King, she also founded World TeamTennis, of which she served as director. She wrote two autobiographies (with cowriters) and a history of women's tennis, and she cofounded the magazine *Womensport*.

Billie Jean King.
COLORSPORT

King, Larry *orig.* **Lawrence Harvey Zeiger** (b. Nov. 19, 1933, Brooklyn, N.Y., U.S.) U.S. talk-show host. He worked in Miami, Fla., as a radio disc jockey, talk-show host, and freelance broadcaster and writer (1957–78). He hosted the popular national radio talk show *The Larry King Show* (1978–94) and, since 1985, the television talk show *Larry King Live* on CNN. Known for his easygoing interviewing style with celebrities, news makers, and world leaders, he conducted more than 30,000 interviews on his two shows.

King, Martin Luther, Jr. (b. Jan. 15, 1929, Atlanta, Ga., U.S.—d. April 4, 1968, Memphis, Tenn.) U.S. civil-rights leader. The son and grandson of Baptist preachers, King became an adherent of nonviolence while in college. Ordained a Baptist minister himself in 1954, he became pastor of a church in Montgomery, Ala.; the following year he received a doctorate from Boston University. He was selected to head the Montgomery Improvement Association, whose boycott efforts eventually ended the city's policies of RACIAL SEGREGATION on public transportation. In 1957 he formed the SOUTHERN CHRISTIAN LEADERSHIP CONFERENCE and began lecturing nationwide, urging active nonviolence to achieve civil rights for African Americans. In 1960 he returned to Atlanta to become copastor with his father of Ebenezer Baptist Church. He was arrested and jailed for protesting segregation at a lunch counter; the case drew national attention, and presidential candidate JOHN F. KENNEDY interceded to obtain his release. In 1963 King helped organize the March on Washington, an assembly of more than 200,000 protestors at which he made his famous "I have a dream" speech. The march influenced the passage of the CIVIL RIGHTS ACT OF 1964, and King was awarded the 1964 Nobel Prize for Peace. In 1965 he was criticized from within the civil-rights movement for yielding to state troopers at a march in Selma, Ala., and for failing in the effort to change Chicago's housing segregation policies. Thereafter he broadened his advocacy, addressing the plight of the poor of all races and opposing the Vietnam War. In 1968 he went to Memphis, Tenn., to support a strike by sanitation workers; there on April 4, he was assassinated by JAMES EARL RAY. A U.S. national holiday is celebrated in King's honour on the third Monday in January.

Martin Luther King, Jr.
JULIAN WASSER

King, Rufus (b. March 24, 1755, Scarborough, Mass.—d. April 29, 1827, Jamaica, N.Y., U.S.) U.S. diplomat. He was a delegate to the Continental Congress (1784–87), where he called for a new constitution. He helped frame the CONSTITUTION OF THE UNITED STATES and effected its ratification by Massachusetts. In 1788 he moved to New York, where he was elected one of the state's first U.S. senators (1789–96, 1813–25). He became a strong leader of the FEDERALIST PARTY and introduced the antislavery provision of the 1787 document that formed part of the NORTHWEST ORDINANCES. He served as ambassador to Britain from 1796 to 1803 and from 1825 to 1826.

King, Stephen (Edwin) (b. Sept. 21, 1947, Portland, Maine, U.S.) U.S. writer. Educated at the University of Maine, he wrote a number of enormously popular books, which made him one of the world's best-selling writers. His books blend horror, the macabre, fantasy, and SCIENCE FICTION. *Carrie* (1974; film 1976), his first published novel and an immediate success, was followed by a long string of popular books, including *The Shining* (1977; film, 1980; television miniseries, 1997), *The Dead Zone* (1979; film, 1983), *Pet Sematary* (1983; film, 1989), and *Misery* (1987; film, 1990). Most of his novels have been adapted for television or film, and most have been translated into many languages.

King, W(illiam) L(yon) Mackenzie (b. Dec. 17, 1874, Berlin, Ont., Can.—d. July 22, 1950, Kingsmere, Que.) Prime minister of Canada (1921–26, 1926–30, 1935–48). The grandson of WILLIAM L. MACKENZIE, he was deputy minister of labour (1900–08) before being appointed Canada's first minister of labour (1909–11). Reelected to the Canadian Parliament (1919), he became leader of the Liberal Party. As prime minister, he favoured social reform without socialism; he led the government with support from an alliance of Liberals and Progressives. He effected a more independent relationship between the Commonwealth nations and Britain. During and after World War II he unified a country often divided between English and French constituents.

King, William Rufus de Vane (b. April 7, 1786, Sampson county, N.C., U.S.—d. April 18, 1853, Cahaba, Ala.) U.S. politician. A member of the U.S. House of Representatives from North Carolina from 1811, he resigned from the House in 1816 to serve as secretary of legation to William Pinkney, the U.S. minister plenipotentiary to Russia. Upon his return, he moved to Alabama and became one of the state's first U.S. senators (1819–44, 1848–52). As minister to France from 1844 to 1846, he convinced the French government not to interfere with the U.S. annexation of Texas. In 1852 he was elected U.S. vice president under FRANKLIN PIERCE, but he died shortly after taking the oath of office.

King Cotton Phrase used before the AMERICAN CIVIL WAR to denote the economic importance of Southern cotton production. The concept first appeared in the book *Cotton Is King* (1855) and was echoed by Southern politicians, who believed that cotton's economic and political power would bring victory if secession led to war. The South expected support from Britain, a major cotton importer, but Britain instead developed alternative sources of cotton within its empire. The South's dependence on cotton contributed to its economic weakness after the Civil War.

king crab *or* **Alaskan king crab** *or* **Japanese crab** Marine DECAPOD (*Paralithodes camtschatica*), an edible CRAB. It is found in the shallow waters off Japan and along the Alaska coast; it also inhabits the

© 2006 Encyclopædia Britannica, Inc.

Bering Sea. One of the largest crabs, it often weighs 10 lbs (4.5 kg) or more. Its size and tasty flesh make it a valued food, and large numbers are fished commercially each year.

King George Sound Inlet of the Indian Ocean, southern coast of Western Australia. It has an area of 35 sq mi (91 sq km). Its harbours are Oyster Harbor and Princess Royal Harbor (the site of the port for the city of Albany). It was charted in 1791 by Capt. George Vancouver and was first used as a whaling base.

King George's War (1744–48) Inconclusive struggle between France and Britain for mastery of North America. Also called the American phase of the War of the Austrian Succession, the war involved disputes over boundaries of Nova Scotia and northern New England and control of the Ohio Valley. After bloody border raids by both sides, aided by their Indian allies, they signed the Treaty of Aix-la-Chapelle (1748), which restored conquered territory but failed to resolve colonial issues. See also French and Indian War.

King Philip's War (1675–76) Bloodiest conflict between American colonists and Indians in 17th-century New England. By 1660 colonial settlers, no longer dependent on Indians for survival, had pushed into Indian territory in Massachusetts, Connecticut, and Rhode Island. To protect their lands, the Wampanoag chief King Philip (Metacom) organized a federation of tribes, which in 1675 destroyed several frontier settlements. In retaliation the colonial militia burned Indian villages and crops. After Philip's death in 1676, Indian resistance collapsed. An estimated 600 settlers and 3,000 Indians were killed in the conflict.

king salmon See chinook salmon

king snake Any of seven species of snake (genus *Lampropeltis*, family Colubridae) found in numerous habitats from southeastern Canada to Ecuador. They kill by constriction; named for their practice of eating other snakes, they also take small mammals, amphibians, birds, and birds' eggs. They are mainly terrestrial and relatively slow-moving. Strikingly marked and smooth-scaled, they have a small head and are usually less than 4 ft (1.2 m) long, though some specimens may approach 7 ft (2 m). The common king snake, found throughout the U.S. and in northern Mexico, is usually black or dark brown, variously blotched, ringed, or speckled with yellow or white.

Common king snake (*Lampropeltis getula*).
JACK DERMID

King William's War (1689–97) Battle for North American territory between Britain, under King William III, and France. The war, which was the North American extension of the War of the Grand Alliance, involved French Canadians and New England colonists and their Indian allies. The British captured Port Royal, Acadia (later Nova Scotia), but failed to take Quebec. The French, under the count de Frontenac, won skirmishes at Schenectady, N.Y., and in New England but failed to take Boston. The war ended with the Treaty of Rijswijk (1697). See also French and Indian War.

kingdom of God *or* **kingdom of heaven** In Christianity, the spiritual realm over which God reigns as king, or the eventual fulfillment of God's will on earth. Although rare in pre-Christian Jewish literature, the idea of God as king was fundamental to Judaism, and Jewish ideas on the kingdom of God most likely shaped New Testament usage. The term is often used in the New Testament, and it was a central theme in the preaching of John the Baptist and Jesus. Theologians differ as to whether Jesus implied that the kingdom had arrived in his person or whether it was expected as a future event. Christian orthodoxy now holds that the kingdom has been partially realized by the presence of the church in the world and that it will be fully realized after the Last Judgment.

kingfish Any of various fishes, among them certain species of mackerel and a drum. The king mackerel, or kingfish (*Scomberomorus cavalla*), is a western Atlantic fish about 67 in. (170 cm) long and weighing 79 lbs (36 kg) or more. The kingfish, or whiting (*Menticirrhus saxatilis*), of the Atlantic, is notable among drums in that it lacks an air bladder.

kingfisher Any of about 90 species of birds (family Alcedinidae), many of which fish for their food. Solitary birds, kingfishers are found worldwide but are chiefly tropical. They have a large head, long and usually narrow bill, compact body, small feet, and usually a short or medium-length tail. Species range from 4 to 18 in. (10–45 cm) long; most have bright, boldly patterned plumage, and many are crested. They utter rattling or piping calls, and they plunge into the water for small fish and other aquatic animals. The only widespread North American species, the belted kingfisher (*Megaceryle alcyon*), is bluish gray above and white below. The forest kingfishers (e.g., kookaburra) have a broader bill.

Kings, Valley of the Narrow gorge, Upper Egypt, near the ancient city of Thebes. It is the burial site of nearly all of the kings (pharaohs) of the 18th–20th dynasties (1539–1075 BC), from Thutmose I to Ramses X. The valley contains 62 tombs, virtually all of which were robbed in antiquity. Only the tomb of Tutankhamen escaped pillage; after its excavation in the 1920s, its treasures were placed in the Egyptian Museum in Cairo. The longest tomb belongs to Queen Hatshepsut, whose burial chamber is nearly 700 ft (215 m) from the entrance. The largest tomb, built for the sons of Ramses II, contains scores of burial chambers. The valley is part of a UNESCO World Heritage site (designated 1979) centred on Thebes.

Kings Canyon National Park National park, Sierra Nevadas, south-central California, U.S. Occupying an area of 722 sq mi (1,870 sq km), it is administered along with the adjacent Sequoia National Park. Established in 1940, it contains giant sequoia trees. Its most spectacular feature is Kings Canyon on the Kings River, which was carved by glacial action.

Kings Mountain, Battle of (Oct. 7, 1780) Battle in the American Revolution between American revolutionaries and loyalists. About 2,000 frontiersmen were assembled to resist the British advance into North Carolina; they surrounded the 1,100 soldiers, mainly loyalists from New York and South Carolina, on Kings Mountain, S.C., near the border with North Carolina. The frontiersmen killed or captured almost all the loyalists, and the battle marked the beginning of the war's turn against the British.

kingship, divine See divine kingship

Kingsley, Charles (b. June 12, 1819, Holne Vicarage, Devon, Eng.—d. Jan. 23, 1875, Eversley, Hampshire) English clergyman and novelist. After studies at Cambridge, he became a parish priest and later chaplain to Queen Victoria, professor of modern history at Cambridge, and canon of Westminster. An enthusiastic advocate of Christian socialism, he published several novels about social problems before writing the very successful historical novels *Hypatia* (1853), *Westward Ho!* (1855), and *Hereward the Wake* (1866). Fearing the Anglican church's trend in the direction of Catholicism, he engaged in a famous controversy with John Henry Newman. His wholehearted acceptance of Charles Darwin's theory of evolution inspired his popular children's book *The Water-Babies* (1863).

Kingston City (pop., 1999 est.: metro. area, 655,000), capital and chief port of Jamaica. Located on the southeastern coast of the island, it was founded in 1692 after Port Royal was destroyed by an earthquake. It soon became the commercial centre of Jamaica and was made the political capital in 1872. Historic buildings include a 17th-century church, a moated fortress, and the 18th-century Headquarters House. It is the seat of the University of the West Indies.

Kingston, Maxine Hong *orig.* **Maxine Hong** (b. Oct. 27, 1940, Stockton, Calif., U.S.) U.S. writer. Born to an immigrant family, she examined the myths, realities, and cultural identities of Chinese and American families and the role of women in Chinese culture in her fiction and nonfiction. Her widely admired *The Woman Warrior* (1976) and *China Men* (1980) blend fact and fantasy to tell aspects of her family's history.

Kingston upon Hull *or* **Hull** City and unitary authority (pop., 2001: 243,595), geographic county of East Riding of Yorkshire, historic county of Yorkshire, England. It lies on the northern bank of the River Humber at its junction with the River Hull, 22 mi (35 km) from the North Sea. Hull was a medieval wool port that passed from the monks of Meaux Abbey to Edward I in 1293. For more than 400 years it was the chief shipping port for the inland waterways converging on the River Humber. Granted city status in 1897, it is a major national seaport, accommodating large oceangoing vessels. The medieval part of the city retains a number of historic buildings; its grammar school was founded in 1486.

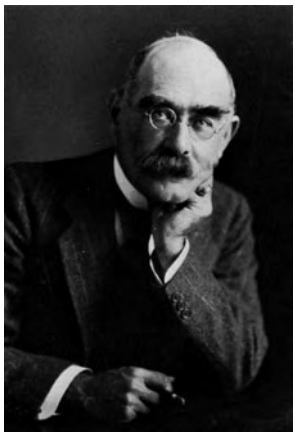
© 2006 Encyclopædia Britannica, Inc.

Kingstown Capital (pop., 1999 est.: 16,175), chief port of Saint Vincent and the Grenadines, West Indies. Located on the southwestern end of Saint Vincent island, it overlooks Kingstown Harbour. Its sites of interest include the Botanic Gardens (founded 1763), the oldest of its kind in the Western Hemisphere; Capt. William Bligh made his 1787 voyage on the *Bounty* to obtain breadfruit trees from Tahiti for this garden.

Kinnock, Neil (Gordon) (b. March 28, 1942, Tredegar, Monmouthshire, Wales) British politician. Elected to Parliament in 1970, he rose in the Labour Party ranks and was named to its national executive committee in 1978. After the party suffered its heaviest defeat in 48 years in 1983, he was elected party leader, the youngest in its history. By 1989 he had persuaded the party to abandon its radical policies on disarmament and large-scale nationalization. Although the party increased its numbers in Parliament, it lost the 1992 general election to the Conservatives, and Kinnock resigned as party leader. He became a vice president of the European Commission of the European Union in 1999.

Kinsey \'kin-zē**, Alfred (Charles)** (b. June 23, 1894, Hoboken, N.J., U.S.—d. Aug. 25, 1956, Bloomington, Ind.) U.S. zoologist and expert on human sexual behaviour. After earning a Ph.D. from Harvard University in 1920, he taught zoology at Indiana University, where he became the founder-director, in 1942, of the university's Institute for Sex Research (renamed the Kinsey Institute for Sex Research, Inc., in 1981). His inquiries into human sexuality led him to publish *Sexual Behavior in the Human Male* (1948) and *Sexual Behavior in the Human Female* (1953). These reports, based on 18,500 personal interviews, received extraordinary publicity for their conclusions about contemporary sexual mores and behaviour. Kinsey's methodologies and statistical samplings, however, have been highly questioned and criticized in recent years.

Kinsha River See Jinsha River



Kinshasa \kin-'shä-sə\ *formerly* **Léopoldville** Capital and largest city (pop., 1994 est.: 4,655,313), Democratic Republic of the Congo. Situated on the southern bank of the Congo River, it was founded as Léopoldville in 1881 by Henry Morton Stanley. It became the capital of the Belgian Congo in the 1920s. After World War II it emerged as the largest city in sub-Saharan Africa and became the capital of the independent republic in 1960. It was given its present name in 1966. A major river port and a commercial centre, it is the seat of the University of Kinshasa (1954).

kinship Socially recognized relationship between people who are or are held to be biologically related or who are given the status of relatives by marriage, adoption, or other ritual. Kinship is the broad term for all the relationships that people are born into or create later in life that are considered binding in the eyes of society. Every person belongs to a family of orientation (e.g., mother, father, brothers, and sisters); many adults also belong to a family of procreation (which includes a spouse or spouses and children). Familial bonds of descent and marriage may be traced through a genealogy, a written or oral statement of the names of individuals and their kin relations to one another. Inheritance and succession (the transmission of power and position in society) usually follow kinship lines. See also exogamy and endogamy; incest.

kiosk \'kē-äsk\ Originally, in Islamic architecture, an open circular pavilion consisting of a roof supported by pillars. The word has been applied to a Turkish summer garden pavilion and a type of early Persian mosque. Today the term refers to any small urban booth that dispenses newspapers, information, or tickets.

Kiowa \'kī-ə-ˌwȯ\ North American Indian people living mostly in Oklahoma, U.S., on a reservation they share with Comanche and Apache. Their language is of Kiowa-Tanoan language stock. The name Kiowa may be a variant of their name for themselves, Kai-i-gwu, meaning "Principal People." The Kiowa moved southward from western Montana and adopted the lifestyle of the Plains Indians. They hunted buffalo on horseback and lived in large three-poled tepees. They had warrior societies, the members of which attained rank according to their exploits in war. They believed that dreams and visions gave them supernatural power, and they participated in the sun dance ceremony. They were also noted for their pictographic portrayals, or "calendar histories," of important tribal events. They were among the last of the Plains peoples to capitulate to the U.S. Some 8,600 peoples claimed sole Kiowa descent in the 2000 U.S. census.

Kipling, (Joseph) Rudyard (b. Dec. 30, 1865, Bombay, India—d. Jan. 18, 1936, London, Eng.) Indian-born British novelist, short-story writer, and poet. The son of a museum curator, he was reared in England but returned to India as a journalist. He soon became famous for volumes of stories, beginning with *Plain Tales from the Hills* (1888; including "The Man Who Would Be King"), and later for the poetry collection *Barrack-Room Ballads* (1892; including "Gunga Din" and "Mandalay"). His poems, often strongly rhythmic, are frequently narrative ballads. During a residence in the U.S., he published a novel, *The Light That Failed* (1890); the two *Jungle Book*s (1894, 1895), stories of the wild boy Mowgli in the Indian jungle that have become children's classics; the adventure story *Captains Courageous* (1897); and *Kim* (1901), one of the great novels of India. He wrote six other volumes of short stories and several other verse collections. His children's books include the famous *Just So Stories* (1902) and the fairy-tale collection *Puck of Pook's Hill* (1906). He was awarded the Nobel Prize for Literature in 1907. His extraordinary popularity in his own time declined as his reputation suffered after World War I because of his widespread image as a jingoistic imperialist.

Rudyard Kipling.
ELLIOTT AND FRY

Kirchhoff \'kirk-hȯf**, Gustav Robert** (b. March 12, 1824, Königsberg, Prussia—d. Oct. 17, 1887, Berlin, Ger.) German physicist. Kirchhoff's laws (1845) allow calculation of the currents, voltages, and resistances of electrical networks (he was the first to show that current flows through a conductor at the speed of light) and generalized the equations describing current flow to three dimensions. With Robert Bunsen, he demonstrated that every element emits coloured light when heated at wavelengths specific to it, a fact that is the basis of spectrum analysis. They used this new research tool to discover cesium (1860) and rubidium (1861), and began a new era in astronomy when they applied it to the spectrum of the sun.

Kirchhoff's circuit rules \'kir-ˌkȯfs\ *or* **Kirchhoff's laws** Two statements, developed by Gustav Kirchhoff, about complex circuits that embody the laws of conservation (see conservation law) of electric charge and energy. They are used to determine the value of the electric current in each branch of the circuit. The first law states that the sum of the currents into a junction in the circuit equals the sum of the currents out of the junction. The second law states that around each loop in an electric circuit, the sum of the electromotive force is equal to the sum of all the potential drops (changes in voltage) across components in the loop. Using these rules, algebraic equations can be formulated to determine the value of currents in different loops in a circuit.

Kirchner \'kirk-nər**, Ernst Ludwig** (b. May 6, 1880, Aschaffenberg, Bavaria—d. June 15, 1938, near Davos, Switz.) German painter, printmaker, and sculptor. He was among the founders of the Expressionist group Die Brücke. Kirchner's highly personal style, influenced by Albrecht Dürer, Edvard Munch, and African and Polynesian art, was noted for its psychological tension and eroticism. He used simple, powerfully drawn forms and often garish colours to create intense, sometimes threatening works, such as his two versions of *Street, Berlin* (1907, 1913). Highly strung and often depressed, he took his own life when the Nazis declared his work "degenerate."

Street, Berlin, oil on canvas by Ernst Ludwig Kirchner, 1913; in the Museum of Modern Art, New York City.

Kiribati \ˌkir-ə-'bä-tē, ˌkir-i-'bas, 'kir-i-ˌbas\ *officially* **Republic of Kiribati** Island country, central

H | I | J | K

© 2006 Encyclopædia Britannica, Inc.

Pacific Ocean. It consists of 33 islands. The three major island groups are the Gilbert, Phoenix, and Line islands (excluding the three Line Islands that are U.S. territories); Kiribati also includes Banaba Island, the former capital of the Gilbert and Ellice Islands colony. Area (land): 313 sq mi (811 sq km). Population (2005 est.): 95,300. Capital: Bairiki, on Tarawa Atoll. The indigenous people are mostly Micronesians. Languages: English (official), Gilbertese. Religions: Christianity (mostly Roman Catholic; also Protestant); also Bahāʾī. Currency: Australian dollar. With the exception of Banaba (which is a coral island and higher in elevation), all the islands of Kiribati are low-lying coral atolls built on a submerged volcanic chain and encircled by reefs. Only about 20 of the islands are inhabited; nearly all of the population of Kiribati live in the Gilbert Islands. The economy is based on subsistence farming and fishing. Kiribati is a republic with one legislative house; its head of state and government is the president. The islands were settled by Austronesian-speaking people before the 1st century AD. Fijians and Tongans arrived c. the 14th century. In 1765 the British commodore John Byron discovered the island of Nikunau; the first permanent European settlers arrived in 1837. In 1916 the Gilbert and Ellice Islands and Banaba became a crown colony of Britain; the Phoenix Islands joined the colony in 1937. Most of the Line Islands joined the colony in 1972, but in 1976 the Ellice Islands were separated and in 1978 formed the country of Tuvalu. The colony became self-governing in 1977, and in 1979 it became the Republic of Kiribati.

Kirkland, (Joseph) Lane (b. March 12, 1922, Camden, S.C., U.S.—d. Aug. 14, 1999, Washington, D.C.) U.S. labour-union leader. He served as an officer in the U.S. merchant marine and joined the American Federation of Labor (AFL) as a staff researcher in 1948. He was elected secretary-treasurer of the AFL-CIO in 1969 and succeeded George Meany as president in 1979. During Kirkland's tenure (1979–95), the AFL-CIO's membership and political influence waned due to shrinking employment in the U.S. manufacturing sector.

Kirkland, Samuel (b. Dec. 1, 1741, Norwich, Conn.—d. Feb. 28, 1808, Clinton, N.Y., U.S.) American clergyman. He was a Congregational missionary to Indian tribes of the Iroquois Confederacy and learned several Indian languages. In the American Revolution he served as chaplain to colonial troops and secured an alliance with the Oneida. He was rewarded with a land grant in New York state, where he founded the Hamilton Oneida Academy for Indian and white students (later Hamilton College).

Kirkwall Royal burgh and chief town (pop., 1995 est.: 7,000), Orkney Islands, Scotland. Located on Pomona Island off the northern tip of Scotland, it has evidence of Norse influence persisting as late as the building of the Cathedral of St. Magnus in the 12th century. Kirkwall functions mainly as a commercial and service centre for the Orkney Islands and is also the islands' historic county town (seat) and administrative centre. The exploitation of North Sea oil has led to development of offshore servicing and supply for the oil industry.

Kirkwood gaps Interruptions in the distribution of asteroids in the asteroid belt between Mars and Jupiter that appear where any of these small bodies' orbital periods would be a simple fraction of Jupiter's. Several zones of low density in the asteroid belt were noticed about 1860 by Daniel Kirkwood (1814–95), who explained the gaps as resulting from perturbations by Jupiter. Any object that revolved in one of these locations would be disturbed regularly by the planet's gravitational pull and eventually be moved to another orbit.

Kirov \'kē-rȯf**, Sergey (Mironovich)** *orig.* **Sergey Mironovich Kostrikov** (b. March 27, 1886, Urzhum, Vyatka province, Russia—d. Dec. 1, 1934, Leningrad, Russia, U.S.S.R.) Soviet political leader. After joining the Bolsheviks, he extended the Communist Party's control in Transcaucasia, and in 1926 Joseph Stalin appointed him head of the Leningrad party organization (1926). He modernized the city's industries, was elected to the Politburo (1930), and acquired power that nearly rivaled Stalin's. In 1934 he was assassinated by a young party member, Leonid Nikolayev, who was later shot, along with 13 suspected accomplices. Stalin, claiming that a widespread conspiracy of anti-Stalinist communists planned to assassinate the entire Soviet leadership, used the assassination as a pretext to institute the Purge trials. In 1956 Nikita Khrushchev suggested that Stalin had engineered Kirov's assassination.

Kirstein \'kir-ˌstēn**, Lincoln (Edward)** (b. May 4, 1907, Rochester, N.Y., U.S.—d. Jan. 5, 1996, New York, N.Y.) U.S. dance authority, impresario, and writer. He graduated from Harvard, where he founded the literary magazine *Hound & Horn*. Financially independent, he focused his artistic interests on ballet and in 1933 persuaded the choreographer George Balanchine to move to the U.S. to found a ballet school and company. The School of American Ballet opened in 1934; Kirstein was its director from 1940 to 1989. He and Balanchine jointly established a series of ballet companies, culminating in the New York City Ballet (1948), of which he served as general director until 1989. He wrote seven books on ballet, including the classic history *Dance* (1935).

Kisangani \ˌkē-sän-ˈgä-nē\ *formerly (until 1966)* **Stanleyville** City (pop., 1994 est.: 417,517), northeastern Democratic Republic of the Congo. The nation's major inland port after Kinshasa, it is located on the Congo River, below Boyoma Falls. The city was founded in 1883 by Europeans and was known first as Falls Station and then as Stanleyville (for Henry Morton Stanley). It has been the major centre of the northern Congo since the late 1800s. It is the seat of the University of Kisangani (1963) and other institutions of higher education.

Kish Ancient Mesopotamian city-state located east of Babylon in what is now south-central Iraq. It lay on the Euphrates River before the course of the river changed. City ruins date to the 4th millennium BC and to Sumerian culture; archaeological evidence of the palace of Sargon and the temple of Nebuchadrezzar II has also been found.

Kishinev See Chisinau

Kishon River See Qishon River

Kissinger \'ki-sᵊn-jər**, Henry A(lfred)** (b. May 27, 1923, Fürth, Ger.) German-born U.S. political scientist and foreign-policy adviser (1969–76). He immigrated with his family to the U.S. in 1938. He taught at Harvard University, where he directed the Defense Studies Program (1959–69). He was appointed assistant for national security affairs by Pres. Richard Nixon in 1968 and served as head of the National Security Council from 1969 to 1975; he was secretary of state from 1973 to 1977. He developed the policy of détente toward the Soviet Union, which led to the Strategic Arms Limitation Talks agreements. He also initiated the first official U.S. contact with China. After helping to plan the U.S. bombing of Cambodia in 1969–70, he negotiated the cease-fire agreement that ended the Vietnam War, for which he shared the Nobel Prize for Peace in 1973 with Le Duc Tho (who refused it). In 1973 he helped foment a military coup in Chile that toppled that country's Marxist government. After leaving government service, he became an international consultant, lecturer, and writer.

Kit-Cat Club Association of early 18th-century Whig leaders that met in London. Members included the writers Richard Steele, Joseph Addison, and William Congreve and such political figures as Robert Walpole and the duke of Marlborough. They first met in the tavern of Christopher Cat, whose mutton pies were called kit-cats. Portraits of the 42 members were painted by Godfrey Kneller (1646–1723), and the specific size of the canvas (36 × 28 in. [91 × 71 cm]) used for the portraits became known as a kit-cat.

Kitaj \ki-ˈtī**, R(onald) B(rooks)** (b. Oct. 29, 1932, Chagrin Falls, Ohio, U.S.) U.S.-born British painter. He studied in New York City, Vienna, Oxford, and London. In the 1960s he was a prominent member of the Pop art movement in Britain. His works mingled the impersonal finish characteristic of Pop canvases with the loose, painterly brushwork of Abstract Expressionism but differed from the work of his Pop contemporaries in their complex and allusive figurative imagery. Kitaj's semiabstract paintings featured brightly coloured and imaginatively interpreted human figures portrayed in puzzling and ambiguous relation to one another. He exhibited internationally and taught at various British art schools.

Kitakami Mountains \kē-ˈtä-kä-mē\ Mountain range, northeastern Honshu, Japan. It parallels the Pacific coast and extends for about 155 mi (250 km) to the Ojika Peninsula. Its highest peak rises to 6,280 ft (1,914 m). Often referred to as the "Tibet of Japan," the Kitakami Range is the most culturally isolated region of Honshu. Until the mid-20th century relics of old agricultural practices survived, including the serf system known as Nago.

© 2006 Encyclopædia Britannica, Inc.

Kitakyūshū \kē-'tä-ˌkyü-shü\ City (pop., 2000 prelim.: 1,011,491), Kyushu, Japan. It was created in 1963 by the amalgamation of several cities. Part of its long coastline is included in the Inland Sea National Park. It is one of Japan's leading manufacturing centres. Undersea tunnels and a bridge link the city with Shimonoseki, Honshu.

Kitami Mountains \kē-'tä-mē\ Mountain range, northeastern Hokkaido, Japan. Extending 180 mi (290 km) along the coast of the Sea of Okhotsk, its elevations range generally from 2,500 to 3,100 ft (750 to 950 m), but the highest reaches 6,500 ft (1,980 m).

Kitchener City (pop., 2001: 190,399), southeastern Ontario, Canada. It is situated in the Grand River valley, southwest of Toronto. Founded by Bishop Benjamin Eby and settled by German immigrants c. 1807, it was incorporated as a city in 1912. It was known successively a Sand Hill, Ebytown, and Berlin before being renamed in honour of H.H. Kitchener in 1916. The boyhood home of W.L. Mackenzie King is now preserved in Woodside National Historic Park.

Kitchener, H(oratio) H(erbert) *later* **Earl Kitchener (of Khartoum and of Broome)** (b. June 24, 1850, near Listowel, Co. Kerry, Ire.—d. June 5, 1916, at sea off Orkney Islands) British field marshal and imperial administrator. Trained as a military engineer, Kitchener served in posts in the Middle East and Sudan before being appointed commander in chief of the Egyptian army in 1892. In 1898 he crushed the rebellious Mahdist movement in the Battle of Omdurman and forced concessions from France in the Fashoda Incident. He entered the South African War as chief of staff in 1899, becoming commander in chief a year later. In the last 18 months of the war, he resorted to brutal methods, burning Boer farms and herding Boer women and children into concentration camps. He was later sent to India to reorganize the army there. A clash with Lord Curzon over control of the army resulted in Curzon's resignation in 1905. In 1911 Kitchener returned to Khartoum as proconsul of Egypt and the Sudan. As secretary of state for war during World War I, he organized armies on a scale unprecedented in British history and became a symbol of the national will to victory. He died on a mission to Russia when his ship was sunk by a German mine.

kite Light frame covered with paper or cloth, often provided with a balancing tail, and designed to be flown in the air at the end of a long string; it is held aloft by wind. Its name comes from the kite, a member of the hawk family. Kites have been in use in Asia from time immemorial, and religious significance is still connected to some ceremonial kite-flying there. In a famous experiment in 1752, Benjamin Franklin hung a metal key from a kite line during a storm to attract electricity. Kites were used to carry weather-recording devices aloft before the advent of balloons and airplanes. Types of kite commonly in use today include the hexagonal (or three-sticker), the malay (modified diamond), and the box kite, invented in the 1890s. Newer wing-like kites, with pairs of controlling strings for superior maneuverability, are also flown.

kite Any of numerous lightly built birds of prey that have a small head, partly bare face, short beak, and long, narrow wings and tail. They are found worldwide in warm regions. Some live on insects; others are primarily scavengers but also eat rodents and reptiles; a few eat only snails. In flight, kites slowly flap and then glide with wings angled back. Kites belong to three subfamilies of the family Accipitridae: Milvinae (true kites and snail kites), Elaninae (including the white-tailed kite, one of the few North American raptors increasing in number), and Perninae (including the swallow-tailed kite of the New World). See also hawk.

Swallow-tailed kite (*Elanoides forficatus*).
JAMES A. KERN

kithara \'ki-thə-rə\ Large lyre of Classical antiquity, the principal stringed instrument of the Greeks and later of the Romans. It had a box-shaped resonating body from which extended two parallel arms connected by a crossbar to which 3–12 strings were attached. It was held vertically and plucked with a plectrum; the left hand was used to stop and damp the strings. It was played by singers of the Greek epics, as well as by later professional accompanists and soloists.

kittiwake *or* **black-legged kittiwake** White oceanic gull (*Rissa tridactyla*) with pearl-gray mantle, black-tipped wings, black feet, and yellow bill. Kittiwakes nest on narrow cliff ledges along the North and South Atlantic coasts. The red-legged kittiwake (*R. brevirostris*) is found in the Bering Sea region.

kiva \'kē-və\ Underground chamber of the Pueblo Indian villages of the southwestern U.S., notable for the murals that decorate its walls. A small hole in its floor, the *sípapu*, serves as the symbolic place of origin of the tribe. Though the kiva's primary purpose is for ritual ceremonies, men also use it for political meetings or casual gatherings. Women are almost always excluded from the kiva. The traditional round slope of the earliest kiva, in contrast to the otherwise square or rectangular Pueblo architecture, recalls the circular pit houses of the prehistoric basket-weaving culture from which these tribes, primarily Hopi and Zuni, descend.

Kivu \kē-vü**, Lake** Lake, central East Africa. Located between Rwanda and the Democratic Republic of the Congo (Zaire), it occupies 1,040 sq mi (2,700 sq km), is 55 mi (90 km) long and 30 mi (48 km) wide, and has a maximum depth of 1,558 ft (475 m). Containing many islands, it was part of a larger body of water until volcanic outpourings along its northern shore created a dam that separated it from Lake Edward.

kiwi Any of three species (genus *Apteryx*) of chicken-sized, grayish brown ratite birds, found in New Zealand. Their Maori name refers to the male's shrill call. Kiwis have vestigial wings hidden within the plumage; nostrils at the tip (rather than the base) of the long flexible bill; soft, hairlike feathers; and stout, muscular legs. Each of the four toes has a large claw. Kiwis live in forests, where they sleep by day and forage for worms, insects and their larvae, and berries at night. They run swiftly and use their claws in defense when cornered.

Common kiwi (*Apteryx australis*)
PICTORIAL PARADE

kiwi fruit Edible fruit of the vine *Actinidia chinensis* (family Actinidiaceae), native to China and Taiwan and grown commercially in New Zealand and California. It became popular in the nouvelle cuisine of the 1970s. It has a slightly acid taste and is high in vitamin C. Kiwi can be eaten raw or cooked, and the juice is sometimes used as a meat tenderizer.

Kiyomori See Taira Kiyomori

Kızıl \ki-'zil\ **River** *ancient* **Halys River** River, central and north-central Turkey. The longest river wholly within Turkey and the largest in Anatolia, it rises in north-central Turkey and flows southwestward. It turns north and empties into the Black Sea after a total course of 734 mi (1,182 km). Unsuitable for navigation, it is a source of irrigation and hydroelectricity for the region.

KKK See Ku Klux Klan

Klaipeda \'klī-pə-də\ *German* **Memel** \'mā-məl\ City (pop., 2001: 192,954) and port, Lithuania. It lies on the channel that connects the Neman River with the Baltic Sea. A fortress built on the site in the early 13th century was destroyed in 1252 by the Teutonic Order, who built a new fortress called Memelburg. It came under Prussian control in the 17th century, and the town (Memel) was settled by Germans. In 1923 Memel became part of Lithuania and was renamed Klaipeda. Seized by Germany in 1939, it passed to the Soviet Union in 1945. Klaipeda became part of the newly independent Lithuania in 1991. The modern city has major shipbuilding yards and is the base for a large deep-sea fishing fleet.

Klamath \'kla-məth\ North American Plateau Indian people living mainly in Oregon, U.S. The name Klamath may be a variant of their name for the region (spelled Clemmat or Tlamath); it is the name by which they were known to the Chinook. They called themselves Maqlaq, meaning "The People," usually with an adjective (such as Ewksikni, "of the Lake"). They were primarily fishers and hunters of waterfowl. The Klamath were divided into relatively autonomous villages, each with its own leaders and medicine man; the villages would ally for war, and members of different villages often intermarried. Families lived in earth-covered lodges in winter and domed houses of poles and matting in summer. Sweat lodges

© 2006 Encyclopædia Britannica, Inc.

doubled as community centres for religious activities. The Klamath's closely related neighbours were the Modoc. Together with the Modoc and the Yahooskin band of Snake Indians, they form an entity known as the Klamath Tribes. Some 2,700 people claimed sole Klamath descent in the 2000 U.S. census.

Klamath \'kla-məth\ **River** River, southern Oregon and northwestern California, U.S. Rising in Upper Klamath Lake just above Klamath Falls, Ore., it flows south and southwest for 250 mi (400 km) through the Klamath Mountains in California and empties into the Pacific Ocean.

Klausenburg See Cluj-Napoca

klebsiella \ˌkleb-zē-'e-lə\ Any of the rod-shaped bacteria that make up the genus Klebsiella. They are gram-negative (see gram stain), thrive better without oxygen than with it, and do not move. *K. pneumoniae*, also called Friedländer's bacillus, can infect the human respiratory tract and cause pneumonia and, as well as some other species, human urinary-tract and wound infections.

Klee \'klā**, Paul** (b. Dec. 18, 1879, Münchenbuchsee, Switz.—d. June 29, 1940, Muralto) Swiss painter. After studies in Germany and Italy, he settled in Munich, where he became associated with Der Blaue Reiter (1911). He taught at the Bauhaus (1920–31), then at the Düsseldorf Academy. He lost his post when the Nazis came to power in 1933 and returned to Switzerland. One of the foremost artists of the 20th century, he belonged to no movement, yet he assimilated and even anticipated some of the major artistic tendencies of his time. Using both representational and abstract approaches, he produced some 9,000 paintings, drawings, and watercolours in a great variety of styles. His works, which tend to be small in scale, are remarkable for their delicate nuances of line, colour, and tonality. In Klee's highly sophisticated art, irony and a sense of the absurd are joined to an intense evocation of the mystery and beauty of nature. Music figures prominently in his work—in his many images of opera and musicians, and to some extent as a model for his compositions. But literature had the greater pull on him; his art is steeped in poetic and mythic allusion, and the titles he gave to his pictures tend to charge them with additional meanings. His late paintings, anticipating his approaching death, are among his most memorable.

Klee, 1939.
AUFNAHME FOTOPRESS

Kleiber \'klī-bər**, Erich** (b. Aug. 5, 1890, Vienna, Austria—d. Jan. 27, 1956, Zürich, Switz.) Austro-Hungarian conductor. After his Prague debut in 1911, he held a series of posts that led him to the Berlin State Opera, where he was music director from 1923 to 1934. There he premiered important works such as Alban Berg's *Wozzeck* (1925). When the Nazis forbade the premiere of Berg's *Lulu* (1934), he managed to program the suite from the opera for his last concert. After moving to Buenos Aires, he was head of the German Opera at the Teatro Colón (1937–49). His son Carlos (b. 1930) also became an internationally celebrated conductor, especially of opera, with a reputation for perfectionism equal to his father's.

Klein, Calvin (Richard) (b. Nov. 19, 1942, New York, N.Y., U.S.) U.S. fashion designer. He attended the Fashion Institute of Technology. He opened his own company in 1968, when casual, hippie-style clothing was in fashion, but took a different direction by designing simple, understated, elegant clothing. Though noted at first for suits and coats, he gradually placed more emphasis on sportswear, particularly interchangeable separates. He was the first designer to win three consecutive Coty Awards for womenswear (1973–75). Over the course of the 1980s and '90s he became known for his clothing, cosmetics, linens, and other designer collections, as well as for his erotic advertising photographs, some of which have drawn public protest. His achievements represented the maturation of the American fashion industry.

Klein, Melanie *orig.* **Melanie Reizes** (b. March 30, 1882, Vienna, Austria—d. Sept. 22, 1960, London, Eng.) Austrian-British psychoanalyst. She married at age 21 and had three children before undergoing psychoanalysis with Ferenczi Sándor in Budapest, Hung. She studied the psychoanalysis of young children, joining the Berlin Psychoanalytic Institute (1921–26) and later moving to London. In works such as *The Psychoanalysis of Children* (1932) and *Narrative of a Child Analysis* (1961), she asserted that children's play was a symbolic way of controlling anxiety and that observation of free play with toys could serve as a means of determining early psychological impulses.

Klein, Yves (b. April 28, 1928, Nice, Fr.—d. June 6, 1962, Paris) French painter, sculptor, and performance artist. With no formal artistic training, he began in the mid 1950s to exhibit nonobjective paintings in which a canvas was uniformly covered in a single colour, usually blue; he also used the technique for sculptural figures and reliefs. In 1958 he produced a near-riot with an "exhibition of emptiness," an empty gallery painted white, titled *The Void*. He used a variety of unorthodox methods to produce pictures, such as imprints of the human body on paper or canvas (*anthropométries*). His work was deliberately extreme and experimental. A member of Fluxus, he greatly influenced the development of Minimalism.

Kleist \'klīst**, (Bernd) Heinrich (Wilhelm) von** (b. Oct. 18, 1777, Frankfurt an der Oder, Brandenburg—d. Nov. 21, 1811, Wannsee, near Berlin) German writer. He served seven years in the Prussian army, and his work first attracted attention when he was in prison accused as a spy. The grim and intense drama *Penthesilea* (1808) contains some of his most powerful poetry, and *The Broken Pitcher* (1808) is a masterpiece of dramatic comedy; they were followed by *Katherine of Heilbronn* (1810), *Die Hermannsschlacht* (1821), and *The Prince of Homburg* (1821). In 1811 he published a collection of eight masterly novellas, including *Michael Kohlhaas*, *The Earthquake in Chile,* and *The Marquise of O*. Embittered by a lack of recognition, he ended his unhappy life in a joint suicide with a young woman at age 34. He is now considered the first of the great 19th-century German dramatists, and his disturbing and densely written fictions are widely admired by writers.

Kleitias See Cleitias

Klemperer, Otto (b. May 14, 1885, Breslau, Ger.—d. July 6, 1973, Zürich, Switz.) German conductor. After studying composition with Hans Pfitzner (1869–1949), in 1905 he met Gustav Mahler, who recommended him for several positions, including chief conductor at the Hamburg Opera (1910). At the short-lived Kroll Opera (1927–31) he conducted the Berlin premieres of many important works by contemporary composers. In 1933 he fled Germany for the U.S., conducting in Los Angeles (1933–39) and studying with Arnold Schoenberg. A brain tumour in 1939 left him partly paralyzed. From the 1950s, though seated on the podium, he created a much-admired recorded legacy with London's Philharmonia Orchestra.

Kleophrades Painter See Cleophrades Painter

klezmer music *Yiddish* **"vessel of song"** Traditional music played by professional musicians (*klezmorim*) in the Jewish ghettos of eastern Europe, especially for weddings and other ceremonies. The klezmer tradition has its roots in medieval Europe. By the 19th century its style was well-developed, influenced not only by the liturgical music of the synagogue (which allows only unaccompanied singing), but also that of the local non-Jewish cultures. It is primarily lively dance music. Klezmer ensembles have varied considerably; in the U.S., where a klezmer revival began in the 1980s, a typical band consists of four to six musicians playing some combination of violin, clarinet, trumpet, trombone, tuba, accordion, double bass, and percussion.

Klimt, Gustav (b. July 14, 1862, Vienna, Austria—d. Feb. 6, 1918, Vienna) Austrian painter. In 1897, after a period as an academic muralist, his mature style emerged. Revolting against academic art in favour of a decorative style similar to Art Nouveau, he founded the Vienna Secession. His most successful works include *The Kiss* (1908) and a series of portraits of fashionable Vienna matrons. In these works he treated the human figure without shadow, conveying the sensuality of skin by surrounding it with areas of flat, highly ornamental areas of decoration. His later murals are characterized by precisely linear drawing and flat, decorative patterns of colour and gold leaf. He greatly influenced Oskar Kokoschka and Egon Schiele. See also Jugendstil.

Kline, Franz (b. 1910, Wilkes-Barre, Pa., U.S.—d. May 13, 1962, New York, N.Y.) U.S. painter. He studied art in London before settling in New York City. He became one of the leading artists of the Abstract Expres-

© 2006 Encyclopædia Britannica, Inc.

SIONIST movement and was known for his use of inexpensive commercial paints and large house-painter's brushes to build graphic networks of rough bars of black paint on white backgrounds. He achieved a sense of majesty and power in such large-scale works as *Mahoning* (1956). In the late 1950s he introduced colour into his paintings.

Klinefelter syndrome Chromosomal disorder that occurs in one out of 500 males. With an extra X CHROMOSOME in each cell (XXY), patients look male, with firm, small TESTES, but they produce no sperm and may have enlarged breasts and buttocks and very long legs. TESTOSTERONE is low and pituitary reproductive hormones high. Intelligence is usually normal, but social adjustment can be difficult. Rarer variants cause additional abnormalities, including mental retardation. In the XX male syndrome, Y chromosome material has been transferred to another chromosome, causing changes typical of Klinefelter syndrome. All variants are treated with ANDROGENS.

Klinger, Max (b. Feb. 18, 1857, Leipzig, Ger.—d. July 5, 1920, near Naumburg) German painter, sculptor, and printmaker. He is known for his use of symbol, fantasy, and dreamlike situations, reflecting a late-19th-century awareness of psychological depths. His vivid, frequently morbid imaginings and his interest in the gruesome and grotesque can be seen in his Goyaesque etchings. He is best known for a series of pen-and-ink drawings called *Series upon the Theme of Christ and Fantasies upon the Finding of a Glove*, which tells a strange parable of a hapless young man and his obsessive involvement with a woman's elbow-length glove. He also created controversial treatments of religious themes. In his later years he worked primarily in sculpture. He had a deep influence on many artists, including EDVARD MUNCH, KÄTHE KOLLWITZ, MAX ERNST, and GIORGIO DE CHIRICO.

Klondike gold rush Canadian gold rush of the late 1890s. Gold was discovered on Aug. 17, 1896, near the confluence of the Klondike and YUKON rivers in western Yukon Territory. The news spread quickly, and by late 1898 more than 30,000 prospectors had arrived. Annual production peaked at $22 million worth of gold in 1900, and soon prospectors began moving on to Alaska. By the time mining ended in 1966, the area had yielded $250 million in gold.

Kluane \klü-'ò-nē\ **National Park** National park, southwestern Yukon, Canada. Located on the Alaskan border and established in 1972, it encompasses some 5,440,000 acres (2,201,500 hectares). Its focal point is Mount LOGAN, the highest peak in Canada. Kluane also has a large glacier system and abundant wildlife.

Kmart Corp. *formerly (until 1977)* **S.S. Kresge Co.** Major U.S. retail chain, marketing general merchandise primarily through discount and variety stores. It originated with a pair of 5-and-10-cent stores established in 1897 by S.S. KRESGE and a partner. Kresge's at first restricted the price of its merchandise to not more than 10 cents, but eventually to not more than one dollar. In 1962 Kresge's entered the large-scale discount retail market with construction of the first Kmart outside Detroit, Mich. With its success, the company expanded aggressively, erecting an average of 85 discount stores per year over the next two decades. In 1977 it became the second largest U.S. retailer. After introducing Martha Stewart as its spokesperson in 1987, Kmart became the exclusive retailer for the Martha Stewart Everyday brand in 1997. Kmart declared bankruptcy, however, in 2002 after years of increasingly damaging competition from the world's largest retailer, Wal-Mart, and other discount stores. It merged with SEARS, ROEBUCK AND CO. in 2005, becoming part of Sears Holdings Corporation.

Knesset \kə-'nes-ət\ (Hebrew: "Assembly") Unicameral national LEGISLATURE of Israel. The first Knesset opened in 1949. Its name and the number of its seats (120) are based on the Jewish assembly of biblical times; its traditions and organization are based on the Zionist Congress, the political system of the Jewish community in pre-Israel Palestine, and more loosely the British House of COMMONS. Its members are elected by proportional representation for four-year terms; candidates are chosen by their parties.

knight *French* **chevalier** \shə-'val-ˌyā\ *German* **Ritter** In the European Middle Ages, a formally professed cavalryman, generally a vassal holding land as a FIEF from the lord he served (see FEUDALISM). At about 7 a boy bound for knighthood became a page, then at 12 a damoiseau ("lordling"), varlet, or valet, and subsequently a shieldbearer or esquire. When judged ready, he was dubbed knight by his lord in a solemn ceremony. The Christian ideal of knightly behavior (see CHIVALRY) required devotion to the church, loyalty to military and feudal superiors, and preservation of personal honor. By the 16th century knighthood had become honorific rather than feudal or military.

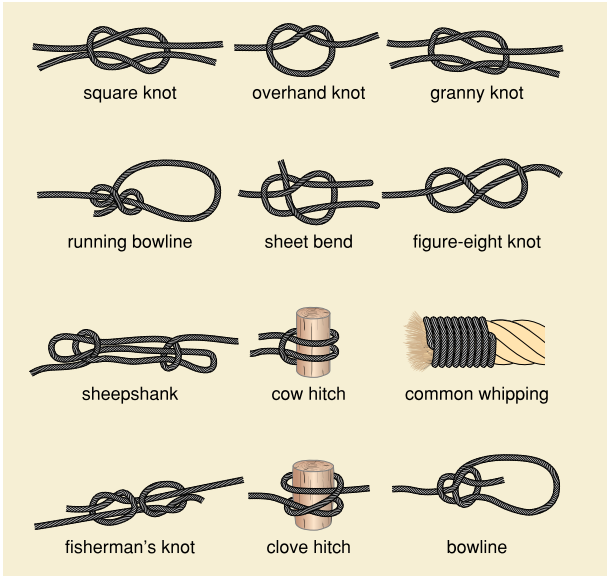
Knight, Frank H(yneman) (b. Nov. 7, 1885, White Oak township, McLean county, Ill., U.S.—d. April 15, 1972, Chicago, Ill.) U.S. economist. He received his Ph.D. from Cornell University in 1916. He taught at the University of Chicago from 1927 to 1952; MILTON FRIEDMAN was one of the many students he influenced. His book *Risk, Uncertainty and Profit* (1921) distinguished between insurable and uninsurable RISKS and asserted that profit was the reward entrepreneurs earned for bearing uninsurable risk. His monograph "Economic Organization" is a classic exposition of MICROECONOMIC theory. He is considered the founder of the Chicago school of economics.

Knight Templar See TEMPLAR

Knights of Labor First important national labour organization in the U.S. Founded in 1869 by URIAH SMITH STEPHENS as the Noble Order of the Knights of Labor, it included both skilled and unskilled workers, and it proposed a system of workers' cooperatives to replace CAPITALISM. To protect its members from employers' reprisals, it originally maintained secrecy. Under TERENCE V. POWDERLY (1879–93) it favoured open ARBITRATION with management and discouraged strikes. National membership reached 700,000 in 1886. Strikes by militant groups and the HAYMARKET RIOT caused an antiunion reaction that rapidly reduced the organization's influence. A splinter group left to form the AFL (later AFL-CIO).

Knights of Malta *or* **Hospitallers** \'häs-ˌpi-tᵊl-ərz\ *in full (since 1961)* **Sovereign Military Hospitaller Order of St. John of Jerusalem, of Rhodes and of Malta** Religious order founded at Jerusalem in the 11th century to care for sick pilgrims. Recognized by the pope in 1113, the order built hostels along the routes to the Holy Land. The Hospitallers acquired wealth and lands and began to combine the task of tending the sick with waging war on Islam, eventually becoming a major military force in the CRUSADES. After the fall of the crusader states, they moved their headquarters to Cyprus and later to Rhodes (1309). They ruled Rhodes until it fell to the Turks in 1523; thereupon they moved to Malta, where they ruled until their defeat by NAPOLEON I in 1798. In 1834 they moved to their present headquarters in Rome.

knitting machine Machine for TEXTILE and garment production. Flatbed machines may be hand-operated or power-driven, and, by selection of colour, type of stitch, cam design, and Jacquard device (see JACQUARD LOOM), almost unlimited variety is possible. Modern circular machines may have 100 feeders, allowing each needle to pick up 100 threads per revolution. Both spring (invented c. 1589) and latch (invented 1847) needles are used, with the latter more common. Small bladelike units (sinkers) are inserted between every two needles to engage and hold the completed fabric. Machines may have pattern wheels controlling needle action to produce special stitches, and also a Jacquard mechanism. See also WILLIAM LEE.



Knopf \kə-'näpf, kə-'nȯpf**, Alfred A.** (b. Sept. 12, 1892, New York, N.Y., U.S.—d. Aug. 11, 1984, Purchase, N.Y.) U.S. publisher. He worked a short time in publishing before he and his wife, Blanche, founded their own firm, Alfred A. Knopf, Inc., in 1915. His appreciation of contemporary literature and his literary contacts helped make the firm renowned for publishing works of high literary quality. By the time of his death, authors published by the firm had won 16 Nobel and 27 Pulitzer prizes. In 1966 it became a subsidiary of RANDOM HOUSE, Inc. Knopf also published the *American Mercury* (1924–34), an influential periodical he cofounded with H.L. MENCKEN and George Jean Nathan.

Knossos \'nä-səs\ Ancient royal city, CRETE. It was King MINOS's capital and the centre of the MINOAN civilization. Settled by migrants from ASIA MINOR in the 7th millennium BC, it gave rise to a sophisticated BRONZE AGE culture. Two great palaces were built in the Middle Minoan period, the second c. 1720 BC after an earthquake leveled the city. About 1580 BC Minoan culture began to extend to mainland Greece, where it greatly influenced the MYCENAEAN culture. After its palace was destroyed by fire c. 1400 BC, it was reduced to town status, and Aegean political focus shifted to MYCENAE. Knossos was the site of the legendary labyrinth of DAEDALUS.

knot In cording, the interlacement of parts of one or more ropes, cords, or other pliable materials, commonly used to bind objects together. Knots

have existed from the time humans first used vines and cordlike fibers to bind stone heads to wood in primitive axes, and were also used in the making of nets and traps. Knot making became sophisticated when it began to be used in the ropes, or rigging, that controlled the sails of early sailing vessels, and thus became the province of sailors. Knots are still depended on by campers and hikers, mountaineers, fishermen, and weavers, among others.

Examples of common knots.
© MERRIAM-WEBSTER INC.

knot theory Mathematical theory of closed curves in three-dimensional space. The number of times and the manner in which a curve crosses itself distinguish different KNOTS. The fewest possible crossings is three, for the overhand (trefoil) knot, which occurs in two mirror versions according to the directions in which the curve crosses itself. Knot theory has been used to understand both atomic and molecular structures (protein folding).

Know-Nothing Party *or* **American Party** U.S. political party of the 1850s. The party's precursor organization, the secret Order of the Star-Spangled Banner, was formed in New York City in 1849 from the anti-immigrant and anti-Roman Catholic movement, and lodges were soon established in other major cities. Members were instructed to reply to queries about their group with "I know nothing." As its membership and importance grew in the 1850s, the group slowly shed its clandestine character and took the official name American Party. The party called for restrictions on immigration and on naturalized citizenship. Many local and state candidates won offices in the 1852 election, and by 1855 there were 43 Know-Nothing members of Congress. At its 1856 convention the party split over the slavery issue; proslavery advocates left to join the Democrats and antislavery adherents joined the Republicans. By 1859 the party's influence was limited to the border states.

Knowles \'nōlz**, John** (b. Sept. 16, 1926, Fairmont, W.Va., U.S.—d. Nov. 29, 2001, Fort Lauderdale, Fla.) U.S. author. Educated at Yale University, he gained prominence for his first novel, *A Separate Peace* (1959), about the competitive friendship of two private-school students. Most of his novels, which include *Indian Summer* (1966), *Spreading Fires* (1974), and *Peace Breaks Out* (1981), are psychological examinations of characters caught in conflict between the wild and the pragmatic sides of their personalities.

Knox, Henry (b. July 25, 1750, Boston, Mass.—d. Oct. 25, 1806, Thomaston, Maine, U.S.) American Revolutionary officer. Active in the colonial militia, he joined the Continental Army and was sent by GEORGE WASHINGTON to transport British artillery captured in the Battle of TICONDEROGA. In mid-winter, he oversaw the transport of 120,000 lbs (55,000 kg) of artillery by oxen and horses over snow and ice 300 mi (480 km) to Boston. Promoted to general, he commanded the artillery in the battles of Monmouth and Yorktown, and in 1783 he succeeded Washington as commander of the army. He was secretary of war under the ARTICLES OF CONFEDERATION from 1785 to 1789 and served as the first U.S. secretary of war from 1789 to 1795.

Knox, John (b. c. 1514, near Haddington, East Lothian, Scot.—d. Nov. 24, 1472, Edinburgh) Scottish clergyman, leader of the Scottish Reformation and founder of Scottish PRESBYTERIANISM. Probably trained for the priesthood at the University of St. Andrews, he was ordained in 1540. He joined a group of Protestants who fortified St. Andrews Castle, but they were captured by French Catholics and carried away into slavery in 1547. Released through English intervention in 1549, he spent four years preaching in England, where he influenced developments in the Church of England. With the accession of the Catholic MARY I, he fled to the Continent. He served as pastor at Frankfurt am Main and Geneva until his return to Scotland in 1559. In England, ELIZABETH I made common cause with the Scottish Presbyterians, lest the French gain control of Scotland to support its Catholic monarch, MARY, QUEEN OF SCOTS. Knox survived conflicts with Mary and spent the rest of his life in setting up the Presbyterian church.

Knox, Philander Chase (b. May 6, 1853, Brownsville, Pa., U.S.—d. Oct. 12, 1921, Washington, D.C.) U.S. lawyer and politician. After admission to the bar in 1875 he became a successful corporation lawyer in Pittsburgh. As legal counsel for the Carnegie Steel Company, he helped organize the UNITED STATES STEEL CORP. (1900–01). Appointed attorney general by Pres. THEODORE ROOSEVELT in 1901, he initiated several suits under the SHERMAN ANTITRUST ACT. He served in the U.S. Senate from 1904 to 1909. As secretary of state (1909–13) under Pres. WILLIAM H. TAFT, he helped develop the foreign policy of expanded U.S. investment later criticized as DOLLAR DIPLOMACY. During his second term in the Senate (1917–21), he opposed the formation of the LEAGUE OF NATIONS.

Knoxville City (pop., 2000: 173,890), eastern Tennessee, U.S. In 1786, Gen. James White, a former officer in the American Revolutionary army, established a frontier outpost near the Tennessee River. In 1791 White's Fort was renamed Knoxville for HENRY KNOX. It served as the capital of the state of Tennessee from 1796 to 1812 and from 1817 to 1818. During the AMERICAN CIVIL WAR, it was occupied by the Confederates until 1863. It is the seat of the University of Tennessee and Knoxville College as well as the headquarters of the TENNESSEE VALLEY AUTHORITY.

Knudsen \'knüd-sən, 'nüd-sən**, William Signius** *orig.* **Signius Wilhelm Poul Knudsen** (b. March 25, 1879, Copenhagen, Den.—d. April 27, 1948, Detroit, Mich., U.S.) Danish-U.S. industrialist. He immigrated to the U.S. in 1900. In 1914 he began supervising FORD MOTOR CO. assembly plants and directed the firm's construction of submarine patrol boats and other war matériel in World War I. He joined GENERAL MOTORS CORP. in 1922 and became president in 1937. He was appointed director of industrial production for the National Defense Research Committee and directed production of war matériel as head of the U.S. Office of Production Management.

Knut See CANUTE THE GREAT

Knuth \kə-'nüth**, Donald E(rvin)** (b. Jan. 10, 1938, Milwaukee, Wis., U.S.) U.S. computer scientist. Knuth earned a Ph.D. in mathematics in 1963 from the California Institute of Technology. A pioneer in computer science, he took time out during the 1970s from writing his highly acclaimed multivolume *The Art of Computer Programming* in order to develop TeX, a document-preparation system. Because of its precise control of special characters and mathematical formulas, TeX and its variants soon became standard for submitting typeset-ready scientific and mathematical research papers for publication. He has received many awards

© 2006 Encyclopædia Britannica, Inc.

and honours, including the Kyoto Prize (1996), the Turing Award (1974), and the National Medal of Science (1979).

Ko Hung See GE HONG

koala Tree-dwelling MARSUPIAL (*Phascolarctos cinereus*) of coastal eastern Australia. About 24–33 in. (61–85 cm) long and tailless, the koala has a stout, pale gray or yellowish body; broad face; big, round, leathery nose; small, yellow eyes; and fluffy ears. Its feet have strong claws and some opposable digits. The koala feeds only on EUCALYPTUS leaves. The single offspring remains in the rearward-opening pouch for up to seven months. Koala populations have dwindled seriously, formerly because they were killed for their fur and now because of loss of habitat and the spread of disease.

Koala (*Phascolarctos cinereus*).

koan \'kō-ˌän\ In ZEN Buddhism, a brief paradoxical statement or question used as a discipline in MEDITATION. The effort to solve a koan is designed to exhaust the analytic intellect and the will, leaving the mind open for response on an intuitive level. There are about 1,700 traditional koans, which are based on anecdotes from ancient Zen masters. They include the well-known example "When both hands are clapped a sound is produced; listen to the sound of one hand clapping."

kobdas \'gō-aù-ˌdēs\ Drum used for inducing trances and for DIVINATION by Sami SHAMANS. It consisted of a wooden frame over which a reindeer hide was stretched; the hide was covered with designs representing spirits or deities. In divination, the drum was beaten with a hammer made of reindeer antler, causing a triangular piece of bone or metal called an *arpa* to move along its surface. From these movements the shaman divined the nature of an illness or learned the location of lost or stolen objects.

Kōbe \'kō-bā\ City (pop., 2000 prelim.: 1,493,595), west-central HONSHU, Japan. It is situated on Ōsaka Bay and occupies a narrow shelf of land between mountains and the sea. With neighbouring cities ŌSAKA and KYŌTO, it is the centre of a major industrial zone. Until the MEIJI RESTORATION it was only a fishing village, but it grew rapidly in the late 19th century. It was severely bombed during World War II and was entirely rebuilt after 1945. It suffered a major earthquake in 1995. Kōbe is an important Japanese port and a centre of shipbuilding and steel production; it is the seat of Kōbe University.

Koblenz *or* **Coblenz** \'kō-ˌblents\ *ancient* **Confluentes** City (pop., 2002 est.: 107,730), western Germany. Situated at the junction of the RHINE and MOSELLE rivers, it was founded by the Romans in 9 BC. It was a Frankish royal seat in the 6th century AD and was chartered as a city in 1214. The French occupied the city in 1794, and it passed to Prussia in 1815. After World War I, Koblenz was the seat of the Inter-Allied Control Commission for the Rhineland (1919–29). Devastated in World War II, it has since been restored. It is a centre for the German wine trade; other industries include tourism and the manufacture of furniture, clothing, and chemicals.

Kobo Daishi See KUKAI

Kobuk \kō-'bůk\ **Valley National Park** National park, northwestern Alaska, U.S. Located north of the Arctic Circle, it was made a national monument in 1978 and a national park in 1980. Occupying an area of 1,750,421 acres (708,370 hectares), it preserves the Kobuk River valley, including the Kobuk and Salmon rivers, forest lands, and the Great Kobuk Sand Dunes. Archaeological sites reveal more than 10,000 years of human habitation. It protects caribou migration routes; other wildlife include grizzly and black bears, foxes, moose, and wolves.

Koch \'käch**, Ed(ward Irving)** (b. Dec. 12, 1924, New York, N.Y., U.S.) U.S. politician. After serving in the army during World War II, he graduated from New York University Law School. He was elected to the U.S. Congress in 1968, and in 1978 he was elected to the first of three terms as mayor of New York City. Koch is credited with bringing fiscal stability to the insolvent city and with instituting merit selection of city judges. His brash forthrightness made him an entertaining and popular figure, but his demeanour and his rhetoric increasingly came to be seen as unkind and divisive and eventually resulted in his defeat. He later became a columnist and talk-show host.

Koch \'kȯk\, *English* \'kȯk**, (Heinrich Hermann) Robert** (b. Dec. 11, 1843, Clausthal, Hannover—d. May 27, 1910, Baden-Baden, Ger.) German physician. As the first to isolate the ANTHRAX bacillus, observe its life cycle, and develop a preventive inoculation for it, he was the first to prove a causal relationship between a bacillus and a disease. He perfected pure-culture techniques, based on LOUIS PASTEUR's concept. He isolated the TUBERCULOSIS organism and established its role in the disease (1882). In 1883 he discovered the causal organism for CHOLERA and how it is transmitted and also developed a vaccination for RINDERPEST. Koch's postulates remain fundamental to pathology: the organism should always be found in sick animals and never in healthy ones; it must be grown in pure culture; the cultured organism must make a healthy animal sick; and it must be reisolated from the newly sick animal and recultured and still be the same. Awarded a Nobel Prize in 1905, he is considered a founder of bacteriology.

Köchel \'kœk-əl\, *English* \'kər-shəl**, Ludwig (Alois Ferdinand) von** (b. Jan. 14, 1800, Stein, near Krems, Austria—d. June 3, 1877, Vienna) Austrian scholar and musicologist. After gaining a law degree, he tutored children of wealthy families and traveled, researching books on a number of different topics, including botany, mineralogy, and music. He is best known for his 1862 thematic catalog of Mozart's works (which are still identified by their "K numbers"), a monument of music scholarship. He also edited Ludwig van BEETHOVEN's letters.

Kocher \'kȯ-kər**, Emil Theodor** (b. Aug. 25, 1841, Bern, Switz.—d. July 27, 1917, Bern) Swiss surgeon. He was the first surgeon to remove the thyroid gland to treat GOITRE (1876). He later found that total removal could cause a state resembling cretinism, but that leaving part of the gland in place made this temporary. He introduced a surgical method for reducing shoulder dislocations, as well as many new surgical techniques, instruments, and appliances. A type of forceps and a gallbladder surgery incision named for him are still used. He adopted JOSEPH LISTER's principles of complete asepsis in surgery. In 1909 he won a Nobel Prize.

Kodak Co., Eastman See EASTMAN KODAK CO.

Kodály \'kō-ˌdī**, Zoltán** (b. Dec. 16, 1882, Kecskemét, Hung.—d. March 6, 1967, Budapest) Hungarian composer, ethnomusicologist, and music educator. He played various instruments as a child and studied simultaneously at the university and the Budapest Academy of Music, earning diplomas in composition and teaching and a doctorate in Hungarian folk song. With BÉLA BARTÓK, a lifelong friend, he compiled the important *Hungarian Folk Songs* (1906), and he continued to make field recordings until World War I made it impossible. He came to international attention with his *Psalmus hungaricus* (1923) and the opera *Háry János* (1926). Kodály created an individual style that was derived from Hungarian folk music, contemporary French music, and the religious music of the Italian Renaissance. He devoted much of his energy to developing a school music curriculum that would develop children's musicality, and the "Kodály method" remains in wide use.

Kodiak Island Island (pop., 2000: 13,913), Alaska, U.S. Lying in the Gulf of ALASKA, it is 100 mi (160 km) long and 10–60 mi (16–96 km) wide and has an area of 3,588 sq mi (9,293 sq km). The Kodiak National Wildlife Refuge covers 75% of the island and is the habitat of the Kodiak bear. Discovered in 1763 by a Russian fur trader, the island, known as Kikhtak, became the site in 1784 of the first Russian colony in America. Russian control ended in 1867; the island was renamed Kodiak in 1901. In 1964 a destructive earthquake lowered the island by 5–6 ft (1.5–1.8 m).

Koehler, Ted See Harold ARLEN

Koestler \'kest-lər**, Arthur** (b. Sept. 5, 1905, Budapest, Hung.—found dead March 3, 1983, London, Eng.) Hungarian-British novelist, journalist, and critic. He is best known for *Darkness at Noon* (1940); a political novel examining the moral danger in a totalitarian system that sacrifices means to an end, it reflects the events leading to his break with the Communist Party and his experience as a correspondent imprisoned by the fascists in the SPANISH CIVIL WAR. He also wrote of his disillusionment with

© 2006 Encyclopædia Britannica, Inc.

communism in the essay collection *The God That Failed* (1949). His later works, mostly concerning science and philosophy, include *The Act of Creation* (1964) and *The Ghost in the Machine* (1967). Suffering from leukemia and Parkinson's disease and believing in voluntary euthanasia, he died with his wife in a suicide pact.

Koguryŏ \ˌkō-gůr-ˈyō\ Largest of the three kingdoms into which ancient Korea was divided until 668. Tradition sets its founding at 37 BC, but modern historians believe the tribal state was formed in the 2nd century BC. Eventually the northern half of the Korean peninsula, the Liaodong Peninsula, and much of Manchuria were under Koguryŏ's rule. Buddhism, Confucianism, and Daoism all influenced the kingdom, which fell to the allied forces of China's TANG DYNASTY and the southern Korean kingdom of SILLA in 668. Numerous surviving tomb paintings give a good picture of the life, ideology, and character of Koguryŏ's forceful, horse-riding northern people. See also PARHAE.

Koh-i-noor \ˈkō-ə-ˌnůr\ Famous Indian diamond with a history dating perhaps as far back as the 14th century. Originally a 191-carat stone that lacked fire (flashes of colour), it was recut to 109 carats in 1852 in an attempt to enhance its fire and brilliance. The Koh-i-noor (Hindi for "mountain of light") was acquired by the British in 1849 and became part of the CROWN JEWELS of Queen Victoria. It was incorporated into the state crown fashioned for Queen Elizabeth, consort of George VI, at her coronation in 1937.

kohen See COHEN

Kohima \ˈkō-hə-mə\ Town (pop. 2001 prelim.: 78,584), capital of NAGALAND state, northeastern India. It lies near the northern border of MANIPUR state in the NAGA HILLS. It marked the farthest point of the Japanese advance into British India during World War II. It was held briefly by Japanese troops during the Manipur campaign in 1944 but was retaken by the British. It is the site of Nagaland University.

Kohl \ˈkōl**, Helmut** (b. April 3, 1930, Ludwigshafen am Rhein, Ger.) Chancellor of West Germany (1982–90) and of reunified Germany (1990–98). After earning a doctorate at the University of Heidelberg, he was elected to the Rhineland-Palatinate legislature and became the state's minister president (1969). In 1973 he was elected chair of the CHRISTIAN DEMOCRATIC UNION, and in 1982 he became Germany's chancellor. Kohl's centrist policies included modest cuts in government spending and strong support for West German commitments to NATO. After the fall of the BERLIN WALL in 1989, Kohl concluded a treaty with East Germany that unified the two countries' economic systems. Absorption of the moribund East German economy proved difficult, and Kohl's government had to increase taxes and cut government spending after unification. In 1998 his coalition government with the Free Democratic Party was defeated by the Social Democrats under GERHARD SCHRÖDER. Revelations of serious financial irregularities during Kohl's chancellorship soon emerged, tainting his reputation and weakening his party.

Kohler, Kaufmann (b. May 10, 1843, Fürth, Bavaria—d. Jan. 28, 1926, New York, N.Y., U.S.) German-born U.S. rabbi. He was brought up in Orthodox Judaism but soon came under the influence of Reform leader ABRAHAM GEIGER. His early writings approached biblical texts critically and led to his exclusion from the German rabbinate. He emigrated to the U.S. in 1869 and served Reform congregations in Detroit, Chicago, and New York City. In 1885 he was the driving force in formulating the PITTSBURGH PLATFORM. He served as president of Hebrew Union College in Cincinnati 1903–21. His chief work was *Jewish Theology* (1918).

Köhler \ˈkō-lər**, Wolfgang** (b. Jan. 21, 1887, Tallinn, Estonia, Russian Empire—d. June 11, 1967, Enfield, N.H., U.S.) German-U.S. psychologist. His studies of problem solving by chimpanzees (*The Mentality of Apes*, 1917), in which he examined learning and perception as structured wholes, led to a radical revision of existing theory, and Köhler became a key figure in the development of GESTALT PSYCHOLOGY. He continued his research during the 1920s and early '30s at the University of Berlin, publishing *Gestalt Psychology* (1929, rev. 1947), but emigrated from Germany to the U.S. after the Nazi takeover and taught at Swarthmore College (1935–55). His other writings include *Dynamics in Psychology* (1940), *The Place of Values in a World of Facts* (1938), and *The Task of Gestalt Psychology* (1969).

kohlrabi \kōl-ˈrä-bē\ Form of CABBAGE (*Brassica oleracea*, Gongylodes group) of the MUSTARD FAMILY, which originated in Europe. Its most distinctive feature is the greatly enlarged, globular to slightly flattened stem that grows just above the soil. Its flesh resembles that of a turnip but is sweeter and milder. Low in calories, kohlrabi is an excellent source of vitamin C, minerals, and dietary bulk. The young tender leaves may be eaten as greens; the thickened stem is served raw or cooked. Though not widely grown commercially, it is popular in some regions.

Kohlrabi (*Brassica oleracea*)
W.H. HODGE

koine \kȯi-ˈnā\ Newly formed compromise language that usually arises from a leveling of features distinguishing dialects of a common base language, or of features distinguishing several closely related languages. The new language is hence deregionalized and does not reflect social or political dominance of any one group of speakers. The classical example of a koine (as well as the source of the term) is Hellenistic GREEK, which developed from Attic Greek through replacement of the most distinctively Attic features by features of Ionic or other dialects. A koine may serve as a LINGUA FRANCA and often forms the basis of a new standard language.

Koizumi Jun'ichirō (b. Jan. 8, 1942, Yokosuka, Kanagawa prefecture, Japan) Third-generation Japanese politician who became prime minister in 2001. Both Koizumi's father and grandfather served in the DIET (parliament). He ran unsuccessfully for his father's seat after the latter's death in 1969 but was elected in 1971. He held ministerial posts in 1988–89, 1992–93, and 1996–98. After unsuccessful bids for the presidency of the LIBERAL-DEMOCRATIC PARTY in 1995 and 1998, he won in April 2001 and was soon confirmed as prime minister. An unconventional advocate of reform, Koizumi appointed a cabinet that included a record five women. His economic policies included privatizing the country's postal savings system, reducing government spending, and ending the practice of supporting failing businesses.

Kokand See QOʻQON

Koko Nor *Chinese* **Qinghai Hu** *or* **Ch'ing-hai** \ˈchiŋ-ˈhī\ **Hu** Lake, QINGHAI province, China. The largest drainless mountain lake of Central Asia, it is 65 mi (105 km) long and 40 mi (64 km) wide; its surface area fluctuates seasonally between 1,600 and 2,300 sq mi (4,200 and 6,000 sq km). It is located in the Nan Mountains (Nan Shan) at an elevation of 10,515 ft (3,205 m). Formed by melting glaciers during the Late Pleistocene Epoch, the lake today receives the waters of some two dozen rivers and streams.

Kokoschka \kə-ˈkȯsh-kə**, Oskar** (b. March 1, 1886, Pöchlarn, Austria—d. Feb. 22, 1980, Villeneuve, Switz.) Austrian painter and writer. He studied and taught at the Vienna School of Arts and Crafts but was dissatisfied because the school omitted study of the human figure, his primary artistic interest. His early paintings were rendered in delicate, agitated lines and relatively naturalistic colours. After c. 1912 he became a leading exponent of EXPRESSIONISM; his portraits came to be painted with increasingly broader strokes of more varied colour and heavier outlines. While recovering from a wound received in World War I, he wrote, produced, and staged three plays; his *Orpheus and Eurydice* (1918) became an opera by ERNST KRENEK (1926). The landscapes he produced during 10 years of teaching and travel mark the second peak of his career. Shortly before World War II he fled to London, where his paintings became increasingly political and antifascist. He continued his political art after moving to Switzerland in 1953.

Kol Nidre \ˈkȯl-ˈni-drā\ Prayer sung in Jewish synagogues at the start of services on the eve of YOM KIPPUR. The prayer begins with an expression of repentance for all unfulfilled vows, oaths, and promises to God during the previous year. It was in use as early as the 8th century, perhaps as a means of annulling oaths forced on Jews by their Christian persecutors. The melody used by Ashkenazi Jews became famous when the composer MAX BRUCH used it in his *Kol Nidrei* (1880).

Kola nut (*Cola nitida*)
W.H. HODGE

kola nut *or* **cola nut** Caffeine-containing NUT of two evergreen trees

© 2006 Encyclopædia Britannica, Inc.

(*Cola acuminata* and *C. nitida*) of the cocoa family (Sterculiaceae), native to tropical Africa and cultivated extensively in the New World tropics. The trees grow to 60 ft (18.3 m) in height and have oblong leathery leaves, yellow flowers, and star-shaped fruit. The nut has been used in medicines and in soft drinks, though American "colas" today instead use synthetic flavorings that mimic its taste. Kola nuts are also used where grown as a medium of exchange or are chewed to diminish sensations of hunger and fatigue, to aid digestion, and to combat intoxication, hangover, and diarrhea.

Kola Peninsula Promontory, northern Russia. It separates the White and Barents seas; it occupies 40,000 sq mi (100,000 sq km) and extends across the Arctic Circle. It consists of rock more than 570 million years old. The winter climate is severe; the largest town is the ice-free port of Murmansk on the northern coast. It has the world's largest deposits of apatite, used for fertilizer production.

Kolbe \'kōl-bə**, Saint Maksymilian Maria** *orig.* **Rajmund Kolbe** (b. Jan. 8, 1894, Zduńska Wola, near Lodz, Russian Empire—d. Aug. 14, 1941, Auschwitz; canonized Oct. 10, 1982; feast day August 14) Polish Franciscan priest martyred by the Nazis. Ordained in 1918, he founded the City of Mary Immaculate religious centre (1927) and became its superior, as well as director of Poland's chief Roman Catholic publishing complex. He was arrested by the Gestapo in 1939 and again in 1941 on charges of aiding Jews and the Polish underground. He was imprisoned at Warsaw, then shipped to Auschwitz, where he volunteered his life in place of that of a condemned inmate.

Kolchak \kōl-'chäk**, Aleksandr (Vasilyevich)** (b. Nov. 16, 1874, St. Petersburg, Russia—d. Feb. 7, 1920, Irkutsk, Siberia, Soviet Russia) Russian naval officer and political leader. He was forced to resign as commander of the fleet in the Black Sea after the Russian Revolution of 1917 began. After a coup d'état in Omsk in 1918, he gained power among the counterrevolutionary White Russians, and in 1919 he was recognized by them as supreme ruler of Russia. After initial successes against the Red Army, his armies were routed in 1919; the next year he was captured and executed by the Bolsheviks.

Kolkata *formerly* **Calcutta** City (pop., 2001: city, 4,580,546; metro. area, 13,205,697), northeastern India. Capital of West Bengal state, former capital (1772–1912) of British India, and India's second largest metropolitan area, it is located on the Hugli (Hooghly) River, about 90 mi (145 km) from the river's mouth. The British established a trading centre at the site in 1690, which grew and became the seat of the Bengal presidency in 1707. It was captured by the nawab of Bengal, who in 1756 imprisoned the British there (in a prison that was later known as the Black Hole); the city was retaken by the British under Robert Clive. It was an extremely busy 19th-century commercial centre, but it began to decline with the removal of the colonial capital to Delhi in 1912. The decline continued when Bengal was partitioned between India and Pakistan in 1947 and when Bangladesh was created in 1971. The flood of refugees from those political upheavals boosted the city's population but also significantly added to its widespread poverty. Despite its problems, Kolkata remains the dominant urban area of eastern India and a major educational and cultural centre.

Kollontay \ˌkä-lən-'tī**, Aleksandra (Mikhaylovna)** *orig.* **Aleksandra Mikhaylovna Domontovich** (b. March 31, 1872, St. Petersburg, Russia—d. March 9, 1952, Moscow, Russia, U.S.S.R.) Russian administrator and diplomat. As the first commissar for public welfare in the Bolshevik government (1917), she advocated simplifying marriage and divorce procedures and improving the status of women. She became the first woman to serve as an accredited minister to a foreign country when she was named minister to Norway (1923–25, 1927–30); she later served as minister to Mexico (1926–27) and Sweden (1930–45). In 1944 she conducted the negotiations that ended Soviet-Finnish hostilities in World War II.

Kollwitz \'kōl-ˌvits,\ *English* \'kōl-ˌwits**, Käthe** *orig.* **Käthe Schmidt** (b. July 8, 1867, Königsberg, East Prussia—d. April 22, 1945, near Dresden, Ger.) German graphic artist and sculptor. She studied painting in Berlin and Munich but devoted herself primarily to etchings, drawings, lithographs, and woodcuts. She gained firsthand knowledge of the miserable conditions of the urban poor when her physician husband opened a clinic in Berlin. She became the last great practitioner of German Expressionism and an outstanding artist of social protest. Two early series of prints, *Weavers' Revolt* (1895–98) and *Peasants' War* (1902–08), portray the plight of the oppressed with the powerfully simplified, boldly accentuated forms that became her trademark. After her son died in World War I, she created a cycle of prints dedicated to the theme of a mother's love. She was the first woman elected to the Prussian Academy of Arts, where she was head of the Master Studio for Graphic Arts (1928–33). The Nazis banned her works from exhibition. The bombing of her home and studio in World War II destroyed much of her work.

Self-Portrait with Hand on Forehead, etching by Käthe Kollwitz, 1910; in the National Gallery of Art, Washington, D.C.

Köln See Cologne

Kölreuter \'kœl-ˌrȯi-tər**, Josef Gottlieb** (b. April 27, 1733, Sulz, Württemberg—d. Nov. 12, 1806, Karlsruhe, Baden) German botanist. A pioneer in the study of plant hybrids, he was the first to develop a scientific application of the discovery (made in 1694 by Rudolph Camerarius) of sex in plants. Cultivating plants in order to study their fertilization and development, he performed experiments, particularly with the tobacco plant, that included artificial fertilization and the production of fertile hybrids between plants of different species. His results foreshadowed the work of Gregor Mendel. Kölreuter recognized the importance of insects and wind as agents of pollen transfer. He applied Carolus Linnaeus's sexual system of classification to lower plant forms. His work was not recognized until long after his death.

Kolyma \ˌkä-li-'mä\ **River** River, northeastern Siberia, eastern Russia. Rising in the Kolyma Mountains and emptying in the East Siberian Sea, it is 1,323 mi (2,129 km) long. It is navigable upstream to Verkhnekolymsk but is ice-free only from June to September. Under Joseph Stalin the goldfields of the upper Kolyma River valley held labour camps where more than one million prisoners died (1932–54).

Komarov \kə-mə-'rȯf**, Vladimir (Mikhaylovich)** (b. March 16, 1927, Moscow, Russia, U.S.S.R.—d. April 24, 1967, Kazakstan) Soviet cosmonaut. He joined the Soviet air force at age 15, became a pilot in 1949, and piloted Voskhod 1, the first craft to carry more than one human into space, in 1964. On his 1967 flight in Soyuz 1 he became the first Russian to have made two spaceflights. During the 18th orbit he attempted a landing; he died when the spacecraft reportedly became entangled in its main parachute at an altitude of several miles and fell back to Earth.

Komodo \kə-'mō-dō\ **dragon** Largest living lizard (*Varanus komodoensis*), a member of the monitor lizard family Varanidae. They live on Komodo Island and a few neighbouring islands in Indonesia. Driven almost to extinction, they are now protected. Komodos grow to 10 ft (3 m) long, weigh up to 300 lb (135 kg), and may live up to 100 years. They

Komodo dragon (*Varanus komodoensis*).

dig a burrow as deep as 30 ft (9 m). Carrion is their main diet, but adults may eat smaller Komodos. They can run swiftly and occasionally attack and kill humans.

Komsomol \'käm-sə-ˌmäl\ Organization in the former Soviet Union for young people aged 14–28 years. Primarily a political organ for spreading Communist teachings and preparing future members of the Communist Party, it was organized in 1918. Members participated in health, sports, education, and publishing activities and various industrial projects. They were frequently favoured over nonmembers for employment, scholarships, and the like. Its membership reached its height, about 40 million, in the 1970s and early 1980s. It disbanded with the collapse of Soviet communism in the early 1990s.

Konbaung dynasty See Alaungpaya dynasty

Kondratev \kən-'drät-yəf**, Nikolay (Dmitriyevich)** *also spelled* **Kondratieff** (b. March 4, 1892—d. 1938?) Russian economist and statistician. In the 1920s he helped develop the first Soviet Five-Year Plan, for which he analyzed factors that would stimulate Soviet economic growth. After criticizing Joseph Stalin's plan for the total collectivization of agriculture, he was dismissed from his post as director of the Institute for the Study of Business Activity in 1928. He was arrested in 1930 and sentenced to prison; his sentence was reviewed in 1938, and he received the death penalty, which was likely carried out the same year. He is noted for his theory of 50-year business cycles known as Kondratev's waves. See also Gosplan.

Konev \'kȯ-nyəf**, Ivan (Stepanovich)** (b. Dec. 28, 1897, Lodeino, near Veliky Ustyug, Russia—d. May 21, 1973, Moscow, Russia, U.S.S.R.) Soviet general in World War II. When the Germans invaded the Soviet Union in 1941, Konev led the first counterattack of the war. He defeated Heinz Guderian's advance on Moscow and halted large German forces in 1942 and 1943. In 1944 his army was the first to march onto German soil; with the forces of Georgy K. Zhukov, it captured Berlin. After the war he served as commander in chief of Soviet ground forces (1946–50) and later of Warsaw Pact forces (1955–60).

Kong River River, Laos and Cambodia. Rising in central Vietnam southwest of Hue, it flows southwest for 300 mi (480 km), passing through southern Laos. It enters Cambodia east of the Mekong River and continues southwest across the northern Cambodian plateau to later join the Mekong.

Kongo *or* **Bakongo** Bantu-speaking peoples living along the Atlantic coast in Congo (Kinshasa), Congo (Brazzaville), and Angola. They engage in subsistence agriculture and raise cash crops (including coffee, cacao, and bananas); many live and work in towns. Descent is matrilineal, and most villages are independent of their neighbours. A Kongo kingdom existed from the 14th century; its wealth came from trade in ivory, hides, slaves, and a shell currency. It broke up into warring chiefdoms in 1665.

Königgrätz \'kœ-nik̲-ˌgrets**, Battle of** *or* **Battle of Sadowa** \'sä-dō-ˌvä\ (July 3, 1866) Decisive battle in the Seven Weeks' War between Prussia and Austria, fought at Sadowa, near Königgrätz, Bohemia (now Hradec Králové, Czech Republic). The Austrians, equipped with muzzle-loading rifles and relying heavily on the bayonet charge, were led by Ludwig von Benedek (1804–1881). The Prussians, led by Helmuth von Moltke, were armed with breech-loading needle guns; they used railroad transport to move their troops, a first in European warfare. The Prussian victory led to Austria's exclusion from a Prussian-dominated Germany.

Königsberg See Kaliningrad

Konkouré \ˌkȯŋ-kü-'rā\ **River** River, west-central Guinea, West Africa. Flowing west for 188 mi (303 km) to empty into the Atlantic Ocean, it is a source of hydroelectric power. Once a major hindrance to transportation between Conakry and the towns of Boffa and Boké, it is now bridged at Ouassou.

Konoe Fumimaro \kə-'nȯ-ā-ˌfü-mē-'mä-rō\ (b. Oct. 12, 1891, Tokyo, Japan—d. Dec. 16, 1945, Tokyo) Political leader and prime minister of Japan (1937–39, 1940–41), who tried unsuccessfully to restrict the power of the military and to keep Japan's war with China from widening into a world conflict. In 1941 he signed a nonaggression pact with the Soviet Union and participated in U.S.-mediated negotiations to try to resolve the conflict with China. Later that year he resigned over differences with Tōjō Hideki. During the war he was forced to leave the centre of politics; afterward he was a deputy minister in the Higashikuni cabinet. He committed suicide after being served an arrest warrant on suspicion of being a war criminal.

Konya \'kȯn-yä\ *ancient* **Iconium** City (pop., 1997: 623,333), central Turkey. First settled in the 3rd millennium BC, it is one of the oldest urban centres in the world. Influenced by Greek culture from the 3rd century BC, Iconium came under Roman rule by 25 BC. It was taken by the Seljūq dynasty c. 1072. Renamed Konya, it was a major cultural centre in the 13th century and was home to the Sufi brotherhood known as "whirling dervishes." Later ruled by the Mongols, it was annexed to the Ottoman Empire c. 1467. It declined during Ottoman rule but revived after the Istanbul-Baghdad railway opened in 1896. An important industrial centre, it is also a trade centre for the agricultural area surrounding it.

kookaburra *or* **laughing jackass** Eastern Australian species (*Dacelo gigas*) of forest kingfisher (subfamily Daceloninae). Its call, which sounds like fiendish laughter, can be heard very early in the morning and just after sunset. A gray-brown, woodland-dwelling bird, it reaches a length of 17 in. (43 cm), with a 3.2–4-in. (8–10-cm) beak. In its native habitat it eats invertebrates and small vertebrates, including venomous snakes. In western Australia and New Zealand, where it has been introduced, it has been known to attack chickens and ducklings.

Koolhaas \'kōl-ˌhäs**, Rem** (b. Nov. 17, 1944, Rotterdam, Neth.) Dutch architect. After studying architecture in London and working in New York City, in 1975 he opened his own firm in Rotterdam and London. He first achieved recognition with his book *Delirious New York* (1978), which profiled Manhattan's architectural development, suggesting that it was an organic process created through a variety of cultural forces. His best-known projects are large-scale structures, including the Kunsthal in Rotterdam, the Grand Palais exhibition hall in Lille, Fr., and a master plan for the MCA/Universal Studios site in Los Angeles. His book *S, M, L, XL* (1996) addressed the theme of size. In 1998 he won the design competition for a new campus centre at the Illinois Institute of Technology. He was awarded the Pritzker Architecture Prize in 2000.

Kooning, Willem de See Willem de Kooning

Kootenay National Park National park, southeastern British Columbia, Canada. Centred around the Kootenay River, the park occupies the western slopes of the Rocky Mountains, adjacent to Banff and Yoho national parks. Established as a national park in 1920, it covers 543 sq mi (1,406 sq km). From prehistoric times, the area was a major north-south travel route. Pictographs indicate that humans settled near the hot springs 11,000–12,000 years ago. The park's scenery is characterized by snowcapped peaks, glaciers, cascades, canyons, and verdant valleys. Wildlife includes wapiti (elk), moose, deer, bighorn sheep, and mountain goats.

Kootenay \'kü-tᵊn-ˌā\ **River** River, western North America. Rising in the Rocky Mountains in Alberta, Can., it flows south through British Columbia. It continues into Montana and then turns north into Idaho, U.S., and back into British Columbia, where it joins the Columbia River, having traveled a course of 485 mi (780 km).

Köprülü \kœ-prǖ-'lǖ**, Fazıl Ahmed Pasha** (b. 1635, Vezirköprü, Anatolia, Ottoman Empire—d. Nov. 3, 1676, near Çorlu, Thrace) Grand vizier (1661–76) under the Ottoman sultan Mehmed IV. He started his career as a scholar but entered the civil service when his father became grand vizier. Having made the army more efficient, he campaigned successfully against Austria (1663), the Venetian republic in Crete (1669), and Poland (1672–76). He died during his last campaign.

Koraïs \kȯ-'rä-ēs**, Adamántios** (b. April 27, 1748, Smyrna, Anatolia—d. April 6, 1833, Paris, France) Greek scholar. He studied medicine in France but moved to Paris to pursue a literary career. He hoped to awaken the national aspirations of his countrymen and to increase awareness of the Greek heritage. His advocacy of a revived classicism had a great

© 2006 Encyclopædia Britannica, Inc.

influence on Greek language and culture. His anthologies include the *Library of Greek Literature*, 17 vol. (1805–26), and the *Parerga*, 9 vol. (1809–27). Largely through his *Atakta* (composed 1828–35), the first Modern Greek dictionary, he created a new Greek literary language by combining elements of vernacular (Demotic) with Classical Greek.

Koran See QUR'ĀN

Korbut, Olga (Valentinovna) (b. May 16, 1955, Grodno, Belorussia, U.S.S.R.) Soviet gymnast. Korbut first competed in the U.S.S.R. championships in 1969. Appealingly diminutive, with a captivating smile, she was the first person ever to do a backward aerial somersault on the balance beam and the first to perform a backward release move on the uneven parallel bars. In the 1972 Olympic Games she won three gold medals (balance beam, floor exercises, and as a member of the winning U.S.S.R. team) and a silver medal (uneven parallel bars). In the 1976 Olympics she won a team gold medal and a silver for the balance beam.

Korda, Sir Alexander *orig.* **Sándor Laszlo Kellner** (b. Sept. 16, 1893, Pusztatúrpásztó, Hung.—d. Jan. 23, 1956, London, Eng.) Hungarian-born British film director and producer. He worked as a journalist in Budapest, where he founded a film magazine and, in 1917, became manager of the Corvin movie studio. He left Hungary in 1919 to make several films in Berlin, then went to Hollywood, where he directed movies such as *The Private Life of Helen of Troy* (1927). After moving to England in 1931, he founded London Film Productions. He helped develop Britain's film industry, directing and producing successful films such as *The Private Life of Henry VIII* (1933), *Catherine the Great* (1934), *The Scarlet Pimpernel* (1935), and *Rembrandt* (1936), and producing *The Third Man* (1949), *Summertime* (1955), and *Richard III* (1955). In 1942 he received the first British knighthood conferred on someone in the film industry.

Kordofan \ˌkȯr-də-ˈfan\ *or* **Kurdufan** \ˌkůr-dů-ˈfän\ Region, central Sudan. Lying west of the White NILE RIVER, it was originally inhabited by Nubian-speaking peoples. Controlled by the Christian Tungur dynasty (900–1200 AD), it was later taken by Arabs, and in the 17th century a sultanate was established. Egyptian rule began in the 1820s. The slave trade played an important part in the region's economy until its eradication in 1878 by CHARLES GEORGE GORDON. Egyptian rule was ended by a revolt in 1882 led by al-MAHDĪ. Kordofan became a province of The Sudan in 1899.

Kordofanian languages Branch of the NIGER-CONGO LANGUAGE FAMILY. It is geographically separated from the rest of the Niger-Congo languages and is believed to represent the oldest layer of languages in the region. The Kordofanian branch consists of some 20 languages spoken by 250,000 to 500,000 people, mainly in the Nuba Hills of central Sudan.

kore \ˈkȯ-rā\ Type of freestanding statue of a maiden (the female counterpart of the KOUROS) that appeared with the beginning of Greek monumental sculpture (c. 700 BC) and remained to the end of the Archaic period (c. 500 BC). Carved from marble and originally painted, the kore is a draped female figure standing erect with feet together or one foot slightly advanced. One arm is often extended, holding an offering; the other is lowered, usually clasping a fold of drapery. As in all Greek art, the kore evolved from a highly stylized form to a more naturalistic one. Its prototypes are found in Egyptian and Mesopotamian art.

Korea *Korean* **Chosŏn** \ˈchō-sȯn\ *or* **Taehan** Former kingdom, a peninsula (Korean peninsula) on the eastern coast of Asia. In 1948 it was partitioned into two republics, North Korea and South Korea. According to tradition, the ancient kingdom of Chosŏn was established in the northern part of the peninsula probably by peoples from northern China in the 3rd millennium BC. Conquered by China in 108 BC, it later developed into the Three Kingdoms of SILLA, KOGURYŎ, and PAEKCHE. Silla conquered the other two in the 7th century AD and ruled until 936, when the Paekche dynasty became prominent. Invaded by the Mongols in 1231, the kingdom of Chosŏn, with its capital at SEOUL, was ruled by the Chosŏn (Yi) dynasty (see YI SŎNG-GYE) from 1392 to 1910. From c. 1636 it shut out foreign contacts but was forced after 1873 to open ports to Japan. Rivalry over Korea brought on the RUSSO-JAPANESE WAR (1904–05), after which Korea became a Japanese protectorate. Formally annexed to Japan in 1910, it was freed from Japanese control in 1945 at the end of World War II. After the war it was divided into two zones of occupation, Soviet in the north and U.S. in the south; the two republics were established in 1948. For Korea's later history, see North KOREA and South KOREA; see also KOREAN WAR.

Korea, North *officially* **Democratic People's Republic of Korea** Country, East Asia, occupying the northern half of the Korean peninsula. Area: 47,399 sq mi (122,762 sq km). Population (2005 est.):

22,488,000. Capital: P'YŎNGYANG. Ethnically, the population is almost completely Korean. Language: Korean (official). Religions: CH'ŎNDOGYO, traditional beliefs, Christianity, Buddhism. Foreign missionaries were expelled during World War II. Currency: won. North Korea's land area largely consists of mountain ranges and uplands; its highest peak is the volcanic Mount Paektu (9,022 ft [2,750 m]). North Korea has a centrally planned economy based on heavy industry (iron and steel, machinery, chemicals, and textiles) and agriculture. Cooperative farms raise crops such as rice, corn, barley, and vegetables. The country is rich in mineral resources, including coal, iron ore, and magnesite. It is a republic with one legislature; the head of state and government is the chairman of the National Defense Commission. For early history, see KOREA. After the Japanese were defeated in World War II, the Soviet Union occupied Korea north of latitude 38° N; there the Democratic People's Republic of Korea was established as a communist state in 1948. Seeking to unify the peninsula by force, it launched an invasion of South Korea in 1950, initiating the KOREAN WAR. UN troops intervened on the side of South Korea, and Chinese soldiers reinforced the North Korean army in the war, which ended with an armistice in 1953. Led by KIM IL-SUNG, North Korea became one of the most harshly regimented societies in the world, with a state-owned economy that failed to produce adequate supplies of food and consumer goods for its citizens. Under his son and successor, KIM JONG IL, the country endured periods of severe food shortages from the late 1990s that caused widespread famine. Hopes that North Korea was seeking to end its long isolation—notably through meetings between Kim and the leaders of South Korea (2000) and Japan (2002)—have been tempered by concerns over its nuclear weapons program.

Korea, South *officially* **Republic of Korea** Country, East Asia, occupying the southern half of the Korean peninsula. It is west of Japan and includes Cheju Island, located about 60 mi (97 km) south of the peninsula. Area: 38,572 sq mi (99,900 sq km). Population (2005 est.): 48,294,000. Capital: SEOUL. The population is almost entirely ethnically Korean. Language: Korean (official). Religions: Christianity (Protestant, other Christians, Roman Catholic), traditional beliefs, Buddhism, new religions, Confucianism. Currency: won. Most of South Korea's land area consists of mountains and uplands; the densely populated lowlands are heavily cultivated for wet rice. The Naktong and HAN are the principal rivers. The economy is based largely on services and manufacturing (including petrochemicals, electronic goods, and steel). South Korea is a

© 2006 Encyclopædia Britannica, Inc.

republic with one legislative house; its head of state and government is the president, assisted by the prime minister. For early history, see KOREA. The Republic of Korea was established in 1948 in the portion of the Korean peninsula south of latitude 38° N, which had been occupied by the U.S. after World War II. In 1950 North Korean troops invaded South Korea, precipitating the KOREAN WAR. UN forces intervened on the side of South Korea, while Chinese troops backed North Korea in the war, which ended with an armistice in 1953. The devastated country was rebuilt with U.S. aid, and South Korea prospered in the postwar era, developing a strong export-oriented economy. It experienced an economic downturn beginning in the mid-1990s that affected many countries in the area. Efforts at reconciliation between North and South Korea, including the first-ever summit between their leaders (2000) and reunions between families from both countries, were accompanied by periods of continuing tension.

Korea Strait Channel between South Korea and southwestern Japan. Connecting the East China Sea with the Sea of JAPAN (East Sea), it is 120 mi (195 km) wide and is divided by the Tsushima islands at its centre. Its passage to the east is known as Tsushima Strait, site of the Battle of TSUSHIMA (1905); to the west it is called the Western Channel.

Korean language Official language of North Korea and South Korea, spoken by more than 75 million people, including substantial communities of ethnic Koreans living elsewhere. Korean is not closely related to any other language, though a distant genetic kinship to JAPANESE is now thought probable by some scholars, and an even more remote relationship to the ALTAIC LANGUAGES is possible. Korean was written with CHINESE characters to stand in various ways for Korean meanings and sounds as early as the 12th century, though substantial documentation is not evident until the invention of a unique phonetic script for it in 1443. This script, now called Hangul, represents syllables by arranging simple symbols for each PHONEME into a square form like that of a Chinese character. Grammatically, Korean has a basic subject-object-verb word order and places modifiers before the elements they modify.

Korean War (1950–53) Conflict arising after the post-World War II division of Korea, at latitude 38° N, into North Korea and South Korea. At the end of World War II, Soviet forces accepted the surrender of Japanese forces north of that line, as U.S. forces accepted Japanese surrender south of it. Negotiations failed to reunify the two halves, the northern half being a Soviet client state and the southern half being backed by the U.S. In 1950 North Korea invaded South Korea, and U.S. Pres. HARRY TRUMAN ordered troops to assist South Korea. The UN Security Council, minus the absent Soviet delegate, passed a resolution calling for the assistance of all UN members in halting the invasion. At first North Korean troops drove the South Korean and U.S. forces down to the southern tip of the Korean peninsula, but a brilliant amphibious landing at Inch'ŏn, conceived by Gen. DOUGLAS MACARTHUR, turned the tide in favour of the UN troops, who advanced near the border of North Korea and China. The Chinese then entered the war and drove the UN forces back south; the front line stabilized at the 38th parallel. MacArthur insisted on voicing his objections to U.S. war aims in a public manner and was relieved of his command by Truman. U.S. Pres. DWIGHT D. EISENHOWER participated in the conclusion of an armistice that accepted the front line as the de facto boundary between the two Koreas. The war resulted in the deaths of approximately 2,000,000 Koreans, 600,000 Chinese, 37,000 Americans, and 3,000 Turks, Britons, and other nationals in the UN forces.

Kornberg, Arthur (b. March 3, 1918, Brooklyn, N.Y., U.S.) U.S. biochemist and physician. He studied at the University of Rochester. In 1959 he joined the faculty at Stanford University. While studying how living organisms manufacture NUCLEOTIDES, his research led him to the problem of how nucleotides are strung together to form DNA molecules. Adding radioactive nucleotides to an enzyme mixture prepared from cultures of *E. coli*, he found evidence of a reaction catalyzed by the enzyme that adds nucleotides to a preexisting DNA chain. He was the first to accomplish the cell-free synthesis of DNA. He shared a 1959 Nobel Prize with SEVERO OCHOA.

Korngold, Erich Wolfgang (b. May 29, 1897, Brünn, Austria-Hungary—d. Nov. 29, 1957, Hollywood, Calif., U.S.) U.S. composer of Austro-Hungarian birth. Son of a music critic, he had his childhood compositions praised by GUSTAV MAHLER and ARTUR SCHNABEL. He solidified his reputation with his operatic masterpiece, *Die tote Stadt* (1920). In 1934 he moved to Hollywood, and he became best known for his film scores, his broadly Romantic style proving very suitable to swashbuckling stories such as *Anthony Adverse* (1936, Academy Award) and *The Adventures of Robin Hood* (1938, Academy Award), as well as 17 others. His violin concerto (1946) has been frequently recorded.

Kornilov \kȯr-'nyē-lȯf**, Lavr (Georgiyevich)** (b. Aug. 30, 1870, Karkaralinsk, Western Siberia, Russian Empire—d. April 13, 1918, near Ekaterinodar, Russia) Imperial Russian general. A career army officer, he was a divisional commander in World War I. After the RUSSIAN REVOLUTION OF 1917, he was appointed army commander in chief by ALEKSANDR KERENSKY. Conflicts developed because of their opposing views on politics and the role of the army, and, when Kornilov sent troops toward Petrograd, Kerensky interpreted the move as an attempted coup and dismissed him. After being arrested, he escaped to command an anti-Bolshevik White army and was killed in battle.

Korolyov \kə-rəl-'yȯf**, Sergey (Pavlovich)** (b. Jan. 12, 1907, Zhitomir, Russia—d. Jan. 14, 1966, Moscow, Russia, U.S.S.R.) Soviet designer of guided missiles, rockets, and spacecraft. In 1933 he and F.A. Tsander launched the Soviet Union's first liquid-propellant rocket. During World War II Korolyov designed and tested liquid-fuel rocket boosters for military aircraft. After the war he improved the German V-2 MISSILE and supervised test firing of captured missiles. His work led to the world's first intercontinental ballistic missile (ICBM). He directed systems engineering for Soviet launch vehicles and spacecraft, including design, testing, construction, and launching of manned and unmanned spacecraft, and was the guiding genius behind the Soviet spaceflight program.

Koror \'kȯr-ˌȯr\ Island (pop., 2000: 13,303), PALAU, western Pacific Ocean. Lying southwest of Babelthuap island, the island of Koror has a land area of 3 sq mi (8 sq km). The town of Koror on the island was the administrative capital of all Japanese mandated islands in the Pacific from 1921 to 1945. Devastated during World War II, it was later developed as a commercial and tourist centre and served as the provisional capital of Palau. After the bridge between Koror and Babelthuap collapsed in 1996, a new bridge was built (opened 2002) while a new capital was under construction at Melekeok on Babelthuap.

Korsakoff syndrome *or* **Korsakoff psychosis** *or* **Korsakoff disease** Neurological disorder marked by severe AMNESIA despite clear perception and full consciousness, resulting from chronic alcoholism, head injury, brain illness, or THIAMIN deficiency. Persons with the syndrome typically cannot remember events in the recent or even immediate past; some retain memories only a few seconds. Longer periods—up to 20 years—may also be forgotten. Confabulation (recounting detailed, convincing "memories" of events that never happened) sometimes coexists with the syndrome, which may be transient or chronic.

Korsakov, Nicolay Rimsky- See Nicolay Rimsky-Korsakov

Koryŏ \'kȯr-yō\ Korean kingdom ruled by a dynasty of the same name from 935 to 1392. During this period Korea began to form a distinctively Korean cultural tradition. The dynasty was formed by Gen. Wang Kŏn of Later Koguryŏ, who defeated the kingdoms of Silla and of Later Paekche to create a unified Korean peninsula in 936. In the late 10th century, a centralized bureaucratic system replaced the old aristocratic tribal system. The kingdom saw a flowering of the arts, particularly ceramics (Koryŏ celadon), and Buddhism and Confucianism were influential. In the 13th century Koryŏ endured a series of Mongol invasions, and in 1392 Yi Song-gye overthrew the shaky dynasty and founded the Chosŏn dynasty.

Kosala \'kō-sə-lə\ Ancient kingdom, northern India. Roughly corresponding to the historical region of Oudh, in what is now south-central Uttar Pradesh state, it extended into present-day Nepal. In the 6th century BC it rose to become one of the dominant states in northern India. The Buddha was born there. The kingdom of Magadha conquered Kosala by c. 459 BC, and it became known as Northern Kosala to distinguish it from a larger kingdom to the south known variously as Kosala, Southern Kosala, or Great Kosala.

Kosciusko \ˌkä-zē-'əs-kō**, Mount** Peak, southeastern New South Wales, Australia. Located in the Snowy Mountains of the Australian Alps, Mount Kosciusko is the highest mountain in mainland Australia, reaching 7,310 ft (2,228 m). It is located in Kosciusko National Park, which has an area of 2,498 sq mi (6,469 sq km); it is near Mounts Townsend, Twynam, North Ramshead, and Carruthers, whose melting snows feed the rivers and reservoirs that make up the Snowy Mountains Hydroelectric Scheme. The mountain was named in 1840 in honour of Tadeusz Kosciuszko.

Kościuszko \kȯsh-'chüsh-kō,\ *English* \ˌkä-sē-'əs-kō**, Tadeusz** (b. Feb. 4, 1746, Mereczowszczyzna, Pol.—d. Oct. 15, 1817, Solothurn, Switz.) Polish patriot who fought in the American Revolution. He studied military engineering in Paris and went to America in 1776, where he joined the colonial army. He helped build fortifications in Philadelphia, Pa., and at West Point, N.Y. As chief of engineers, he twice rescued the army of Gen. Nathanael Greene by directing river crossings. He also directed the blockade of Charleston, S.C. At the war's end he was awarded U.S. citizenship and made a brigadier general. He returned to Poland in 1784 and became a major general in the Polish army. In 1794 he led a rebellion against occupying Russian and Prussian forces, during which he defended Warsaw for two months, directing residents to build earthworks. He was jailed in Russia from 1794 to 1796, returned to the U.S. in 1797, and then left for France, where he continued efforts to secure Polish independence.

kosher See kashruth

Kosi River \'kō-sē\ River, Nepal and northern India. Rising from several tributaries in eastern Nepal, it runs south through the great plain of northern India. It empties into the Ganges River after a course of 450 mi (724 km).

Košice \'kȯ-shēt-sə\ City (pop., 2003 est.: 235,281), eastern Slovakia. Settled in the 9th century and chartered in 1241, it served as a trading settlement during the late Middle Ages. It developed rapidly after becoming part of Czechoslovakia in 1920. Occupied in 1938 by Hungary, it was liberated in 1945 and became the first seat of the postwar Czechoslovakian government. A part of independent Slovakia since 1993, it is the political, economic, and cultural centre of southeastern Slovakia.

Kosinski \kō-'sin-skē**, Jerzy (Nikodem)** (b. June 14, 1933, Łódź, Pol.—d. May 3, 1991, New York, N.Y., U.S.) Polish-born U.S. writer. He claimed that his horrific experiences as a Jew in World War II Poland and Russia caused him to be mute for much of his childhood. He studied political science and became a professor of sociology before immigrating to the U.S. in 1957. His novel *The Painted Bird* (1965) is a graphic, surrealistic tale of the horrors surrounding the war. Other successful novels were *Steps* (1968) and the satiric fable *Being There* (1970; film, 1979). After his suicide, it was revealed that much of his past had been fabricated.

Kosovo \'kȯ-sȯ-ˌvȯ\ *Albanian* **Kosova** Region (pop., 2001 est.: 2,325,000) within the republic of Serbia, Serbia and Montenegro. It occupies an area of 4,203 sq mi (10,887 sq km); its administrative capital is Priština. Before 1999, ethnic Albanians, most of whom are Muslims, made up about four-fifths of its population, with Serbs (mostly Christian) accounting for the bulk of the remainder. Kosovo was an autonomous region until 1989, when Serbia took control of Kosovo's administration, prompting protests from the region's Albanian population, which in 1990 voted to secede from Yugoslavia. Serbia responded by tightening its control of Kosovo, which led to the Kosovo conflict. From 1999 the region was administered by the UN.

Kosovo \'kō-sə-ˌvō**, Battle of** Either of two battles fought in the Serbian province of Kosovo. The first (June 13, 1389), between the Serbs under Prince Lazar and the Ottoman Empire led by Sultan Murad I, ended—despite Murad's death—in the defeat of Serbia and the encirclement of the crumbling Byzantine Empire by Ottoman armies. The battle, which led to three centuries of Serbian vassalage, has remained a central event in Serbian history. In the second battle (Oct. 17–20, 1448), between the Ottomans led by Murad II and a Hungarian-Walachian coalition under Hunyadi János, halted the last major effort by Christian Crusaders to free the Balkans from Ottoman rule.

Kosovo conflict (1998–99) Ethnic war in Kosovo, Yugoslavia. In 1989 the Serbian president, Slobodan Milošević, abrogated the constitutional autonomy of Kosovo. He and the minority of Serbs in Kosovo had long bristled at the fact that Muslim Albanians were in demographic control of an area considered sacred to Serbs (Kosovo was the seat of the Serbian Orthodox church, the inspiration for Serbian epic poetry, and the site of the Turkish defeat of the Serbs in 1389 and Serbian victory over the Turks in 1912). In response, the Albanian Kosovars began a campaign of nonviolent resistance. Growing tensions led in 1998 to armed clashes between Serbs and the Kosovo Liberation Army (KLA), which had begun killing Serbian police and politicians. The Contact Group (U.S., Britain, Germany, France, Italy, and Russia) demanded a cease-fire, the unconditional withdrawal of Serbian forces, the return of refugees, and unlimited access for international monitors. Although Milošević agreed to meet most of the demands, he failed to implement them. The KLA regrouped and rearmed during the cease-fire and renewed its offensive. The Serbs responded with a ruthless counteroffensive, inducing the UN Security Council to condemn the Serbs' excessive use of force, including ethnic cleansing (killing and expulsion), and to impose an arms embargo, but the violence continued. After diplomatic negotiations at Rambouillet, France, broke down, Serbia renewed its assault, and NATO responded with an 11-week bombing campaign that extended to Belgrade, accidentally destroyed the Chinese embassy, and significantly damaged Serbia's infrastructure. The bombing was halted after NATO and Yugoslavia signed an accord in June 1999 outlining Serbian troop withdrawal and the return of nearly 1,000,000 ethnic Albanian refugees as well as 500,000 displaced within the province; there were sporadic reprisals again Serbs who remained in Kosovo.

Kossuth \'kȯ-ˌshüt,\ *English* \'kä-ˌsüth**, Lajos** (b. Sept. 19, 1802, Monok, Hung.—d. March 20, 1894, Turin, Italy) Hungarian patriot. A lawyer from a noble family, he was sent to the national Diet (1832), where he developed his radical political and social philosophy. Imprisoned on political charges (1837–40), he later wrote for a reform journal and gained a devoted following. Reelected to the Diet (1847–49), he led the "national opposition," and after the February Revolution (1848) he persuaded the delegates to vote for independence from Austria. Appointed provisional governor, he became virtual dictator of Hungary. In 1849 Russian armies intervened on behalf of Austria, forcing Kossuth to resign. He fled to Turkey, where he was interned for two years. After his release he lectured in the U.S. and England, and later, from his home in Turin, he watched Hungary reconcile itself with the Austrian monarchy. After the Compromise of 1867, he retired from political life.

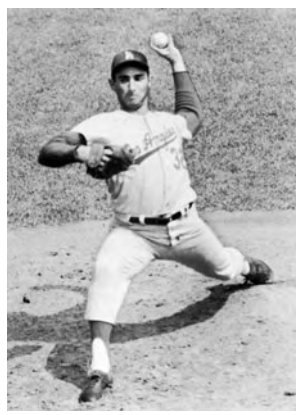
Kosygin \kə-'sē-gən**, Aleksey (Nikolayevich)** (b. Feb. 20, 1904, St. Petersburg, Russia—d. Dec. 18, 1980, Moscow, Russia, U.S.S.R.) Soviet statesman, premier of the Soviet Union (1964–80). He joined the Communist Party of the Soviet Union in 1927, and by 1939 he was a member of the Central Committee. After 1957 he worked closely with Nikita

© 2006 Encyclopædia Britannica, Inc.



Khrushchev on economic matters, and in 1964, after Khrushchev's forced resignation, he replaced him as chair of the Council of Ministers, becoming head of the Soviet government. A competent and pragmatic economic administrator, he introduced reforms designed to modernize the Soviet economy. In the late 1960s and early 1970s he shared power with Leonid Brezhnev and Nikolay Podgorny, but his role decreased as Brezhnev's authority increased, and he retired in 1980.

koto Japanese musical instrument, a long zither with movable bridges and usually 13 strings. It is placed on the ground or a low table, and the strings are plucked by plectra on the fingers of the right hand while the left hand alters the pitch or ornaments the sound of individual strings by pressing or manipulating them on the other side of each bridge. The koto is played solo, in chamber ensembles—especially with the *shakuhachi* (a bamboo flute) and the samisen (a fretless lute)—and in gagaku music. The koto is Japan's national instrument.

Kotzebue \'kōt-sə-ˌbü**, August (Friedrich Ferdinand) von** (b. May 3, 1761, Weimar, Saxony—d. March 23, 1819, Mannheim, Baden) German playwright. He helped popularize poetic drama, which he infused with melodramatic sensationalism and sentimental philosophizing. Prolific (he wrote more than 200 plays) and facile, he is known for works such as the dramas *The Stranger* (1789) and *The Indian Exiles* (1790) and the comedies *Der Wildfang* (1798; "The Trapping of Game") and *Die deutschen Kleinstädter* (1803; "Small-Town Germans"). He was denounced by political radicals as a spy and stabbed to death.

Kou Qianzhi *or* **K'ou Ch'ien-chih** \'kō-'chyen-'jə\ (d. ad 448, Northern Wei empire, China) Chinese Daoist reformer. He probably began his career as a Daoist physician. In 415 he had a vision telling him that Daoism had been perverted by false teachings. He began to curb the orgiastic practices and mercenary spirit that had become associated with Daoism and to emphasize hygienic ritual and good works. His efforts won notice from the emperor and led to the establishment of Daoism as the state religion of China's Northern Wei dynasty. He also succeeded in having Buddhism proscribed and its adherents subjected to persecution. His reforms proved transitory, however, and Buddhism soon experienced a resurgence.

Koufax \'kō-ˌfaks**, Sandy** *in full* **Sanford Koufax** *orig.* **Sanford Braun** (b. Dec. 30, 1935, New York, N.Y., U.S.) U.S. baseball pitcher. Koufax's mother divorced when he was young, and he took the name of his stepfather. In his youth he played sports at the Jewish community centres in his native Brooklyn, and in high school he was known more as a basketball player than as a baseball player. He attended the University of Cincinnati on a basketball scholarship before joining the Brooklyn (later Los Angeles) Dodgers in 1955 as a left-handed thrower with a blazing fastball and a sharp breaking curveball. Once he gained control of his pitches he set several season records for strikeouts (including 382 in 1965), and his career average of one strikeout per inning is a rare accomplishment. In 1965 he pitched his fourth no-hit game, until 1981 a major-league record; the fourth no-hitter was also a perfect game (no player reached first base). Despite his early retirement in 1966 because of arthritis, he is regarded as one of baseball's greatest pitchers.

Koufax, 1966
AP/WIDE WORLD PHOTOS

kouros \'kü-ˌrȯs\ Archaic Greek statue representing a standing male youth. These large stone figures began to appear in Greece c. 700 bc and closely followed the Egyptian style of geometrical, rigid figures. Later forms reflect the Greeks' increased understanding of human anatomy and are more naturalistic. Kouroi sometimes represented the god Apollo, but more commonly served as votive offerings or grave markers. See also kore.

Koussevitzky \ˌkü-sə-'vit-skē**, Serge** *orig.* **Sergey Aleksandrovich Kusevitsky** (b. July 26, 1874, Vyshny Volochyok, Russia—d. June 4, 1951, Boston, Mass., U.S.) Russian-born U.S. conductor. A virtuoso double-bass player, he was self-taught as a conductor. With his father-in-law's financial help, he debuted with the Berlin Philharmonic in 1908. In the following years he founded his own orchestra, which toured the Volga by riverboat. After leaving the Soviet Union in 1920, he established the Concerts Koussevitzky series in Paris before becoming permanent conductor of the Boston Symphony Orchestra (1924–49). He gave about 100 premieres there, including commissioned works such as Igor Stravinsky's *Symphony of Psalms*, and many works by U.S. composers, inspiring his musicians to legendary performances by the force of his personality. The Tanglewood Music Center in Lenox, Mass., was established during his tenure in Boston.

Kovno See Kaunas

Kowloon \'kaů-'lün\ *or* **Jiulong** \'jyō-'lůŋ\ Peninsula on the Chinese mainland, part of the Hong Kong special administrative region. It lies just north of Hong Kong Island and is surrounded on three sides by Victoria Harbour; the New Territories adjoin it to the north. An industrial, commercial and tourist centre, it includes the urban area of Kowloon and New Kowloon (pop., 2001 prelim.: 2,025,800). Much of its territory consists of reclaimed land.

Koxinga See Zheng Chenggong

Koyukuk \'kȯi-ə-ˌkək\ **River** River, central Alaska, U.S. It rises on the southern slope of the Brooks Range and flows southwest for 500 mi (800 km) to join the Yukon River, of which it is a major tributary. It was named for the Koyukon, a local Indian people.

Kpelle \kə-'pel-ə\ People occupying central Liberia and part of Guinea. Numbering about one million, the Kpelle speak a Mande language of the Niger-Congo languages. They form about one-fifth of the population of Liberia. They are primarily rice farmers; cash crops include peanuts, sugarcane, and kola nuts. They are known for their elaborate secret societies (Poro for men, Sande for women), which serve a variety of social and political functions.

kraal \'krȯl, 'kräl\ In southern Africa, an enclosure or group of houses surrounding an enclosure for livestock, or the social unit that inhabits these structures. The term has been more broadly used to describe the associated way of life. Among some Zulus, the traditional kraal consists of a number of huts arranged in a circle around a cattle corral. Where polygyny is practiced, each wife often has her own hut. The word kraal has also been applied to the temporary encampments of the Masai of eastern Africa.

Kraepelin \ˌkrep-ə-'lēn**, Emil** (b. Feb. 15, 1856, Neustrelitz, Mecklenburg-Strelitz—d. Oct. 7, 1926, Munich, Ger.) German psychiatrist. He taught at the Universities of Heidelberg and Munich, where he developed an influential classification system for mental illness, the *Psychiatric Compendium* (nine eds., 1883–1926). He was the first to distinguish (in 1899) between manic-depressive psychosis (bipolar disorder) and dementia praecox (schizophrenia), and the first to distinguish three clinical varieties of the latter: catatonia, hebephrenia, and paranoia.

Krafft-Ebing \'kräft-'ā-biŋ**, Richard, Freiherr (Baron) von** (b. Aug. 14, 1840, Mannheim, Baden—d. Dec. 22, 1902, near Graz, Austria) German neuropsychiatrist. Educated in Germany and Switzerland, he taught psychiatry in the Austrian cities of Strasbourg, Graz, and Vienna, and he pursued studies that ranged from epilepsy and syphilis to genetic functions in insanity and sexual deviation. He also performed experiments in hypnosis. He is best remembered today for his *Psychopathia sexualis* (1886), a groundbreaking examination of sexual aberrations.

Kraft Foods, Inc. U.S. manufacturer and marketer of food products. It grew out of a wholesale cheese delivery business established in Chicago in 1903 by James L. Kraft. Incorporated as J.L. Kraft Bros. & Co. in 1909, it prospered by selling processed cheese to the U.S. Army during World War I. Held by various owners since 1930, Kraft was acquired in 1988 by Philip Morris Cos. (renamed Altria Group, Inc., in 2003), which also purchased Nabisco Holdings in 2000. Nabisco's business was integrated into Kraft's operations.

kraft process Chemical method for producing wood pulp using caustic soda and sodium sulfide as the liquor in which the pulpwood is cooked to loosen the fibres. The process (from German *kraft*, "strong") produces particularly strong and durable paper; another advantage is its capability of digesting pine chips; resins dissolve in the alkaline liquor and are recovered as tall oil, a valuable by-product. Recovery of sodium compounds is

© 2006 Encyclopædia Britannica, Inc.

important in the economy of the process. In modern kraft mills, operations are completely contained; waste streams are recycled and reused, eliminating water pollution.

Krakatoa \ˌkra-kə-ˈtō-ə\ *or* **Krakatau** \ˌkra-kə-ˈtaù\ Island volcano in the centre of the Sunda Strait, between Java and Sumatra, Indonesia. Its eruption in 1883 was one of the most catastrophic in history. Its explosions were heard in Australia, Ceylon (Sri Lanka), and the Philippines, and large quantities of ash fell over an area of some 300,000 sq mi (800,000 sq km). It caused a tidal wave 120 ft (36 m) high that killed 36,000 people in Java and Sumatra. It erupted again in 1927 and has remained active.

Kraków *or* **Cracow** \ˈkrä-ˌküf,\ *English* \ˈkra-ˌkaù\ City (pop., 2005 est.: 757,430), southern Poland. Located on both sides of the upper Vistula River, it was the capital of a principality in 1138. After surviving a Mongol invasion in 1241, it was made the capital of a reunited Poland in 1320. Its importance diminished after the capital was moved to Warsaw in 1611. During the Partitions of Poland it came under Austrian rule. Returned to Poland in 1918, it was held by Germany during World War II. Rebuilt since the war, it is an industrial centre with a giant steelworks on the city's outskirts. Kraków is also a cultural centre. Its university was founded in 1364.

Kramer, Jack *orig.* **John Albert Kramer** (b. Aug. 1, 1921, Las Vegas, Nev., U.S.) U.S. tennis player and promoter. He won the Wimbledon singles (1947) and men's doubles (1946–47), the U.S. singles (1946–47), men's doubles (1940–41, 1943, 1947), and mixed doubles (1941) and was on the winning Davis Cup team in 1946. He played professional tennis from 1947 to 1952 and was instrumental in promoting open tennis, in which amateurs competed with professionals in major tournaments. He helped establish the Association of Tennis Professionals.

Kramnik, Vladimir (b. June 25, 1975, Tuapse, Russia, U.S.S.R.) Russian international chess grandmaster. He won the world championship in 2000 from his countryman Garry Kasparov. Kramnik learned to play when he was four years old from his father and began taking instruction at the local Pioneers (a Soviet youth organization) at the age of five. At age 11 he became a "candidate" master. Kramnik had success during his early years, winning the World Under 18 Championship in 1991 and a gold medal for his performance at the 1992 Men's Chess Olympiad. The years from 1992 to 2000 saw Kramnik move into the world's elite by winning numerous international chess tournaments.

Krasner, Lee *orig.* **Lenore Krassner** (b. Oct. 27, 1908, Brooklyn, N.Y., U.S.—d. June 19, 1984, New York, N.Y.) U.S. painter. Born to Russian immigrants, in 1937 she began to study with the painter Hans Hofmann, who exposed her to the work of Pablo Picasso and Henri Matisse. Synthesizing these European influences, Krasner developed her own style of geometric abstraction, which she grounded in floral motifs and rhythmic gesture. In 1940 she began exhibiting her work with that of other American artists who became known as Abstract Expressionists. After her 1945 marriage to painter Jackson Pollock, Krasner and Pollock both produced a large body of work, each under the other's influence. Krasner continued to paint throughout the 1970s.

Krasnoyarsk City (pop., 2002: 911,700), east-central Russia. Located on the upper Yenisey River, it was founded by Cossacks in 1628. In the late 17th century, it was often attacked by the Tatars and Kirghiz. The Trans-Siberian Railroad brought a period of rapid growth in the 1890s. A commercial and industrial centre, it is the site of one of the world's largest hydroelectric stations, built in the 1960s.

Kraus \ˈkraùs**, Karl** (b. April 28, 1874, Gitschin, Bohemia—d. June 12, 1936, Vienna, Austria) Austrian journalist, critic, playwright, and poet. In 1899 he founded *Die Fackel*, a literary and political review, and by 1911 he had become its sole author; he continued to publish it until the year of his death. Believing that language was of great moral and aesthetic importance, he wrote with masterly precision, and his writings exercised wide influence. His works, which are almost untranslatably idiomatic, include *Morality and Criminality* (an essay collection, 1908), *Proverbs and Contradictions* (a collection of aphorisms, 1909), and *The Last Days of Humanity* (a lengthy satirical drama, 1922).

Krebs, Edwin (Gerhard) (b. June 6, 1918, Lansing, Iowa, U.S.) U.S. biochemist. He received his medical degree from Washington University. With Edmond H. Fischer (b. 1920), he won a 1992 Nobel Prize for the discovery of reversible protein phosphorylation, a biochemical process that regulates the activities of proteins in cells and governs countless processes necessary for life. Errors in protein phosphorylation have been implicated in such diseases as diabetes, cancer, and Alzheimer disease.

Krebs, Sir Hans Adolf (b. Aug. 25, 1900, Hildesheim, Ger.—d. Nov. 22, 1981, Oxford, Eng.) German-born British biochemist. He fled Nazi Germany for England in 1933, where he taught at the Universities of Sheffield and Oxford. He was the first to describe the urea cycle (1932). He and Fritz Lipmann (1899–1986) received a 1953 Nobel Prize for their discovery in living organisms of the series of chemical reactions known as the tricarboxylic acid cycle (also called the citric acid cycle or Krebs cycle), a discovery of vital importance to a basic understanding of cell metabolism and molecular biology.

Krebs cycle See tricarboxylic acid cycle

Kreisler \ˈkrīs-lər**, Fritz** *orig.* **Friedrich Kreisler** (b. Feb. 2, 1875, Vienna, Austria—d. Jan. 29, 1962, New York, N.Y., U.S.) Austrian violinist and composer. He entered the Vienna Conservatory at age 7 and finished his musical studies by 12. After touring internationally as a teenager, he quit performing to study medicine. Returning to the violin, he scored successes in Berlin and Vienna (1898). He toured Europe and the U.S. until the start of World War I, and he premiered Edward Elgar's *Violin Concerto* in 1910. After recovering from a war wound, he resumed touring (1919–50). His concert programs frequently included many charming short pieces that he wrote, among them "Viennese Caprice" and "Pretty Rosemary."

kremlin Central fortress in medieval Russian cities, usually located at a strategic point along a river and separated from the surrounding parts of the city by a wall with ramparts, moat, towers, and battlements. Several capitals of principalities were built around old kremlins, which generally contained cathedrals, palaces, governmental offices, and munitions stores. The Moscow Kremlin (established 1156) served as the centre of Russian government until 1712 and again after 1918. Its crenellated brick walls and 20 towers were built in the 15th century by Italian architects. The palaces, cathedrals, and government buildings within the walls encompass a variety of styles, including Byzantine, Russian Baroque, and Classical.

Krenek, Ernst (b. Aug. 23, 1900, Vienna, Austria—d. Dec. 23, 1991, Palm Springs, Calif., U.S.) Austrian-born U.S. composer. He studied composition from age 16 with Franz Schreker (1878–1934) and first gained attention with his atonal *Second Symphony* (1923). After a brief Neoclassical phase, he reestablished his radical credentials with the jazz-influenced satiric opera *Johnny Strikes up the Band!* (1926), which created a sensation. Intrigued by Arnold Schoenberg's 12-tone method (see serialism), he devised his own version—which involved "rotation" of the set's order—for the opera *Karl V* (1933), the first 12-tone opera. He immigrated to the U.S. in 1937 and taught at several institutions, but his large body of work remained more highly esteemed in Europe.

Kresge \ˈkrez-gē**, S(ebastian) S(pering)** (b. July 31, 1867, Bald Mount, Pa., U.S.—d. Oct. 18, 1966, East Stroudsburg, Pa.) U.S. merchant. He worked as a traveling salesman before becoming a partner in 5-and-10-cent stores in Memphis, Tenn., and Detroit, Mich., in 1897. He opened several others in major Midwest cities, founding the S.S. Kresge Co. in 1907 (incorporated 1912). After World War II the firm expanded into large discount stores in the U.S., Puerto Rico, and Canada, which eventually numbered nearly 1,000. Kresge established a major charitable foundation in 1924. His retail empire became the foundation of the Kmart Corp.

Kretschmer \ˈkrech-mər**, Ernst** (b. Oct. 8, 1888, Wüstenrot, Ger.—d. Feb. 8, 1964, Tübingen, W.Ger.) German psychiatrist. In his best-known work, *Physique and Character* (1921), he attempted to correlate body build and physical constitution with character and mental illness, identifying three physical types—the pyknic (rotund), the athletic (muscular), and the asthenic (tall and thin)—and claiming that different psychiatric disorders were associated with each. His system was later adapted by the American psychologist William H. Sheldon (1899–1977), who renamed the types endomorph, mesomorph, and ectomorph and focused on their associated personality traits. Both theorists' work entered into popular culture and generated further research.

Kriemhild \ˈkrēm-ˌhilt\ *or* **Gudrun** In the *Nibelungenlied*, the gentle princess courted by Siegfried. Her grief at Siegfried's death transforms her into a "she-devil"; she exacts revenge by marrying Attila the Hun and killing her brother (who ordered Siegfried's death). She herself is also killed.

© 2006 Encyclopædia Britannica, Inc.

In Norse legend, as Gudrun, she appears in tales of revenge. Kriemhild's story may have originated in confusion over events in the life of the historical Attila.

krill Any member of the CRUSTACEAN suborder Euphausiacea, comprising shrimplike animals that live in the open sea. The name also refers to the genus *Euphausia* within the suborder and sometimes to a single species, *E. superba*. The described species, numbering more than 80, range in size from about 0.25 to 2 in. (8–60 mm). Most have bioluminescent organs on the lower side, making them visible at night. They are an important source of food for various fishes, birds, and whales, particularly BLUE and FIN whales. Krill may occur in vast swarms at the ocean surface, where they feed at night, and at depths greater than about 6,000 ft (2,000 m). Because of their vast numbers and nutritive qualities (they are an especially rich source of vitamin A), krill have been regarded as a potential source of food for humans.

Krishna One of the most widely venerated Hindu gods, worshiped as the eighth incarnation of VISHNU and as the supreme deity. Many Krishna legends are drawn from the MAHABHARATA and the PURANAS. His earliest appearance is in the *Mahabharata* as the divine charioteer of Arjuna, whom Krishna convinces that the war Arjuna is about to fight is just (see BHAGAVADGITA). In later works Krishna was a slayer of demons, a secret lover of all devotees, and a devoted son and father. He also lifted the sacred hill of Govardhana on one finger to protect his devotees from INDRA's wrath. In art Krishna is often depicted with blue-black skin, wearing a loincloth and a crown of peacock feathers. As a divine lover, he is shown playing the flute, surrounded by adoring females.

Krishna River *formerly* **Kistna River** River, southern India. Rising in MAHARASHTRA state, it flows southeast and east across KARNATAKA and crosses ANDHRA PRADESH state before entering the Bay of BENGAL after a course of 800 mi (1,290 km).

Krishnamurti \ˌkrish-nə-ˈmu̇r-tē**, Jiddu** (b. 1895—d. 1986) Indian spiritual leader. He was educated in THEOSOPHY by ANNIE BESANT, who proclaimed him the coming "World Teacher," a messiah-like figure who would bring about world enlightenment. He became a teacher and writer, and from the 1920s he spent much time in the U.S. and Europe. He broke with formal theosophy in 1929 and renounced any claims to being a World Teacher, but he continued to be a popular lecturer. His desire, he said, was to set people free, a goal that could only be achieved through unflinching self-awareness. He established a number of Krishnamurti foundations in the U.S., Britain, and India to further his aims. His books include *The Songs of Life* (1931) and *Commentaries on Living* (1956–60).

Kristallnacht \krēs-ˈtäl-ˌnäk̲t\ *or* **Crystal Night** *or* **Night of Broken Glass** Night of violence against Jews, carried out by members of the German NAZI PARTY on Nov. 9–10, 1938, so called because of the broken glass left in its aftermath. The violence, instigated by JOSEPH GOEBBELS, left 91 Jews dead and hundreds seriously injured. About 7,500 Jewish businesses were gutted and some 1,000 synagogues burned or damaged. The GESTAPO arrested 30,000 Jewish males, offering to release them only if they emigrated and surrendered their wealth. The incident marked a major escalation in the Nazi program of Jewish persecution, foreshadowing the HOLOCAUST.

Kristeva \krē-stā-ˈvȧ,\ *English* \kri-ˈstā-və**, Julia** (b. June 24, 1941, Sliven, Bulg.) Bulgarian-born French psychoanalyst, critic, and educator. Professor of linguistics at the University of Paris VII, she is known for her writings in structuralist linguistics (see STRUCTURALISM), psychoanalysis, SEMIOTICS, and feminism. She was a protégé of ROLAND BARTHES, and she synthesized elements from such thinkers as JACQUES LACAN, MICHEL FOUCAULT, and MIKHAIL BAKHTIN in creating her own theories. Her novels include *The Samurai* (1990) and *The Old Man and the Wolves* (1991).

Kroc, Ray(mond Albert) (b. Oct. 5, 1902, Chicago, Ill., U.S.—d. Jan. 14, 1984, San Diego, Calif.) U.S. restaurateur, a pioneer of the fast-food industry. He was working as a blender salesman when he discovered a restaurant in San Bernardino, Calif., owned by Maurice and Richard McDonald, who used an assembly-line format to prepare and sell a large volume of hamburgers, french fries, and milk shakes. Beginning in 1955 Kroc opened his first McDonald's drive-in restaurant in Des Plaines, Ill., paying the brothers a percentage of the receipts. He soon began selling franchises for new restaurants, and he instituted a training program for owner-managers that emphasized automation and standardization. At the time of his death there were some 7,500 McDonald's restaurants worldwide; with more than 25,000 restaurants in the early 21st century, McDonald's was the world's largest food-service retailer.

Ray Kroc
SYGMA

Kroeber \ˈkrō-bər**, A(lfred) L(ouis)** (b. June 11, 1876, Hoboken, N.J., U.S.—d. Oct. 5, 1960, Paris, Fr.) U.S. anthropologist. Trained under FRANZ BOAS (Ph.D., 1901), he later taught at the University of California at Berkeley. Kroeber's career nearly coincided with the emergence of academic, professionalized anthropology in the U.S. and contributed significantly to its development. He made valuable contributions to American Indian ethnology, New World archaeology, and the study of linguistics, folklore, kinship, and culture. His most influential books are considered to be *Anthropology* (1923) and *The Nature of Culture* (1952). His daughter, URSULA K. LE GUIN (b. 1929), was a noted science fiction and fantasy writer.

Kroemer, Herbert (b. Aug. 25, 1928, Weimar, Ger.) German physicist. He received a Ph.D. (1952) from Georg August University in Göttingen and later moved to the U.S., where he taught at several institutions. In 1957 he carried out theoretical calculations showing that a heterostructure transistor, which is made from several materials, would be superior to a conventional transistor, which is made from only one kind of material. His theory was later confirmed and led to the development of numerous electronic components that had a significant influence on communications technology and computers. He shared the 2000 Nobel Prize for Physics with ZHORES ALFEROV and JACK S. KILBY.

Kronos See CRONUS

Kronshtadt \ˈkrōn-ˌshtät\ **Rebellion** (1921) Internal uprising against Soviet rule in Russia after the RUSSIAN CIVIL WAR, conducted by sailors from the Kronshtadt naval base. The sailors had supported the BOLSHEVIKS in the RUSSIAN REVOLUTION OF 1917, but disillusionment with the government and inadequate food supplies after the civil war led them to demand economic and labour and political freedoms. The rebels were crushed by a force led by LEON TROTSKY and MIKHAYL TUKHACHEVSKY, and the survivors were shot or imprisoned. By dramatically demonstrating popular dissatisfaction with communist policies, the rebellion, along with several other major internal uprisings, led to the adoption of the NEW ECONOMIC POLICY.

Kronstadt See BRASOV

Kropotkin \krə-ˈpȯt-kən**, Peter (Alekseyevich)** (b. Dec. 21, 1842, Moscow, Russia—d. Feb. 8, 1921, Dmitrov, near Moscow) Russian revolutionary and geographer, foremost theorist of ANARCHISM. The son of a prince, he renounced his aristocratic heritage in 1871. Although he achieved renown in such fields as geography, zoology, sociology, and history, he shunned material success for the life of a revolutionist. He was imprisoned on political charges (1874–76) but escaped and fled to western Europe. He was imprisoned in France on trumped-up charges of sedition (1883–86), and in 1886 he settled in England, where he remained until the RUSSIAN REVOLUTION OF 1917 allowed him to return home. While

Peter Alekseyevich Kropotkin.

in exile, he wrote several influential books, including *Memoirs of a Revolutionist* (1899) and *Mutual Aid* (1902), in which he attempted to put anarchism on a scientific basis and argued that cooperation rather than conflict is the chief factor in the evolution of species. On his return to Russia, he was bitterly disappointed that the Bolsheviks had made their revolution by authoritarian rather than libertarian methods, and he retired from politics.

Kru Group of peoples of Liberia and Côte d'Ivoire, including the Bassa, Krahn, Grebo, Klao (Kru), Bakwe, and Bete. They speak Kru languages of the Niger-Congo family and number some 2.5 million. Members of Kru ethnic groups, especially Klao, Grebo, and Bassa, are known as stevedores and fishermen all along the west coast of Africa and have established colonies in most ports from Dakar, Seneg., to Douala, Camer., the largest being in Monrovia, Liberia.

Kru languages Branch of the Niger-Congo language family. It consists of some 24 languages (or language clusters) spoken by some three million Kru people living in the forest regions of southwestern Côte d'Ivoire and southern Liberia.

Kruger, Paul *orig.* **Stephanus Johannes Paulus Kruger** (b. Oct. 10, 1825, Cradock district, Cape Colony—d. July 14, 1904, Clarens, Switz.) South African soldier and statesman, noted as the builder of the Afrikaner nation. As a boy of 10, Kruger took part in the Great Trek and was impressed by the ability of the Boers to defend themselves against hostile African peoples and to establish an orderly government. When the British annexed the Transvaal in 1877, Kruger became the recognized champion of his people in the struggle to regain independence. After leading a series of armed attacks, he succeeded in obtaining limited independence and was elected president of the restored republic (1883–1902). In 1895 he fended off an attempt by Cecil Rhodes and Leander Starr Jameson to end Boer control of the republic. His age prevented his participation in the South African War and he retreated to the Netherlands; he died in Switzerland and was buried (December 1904) in Pretoria, S.Af.

Kruger National Park National park, South Africa. Located in the northeastern part of the country on the Mozambique border, it was created as a game sanctuary in 1898 and in 1926 became a national park named for Paul Kruger. It covers an area of 7,523 sq mi (19,485 sq km) and contains six rivers. It has a wide variety of wildlife, including elephants, lions, and cheetahs. In December 2002 it became part of Africa's largest game park when Kruger National Park was joined with Limpopo National Park in Mozambique and Gonarezhou National Park in Zimbabwe to form the Great Limpopo Transfrontier Park.

Krupa, Gene (b. Jan. 15, 1909, Chicago, Ill., U.S.—d. Oct. 16, 1973, Yonkers, N.Y.) U.S. bandleader and the first great drum soloist in jazz. Krupa had worked with Eddie Condon (1905–73) in Chicago before moving to New York City in 1929 and joining Benny Goodman's big band in 1935. He quickly became the best-known drummer of his day, famous for the showmanship and technique displayed in extended drum solos such as that in "Sing, Sing, Sing." He formed his own successful band in 1938, featuring trumpeter Roy Eldridge and singer Anita O'Day (b. 1919). Krupa's energetic playing became the model for many drummers of the swing era.

Krupp \'krůp\ **family** German steel-manufacturing dynasty. Friedrich Krupp (1787–1826) founded a steel factory in Essen in 1811. On his death his son Alfred (1812–1887) took full charge of the faltering concern at age 14. He made a fortune supplying steel to the railways and manufacturing cannons; the performance of Krupp guns in the Franco-Prussian War of 1870–71 led to the firm's being called "the Arsenal of the Reich." At Alfred's death he had armed 46 nations. The rise of the German navy and the need for armour plates further enriched the company under his son Friedrich Alfred (1854–1902). By the time Friedrich Alfred's elder daughter, Bertha (1886–1957), inherited control of the firm, it employed more than 40,000 people. Her husband, Gustav von Bohlen (1870–1950), affixed Krupp to the beginning of his name; an ardent Nazi, he ran the Krupp empire until 1943, when he was succeeded by their son Alfried Krupp (1907–1967). The Krupp works used slave labour during World War II and were a major part of the Nazi war machine; Alfried was later convicted of war crimes at Nürnberg. An Allied order to break up the company in 1953 languished for lack of a buyer, and Alfried eventually restored the Krupp fortune. See also Thyssen Krupp Stahl.

Krupp GmbH See ThyssenKrupp AG

Krupskaya \'krůp-skə-yə**, Nadezhda (Konstantinovna)** (b. Feb. 26, 1869, St. Petersburg, Russia—d. Feb. 27, 1939, Moscow, Russia, U.S.S.R.) Russian revolutionary, wife of Vladimir Ilich Lenin. A Marxist activist from the 1890s, she met Lenin c. 1894. Sentenced to three years in exile in 1898, she obtained permission to spend her term with Lenin in Siberia, where they were married. After 1901 she lived with Lenin in several European cities and helped found the Bolshevik party faction. She returned to Russia in 1917 to spread Bolshevik propaganda after the revolution began, and later she served in several posts in the educational bureaucracy. After Lenin's death (1924), she remained aloof from intraparty struggles.

krypton \'krip-ˌtän\ Chemical element, chemical symbol Kr, atomic number 36. One of the noble gases, it is colourless, odourless, tasteless, and almost totally inert, combining only with fluorine under very rigourous conditions. Krypton occurs in trace amounts in the atmosphere and in rocks and is obtained by fractional distillation of liquefied air. It is used in luminescent tubes, flash lamps, incandescent light bulbs, lasers, and tracer studies.

Kryvyy Rih \kri-'vi-'rik\ *Russian* **Krivoy Rog** \kri-'vȯi-'rȯk\ City (pop., 2001: 669,000), southeast-central Ukraine. Founded as a village by Cossacks in the 17th century, it grew slowly until a railway was constructed to the Donets Basin in 1884; it soon became a significant iron-mining city. It was seized by Germany in 1941 and retaken by the Soviet Union in 1944. Terny, which was annexed to the city in 1969, has a major uranium mine. The city is now a centre of industry as well as mining, with metallurgical plants, foundries, mills, and chemical works.

Kshatriya *or* **Ksatriya** \'kshə-trē-ə\ In Hindu India, the second-highest of the four varnas, or social classes, traditionally the military or ruling class. In ancient times before the caste system was completely defined, they were considered first in rank, placed higher than the Brahmans, or priestly class. The legend that they were degraded by an incarnation of Vishnu as a punishment for their tyranny may reflect a historical struggle for supremacy between priests and rulers. In modern times the Kshatriya varna includes members from a variety of castes, united by their status in government or the military or their land ownership.

Ksitigarbha \'kshi-ti-'gər-bə\ Buddhist bodhisattva widely revered in China and Japan. Known in India from the 4th century BC, he became popular in China as Dicang and in Japan as Jizō. He is the patron of the oppressed or dying, and he seeks to save the souls of the dead condemned to hell. In China he is the overlord of hell, and in Japan he is known for his kindness to the departed, particularly to dead children. Usually depicted as a monk with a nimbus around his shaved head, he carries a staff to force open the gates of hell and a flaming pearl to light up the darkness.

Ku Klux Klan (KKK) Either of two racist terrorist organizations in the U.S. The first was organized by veterans of the Confederate army, first as a social club and then as a secret means of resisting Reconstruction and restoring white domination over newly enfranchised blacks. Dressed in white robes and sheets, Klansmen whipped and killed freedmen and their white supporters in nighttime raids (see lynching). It had largely accomplished its goals by the 1870s before gradually fading away. The second KKK arose in 1915, partly out of nostalgia for the Old South and partly out of fear of the rise of communism in Russia and the changing ethnic character of U.S. society. It counted Catholics, Jews, foreigners, and labour unions among its enemies. Its membership peaked in the 1920s at more than four million, but during the Great Depression the organization gradually declined. It became active again during the civil rights movement of the 1960s, attacking blacks and white civil rights workers with bombings, whippings, and shootings. By the end of the 20th century, growing racial tolerance had reduced its numbers to a few thousand.

Kuala Lumpur \'kwä-lə-'lům-ˌpůr\ City (pop., 2000 prelim.: 1,297,526), capital of Malaysia. Founded as a tin-mining camp in 1857, it was made capital of the Federated Malay States in 1895, of the independent Federation of Malaya in 1957, and of Malaysia in 1963. It was designated a municipality in 1972. The most important Malay city on the Malay Peninsula, it is a commercial centre and the site of the Petronas Twin Towers, the world's tallest buildings when they were completed in 1998. Its educational institutions include the University of Malaya and a branch of the National University of Malaysia. In 1999 government offices began moving to the new administrative centre at Putrajaya just south of Kuala Lumpur.

Kuban River \kü-'ban^{y}\ River, southwestern Russia. Rising on Mount ELBRUS, in the Republic of Georgia, it flows north then west to enter the Sea of AZOV. It is 563 mi (906 km) long. Much of its water is diverted for irrigation.

Kubitschek \'kü-bə-ˌchek\ **(de Oliveira), Juscelino** (b. Sept. 12, 1902, Diamantina, Braz.—d. Aug. 22, 1976, near Resende) President of Brazil (1956–61). He studied medicine but entered politics, becoming mayor of Belo Horizonte and later winning election to Congress. As president he promoted rapid development of the hydroelectric, steel, and other heavy industries and built 11,000 mi (18,000 km) of roads. He moved the government from Rio de Janeiro to BRASÍLIA, 600 mi (1,000 km) inland, to accelerate the settlement of Brazil's vast interior. One price of his ambitious development was rapid and persistent inflation, exacerbated by the need to spend large sums to aid the drought-stricken northeastern region. The military government that took power in 1964 forced him into exile (1965–67). On returning to Brazil, he became a banker.

Kublai Khan \'kü-blə-'kän\ (b. 1215—d. 1294) Grandson of GENGHIS KHAN who conquered China and established the YUAN, or Mongol, dynasty. When Kublai was in his 30s, his brother, the emperor MÖNGKE, gave him the task of conquering and administering SONG-DYNASTY China. Recognizing the superiority of Chinese thought, he gathered around himself Confucian advisers who convinced him of the importance of clemency toward the conquered. In subduing China and establishing himself there, he alienated other Mongol princes; his claim to the title of khan was also disputed. Though he could no longer control the steppe aristocracy effectively, he succeeded in reunifying China, subduing first the north and then the south by 1279. To restore China's prestige, Kublai engaged in wars on its periphery with Myanmar, Java, Japan, and the nations of eastern Southeast Asia, suffering some disastrous defeats. At home, he set up a four-tiered society, with the Mongols and other Central Asian peoples forming the top two tiers, the inhabitants of northern China ranking next, and those of southern China on the bottom. Posts of importance were allotted to foreigners, including MARCO POLO. Kublai repaired the GRAND CANAL and public granaries and made BUDDHISM the state religion. Although his reign was one of great prosperity, his politics were pursued less successfully by his followers.

Kubrick \'kyü-brik**, Stanley** (b. July 26, 1928, New York, N.Y., U.S.—d. March 7, 1999, Childwickbury Manor, near St. Albans, Hertfordshire, Eng.) U.S. film director. He began his career as a photographer for *Look* magazine (1945–50). He directed two documentary films before directing his first feature film, *Fear and Desire* (1953). He won fame with *Paths of Glory* (1957), *Spartacus* (1960), *Lolita* (1962), *Dr. Strangelove* (1964), and the internationally acclaimed *2001: A Space Odyssey* (1968), which earned an Academy Award for special visual effects. His later movies include *A Clockwork Orange* (1971), *Barry Lyndon* (1975), *The Shining* (1980), *Full Metal Jacket* (1987), and *Eyes Wide Shut* (1999). His films are characterized by a cool visual style, meticulous attention to detail, and a detached, often ironic pessimism.

Küçük Kaynarca, Treaty of (1774) Pact signed after the RUSSO-TURKISH WAR of 1768–74, in Küçük Kaynarca (now Kaynardzha), Bulg., ending undisputed Ottoman control of the Black Sea. The treaty extended the Russian frontier to the southern Bug River and allowed Russia to navigate freely in Ottoman waters through the Bosporus Strait and the Dardanelles. Most far-reaching was a religious stipulation allowing Russia to represent Eastern Orthodox Christians in several regions, which Russia later interpreted as the right to intervene to protect Eastern Orthodox Christians anywhere in the Ottoman Empire.

kudu Slender African ANTELOPES of the genus *Tragelaphus*. The greater kudu lives in small groups in hilly bush country or open woods. It stands about 51 in. (1.3 m) high at the shoulder and has a fringe on the throat and a crest of hair on the neck and back. It is reddish brown to blue-gray, with a white mark between the eyes and narrow vertical white stripes on the body. The male has long, corkscrewlike horns. The lesser kudu lives in pairs or small groups in open bush country; it stands about 40 in. (1 m) high, has more tightly spiraled horns, and has two white patches on the throat and no throat fringe. Both species browse on shrubs and leaves.

kudzu vine \'kůd-ˌzü\ Fast-growing, twining, perennial, woody vine (*Pueraria lobata*, or *P. thunbergiana*) belonging to the pea family (see LEGUME). Transplanted from its native China and Japan to North America in the 1870s as an attractive ornamental that could be planted on steep soil banks to prevent erosion, kudzu has become a rampant weed in much of the southeastern U.S, where it readily spreads to form great canopies over trees, shrubs, and exposed soil. Roots survive even northern winters, and the hairy vine grows to a length of 60 ft (18 m) in one season. It has large leaves, late-blooming reddish-purple flowers, and flat, hairy seedpods. In its native range kudzu is grown for its edible, starchy roots and for a fiber made from its stems. It is also useful as a fodder or cover crop.

Kuei-chou See GUIZHOU

Kuei-yang See GUIYANG

Kuhn \'kün**, Thomas (Samuel)** (b. July 18, 1922, Cincinnati, Ohio, U.S.—d. June 17, 1996, Cambridge, Mass.) U.S. historian and philosopher of science. He taught at Berkeley (1956–64), Princeton (1964–79), and the Massachusetts Institute of Technology (1979–91). In his highly influential work *The Structure of Scientific Revolutions* (1962), he questioned the previously accepted view of scientific progress as a gradual accumulation of knowledge based on universally valid experimental methods and results, claiming that progress was often achieved by far-reaching "paradigm shifts." His other works include *The Copernican Revolution* (1957), *The Essential Tension* (1977), and *Black-Body Theory and the Quantum Discontinuity* (1978).

Kuiper \'kī-pər\ **belt** *or* **Edgeworth-Kuiper belt** Disk-shaped belt of billions of small, icy bodies orbiting the Sun beyond the orbit of NEPTUNE, mostly at distances 30–50 times Earth's distance from the Sun. Gerard Peter Kuiper (1905–73) proposed the existence of this large flattened distribution of objects in 1951 in connection with his theory of the origin of the solar system (see SOLAR NEBULA). Kenneth Edgeworth (1880–1972) independently had made similar proposals in 1943 and 1949. Whether the belt extends thinly as far as the OORT CLOUD is not known. Gravitational disturbances by Neptune of objects in the belt are thought to be the origin of most short-period COMETS. The first Kuiper belt object was discovered in 1992, although the orbit, icy composition, and diminutive size of PLUTO appear to qualify this body, traditionally considered a planet, as a giant Kuiper belt object.

Kūkai \'kü-ˌkī\ *or* **Kōbō Daishi** (b. July 27, 774, Byōbugaura, Japan—d. April 22, 835, Mount Kōya) Japanese Buddhist saint and founder of the SHINGON school. Born into an aristocratic family, Kūkai was given a CONFUCIAN education but soon converted to BUDDHISM. After studying in China (804–806) with Huiguo (746–805), he returned home to spread his doctrines, which emphasized magic formulas, ceremonials, and services for the dead. In 816 he built a temple on Mount Kōya, and he helped to establish the Shingon sect as one of the most popular forms of Japanese Buddhism. His major work, *Ten Stages of Consciousness*, traces the development of Confucianism, DAOISM, and Buddhism, representing Shingon as the highest stage. He was also a gifted poet, artist, and calligrapher.

kulak (Russian: "fist") Wealthy or prosperous landed peasant in Russia. Before the RUSSIAN REVOLUTION OF 1917, kulaks were major figures in peasant villages, often lending money and playing central roles in social and administrative affairs. In the WAR COMMUNISM period (1918–21), the Soviet government undermined the kulaks' position by organizing poor peasants to administer the villages and requisition grain from richer peasants. The kulaks regained their position under the NEW ECONOMIC POLICY, but in 1929 the government began a drive for rapid collectivization of agriculture and

© 2006 Encyclopædia Britannica, Inc.

"liquidation of the kulaks as a class" (dekulakization). By 1934 most kulaks had been deported to remote regions or arrested and their land and property confiscated.

Kulturkampf \kůl-'tůr-ˌkämpf\ *German* **"culture struggle"** Bitter struggle by Otto von Bismarck to subject the Roman Catholic church to state controls. Bismarck, a staunch Protestant, doubted the loyalty of Catholics in his new German Empire and became concerned by the Vatican Council's 1870 proclamation on papal infallibility. In 1872 the state dissolved the Jesuit order in Germany. The May, or Falk, Laws of 1873 (applying only to Prussia) limited church powers, and in 1875 the state mandated civil marriage services. Bismarck retreated in the face of strong Catholic resistance, especially by the Center Party. By 1887, with many anti-Catholic laws repealed, Pope Leo XIII declared the conflict over.

Kumasi \kü-'mä-sē\ *formerly* **Coomassie** \kü-'ma-sē\ City (pop., 1998 est.: 578,000), south-central Ghana. A 17th-century Asante king chose the site for his capital and conducted land negotiations under a kum tree, which gave the town its name. Located on north-south trade routes, it became a major commercial centre. The British gained control of the city in 1874. Called the "Garden City of West Africa," it remains the seat of Asante kings. Its central market is one of the largest in western Africa. Kwame Nkrumah University of Science and Technology (1951) is located there.

Kumazawa Banzan \'kü-mä-ˌzä-wä-'bän-ˌzän\ (b. 1619, Kyōto, Japan—d. Sept. 9, 1691, Shimofusa) Japanese political philosopher. Born a rōnin, he was taken into service by the feudal lord of Okayama at age 15. Largely self-taught, he became a disciple of the Chinese Neo-Confucianist Wang Yangming. As chief minister of Okayama from 1647, he tried to put into practice the Confucian teachings on governance. Forced to resign in 1656, he spent the rest of his life studying and writing. He called for advancement in the government bureaucracy based on merit, not heredity, and advocated more government responsibility in economic life and less control by feudal lords. His ideas so infuriated the government that he was kept in custody or under surveillance the rest of his life.

Kumin \'kyü-min**, Maxine** *orig.* **Maxine Winokur** (b. June 6, 1925, Philadelphia, Pa., U.S.) U.S. poet. She studied at Radcliffe College. Her poetry, written primarily in traditional forms, deals with loss, fragility, family, and the cycles of life and nature. Her New Hampshire farm inspired *Up Country* (1972, Pulitzer Prize); later collections include the acclaimed *The Retrieval System* (1978), *Our Ground Time Here Will Be Brief* (1982), *Nurture* (1989), and *Connecting the Dots* (1996). She wrote numerous children's books, some with Anne Sexton, as well as novels and short stories.

kumquat \'kəm-ˌkwät\ Any of several evergreen shrubs or small trees of the genus *Fortunella* (rue, or citrus, family), or their fruit. Native to eastern Asia, kumquats are cultivated throughout the subtropics. The mainly thornless branches bear dark green, glossy leaves and white, orangelike flowers. The small, bright orange-yellow, round or oval fruit has mildly acid, juicy pulp and a sweet, edible, pulpy skin. Kumquats may be eaten fresh, preserved, or candied, or made into jams and jellies. In the U.S., hybrids have been produced with other citrus fruits.

Kun \'kün**, Béla** (b. Feb. 20, 1886, Szilágycseh, Transylvania, Austria-Hungary—d. Nov. 30, 1939?, U.S.S.R.) Hungarian communist leader. He fought in the Austrian army in World War I, was captured by the Russians, and became a Bolshevik. After returning to Hungary in 1918, he founded the Hungarian Communist Party. When Count Károlyi resigned in March 1919, Kun headed the new Hungarian Soviet Republic. He created a Red Army that reconquered much of the territory lost to Czechoslovaks and Romanians and eliminated moderate elements in the government. In August the regime collapsed, and Kun fled to Vienna and then Russia. As a leader of the Comintern, he tried to foment revolution in Germany and Austria in the 1920s. Eventually accused of "Trotskyism," he fell victim to Joseph Stalin's purge trials.

kundalini \ˌkůn-də-'lē-nē\ In some tantric forms of Yoga, the cosmic energy believed to be within everyone. It is pictured as a coiled serpent lying at the base of the spine. Through a series of exercises involving posture, meditation, and breathing, a practitioner can force this energy up through the body to the top of the head. This brings about a sensation of bliss, as the ordinary self is dissolved into its eternal essence, atman.

Kundera \'kün-de-rä**, Milan** (b. April 1, 1929, Brno, Czech.) Czech-born French writer. He worked as a jazz musician and taught at Prague's film academy, but he gradually turned to writing. Though a member of the Communist Party for years, his works were banned after he participated in Czechoslovakia's short-lived liberalization movement (1967–68), and he was fired from his teaching positions. He immigrated to France in 1975 and was stripped of his Czech citizenship in 1979; he became a French citizen in 1981. His works combine erotic comedy with political criticism. *The Joke* (1967), his first novel, describes life under Stalin. *The Book of Laughter and Forgetting* (1979), a series of wittily ironic meditations on the modern state, and the novel *The Unbearable Lightness of Being* (1984; film, 1988) were banned in his homeland until 1989. His later books include *Immortality* (1990) and *Slowness* (1994).

Kunene River See Cunene River

kung fu *Pinyin* **gongfu** Chinese martial art that is simultaneously a spiritual and a physical discipline. It has been practiced at least since the Zhou dynasty (1111–255 BC). Its prescribed stances and actions are based on keen observations of human skeletal and muscular anatomy and physiology, and many of its movements are imitations of the fighting styles of animals. Its combative techniques resemble those used in karate and tae kwon do. Self-discipline is emphasized. Kung fu performed as exercise resembles t'ai chi ch'uan.

Kunitz \'kyü-nits**, Stanley (Jasspon)** (b. July 29, 1905, Worcester, Mass., U.S.) U.S. poet. He worked as an editor while contributing verse to magazines; much of it was collected in volumes such as *Selected Poems 1928–1958* (1958, Pulitzer Prize). With *The Testing-Tree* (1971), he began to write shorter, looser, more emotional poetry. Among his later collections, noted for their subtle craftsmanship and treatment of complex themes, are *The Coat Without a Seam* (1974), *The Lincoln Relics* (1978), *Next-to-Last Things* (1985), and *Passing Through* (1995). He was also U.S. poet laureate twice (1974–76, 2000–01).

Kunlun \'kün-'lün\ **Mountains** *or* **K'un-lun Mountains** Mountain system, east-central Asia. It extends for 1,250 mi (2,000 km) through the western regions of China. From the Pamirs of Tajikistan, it runs east along the border between Xinjiang and Tibet autonomous regions to the Sino-Tibetan ranges in Qinghai province. It divides the northern limit of the Plateau of Tibet from the interior plains of Central Asia. Its highest peak, Mount Muztag, measures 25,338 ft (7,723 m).

Kunming \'kün-'miŋ\ *or* **K'un-ming** City (pop., 2003 est.: 1,597,768), capital of Yunnan province, southern China. Situated on the northern shore of Lake Dian, it has long been a commercial centre at the junction of major trade routes. Originally known as Tuodong in the 8th–9th centuries AD and a part of the independent state of Nanzhao, it came under Chinese control with the Mongol invasion of 1253. The city became the provincial capital of Yunnan in 1276 and was visited by Marco Polo. It became a municipality in 1928 and was transformed into a modern city in 1937 during the Sino-Japanese War (1937–45), when Chinese evacuees from the north brought industrial plants and universities to Kunming.

Kunstler, William (Moses) (b. July 7, 1919, New York, N.Y., U.S.—d. Sept. 4, 1995, New York City) U.S. lawyer who defended a number of controversial clients in high-profile cases. After graduating from Yale University (1941) he served in the army in the Pacific during World War II, earning a Bronze Star. He graduated from Columbia Law School in 1948. In the 1950s and '60s he became involved with the American Civil Liberties Union and clients such as the antisegregationist Freedom Riders and Martin Luther King, Jr., not only defending them in court but becoming active in their causes. He gained national renown for his defense of the "Chicago Seven" on charges of conspiring to incite riots in Chicago during the 1968 Democratic national convention. In other cases that reflected his political leanings, he represented black power

Kuomintang See Nationalist Party

Kura \kə-'rä, 'kůr-ə\ **River** *Azerbaijani* **Kür** *Georgian* **Mtkvari** River in Turkey, Georgia, and Azerbaijan. The largest river in Transcaucasia, it rises in eastern Turkey and flows north. After entering Georgia, it turns east and flows southeast to enter the Caspian Sea. It is 848 mi (1,364 km) long and used in places for irrigation.

Kurath \ků-'räth**, Hans** (b. Dec. 13, 1891, Villach, Austria—d. Jan. 2, 1992, Ann Arbor, Mich., U.S.) Austrian-born U.S. linguist. He immigrated to the U.S. in 1907. He is best known as the chief editor of the *Linguistic Atlas of New England*, 3 vol. (1939–43), the first linguistic atlas of a region of the U.S. His other works include *A Word Geography of the Eastern United States* (1949) and *The Pronunciation of English in the Atlantic States* (1961). Kurath was later editor in chief (1946–62) of the *Middle English Dictionary*.

Kurd Member of an ethnic and linguistic group native to parts of Iran, Iraq, and Turkey (see Kurdistan). Kurds speak one of two dialects of Kurdish, a West Iranian language related to Modern Persian. Traditionally nomadic, most were forced into farming by the redrawing of state borders after World War I (1914–18). Most Kurds are Sunnite Muslims; Sufism is widely practiced. Plans for a Kurdish state, promised by the Treaty of Sèvres (1920), which dissolved the Ottoman Empire, were never realized. Kurds in Turkey, Iran, and Iraq have been variously persecuted and pressured to assimilate; Iraqi attacks were particularly severe during the Iran-Iraq War (1980–90) and following the Persian Gulf War (1990–91). See also Kurdistan Workers' Party.

Kurdistan Mountainous region of Turkey, Iran, Iraq, and Syria, inhabited predominantly by Kurds. It covers about 74,000 sq mi (191,660 sq km), and its chief towns are Diyarbakır, Bitlis, and Van in Turkey, Mosul and Karkūk in Iraq, and Kermānshāh in Iran. Since early times the region has been the home of the Kurds, a people whose ethnic origins are uncertain. The Treaty of Sèvres, signed in 1920, provided for the recognition of a Kurdish state, but the agreement was never ratified.

Kurdistan Workers' Party (PKK) Kurdish nationalist party. It was founded in Turkish Kurdistan in 1978 and sought to establish an independent Kurdish state in southeastern Turkey. It attacked Turkish interests and fellow Kurds suspected of collaboration with the Turkish government, often from bases in Iraq and Syria. The group's leader, Abdullah Öcalan, was arrested by Turkey in 1999 and was thereafter tried and convicted of treason. At its peak, it claimed 5,000–10,000 members. See also Kurd.

Kurdufan See Kordofan

Kuria Muria Islands See Khuriyyā Muriyyā Islands

Kuril \'kůr-ˌēl\ **Islands** Archipelago, eastern Russia. It extends for 750 mi (1,200 km) from the southern tip of Russia's Kamchatka Peninsula to the northeastern coast of Japan's Hokkaido island. The 56 islands cover 6,000 sq mi (15,600 sq km) and together with Sakhalin Island form an administrative region (pop., 2001 est.: 591,000) of Russia. The Kurils were originally settled by the Russians in the 17th–18th centuries. Japan seized the southern islands and in 1875 obtained the entire chain. After World War II they were ceded to the Soviet Union, and the Japanese population was repatriated and replaced by Soviets. Japan still claims historical rights to the southern islands and has tried repeatedly to regain them.

Kurisches Haff See Courland Lagoon

Kuropatkin \kü-rə-'pät-kin**, Aleksey (Nikolayevich)** (b. March 29, 1848, Shemchurino, Pskov province, Russia—d. March 23, 1925) Russian general. He was chief of staff during the Russo-Turkish War (1877–78), commander in chief in Caucasia in 1897, and minister of war (1898–1904). In the Russo-Japanese War (1904–05) he commanded the Russian troops in Manchuria; he resigned after the Russian defeat at the Battle of Mukden (1905).

Kurosawa \ˌkůr-ə-'saů-ə\ **Akira** (b. March 23, 1910, Tokyo, Japan—d. Sept. 6, 1998, Tokyo) Japanese film director. He studied painting before becoming an assistant director and scenarist at PCL (later Tōhō) movie studio (1936–43). He wrote and directed his first feature film, *Sanshiro Sugata,* in 1943, won notice with *Drunken Angel* (1948), starring Mifune Toshiro, and was internationally acclaimed for *Rashomon* (1950). His later classic films include *Ikiru* (1952), *Seven Samurai* (1954), *Throne of Blood* (1957), *Yojimbo* (1961), *Kagemusha* (1980), and *Ran* (1985). His ability to combine Japanese aesthetic and cultural elements with a Western sense of action and drama made him, in Western eyes, the foremost Japanese filmmaker.

Kursk, Battle of (July 5–Aug. 23, 1943) Unsuccessful German assault on the Soviet salient around Kursk, in western Russia, in World War II. The salient was a bulge in the Soviet lines that protruded 100 mi (160 km) westward into the German lines. The Germans planned a surprise attack to trap the Soviet forces but encountered Russian-laid minefields and antitank defenses. At the height of the assault, the Soviets counterattacked and forced a German withdrawal. The Battle of Kursk was the largest tank battle in history, involving some 6,000 tanks, two million troops, and 4,000 aircraft. It marked the decisive end of the German offensive on the Eastern Front and cleared the way for the great Soviet offensives of 1944–45.

Kursky Zaliv See Courland Lagoon

Kuryłowicz \ˌkůr-ə-'lō-vich**, Jerzy** (b. Aug. 26, 1895, Stanislav, Galicia, Austria-Hungary—d. Jan. 28, 1978, Kraków, Pol.) Polish historical linguist. His identification of the Hittite medial *h* in 1927 substantiated the existence of laryngeals, the Indo-European speech sounds postulated by Ferdinand de Saussure, and stimulated much research in Indo-European phonology. His books include *Apophony in Indo-European* (1956) and *The Inflectional Categories of Indo-European* (1964).

Kush See Cush

Kushan art *or* **Kusana art** Art produced during the Kushan dynasty (late 1st–3rd century AD), in an area that now includes parts of Central Asia, northern India, Pakistan, and Afghanistan. There are two major stylistic divisions among artifacts of the period: the imperial art of Iranian derivation, and the Buddhist art of mixed Greco-Roman and Indian sources. The former is exemplified by stiff, frontal portraits (including those on coins) emphasizing the individual's power and wealth. The second, more realistic, style is typified by the schools of Gandhara and Mathura art.

Kushner, Tony (b. July 16, 1956, New York, N.Y., U.S.) U.S. dramatist. He grew up in Lake Charles, La., and attended Columbia University and New York University. His early plays include *Yes, Yes, No, No* (1985). His major work, *Angels in America*, consists of two lengthy plays that deal with political issues and the AIDS epidemic of the 1980s. The first part, *Millennium Approaches* (1991), won a Pulitzer Prize and a Tony Award for best play; the second, *Perestroika* (1992), also won a Tony Award for best play. Later works include *Slavs* (1995), *Henry Box Brown* (1997), and the controversial *Homebody/Kabul* (2001), which addresses the relationship between Afghanistan and the West.

K'ut'aisi \ˌkə-tä-'ē-sē\ City (pop., 2002: 185,965), west-central Republic of Georgia. One of the oldest cities of Transcaucasia, it served as the capital of successive kingdoms in Georgia: Colchis, Iberia (Kartli), Abkhazia, and Imeretia. It was often caught in wars between Persians, Mongols, Turks, and Russians. Russia occupied it in the 18th century and made it a provincial seat. It is a major regional industrial and trade centre.

Kutch, Rann of See Rann of Kachchh

Kutuzov \kə-'tü-zȯf**, Mikhail (Illarionovich), Prince** *orig.* **Mikhail Illarionovich Golenishchev-Kutuzov** (b. Sept. 16, 1745, St. Petersburg, Russia—d. April 28, 1813, Bunzlau, Silesia) Russian army commander. In 1805 Kutuzov, an army officer, was given command of the joint Russian-Austrian army that opposed the French advance on Vienna. Following Austria's defeat in the Battle of Ulm, he retreated and preserved his army intact, but Alexander I engaged the French at the Battle of Austerlitz (1805), for which disaster Kutuzov was partly blamed. After Napoleon's army entered Russia in 1812, public pressure made Alexander appoint Kutuzov commander in chief. After waging minor engagements, he was forced to fight the inconclusive Battle of Borodino. When Napoleon led his troops in retreat from Moscow, Kutuzov forced

© 2006 Encyclopædia Britannica, Inc.

the French army to leave Russia along the path it had devastated when it entered the country. He pursued the French into Prussia, destroying his opponent without fighting another major battle. Considered the finest Russian commander of his day, he appears as a major character in Leo Tolstoy's *War and Peace*.

Kuusinen \'kü-si-nən**, Otto V(ilhelm)** (b. Oct. 4, 1881, Laukaa, Fin.—d. May 17, 1964, Moscow, Russia, U.S.S.R.) Finnish-born Soviet politician. He joined the Social Democratic Party in Finland in 1905 and held various party posts. After Finland's short-lived socialist regime was overthrown in 1918, he fled to Russia, where he cofounded the Finnish Communist Party. He remained in exile to become secretary of the Comintern. In the Soviet-Finnish "Winter War" (1939–40) he was head of the pro-Soviet puppet Finnish government, and he later became president of the supreme soviet of the Karelo-Finnish Soviet Socialist Republic (1940–56). He was secretary of the Russian Communist Party's Central Committee (1946–53, 1957–64).

Kuwait *officially* **State of Kuwait** Country, Middle East, southwestern Asia. It is on the Arabian Peninsula at the northwest corner of the Persian Gulf. Area: 6,880 sq mi (17,818 sq km). Population (2005 est.):

2,847,000. Capital: Kuwait city. Its population is overwhelmingly Arab. Languages: Arabic (official), Persian, English. Religion: Islam (official). Currency: Kuwaiti dinar. Except for Al-Jahrā' oasis, at the western end of Kuwait Bay, and a few fertile patches in the southeastern and coastal areas, it is largely desert; annual precipitation totals 1–7 in. (25–180 mm). Kuwait has almost no arable land, but there is a small amount of pastureland for livestock. Its extensive petroleum and natural gas deposits are the basis of its economy. Its estimated reserves of petroleum represent roughly one-tenth of global reserves, ranking Kuwait third, behind Iraq and Saudi Arabia. It is a constitutional monarchy with one legislative body; the head of state and government is the emir, assisted by the prime minister. Traces of civilization on Faylakah, an island in Kuwait Bay, date to the 3rd millennium BC. These flourished until c. 1200 BC, when they disappeared from the historical record. Greek colonists again settled the island in the 4th century BC. The nomadic 'Anizah tribe of central Arabia founded Kuwait city in 1710, and 'Abd al-Raḥīm of the Ṣabāḥ dynasty became sheikh in 1756; the family continues to rule Kuwait. In 1899, to thwart German and Ottoman influences, Kuwait agreed to give Britain control of its foreign affairs. Following the outbreak of war with the Ottoman Empire in World War I (1914–18), Britain established a protectorate there. In 1961, after Kuwait had gained full independence from Britain, Iraq laid claim to Kuwait. British troops were sent to defend Kuwait; the Arab League recognized its independence, and Iraq dropped its claim. Iraq reasserted these claims in the aftermath of the Iraq-Iraq War and invaded and occupied Kuwait in 1990. A U.S.-led military coalition drove the Iraqi army out of Kuwait the next year (see First Persian Gulf War). Iraqi forces set fire to most of Kuwait's oil wells, but these were extinguished, and petroleum production soon returned to prewar levels.

Kuwait *or* **Kuwait City** City (pop., 1995: 28,859), capital of Kuwait. Located at the head of the Persian Gulf, it was founded in the 18th century and was a trading city relying on sea and caravan traffic. Until 1957 it was enclosed by a mud wall separating it from the desert and was only 5 sq mi (13 sq km) in area. The development of the country's oil industry after World War II (1939–45) transformed the city into a modern metropolis. Almost all of the country's population is concentrated near the capital. The city, damaged during the Iraqi occupation and the Persian Gulf War (1990–91), soon recovered.

Kuybyshev See Samara

Kuyper \'kœi-pər**, Abraham** (b. Oct. 29, 1837, Maassluis, Neth.—d. Nov. 8, 1920, The Hague) Dutch theologian and politician. After serving as a pastor (1863–74), he founded a Calvinist-oriented newspaper (1872) and was elected to the national assembly (1874). He formed the Anti-Revolutionary Party, the first organized Dutch political party, and built up a lower-middle-class following with a program that combined orthodox religious positions and a progressive social agenda. To provide Calvinist training for pastors, he founded the Free University at Amsterdam (1880), and in 1892 he founded the Reformed Churches in The Netherlands. As prime minister of The Netherlands (1901–05), he advocated a wider franchise and broader social benefits.

Kuznets \'kəz-nets**, Simon (Smith)** (b. April 30, 1901, Kharkov, Ukraine, Russian Empire—d. July 8, 1985, Cambridge, Mass., U.S.) Russian-U.S. economist and statistician. He immigrated to the U.S. in 1922 and joined the National Bureau of Economic Research in 1927; he later taught at the University of Pennsylvania (1930–54), Johns Hopkins University (1954–60), and Harvard University (1960–71). His work emphasized the complexity of underlying data in the construction of economic models, stressing the need for information on population structure, technology, labour quality, government structure, trade, and markets. He also described the existence of cyclical variations in growth rates (now called "Kuznets cycles") and their links with underlying factors such as population. In 1971 he received the Nobel Prize.

Kvasir \'kvä-sir\ In Norse mythology, the wisest of all men. He was born from the saliva from two rival groups of gods, the Aesir and the Vanir. As a teacher, he never failed to answer a question correctly. Two dwarfs, Fjalar and Galar, became tired of his great learning, and they killed him and distilled his blood in a magic cauldron. His blood, when mixed with honey by the giant Sattung, formed the mead that gave wisdom and poetic inspiration to those who drank it. Kvasir's story is told in the Edda *Braga Raedur*.

Kwa languages Branch of the Niger-Congo language family. Forty-five Kwa languages are spoken by approximately 20 million people in the southern areas of Côte d'Ivoire, Ghana, Togo, and Benin and in the extreme southwestern corner of Nigeria. Languages and language groups having more than a million speakers include Anyi and Baule in Côte d'Ivoire, Akan (including Asante, Fante, and Brong) and Guang in Ghana, and Gbe (including Ewe, Fon, and Anlo) in southeastern Ghana, Togo, and Benin.

Kwakiutl \ˌkwä-kē-'yü-tᵊl\ Northwest Coast Indian people who live along the shores of Vancouver Island, B.C., Can., and the mainland opposite. They speak Kwakwala, a Wakashan language, and call themselves Kwakwaka'wakw, meaning "Those Who Speak Kwakwala." Traditionally, the Kwakiutl subsisted mainly by fishing. They had a technology based largely on woodworking. Their society was stratified by rank, determined primarily by inheritance. The potlatch was elaborately developed and was often combined with dances and songs dramatizing ancestral experiences with supernatural beings. They continue to be known for their highly stylized art, which includes totem poles and striking masks. The Kwakiutl numbered about 3,000 in the 2001 Canadian census.

KwaNdebele \ˌkwän-dā-'bā-lā\ Former black enclave, central Transvaal province, South Africa. It was a self-governing "national state" for Transvaal Ndebele people, although it was never internationally recognized. Situated northeast of Johannesburg, it was founded in 1979, when

H | I | J | K

© 2006 Encyclopædia Britannica, Inc.

many Transvaal Ndebele were expelled from Bophuthatswana. In 1994, after the abolition of APARTHEID, KwaNdebele became part of the new East Transvaal province, which was subsequently renamed Mpumalanga.

Kwando River River, southern Africa. Rising in central Angola, it flows southeast, forming part of the boundary between Angola and Zambia. It continues east along the northeastern border of Botswana and empties into the ZAMBEZI RIVER just above VICTORIA FALLS. Its total length is 457 mi (731 km).

Kwangju \'gwòŋ-'jü\ *formerly* **Koshu** City (pop., 2000: 1,350,948), southwestern South Korea, capital of South Chŏlla province. It occupies an area of 193 sq mi (501 sq km) and constitutes a metropolitan city (province) by itself. It has been a centre of trade and local administration since the Three Kingdoms (c. 57 BC); its modern industrial development began with a railway connection to SEOUL in 1914. Kwangju was the site of an armed uprising between civilians and the government in 1980. It is the seat of Chosŏn University (founded 1946).

Kwangsi Chuang See GUANGXI

Kwangtung See GUANGDONG

Kwanzaa *or* **Kwanza** \'kwän-zə\ African American holiday celebrated from December 26 to January 1 and patterned after African harvest festivals. It was created in 1966 by Maulana Karenga, a black-studies professor at California State University at Long Beach, as a nonreligious celebration of family and community. The name was taken from the Swahili phrase *matunda ya kwanzaa* ("first fruits"). Each day is dedicated to one of seven principles: unity, self-determination, collective responsibility, cooperative economics, purpose, creativity, and faith. Each evening, family members gather to light one of the candles in the *kinara*, a seven-branched candelabra; often gifts are exchanged. On December 31 community members gather for a feast, the *karamu*. Kwanzaa is now observed by more than 15 million people.

kwashiorkor \ˌkwä-shē-'ór-kər\ Condition caused by severe PROTEIN deficiency. It is common in tropical and subtropical regions in young children weaned on a diet chiefly of starchy foods such as grains, cassava, plantain, and sweet potato. It causes potbelly, EDEMA, weakness, irritability, dry skin with rash, reddish-orange hair discoloration, DIARRHEA, ANEMIA, and fat deposits in the liver. Mental development may be stunted. Adults who had the disease in childhood may be at risk of diseases such as CIRRHOSIS. Treatment is protein supplementation, often in the form of dried skim milk. For long-term prevention, development of high-protein plant mixtures based on local food preferences and availability is encouraged. Nondietary causes include inadequate absorption of nutrients by the intestines, chronic alcoholism, kidney disease, and trauma (e.g., infection, burns) causing abnormal protein loss.

Kweichow See GUIZHOU

Kworra River See NIGER RIVER

kyanite \'kī-ə-ˌnīt\ *or* **cyanite** \'sī-ə-ˌnīt\ *or* **disthene** \'dis-ˌthēn\ SILICATE MINERAL, one of several phases in the aluminum silicate (Al_2SiO_5) system. Its colour ranges from gray-green to black or blue, with blue and blue-gray being most common. It occurs in Switzerland, Italy, the Ural Mountains, and New England (U.S.). Kyanite is a raw material in the manufacture of spark plugs. A clear, deep-blue variety is sometimes cut as a gemstone.

Kyd \'kid**, Thomas** (b. Nov. 6, 1558, London, Eng.—d. c. December 1594, London) English dramatist. With *The Spanish Tragedie* (1592), he initiated the revenge tragedy, a favourite dramatic form in the Elizabethan and Jacobean eras in which the main motivation was revenge. One of the most popular plays of its time, it prepared the way for WILLIAM SHAKESPEARE's *Hamlet* and other plays. The only other play certainly by Kyd is *Cornelia* (1594). He was arrested and tortured in 1593 after "atheistical" documents were found in his room; he claimed the papers belonged to CHRISTOPHER MARLOWE, with whom he had shared lodgings. His reputation ruined, he died the next year at age 36.

Kydland, Finn E. (b. December 1943, Ålgård, near Stavanger, Nor.) Norwegian economist. Kydland was educated at the Norwegian School of Economics and Business Administration (B.S., 1968) and Carnegie Mellon University in Pittsburgh, Pa. (Ph.D., 1973), where EDWARD C. PRESCOTT advised him on his doctorate. Kydland, working with Prescott, demonstrated how a declared commitment to a low inflation rate by policy makers might create expectations of low inflation and unemployments rates. They also established the microeconomic foundation for business cycle analyses, showing that technology changes or supply shocks, such as oil price hikes, could be reflected in investment and relative price movements and thereby create short-term fluctuations around the long-term economic growth path. In 2004 Kydland shared the Nobel Prize for Economics with Prescott.

Kynewulf See CYNEWULF

Kyoga Lake Lake, south-central Uganda. It is formed by the VICTORIA NILE, which flows through it. It has a maximum depth of 25 ft (8 m), restricting navigation to shallow-draft vessels. About 80 mi (129 km) long, it has an area of 1,710 sq mi (4,429 sq km).

Kyōto City (pop., 2003 est.: 1,386,372), west-central HONSHU, Japan. It is situated northeast of ŌSAKA, and together with KŌBE it is part of a major urban-industrial region. The centre of Japanese culture and Japanese Buddhism, Kyōto ("Capital City") was the capital of Japan and the site of the imperial family residence for more than 1,000 years (794–1868). The modern city has venues that present NŌH THEATRE and KABUKI. It is a manufacturing centre, and many small workshops produce textiles and porcelain; tourism is also important. Buddhist temples, Shintō shrines, and other historic buildings are found throughout the city and surrounding area; 17 of these were collectively designated a UNESCO WORLD HERITAGE SITE in 1994. Its educational institutions include Kyōto University (founded 1897) and Dōshisha University (1875).

Kyrgyzstan \ˌkir-giz-'stan\ *officially* **Kyrgyz Republic** Country, Central Asia. In the southeast the Kok Shaal-Tau Range, part of the TIEN SHAN, forms the border with China. Area: 77,199 sq mi (199,945 sq km).

Population (2005 est.): 5,146,000. Capital: BISHKEK. The Kyrgyz make up about two-thirds of the population; most of the remainder consists of Uzbeks and Russians. Languages: Kyrgyz, Russian (both official). Religions: Islam (mostly Sunni); also Christianity. Currency: som. Kyrgyzstan is a largely mountainous country. At its eastern edge rises Victory (Pobedy) Peak, which at 24,406 ft (7,439 m) is the country's highest point of elevation. The country's valleys and plains, occupying only one-seventh of the total area, are home to most of its people. The economy is based largely on agriculture, including livestock raising and the cultivation of cereals, potatoes, cotton, and sugar beets. Gold mining and industries such as food processing and the production of machinery are also important. It is a republic with two legislative houses; its head of state and government is the president, assisted by the prime minister. The Kyrgyz, a nomadic people of Central Asia, settled in the Tien Shan

region in ancient times. They were conquered by GENGHIS KHAN's son Jöchi in 1207. The area became part of the Qing dynasty of China in the mid-18th century. It came under Russian control in the 19th century, and its long rebellion against Russia (and later the Soviet Union) that began in 1916 resulted in a long period of brutal repression. Kirgiziya became an autonomous province of the Soviet Union in 1924 and was made the Kirgiz S.S.R. in 1936. Kyrgyzstan gained independence in 1991. It subsequently struggled with creating a democratic process and with establishing a stable economy.

Kyushu Island (pop., 2001 est.: 13,454,000), southernmost of Japan's four main islands. Located off the eastern coast of Asia, it is separated from HONSHU to the north by the Shimonoseki Strait and from SHIKOKU to the east by the Bungo Strait. The island, with an area of 14,177 sq mi (36,719 sq km), is mountainous; several famous peaks rise 5,000–6,000 ft (1,525–1,980 m) high, including Mount ASO. Its chief cities include FUKUOKA and KITAKYŪSHŪ. It was the first part of the Japanese empire opened to foreigners in the 19th century.

Kyzylkum \ki-'zil-'küm\ *Uzbek* **Qizilqum** *Kazakh* **Qyzylqum** Desert in Kazakhstan and Uzbekistan. Occupying roughly 115,000 sq mi (300,000 sq km), it lies between the SYR DARYA and the AMU DARYA rivers, southeast of the ARAL SEA. Desert plants grow on its sand ridges, serving as pasture for sheep, horses, and camels; there are several small oasis settlements. Its mineral resources include natural gas deposits and gold.

La Brea \lə-'brā-ə\ **Tar Pits** Fossil field in Hancock Park (formerly Rancho La Brea), Los Angeles, Calif., U.S. It is the site of "pitch springs" oozing crude oil, discovered by Gaspar de Portolá's expedition in 1769. The tar pits contain the fossilized bones of Pleistocene mammals that became entrapped there; they include mammoths, mastodons, and sabre-toothed cats. The George C. Page Museum contains more than one million prehistoric specimens exhumed from the pits.

La Bruyère \lä-brüē-'yer**, Jean de** (b. August 1645, Paris, France—d. May 10/11, 1696, Versailles) French satiric moralist. As a tutor and librarian in a royal household, he observed aristocratic idleness, fads, and fashions. His *The Characters, or Manners of the Age, with the Characters of Theophrastus* (1688) was appended to his translation of Theophrastus and written in the latter's style. A masterpiece of French literature, it was an indictment of the vanity and pretensions around him. Eight editions of *Characters*, with expanded character sketches and topical allusions, appeared through 1694.

La Coruña See A Coruña

La Follette \lə-'fäl-ət**, Robert M(arion)** (b. June 14, 1855, Primrose, Wis., U.S.—d. June 18, 1925, Washington, D.C.) U.S. politician. He served as a county district attorney in Wisconsin (1880–84) and in the U.S. House of Representatives (1885–91). Advocating progressive reforms, he was elected governor of Wisconsin (1901–06). In the U.S. Senate (1906–24), he sponsored bills to restrict the power of the railroad companies. He founded *La Follette's Weekly* (1909) to broaden his reform movement, and he led Republican opposition to the policies of Pres. William H. Taft. He opposed U.S. entrance into World War I and policies of Pres. Woodrow Wilson that favoured big business. After the war he worked vigorously to expose corruption in government, including in the Teapot Dome scandal. As the presidential candidate of the Progressive Party in the 1924 election, he won five million votes, one-sixth of the total national vote. He died the next year; his son Robert (1895–1953) held his Senate seat from 1925 until 1947, when he was defeated by Joseph McCarthy.

La Fontaine \lä-fōⁿ-'ten**, Jean de** (b. July 8?, 1621, Château-Thierry, France—d. April 13, 1695, Paris) French poet. He made important contacts in Paris, where he was able to attract patrons and spend his most productive years as a writer. He is best known for his *Fables* (1668–94), which rank among the masterpieces of French literature. Comprising some 240 poems, they include timeless tales about simple countryfolk, heroes of Greek mythology, and the familiar animals of fables. Their chief theme is the everyday moral experience of humankind. His many lesser works include *The Loves of Cupid and Psyche* (1669), notable for its lucid, elegant prose. He was elected to the Académie Française in 1683.

La Galissonnière \lä-gä-lē-sȯn-'yer**, Roland-Michel Barrin, marquis de** (b. Nov. 10, 1693, Rochefort, France—d. Oct. 26, 1756, Montereau) French naval officer. While serving in the French navy (1710–36), he made several supply trips to New France and held various commands in the Atlantic. As commandant general of New France (1747–49), he sought unsuccessfully to fortify a link along the Ohio River between French Canada and the Louisiana settlements and to establish French settlements in Detroit and the Illinois country. In 1754 he was given command of a naval squadron assigned to protect French shipping from the Barbary pirates.

La Guajira \gwä-'hē-rä\ **Peninsula** Peninsula, northwestern coast of South America. It is bounded by the Caribbean Sea to the north and west and the Gulf of Venezuela to the southeast. Much of the peninsula lies in Colombia, and the rest is in Venezuela. Ríohacha, Colom. (pop., 1999 est.: 88,577), is its principal town; nearby natural gas fields are connected by pipeline with Barranquilla to the southwest.

La Guardia \lə-'gwär-dē-ə**, Fiorello H(enry)** (b. Dec. 11, 1882, New York, N.Y., U.S.—d. Sept. 20, 1947, New York City) U.S. politician, mayor of New York City (1933–45). He practiced law in New York City from 1910 before serving in the U.S. House of Representatives (1917, 1918–21, 1923–33). A progressive Republican, he cosponsored a bill that restricted the courts' power to ban strikes, boycotts, and picketing by organized labour; opposed Prohibition; and supported woman suffrage and child-labour laws. As New York's mayor, he fought Tammany Hall corruption and introduced reform programs for civic improvement through low-cost housing, social-welfare services, and new roads and bridges. A colourful figure with a flair for the dramatic, he enjoyed enormous popularity for his fearlessness and his lack of pretension. In 1945 he declined to run for a fourth term as mayor.

La Harpe \lä-'ärp**, Frédéric-César de** (b. April 6, 1754, Rolle, Vaud, Switz.—d. March 30, 1838, Lausanne) Swiss political leader. From 1784 he was tutor to the future Russian tsar Alexander I. He returned to Switzerland in 1794, then went to Paris to obtain French military support to secure independence for his native Vaud canton. In 1798 France invaded to establish the Helvetic Republic. A member of its Directory, La Harpe sought dictatorial powers, but he was deposed in 1800. He fled to France, and in 1814 he secured from Alexander a promise of Vaudois independence.

La Hontan \lä-ōⁿ-'täⁿ**, Louis-Armand de Lom d'Arce, baron de** (b. June 9, 1666, Mont-de-Marsan, France—d. 1715, Hannover, Hanover) French army officer and explorer. He served in New France (1683–93), commanded Ft.-St.-Joseph (now Niles, Mich.), and explored territory along the Wisconsin and Mississippi rivers (1688–89). In 1692 he stopped at Newfoundland and defended the French colonists at Plaisance against the English; after the governor there accused him of insubordination, he fled to Portugal in 1693 and thereafter remained in Europe. His *New Voyages to North-America* (1703) influenced the works of Montesquieu, Voltaire, and Jonathan Swift.

La Niña Cyclic counterpart to El Niño, consisting of a cooling of surface waters of the Pacific Ocean along the western coast of South America. While its local effects on weather and climate are generally the opposite of those associated with El Niño, its global effects can be more complex. La Niña events often follow El Niños, which occur at irregular intervals of about 5–10 years.

La Paz \lä-'päs\ City (pop., 2001: city, 789,558; 2003 metro. area est., 1,477,000), administrative capital of Bolivia. Located in west-central Bolivia, it is the world's highest capital, built over 12,000 ft (3,650 m) above sea level. The city centre lies in a canyon formed by the La Paz River. Founded in 1548 by the Spanish on the site of an Inca village, it was originally called Nuestra Señora de La Paz ("Our Lady of Peace"). Following the Battle of Ayacucho (1824), the decisive battle in the colony's wars of independence, the city was renamed La Paz de Ayacucho, though informally it continues to be called La Paz. Since 1898 it has been the administrative capital of Bolivia, though Sucre remains the judicial capital. It is Bolivia's principal industrial centre and also the site of the University of San Andrés (1830), the National Museum of Art, and the National Museum of Archaeology.

La Paz City (pop., 2000: 162,954), capital of Baja California Sur state, northwestern Mexico. Situated on La Paz Bay of the Gulf of California, it is a popular resort and the largest urban centre in the state. The bay was discovered by the Spanish in 1596; the town was established in the early 1800s and served as the capital of Baja California (1828–87). When the peninsula was divided between the U.S. and Mexico (1887), La Paz became the capital of the Mexican region.

La Perouse \ˌlä-pā-'rüz\ **Strait** *Japanese* **Sōya-kaikyō** *Russian* **Proliv Laperuza** International waterway between the Russian island of Sakhalin and the Japanese island of Hokkaido. The strait, named for the French explorer count de La Pérouse, separates the Sea of Okhotsk from the Sea of Japan (East Sea). It is 27 mi (43 km) wide at its narrowest part, and it varies in depth from 167 to 387 ft (51 to 118 m). Noted for its extremely strong currents, it is closed by ice in the winter.

La Plata City (pop., 1999 est.: 556,308), eastern Argentina. After Buenos Aires became the national capital, La Plata was chosen (1882) as the new seat of Buenos Aires province and was modeled on the U.S. capital of Washington, D.C. It was renamed for Argentine first lady Eva Perón in 1952, but after the overthrow of Pres. Juan Peron in 1955 it resumed its original name. Located near the Río de la Plata estuary, it is a seaport with a large artificial harbour. Its industries include meatpacking and oil refining.

La Plata River River, eastern central Puerto Rico. It flows about 45 mi (70 km) northwest and north, to empty into the Atlantic Ocean. Part of it is dammed to create a lake which provides hydroelectric power.

La Rioja \ˌlä-rē-'ō-hä\ Autonomous community (pop., 2001: 276,702), province, and historical region, north-central Spain. Covering 1,944 sq mi (5,035 sq km), it was known until 1980 as Logroño; its capital is Logroño city. Historically belonging to old Castile, La Rioja's population is concentrated in the irrigated farmland (grapes, cereals, horticultural produce) along the Ebro River and its affluents. Upper Rioja produces some of Spain's finest wines. A highway runs through Lower Rioja linking Bilbao, Zaragoza, and Barcelona.

La Rochefoucauld \lå-rôsh-fü-'kō**, François VI, duke de** (b. Sept. 15, 1613, Paris, France—d. March 16/17, 1680, Paris) French writer. Of a noble family, he joined the army at an early age and was wounded several times. He later played a leading part in the Fronde but gradually won his way back into royal favour. He turned his energies to intellectual pursuits and became the leading exponent of the *maxime*, a French form of epigram that concisely expresses a harsh or paradoxical truth. *Maximes* (five eds., 1665–78), his principal achievement, consists of 500 reflections on human behaviour. His *Mémoires* (1664) recount the plots and campaigns of mutinous nobles during the Fronde.

La Salle \lə-'säl**, René-Robert Cavelier, sieur de** (b. Nov. 22, 1643, Rouen, France—d. March 19, 1687, near Brazos River [now in Texas, U.S.]) French explorer. In 1666 he left France for North America and was granted land near Montreal. He explored the Ohio River region (1669) and then worked with the count de Frontenac to extend French influence. He helped establish Fort Frontenac on Lake Ontario, where as seigneur he controlled the fur trade. He obtained authority from Louis XIV to explore the western frontier of New France and build new forts. He sailed down the Illinois River and with Henri de Tonty (1650?–1704) canoed down the Mississippi River to the Gulf of Mexico. There in 1682 La Salle claimed the entire Mississippi Basin for France, naming it Louisiana after Louis XIV. Back in France, he received authority to build a fort at the mouth of the Mississippi. Beset by losses of men and ships, he mistakenly landed at Matagorda Bay, Texas. After fruitless attempts to locate the Mississippi, he was killed by mutineers.

La Scala Opera house in Milan, Italy. Built in 1776 by Empress Maria Theresa of Austria (which country then ruled Milan), it replaced an earlier theatre that had burned. With the works of 19th-century composer Gioacchino Rossini, Italian opera regained international attention, and La Scala, as the site of many of Rossini's premieres, had by the 1830s become the opera landmark it has remained ever since. Associated with the main theatre are a smaller theatre, La Piccola Scala; a ballet company and ballet school; and a singing school.

La Tène \lä-'ten\ *French* **"The Shallows"** Archaeological site at the eastern end of Lake Neuchâtel, Switz. The name by extension applies to a late Iron Age culture of European Celts. La Tène culture originated in the mid-5th century BC, when the Celts came into contact with Greeks and Etruscans. It passed through several phases and regional variations during the next 400 years, as the Celts populated northern Europe and the British Isles, and ended in the mid-1st century BC, when most of the Celts came under Roman control. Objects of the early period are characterized by ornamental S-shapes, spirals, and round patterns. The middle period is notable for long iron swords, heavy knives, and burial in coffins or under stone heaps; findings with a later date, but still of the middle period, include decorated scabbards, broad-bladed spearheads, and wooden shields with iron supports. The final period, showing Roman influence, is distinguished by peasant's implements, such as iron sickles, scythes, axes, saws, and plowshares.

Gold disk found at Auvers, La Tène culture, 5th century BC.

La Tour \lə-'tůr**, Georges de** (b. March 19, 1593, Vic-sur-Seille, Lorraine, Fr.—d. Jan. 30, 1652, Lunéville) French painter. He was well known in his lifetime, especially for his depictions of candlelit subjects, then was forgotten until the 20th century, when the identification of works previously misattributed established his reputation as a giant of French painting. His early works were painted in a realistic manner and influenced by the dramatic chiaroscuro of Caravaggio. The paintings of La Tour's maturity are marked by a startling geometric simplification of the human form and by the depiction of interior scenes lit only by the glare of candles or torches. His religious paintings done in this manner have a monumental simplicity and a stillness that expresses both contemplative quiet and wonder. Little is known of his life, and only four or five of his paintings are dated. The chronology and authenticity of some works attributed to him are still debated.

"St. Joseph the Carpenter," oil on canvas by Georges de La Tour, *c.* 1645; in the Louvre, Paris

La Vérendrye \lä-ˌver-ən-'drē**, Pierre Gaultier de Varennes et de** (b. Nov. 17, 1685, Trois-Rivières, New France—d. Dec. 5, 1749, Montreal) French-Canadian explorer. He served in the French army before becoming a fur trader in the region north of Lake Superior (1726). From the Indians he learned of a river that might lead to the Pacific Ocean, and with his sons he built a string of fur-trading posts from Ontario to Manitoba (1731–38). Two sons sent farther west became the first Europeans to explore areas of present-day Nebraska, Montana, and Wyoming, and they claimed South Dakota for France. The 30,000 beaver pelts La Vérendrye annually sent to Quebec broke the monopoly of the Hudson's Bay Co. Little appreciated in his lifetime, he was later considered one of the greatest explorers of the Canadian West.

Laayoune \lä-'yün\ *or* **El Aaiún** \ˌel-ī-'ün\ City (pop., 1998 est.: 164,000), North Africa. The capital (1940–76) of the overseas Spanish province of Western Sahara and since 1976 of the Laayoune province of Morocco (though Morocco's claim is not internationally recognized), Laayoune lies in the northern part of Western Sahara, 8 mi (13 km) inland from the Atlantic Ocean. It was developed by Spain in 1938 as the administrative and military centre of the Europeans living in the former province. It is Western Sahara's only major populated place. Nearby oases supply water.

Laban \'lä-bän**, Rudolf (von)** (b. Dec. 15, 1879, Bratislava, Austria-Hungary—d. July 1, 1958, Weybridge, Surrey, Eng.) Hungarian modern-dance teacher, inventor of the Labanotation system of dance notation. After studying dance in Paris, he opened his Choreographic Institute in Zürich, Switz., in 1915 and later founded branches in Italy, France, and central Europe. From 1919 to 1937 he worked in Germany, where in 1930–34 he was ballet director of the Berlin State Opera. In 1928 he published his method for recording all forms of human motion, which enabled choreographers to record the dancer's steps and other body movements, including their rhythm. In 1938 he joined his former pupil Kurt Jooss and taught dance in England, where he later formed the Art of Movement Studio. His system was further developed and maintained at centres in Essen, Ger., and New York.

Labdah See Leptis Magna

Labor, Knights of See Knights of Labor

Labor Day Annual holiday devoted to the recognition of working people's contribution to society. It is observed on the first Monday in September in the U.S. and Canada. It was first celebrated in New York City on Sept. 5, 1882, under the sponsorship of the Knights of Labor. Various U.S. states observed the holiday before 1894, when Congress passed a bill making Labor Day a national holiday. It is often celebrated with parades and speeches, as well as political rallies, and the day is sometimes the official kickoff date for national political campaigns in the U.S. In most other countries, workers are honoured on May Day.

Labor Relations Act, National See Wagner Act

laboratory Place where scientific research and development is conducted and analyses performed, in contrast with the field or factory. Most laboratories are characterized by controlled uniformity of conditions (constant temperature, humidity, cleanliness). Modern laboratories use a vast num-

© 2006 Encyclopædia Britannica, Inc.

ber of instruments and procedures to study, systematize, or quantify the objects of their attention. Procedures often include sampling, pretreatment and treatment, measurement, calculation, and presentation of results; each may be carried out by techniques ranging from having an unaided person use crude tools to running an automated analysis system with computer controls, data storage, and elaborate readouts.

labour In economics, the general body of wage earners. In CLASSICAL ECONOMICS, labour is one of the three factors of production, along with CAPITAL and LAND. Labour can also be used to describe work performed, including any valuable service rendered by a human agent in the production of wealth, other than accumulating and providing capital. Labour is performed for the sake of its product or, in modern economic life, for the sake of a share of the aggregate product of the community's industry. The price per unit of time, or wage rate, commanded by a particular kind of labour in the MARKET depends on a number of variables, such as the technical efficiency of the worker, the demand for that person's particular skills, and the supply of similarly skilled workers. Other variables include training, experience, intelligence, social status, prospects for advancement, and relative difficulty of the work. All these factors make it impossible for economists to assign a standard value to labour. Instead, economists often quantify labour hours according to the quantity and value of the goods or services produced.

labour See PARTURITION

labour economics Study of how workers are allocated among jobs, how their rates of pay are determined, and how their efficiency is affected by various factors. The labour force of a country includes all those who work for gain in any capacity as well as those who are unemployed but seeking work. Many factors influence how workers are utilized and how much they are paid, including qualities of the labour force itself (such as health, level of education, distribution of special training and skills, and degree of mobility), structural characteristics of the economy (e.g., proportions of heavy manufacturing, technology, and service industries), and institutional factors (including the extent and power of LABOUR UNIONS and employers' associations and the presence of minimum-wage laws). Miscellaneous factors such as custom and variations in the BUSINESS CYCLE are also considered. Certain general trends are widely accepted by labour economists; for instance, wage levels tend to be higher in jobs that involve high risk, in industries that require higher levels of education or training, in economies that have high proportions of such industries, and in industries that are heavily unionized.

labour law Body of law that applies to matters such as employment, wages, conditions of work, LABOUR UNIONS, and labour-management relations. Laws intended to protect workers, including children, from abusive employment practices were not enacted in significant numbers until the late 19th century in Europe and slightly later in the U.S. In Asia and Africa, labour legislation did not emerge until the 1940s and '50s. Employment laws cover matters such as hiring, training, advancement, and UNEMPLOYMENT compensation. Wage laws cover the forms and methods of payment, pay rates, SOCIAL SECURITY, PENSIONS, and other matters. Legislation on working conditions regulates hours, rest periods, vacations, CHILD LABOUR, EQUALITY in the workplace, and health and safety. Laws on trade unions and labour-management relations address the status of unions, the rights and obligations of workers' and employers' organizations, COLLECTIVE BARGAINING agreements, and rules for settling STRIKEs and other disputes. See also ARBITRATION; MEDIATION.

Labour Party British political party whose historic links with trade unions have led it to promote an active role for the state in the creation of economic prosperity and the provision of social services. In opposition to the CONSERVATIVE PARTY, it has been Britain's major democratic socialist party since the early 20th century. In 1900 the Trades Union Congress and the Independent Labour Party (founded 1893) established the Labour Representation Committee, which took the name Labour Party in 1906. In 1918 it became a socialist party with a democratic constitution, and by 1922 it had supplanted the LIBERAL PARTY as the official opposition party. In 1924 JAMES RAMSAY MACDONALD formed the first Labour government, with Liberal support. The party was out of power from 1935 until a spectacular recovery in 1945 brought in CLEMENT R. ATTLEE's government (until 1951), which introduced a system of social welfare, including a NATIONAL HEALTH SERVICE, and extensive nationalization of industry. Labour regained power under HAROLD WILSON (1964–70) and later JAMES CALLAGHAN (1974–79), but it foundered because of economic problems and worsening relations with its trade-union allies. In 1983 MICHAEL FOOT's radical program resulted in a massive Labour defeat. NEIL KINNOCK moved the party toward the centre, but only in 1997 did TONY BLAIR and his "New Labour" agenda succeed in returning Labour to power.

labour union Association of workers in a particular trade, industry, or plant, formed to obtain improvements in pay, benefits, and working conditions through collective action. The first fraternal and self-help associations of labourers appeared in Britain in the 18th century, and the era of modern labour unions began in Britain, Europe, and the U.S. in the 19th century. The movement met with hostility from employers and governments, and union organizers were regularly prosecuted. British unionism received its legal foundation in the Trade-Union Act of 1871. In the U.S. the same effect was achieved more slowly through a series of court decisions that whittled away at the use of injunctions and conspiracy laws against unions. The founding of the American Federation of Labor (AFL) in 1886 marked the beginning of a successful, large-scale labour movement in the U.S. The unions brought together in the AFL were craft unions, which represented workers skilled in a particular craft or trade. Only a few early labour organizers argued in favour of industrial unions, which would represent all workers, skilled or unskilled, in a single industry. The Congress of Industrial Organizations (CIO) was founded by unions expelled from the AFL for attempting to organize unskilled workers, and by 1941 it had assured the success of industrial unionism by organizing the steel and automotive industries (see AFL-CIO). The use of COLLECTIVE BARGAINING to settle wages, working conditions, and disputes is standard in all noncommunist industrial countries, though union organization varies from country to country. In Britain, labour unions displayed a strong inclination to political activity that culminated in the formation of the LABOUR PARTY in 1906. In France, too, the major unions became highly politicized; the Confédération Générale du Travail (formed in 1895) was allied with the Communist Party for many years, while the Confédération Française Démocratique du Travail is more moderate politically. Japan developed a form of union organization known as enterprise unionism, which represents workers in a single plant or multiplant enterprise rather than within a craft or industry.

Labov \lə-ˈbȯv**, William** (b. Dec. 4, 1927, Rutherford, N.J., U.S.) U.S. linguist. After working for many years as an industrial chemist, Labov began graduate work in 1961, focusing on regional and class differences in English pronunciation on Martha's Vineyard, Mass., and in New York City, and ways to quantify phonetic change and variation. Most of his later research dealt with the same issues in increasingly sophisticated ways, culminating in his monumental *Principles of Linguistic Change* (1994). The discovery that American English pronunciation was becoming regionally more rather than less divergent countered popular belief and attracted the attention of many outside his field.

Labrador Large peninsula, northeastern Canada. Divided between the provinces of Quebec and Newfoundland and Labrador, it occupies an area of about 625,000 sq mi (1,620,000 sq km). Its highest mountains are over 5,000 ft (1,520 m), and its coast is lined with islands. It forms the easternmost portion of the plateau known as the CANADIAN SHIELD. Politically, Labrador refers to the Newfoundland and Labrador portion of the peninsula; the Quebec portion is UNGAVA PENINSULA. Political control of the region was disputed by the two provinces until the Quebec-Newfoundland border was established in 1927.

Labrador Current Surface oceanic current flowing southward along the western side of the Labrador Sea. Originating at the Davis Strait, the current is a combination of the West Greenland Current, the Baffin Island Current, and inflow from Hudson Bay. It maintains temperatures of less than 32°F (0°C) and has a low salinity. The current is limited to the CONTINENTAL SHELF and reaches depths only slightly greater than 2,000 ft (600 m). It carries several thousand ICEBERGS southward each year.

labradorite \ˈla-brə-ˌdȯr-ˌīt\ Type of FELDSPAR mineral in the PLAGIOCLASE series that is often valued as a gemstone and as ornamental material for its red, blue, or green iridescence. The mineral is usually gray or brown to black and need not be iridescent. Labradorite is named for its occurrence on the coast of Labrador, Canada.

labyrinth *or* **maze** System of intricate passageways and blind alleys. Labyrinth was the name given by the ancient Greeks and Romans to buildings, entirely or partly underground, containing a number of chambers and passages that made egress difficult. From the European Renais-

sance on, labyrinths or mazes consisting of intricate paths separated by high hedges were a feature of formal gardens.

Lacan \lä-'kän**, Jacques (-Marie-Émile)** (b. April 13, 1901, Paris, France—d. Sept. 9, 1981, Paris) French psychoanalyst. A practicing psychiatrist in Paris for much of his career, Lacan emphasized the primacy of language as the mirror of the unconscious mind and introduced the study of language into psychoanalytic theory. His major achievement was his reinterpretation of SIGMUND FREUD's work in terms of structural LINGUISTICS. He became a celebrity in France with *Écrits* (1966; *The Language of the Self*) and in the 1970s was a dominant figure in French cultural life as well as a strong influence on American psychoanalytic and literary theory.

Lacandón \ˌlä-kän-'dōn\ MAYAN Indians who live in a rich tropical rainforest on the border of Mexico and Guatemala. Largely isolated, they maintained a traditional way of life until modern times, fishing, hunting, and growing vegetables and fruits. They spin fibres and weave cloth, tan leather, and make pottery, flutes, dugout canoes, and nets. They have preserved their traditional beliefs. Their total number has declined, and only several hundred remain.

lace Ornamental openwork fabric formed by the looping, interlacing, braiding, or twisting of threads, originally primarily of linen. Almost all high-quality artistic lace is made by one of two techniques: needle lace involves a difficult technique that originated in Italy; bobbin lace is a more widespread craft that originated in Flanders. The art of lace is a European achievement. Fully developed lace did not appear before the Renaissance. By 1600 lace had become a fabric of luxury and an important article of commerce. The Industrial Revolution in the 19th century led to the use of machines to produce less-expensive lace made of cotton, and lace gradually disappeared from both men's and women's fashions. By 1920 the industry was dying. Fine handmade lace is still made in Belgium, Slovenia, and elsewhere, but chiefly as souvenirs.

Lacedaemon See SPARTA

lacemaking Methods of producing LACE. The popularity of handmade laces led to the invention of lacemaking machines in the 19th century (see JOHN HEATHCOAT). Early models required intricate engineering mechanisms. Later improvements included Nottingham-lace machines, primarily for coarse lace, and Barmens machines. Schiffli lace, a type of embroidery, is made by modern machines, evolved from a hand version, using needles with points at each end. Many types of machine-made laces are produced, frequently with geometrically shaped nets forming their backgrounds. The high strength and comparatively low cost of man-made fibre yarns have made sheer laces widely available.

lacewing Any of numerous species of insects in the order Neuroptera, especially those in the green lacewing and brown lacewing families. The green lacewing has long, delicate antennae, a slender greenish body, golden- or copper-coloured eyes, and two pairs of veined wings. It is found worldwide and flies near grasses and shrubs. It is also known as a stinkfly because it emits a disagreeable odour. The larva, with prominent sucking mouthparts, drains body fluids from aphids and other soft-bodied insects. The brown lacewing resembles the green lacewing but is smaller and brown.

Lacewing (*Chrysopa*)
A.E.MC.R. PEARCE—BRUCE COLEMAN LTD.

Lachaise \lä-'shez**, Gaston** (b. March 19, 1882, Paris, Fr.—d. Oct. 18, 1935, New York, N.Y., U.S.) French-born U.S. sculptor. Son of a cabinetmaker, he was trained in the decorative arts and studied sculpture at the École des Beaux-Arts (1898–1904). He was a designer of ART NOUVEAU decorative objects for RENÉ LALIQUE before immigrating to the U.S. in 1906. His most famous work, *Standing Woman* (1912–27), a female nude with ample breasts and thighs and sinuous, tapered limbs, typifies the image he worked and reworked throughout his career. He is also known for his portrait busts of JOHN MARIN, MARIANNE MOORE, E.E. CUMMINGS, and others. See photograph above.

Lachlan River \'lä-klən\ Chief tributary of the MURRUMBIDGEE RIVER, central NEW SOUTH WALES, Australia. Rising in the GREAT DIVIDING RANGE, it flows northwest and turns southwest, joining the Murrumbidgee after a course of 930 mi (1,500 km). Though usually perennial, it may run dry in severe drought years. It was explored in 1815 by George W. Evans and was named after Lachlan Macquarie, governor of New South Wales.

Standing Woman, bronze sculpture by Gaston Lachaise, 1932; in the Museum of Modern Art, New York City.

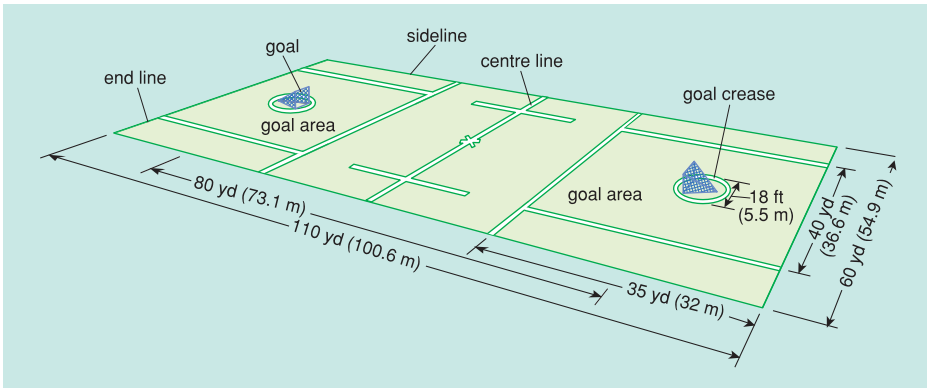
Lackland, John See JOHN (ENGLAND)

Laclos \lä-'klō**, Pierre (-Ambroise-François) Choderlos de** (b. Oct. 18, 1741, Amiens, France—d. Nov. 5, 1803, Taranto, Parthenopean Republic) French writer. He chose an army career but soon left it to become a writer. He is chiefly remembered for *Dangerous Liasions* (1782), one of the earliest psychological novels. The epistolary novel of a noble seducer and his female accomplice who take unscrupulous delight in their victims' misery, it caused an immediate sensation and was banned for years. Laclos later returned to the army and ultimately rose to the rank of general under Napoleon. His book retained its popularity into the 21st century, by which time it had been adapted several times, for film and for television.

Laconia \lə-'kō-nē-ə**, Gulf of** Inlet, southern IONIAN SEA southern coast of the PELOPONNESE, Greece. Cape Maléa, which divides the gulf from the Aegean Sea, was once feared by sailors for its treacherous winds and harborless coast. The major stream entering the gulf is the non-navigable Evrótas River.



Lacoste \lä-'kȯst**, (Jean-) René** (b. July 2, 1904, Paris, France—d. Oct. 12, 1996, Saint-Jean-de-Luz) French tennis player and sportswear entrepreneur. He was noted for a methodical game in which he tried to outlast his opponents. He won the Wimbledon (1925, 1928) and French (1925, 1927, 1929) singles titles and became the first foreigner to win the U.S. championship twice (1926, 1927), the second time beating BILL TILDEN. He also won various doubles matches. Nicknamed "the Crocodile," he retired in 1929 to form a sportswear company that featured a crocodile (later an alligator) emblem on its clothes.

lacquerwork Any of a variety of decorative objects or surfaces, usually of wood, to which a coloured, highly polished, and opaque type of varnish called lacquer has been applied. True lacquerwork is Chinese or Japanese in origin. The technique was copied in Europe, where it was known as "japanning," but European lacquerwork lacks the hardness and brilliance of Asian lacquer. True lacquer is the purified and dehydrated sap of the *Rhus vernicifera* tree, native to China and cultivated in Japan. Lacquer becomes extremely hard but not brittle on exposure to air and takes a high polish. Many thin layers are applied, allowed to dry, and smoothed before the surface is ready for decoration by carving, engraving, or inlay.

lacrosse (French: "the crosier") Outdoor goal-scoring sport played with sticks called crosses. A crosse has a long handle and a triangular head with a mesh pouch for catching, carrying, and throwing a hard rubber ball. The object of the game is to sling the ball into an opponent's goal (for one point). French settlers in Canada adapted the modern game from an ancient American Indian activity (baggataway) that was at once sport, combat training, and mystical ceremony. It became an organized sport in the late 19th century. Modern teams have 10 players. The game is divided into four periods of 15 minutes each. Lacrosse is especially popular as a collegiate sport and is played by both men and women. See illustration on following page.

lactation Production of milk by female mammals after giving birth. The milk is discharged by the MAMMARY GLANDS in the breasts. Hormones triggered by delivery of the placenta and by nursing stimulate milk production. Colostrum (milk that the mother produces in the first few days after giving birth) has more proteins, minerals, and antibodies and fewer calo-

A typical men's lacrosse field. The women's game is often played on a larger field (120 x 82 yards), with the goals 100 yards apart, and usually without the outside boundary lines marked. The ball is put into play by a face-off at the middle of the field, and play is continuous except for goals, fouls, and time-outs. Players may kick the ball, but only the goalie may use his hands.
© MERRIAM-WEBSTER INC.

ries and fats than the mature milk that develops later. Mature milk supplies nutrients, hormones, and substances that provide the infant with IMMUNITY against infectious agents. Most physicians recommend that babies be fed mother's milk exclusively for the first six months and that nursing continue through the first year. As the child is weaned, lactation tapers off; while nursing continues, FERTILITY is reduced. Problems with lactation may involve hormones, suckling pattern, physical difficulties, or emotional factors. Mothers taking certain drugs or with some diseases (e.g., AIDS) should not nurse, because of risks to the baby.

lactic acid CARBOXYLIC ACID found in certain plant juices, in blood and muscle, and in soil. In blood it occurs in the form of its SALTS (lactates) when GLYCOGEN is broken down in muscle; it can be reconverted to glycogen in the liver. Stiffness and soreness after prolonged heavy exercise are due to accumulated lactic acid in the muscles. The end product of bacterial FERMENTATION, lactic acid is the most common acidic constituent of fermented milk products (e.g., sour milk and cream, cheese, buttermilk, yogurt). It is used in other foods as a flavouring or preservative and industrially in tanning leather and dyeing wool and as a raw material or CATALYST in many chemical processes.

lactobacillus \ˌlak-tō-bə-'si-ləs\ Any of the rod-shaped, gram-positive (see GRAM STAIN) bacteria that make up the genus *Lactobacillus*. They are widely distributed in animal feeds, manure, and milk and milk products. Various species are used commercially in the production of sour milks, cheeses, and yogurt. Lactobacilli also play an important role in the manufacture of fermented vegetables (pickles and sauerkraut), beverages (beer, wine, and juices), sourdough breads, and some sausages. They inhabit but do not damage animal and human intestinal tracts. Commercial preparations of lactobacilli are used to restore normal intestinal flora after antibiotic therapy.

lactose Slightly sweet SUGAR (disaccharide) composed of two MONOSACCHARIDES, GLUCOSE and GALACTOSE, linked together. Lactose-intolerant adults, and more rarely infants, cannot digest lactose because they lack the ENZYME (lactase) that splits it into simpler sugars and suffer DIARRHEA and bloating when they eat foods containing it. Lactose, which makes up 2–8% of the milk of mammals, is the only common sugar of animal origin. Commercial lactose is obtained from whey, a liquid by-product of cheese. It is used in foods, in pharmaceuticals, and in nutrient broths used to produce penicillin, yeast, and riboflavin, and other products.

Ladakh \lə-'däk\ Region, eastern KASHMIR region, northwestern Indian subcontinent. It covers about 45,000 sq mi (117,000 sq km) and includes the western Himalayan Ladakh Range (see HIMALAYAS), the KARAKORAM RANGE, and the upper INDUS RIVER valley. Its capital is Leh. India and Pakistan fought over it before peace negotiations in 1949 gave its southern portion to India (which is part of the Indian state of JAMMU AND KASHMIR) and the rest to Pakistan. In the Sino-Indian War of 1962 China gained a portion of northeastern Ladakh. The region's boundaries are still in dispute.

Ladd-Franklin, Christine *orig.* **Christine Ladd** (b. Dec. 1, 1847, Windsor, Conn., U.S.—d. March 5, 1930, New York, N.Y.) U.S. scientist and logician. She fulfilled Ph.D. requirements at Johns Hopkins University in the 1880s, but, because women candidates were not recognized, she was not awarded her degree until 1926. In symbolic logic, she reduced syllogistic reasoning to an inconsistent triad with the introduction of the antilogism, a form that made the testing of deductions easier. The Ladd-Franklin theory of colour vision stressed increasing colour differentiation with evolution and assumed a photochemical model for the visual system. Her principal works are *The Algebra of Logic* (1883), *The Nature of Color Sensation* (1925), and *Color and Color Theories* (1929).

Ladies' Home Journal U.S. monthly magazine, one of the oldest in the country and long the trendsetter among women's magazines. Founded in 1883 as a supplement to the *Tribune and Farmer* (1879–85), it began an independent publication in 1884. Under the editorship (1889–1919) of EDWARD BOK, its circulation surpassed that of any other U.S. publication. Bok revolutionized the women's magazine field by offering high-quality fiction and nonfiction, establishing service departments that answered letters from readers, and conveying a sense of intimacy. After the mid-20th century *Ladies' Home Journal* was overtaken in circulation by its rival, *McCall's*. It was acquired in 1986 by the Meredith Corporation, which also publishes *Better Homes and Gardens*.

ladino \lə-'dē-nō\ Central American whose primary language is Spanish and who wears modern dress. Genetically ladinos may be of Indian, African, or mixed descent. An Indian may become a ladino by abandoning the Indian dress and customs. Many rural ladinos practice subsistence agriculture much like that of their Indian neighbours, but they tend to emphasize cash crops and modern farming techniques, which the Indians shun. In small towns ladinos commonly engage in commerce as well as farming. In the cities they engage in all occupations, from day labourer to university professor.

Ladino \lə-'dē-nō\ **language** *or* **Sephardic language** ROMANCE LANGUAGE spoken by Sephardic Jews in the Balkans, the Middle East, North Africa, Greece, and Turkey, though nearly extinct in many of these areas. Ladino is a very archaic form of Castilian SPANISH, mixed with HEBREW elements. It originated in Spain and was carried to its present speech areas by descendants of the Jews who were exiled from Spain after 1492. It preserves many words and grammatical usages that have been lost in modern Spanish. Ladino is usually written in the Hebrew alphabet.

Ladislas I *or* **Saint Ladislas** \'lä-dē-ˌsläs\ (b. June 27, 1040, Pol.—d. July 29, 1095, Nitra, Slvk.; canonized 1192; feast day June 27) King of Hungary (1077–95). He greatly expanded the boundaries of the kingdom, gaining land in Transylvania and occupying Croatia (1091). In the INVESTITURE CONTROVERSY he sided with the pope. Ladislas introduced Roman Catholicism to Croatia and persecuted pagans in his dominions. He also promulgated a legal code that brought order and prosperity to Hungary. He died while preparing for the First CRUSADE and was canonized in 1192.

Lado Enclave \'lä-dō\ Region, central Africa. It was located north of Lake ALBERT on the west bank of the Upper NILE RIVER, in what is now northern Uganda and southeastern Sudan. It was first explored by Europeans in 1841–42 and became a station for ivory and slave traders. Britain claimed the Upper Nile region in 1894 and leased to LEOPOLD II of Belgium the area known as the Lado Enclave. It was incorporated into the Anglo-Egyptian Sudan in 1910.

Ladoga \'lä-də-gə**, Lake** Lake, northwestern Russia. The largest lake in Europe, it covers an area of 6,700 sq mi (17,600 sq km). It is 136 mi (219 km) long and has an average width of 51 mi (82 km); its greatest depth is 754 ft (230 m). It contains 660 islands of more than 2.5 acres (1 hectare) in area. Its outlet is the NEVA RIVER, in the southwestern corner. Formerly divided between the U.S.S.R. and Finland, it now lies entirely

© 2006 Encyclopædia Britannica, Inc.

within Russia. During the Siege of Leningrad (1941–44) in World War II, the lake was the lifeline that connected the city with the rest of the Soviet Union.

Ladrone Islands See Mariana Islands

ladybug *or* **ladybird beetle** Any of the approximately 5,000 widely distributed beetles of the family Coccinellidae. The name originated in the Middle Ages, when the beetle was dedicated to the Virgin Mary and called "beetle of Our Lady." Ladybugs are hemispheric and are usually 0.3–0.4 in. (8–10 mm) long. They have short legs and are usually brightly coloured with black, yellow, or reddish markings. Several generations are produced each summer. Ladybugs are often used to control such insect pests as aphids, scales, and mites, which they eat. Several species of ladybugs feed on plants.

ladyfish *or* **tenpounder** Species (*Elops saurus*, family Elopidae) of primarily tropical coastal marine fish. The ladyfish is slender and covered with fine silver scales; the dorsal and anal fins can be depressed into grooves. A predatory fish, it has small, sharp teeth and a bony throat plate between its mandibles. It is up to 35 in. (90 cm) long and weighs up to 30 lbs (14 kg). The young are transparent and eel-like.

lady's slipper Any member of several genera of orchids in which the lip of the flower is slipper-shaped. The genus *Cypripedium* has about 50 temperate and subtropical species. Two well-known species, the yellow lady's slipper (*C. calceolus*) and the pink lady's slipper, or moccasin flower (*C. acaule*), are found in temperate coniferous woods in early spring. Other genera include *Phragmipedium* and *Selenipedium* of the New World tropics, and the tropical Asian *Paphiopedilum*. Many hybrids have been developed.

Lady's slipper (*Cypripedium*)
GRANT HEILMAN

Laemmle \'lem-lē**, Carl** (b. Jan. 17, 1867, Laupheim, Ger.—d. Sept. 24, 1939, Beverly Hills, Calif., U.S.) German-born U.S. film producer. After immigrating to the U.S. in 1884, he worked at various jobs in Chicago before opening a nickelodeon there in 1906 and becoming a leading film distributor. He founded the Independent Motion Picture Co. in 1909 and induced stars such as Mary Pickford to join his studio. Fighting off monopoly control by the Motion Picture Patents Co., he produced 100 short films by 1910. In 1912 he merged with smaller companies to form Universal Pictures, and in 1915 he opened its 230-acre studio in California. His employees included Irving Thalberg and Harry Cohn. He is considered the father of the Hollywood star system. Financial setbacks forced him to sell the company in 1935.

Laetoli \lī-'tō-lē\ **footprints** Several trails of bipedal footprints, presumed to be those of Australopithecus *afarensis*, preserved in volcanic ash at Laetoli in northern Tanzania and dated to approximately 3.5 million years ago. They were discovered in 1978 by a team led by the Leakey family. The footprints indicate that the mechanism of weight and force transference through the early hominin foot was virtually identical to that of modern humans and suggest that two of the individuals, one larger and one smaller, walked together in stride and were close enough to have been touching. See also Lucy.

Laetus \'lī-təs**, Julius Pomponius** *or* **Giulio Pomponio Leto** (b. 1428, Diano, Kingdom of Naples—d. 1497, Rome) Italian humanist. As a youth he decided to dedicate his life to the study of the ancient world. In Rome he gathered other humanists around him in a semisecret society, the Academia Romana. Their celebration of ancient Roman rites aroused the suspicions of Pope Paul II, who briefly dissolved the Academia and imprisoned Laetus and his associates. Laetus's lack of rigour and critical spirit have led modern scholars to treat his writings with caution.

Lafayette, Marie-Joseph-Paul-Yves-Roch-Gilbert du Motier, marquis de (b. Sept. 6, 1757, Chavaniac, France—d. May 20, 1834, Paris) French military leader. Born to an ancient noble family of great wealth, he was a courtier at the court of Louis XVI but sought glory as a soldier. In 1777 he went to America, was appointed a major general, became a close friend of George Washington, and fought with distinction at the Battle of the Brandywine. He returned to France in 1779, persuaded Louis to send a 6,000-man force to aid the colonists, and returned to America in 1780 to command an army in Virginia and help win the Siege of Yorktown. Hailed as "the Hero of Two Worlds," he returned to France in 1782, became a leader of liberal aristocrats, and was elected to the Estates General in 1789. He presented the Declaration of the Rights of Man and of the Citizen to the National Assembly. Elected commander of the national guard of Paris, he sought to protect the king, favouring a constitutional monarchy. When his guards fired on a crowd of petitioners in the Champ de Mars (1791), he lost popularity and resigned his position. He commanded the army against Austria (1792), then defected to the Austrians, who held him captive until 1797. Returning to France, Lafayette became a gentleman farmer. In the Bourbon Restoration, he served in the Chamber of Deputies (1814–24) and commanded the national guard in the July Revolution (1830).

Laffite \lə-'fēt**, Jean** (b. 1780?, France—d. 1825?) French pirate. He led a band of privateers that preyed on Spanish ships and smuggled goods and slaves through New Orleans, where the group lived on islands south of the city. In the War of 1812 the British offered Laffite $30,000 for his allegiance in their planned attack on the city. He warned Louisiana officials of the attack but was not believed. He then offered his aid to Gen. Andrew Jackson, who accepted Laffite's help in the Battle of New Orleans. After the war Laffite returned to privateering against the Spanish.

THE BETTMANN ARCHIVE

Laffitte \lä-'fēt**, Jacques** (b. Oct. 24, 1767, Bayonne, France—d. May 26, 1844, Maisons-sur-Seine) French banker and politician. He became a partner in a Perregaux banking house in 1800 and head of the firm in 1804. As governor of the Bank of France (1814–19), he raised large sums of money for the provisional government in 1814 and for Louis XVIII during the Hundred Days. He saved Paris from a financial crisis in 1818. An early partisan of a constitutional monarchy under Louis-Philippe, he did much to secure Louis-Philippe's accession to the throne, and he briefly served as premier (1830–31) in the July Monarchy.

LaFontaine \lä-fōⁿ-'tan**, Sir Louis Hippolyte, Baronet** (b. Oct. 4, 1807, Boucherville, Lower Canada—d. Feb. 26, 1864, Montreal) Canadian statesman. Called to the bar in Lower Canada in 1829, he began his political career the following year, when he was elected to the provincial assembly for Terrebonne. He supported French-Canadian grievances against the British but opposed the rebellions of 1837–38. After the union of Upper and Lower Canada in 1841, he became the leader of Canada East (formerly Lower Canada). Appointed joint prime minister with Robert Baldwin (1842–43, 1848–51), he established responsible (i.e., representative) government for Canada. His Rebellion Losses Bill to compensate property owners for damages in 1837–38 provoked riots in Montreal but affirmed the strength of the government.

Lagash \'lā-ˌgash\ *modern* **Telloh** \'tel-ō\ Ancient capital in Sumer. It was located midway between the Tigris and Euphrates rivers in Babylonia,

© 2006 Encyclopædia Britannica, Inc.

now in southeastern Iraq. Excavations have uncovered palace and temple ruins as well as CUNEIFORM texts that provide information about Sumer in the 3rd millennium BC. Founded in the Ubaid period (c. 5200–c. 3500 BC), it came under the control of SARGON of Akkad. It later prospered under Gudea, a governor nominally subject to the Guti. It was occupied as late as the Parthian era (247 BC–AD 224).

Lågen River \'lȯ-gən\ River, southeastern Norway. Rising in the Hardanger Plateau, it flows south to empty into the Skagerrak, an arm of the NORTH SEA. With a length of 209 mi (337 km), it is the third longest river in the country.

Lagerfeld, Karl (b. Sept. 10, 1938, Hamburg, Ger.) German fashion designer. After moving to Paris at age 14, he went on to create designs for such established labels as Pierre Balmain, Chloe, Valentino, and Fendi. He is best known as the creative power behind the modern revival of the house of Chanel, which he joined in 1983. Lagerfeld consistently managed to merge the spirit of the times with the chic, timeless identity established by the house's founder, GABRIELLE "COCO" CHANEL, making Chanel one of the most coveted and influential labels in late 20th-century fashion.

Lagerkvist \'lä-gər-ˌkvēst**, Pär (Fabian)** (b. May 23, 1891, Växjö, Swed.—d. July 11, 1974, Stockholm) Swedish novelist, poet, and dramatist. He was involved early in life with socialism and soon began to support literary and artistic radicalism. Though his early works are characterized by extreme pessimism, he declared his faith in humanity with his great prose monologue *The Triumph over Life* (1927). In the 1930s and '40s his writings protested fascism and brutality. The novel *The Dwarf* (1944) was his first best-seller and his first undisputed critical success. He won world recognition with the novel *Barabbas* (1950). He was awarded the Nobel Prize for Literature in 1951.

Lagerlöf \'lä-gər-ˌlœf**, Selma (Ottiliana Lovisa)** (b. Nov. 20, 1858, Mårbacka, Swed.—d. March 16, 1940, Mårbacka) Swedish novelist. She was working as a schoolmistress when she wrote her first novel, *Gösta Berlings saga* (1891), a chronicle of life in her native Värmland. Later works include *Jerusalem* (1901–02), which established her as Sweden's foremost novelist, and *The Wonderful Adventures of Nils* and its sequel (1906–07), a geography reader for children in fantasy form. A naturally gifted storyteller, she rooted her work in legend and saga. In 1909 she became the first woman and the first Swedish writer to win the Nobel Prize for Literature.

Laghouat \lä-'gwät\ Town (pop., 1998 prelim.: 96,342) and oasis, north-central Algeria. At the southern edge of the ATLAS MOUNTAINS, it was built on two hills that are extensions of Mount Tizigarine. It was settled in the 11th century and came under Moroccan and Ottoman control. Seized by the French in 1852, it reverted to Algeria in 1962.

lagoon Area of relatively shallow, quiet water with access to the sea but separated from it by sandbars, barrier islands, or coral reefs. Coastal lagoons have low to moderate tides and constitute about 13% of the world's coastline. Their water is colder than the sea in winter and warmer in summer. In warm regions, evaporation may more than balance any freshwater input and may result in hypersaline water and even the buildup of thick salt deposits. Coral-reef lagoons occur on marginal reefs such as the Great Barrier Reef, but the most spectacular examples, some more than 30 mi (50 km) across, are associated with Pacific ATOLLS.

Lagos \'lā-ˌgäs, 'lä-gəs\ City (pop., 1999: urban agglomeration, 12,763,000) and chief port, Nigeria. It is Nigeria's largest city, built on four main islands—Lagos, Iddo, Ikoyi, and Victoria—that are connected to each other and to the mainland by bridges. Its population is centered on Lagos Island, on the Bight of Benin. Part of the KINGDOM OF BENIN in the 16th century, it was inhabited largely by the Yoruba. Beginning in 1808, as Britain attempted to end the SLAVE TRADE, Lagos came into increasingly greater contact with the British. It was ceded to Britain in 1861, became a crown colony, and was governed from Sierra Leone (1866–74) and as part of the Gold Coast colony (1874–86). Joined with the protectorate of Southern Nigeria in 1906, it was made the capital of the colony of Nigeria in 1914. It was the capital (1960–91) of independent Nigeria until ABUJA became the new capital. It is a major trade and industrial centre.

Lagrange \lä-'grä^{n}zh**, Joseph-Louis** *later* **count de L'Empire** (b. Jan. 25, 1736, Turin, Sardinia-Piedmont—d. April 10, 1813, Paris, France) Italian-born French mathematician who made important contributions to NUMBER THEORY and to classical and celestial mechanics. By age 25 he was recognized as one of the greatest living mathematicians because of his papers on wave propagation (see WAVE motion) and maxima and minima (see MAXIMUM; MINIMUM) of curves. His prodigious output included his textbook *Mécanique analytique* (1788), the basis for all later work in this field. His remarkable discoveries included the Lagrangian, a DIFFERENTIAL OPERATOR characterizing a system's physical state, and the Lagrangian points, points in space where a small body in the gravitational fields of two large ones remains relatively stable.

Laguna de Bay See Laguna de BAY

Laguna Madre See Laguna MADRE

Lahn River River, western Germany. A tributary of the RHINE RIVER, it rises in western Germany and after a southerly course reaches the Rhine at Lahnstein. It is 152 mi (245 km) long. Small barges are able to navigate to Giessen on the partly canalized river.

Lahore \lə-'hōr\ City (pop., 1998: 5,143,495), capital of Punjab province, northeastern PAKISTAN. The second largest city of Pakistan, it lies in the upper Indus plain on the RAVI RIVER. It was the capital of the Ghaznavid dynasty in the 12th century and was captured by the Mughal BĀBUR's troops in 1524; it was later under AKBAR and Jahāngīr. Ruled by Sikhs in the early 19th century, it passed to the British in 1849. After Indian independence, Lahore became part of Pakistan in 1947. It is the site of the mosque of Wazir Khan (1634); a mosque built by AURANGZEB; and the Shalimar gardens, laid out in 1641. It is the seat of Pakistan's oldest educational institution, the University of the Punjab (founded 1882).

Laibach \'lī-bäk**, Congress of** (Jan. 26–May 12, 1821) Meeting of the HOLY ALLIANCE powers that set the conditions for Austrian intervention in and occupation of the Kingdom of the Two Sicilies in action against the Neapolitan revolution (1820). The congress proclaimed its hostility to revolutionary regimes, agreed to abolish the Neapolitan constitution, and authorized the Austrian army to restore the absolutist monarchy. The British and French protested the decision.

Laing \'laŋ**, R(onald) D(avid)** (b. Oct. 7, 1927, Glasgow, Scot.—d. Aug. 23, 1989, St. Tropez, France) Scottish psychiatrist. In his widely read and highly controversial book *The Divided Self* (1960), his analysis of SCHIZOPHRENIA led him to theorize that insecurity about one's existence prompts a defensive reaction in which the self splits into separate components, generating psychotic symptoms, and he opposed standard schizophrenia treatments such as hospitalization and electroshock. He even opposed the concept of mental illness, viewing it as induced by family relationships and society, and radically reconceived the role of the psychiatrist. He later modified some of his controversial positions.

laissez-faire \ˌle-sā-'fer\ *French* **"allow to do"** Policy dictating a minimum of governmental interference in the economic affairs of individuals and society. It was promoted by the PHYSIOCRATS and strongly supported by Adam SMITH and JOHN STUART MILL. Widely accepted in the 19th century, laissez-faire assumed that the individual who pursues his own desires contributes most successfully to society as a whole. The function of the state is to maintain order and avoid interfering with individual initiative. The popularity of the laissez-faire doctrine waned in the late 19th century, when it proved inadequate to deal with the social and economic problems caused by INDUSTRIALIZATION. See also CLASSICAL ECONOMICS.

lake Relatively large body of slow-moving or standing water that occupies an inland basin. Lakes are most abundant in high northern latitudes and in mountain regions, particularly those that were covered by GLACIERS

© 2006 Encyclopædia Britannica, Inc.

in recent geologic times. The primary sources of lake water are melting ice and snow, springs, rivers, runoff from the land surface, and direct precipitation. In the upper part of lakes there is a good supply of light, heat, oxygen, and nutrients, well distributed by currents and turbulence. As a result, a large number of diverse aquatic organisms can be found there. The most abundant forms are PLANKTON (chiefly DIATOMS), ALGAE, and flagellates. In the lower levels and in the sediments, the main forms of life are bacteria. See also LIMNOLOGY.

Lake Clark National Park and Preserve National park, southern Alaska, U.S. Located on the western shore of Cook Inlet, it was proclaimed a national monument in 1978 and a national park in 1980. Its total area is 3,653,000 acres (1,478,300 hectares). Lake Clark, more than 40 mi (65 km) long, is the largest of its glacial lakes; it feeds rivers that provide the most important spawning ground for red salmon in North America. The park includes glaciers, waterfalls, and active volcanoes.

Lake District Mountainous region, administrative county of Cumbria, northwestern England. Roughly coextensive with Lake District National Park, the country's largest, it occupies an area of 866 sq mi (2,243 sq km). It contains numerous lakes, including WINDERMERE (England's largest), Grasmere, and Coniston Water, as well as England's highest mountains, the loftiest being Scafell Pike, which rises to 3,210 ft (978 m). The district was home to several English poets, including WILLIAM WORDSWORTH, ROBERT SOUTHEY, and SAMUEL TAYLOR COLERIDGE, who celebrated its landscape. It became a national park in 1951.

Lake Dwellings Remains of various pre- and post-BRONZE AGE settlements within the margins of lakes in southern Germany, Switzerland, France, and Italy. The dwellings appear to have been built on platforms supported by piles above the water surface or above swampy areas along the water's edge. The platforms supported one- or two-room rectangular huts with beaten clay floors. Cattle and sheep were raised in some of the structures. Most dwellings seem to have burned, either by accident or by attack. Because the Lake Dwellers usually rebuilt new villages on the remains of the old, archaeologists were able to work out a cultural sequence confirming that the Bronze Age immediately followed the STONE AGE. See also CRANNOG.

Lake of the Ozarks See Lake of the OZARKS

Lake of the Woods See Lake of the WOODS

Lake Placid Village (pop., 2000: 2,638), northeastern New York, U.S., on Mirror Lake and Lake Placid, in the ADIRONDACK MOUNTAINS. The site was settled in 1800, but it was abandoned after crop failures. Resettled during the 1840s, it was promoted in 1850 as a summer resort, and MELVIL DEWEY founded the Lake Placid Club there in 1895. It is a year-round recreation area with numerous hotels, golf courses, ski resorts, and mountain scenery. It was the scene of the OLYMPIC GAMES in 1932 and 1980.

lake trout *or* **Mackinaw trout** *or* **Great Lakes trout** *or* **salmon trout** Large, voracious CHAR (*Salvelinus namaycush*) found widely from northern Canada and Alaska to New England and the Great Lakes, usually in deep, cool lakes. They are greenish gray and covered with pale spots. In spring, 5-lb (2.3-kg) lake trout are caught in shallow water; in summer, fish of up to 100 lbs (45 kg) are trolled in deep water. Lake trout were virtually eliminated from the Great Lakes by the sea LAMPREY, which entered through the Welland Canal in the 1930s. They have been introduced in the western U.S., South America, Europe, and New Zealand.

Lake Turkana remains Collection of HOMININ fossils found along the shores of Lake Turkana (Lake RUDOLF) in northwestern Kenya. The Koobi Fora site, excavated by the LEAKEY FAMILY and others, has proved to be the richest trove of hominin remains anywhere in the world, yielding fossils that represent perhaps 230 individuals, including members of *HOMO HABILIS*, *HOMO ERECTUS*, and *AUSTRALOPITHECUS*. On the western shore was found a remarkably well-preserved skeleton of an 11-year-old boy ("Turkana Boy") later classified as *H. ergaster* or *H. erectus* and dated to c. 1.8 million years ago. This surprisingly human specimen suggests that *H. ergaster* may have been the direct ancestor of the hominins that left Africa for Eurasia c. 1 million years ago. See also HUMAN EVOLUTION.

Lakewood Township (pop., 2000: 60,352), eastern New Jersey, U.S. Located southwest of Asbury Park, it was settled by the Dutch and English in 1800, and it was known successively as Three Partners' Mill, Washington's Furnace, Bergen Iron Works, and Bricksburg. It is now a popular resort and recreation area, and its population has tripled since the 1960s.

Lakshadweep \lək-'shäd-ˌwēp\ Union territory (pop., 2001 prelim.: 60,595) of India. Located in the Arabian Sea off India's southwestern coast, it includes 27 islands (10 of which are inhabited), with a total land area of 12 sq mi (32 sq km). The capital is KAVARATTI. Once ruled by the Hindu Kulashekhara dynasty, it became part of an Islamic dominion in the 12th century. Britain gained sovereignty over it in the 18th century and assumed direct administration in 1908. It passed to India in 1947 and became the nation's smallest union territory in 1956. Coconut palms are the agricultural mainstay, while fishing is the chief industry.

Lakshmi *or* **Laksmi** \'lək-shmē\ Hindu and Jain goddess of wealth and good fortune. The consort of VISHNU, she is said to have taken different forms to be with him in each of his incarnations. She is a principal object of worship during DIVALI, when her presence is sought in homes, temples, and businesses for the whole of the year to come.

Lalique \lä-'lēk**, René (Jules)** (b. April 6, 1860, Ay, Fr.—d. May 5, 1945, Paris) French jeweler and glassmaker. Trained in Paris and London, he opened his own firm in Paris in 1885 and soon acquired clients such as SARAH BERNHARDT. Reacting against machine-produced jewelry featuring precious gems, he designed elegant and fantastic jewelry with less conventional gemstones (tourmaline, cornelian, etc.) and materials such as horn. His designs contributed significantly to the ART NOUVEAU movement and later the ART DECO movement. His interest in architectural glass led him to develop the style of molded glass for which he is famous, characterized by iced surfaces, elaborate patterns in relief, and occasionally applied or inlaid colour.

Enamel, glass, and topaz hair ornament and brooch by Lalique, 1900; in the Victoria and Albert Museum, London
COURTESY OF THE VICTORIA AND ALBERT MUSEUM, LONDON

lama In TIBETAN BUDDHISM, a spiritual leader. Some lamas are considered to be reincarnations of their predecessors; others have won respect for their high level of spiritual development. The most honored of the reincarnate lamas is the DALAI LAMA; second in spiritual authority is the PANCHEN LAMA. The process of discovering the new incarnation of a lama, especially the Dalai Lama, is elaborate and exacting. Oracular messages, unusual signs during the lama's death or during a birth thereafter, and examinations of candidates identify a successor. The child thus identified as the lama's incarnation is given extensive monastic training from an early age.

Lamar \lə-'mär**, Mirabeau Buonaparte** (b. Aug. 16, 1798, Louisville, Ga., U.S.—d. Dec. 19, 1859, Richmond, Texas) U.S. politician. After an unsuccessful career as a merchant in Alabama, he served as secretary to the governor of Georgia and later became editor of a newspaper favouring states' rights. He then moved to Texas, where he became involved in the independence struggle against Mexico. As a cavalry commander, he helped win the Battle of San Jacinto (1836) and was later appointed secretary of war in the provisional Texas government. He was elected vice president of the Republic of Texas under SAM HOUSTON, whom he succeeded as president (1838–41). He initially opposed annexation to the U.S., but after 1844 he advocated statehood to ensure the continuation of slavery.

Lamarck \lə-'märk**, Jean-Baptiste de Monet, knight de** (b. Aug. 1, 1744, Bazentin-le-Petit, Picardy, France—d. Dec. 18, 1829, Paris) French biologist. He is credited with the first use of the word *biology* (1802). He was one of the originators of the modern concept of the museum collection, an array of objects whose arrangement constitutes a classification under institutional sponsorship, maintained and kept up-to-date by knowledgeable specialists. He seems to have been the first to relate fossils to the living organisms to which they corresponded most closely. His notion that acquired traits could be inherited (called Lamarckism) was discredited after the 1930s by most geneticists except in the Soviet Union, where it dominated Russian genetics until the 1960s (see TROFIM LYSENKO). See also CHARLES DARWIN; DARWINISM.

Lamartine \lä-mär-'tēn**, Alphonse de** (b. Oct. 21, 1790, Mâcon, France—d. Feb. 28, 1869, Paris) French poet and statesman. After brief military service under LOUIS XVIII, he turned to literature, writing verse tragedies and elegies. He is chiefly remembered for his successful first collection of poetry, the musical, evocative *Méditations poétiques* (1820), which established him as a key figure in French ROMANTICISM. From 1830 he was active in politics, speaking for the working classes. After France's SECOND REPUBLIC was proclaimed in 1848, he briefly headed the provisional government until the revolution was crushed. In later years he published novels, poetry, and historical works in a vain struggle against bankruptcy.

Lamashtu \lä-'mäsh-tü\ In MESOPOTAMIAN RELIGION, the most terrible of all female demons. The daughter of the sky god ANU, Lamashtu killed children, consumed human flesh and blood, blighted plants, spoiled rivers and streams, sent nightmares, caused miscarriages, and brought disease. She had seven names and was often described in incantations as "seven witches." She was portrayed on amulets as a lion- or bird-headed female figure kneeling on an ass, holding a double-headed serpent in each hand and suckling dogs or pigs at her breasts.

lamb Live SHEEP before the age of one year, and the flesh of such animals. The flesh of the mature ram or ewe at least one year old is called mutton; the meat of sheep 12–20 months old may be called yearling mutton. The meat of sheep 6–10 weeks old is usually sold as baby lamb, and spring lamb comes from sheep 5–6 months old. The primary lamb- and mutton-consuming countries (on a per capita basis) are New Zealand and Australia.

Lamb, Charles (b. Feb. 10, 1775, London, Eng.—d. Dec. 27, 1834, Edmonton, Middlesex) English essayist and critic. Lamb was employed as a clerk at East India House (headquarters for the East India Company) from 1792 to 1825. From 1796 he was guardian of his sister, the writer Mary Lamb (1764–1847), who, in a fit of madness (which proved recurrent), had killed their mother. He is best known for the often autobiographical essays he wrote under the pseudonym Elia for *London Magazine*, collected in *Essays of Elia* (1823) and *The Last Essays of Elia* (1833). Among the greatest of English letter writers, he included some of his most perceptive literary criticism, often in the form of marginalia, in letters. He collaborated with Mary on *Tales from Shakespear* (1807), a highly popular retelling of the plays for children.

lamb's ears *or* **lamb's ear** Widely cultivated perennial herb (*Stachys byzantina*, or *S. olympica*) of the MINT family, native to South Asia. Covered with densely matted hairs, its silver-green leaves, which provide a pleasing contrast to green leaves and to bright- or soft-coloured flowers, make lamb's ears a hardy favourite in perennial gardens of the northeastern U.S.

Lamennais \lȧm-'ne**, (Hugues-) Félicité (-Robert de)** (b. June 19, 1782, Saint-Malo, France—d. Feb. 27, 1854, Paris) French priest and philosopher. With his brother Jean, he sketched a program of church reform in *Reflections on the State of the Church* (1808) and in 1814 produced a defense of ultramontanism (papal authority). Ordained a priest in 1816, he wrote the acclaimed *Essay on Indifference Toward Religion* (1817–23), which argued for the necessity of religion. After the JULY REVOLUTION (1830), he cofounded the journal *L'Avenir* to advocate democratic principles and church-state separation. Its principles were condemned by the pope in 1832. Lamennais's *The Words of a Believer* (1834), written in response, provoked another papal encyclical and led to Lamennais's severance from the church. Thereafter he wrote in the cause of republicanism and socialism.

Lamerie \lȧm-'rē**, Paul de** (b. April 9, 1688, 's Hertogenbosch, Neth.—d. Aug. 1, 1751, London, Eng.) Dutch-born British silversmith. His Huguenot parents had left France in the early 1680s and settled in England by 1691. After an apprenticeship with a London goldsmith, he registered his mark and opened a shop in 1713. Early in his career he made simple vessels such as tankards and teapots in an unadorned QUEEN ANNE STYLE; later he used more ornamentation. By the 1730s he had established his own version of the ROCOCO STYLE, seen in a 1737 cup with handles in the form of snakes.

laminar flow Fluid flow in which the fluid travels smoothly or in regular paths. The VELOCITY, PRESSURE, and other flow properties at each point in the fluid remain constant. Laminar flow over a horizontal surface may be thought of as consisting of thin layers, all parallel to each other, that slide over each other. It is common only where the flow channel is relatively small, the fluid is moving slowly, and its VISCOSITY is relatively high. Examples include the flow of oil through a thin tube and blood flow through capillaries. See also TURBULENT FLOW.

L'Amour \lä-'mȯr-, lä-'můr**, Louis** *orig.* **Louis Dearborn LaMoore** (b. March 22, 1908, Jamestown, N.D., U.S.—d. June 10, 1988, Los Angeles, Calif.) U.S. author of westerns. He left school at age 15 and traveled the world before beginning his writing career in the 1940s. He used pseudonyms, including Tex Burns and Jim Mayo, until *Hondo* (1953) became a successful film. His more than 100 works, mostly formula westerns that convincingly portray frontier life, have sold 200 million copies in 20 languages, and more than 30—including *Kilkenny* (1954), *The Burning Hills* (1956), *Guns of the Timberland* (1955), and *How the West Was Won* (1963)—were the basis of films.

lamprey \'lam-prē, 'lam-ˌprā\ Any of about 22 species of primitive, jawless fishes (with HAGFISHES in class Agnatha). Lampreys live in coastal and freshwater in temperate regions worldwide except Africa. Eel-like, scaleless animals, they are 6–40 in. (15–100 cm) long. Lampreys have well-developed eyes, a single nostril on top of the head, a cartilaginous skeleton, and a sucking mouth with horny teeth surrounding the round opening. They spend years as burrowing larvae; adults of most species move into the sea. They attach to fish with their mouth and feed on their host's blood and tissues. Some species will remain in freshwater, notably the sea lamprey, which entered the Great Lakes and nearly eliminated LAKE TROUT and other commercially important fishes there.

Lamprey (*Lampetra*) on rainbow trout.
OXFORD SCIENTIFIC FILMS/BRUCE COLEMAN LTD.

Lampsacus \'lamp-sə-kəs\ Ancient Greek colony on the Asian shore of the DARDANELLES. It was famous for its wines and was the chief seat of the worship of PRIAPUS. Colonized in 654 BC by Ionian Phocaea, it took part in the Ionian revolt against the Persian Achaemenian dynasty in 499 and later joined the DELIAN LEAGUE. When Athens fell in 405, it again came under Persian control until ALEXANDER THE GREAT captured it in 334. It was the home of the philosopher Strato of Lampsacus.

present-day Thailand; its capital was the city of Chiang Mai. Lan Na was a powerful state and a centre for the spread of Theravada Buddhism. Under Tilokaracha (r. 1441–87) it was famous for its Buddhist scholarship and literature. It remained independent until it was conquered by Myanmar (Burma) in the 16th century. The Siamese did not reassert control over the area until the 19th century.

Lan Sang \'län-'säŋ\ *or* **Lan Xang** \'län-'shäŋ\ *or* **Lan Chang** \'län-'chäŋ\ Laotian kingdom that flourished from the 14th century until it was split into two separate kingdoms in the 18th century. Conflict with its neighbours forced Lan Sang's rulers to move the capital from Luang Prabang to Vientiane in 1563, but the kingdom maintained its power.

Lancashire \'laŋ-kə-ˌshir\ Administrative (pop. 2001: 1,134,976), historic, and geographic county, northwestern England. The administrative county comprises 12 districts. In the early Middle Ages it was a province of the Anglo-Saxon kingdom of Northumbria. The region included the ancestral lands of the house of Lancaster. In the Industrial Revolution it became an important manufacturing region and a centre of the textile industry. Lancaster and Preston are its major market and industrial cities; it also has resort towns, including Blackpool, on the Irish Sea.

Lancaster, Burt(on Stephen) (b. Nov. 2, 1913, New York, N.Y., U.S.—d. Oct. 20, 1994, Century City, Calif.) U.S. film actor. He toured with circuses as an acrobat in the 1930s and served in North Africa and Italy during World War II. He first appeared in movie houses in *The Killers* (1946), which made him a star. He was noted for his portrayals of physically tough, emotionally sensitive characters. Lancaster's many films include *Come Back, Little Sheba* (1952), *From Here to Eternity* (1953), *The Rose Tattoo* (1955), *Sweet Smell of Success* (1957), *Elmer Gantry* (1960, Academy Award), *The Birdman of Alcatraz* (1962), *The Leopard* (1963), *Atlantic City* (1981), *Local Hero* (1983), and *Field of Dreams* (1989).

Lancaster, house of Cadet branch of the house of Plantagenet that provided three kings of England in the 15th century (Henry IV, Henry V, Henry VI). The family name first appeared in 1267, when the title of earl of Lancaster was granted to Henry III's son Edmund (1245–96). Edmund's grandson Henry (d. 1361) became the 1st duke of Lancaster, and the inheritance fell to his youngest daughter, Blanche, and to her husband, John of Gaunt. His son, Henry of Lancaster, became King Henry IV, and the duchy of Lancaster was merged in the crown. The Lancaster dynasty ended after the defeat of Henry VI by Edward IV of the house of York (see Wars of the Roses), and the Lancaster claims were passed on to the house of Tudor.

lancelet See amphioxus

Lancelot *or* **Launcelot** \'lan-sə-ˌlät, 'lan-sə-ˌlət\ One of the greatest knights in Arthurian legend, the lover of Guinevere and the father of Galahad. He first appeared in a 12th-century romance by Chrétien de Troyes, and he is a major character in Sir Thomas Malory's *Morte Darthur*. His full name, Sir Lancelot du Lac, refers to his upbringing by the Lady of the Lake, the enchantress who carried him off in infancy and trained him to be a model of chivalry before sending him to Arthur's court. There he became the favorite of King Arthur and the lover of Queen Guinevere. His adultery with Guinevere caused him to fail in the quest for the grail and set in motion the events that led to the destruction of Camelot. He was displaced as the model knight by Galahad, his son by the grailkeeper's daughter Elaine.

Lancet, The British medical journal established in 1823, published weekly from New York and London. Its founder and first editor, Thomas Wakley, considered at the time a radical reformer, stated that the intent of the new journal was to report on hospital lectures and describe important cases of the day. It has since played a significant role in medical and hospital reform movements in Britain and has become a highly prestigious medical journal around the world.

Lanchester \'lan-chəs-tər**, Frederick William** (b. Oct. 23, 1868, London, Eng.—d. March 8, 1946, Birmingham, Warwickshire) British automobile and aeronautics pioneer. Lanchester produced the first British automobile, a one-cylinder, five-horsepower model, in 1896. After he successfully produced improved models, financial backing enabled him to produce several hundred cars over the next few years, vehicles notable for a relative freedom from vibration, a graceful appearance, and a luggage rack. He published an important paper (1897) on the principles of heavier-than-air flight and later major texts on aeronautics.

Lancisi \län-'chē-zē**, Giovanni Maria** (b. Oct. 26, 1654, Rome, Papal States—d. Jan. 20, 1720, Rome) Italian anatomist and epidemiologist. He related the prevalence of malaria in swampy areas to the presence of mosquitoes and recommended swamp drainage to prevent it. He linked an increase in sudden deaths in Rome to causes such as hemorrhagic stroke, cardiac enlargement and dilation, and growths on heart valves and explored causes of heart enlargement. He also provided the first description of syphilitic aneurysms.

land In economics, the resource that encompasses the natural resources used in production. In classical economics, the three factors of production are land, labour, and capital. Land was considered to be the "original and inexhaustible gift of nature." In modern economics, it is broadly defined to include all that nature provides, including minerals, forest products, and water and land resources. While many of these are renewable resources, no one considers them "inexhaustible." The payment to land is called rent. Like land, its definition has been broadened over time to include payment to any productive resource with a relatively fixed supply.

Land, Edwin (Herbert) (b. May 7, 1909, Bridgeport, Conn., U.S.—d. March 1, 1991, Cambridge, Mass.) U.S. inventor and physicist. After briefly attending Harvard University, he cofounded the Land-Wheelwright Laboratories in Boston in 1932. Interested in light polarization, in 1932 he developed the polarizer (which he called the Polaroid J sheet), for which he envisioned numerous uses. By 1936, Land began to use types of Polaroid material in sunglasses and other optical devices. It was later used in camera filters and other optical equipment. In 1937 Land founded the Polaroid Corp. in Cambridge, Mass. In 1947 he demonstrated the revolutionary Polaroid Land Camera, which produced a finished print in 60 seconds; he introduced colour Polaroid film in 1963. His interest in light and colour resulted in a new theory of colour perception. He received more than 500 patents.

Land-Grant College Act of 1862 *or* **Morrill Act** Act of the U.S. Congress (1862) that provided grants of land to states to finance the establishment of colleges specializing in "agriculture and the mechanic arts." Named for its sponsor, Vermont Congressman Justin Smith Morrill (1810–98), it granted each state 30,000 acres (12,140 hectares) for each of its congressional seats. Funds from the sale of the land were used by some states to establish new schools; other states turned the money over to existing state or private colleges to create schools of agriculture and mechanic arts (known as "A&M" colleges). The military training required in the curriculum of all land-grant schools led to the establishment of the Reserve Officers Training Corps, an educational program for future army, navy, and air force officers. The second Morrill Act (1890) initiated regular appropriations to support land-grant colleges, which came to include 17 predominantly African American colleges and 30 American Indian colleges.

land mine Explosive charge buried just below the surface of the earth, used in military operations against troops and vehicles. It may be fired by the weight of vehicles or troops on it, the passage of time, or remote control. Though improvised land mines (buried artillery shells) were used in World War I, they only became important in warfare during World War II and have been widely used since. Most early mines had metal cases; later models were sometimes made of other materials to prevent magnetic detection. They are typically used to disrupt or prevent the massed attack of tanks or infantry, but in post–World War II conflicts they have also been used to render land useless to enemy civilian populations. A treaty banning land mines—not signed by the U.S., Russia, and China—went into effect in 1997. See also submarine mine.

land reform Deliberate change in the way agricultural land is held or owned, the methods of its cultivation, or the relation of agriculture to the rest of the economy. The most common political objective of land reform is to abolish feudal or colonial forms of landownership, often by taking land away from large landowners and redistributing it to landless peas-

© 2006 Encyclopædia Britannica, Inc.

ants. Other goals include improving the social status of peasants and coordinating agricultural production with industrialization programs. The earliest record of land reform is from 6th-century-BC Athens, where SOLON abolished the debt system that forced peasants to mortgage their land and labour. The concentration of land in the hands of large landowners became the rule in the ancient world, however, and remained so through the Middle Ages and the Renaissance. The FRENCH REVOLUTION brought land reform to France and established the small family farm as the cornerstone of French democracy. SERFDOM was abolished throughout most of Europe in the 19th century. The Russian serfs were emancipated in 1861, and the RUSSIAN REVOLUTION OF 1917 introduced collectivization of agriculture, attended by loss of capital and devastating famines. Land reform was instituted in a number of other countries where communists came to power, notably China. It remains a potent political issue in many parts of the world. See also ABSENTEE OWNERSHIP.

land tenure, feudal See FEUDAL LAND TENURE

Landau \län-'daù**, Lev (Davidovich)** (b. Jan. 22, 1908, Baku, Azerbaijan, Russian Empire—d. April 1, 1968, Moscow, Russia, U.S.S.R.) Soviet physicist. After graduating from Leningrad State University, he studied at NIELS BOHR's institute in Copenhagen. He is known for his work in low-temperature physics, atomic and nuclear physics, and solid-state, stellar-energy, and plasma physics. For explaining the phenomenon of liquid HELIUM, he was awarded a 1962 Nobel Prize. For his work in many areas of physics, his name is applied to Landau diamagnetism, Landau levels, Landau damping, the Landau energy spectrum, Landau cuts, and the Landau Institute for Theoretical Physics in Moscow.

Landers, Ann *orig.* **Esther Pauline Friedman** (b. July 4, 1918, Sioux City, Iowa, U.S.—d. June 22, 2002, Chicago, Ill.) U.S. newspaper columnist. She took over an advice column in the *Chicago Sun-Times* in 1955, adopting her now-familiar pseudonym, and made it into the most widely syndicated advice column in the U.S.; by the early 21st century her column appeared in more than 1,200 newspapers and had some 90 million readers. Her twin sister, Pauline, has written the competitive and equally well-known "Dear Abby" advice column (originally for the *San Francisco Chronicle*) since 1956.

Landini \län-'dē-nē**, Francesco** *or* **Francesco Landino** (b. c. 1335, Fiesole, near Florence—d. Sept. 2, 1397, Florence) Italian composer, organist, and poet. Blinded by smallpox as a child, he took up the study of music and the organ. He later became an organ builder as well as a composer, lyricist, and performer of more than 150 beautifully melodic two- and three-part songs. Landini's works represent about a quarter of the music that survives from the Italian ARS NOVA (14th century).

Landis, Kenesaw Mountain (b. Nov. 20, 1866, Millville, Ohio, U.S.—d. Nov. 25, 1944, Chicago, Ill.) U.S. federal judge and first commissioner of professional baseball. Landis was named for a Georgia mountain where his father had been wounded as a Civil War soldier. He practiced law in Chicago (1891–1905) before being appointed a U.S. district judge (1905–22). In 1907 he presided over a famous case in which Standard Oil Co. was found guilty of granting unlawful freight rebates and fined $29 million (his decision was later reversed). He was named baseball commissioner in 1920 in the aftermath of the BLACK SOX SCANDAL and became noted for his uncompromising measures to preserve the game's integrity. Though widely disliked for his stern, autocratic rule, he kept the post until his death.

Landis, 1928
UPI-EB INC.

ländler \'lent-lər\ Traditional couple dance of Austria and Bavaria. A gliding and turning dance to music in ¾ time, it was popular in the 18th–19th century in Vienna and influenced the later development of the WALTZ. Composers such as WOLFGANG AMADEUS MOZART, FRANZ SCHUBERT, ANTON BRUCKNER, and GUSTAV MAHLER wrote *ländlers* and *ländler*-inspired works.

landlord and tenant Parties to the leasing of real estate, whose relationship is bound by contract. The landlord, or lessor, is the owner; the tenant, or lessee, supplies payment in order to enjoy possession and use of the property for a specified period. Important forms of tenancy include tenancy for a fixed period, periodic (seasonal) tenancy, tenancy at will, and holdover tenancy (whereby a tenant remains after the contract has ended). See also REAL AND PERSONAL PROPERTY, RENT.

Landon, Alf *orig.* **Alfred Mossman Landon** (b. Sept. 9, 1887, West Middlesex, Pa., U.S.—d. Oct. 12, 1987, Topeka, Kan.) U.S. politician. He received a law degree from the University of Kansas in 1908 and entered the oil business in 1912. He became active in Progressive Party politics and campaigned in Kansas for the party's 1912 presidential candidate, THEODORE ROOSEVELT. He was elected governor of Kansas in 1932 and again in 1934, the only incumbent Republican governor to be reelected that year. As the Republican candidate in the presidential election of 1936 he lost in a landslide to Democratic incumbent FRANKLIN D. ROOSEVELT.

Landor, Walter Savage (b. Jan. 30, 1775, Warwick, Warwickshire, Eng.—d. Sept. 17, 1864, Florence, Italy) British writer. He was educated at Rugby School and Oxford but left both over disagreements with the authorities. A classicist, he originally wrote many of his works in Latin. Though he wrote lyrics, plays, and heroic poems, he is best remembered for his multivolume *Imaginary Conversations*, prose dialogues between historical personages (1824–53). He spent much of his life in France and Italy.

Landowska \lan-'dȯf-skə**, Wanda (Louise)** (b. July 5, 1879, Warsaw, Pol., Russian Empire—d. Aug. 16, 1959, Lakeville, Conn., U.S.) Polish-born U.S. harpsichordist and pianist. After establishing herself as a pianist and devoting much energy to musicological research, she had a harpsichord made for her by Pleyel in Paris. She first performed on this instrument at the Breslau Bach Festival in 1912, thus beginning the 20th-century revival of the instrument and sparking a new international interest in authentic performance practice. Her many recordings include the first recording of JOHANN SEBASTIAN BACH's *Goldberg Variations*, and she commissioned works such as MANUEL DE FALLA's *Harpsichord Concerto* and FRANCIS POULENC's *Concert champêtre*. As a Jew she was forced to flee the Nazis, and after 1940 she lived and taught in the U.S.

Landrum-Griffin Act (1959) Legislation in the U.S. designed to counter labour-union corruption. Officially called the Labor-Management Reporting and Disclosure Act, it instituted federal penalties for labour officials who misused union funds or prevented union members from exercising their legal rights. The legislation was passed in response to Senate investigations that uncovered connections between labour and ORGANIZED CRIME. Provisions included a strict ban on secondary boycotts (union efforts to stop one employer from dealing with another employer who is being struck or boycotted) and greater freedom for individual states to set the terms of labour relations within their borders.

Land's End Westernmost peninsula, CORNWALL, England. Its tip is the southwesternmost point of England and lies about 870 mi (1,400 km) from JOHN O' GROATS, traditionally considered the northernmost point of Britain. Off its coast lie dangerous reefs, one group of which, a mile from the mainland, is marked by the Longships lighthouse.

Landsat *officially* **Earth Resources Technology Satellites** Any of a series of unmanned U.S. scientific satellites. The first three were launched in 1972, 1975, and 1978. They were designed mainly to collect information about Earth's natural resources. They were also equipped to monitor atmospheric and oceanic conditions and to detect variations in pollution levels and other ecological changes. Three more Landsat satellites were launched successfully, in 1982, 1984, and 1999; radio communication with Landsat 6 was lost immediately after its launch in 1993.

landscape gardening Process of arranging land, plants, and objects for human use and enjoyment, usually with long and close-up views. Cyclical growth and seasonal changes provide a continuous sense of time and natural rhythms that is absent in buildings and sculptures. GARDENS and designed landscapes fill in the open areas in cities and create continuity between urban structures and open rural lands beyond. Landscape-gardening areas may be of any size, from small urban courtyards and suburban gardens to many thousands of acres in regional, state, or national

© 2006 Encyclopædia Britannica, Inc.

parks. Every landscape garden reflects attitudes toward nature and humans, revealing much about a culture and a period.

Landseer, Sir Edwin (Henry) (b. March 7, 1802, London, Eng.—d. Oct. 1, 1873, London) British painter and sculptor. He studied with his father, an engraver and writer, and at the Royal Academy. He specialized in animals and developed great skill in depicting animal anatomy; he sometimes humanized his animal subjects to the point of sentimentality or moralizing (e.g., *Dignity and Impudence*, 1839). He achieved great professional and social success and was a favourite painter of Queen Victoria. He was elected to the Royal Academy in 1831 and knighted in 1850. As a sculptor, he is best known for his bronze lions at the base of Nelson's Column in Trafalgar Square (unveiled 1867).

landslide The movement of a mass of rock or soil down a slope. The term is used to describe a variety of phenomena, from rock falls to the gradual downhill flow of soil. Landslides occur when the force of gravity acting on the materials within a slope overcomes the material's resistance to shearing. Among the processes that can lead to a landslide are the steepening of a slope by natural erosion or excavation, the overloading of the slope by an inflow of water, and the motion caused by an earthquake.

Lane, Burton *orig.* **Burton Levy** (b. Feb. 2, 1912, New York, N.Y., U.S.—d. Jan. 5, 1997, New York City) U.S. songwriter. Lane worked in Tin Pan Alley, where he came to the attention of George Gershwin. His tunes were featured on Broadway from the early 1930s and were later heard in films, including *Babes on Broadway* (1942). His greatest success came with *Finian's Rainbow* (1947; film, 1968), for which he worked with lyricist E.Y. Harburg. He collaborated with Alan Jay Lerner on the film *Royal Wedding* (1951). Another joint effort with Lerner, *On a Clear Day You Can See Forever* (1965; film, 1970), gave Lane his last notable success.

Lanfranc \ˈlan-ˌfraŋk\ (b. c. 1010, Pavia, Lombardy—d. May 28, 1089, Canterbury, Kent, Eng.) Archbishop of Canterbury (1070–89). An Italian scholar who settled in Normandy, he joined the Benedictine monastery of Bec and was made its prior. He became a trusted adviser of William I (the Conqueror), who made Lanfranc the first abbot of St. Stephen's at Caen and nominated him as archbishop of Canterbury after the Norman Conquest of England. Lanfranc reformed and reorganized the English church, asserted the primacy of Canterbury over York, and introduced the moral components of Gregorian reform. He uncovered a conspiracy against the king (1075), and he secured the succession for William II against Robert II (1087). Lanfranc was also a renowned scholar and theologian who was noted for his criticism of Berengar of Tours's teaching on the Eucharist.

Lanfranco \län-ˈfräŋ-kō**, Giovanni** (b. Jan. 26, 1582, Parma—d. Nov. 30, 1647, Rome) Italian painter. He studied with Agostino Carracci. In 1602 he went to Rome to work with Annibale Carracci in the Farnese Palace. After Annibale's death, he became the leading fresco painter in Rome. His work shows the influence of Correggio's dynamic illusionism. His masterpiece is the *Assumption of the Virgin* in the dome of Sant'Andrea della Valle (1625–27), which he took over from his rival, Domenichino; with its vigorously painted figures floating in the clouds over the viewer, it is a pivotal work of the Baroque period. He worked in Naples 1633–46; his best-known work there is the dome of the chapel of San Gennaro in the cathedral (1641–46).

Lang, Fritz (b. Dec. 5, 1890, Vienna, Austria-Hungary—d. Aug. 2, 1976, Los Angeles, Calif., U.S.) Austrian-born U.S. film director. He studied architecture in Vienna and served in the Austrian army in World War I. While recovering from war wounds, he began to write screenplays. He found work at a movie studio in Berlin, where he later directed successful films such as *Between Two Worlds* (1921), *Dr. Mabuse* (1922), the two-part *The Nibelungen* (1924), the expressionistic *Metropolis* (1926), and *M* (1931). After making the anti-Nazi film *The Last Will of Dr. Mabuse* (1933), he left Germany for Paris and later Hollywood. His U.S. films, which equal his German films in their intensity, pessimism, and visual mastery, include *Fury* (1936), *You Only Live Once* (1937), *Ministry of Fear* (1944), *Rancho Notorious* (1952), and *The Big Heat* (1953). Many of his films deal with fate and man's inevitable working out of his destiny.

Langdell \ˈlaŋ-dᵊl**, Christopher Columbus** (b. May 22, 1826, New Boston, N.H., U.S.—d. July 6, 1906, Cambridge, Mass.) U.S. legal educator. He studied law at Harvard (1851–54) and practiced in New York City until 1870, when he accepted a professorship and then the deanship at Harvard Law School (1870–95). His case method of teaching law, in which students read and discussed original authorities and derived for themselves the principles of the law, eventually became dominant in U.S. law schools. His *Selection of Cases on the Law of Contracts* (1871) was the first case-method textbook.

Lange \ˈlaŋ**, Dorothea** (b. May 26, 1895, Hoboken, N.J., U.S.—d. Oct. 11, 1965, San Francisco, Calif.) U.S. documentary photographer. She studied photography and opened a portrait studio in San Francisco in 1919. During the Great Depression, her photos of homeless men led to her employment by a federal agency to bring the plight of the poor to public attention. Her photographs were so effective that the government established camps for migrants. Her *Migrant Mother* (1936) was the most widely reproduced of all Farm Security Administration pictures. She produced several other photo essays, including one documenting the World War II internment of Japanese-Americans.

Lange, Jessica (b. April 20, 1949, Cloquet, Minn., U.S.) U.S. film actress. She studied mime in Paris and worked as a model in New York before making her movie debut in *King Kong* (1976). She appeared in *All That Jazz* (1979) and *The Postman Always Rings Twice* (1981) and became a star with *Frances* (1982) and *Tootsie* (1982, Academy Award). Noted for her beauty and her ability to reveal the inner psyche of her characters, Lange won praise for her roles in *Country* (1984), *Sweet Dreams* (1985), and *Music Box* (1989) and in the televised versions of *Cat on a Hot Tin Roof* (1984) and *O Pioneers!* (1992). Her later films include *Blue Sky* (1994, Academy Award), *Rob Roy* (1995), *A Thousand Acres* (1997), and *Titus* (1999).

Langer, Susanne K(nauth) (b. Dec. 20, 1895, New York, N.Y., U.S.—d. July 17, 1985, Old Lyme, Conn.) U.S. philosopher. After receiving her Ph.D. from Harvard University in 1926, she taught at Harvard (1927–42) and at Columbia University (1945–50, 1954–61). In *Philosophy in a New Key* (1942), she presented a novel interpretation of the meaning of art. Her *Feeling and Form* (1953) proposed that art, especially music, is a highly articulated form of expression symbolizing intuitive knowledge of life patterns that ordinary language cannot convey. She traced the origin and development of the mind in her three-volume work *Mind: An Essay on Human Feeling*.

Langerhans, islets of *or* **islands of Langerhans** Irregularly shaped patches of endocrine tissue in the pancreas. The normal human pancreas has about one million of them. Beta cells, the most common islet cells, produce insulin to regulate blood glucose. (Inadequate production of insulin is characteristic of diabetes mellitus.) Alpha cells produce an opposing hormone, glucagon, which releases glucose from the liver and fatty acids from fat tissue; these favour insulin release and inhibit glucagon secretion. Delta cells produce somatostatin, which inhibits somatotropin (a major pituitary hormone), insulin, and glucagon; its metabolic role is not clear. Small numbers of another type of cell secrete pancreatic polypeptide, which slows down nutrient absorption. See also endocrine system.

Langland, William (b. c. 1330—d. c. 1400) Presumed author of the poem known as "Piers Plowman." Little is known of his life, though he clearly had a deep knowledge of theology and was interested in the asceticism of St. Bernard de Clairvaux. One of the greatest Middle English alliterative poems, "Piers Plowman" is an allegorical work in the form of a series of dream visions with a complex variety of religious themes; written in simple, colloquial language, it contains powerful imagery.

Langley, Samuel (Pierpont) (b. Aug. 22, 1834, Roxbury, Mass., U.S.—d. Feb. 27, 1906, Aiken, S.C.) U.S. astronomer and aeronautics pioneer. He taught for many years at the future University of Pittsburgh. He studied the effect of solar activity on weather and invented the bolometer (1878), a radiant-heat detector sensitive to extremely small temperature differences. He began conducting experiments on lift and drag of wings by building flying machines, and in 1896 one of his heavier-than-air machines became the first to achieve sustained unmanned flight, flying 3,000 ft (900 m) along the Potomac River.

Langmuir \ˈlaŋ-ˌmyůr**, Irving** (b. Jan. 31, 1881, Brooklyn, N.Y., N.Y., U.S.—d. Aug. 16, 1957, Falmouth, Mass.) U.S. physical chemist. He received a Ph.D. from the University of Göttingen, Ger. As a researcher for General Electric (1909–50), he investigated electrical discharges in gases, electron emission, and the high-temperature surface chemistry of tungsten, making possible a great extension in the life of tungsten-filament

© 2006 Encyclopædia Britannica, Inc.

lightbulbs. He developed a vacuum pump and the high-vacuum tubes used in radio broadcasting. He formulated theories of atomic structure and chemical bond formation, introducing the term covalence. He received a Nobel Prize in 1932.

Langton, Stephen (d. July 9, 1228, Slindon, Sussex, Eng.) English cardinal and archbishop of Canterbury (1207–28). Langton was living in Rome when INNOCENT III nominated him as archbishop of Canterbury to settle a disputed election. When King JOHN refused to allow him into England, the pope excommunicated John (1209). John finally submitted and received Langton in 1213. The new archbishop encouraged baronial opposition to the king but opposed violence. He was present at the signing of the MAGNA CARTA (1215) and influenced its provisions on ecclesiastical liberties.

Langtry, Lillie *orig.* **Emilie Charlotte Le Breton** (b. Oct. 13, 1853, Isle of Jersey, Channel Islands—d. Feb. 12, 1929, Monte-Carlo, Monaco) British actress. She married the socially prominent Edward Langtry in 1874 and later became known as the "Jersey Lily." A famous beauty, she caused a sensation when she became the first society woman to go on the stage, starring in *She Stoops to Conquer* (1881). She played to enthusiastic audiences in England and the U.S., notably in *As You Like It*. Her lovers included the Prince of Wales (later EDWARD VII). After her husband died, she married Hugo de Bathe (1899), and she later remodeled and managed the Imperial Theatre in London (1901–17).

Lillie Langtry
MANSELL COLLECTION

language System of conventional spoken or written symbols used by people in a shared culture to communicate with each other. A language both reflects and affects a culture's way of thinking, and changes in a culture influence the development of its language. Related languages become more differentiated when their speakers are isolated from each other. When speech communities come into contact (e.g., through trade or conquest), their languages influence each other. Most existing languages are grouped with other languages descended "genetically" from a common ancestral language (see historical LINGUISTICS). The broadest grouping of languages is the language family. For example, all the ROMANCE LANGUAGES are derived from Latin, which in turn belongs to the Italic branch of the INDO-EUROPEAN LANGUAGE family, descended from the ancient parent language, Proto-Indo-European. Other major families include, in Asia, SINO-TIBETAN, AUSTRONESIAN, DRAVIDIAN, ALTAIC, and AUSTROASIATIC; in Africa, NIGER-CONGO, AFRO-ASIATIC, and NILO-SAHARAN; and in the Americas, UTO-AZTECAN, MAYA, OTOMANGUEAN, and TUPIAN. Relationships between languages are traced by comparing GRAMMAR and SYNTAX and especially by looking for cognates (related words) in different languages. Language has a complex structure that can be analyzed and systematically presented (see LINGUISTICS). All languages begin as SPEECH, and many go on to develop WRITING systems. All can employ different sentence structures to convey MOOD. They use their resources differently for this but seem to be equally flexible structurally. The principal resources are word order, word form, syntactic structure, and, in speech, INTONATION. Different languages keep indicators of number, person, GENDER, TENSE, mood, and other categories separate from the root word or attach them to it. The innate human capacity to learn language fades with age, and languages learned after about age 10 are usually not spoken as well as those learned earlier. See also DIALECT.

language, philosophy of Philosophical study of the nature and use of natural languages and the relations between language, language users, and the world. It encompasses the philosophical study of linguistic MEANING (see SEMANTICS), the philosophical study of language use in communication (see PRAGMATICS), and philosophical reflection on the nature and scientific status of linguistic theories, known as the philosophy of linguistics. Major areas of investigation have included the theory of reference and the theory of TRUTH. It was the dominant field in ANALYTIC PHILOSOPHY for most the 20th century.

Languedoc \lä^{n}g-'dȯk\ Historical and cultural region, south-central France. Languedoc's name is derived from the traditional language of southern France, in which the word *oc* means "yes" (see OCCITAN LANGUAGE). From 121 BC the region was part of the Roman province of Gallia Narbonensis. With the fall of the Roman Empire, it was controlled by the Visigoths in the 5th century. During the Middle Ages it came under the counts of Toulouse. Religious wars (see ALBIGENSIAN CRUSADE) in the 13th century brought it under the French crown. From the 16th to 18th centuries Languedoc was the scene of Protestant persecution that culminated in the war of the CAMISARDS. Protestant revolt led to its division into *départments*.

Lanier \lə-'nir**, Willie (Edward)** (b. Aug. 21, 1945, Clover, Va., U.S.) U.S. gridiron football player. He was selected to the Little All-America Team while at Morgan State University. An outstanding defensive player, he played middle linebacker for the Kansas City Chiefs (1967–77). He helped the Chiefs defeat the favoured Minnesota Vikings in Super Bowl IV (1970) and was selected to eight consecutive Pro Bowls.

Lansbury, George (b. Feb. 21, 1859, near Halesworth, Suffolk, Eng.—d. May 7, 1940, London) British politician. As a member of the House of Commons (1910–12, 1922–40), he became known as a socialist and poor-law reformer, and he led the British Labour Party from 1931 to 1935. Pacifist in his leanings, he was unwilling to call for economic sanctions against Italy for its aggression in Ethiopia (1935), fearing it might lead to war, and lost his party leadership post. In 1937 he visited ADOLF HITLER and BENITO MUSSOLINI in the vain hope that his personal influence could stop the movement toward war.

Lansdowne, Henry Charles Keith Petty-Fitzmaurice, 5th marquess of (b. Jan. 14, 1845, London, Eng.—d. June 3, 1927, Clonmel, County Tipperary, Ire.) Irish nobleman and British diplomat. He inherited his father's title and wealth in 1866 and served in WILLIAM E. GLADSTONE's Liberal administration. In 1885, as governor-general of Canada (1883–88), he helped settle the rebellion led by LOUIS RIEL. As viceroy of India (1888–94) under a Conservative government, he reorganized the police, reconstituted legislative councils, closed Indian mints to the free coinage of silver, and extended railway and irrigation works. As secretary of war (1895–1900), he was blamed for British unpreparedness in the SOUTH AFRICAN WAR. As foreign secretary (1900–06), he concluded the ENTENTE CORDIALE.

L'Anse aux Meadows \ˌlans-ō-'me-ˌdōz\ Site on the northern tip of Newfoundland of the first known European settlements in the New World. Norse settlers may have established as many as three settlements there near the end of the 10th century. After initially fighting each other, the Norse settlers and the Inuit (whom the Norse called Skraeling) established a regular trade relationship. The settlements were soon abandoned, probably as the Norse withdrew from Greenland.

Lansing City (pop., 2000: 119,128), capital of Michigan, U.S. Located on the Grand River at its junction with the Red Cedar River, it was a recently settled site when the state capital was moved there from DETROIT in 1847. Originally called Michigan, it adopted the name Lansing in 1848. Auto manufacturing began there in the late 19th century, and it is now a major automobile production centre. Adjacent East Lansing is the home of Michigan State University.

Lansky, Meyer *orig.* **Maier Suchowljansky** (b. July 4, 1902, Grodno, Russia—d. Jan. 15, 1983, Miami Beach, Fla., U.S.) Russian-born U.S. gangster. His family immigrated to New York in 1911. As a young man he joined BUGSY SIEGEL in auto theft, burglary, and liquor smuggling. In 1931 he allegedly organized the murder of crime boss Joe Masseria and joined LUCKY LUCIANO in forming a national crime syndicate. By 1936 he had developed gambling operations in Cuba and the U.S., putting Siegel in charge of Las Vegas. In the 1960s he extended his gambling empire to the Bahamas and elsewhere in the Caribbean while continuing to run narcotics-smuggling, prostitution, labour-racketeering, and extortion rackets. His holdings in 1970 were estimated at $300 million. In 1979 the House of Representatives Assassinations Committee linked Lansky with Jack Ruby, the nightclub owner who killed LEE HARVEY OSWALD, the assassin of Pres. JOHN F. KENNEDY. Though convicted of income-tax evasion in 1973, he remained free on appeals.

lantana \lan-'tä-nə\ Any of more than 150 shrubs that make up the genus *Lantana* in the VERBENA family, native to the New World and African tropics. They are cultivated for their ornamental foliage, fragrant

© 2006 Encyclopædia Britannica, Inc.

clusters of flowers, and colourful blue-black fruits. Common lantana (*L. camara*), a weed in the New World tropics, is much used as a garden plant elsewhere. It grows to 10 ft (3 m) and blooms almost continuously with yellow, orange, pink, or white flower heads. The aromatic leaves are rough and oval.

lanthanide \'lan-thə-ˌnīd\ Any of the series of 15 consecutive chemical ELEMENTS in the PERIODIC TABLE from lanthanum to lutetium (atomic numbers 57–71). With scandium and yttrium, they make up the RARE EARTH METALS. Their atoms have similar configurations and similar physical and chemical behaviour; the most common VALENCES are 3 and 4.

Lanzhou *or* **Lan-chou** \'län-'jō\ City (pop., 1999 est.: 1,429,673), capital of GANSU province, north-central China. Situated on the upper HUANG HE (Yellow River), it became part of the territory of Qin in the 6th century BC and later developed as a major trade centre on the SILK ROAD. It became the seat of Lanzhou prefecture under the SUI DYNASTY (581–618 AD) and the capital of Gansu province in 1666. It was badly damaged during the Muslim uprisings in 1864–75. A centre of Soviet influence in northwestern China in the early 20th century, it was the terminus of the 2,000-mi (3,200-km) Chinese-Soviet highway that was used during the Sino-Japanese War (1937–45) for the transport of Soviet supplies. It developed as an industrial and cultural centre after World War II. It is the seat of Lanzhou University.

Lao She \'laù-'shə\ *orig.* **Shu Qingchun** *or* **Shu Sheyu** (b. Feb. 3, 1899, Beijing, China—d. Aug. 24?, 1966, Beijing) Chinese writer. He worked as an educator before going to England in 1924, and he was inspired to write his first novel while reading the works of CHARLES DICKENS to improve his English. He originally championed strong, hard-working individuals but later expressed the futility of the individual's struggle against society, as in *Luotuo Xiangzi* (1936), the tragic story of a ricksha puller; *Rickshaw Boy*, an unauthorized translation with a happy ending (1945), became a U.S. best-seller. After the onset of the SINO-JAPANESE WAR, he wrote lesser patriotic and propagandistic plays and novels. In 1966 he fell victim to the CULTURAL REVOLUTION.

Laocoön \'lā-'ä-kō-ˌän\ In Greek legend, a seer and priest of APOLLO. He was the son of Agenor of Troy or the brother of AENEAS's father Anchises. Laocoön offended Apollo by breaking his priestly vow of celibacy and begetting children, and by warning the Trojans not to accept the wooden horse presented by the Greeks. While preparing to offer a sacrifice to POSEIDON, he and his two sons were crushed to death by sea serpents sent by Apollo.

Laos \'lä-ōs, 'laùs\ *officially* **Lao People's Democratic Republic** Country, Southeast Asia. Area: 91,429 sq mi (236,800 sq km). Population (2005 est.): 5,924,000. Capital: VIENTIANE. Major ethnic groups include the Lao-Lum (valley Lao), who make up about half of the population; the Lao-Tai, a highland tribal people; the Lao-Theung (Mon-Khmer), descendants of the region's earliest inhabitants; and the Lao-Soung group, including the HMONG and Man. Languages: Lao (official), English, Vietnamese, French. Religions: Buddhism, traditional beliefs. Currency: kip. Laos is largely mountainous, especially in the north; its highest point is Mount Bia (9,245 ft [2,818 m]). Tropical forests cover more than half of the country's total land area; only a tiny portion of its total area is suitable for agriculture. The floodplains of the MEKONG RIVER provide the country's only lowlands and its major wet-rice fields. Laos has a centrally planned economy based primarily on agriculture (including rice, sweet potatoes, sugarcane, cassava, and opium poppies) and international aid. It is a people's republic with one legislative house; its chief of state is the president, and its head of government is the prime minister. The Lao people migrated into Laos from southern China after the 8th century AD, displacing indigenous peoples. In the 14th century Fa Ngum founded the first Laotian state, Lan Xang. Except for a period of rule by Myanmar (Burma; 1574–1637), the Lan Xang kingdom ruled Laos until 1713, when it split into three kingdoms—Vien Chan, Champassak, and Luang Prabang. During the 18th century the rulers of the three Laotian kingdoms became vassals of Siam (Thailand). France gained control of the region in 1893, and Laos became a French protectorate. In 1945 Japan seized control and declared Laos independent. The area reverted to French rule after World War II. By the end of the First INDOCHINA WAR, the leftist Pathet Lao movement controlled two provinces of the country. The Geneva Conference of 1954 unified and granted independence to Laos. Pathet Lao forces fought the Laotian government and took control in 1975, establishing the Lao People's Democratic Republic; about one-tenth of the population fled into

neighbouring Thailand. Laos held its first election in 1989 and promulgated a new constitution in 1991. Although its economy was adversely affected by the regional economic recession beginning in the mid-1990s, it realized a longtime goal in 1997 when it joined ASEAN.

Laozi *or* **Lao-tzu** \'laù-'dzə\ (fl. 6th century BC, China) First philosopher of Chinese DAOISM. He is traditionally named as the author of the DAODEJING, though modern scholars hold that the work had more than one author. Legends about his life abound, but little or no certain information survives. The historical Laozi, if he existed, may have been a scholar and caretaker of sacred books at the royal court of the ZHOU DYNASTY. According to legend, he was carried 72 years in his mother's womb, and he met CONFUCIUS as a young man. He is venerated as a philosopher by the Confucianists, as a saint or god by the common people of China, and as a divinity and the representative of the *dao* by Daoists.

laparoscopy \ˌla-pə-'räs-kə-pē\ *or* **peritoneoscopy** \ˌper-ət-ᵊn-ˌē-'äs-kə-pē\ Procedure for inspecting the ABDOMINAL CAVITY using a laparoscope; also surgery requiring use of a laparoscope. Laparoscopes use fibre-optic lights and small video cameras to show tissues and organs on a monitor. Laparoscopic surgical procedures include gallbladder, appendix, and tumour removal; tubal ligation; and hysterectomy. After carbon dioxide is pumped in to expand the space for the instruments, small incisions are made and the laparoscope and instruments inserted. Less invasive than traditional (open) surgery, laparoscopy reduces postoperative pain, recovery time, and length of hospital stay.

Lapidus \la-'pi-dəs**, Morris** (b. Nov. 25, 1902, Odessa, Russia—d. Jan. 18, 2001, Miami Beach, Fla., U.S.) Ukrainian-born U.S. architect. He came to the U.S. as a child and grew up in New York City. After earning an architectural degree, he worked in New York architectural firms from 1928 to 1942. In 1942 Lapidus moved to Miami Beach, where he ran his own firm until 1986. He designed numerous buildings there in the Art Deco style, including the Fontainebleau and Eden Roc hotels. He designed over 200 hotels worldwide as well as numerous office buildings, shopping centres, and hospitals.

lapis lazuli \ˌla-pəs-'la-zə-lē\ Semiprecious stone valued for its deep-blue colour caused by the presence of the mineral lazurite, which is the source of the pigment ultramarine. Lapis lazuli is not a single mineral but an intergrowth lazurite with calcite, pyroxene, and commonly small grains of PYRITE. The most important mines are in Afghanistan and Chile. Much of what is sold as lapis is an artificially dyed JASPER from Germany that shows colourless specks of clear, crystallized quartz and never the gold-like flecks of pyrite that are characteristic of lapis lazuli.

© 2006 Encyclopædia Britannica, Inc.

Lapita culture \lä-'pē-tə\ Cultural complex of what were presumably the original human settlers of Melanesia, much of Polynesia, and parts of Micronesia. The Lapita people were originally from New Guinea or some other region of Austronesia. Seaborne explorers, they spread to the Solomon Islands (c. 1600 BC), then to Fiji, Tonga and the rest of western Polynesia (c. 1000 BC), and finally to Micronesia (c. 500 BC). They are known principally on the basis of the remains of their fired pottery, which was first extensively investigated at the site of Lapita in New Caledonia. They appear to have subsisted largely by fishing but may also have practiced some domestic agriculture and animal husbandry.

Laplace \lə-'pläs**, Pierre-Simon, marquis de** (b. March 23, 1749, Beaumont-en-Auge, France—d. March 5, 1827, Paris) French mathematician, astronomer, and physicist. He is best known for his investigations into the stability of the solar system and the theory of magnetic, electrical, and heat wave propagation. In his major lifework he applied Newtonian gravitational theory to the solar system to explain deviations of the planets from the orbits predicted by the theory (1773). NEWTON believed that only divine intervention could explain the solar system's equilibrium, but Laplace established a mathematical basis for it, the most important advance in physical astronomy since Newton. He continued to work on elucidating planetary perturbations through the 1780s. A work published in 1796 included his nebular hypothesis, which attributed the origin of the solar system to the cooling and contracting of a gaseous nebula, a theory that strongly influenced future thought on planetary origins. See also LAPLACE TRANSFORM; LAPLACE'S EQUATION.

Laplace transform In mathematics, an INTEGRAL TRANSFORM useful in solving DIFFERENTIAL EQUATIONS. The Laplace transform of a function is found by integrating the product of that function and the EXPONENTIAL FUNCTION e^{-pt} over the interval from zero to INFINITY. The Laplace transform's applications include solving linear differential equations with constant coefficients and solving boundary value problems, which arise in calculations relating to physical systems.

Laplace's equation In mathematics, a PARTIAL DIFFERENTIAL EQUATION whose solutions (harmonic functions) are useful in investigating physical problems in three dimensions involving gravitational, electrical, and magnetic fields, and certain types of fluid motion. Named for PIERRE-SIMON LAPLACE, the equation states that the sum of the second partial derivatives (the Laplace operator, or Laplacian) of an unknown function is zero. It can apply to functions of two or three variables, and can be written in terms of a differential operator as $\Delta F = 0$, where Δ is the Laplace operator.

Lapland Region, northern Europe. Located within the Arctic Circle, it stretches across northern Norway, Sweden, and Finland and into Russia's KOLA PENINSULA. Occupying an area of 150,000 sq mi (389,000 sq km), it is bounded by the Norwegian Sea, the BARENTS SEA, and the White Sea. Since it straddles several national borders, it does not exist as any unified administrative entity. It is named for the SAMI (Lapp) people, who have inhabited the region for several thousand years. Those still practicing reindeer herding have liberty of movement across national boundaries. Industries include mining and fishing.

lapwing Any of numerous bird species of the PLOVER family (Charadriidae), especially the Eurasian lapwing (*Vanellus vanellus*) of farmlands and grassy plains. Lapwings are about 12 in. (30 cm) long and have broad, rounded wings. Several species have crests, and some have wing spurs (sharp projections at the bend of the wing). The Eurasian lapwing is green-glossed black above with white cheeks, black throat and breast, white belly, and white tail with a black band. About 24 other species are found in South America, Africa, southern Asia, Malaya, and Australia.

Eurasian lapwing (*Vanellus vanellus*)

INGMAR HOLMASEN

L'Aquila \'lä-kwē-lä\ City (pop., 2001 prelim.: 63,121), capital of the ABRUZZI region, central Italy. The area was settled by the Sabini, an ancient Italic tribe, and the city was founded c. 1240. After being ruled by the Kingdom of Naples, it became part of the Kingdom of Italy in 1861. Located near the mountains of Gran Sasso d'Italia, it is a skiing centre and summer resort. Historic sites include a 14th-century cathedral and a 16th-century castle.

Laramide orogeny \'lar-ə-ˌmīd-ō-'rä-jə-nē\ Series of mountain-building events that affected much of western North America in Late CRETACEOUS and Early TERTIARY time (c. 65 million years ago). The Laramide orogeny originally was believed to mark the Cretaceous-Tertiary boundary. It is now considered to have consisted of many separate pulses of deformation that varied in intensity and age from place to place. Laramide rocks, however, were generally created around the Cretaceous-Tertiary time boundary.

larceny See THEFT

larch Any of about 10–12 species of coniferous trees that make up the genus *Larix* of the PINE family, native to cool temperate and sub-Arctic regions of the Northern Hemisphere. Though the larch has the pyramid shape typical of CONIFERS, it sheds its short, light-green, needlelike leaves in autumn. The most widespread North American larch, the tamarack, or eastern larch (*L. laricina*), matures in 100–200 years, may grow 40–100 ft (12–30 m) tall, and has gray to reddish-brown bark. Coarse-grained, strong, hard, and heavy, larch wood is useful in ship construction and for telephone poles, mine timbers, and railroad ties.

Lardner, Ring(gold Wilmer) (b. March 6, 1885, Niles, Mich., U.S.—d. Sept. 25, 1933, East Hampton, N.Y.) U.S. writer. He worked as a newspaper reporter, sportswriter, and columnist before he began publishing fiction. He won popular success with comic stories about a baseball player, some collected in *You Know Me, Al* (1916). Later collections, noted for their satire, narrative skill, and convincing vernacular language, include *How to Write Short Stories* (1924) and *The Love Nest* (1926). His son, the screenwriter Ring Lardner, Jr., was one of the HOLLYWOOD TEN and later wrote such hit movies as *M*A*S*H* (1970).

Laredo \lə-'rā-dō\ City (pop., 2000: 176,576), southern Texas, U.S. Located on the RIO GRANDE opposite Nuevo Laredo, Mex., it was established in 1755 by the Spanish and was named for Laredo, Spain. After the Texas revolt against Mexican rule in 1836, it became the seat of the Republic of the Rio Grande (1839–41). Occupied by the Texas Rangers in 1846, it was incorporated as a city in 1852. A rapidly growing city, its manufacturing includes electronic components and oil refining.

Lares \'lar-ˌēz\ In ROMAN RELIGION, guardian deities. Originally gods of cultivated fields, Lares were later worshiped in association with the PENATES, the gods of the household. The household Lar, considered the centre of the family cult, was often represented as a youthful figure holding a drinking horn and cup. Two Lares might be portrayed standing on either side of VESTA or some other deity. A prayer was said to the Lar or Lares every morning, and offerings were made at family festivals. Public Lares presided over local districts marked by a crossroads; state Lares (*praestites*), guardians of Rome, were worshiped in a temple on the Via Sacra.

large intestine End section of the intestine. It is about 5 ft (1.5 m) long, is wider than the SMALL INTESTINE, and has a smooth inner wall. In the first half, ENZYMES from the small intestine complete digestion, and bacteria produce many B vitamins and vitamin K. Over 24–30 hours, churning movements break down tough cellulose fibres and expose CHYME to the COLON's walls, which absorb water and electrolytes; absorption is its main function, along with storing fecal matter for expulsion. The more vigorous "mass movement" (gastrocolic reflex) occurs only two or three times a day to propel waste material toward the ANAL CANAL. Common afflictions include ULCERATIVE COLITIS, diverticulosis (see DIVERTICULUM), POLYPS, and TUMOURS.

Largo Caballero \'lär-gō-ˌkä-bäl-'yār-ō**, Francisco** (b. Oct. 15, 1869, Madrid, Spain—d. March 23, 1946, Paris, France) Spanish socialist leader and prime minister (1936–37). He joined the Spanish Socialist Workers' Party in 1894 and rose to become head of the party's trade-union federation in 1925. He cooperated with the dictatorship of Miguel PRIMO DE RIVERA, then served in the Second Republic as labour minister

© 2006 Encyclopædia Britannica, Inc.

(1931–33). After the Popular Front's election victory in 1936, he became prime minister and tried to unify the leftist parties; however, an extreme-left uprising in Barcelona in 1937 during the Spanish Civil War caused a cabinet crisis and he was forced to resign. He went into exile in France and was interned by the Germans in World War II (1942–45).

Laristan \ˌlar-ə-ˈstan\ Region, southern Iran. Located on the Persian Gulf, it is a former province; its chief town is Lar. The region was ruled by the Muẓaffarid dynasty of Kermān until it was conquered by Timur. After his death in 1405, it was ruled by local chiefs under the Ṣafavid dynasty. The last such chief was put to death by ʿAbbās I (the Great), who ruled from 1587 to 1629.

lark Any of about 75 species of songbirds (family Alaudidae) found throughout the continental Old World. Only the horned, or shore, lark (*Eremophila alpestris*) is native to the New World. The bill may be small and narrowly conical or long and downward-curving, and the hind claw is long and sometimes straight. The plumage is plain or streaked and closely matches the soil in colour. Its body is 5–9 in. (13–23 cm) long. Flocks of larks forage for insects and seeds on the ground. All species have a high, thin, melodious voice. See also skylark.

Horned lark (*Eremophila alpestris*)
HERBERT CLARKE

Larkin, Philip (Arthur) (b. Aug. 9, 1922, Coventry, Warwickshire, Eng.—d. Dec. 2, 1985, Kingston upon Hull, Yorkshire) English poet. Educated at Oxford, Larkin became a librarian at the University of Hull, Yorkshire, in 1955; he would remain a librarian the rest of his life. He wrote two novels before becoming well known with his third volume of verse, *The Less Deceived* (1955), which expressed the antiromantic sensibility prevalent in English verse of his time. Later poetry volumes are *The Whitsun Weddings* (1964), *High Windows* (1974), and *Aubade* (1980). *All What Jazz* (1970) contains essays he wrote as a jazz critic for *The Daily Telegraph* (1961–71).

larkspur *or* **delphinium** Any of about 300 species of herbaceous plants that make up the genus *Delphinium* in the buttercup family, many of which are grown for their showy flower stalks. Annual larkspurs (sometimes separated as the genus *Consolida*) include the common rocket larkspur (*D. ajacis*, or *C. ambigua*) and its varieties, up to 2 ft (60 cm) tall, with bright blue, pink, or white flowers on branching stalks. Perennial larkspurs, often with blue flowers, include species that grow to 4.5 ft (1.4 m).

Dwarf larkspur (*Delphinium tricorne*)
LOUISE K. BROMAN FROM ROOT RESOURCES—EB INC.

Larne \ˈlärn\ Town (pop., 1991: 17,575), capital of Larne district (pop., 2001: 30,832), Northern Ireland. It is located on the Irish Sea north of Belfast. Edward Bruce landed nearby on his journey to accept the Irish throne in 1315. It developed as a holiday resort after 1900. The Antrim Coast Road, one of the greatest tourist attractions in Northern Ireland, begins at Larne. The district's economy is largely based on tourism and agriculture.

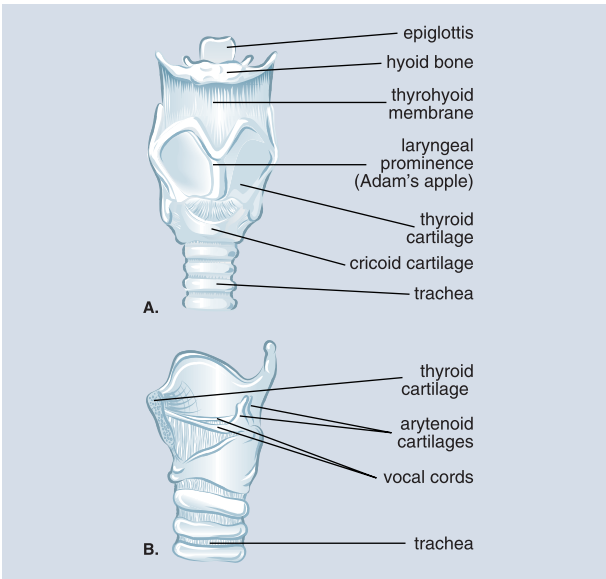
Larousse \lə-ˈrüs**, Pierre (Athanase)** (b. Oct. 23, 1817, Toucy, France—d. Jan. 3, 1875, Paris) French publisher, lexicographer, and encyclopaedist. Son of a blacksmith, he received a scholarship to study in Versailles. He founded his publishing house, Librairie Larousse, in Paris in 1852. It published textbooks, grammar books, and dictionaries, but his major work, reflecting his desire "to teach everyone about everything," was the combined dictionary and encyclopaedia *Grand dictionnaire universel du XIXe siècle*, 17 vol. (1866–76). Librairie Larousse continues to publish a multivolume encyclopaedia as well as dictionaries and smaller encyclopaedias.

Larsa *biblical* **Ellasar** Ancient capital of Babylonia, located on the Euphrates River in present-day southern Iraq. It was founded in prehistoric times and flourished in a period of Sumerian decline (c. 2000–c. 1760 BC), when long-distance trade connected the Euphrates with the Indus River valley. Hammurabi of Babylon gained control of the area in 1763 BC.

Larsen Ice Shelf Ice shelf in the northwestern Weddell Sea, adjoining the eastern coast of the Antarctic Peninsula. It is named for Capt. Carl A. Larsen, who explored the ice front by boat in 1893. The shelf originally covered an area of 33,000 sq mi (86,000 sq km), excluding the numerous small islands within it, but, as air temperatures over the Antarctic Peninsula warmed slightly in the second half of the 20th century, the shelf shrank dramatically. By the early 21st century, it covered only 40 percent of its former area.

Lartigue \lär-ˈtēg**, Jacques-Henri (-Charles-Auguste)** (b. June 13, 1894, Courbevoie, Fr.—d. Sept. 12, 1986, Nice) French painter and photographer. Born into a prosperous family, he was given a Brownie camera at age seven. From the beginning, his photographs were invariably informal shots of everyday subjects. In the 1910s and '20s Lartigue enthusiastically photographed subjects such as automobile races, fashionable ladies at the seashore and the park, and kite flying. These photographs reveal his free spirit and love of life, rather than a concern for photographic technique and craft, and often capture a sense of movement. When his work was discovered in the 1960s, it was acclaimed for its departure from formal, posed portraits and for its ingenuous charm and beguiling spontaneity.

larva Active, feeding stage in the development of many animals, occurring after birth or hatching and before the adult form is reached. Larvae are structurally different from adults and often are adapted to a different environment. Some species have free-living larvae but sessile (affixed) adults, the moving larvae thus helping to spread the species; others have aquatic larvae but terrestrial adults. Most larvae are tiny; many are dispersed by entering a host's body, where the adult form of the parasite emerges. Many invertebrates (e.g., cnidarians) have simple larvae. Flukes have several larval stages, and annelids, molluscs, and crustaceans have various larval forms. Insect larvae are called caterpillars, grubs, maggots, or worms; the larval stage of many insects may last much longer than the adult stage (e.g., some cicadas live 17 years as larvae and a week as adults). Echinoderms also have larval forms. The larvae of frogs and toads are called tadpoles. See also metamorphosis, pupa.



laryngeal \lə-ˈrin-jəl\ **cancer** Malignant tumour of the larynx. The larynx is affected by both benign and malignant tumours. Squamous-cell carcinoma, the most common laryngeal malignancy, is associated with smoking and alcohol consumption; it is more common in men. Prolonged hoarseness without pain is the major symptom and should always be investigated. Radiation therapy or surgery may be used to treat tumours.

laryngitis \ˌlar-ən-ˈjī-təs\ Inflammation of the larynx, causing hoarseness. Simple laryngitis usually occurs with infections such as the common cold. Other causes include inhalation of irritants. The larynx's lining becomes swollen and secretes mucus. In chronic laryngitis, caused by excessive smoking, drinking, or vocal-cord use, the larynx is dry and has polyps. Other types are caused by diphtheria spreading from the upper throat, tuberculosis bacteria spreading from the lungs, and advanced syphilis. The last can produce severe scarring and permanent hoarseness.

larynx \ˈlar-inks\ *or* **voice box** Hollow, tubular structure connecting the pharynx with the trachea, through which air passes on the way to the lungs. The larynx consists of a framework of cartilage plates, with a ridge in front (Adam's apple); the epiglottis, a flaplike projection up into the throat that covers the airway during swallowing to keep food and liquid from entering; and the vocal cords, whose vibration produces the sound of the voice (see speech). See illustration on following page.

Las Casas, Bartolomé de (b. August 1474, Sevilla?—d. July 17, 1566, Madrid) Spanish historian and missionary, called the Apostle of the Indies. He sailed on Christopher Columbus's third voyage (1498) and later became a planter on Hispaniola (1502). In 1510 he became the first priest ordained in the Americas. He devoted his life to protesting the mistreatment of the Indians, with whom he worked in Guatemala, Peru, Cuba, Nicaragua, and Mexico. His call for an end to the *encomienda* system aroused implacable opposition. His proposed and quickly regretted solution, the importation of slaves from Africa, was adopted, but the servitude of the Indians had already been irreversibly established. His *Brief*

© 2006 Encyclopædia Britannica, Inc.

(A) Frontal view and (B) cutaway side view of the human larynx. The larynx is composed of cartilage plates that are joined together by muscles and ligaments. The thyroid cartilage, the largest, forms a prominence in front called the Adam's apple. The leaf-shaped epiglottis, attached to the upper part of the thyroid cartilage, closes during swallowing. The vocal cords in the cavity of the larynx are large folds in the mucous membrane lining the larynx. They stretch between the thyroid cartilage in front and the arytenoid cartilages in the back. As air passes between them, they vibrate to emit sound.

Report on the Destruction of the Indians (1552) and his unfinished *History of the Indians* inspired Simón Bolívar and other revolutionary heroes. See also BLACK LEGEND.

Las Navas de Tolosa \läs-'nä-väs-thā-tō-'lō-sä**, Battle of** *or* **Battle of Al-ʻUqāb** \ˌal-ù-'käb\ (July 16, 1212) Major battle of the Christian reconquest of Spain. It occurred during a Christian Crusade against the Muslim Almohad dynasty. Led by King Alfonso VIII, the combined armies of León, Castile, Aragon, Navarra, and Portugal found a secret route through a mountain pass in Andalusia (southern Spain) and surprised and defeated the Almohads at a site about 40 mi (65 km) north of Jaén.

Las Palmas *or* **Las Palmas de Gran Canaria** Seaport city (pop., 2001: 354,863), northeastern Grand Canary Island, Spain. The largest city and chief port of the Canary Islands, it was founded in 1478 and served as a base for the Spanish conquest of Tenerife and La Palma islands. It grew after the port was constructed in 1883. It is a year-round resort; historic sites include a 15th-century cathedral and the house of Christopher Columbus.

Las Vegas City (pop., 2000: 478,434), southeastern Nevada, U.S. It is famous for its luxury hotels, casinos, and nightclubs, located in the area known as "the Strip." Mormons from Utah settled the site in 1855 and abandoned it in 1857. It became a railroad town in 1905 and was incorporated in 1911. Gambling was legalized in 1931, and Las Vegas expanded rapidly after 1940. Its connections to crime syndicates began in 1946, when Bugsy Siegel opened the Flamingo Hotel. By the early 21st century it was one of the country's fastest-growing metropolitan areas, attracting a year-round population as well as tourists.

Lascaux \lä-'skō\ **Grotto** Cave near Montignac, Fr., that contains perhaps the most outstanding known display of prehistoric art. Discovered in 1940, it consists of a main cavern and several steep galleries, all magnificently decorated with engraved, drawn, and painted animals, some of them portrayed in a "twisted perspective." Among the most notable images are four great aurochs bulls, a curious unicorn-type animal that may represent a mythical creature, and a rare narrative composition involving a bird-man figure and a speared bison. About 1,500 bone engravings have also been found at the site, which has been dated to the late Aurignacian period (c. 15,000 BC). Because of heavy tourist traffic, the cave was closed to the public in 1963, but a full-scale facsimile, Lascaux II, was opened in 1983. See also ROCK ART.

laser Device that produces an intense beam of coherent light (light composed of waves having a constant difference in PHASE). Its name, an acronym derived from "light amplification by stimulated emission of radiation," describes how its beam is produced. The first laser, constructed in 1960 by Theodore Maiman (born 1927) based on earlier work by Charles H. Townes, used a rod of ruby. Light of a suitable WAVELENGTH from a flashlight excited (see EXCITATION) the ruby ATOMS to higher energy levels. The excited atoms decayed swiftly to slightly lower energies (through PHONON reactions) and then fell more slowly to the ground state, emitting light at a specific wavelength. The light tended to bounce back and forth between the polished ends of the rod, stimulating further emission. The laser has found valuable applications in microsurgery, compact-disc players, communications, and holography, as well as for drilling holes in hard materials, alignment in tunnel drilling, long-distance measurement, and mapping fine details.

Lashley, Karl S(pencer) (b. June 7, 1890, Davis, W.Va., U.S.—d. Aug. 7, 1958, Paris, France) U.S. psychologist. He taught at the Universities of Minnesota (1920–29) and Chicago (1929–35) and at Harvard University (1935–55). In *Brain Mechanisms and Intelligence* (1929), he demonstrated that certain types of learning are mediated by the cerebral cortex as a whole, refuting the view that every psychological function is localized at a specific place on the cortex, and he showed that some parts of the brain system (e.g., the visual system) can take over the functions of other parts. He also studied the cortical basis of motor activities and the relation between brain mass and learning ability. His paper "The Problem of Serial Order in Behavior" (1951) played a major supporting role in the revolt against simple associative psychology.

Lasker, Emanuel (b. Dec. 24, 1868, Berlinchen, Prussia—d. Jan. 11, 1941, New York, N.Y., U.S.) German chess master and mathematician. He first won the world chess championship in 1894 and retained the title until his defeat by Jose Capablanca in 1921; his term remains the longest reign as champion. As the first chess master to demand high fees, he helped strengthen the financial status of chess professionals. He wrote the classic *Common Sense in Chess* (1896) as well as books on mathematics and philosophy. As a Jew, he was forced to leave Nazi Germany in 1933. With the loss of his property, he ended his eight-year retirement from chess, once again competing at the highest level.

Laski, Harold J(oseph) (b. June 30, 1893, Manchester, Eng.—d. March 24, 1950, London) British political scientist, educator, and political leader. Educated at the University of Oxford, he taught at McGill University and Harvard University before returning to Britain to work for the Labour Party. He later taught at the London School of Economics (1926–50). He argued in works such as *The State in Theory and Practice* (1935) that the economic difficulties of capitalism might lead to the destruction of political democracy, and he came to view SOCIALISM as the only alternative to FASCISM. He was an assistant to Clement R. Attlee during World War II.

Lassalle \lä-'säl**, Ferdinand** *orig.* **Ferdinand Lasal** (b. April 11, 1825, Breslau, Prussia—d. Aug. 31, 1864, near Geneva, Switz.) German socialist, a founder of the German labour movement. He took part in the revolution of 1848–49 and established contact with Karl Marx and Friedrich Engels. In 1859 he settled in Berlin and became a political journalist. His advocacy of an evolutionary approach to socialism through a democratic constitutional state based on universal suffrage led to his gradual estrangement from Marx. He helped form the General German Workers' Association (1863) and was elected its president, but associates rebelled against his authoritarian leadership. In 1864 he went to Switzerland for a rest, fell passionately in love, and was killed at age 39 in a duel with the woman's former fiancé.

Lassalle, *c.* 1860
ARCHIV FUR KUNST UND GESCHICHTE, BERLIN

© 2006 Encyclopædia Britannica, Inc.

Lassen Peak *or* **Mount Lassen** Volcano, southern end of the Cascade Range, northeastern California, U.S. It erupted on May 30, 1914, and intermittently thereafter until 1921. The peak is 10,457 ft (3,187 m) high and is the principal attraction of Lassen Volcanic National Park, which occupies an area of 106,372 acres (43,047 hectares). In 1821 Luis Argüello, a Spanish officer, became the first European to discover the peak. It is named for Peter Lassen, an explorer who guided settlers through the area.

Lassus \ˈlä-sūs**, Orlande de** *or* **Orlando di Lasso** \ˈlä-sō\ *or* **Roland de Lassus** (b. 1530/32, Mons, Spanish Hainaut—d. June 14, 1594, Munich) Flemish composer. He began as a choirboy (with such a beautiful voice that he is said to have been kidnapped to sing elsewhere), and his first known position was in service to the Gonzaga family in Italy (1544). After 1556 he was based in Munich as kapellmeister to the duke of Bavaria, but he pursued an international career, traveling in Italy, Germany, Flanders, and France. He wrote more than 1,200 works, in every contemporary style and genre, sacred (including some 60 masses and 500 motets) and secular (including hundreds of madrigals and chansons), his attention to the correspondence of music and words being especially remarkable. Because of his range of styles (he always kept up with fashion) and because his works were printed widely during and after his lifetime, he influenced many composers and is regarded as one of the greatest masters of his century.

Last Mountain Lake Lake, southern central Saskatchewan, Canada. Draining southward into the Qu'Appelle River, and with an average width of 2 mi (3.2 km) and a length of 60 mi (96 km), it occupies an area of 89 sq mi (231 sq km). It is a popular fishing and resort area.

Lāt, al- Northern Arabian goddess of pre-Islamic times. A stone cube near Mecca was held sacred as part of her cult. Two other northern Arabian goddesses, Manāt and al-ʿUzzā, are associated with al-Lāt in the Qur'ān. According to a contentious account, Muhammad was said to have recognized these three as goddesses, but a new revelation led him to abandon his attempt to placate Meccan pagans, and he later ordered the sanctuaries of al-Lāt and the other two goddesses destroyed. The goddesses were worshiped by Arab tribes located as far away as Palmyra, Syria.

Late Baroque See Rococo style

latent heat Characteristic amount of energy absorbed or released by a substance during a change in physical state that occurs without a change in temperature. Heat of fusion is the latent heat associated with melting a solid or freezing a liquid. Heat of vaporization is the latent heat associated with vapourizing a liquid or condensing (see condensation) a vapour. For example, when water reaches its boiling point and is kept boiling, it remains at that temperature until it has all evaporated; all the heat added to the water is absorbed as latent heat of vaporization and is carried away by the escaping vapour molecules.

Later Le \ˈlē\ **dynasty** (1428–1788) Greatest and longest-lasting dynasty of traditional Vietnam. Its founder, Le Loi, drove the Chinese out of Vietnam and began the process of recovering the southern portion of the region from the kingdom of Champa. In 1471 the dynasty's greatest ruler, Le Thanh Tong (d. 1497), completed that work. He divided the country into provinces patterned on the Chinese model and established a triennial Confucian civil-service examination. After 1533 the Le rulers were only theoretically supreme, real power being held by the Trinh and Nguyen families. In 1771 a peasant uprising toppled the dynasty.

laterality *or* **hemispheric asymmetry** Characteristic of the human brain in which certain functions (such as language comprehension) are localized on one side in preference to the other. One example is handedness (the tendency to use one hand or the other to perform activities): Since the left and right cerebral hemispheres control the right and left sides of the body, respectively, right-handed people are typically left-dominant in terms of hemispheric control of various motor functions and also with respect to seeing (right-eyed) and language comprehension. Paul Broca first identified the brain centre for articulate speech in what is now called Broca's area. Later researchers discovered that functions involving logical or sequential analysis generally reside in the left hemisphere, while the right hemisphere seems to control processing of spatio-visual information and musical relations. More left-handers than right-handers display a reversal of hemispheric specialization or a more even distribution of functions between the two hemispheres. There is no general agreement about whether laterality is genetically transmitted, developed during gestation, or learned.

Lateran Council Any of five ecumenical councils of the Roman Catholic church held in the Lateran Palace in Rome. The First Lateran Council (1123), held during the papacy of Calixtus II, reiterated decrees of earlier ecumenical councils (condemning simony, forbidding clergymen to marry, etc.). The Second Lateran Council (1139) was called by Innocent II to end the schism created by the election of a rival pope. The Third Lateran Council (1179), held during the papacy of Alexander III, established a two-thirds majority of the College of Cardinals as a requirement for papal election and condemned the heresies of the Cathari. Innocent III called the Fourth Lateran Council (1215) in an effort to reform the church; its decrees obliged Catholics to make a yearly confession, sanctioned the doctrine of transubstantiation, and made preparations for a new Crusade. The Fifth Lateran Council (1512–17), convoked by Julius II, affirmed the immortality of the soul and restored peace among warring Christian rulers.

Lateran Treaty *or* **Lateran Pact** (1929) Pact of mutual recognition between Italy and the Vatican, signed in the Lateran Palace, Rome. The Vatican agreed to recognize the state of Italy, with Rome as its capital, in exchange for formal establishment of Roman Catholicism as the state religion of Italy, institution of religious instruction in the public schools, the banning of divorce, and recognition of papal sovereignty over Vatican City and the complete independence of the pope. A second concordat in 1985 ended Catholicism's status as the state religion and discontinued compulsory religious education.

laterite \ˈla-tə-ˌrīt\ Soil layer rich in iron oxide and sometimes aluminum, derived from a wide variety of rocks by leaching. It forms in tropical and subtropical regions where the climate is humid. Laterite is blackish brown to reddish and has been used as an iron ore and, in Cuba, as a source of nickel.

latex Any of several natural or synthetic colloidal suspensions (see colloid). Some latexes occur naturally in the cells of plants such as chicle and rubber trees. They are complex mixtures of organic compounds, including various gum resins, fats, or waxes and, in some instances, poisonous compounds, suspended in a watery medium with dissolved salts, sugars, tannins, alkaloids, enzymes, and other substances from which the latex (or natural rubber, the only available rubber until 1926) can be concentrated, coagulated, and vulcanized. Synthetic latexes (e.g., neoprene), made by emulsion polymerization from styrene-butadiene copolymer, acrylate resins, polyvinyl acetate, or other materials, are used as paints and coatings; the plastic, dispersed in the water, forms films by fusion as the water evaporates.

lathe \ˈlāth\ machine tool that performs turning operations in which unwanted material is removed from a workpiece rotated against a cutting tool. Lathes are among the oldest and most important machine tools, used in France from 1569 and important in the Industrial Revolution in England, when they were adapted for metal cutting (see Henry Maudslay). Lathes (usually called engine lathes) today have a power-driven, variable-speed horizontal spindle to which the workholding device is attached. Operations include turning straight or tapered cylindrical shapes, grooves, shoulders, and screw threads and facing flat surfaces on the ends of cylindrical parts. Internal cylindrical operations include most of the common hole-machining operations, such as drilling, boring, reaming, counterboring, countersinking, and threading with a single-point tool or tap. See also boring machine.

Latimer, Hugh (b. c. 1485, Thurcaston, Leicestershire, Eng.—d. Oct. 16, 1555, Oxford) English Protestant martyr. The son of a prosperous yeoman farmer, he was educated at the University of Cambridge, where he came into contact with the doctrines of Martin Luther and converted to Protestantism. He supported Henry VIII's attempt to obtain a marriage annulment but was later excommunicated for refusing to accept the existence of purgatory or the need to venerate saints. He made a complete submission and briefly served as bishop of Worcester (1535–39). Again imprisoned on suspicion of heresy, he was freed with the accession of Edward VI, during whose brief reign he preached extensively. On Mary I's accession and the subsequent reversion to Catholicism, he was arrested for treason and burned at the stake.

Latin alphabet *or* **Roman alphabet** Most widely used alphabet, the standard script of most languages that originated in Europe. It developed before 600 BC from the Etruscan alphabet (in turn derived from the North Semitic alphabet by way of the Phoenician and Greek alphabets). The earliest known Latin inscriptions date from the 7th–6th cent. BC. The classical Latin alphabet had 23 letters, 21 derived from the Etruscan. In

© 2006 Encyclopædia Britannica, Inc.

medieval times the letter J became differentiated from I, and U and W became differentiated from V, producing the 26-letter alphabet of modern English. In ancient Roman times there were two types of Latin script, capital letters and cursive. Uncial script, mixing both types, developed in the 3rd century AD.

Latin America Countries of South America and North America (including Central America and the islands of the Caribbean Sea) south of the U.S.; the term is often restricted to countries where either Spanish or Portuguese is spoken. The colonial era in Latin America began in the 15th–16th centuries when explorers such as Christopher Columbus and Amerigo Vespucci made voyages of discovery to the New World. The conquistadores who followed, including Hernán Cortés and Francisco Pizarro, brought Spanish rule to much of the region. In 1532 the first Portuguese settlement was made in Brazil. The Roman Catholic church soon established many missions in Latin America. Roman Catholicism is still the chief religion in most Latin American countries, though the number of Protestants and Evangelicals has grown. Spanish and Portuguese colonists arrived in increasing numbers; they enslaved the native Indian population, which was soon decimated by ill treatment and disease, and then imported African slaves to replace them. A series of movements for independence, led by José de San Martín, Simón Bolívar, and others, swept Latin America in the early 19th century. Federal republics were promulgated across the region, but many of the new countries collapsed into political chaos and were taken over by dictators or military juntas, a situation that persisted into the 20th century. In the 1990s a trend toward democratic rule reemerged; in socialist-run countries many state-owned industries were privatized, and efforts toward regional economic integration were accelerated.

Latin American arts Visual, performing, and literary arts that developed in Mesoamerica, Central America, South America, and the Caribbean after contact with the Spanish and Portuguese beginning in 1492 and 1500, respectively. When Europeans arrived, they came with artistic traditions dating back to antiquity. For centuries, indigenous American peoples had similarly formed civilizations with their own unique artistic practices (see Native American arts). The importation of African slaves led to the presence of long-standing African arts in the region as well (see African arts). At the time of colonization, the architecture of many native centres was destroyed and replaced with European-style churches and buildings. During this period, a combination of European and indigenous imagery led to unique religious sculptural and decorative art forms. As more European artists immigrated to the new land, Iberian artists brought with them elements of the styles that were current in Europe—such as the Renaissance, Baroque, and Rococo—to art and architecture. The most notable regional style of the 18th century was known as Churrigueresque, an elaborately decorative style used in architecture, sculpture, and decorative arts. Throughout the 19th and 20th centuries, Latin American artists and architects continued to experiment with a variety of Western styles—including Romanticism, Neoclassicism, Modernism, and postmodernism—but increasingly adapted them to reflect Latin American themes and, often, political concerns. Indigenous music was varied before colonization. The main instruments seem to have been rattles or shakers (e.g., maracas) and flutes of numerous kinds, including panpipes. Under European influence, harps, violins, and guitars were adopted (see mariachi). Indigenous scales were three- or five-tone, and choral singing in parallel lines was common in some areas. Spanish and Portuguese music contributed verse forms and self-accompanied solo singing. African influences on rhythm have included the use of repetitive patterns to accompany extended improvisation and the prevalence of two- and four-beat patterns, particularly in Caribbean music; the African tradition can also be seen in the use of drums and of syncopation. Iberian dance rhythms and features, such as hand clapping and the use of scarves and handkerchiefs, carried over into many hybrid forms of music and dance. Especially in the 20th century, forms of popular music and dance—such as salsa, tango, samba, and bossa nova—represented a blending of native and Western traditions. During the colonial period, Latin American literature reflected trends in Spanish and Portuguese literature, and it consisted mostly of chronicles of conquest. As the colonies developed their own character and moved towards independence, patriotic writings became prominent. In the mid-19th century, the *cuadro de costumbres*, or sketch of contemporary customs, developed into a realistic novel of manners. Beginning in the late 19th century, authors in the Modernismo movement focused on "art for art's sake." Latin American literature came into its own in the 20th century, with movements such as magic realism gaining international prominence. See also individual artists by name, such as Frida Kahlo; Oscar Niemeyer; and Diego Rivera; and authors by name, such as Jorge Luis Borges; Gabriel García Márquez; and Pablo Neruda.

Latin American Integration Association (LAIA) *formerly (until 1980)* **Latin American Free Trade Association (LAFTA)** International association of Latin American countries originally dedicated to improving its members' economic well-being through free trade. At its founding in 1960 LAFTA included Argentina, Brazil, Chile, Mexico, Paraguay, Peru, and Uruguay; by 1970 Ecuador, Colombia, Venezuela, and Bolivia had joined. The organization aimed to remove all trade barriers over 12 years, but its members' geographic and economic diversity made that goal impossible. LAFTA was superseded in 1980 by the LAIA, which established bilateral trading agreements between members, which were divided into three groups according to their level of economic development. Cuba was admitted with observer status in 1986, and it became a full member in 1999. See also Inter-American Development Bank.

Latin language Indo-European language of the Italic group; ancestor of the modern Romance languages. Originally spoken by small groups of people living along the lower Tiber River, Latin spread with the growth of Roman political power, first throughout Italy and then through most of western and southern Europe and the central and western Mediterranean coastal regions of Africa. The earliest known Latin inscriptions date from the 7th century BC; Latin literature dates from the 3rd century BC. A gap soon appeared between literary (classical) Latin and the popular spoken language, Vulgar Latin. The Romance languages developed from dialects of the latter. During the Middle Ages and much of the Renaissance, Latin was the language most widely employed in the West for scholarly and literary purposes. Until the latter part of the 20th century, its use was required in the liturgy of the Roman Catholic church.

latite \'lā-ˌtīt\ *or* **trachyandesite** \trā-kē-'an-də-ˌzīt\ Type of igneous rock that is abundant in western North America. Usually white, yellowish, pinkish, or gray, it is the volcanic equivalent of monzonite. Latites contain plagioclase feldspar (andesine or oligoclase) as large, single crystals (phenocrysts) in a fine-grained matrix of orthoclase feldspar and augite.

latitude and longitude Coordinate system by which the position or location of any place on the Earth's surface can be determined and described. Latitude is a measurement of location north or south of the Equator. Lines of latitude are known as parallels, or parallels of latitude. Longitude is a measurement of location east or west of the prime meridian, which passes through Greenwich, Eng. The combination of meridians of longitude and parallels of latitude establishes a grid by which exact positions can be determined: for example, a point described as 40° N, 30° W is located 40° of arc north of the Equator and 30° of arc west of the Greenwich meridian.

Latium \'lā-shē-əm\ Ancient area, west-central Italy, on the Tyrrhenian Sea. The Latins (or Latini) came from Indo-European tribes that settled in the Italian peninsula during the 2nd millennium BC. By 500 BC the cities of Latium had formed the Latin League. War erupted between Rome and the Latins in 340 BC and ended in 338 BC with the defeat of the Latins and the dissolution of the league.

Latreille \lä-'trāy**, Pierre-André** (b. Nov. 29, 1762, Brive-la-Gaillarde, Fr.—d. Feb. 6, 1833, Paris) French zoologist, regarded as the father of entomology. An ordained priest, in 1796 he published his *Summary of the Generic Characteristics of Insects, Arranged in a Natural Order,* which led to his becoming head of entomology at the National Museum of Natural History. His principal later work was his *Comprehensive Natural History of Crustaceans and Insects* (14 vol., 1802–05). The two works, representing the first detailed classification of insects and crustaceans, mark the beginnings of modern entomology. In 1829 he took the professorial chair vacated by Jean-Baptiste Lamarck.

Latrobe \lə-'trōb**, Benjamin Henry** (b. May 1, 1764, Fulneck, Yorkshire, Eng.—d. Sept. 3, 1820, New Orleans, La., U.S.) British-U.S. architect and civil engineer. He immigrated to the U.S. in 1795. His first important building was the State Penitentiary in Richmond, Va. In 1798, in Philadelphia, he designed the Bank of Pennsylvania, considered the first U.S. monument of the Greek Revival style. Pres. Thomas Jefferson appointed him surveyor of public buildings. Latrobe inherited the task of completing the U.S. Capitol, and later rebuilt it after its destruction by the British. In Baltimore he designed the country's first cathedral (1818). He

© 2006 Encyclopædia Britannica, Inc.

was active as an engineer, especially in the design of waterworks. He is widely regarded as having established architecture as a profession in the U.S.

Lattre de Tassigny \'lä-trᵊ-də-tä-sēn-'yē**, Jean (-Marie-Gabriel) de** (b. Feb. 2, 1889, Mouilleron-en-Pareds, France—d. Jan. 11, 1952, Paris) French military leader. After service in World War I and later in Morocco, he was promoted to general in 1939. An infantry division commander in World War II, he was imprisoned by the Germans (1940–43), but he escaped to North Africa. In 1944 he led the French army in the Allied landing operations in southern France and in the drive across France into southern Germany and Austria. He represented France at the signing of the German capitulation (1945). In 1950–51 he commanded French troops in the First INDOCHINA WAR against the VIET MINH. He was made a marshal of France posthumously.

Latvia *officially* **Republic of Latvia** Country, northeastern Europe, along the shores of the BALTIC SEA and the Gulf of RIGA. Area: 24,938 sq mi (64,589 sq km). Population (2005 est.): 2,299,000. Capital: RIGA. Less than

three-fifths of the population are Latvians, or Letts, who speak LATVIAN, one of two surviving Baltic languages. Russians make up about one-third of the population. Languages: Latvian (official), Russian. Religion: Christianity (Protestant, Roman Catholic, Eastern Orthodox). Currency: lats. The landscape is an undulating plain, with fairly flat lowlands alternating with hills. Latvia is a fully industrialized country. Heavy industry (notably the production of metals, ships, and railcars) once was more important than it is today; now leading manufactures include alcoholic beverages, wood products, foodstuffs, and textiles. Latvia is a multiparty republic with one legislative body; its chief of state is the president, and the head of government is the prime minister. It was settled by the Balts in ancient times. They came under the overlordship of the Varangians, or Vikings, in the 9th century and were later dominated by their German-speaking neighbours to the west, who Christianized Latvia in the 12th–13th century. The Order of the Brothers of the Sword conquered Latvia by 1230 and established German rule. From the mid-16th to the early 18th century the region was split between Poland and Sweden, but by the end of the 18th century all of Latvia had been annexed by Russia. Latvia declared its independence after the RUSSIAN REVOLUTION OF 1917. In 1939 it was forced to grant military bases to the Soviet Union, and in 1940 the Soviet Red Army invaded. Held by Nazi Germany (1941–44), the country was recaptured by the Soviets and incorporated into the Soviet Union. With the breakup of the Soviet Union, Latvia gained its independence in 1991. Subsequently it sought to privatize the economy and build ties with western Europe (becoming a member of the European Union in 2004), as well as to improve uneasy relations with Russia.

Latvian language *or* **Lettish language** East BALTIC LANGUAGE spoken by some two million people in the Republic of Latvia and in diaspora communities, including about 85,000 speakers in North America. Like Lithuanian, it is sparsely attested until the first printed books in Latvian appear in 1585–86. The essentials of the present orthography, which employs the LATIN ALPHABET with a number of diacritics, were adopted in 1908. Literary Latvian is based on the dialect spoken in Riga, Latvia's capital, though in recent years there has been a resurgence of literature in High Latvian (Latgalian), the dialect of eastern Latvia. Relative to Lithuanian, Latvian has undergone a number of striking sound changes, though the grammatical structures of the two languages are similar.

Laud, William (b. Oct. 7, 1573, Reading, Berkshire, Eng.—d. Jan. 10, 1645, London) Archbishop of Canterbury (1633–45) and religious adviser to CHARLES I. He became a privy councillor in 1627 and bishop of London in 1628, devoting himself to combating PURITANISM and enforcing strict Anglican ritual. By the time he became archbishop of Canterbury, he had extended his authority over the whole country. He attacked the Puritan practice of preaching as dangerous, and he had Puritan writers such as WILLIAM PRYNNE mutilated and imprisoned. Aided by his close ally the 1st earl of Strafford, Thomas WENTWORTH, Laud used his influence over the king to influence government social policy. By 1637, opposition to Laudian reppression had grown, and Laud's attempts to impose Anglican forms of worship in Scotland provoked fierce resistance. In 1640 the LONG PARLIAMENT met, and Laud was accused of high treason. His trial, which began in 1644 and was managed by Prynne, resulted in Laud's conviction and beheading.

Lauder \'lò-dər**, Estée** *orig.* **Josephine Esther Mentzer** (b. July 1, 1908?, New York, N.Y., U.S.—d. April 24, 2004, New York) U.S. entrepreneur. She founded Estée Lauder, Inc., with her husband, Joseph, in 1946. Their innovative marketing techniques led to huge success from the 1960s on. Her son Leonard was named chief executive officer in 1982. The company's fragrance and cosmetics products, including Clinique cosmetics, Aramis men's products, as well as specialty lines such as Bobbi Brown, Origins, and Aveda, are sold in more than 130 countries. By the early 21st century the company was worth about $10 billion.

Laue \'laù-ə**, Max (Theodor Felix) von** (b. Oct. 9, 1879, Pfaffendorf, near Koblenz, Ger.—d. April 23, 1960, Berlin, W.Ger.) German physicist. He taught at the University of Berlin (1919–43). He was the first to use a CRYSTAL to diffract X-RAYS, demonstrating that X-rays are ELECTROMAGNETIC RADIATION similar to light and that the molecular structure of crystals is a regularly repeating arrangement. For his work in crystallography he received the 1914 Nobel Prize for Physics. He championed ALBERT EINSTEIN's theory of relativity and studied the quantum theory, the COMPTON EFFECT, and the disintegration of atoms.

Lauenburg \'laù-ən-ˌbůrk\ Region and former duchy, northern Germany. It was established as a duchy under the Ascanian dynasty in the 13th century. In 1728 George Louis, elector of HANOVER, became its ruler, thereby attaching it to Hanover. It came under Prussia after the Danish-Prussian War of 1864. The duchy was abolished in 1918, and the region has been part of the state of SCHLESWIG-HOLSTEIN since 1946.

laughing jackass See KOOKABURRA

Laughlin \'läk-lin**, James** (b. Oct. 30, 1914, Pittsburgh, Pa., U.S.—d. Nov. 12, 1997, Norfolk, Conn.) U.S. publisher and poet. Born to a wealthy family, Laughlin founded New Directions press in 1936 after graduating from Harvard. He established the company initially to publish ignored yet influential writers, including WILLIAM CARLOS WILLIAMS and EZRA POUND, a friend and major influence on his life and work. New Directions editions of such authors as DYLAN THOMAS, TENNESSEE WILLIAMS, and HERMANN HESSE (one of the many foreign authors it published in translation) eventually made the house, despite its small size, one of the most distinguished literary publishers in the U.S. Its inexpensive pocket-sized volumes had distinctive black-and-white covers that made them recognizable in any bookstore.

Laughton \'lò-tᵊn**, Charles** (b. July 1, 1899, Scarborough, Yorkshire, Eng.—d. Dec. 15, 1962, Hollywood, Calif., U.S.) British actor. He made

© 2006 Encyclopædia Britannica, Inc.

his London stage debut in 1926 and acted in plays such as *The Government Inspector*, *Medea*, and *Payment Deferred,* in which he made his New York debut in 1931. He appeared in movies from 1929 and earned international acclaim in *The Private Life of Henry VIII* (1933, Academy Award). With his bulky frame and ordinary face Laughton defied Hollywood typecasting and emerged as one of the most versatile performers of his generation. He played a wide range of character roles in films such as *Mutiny on the Bounty* (1935), *Ruggles of Red Gap* (1935), *The Hunchback of Notre Dame* (1939), *Witness for the Prosecution* (1957), and *Advise and Consent* (1962). He directed the memorable *The Night of the Hunter* (1955).

lauma \'laù-mä\ In Baltic folklore, a fairy who appeared as a beautiful naked maiden with long blond hair. Laumas lived in the forest near water or stones. They yearned for children, and as they were unable to give birth, they often kidnapped babies to rear as their own. Sometimes they married mortal men and became excellent wives, perfectly skilled in domestic work. Highly temperamental, laumas were seen as benevolent, motherly beings, helpful to orphans and poor girls but extremely vindictive when angered, particularly by disrespectful men. In Latvia and Lithuania in recent centuries, lauma has come to refer to a witch or hag.

Launcelot See LANCELOT

Launceston \'lȯn-sə-stən\ *formerly* **Patersonia** City (pop., 2001: 57,685) and port, northeastern TASMANIA, Australia. Launceston developed during the 1830s as a whaling port and market centre. It is now the largest population and commercial centre in northern Tasmania. An export hub for a fertile agricultural region, it also has industries, including machine-making factories. One of the world's first hydroelectric stations (built in 1895) lies within the city on the South Esk River.

launch vehicle ROCKET system that boosts a SPACECRAFT into Earth orbit or beyond Earth's gravitational pull. A wide variety of launch vehicles have been used to lift payloads ranging from satellites weighing a few pounds (or kilograms) to large modular components of SPACE STATIONS. Most launch vehicles are expendable (one-use) systems; many early ones were derived from intercontinental ballistic missiles (see ICBM). The Saturn V, which launched the spacecraft that carried humans to the Moon (see APOLLO), had three stages (see STAGED ROCKET). The U.S. SPACE SHUTTLE system (from 1981) represents a significant departure from expendable launch vehicles in that it is partially reusable—its manned orbiting component is designed for numerous flights, and its solid rocket boosters can be recovered and refurbished.

Laurana \laù-'rä-nä**, Francesco** (b. c. 1430, Vrana, Dalmatia, republic of Venice—d. before March 12, 1502, Avignon, Fr.) Italian sculptor and medalist. His early life is obscure. In 1453 he was commissioned to work on the Castel Nuovo in Naples. From 1461 to 1466 he was in Provence at the court of the duke of Anjou, for whom he executed a series of medals. His other documented works include Madonnas and bas-reliefs in Italy (chiefly Sicily and Naples) and France, as well as tombs and architectural sculptures in France. He is best known for his portrait busts of women, characterized by serene, detached dignity and aristocratic elegance.

"Eleonora of Aragon," portrait bust by Francesco Laurana; in the National Archaeological Museum, Palermo, Sicily.
ALINARI/ART RESOURCE, NEW YORK

Laurasia Hypothetical former supercontinent in the Southern Hemisphere, which included modern North America, Europe, and Asia (except peninsular India). The concept that the continents were at one time joined was first set forth in detail by ALFRED WEGENER in 1912. He envisioned a single great landmass, PANGAEA, which supposedly began to separate in the Late Triassic Epoch (227–206 million years ago). Subsequent research distinguished between a northern landmass, Laurasia, and GONDWANA. Laurasia is thought to have fragmented into the present continents largely during the MESOZOIC ERA. See also CONTINENTAL DRIFT.

Laurel, Stan; and Hardy, Oliver *original names, respectively,* **Arthur Stanley Jefferson** *and* **Oliver Norvell Hardy, Jr.** *known as* **Laurel and Hardy** (respectively b. June 16, 1890, Lancashire, Eng.—d. Feb. 23, 1965, Santa Monica, Calif., U.S.; b. Jan. 18, 1892, Harlem, Ga., U.S.—d. Aug. 7, 1957, North Hollywood, Calif.) U.S. film comedians. Laurel performed in circuses and vaudeville before settling in the U.S. (1910), where he began appearing in silent movies. Hardy, son of a Georgia lawyer, owned a movie house and acted in silent comedy films from 1913. They joined HAL ROACH's studio in 1926 and began performing together in early short films such as *Putting Pants on Philip* (1927). They made more than 100 comedies, including *Leave 'em Laughing* (1928), *The Music Box* (1932), *Sons of the Desert* (1933), and *Way Out West* (1937), and are considered Hollywood's first great comedy team. The skinny Laurel played the bumbling and innocent foil to the heavy, pompous Hardy as they converted simple, everyday situations into disastrous tangles of stupidity.

laurel family Family Lauraceae, composed of about 2,200 species of often aromatic and evergreen flowering plants in 45 genera. Included in this family are ornamentals and plants that produce cooking herbs, food fruits, and medicinal extracts. The genus *Laurus* includes bay laurel (*L. nobilis*), native to the Mediterranean, which provides bay leaves for cooking, essential oils for perfumery, and the wreaths that crowned victorious heroes and athletes in ancient Greece. Another genus, *Cinnamomum*, includes the CAMPHOR tree and CINNAMON. Also included in this family are the AVOCADO, MOUNTAIN LAUREL, and SASSAFRAS.

Lauren, Ralph *orig.* **Ralph Lifshitz** (b. Oct. 14, 1939, New York, N.Y., U.S.) U.S. fashion designer. Lauren grew up in the Bronx, in New York City. While working for a tie company, he was inspired to begin designing his own neckwear, and in 1967 he went into business for himself. From the inception of his brand, Lauren's creations were characterized by a moneyed style that evoked the look of English aristocracy, as adapted by the sporty, East-Coast American elite. His first menswear line in 1968 featured classic tweed suits, and his first womenswear line in 1971 continued his explorations of classic tailoring and good taste, but with a feminine twist. In 1972 Lauren debuted what would become his signature piece: the mesh sport shirt, available in a variety of colours and featuring his trademark emblem, the polo player. Throughout the following decades he explored new ideas—including Southwestern themes and safari looks—but maintained his central focus on classic American clothing. At the turn of the 21st century, the presence of both his shops and his brand name had become global.

Laurence, Margaret *orig.* **Jean Margaret Wemyss** (b. July 18, 1926, Neepawa, Man., Can.—d. Jan. 5, 1987, Lakefield, Ont.) Canadian writer. She lived in Africa with her engineer husband in the 1950s; her experiences there provided material for her early works. She is best known for depicting the lives of women struggling for self-realization in the male-dominated world of western Canada. Her works include the novels *The Stone Angel* (1964), *A Jest of God* (1966), and *The Fire-Dwellers* (1969) and the stories collected in *A Bird in the House* (1970) and *The Diviners* (1974). In the 1970s she turned to writing children's books.

Laurence, Saint See SAINT LAWRENCE

Laurentian \lȯ-'ren-chən\ **Mountains** Range forming the Quebec portion of the CANADIAN SHIELD, bounded by the Ottawa, ST. LAWRENCE, and Saguenay rivers. One of the oldest mountain ranges in the world, it consists of PRECAMBRIAN rocks more than 544 million years old. It has greatly eroded over time, and its highest peak measures only 3,905 ft (1,190 m). Two provincial parks there are popular vacation areas.

Laurentide Ice Sheet Principal glacial cover of North America during the PLEISTOCENE EPOCH (1.8 million–10,000 years ago). At its maximum extent it spread as far south as latitude 37° N and covered an area of more than 5 million sq mi (13 million sq km). In some areas its thickness reached 8,000–10,000 ft (2,400–3,000 m) or more.

Laurier \'lȯr-ē-ˌā**, Sir Wilfrid** (b. Nov. 20, 1841, Saint-Lin, Canada East—d. Feb. 17, 1919, Ottawa, Ont., Can.) Prime minister of Canada (1896–1911). He studied law at McGill University, where he was a leading member of the liberal Institut Canadien. He served in the Quebec legislature (1871–74) and the Canadian House of Commons (1874–1919), where in 1885 he delivered a plea for clemency for LOUIS RIEL. Leading the Liberal Party to victory in the election of 1896, he became prime minister, the first French Canadian and Roman Catholic to hold that office. He advo-

© 2006 Encyclopædia Britannica, Inc.

cated unity between English and French Canadians, development of the western territories, protection of Canadian industry, and expansion of the transportation system. His insistence on protecting Canadian autonomy in its relations with Britain helped shape the modern concept of a British Commonwealth of independent states. His support for a treaty of reciprocity with the U.S. contributed to his government's defeat in 1911. Laurier is remembered as one of Canada's most outstanding statesmen.

Lausanne \lō-'zän**, Treaty of** (1923) Final treaty concluding World War I, between Turkey (successor to the Ottoman Empire) and the Allies. Signed in Lausanne, Switz., it replaced the Treaty of Sèvres (1920). It recognized the boundaries of the modern state of Turkey, as well as British possession of Cyprus and Italian possession of the Dodecanese, and the Turkish straits between the Aegean and Black seas were declared open to all shipping.

Lautrec, Henri de Toulouse- See Henri de Toulouse-Lautrec

lava Molten rock originating as magma in the Earth's mantle that pours out onto the Earth's surface through volcanic vents (see volcano) at temperatures of about 1,300–2,200 °F (700–1,200 °C). Mafic lavas, such as basalt, form flows known by the Hawaiian names *pahoehoe* and *aa*. *Pahoehoe* is smooth and gently undulating; the lava moves through natural pipes known as lava tubes. *Aa* is very rough, covered with a layer of loose, irregular fragments called clinker, and flows in open channels. Lava that starts out as *pahoehoe* may turn into *aa* as it cools. Lavas of intermediate composition form a block lava flow, which also has a top consisting largely of loose rubble, but the fragments are fairly regular in shape, mostly polygons with relatively smooth sides. See also bomb; nuée ardente.

Lava Beds National Monument Region, northern California, U.S. It features recent lava flows and related volcanic formations, including deep chasms, chimneys, and cinder cones that rise to 300 ft (90 m) in height. The main battle sites of the Modoc Indian war (1872–73) are located within the monument, which occupies an area of 72 sq mi (186 sq km). It was dedicated as a national monument in 1925.

Laval \lə-'väl\ City (pop., 2001: 343,005), southern Quebec, Canada. It occupies the whole of Jesus Island, 20 mi (32 km) long and 8 mi (12 km) wide, and is located north of Montreal. First settled in 1681, it was granted to the Society of Jesus (Jesuits) in 1699 and named for François de Laval, the first Roman Catholic Canadian bishop. Development of Jesus Island's Montreal suburbs began after 1945; in 1965 they were merged to form Laval. Development has been rapid with the opening of industrial parks there.

Laval \lä-'väl**, Carl Gustaf Patrik de** (b. May 9, 1845, Blasenborg, Swed.—d. Feb. 2, 1913, Stockholm) Swedish scientist, engineer, and inventor. Laval built his first impulse steam turbine in 1882. Further advances followed, including a reversible turbine for marine use. A Laval reaction turbine attained a speed of 42,000 revolutions per minute. By 1896 he was operating a complete power plant using an initial steam pressure of 3,400 lbs per sq in. He invented and developed the divergent nozzle to deliver steam to the turbine blades. His flexible shaft and double-helical gear formed the foundation for most subsequent steam turbine development.

Laval \lä-'väl**, Pierre** (b. June 28, 1883, Châteldon, France—d. Oct. 15, 1945, Paris) French politician. A member of the Chamber of Deputies (1914–19, 1924–27) and later the Senate (from 1927), he also held a number of cabinet posts, and, as France's premier (1931–32, 1935–36), he developed the widely denounced Hoare-Laval Pact. In 1940, as minister of state in Philippe Pétain's government (see Vichy France), he began negotiations with the Germans on his own initiative, which aroused suspicion. Pétain soon dismissed him, but in 1942 he returned as head of the government. He agreed to provide French labourers for German industries and announced in a speech that he desired a German victory. In 1945 he was tried and executed as a traitor to France.

Laval University French-language university in Quebec city, Quebec, Canada. Its predecessor institution, the Seminary of Quebec (founded 1663), is considered Canada's first institution of higher learning. The seminary was granted a university charter in 1852 and reorganized in 1970. Today the university has undergraduate and graduate degree programs in numerous fields.

lavender Any of about 20 species of evergreen shrubs that make up the genus *Lavandula* in the mint family, the leaves and flowers of which contain scented oil glands. The spikes of flowers are purple, less commonly pink or white. Native to the Mediterranean, lavender is cultivated widely. Several species yield essential oil for fine perfumes and cosmetics. The narrow fragrant leaves and flowers are dried for use in sachets and potpourris. Lavender is widely used in aromatherapy for its clean, fresh scent.

Spanish lavender (*Lavandula stoechas*). W.H. HODGE

Laver, Rod(ney George) (b. Aug. 9, 1938, Rockhampton, Queen., Austl.) Australian tennis player. He joined Australia's Davis Cup team when he was 18 years old and remained on the squad until 1962. Nicknamed "Rocket," he became the second male player (after Don Budge) to win the grand slam (1962) and the first to repeat the feat (1969). He turned professional in 1963 and in 1971 became the first tennis player to surpass $1 million in career prize money.

Lavoisier \lə-'vwä-zē-ˌā**, Antoine (-Laurent)** (b. Aug. 26, 1743, Paris, France—d. May 8, 1794, Paris) French chemist, regarded as the father of modern chemistry. His work on combustion, oxidation (see oxidation-reduction), and gases (especially those in air) overthrew the phlogiston doctrine, which held that a component of matter (phlogiston) was given off by a substance in the process of combustion. That theory had held sway for a century. He formulated the principle of the conservation of mass (i.e., that the weights of the reactants must add up to the weights of the products) in chemical reactions, clarified the distinction between elements and compounds, and was instrumental in devising the modern system of chemical nomenclature (naming oxygen, hydrogen, and carbon). He was among the first to use quantitative procedures in chemical investigations, and his experimental ingenuity, exact methods, and cogent reasoning, along with the resultant discoveries, revolutionized chemistry. He also worked on physical problems, especially heat, and on fermentation, respiration, and animals. Independently wealthy, he had a simultaneous career as a public servant of remarkable versatility in areas including finance, economics, agriculture, education, and social welfare. A reformer and political liberal, he was active in the French Revolution but came under increasing attack from extremists and was guillotined.

Lavrovsky \lȧv-'rȯf-skē**, Leonid (Mikhaylovich)** (b. June 18, 1905, St. Petersburg, Russia—d. Nov. 26, 1967, Paris, Fr.) Russian dancer, choreographer, teacher, and Bolshoi Ballet director. He studied ballet in St. Petersburg until 1922 and soon was dancing leading roles with the Kirov Ballet, of which he became artistic director in 1938. During 1944–56 and 1960–64 he was chief choreographer of the Bolshoi Ballet, and he became director of its school in 1964. His choreographic work, which began in 1930, included *Fadetta* (1934), *Romeo and Juliet* (1940), *Giselle* (1944), *The Stone Flower* (1954), and *Night City* (1961).

law Discipline and profession concerned with the customs, practices, and rules of conduct that are recognized as binding by the community. Enforcement of the body of rules is through a controlling authority, such as a group of elders, a regent, a court, or a judiciary. Comparative law is the study of the differences, similarities, and interrelationships of different systems of law. Important areas in the study and practice of law include administrative law, antitrust law, business law, constitutional law, criminal law, environmental law, family law, health law, immigration law, intellectual property law, international law, labour law, maritime law, procedural law, property law, public interest law, tax law, trusts and estates, and torts. See also Anglo-Saxon law; canon law; civil law; common law; equity; Germanic law; Indian law; Islamic law (Sharīʿah); Israeli law; Japanese law; jurisprudence; military law; Roman law; Scottish law; Soviet law.

Law, (Andrew) Bonar (b. Sept. 16, 1858, Kingston, N.B., Can.—d. Oct. 30, 1923, London, Eng.) Prime minister of Britain (1922–23), the first born in a British overseas possession. Reared in Scotland, he was elected to the House of Commons in 1900 and became leader of the Conservative Party in 1911. He served as colonial secretary (1915–16) and as chancellor of the Exchequer (1916–18), and he was leader of the House of Commons (1916–21). After David Lloyd George's resignation in 1922, Law formed a Conservative government as prime minister, but he resigned seven months later because of ill health.

Law, John (baptized April 21, 1671, Edinburgh, Scot.—d. March 21, 1729, Venice) Scottish monetary reformer. In 1705 he published the banking reform plan *Money and Trade Considered*, in which, unlike other mercantilists, he proposed a central bank as an agency for manufacturing money, as banknotes rather than as gold and silver. France agreed to try his plan in 1716, and he founded the Banque Générale, which was authorized to issue notes. He soon combined it with a company empowered to develop France's North American territories, particularly the lower Mississippi valley. His plan foundered; held responsible for the "Mississippi Bubble" speculative disaster, he fled to France and died in poverty in Venice.

law, philosophy of See JURISPRUDENCE

law code Systematic compilation of law or legal principles. The oldest extant fragments of a law code are tablets from the ancient city of Ebla dating to c. 2400 BC. The best-known ancient code is that of HAMMURABI. Roman legal records began in the 5th century BC, though the first formal codification, ordered by JUSTINIAN I, was not undertaken until the 6th century AD. In the Middle Ages and into the modern era, only local or provincial compilations were attempted. The first major national code was the NAPOLEONIC CODE, followed by the German, Swiss, and Japanese codes. In COMMON-LAW countries such as England and the U.S., law codes have traditionally been less important than the record of judicial decisions, though major codifications were completed in the U.S. in the 20th century (e.g., the *U.S. Code*, the *Uniform Commercial Code*). See also CIVIL LAW; GERMAN CIVIL CODE.

law of cosines Generalization of the PYTHAGOREAN THEOREM relating the lengths of the sides of any triangle. If a, b, and c are the lengths of the sides and C is the angle opposite side c, then $c^2 = a^2 + b^2 - 2ab \cos C$.

law of sines Principle of TRIGONOMETRY stating that the lengths of the sides of any triangle are proportional to the sines of the opposite angles. That is,

$$\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C}$$

when a, b, and c are the sides and A, B, and C are the opposite angles.

Law of the Sea See Law of the SEA

law report In COMMON LAW, a published record of a judicial decision that is cited by lawyers and judges as legal precedent in arguing and deciding cases. The report contains the title of the case, a statement of the facts, a brief case history, the opinion of the court, and the judgment rendered. It often contains a headnote, or analytical summary stating the points decided. The findings of trial courts are not ordinarily reported, but those of appellate courts are.

Lawamon See LAYAMON

Lawes, Henry and William (respectively baptized Jan. 5, 1596, Dinton, Wiltshire, Eng.—d. Oct. 21, 1662, London; baptized May 1, 1602, Salisbury, Wiltshire, Eng.—d. Sept. 24, 1645, Chester, Cheshire) English composers. Both brothers served at the court of CHARLES I. Henry became the leading English songwriter of his time; some 435 of his songs survive. His theatrical music includes that to JOHN MILTON's masque *Comus* (1634). William wrote a large quantity of instrumental music, mostly for string consorts. His music for some 25 dramatic productions, including works by BEN JONSON and WILLIAM DAVENANT, made him the principal English theatrical composer before HENRY PURCELL. He fought with the Royalists during the English Civil Wars and was killed at the siege of Chester.

lawn Fine-textured expanse of grass that is kept mowed. A common landscape design element of Western-style gardens and parks, lawns aid in giving a sense of scale and proportion. Made popular in the 18th century by Capability BROWN, the lawn is the antithesis of the French PARTERRE. In the 20th century the lawn became a ubiquitous feature of the gardens of U.S. single-family detached houses, serving to denote ownership and provide a buffer zone between street and private space.

lawn bowls See BOWLS

Lawrence, D(avid) H(erbert) (b. Sept. 11, 1885, Eastwood, Nottinghamshire, Eng.—d. March 2, 1930, Vence, France) English novelist, short-story writer, poet, and essayist. The son of a Midlands coal miner and an educated mother, he began to write in 1905 and earned a teaching certificate in 1908. FORD MADOX FORD published much of Lawrence's early work in the *English Review* and helped place his first novel, *The White Peacock* (1911). Lawrence often drew his themes from his own life and relationships. *Sons and Lovers* (1913) is a clearly autobiographical novel about working-class family life. In 1914 he married a German woman, Frieda Weekley. The object of hostility and suspicion during World War I because of his pacifism and her origins, the couple lived in various countries after 1919, never returning to England. *The Rainbow* (1915) and its sequel, *Women in Love* (1920), trace the sickness of modern civilization to the effects of industrialization upon the human psyche. *Kangaroo* (1923) describes the persecution he experienced during the war. *The Plumed Serpent* (1926) was inspired by his fascination with Aztec culture. Lawrence's writing is notable for its intensity and its erotic sensuality; several of his works, including *Lady Chatterley's Lover* (1928), were banned as obscene. He died of the tuberculosis that had plagued him from an early age.

Lawrence, Ernest O(rlando) (b. Aug. 8, 1901, Canton, S.D., U.S.—d. Aug. 27, 1958, Palo Alto, Calif.) U.S. physicist. He earned a Ph.D. at Yale University and taught physics at the University of California at Berkeley from 1929, where he built and directed (from 1936) its radiation laboratory. In 1929 he developed the CYCLOTRON, with which he accelerated protons to speeds high enough to cause nuclear disintegration. He later produced radioactive isotopes for medical use, instituted the use of neutron beams to treat cancer, and invented a colour-television picture tube. He worked with the MANHATTAN PROJECT, converting the Berkeley cyclotron to separate uranium-235 by mass spectrometry. For his invention of the cyclotron, he was awarded a 1939 Nobel Prize, and in 1957 he received the Enrico Fermi Award. Lawrence Berkeley Laboratory and Lawrence Livermore National Laboratory were named in his honour, as was element 103, lawrencium.

Lawrence, Gertrude *orig.* **Gertrud Alexandra Dagmar Lawrence Klasen** (b. July 4, 1898, London, Eng.—d. Sept. 6, 1952, New York, N.Y., U.S.) British actress. She began appearing on stage as a child, and she starred in musical revues such as NOËL COWARD's *London Calling* (1923) and GEORGE GERSHWIN's *Oh, Kay!* (1926). A longtime friend of Coward's, she performed in many of his comedies, notably *Private Lives* (1930); both the play and the stars set the tone that would characterize comedies of manners for a decade or more: sophistication, brittle wit, and chic. She was also acclaimed for her roles in the musicals *Lady in the Dark* (1941) and *The King and I* (1951).

Gertrude Lawrence
CECIL BEATON

Lawrence, Jacob (b. Sept. 7, 1917, Atlantic City, N.J., U.S.—d. June 9, 2000, Seattle, Wash.) U.S. painter. He moved with his family at 13 to New York City's Harlem. Art classes sponsored by the WORKS PROGRESS ADMINISTRATION in 1932 developed his talent. His works portray scenes of African American life and history with vivid, stylized realism. Gouache and tempera were Lawrence's characteristic media. His use of sombre browns and black for shadows and outlines in an otherwise vibrant palette lent his work a distinctive overtone. His best-known works are his series on historical and social themes, such as *Life in Harlem* (1942) and *War* (1947). His later works include a powerful series on the struggles of desegregation. From 1971 he taught at the University of Washington.

Lawrence, James (b. Oct. 1, 1781, Burlington, N.J., U.S.—killed in action June 1, 1813, in a sea battle off Boston, Mass.) U.S. naval officer. He served under STEPHEN DECATUR in the TRIPOLITAN WAR. In the WAR OF 1812 he commanded the USS *Hornet* in the capture of the British *Peacock*. Shortly thereafter he was promoted to captain of the USS *Chesapeake*. In 1813 he accepted a challenge from the British *Shannon* to a sea fight off the coast of Boston. The *Chesapeake* was defeated in less than an hour, and Lawrence was mortally wounded. His last words, "Don't give up the ship," came to express one of the U.S. Navy's most cherished traditions.

Lawrence, John (Laird Mair) *later* **Baron Lawrence (of the Punjab and of Grately)** (b. March 4, 1811, Richmond, Yorkshire, Eng.—d. June 27, 1879, London) British viceroy and governor-general of India (1864–69). He worked in Delhi as an assistant judge, magistrate, and tax collector. After the First Sikh War (1845–46) he was made commissioner of the newly annexed district of Jullundur, where he subdued the hill chiefs, established courts and police posts, and curbed female infanticide and suttee. On the Punjab board of administration he abolished internal duties, introduced a uniform currency, and encouraged road and canal construction. As viceroy and governor-general from 1864, he promoted increased educational opportunities for Indians but resisted their appointment to high civil-service posts. He avoided entanglements in the affairs of Arabia, the Persian Gulf, and Afghanistan.

Lawrence, Saint *or* **Saint Laurence** (d. 258, Rome; feast day August 10) Roman martyr. He was one of seven deacons in Rome during the papacy of Sixtus II. When the pope was executed during the persecution of Christians under Valerian, the authorities asked Lawrence to surrender the churches' treasures to the state, and he responded by distributing the money to the poor, for which he was condemned to death. His fearless behavior at his execution was responsible for many conversions; according to one legend, he was roasted to death on a gridiron, remarking to his torturers, "I am cooked on that side; turn me over, and eat."

Lawrence, T(homas) E(dward) *byname* **Lawrence of Arabia** (b. Aug. 15, 1888, Tremadoc, Caernarvonshire, Wales—d. May 19, 1935, Clouds Hill, Dorset, Eng.) British scholar, military strategist, and author. He studied at Oxford, submitting a thesis on Crusader castles. He learned Arabic on an archaeological expedition (1911–14). During World War I (1914–18) he conceived the plan of supporting Arab rebellion against the Ottoman Empire as a way of undermining Germany's eastern ally, and he led Arab forces in a guerrilla campaign behind the lines, tying up many Ottoman troops. In 1917 his forces had their first major victory, capturing the port town of Al-ʿAqabah. He was captured later that year, but he escaped. His troops reached Damascus in 1918, but Arab factionalism and Anglo-French decisions to divide the area into British- and French-controlled mandates prevented the Arabs from forming a unified nation despite their victory. Lawrence retired, declining royal decorations. Under the name Ross, and later Shaw, he enlisted in the Royal Air Force (and briefly the Royal Tank Corps). He finished his autobiography, *The Seven Pillars of Wisdom*, in 1926. He was eventually posted to India; his experiences provided grist for his semifictional *The Mint*. He died in a motorcycle accident three months after his discharge.

laws, conflict of Opposition or contradiction in the applicable laws of different states or jurisdictions regarding the rights of the parties in a case. Rules have been created to help determine which set of laws is applicable in a given case, which judicial system is most appropriate for trying the case, and the extent to which other jurisdictions are expected to honour or enforce the outcome of the trial.

lawyer *or* **attorney** Person trained and licensed to prepare, manage, and either prosecute or defend a court action as an agent for another and who also gives advice on legal matters that may or may not require court action. Legal practice varies from country to country. In Britain, for example, lawyers are divided into barristers and solicitors. In the U.S. attorneys often specialize in limited areas of the law (e.g., criminal law, divorce, or probate). In France the most important type of legal professional is the *avocat*, roughly comparable to the English barrister. In Germany the chief distinction is between lawyers and notaries.

laxative Substance that promotes defecation. These include irritants (stimulants) such as cascara sagrada and castor oil, bulk formers such as bran and psyllium, saline laxatives such as Epsom salts or milk of magnesia, glycerin, lubricants such as mineral oil and some vegetable oils, and stool softeners. A high-fibre diet is more important than laxatives in correcting simple intestinal constipation.

Laxness \'läks-nes**, Halldór** *orig.* **Halldór Kiljan Gudjónsson** (b. April 23, 1902, Reykjavík, Ice.—d. Feb. 8, 1998, near Reykjavík) Icelandic novelist. He converted to Roman Catholicism while traveling in Europe as a young man but later dissociated himself from Christianity and turned to socialism, an ideology reflected in his novels from the 1930s and '40s. Works exploring the social issues of Iceland include *Salka Valka* (1936), which deals with the plight of working people in a fishing village; *Independent People* (1935), the story of an impoverished farmer's struggle for economic independence; and the nationalist trilogy *Iceland's Bell* (1943–46). His later works were more lyrical and introspective. He received the Nobel Prize for Literature in 1955.

Layamon \'lā-ə-mən\ *or* **Lawamon** \'lȯ-mən\ (fl. 12th century) Middle English poet. A priest who lived in Worcestershire, he is the author of the romance-chronicle the *Brut* (c. 1200), the outstanding product of the 12th-century English literary revival and the first work in English to treat the Arthurian legend. His source was Wace's *Roman de Brut*. In some 16,000 long alliterative lines, the *Brut* tells of Britain from the time of the landing of Brutus, great-grandson of the Trojan Aeneas, to the final Saxon victory over the Britons in 689.

layering *or* **layerage** Method of propagation in which plants are induced to regenerate missing parts from parts that are still attached to the parent plant. It occurs naturally for drooping black raspberry or forsythia stems, whose trailing tips root where they come in contact with the soil. They then send up new shoots from the newly rooted portion of the plant. For soil layering, lower stems are bent to the ground and covered with moist soil of good quality. For air layering, a branch is deeply slit and the wound is covered with a ball of earth or moss and kept moist until roots develop; the branch is then severed and transplanted. Layering was practiced by the ancient Egyptians and Greeks. See also cutting.

Lazarus In the New Testament, two apparently different people. In the Gospel According to Luke, he was the poor man in the parable of Dives and Lazarus, and in the Middle Ages he was honoured as the patron of lepers. In the Gospel According to John, Lazarus was the man whom Jesus raised from the dead. When Jesus visited Bethany, near Jerusalem, Lazarus's sister Mary lamented that if only Jesus had been there four days earlier, surely he could have prevented her brother from dying. Jesus went to the cave where Lazarus was entombed and commanded him to "come forth," and he did. The miracle, in the Gospel account, inspired some Jews to accept Jesus as the Messiah, and others reported it to Jewish leaders.

Lazarus, Emma (b. July 22, 1849, New York, N.Y., U.S.—d. Nov. 19, 1887, New York) U.S. writer. She was born into a cultured Jewish family and learned languages and the classics at an early age. Her first book (1867) caught the attention of Ralph Waldo Emerson, with whom she corresponded thereafter. She wrote a prose romance and translated Heinrich Heine's poems and ballads. She took up the defense of persecuted Jews c. 1881 and began working for the relief of new immigrants to the U.S. The famous closing lines to her poem "The New Colossus" (1883) were inscribed on the base of the Statue of Liberty (see Statue of Liberty National Monument), dedicated in 1886.

Lazio \'lät-sē-ō\ Region (pop., 2001 prelim.: 4,976,184), west-central Italy, fronting the Tyrrhenian Sea. Established in 1948, it covers an area of 6,642 sq mi (17,203 sq km); its capital is Rome. In the east are the central Apennines, and in the west lies a coastal plain. Until the late 19th century, most of its lowlands were marshy and malarial, but in the early 20th century these lands were drained and repopulated. Situated in the region previously known as Latium, it supports light industry, but the area is dominated by Rome.

Le Bon \lə-'bō^{n}**, Gustave** (b. May 7, 1841, Nogent-le-Rotrou, France—d. Dec. 13, 1931, Marnes-la-Coquette) French social psychologist. After receiving a doctorate in medicine, he traveled and wrote books on anthropology, but his interests later shifted to social psychology. In *The Crowd* (1895) he argued that the personality of the individual in a crowd becomes submerged and that the collective crowd mind comes to dominate.

Le Brun \lə-'brœ^{n}**, Charles** (b. Feb. 24, 1619, Paris, France—d. Feb. 12, 1690, Paris) French painter and designer. After study in Paris and Rome, he received large decorative and religious commissions that made his reputation. Possessing extraordinary organizational as well as technical skills, as the first painter to Louis XIV he created or supervised the production of most of the paintings, sculptures, and decorative objects commissioned by the French government for three decades, notably for the Palace of Versailles. As director of the Academy of Painting and Sculpture and organizer of the French Academy at Rome, he was instrumental in establishing the characteristic homogeneity of French art in the 17th century.

© 2006 Encyclopædia Britannica, Inc.

Le Carré \lə-kä-'rā**, John** *orig.* **David John Moore Cornwell** (b. Oct. 19, 1931, Poole, Dorset, Eng.) British novelist. As a member of the foreign service in West Germany from 1959, he acquired firsthand knowledge of international espionage. He began to write full-time after the success of his third novel, the realistic, suspenseful *The Spy Who Came in from the Cold* (1963). The trilogy *Tinker, Tailor, Soldier, Spy* (1974), *The Honourable Schoolboy* (1977), and *Smiley's People* (1980) centres on the intelligence agent George Smiley. Unlike other fictional spies, Smiley is decidedly unglamorous, lonely, and alienated. Le Carré's other novels include *The Little Drummer Girl* (1983), *The Russia House* (1989), and *The Night Manager* (1993). Many of his books were adapted for film or television.

Le Châtelier \lə-shä-tal-'yā**, Henry-Louis** (b. Oct. 8, 1850, Paris, France—d. Sept. 17, 1936, Miribel-les-Échelles) French chemist. A professor at the Collège de France and the Sorbonne, he is best known for the principle of Le Châtelier, which makes it possible to predict the effect that a change in conditions (TEMPERATURE, PRESSURE, or concentration of components) will have on a CHEMICAL REACTION. The principle, invaluable in the chemical industry in developing the most efficient and profitable chemical processes, may be stated thus: A system at EQUILIBRIUM, when subjected to a perturbation, responds in a way that tends to minimize its effect. Le Châtelier was also an authority on metallurgy, cements, glasses, fuels, explosives, and heat.

Le Corbusier \lə-kȯr-bu̇s-'yā\ *orig.* **Charles-Édouard Jeanneret** (b. Oct. 6, 1887, La Chaux-de-Fonds, Switz.—d. Aug. 27, 1965, Cap Martin, France) Swiss-born French architect and city planner. Born in a small Swiss town, he left home as a young man and developed many of his ideas during his travels through Europe (1907–11). After settling in Paris, Le Corbusier (his assumed name, from the surname of an ancestor) and the painter Amédée Ozenfant (1886–1966) formulated the ideas of Purism, an aesthetic based on the pure, simple geometric forms of everyday objects. His early work included theoretical plans for skyscraper cities and mass-produced housing; in one of his many essays on architecture from the period, he declared that "a house is a machine for living in." Works from the 1920s such as the Villa Savoye at Poissy, France (1929–30), with its structure raised on slender concrete pillars, open floor plan, long strip windows, and roof terrace, established him as a major proponent of the INTERNATIONAL STYLE. He and other architects working in this style aspired to clean, Modernist lines, yet Le Corbusier was the first architect to make a studied use of rough-cast concrete, a technique that gave his work a distinctly sculptural, expressive quality. His later works include the UNITÉ D'HABITATION and the lyrical chapel of Notre-Dame-du-Haut at Ronchamp, France (1950–55). His government buildings at Chandigarh, India (begun 1950), with their enormous concrete sunshades, sculptural facades, and swooping rooflines, represent the first large-scale application of his city-planning principles. Le Corbusier's many works, plans, and writings inspired later avant-garde architectural experiments throughout the world.

Le Gallienne \lə-'gal-yən**, Eva** (b. Jan. 11, 1899, London, Eng.—d. June 3, 1991, Weston, Conn., U.S.) British-born U.S. actress and director. After moving to New York City in 1915, she appeared in minor stage roles before starring in *Liliom* (1921). She founded the Civic Repertory Theatre (1926–33), where she directed and acted in plays by ANTON CHEKHOV, HENRIK IBSEN, and other playwrights not then familiar to U.S. audiences. She later cofounded the short-lived American Repertory Theatre (1946–47). Her most notable later stage appearance was in a 1976 revival of *The Royal Family*.

Le Guin \lə-'gwin**, Ursula K(roeber)** *orig.* **Ursula Kroeber** (b. Oct. 21, 1929, Berkeley, Calif., U.S.) U.S. writer of science fiction and fantasy. The daughter of ALFRED L. KROEBER and educated at Radcliffe College, she was influenced by the methods of anthropology and often included highly detailed descriptions of alien societies in her works. Among her novels are *The Left Hand of Darkness* (1969), *The Word for World Is Forest* (1972), *The Dispossessed* (1974), and *Always Coming Home* (1985) and the Earthsea series. She also wrote several volumes of essays on feminist issues, writing, and other topics.

Le Havre \lə-'hävrᵊ\ Seaport city (pop., 1999: 190,905), northern France. It lies along the ENGLISH CHANNEL and the SEINE RIVER estuary, northwest of PARIS. The second port of France after MARSEILLE, it serves as a base for exports; it is also an important industrial centre. It was only a fishing village until 1517, when FRANCIS I had a harbour built there. Enlarged and fortified in the 17th century under cardinal de RICHELIEU and LOUIS XIV, it was adapted to accommodate bigger vessels in the late 18th century. Most of the city was destroyed during World War II. Later rebuilt, the city's 17th-century church of Notre-Dame is one of the few surviving old buildings.

Le Loi \'lā-'lȯi\ *or* **Binh Dinh Vuong** \'bin-'din-'vwȯŋ\ *or* **Thuan Thien** \'twän-'tyen\ (b. 1385, Lam Son, Viet.—d. 1433) Vietnamese general who won back independence for Vietnam from China and founded the LATER LE DYNASTY (1428–1788). A wealthy landowner, he was affected by the social conditions of the common people, who suffered under the Chinese and the Vietnamese aristocracy. His series of revolts, begun in 1418, drove the Chinese out. From then on he maintained diplomatic relations with the Chinese Ming dynasty, even sending tribute; the Ming acknowledged his kingdom in 1428. Among his achievements were land reforms to help the peasants. He is the most honoured Vietnamese hero of his time.

Le Mans \lə-'mäⁿ\ **(Grand Prix d'Endurance)** Automobile race. It is perhaps the best-known automobile race in the world, run annually (with few exceptions) since 1923 at the Sarthe road-racing circuit, near Le Mans, France. The winner is the car that travels the greatest distance in a 24-hour period. The racing circuit is 8.3 mi (13.4 km) long, and the race is open only to sports cars (see SPORTS-CAR RACING).

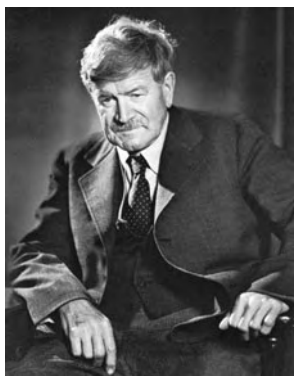
Le Moyne d'Iberville, Pierre See Pierre Le Moyne d'IBERVILLE

Le Nain brothers \lə-'naⁿ\ French painters. By 1630 the three brothers—Antoine (c. 1600–1648), Louis (c. 1600–1648), and Mathieu (c. 1607–1677)—had established a workshop together in Paris. They are said to have worked in harmony, often collaborating on the same picture. Most notable of their works are the dignified and sympathetic genre paintings of peasant life. Their realism is unique in 17th-century French art. None of the brothers' works bears more than a surname, and today they are treated as a single painter.

Le Nôtre \lə-'nō-trᵊ**, André** (b. March 12, 1613, Paris, France—d. Sept. 15, 1700, Paris) French landscape architect. In 1637 he succeeded his father as master gardener to LOUIS XIII at the Tuileries Palace in Paris; he redesigned its gardens and extended the main avenue that later became the CHAMPS-ÉLYSÉES. LOUIS XIV placed him in charge of planning the gardens at the Palace of VERSAILLES, which Le Nôtre transformed from a muddy swamp to a park of splendid vistas. He designed numerous other parks and gardens in France, including those at Saint-Germain-en-Laye, Saint-Cloud, and FONTAINEBLEAU, and probably St. James's Park in London. His designs later influenced PIERRE-CHARLES L'ENFANT.

Le Pen, Jean-Marie (b. June 20, 1928, La Trinité, France) French nationalist politician. He was elected in 1956 to the National Assembly as its youngest member. Le Pen helped to found the National Front in 1972, becoming the party's leader later that year. The party emphasized the threat to France posed by immigration, particularly of Arabs from France's former North African colonies. The party also opposed European integration, favoured the reintroduction of capital punishment, and sought prohibitions on the building of additional mosques in France. Le Pen ran several times for the presidency; though he captured less than 1% of the vote in 1974, in 1988 and 1995 he won some 15%. In the presidential election of 2002 Le Pen finished second in the first round of voting, winning 18%, though he was easily defeated in the second round by JACQUES CHIRAC. Le Pen was widely regarded as the leader of French NEO-FASCISM, and his National Front party constituted the main right-wing opposition to the country's mainstream conservative parties from the 1970s through the turn of the 21st century.



Le Van Duyet \'lā-'vän-dzhu̇-'yet\ (b. 1763, Quang Ngai province, Viet.—d. July 30, 1832, Saigon) Vietnamese military strategist and government official. From his youth he was attached to the Vietnamese court. He acted as adviser to successive emperors and helped Prince Nguyen Anh (the future emperor Gia Long, founder of the NGUYEN DYNASTY) conquer all of Vietnam, making use of Western armaments and military techniques. When Gia Long's successor ordered the persecution of Roman Catholic missionaries, Duyet refused; he was indicted posthumously for his defiance but later was honoured.

leaching Loss of soluble substances and colloids from the top layer of soil by percolating precipitation. The materials are carried downward and

© 2006 Encyclopædia Britannica, Inc.

are generally redeposited in a lower layer. This transport results in a porous and open top layer and a dense, compact lower layer. In areas of extensive leaching, the remaining quartz and hydroxides of iron, manganese, and aluminum form LATERITE. In such areas rapid bacterial action results in the absence of HUMUS in the soil, because fallen plant material is oxidized and the products are leached away.

Leacock, Stephen (Butler) (b. Dec. 30, 1869, Swanmore, Hampshire, Eng.—d. March 28, 1944, Toronto, Ont., Can.) British-born Canadian writer and lecturer. He immigrated to Canada with his parents at age six. Though he taught economics and political science at McGill University (1903–36) and wrote extensively on history and political economy, his true calling was humour. His fame rests on his many books of lighthearted sketches and essays, beginning with *Literary Lapses* (1910) and *Nonsense Novels* (1911). His humour is typically based on a comic perception of social foibles and the incongruity between appearance and reality in human conduct.

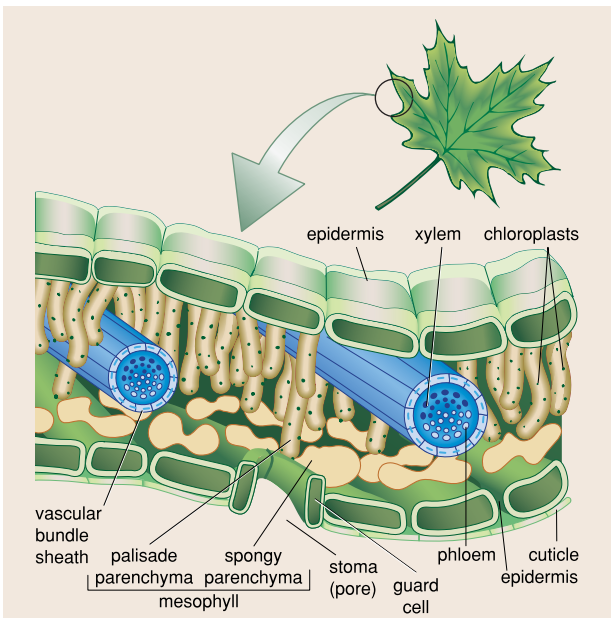
lead Metallic chemical ELEMENT, chemical symbol Pb, atomic number 82. Lead is a soft, silvery white or grayish, malleable, ductile, dense METAL that conducts electricity poorly. Its stable ISOTOPES are all end products of radioactive decay of URANIUM and other heavy elements. Known since ancient times, lead is so durable and resistant to corrosion that Roman lead pipes are still usable. Lead is used in roofing, as cable coverings, and in pipes, conduits, and structures. Other uses are in storage BATTERIES, ammunition, and low-melting-point ALLOYS (e.g., solder, pewter) and as shielding against sound, vibrations, and radiation. Lead is rarely found free in nature; its major ore is the sulfide GALENA (PbS). Because it and its compounds are poisons (see LEAD POISONING), lead-based paints and gasoline additives have been phased out in many countries. Lead in compounds has VALENCE 2 and 4; an OXIDE (litharge, PbO) is the most widely used. Lead compounds are added to lead crystal (see GLASS), glazes, and ceramics and are used as pigments, drying agents for paints and varnishes, insecticides and herbicides, and fireproofing agents and in matches, explosives, and pyrotechnics. Almost half of all lead is recovered from recycled scrap. The "lead" in pencils is GRAPHITE.



lead-210 dating Method of DATING that makes use of the ratio of the amount of the radioactive isotope lead-210 to that of the stable isotope lead-206. The method has been applied to the ores of URANIUM. Lead-210 dating is particularly useful for determining the ages of relatively recent marine sediments and so has been applied to studies concerned with the impact of human activity on the aquatic environment.

lead glance See GALENA

lead poisoning *or* **plumbism** Poisoning by accumulation of LEAD in the body. Large doses cause gastroenteritis in adults and brain disorders in children. Anemia, constipation and abdominal spasm, confusion, a progressive paralysis, and sometimes brain cancer result from chronic exposure. Children are particularly susceptible to nerve and brain damage; sensitive tests show that even low levels of lead can harm children and are linked to behavioral problems. Sources in the home include lead-based paint, lead drinking-water pipes, and lead-glazed tableware. Babies, who put things in their mouths, are at highest risk. Working where lead is used and exposure to some insecticides are other risk factors. The U.S. phase-out of lead in gasoline was completed in 1996; similar bans are being implemented worldwide. Treatment involves giving ANTIDOTES that bind (see CHELATE) the lead in the tissues.

Leadbelly *orig.* **Huddie William Ledbetter** (b. c. Jan. 21, 1885?, Mooringsport, La., U.S.—d. Dec. 6, 1949, New York, N.Y.) U.S. folk blues singer and songwriter. As a child he learned to play many instruments; he later worked as an itinerant musician with Blind Lemon Jefferson. In 1918 he was imprisoned for murder; he was pardoned in 1925 by the governor of Texas, who had visited the prison and heard him sing. Resuming a life of drifting, he was imprisoned for attempted murder in 1930; he was discovered in 1933 by folklorist JOHN LOMAX, who secured his release. Under Lomax's guidance he embarked on a concert tour, published 48 songs with commentary about Depression-era conditions of African Americans (1936), and recorded extensively. He worked with WOODY GUTHRIE in the group the Headline Singers. Leadbelly died penniless, but several of his songs, including "Goodnight, Irene," "The Midnight Special," and "Rock Island Line," soon became standards.

leaf Any flattened, green outgrowth from the stem of a VASCULAR PLANT. Leaves manufacture oxygen and GLUCOSE, which nourishes and sustains both plants and animals. Leaves and stem tissue grow from the same apical BUD. A typical leaf has a broad, expanded blade (lamina), attached to the stem by a stalklike petiole. The leaf may be simple (a single blade), compound (separate leaflets), or reduced to a spine or scale. The edge (margin) may be smooth or jagged. Veins transport materials to and from the leaf tissues, radiating from the petiole through the blade. They are arranged in a netlike pattern in dicot leaves and are parallel in monocot leaves (see COTYLEDON). The leaf's outer layer (epidermis) protects the interior (mesophyll), whose soft-walled, unspecialized green cells (parenchyma) produce carbohydrate food by PHOTOSYNTHESIS. In autumn the green CHLOROPHYLL pigments of deciduous leaves break down, revealing other pigment colors (yellow to red), and the leaves drop off the tree. Leaf scars that form during wound healing after the leaves drop are useful for identifying winter twigs. In CONIFERS, evergreen needles, which are a type of leaf, persist for two or three years.

Structures of a leaf. The epidermis is often covered with a waxy protective cuticle that helps prevent water loss from inside the leaf. Oxygen, carbon dioxide, and water enter and exit the leaf through pores (stomata) scattered mostly along the lower epidermis. The stomata are opened and closed by the contraction and expansion of surrounding guard cells. The vascular, or conducting, tissues are known as xylem and phloem; water and minerals travel up to the leaves from the roots through the xylem, and sugars made by photosynthesis are transported to other parts of the plant through the phloem. Photosynthesis occurs within the chloroplast-containing mesophyll layer.

leaf-footed bug See SQUASH BUG

leaf insect *or* **walking leaf** Any of about 25 species of flat green insects (family Phylliidae) with a leaflike appearance. Leaf insects, which range from India to the Fiji Islands, are about 2.3 in. (60 mm) long. The female has large leathery forewings (tegmina) that lie edge to edge on the abdomen and resemble, in their vein pattern, the midrib and veins in a leaf. The hind wings have no function. The male has small tegmina and ample, non-leaflike, functional hind wings. The newly hatched young are reddish, but become green after feeding on leaves.

© 2006 Encyclopædia Britannica, Inc.

leaf miner Any of various insect larvae that live and feed within a leaf, including CATERPILLARS, SAWFLY larvae, BEETLE and WEEVIL grubs, and DIPTERAN maggots. Most leaf-miner burrows or tunnels are either thin, winding, whitish trails or broad, whitish or brownish blotches. Though leaf miners do not usually cause injury, they mar the appearance of ornamental trees and shrubs. One method of control is to remove and burn infested leaves; spraying with nicotine solutions or dusting with insecticides is effective only when the adults are emerging.

leafhopper Any of the small, slender, often beautifully coloured and marked sap-sucking insects of the large family Cicadellidae. There is a leafhopper species for almost every type of plant. Most are less than 0.5 in. (12 mm) long. Leafhoppers can be serious economic pests. Their feeding may remove sap, destroy chlorophyll, transmit disease, or curl leaves; they also puncture the host plant while laying eggs. Hopperburn is a diseased condition caused by their injection of a toxin into the plant as they feed.

Red-banded leafhopper (*Graphocephala*)
STEPHEN COLLINS/PHOTO RESEARCHERS

League of Arab States See ARAB LEAGUE

League of Nations Organization for international cooperation established by the ALLIED POWERS at the end of WORLD WAR I. A league covenant, embodying the principles of collective security and providing for an assembly, a council, and a secretariat, was formulated at the PARIS PEACE CONFERENCE (1919) and contained in the Treaty of VERSAILLES. The covenant also set up a system of colonial mandates. Headquartered at Geneva, the League was weakened by the failure of the U.S., which had not ratified the Treaty of Versailles, to join the organization. Discredited by its failure to prevent Japanese expansion in Manchuria and China, Italy's conquest of Ethiopia, and Germany's seizure of Austria, the League ceased its activities during World War II. It was replaced in 1946 by the UNITED NATIONS.

Leahy \ˈlā-hē**, William D(aniel)** (b. May 6, 1875, Hampton, Iowa, U.S.—d. July 20, 1959, Bethesda, Md.) U.S. naval officer. After graduating from the U.S. Naval Academy, he served in the Spanish-American War, the Philippine insurrection, and the Boxer Rebellion. He commanded a navy transport during World War I, when he began a friendship with FRANKLIN D. ROOSEVELT, then assistant secretary of the navy. He served as chief of naval operations (1937–39), as governor of Puerto Rico (1939), and as U.S. ambassador to France (1940). He was Roosevelt's chief of staff during World War II and continued in that post under HARRY S. TRUMAN. He was made a fleet admiral in 1944.

Leakey family Family of archaeologists and paleoanthropologists known for their discoveries of HOMININ and other fossil remains in eastern Africa. Louis S.B. Leakey (b. 1903—d. 1972), born of British missionary parents, grew up in Kenya, was educated at Cambridge University, and eventually (1931) began field research at OLDUVAI GORGE in Tanzania. He was joined there by his wife, Mary D. Leakey (b. 1913—d. 1996), who in 1959 uncovered remains of a form of *AUSTRALOPITHECUS*. The couple later uncovered the first known remains of *HOMO HABILIS*, as well as those of *Kenyapithecus*, a possible common ancestor of humans and apes that lived c. 14 million years ago. L.S.B. Leakey commissioned JANE GOODALL, Biruté Galdikas, and DIAN FOSSEY to undertake pioneering studies of chimpanzees, orangutans, and gorillas, respectively. Mary Leakey continued to make important discoveries, including the LAETOLI FOOTPRINTS, after her husband's death. Their son, Richard Leakey (b. 1944), is known for his work at the Koobi Fora site on the shores of LAKE TURKANA in Kenya, where he uncovered evidence of *H. habilis* dated as early as 2.5 million years ago. His wife, zoologist Meave Leakey (b. 1942), discovered two new hominin species.

Leal, Juan de Valdés See Juan de VALDES LEAL

Lean, Sir David (b. March 25, 1908, Croydon, Surrey, Eng.—d. April 16, 1991, London) British film director. He worked at Gaumont Studios from 1928, becoming head film editor. He codirected *In Which We Serve* (1942) with NOËL COWARD and was sole director of Coward's *Blithe Spirit* (1945) and *Brief Encounter* (1945). He directed film adaptations of *Great Expectations* (1946) and *Oliver Twist* (1948). Lean won wide acclaim for *The Bridge on the River Kwai* (1957, Academy Award) and later for *Lawrence of Arabia* (1962, Academy Award), *Dr. Zhivago* (1965), and *A Passage to India* (1984). His literate, epic productions featured spectacular cinematography and stunning locales.

Leaning Tower of Pisa White marble CAMPANILE in Pisa, Italy, famous for the uneven SETTLING of its foundation, which caused it to lean 5.5 degrees (about 15 ft [4.5 m]) from the perpendicular. Begun in 1173 as the third and final structure of the city's cathedral complex, it was designed to stand 185 ft (56 m) high. Work was suspended several times as engineers sought solutions; the tower, still leaning, was completed in the 14th century. Subsiding at the rate of 0.03 in (1.2 mm) a year, the structure was in danger of collapse, and in 1990 it was closed as engineers undertook a strengthening project that decreased the lean by 17 in (44 cm) to about 13.5 ft (4.1 m). The work was completed in May 2001.

Lear, Edward (b. May 12, 1812, Highgate, near London, Eng.—d. Jan. 29, 1888, San Remo, Italy) English painter and comic poet. From age 15 he earned his living by drawing. Employed to illustrate the earl of Derby's private menagerie in the 1830s, he later produced *Book of Nonsense* (1846) for the earl's grandchildren. His other works include *Nonsense Songs, Stories, Botany and Alphabets* (1871), containing "The Owl and the Pussy-Cat," and *Laughable Lyrics* (1877). He is best known for popularizing the LIMERICK. He also published volumes of bird and animal drawings and seven illustrated travel books. Epileptic and depressive, he lived mainly abroad after 1837.

Edward Lear, drawing by William Holman Hunt, 1857; in the Walker Art Gallery, Liverpool
COURTESY OF THE WALKER ART GALLERY, LIVERPOOL

Lear, Norman (Milton) (b. July 27, 1922, New Haven, Conn., U.S.) U.S. producer, writer, and director. He first worked in public relations and later in television as a comedy writer and director (1950–59). He wrote and produced movies such as *Come Blow Your Horn* (1963), *Divorce American Style* (1967), and *Cold Turkey* (1971) before returning to television to create and produce hit series such as *All in the Family* (1971–83), for which he received four Emmy Awards; *Maude* (1972–78); *Sanford and Son* (1972–77); and *The Jeffersons* (1975–85). He founded the progressive activist group People for the American Way.

Lear, William Powell (b. June 26, 1902, Hannibal, Mo., U.S.—d. May 14, 1978, Reno, Nev.) U.S. electrical engineer and industrialist. Following military service during World War I, he designed a practicable car radio and sold it to the future Motorola, Inc. During and after World War II, his companies Lear Avia and Lear, Inc., built radio navigators, autopilots, and other precision devices for Allied aircraft. In 1963 Lear formed Lear Jet, Inc., which produced small private and corporate jet aircraft. In 1964 he developed the stereo eight-track player for automobiles.

learned helplessness In psychology, a mental state in which a laboratory subject forced to bear aversive stimuli becomes unable or unwilling to avoid subsequent applications, even if they are "escapable," presumably through having learned that situational control is generally out of one's hands. Experiments, first on dogs and later on humans, led some researchers, including Martin E.P. Seligman (b. 1942) in *Helplessness* (1975), to believe that chronic failure, depression, and similar conditions are forms of learned helplessness. Critics have argued that different conclusions can be drawn from such tests and that broad generalizations are unwarranted.

learning Process of acquiring modifications in existing knowledge, skills, habits, or tendencies through experience, practice, or exercise. Learning includes associative processes (see ASSOCIATION; CONDITIONING), discrimination of SENSE-DATA, psychomotor and perceptual learning (see PERCEPTION), imitation, CONCEPT FORMATION, PROBLEM SOLVING, and insight learning. Animal learning has been studied by ethologists and comparative psychologists, the latter often drawing explicit parallels to human learning (see COMPARATIVE PSYCHOLOGY; ETHOLOGY). The first experiments concerning associative learning were conducted by IVAN PAVLOV in Russia and EDWARD L. THORNDIKE in the U.S. Critics of the early stimulus-response (S-R) theories,

© 2006 Encyclopædia Britannica, Inc.

such as Edward C. Tolman, claimed they were overly reductive and ignored a subject's inner activities. Gestalt-psychology researchers drew attention to the importance of pattern and form in perception and learning, while structural linguists argued that language learning was grounded in a genetically inherited "grammar." Developmental psychologists such as Jean Piaget highlighted stages of growth in learning. More recently, cognitive scientists have explored learning as a form of information processing, while some brain researchers, such as Gerald Maurice Edelman, have proposed that thinking and learning involve an ongoing process of cerebral pathway building. Related topics of research include attention, comprehension, motivation, and transfer of training. See also behaviour genetics; behaviourism; educational psychology; imprinting; instinct; intelligence.

learning disabilities Chronic difficulties in learning to read, write, spell, or calculate, which are believed to have a neurological origin. Though their causes and nature are still not fully understood, it is widely agreed that the presence of a learning disability does not indicate subnormal intelligence. Rather it is thought that the learning-disabled have a neurologically based difficulty in processing language or figures, which must be compensated for with special learning strategies or with extra effort and tutoring. Examples of learning disabilities include difficulty in reading (dyslexia), writing (dysgraphia), and mathematics (dyscalculia). Learning disabilities may be diagnosed through testing, and children may be enrolled in programs offering special help; left unrecognized, learning disabilities may result not only in poor classroom performance but also in low self-esteem and disruptive behaviour.

least squares method Statistical method for finding a line or curve—the line of best fit—that best represents a correspondence between two measured quantities (e.g., height and weight of a group of college students). When the measurements are plotted as points on a graph and seem to fall near the same line, the least squares method may be used to determine the best-fitting line. The method uses calculus techniques to find the minimum of the sum of the squares of the vertical distances of each data point from the proposed line. More generally, the process is called regression or, when the fitted curve is a line, linear regression.

leather Animal skins and hides treated to preserve them and make them suitable for use. Tanning converts the otherwise perishable skin to a stable and nondecaying material. Though the skins of such diverse animals as ostrich, lizard, eel, and kangaroo have been used, the more common leathers come from cattle, including calf and ox; sheep and lamb; goat and kid; horse, mule, and zebra; buffalo; pig and hog; and seal, walrus, whale, and alligator. Leather making is an ancient art that has been practiced for more than 7,000 years. See also parchment.

Leavis \'lē-vəs**, F(rank) R(aymond)** (b. July 14, 1895, Cambridge, Cambridgeshire, Eng.—d. April 14, 1978, Cambridge) British literary critic. He attended and later taught at Cambridge University. He brought a new seriousness to criticism, believing that the critic's duty is to assess works according to the author's moral position. He cofounded *Scrutiny*, a journal (published 1932–53) often regarded as his greatest contribution to English letters. His books include *New Bearings in English Poetry* (1932) and *The Great Tradition* (1948), in which he reassessed the English novel.

Lebanese Civil War (1975–91) Civil conflict resulting from tensions among Lebanon's Christian and Muslim populations and exacerbated by the presence in Lebanon in the 1970s of fighters from the Palestine Liberation Organization (PLO). In 1975 Lebanon's Muslims and leftists supported the PLO and sought more political power; its Christians, seeking to maintain their political dominance, opposed the PLO. The factions fought fiercely through early 1976, and Lebanon became effectively partitioned, with the Christians in power in the north and the Muslims in the south. Fearing an expanded war, both Israel and Syria intervened on the side of the Christians, who had begun to lose ground. Fighting continued at a lower level of intensity until 1982, when Israel invaded southern Lebanon to destroy Palestinian guerrilla bases; PLO forces were driven out of Beirut, and by 1985 Israel had withdrawn from most of Lebanon, which by then was split internally over whether to accept Syria's leadership. In 1989 the Christian leader General Michel Aoun attempted to drive Syria from Lebanon but was defeated, and the Arab League mediated a peace deal; his removal from power in 1990 eliminated the largest obstacle to implementing a 1989 peace accord. In southern Lebanon, fighting between Israeli and Hezbollah forces continued even after Israel's final withdrawal from Lebanese territory in 2000.

Lebanese National Pact Power-sharing arrangement established in 1943 between Lebanese Christians and Muslims whereby the president is always a Christian and the prime minister a Sunnite Muslim. The speaker of the National Assembly must be a Shīʿite Muslim. Amendments made following the Lebanese Civil War transferred many presidential powers to a cabinet divided evenly between Christians and Muslims.

Lebanon *officially* **Lebanese Republic** Country, Middle East, southwestern Asia, on the eastern shore of the Mediterranean Sea. Area: 4,016 sq mi (10,400 sq km). Population (2005 est.): 3,577,000. Capital: Beirut.

The Lebanese are ethnically a mixture of Phoenician, Greek, Armenian, and Arab elements. Languages: Arabic (official), French, English. Religions: Islam, Christianity, Druze. Currency: Lebanese pound. Uplands include the Lebanon Mountains in the central region and the Anti-Lebanon and Hermon ranges along the eastern border; a low coastal plain stretches along the Mediterranean. The Litani River flows southward through the fertile Al-Biqāʿ (Beqaa) valley region. Originally, much of the country was forested—the cedars of Lebanon were famous in antiquity—but woodlands now cover only a tiny fraction of the country. Lebanon is not agriculturally self-sufficient and must rely on food imports. Its traditional role as the financial centre of the Middle East has been undermined since the outbreak of the Lebanese civil war (1975–76). It is a republic with one legislative house; its chief of state is the president, and the head of government is the prime minister. Much of present-day Lebanon corresponds to ancient Phoenicia, which was settled c. 3000 BC. In the 6th century AD, Christians fleeing Syrian persecution settled in northern Lebanon and founded the Maronite Church. Arab tribal peoples settled in southern Lebanon, and by the 11th century religious refugees from Egypt had founded the Druze faith. Part of the medieval Crusader states, Lebanon was later ruled by the Mamlūk dynasty. In 1516 the Ottoman Empire seized control; the Ottomans, who first ruled by proxy, ended the local rule of the Druze Shihāb princes in 1842. Deteriorating relations between religious groups resulted in the massacre of Maronites by Druze in 1860. France intervened, forcing the Ottomans to form an autonomous province for an area known as Mount Lebanon under a Christian governor. Following World War I (1914–18), the whole of Lebanon was administered by the French military as part of a French mandate; the country was fully independent by 1946. After the Arab-Israeli war of 1948–49, tens of thousands of Palestinian refugees settled in southern Lebanon. In 1970 the Palestine Liberation Organization (PLO) moved its headquarters to Lebanon and began raids into northern Israel. The Christian-dominated Lebanese government tried to curb them, and in response the PLO sided with Lebanon's Muslims in their conflict with Christians, fueling the descent

© 2006 Encyclopædia Britannica, Inc.

into a civil war that split the country into numerous political and religious factions. In 1976–82 Syrian and UN troops tried to maintain a cease-fire. In 1982 Israeli forces invaded in an effort to drive Palestinian forces out of southern Lebanon; Israeli troops withdrew from all but a narrow buffer zone in the south by 1985. Thereafter, guerrillas from the Lebanese Shīʿite militia HEZBOLLAH clashed with Israeli troops regularly. Israeli troops completely withdrew from Lebanon in 2000.

Lebanon Mountains *Arabic* **Jabal Lubnān** \ˈja-bəl-ˌlüb-ˈnän\ *ancient* **Libanus** Mountain range, Lebanon. Running parallel to the Mediterranean Sea coast, it is about 100 mi (160 km) long. The northern section is the highest part of the range and includes the loftiest peak, Qurnat al-Sawdā', at 10,131 ft (8,088 m) in elevation. On its western slopes are the remaining groves of the famous cedars of Lebanon. The snowy peaks may have given Lebanon its name in antiquity; *laban* is Aramaic for "white."

Lebowa \le-ˈbō-wə\ Former nonindependent black state, northeastern South Africa. It was designated by the South African government as the national territory for northern Sotho people, including the Pedi, Lovedu, and Kanga-Kone. It was granted self-government in 1972 and held its first election in 1973. After the abolition of APARTHEID in 1994, it became part of the new Northern (now Limpopo) province.

Lebrun \lə-ˈbrœⁿ**, Albert** (b. Aug. 29, 1871, Mercy-le-Haut, France—d. March 6, 1950, Paris) French statesman and last president (1932–40) of France's THIRD REPUBLIC. Trained as a mining engineer, he served in the Chamber of Deputies (1900–20) and Senate (1920–32). He was elected president as a compromise candidate and served as a mediator and symbol of unity, rarely influencing policy. In 1940 he complied with the cabinet's decision to seek an armistice with Germany and acquiesced to his replacement by the VICHY FRANCE government. He was interned by the Germans (1943–44). In 1944 he acknowledged CHARLES DE GAULLE as head of the provisional government.

Lebrun, Elisabeth Vigée- See Elisabeth VIGEE-LEBRUN

Lechfeld \ˈlek̲-ˌfelt**, Battle of** (955) Battle in which the German king OTTO I decisively defeated an invasion by the MAGYARS. Fought on the Lechfeld, a plain near present-day Augsburg, Germany, it marked the last Hungarian effort to invade Germany.

lecithin \ˈle-sə-thən\ Any of a class of PHOSPHOLIPIDS (also called phosphatidyl cholines) important in cell structure and METABOLISM. They are composed of PHOSPHATE, CHOLINE, GLYCEROL (as the ESTER), and two FATTY ACIDS. Various fatty acids pairs distinguish the various lecithins. Commercial lecithin, a wetting and emulsifying agent used in animal feeds, baking products and mixes, chocolate, cosmetics and soap, insecticides, paint, and plastics, is a mixture of lecithins and other phospholipids in an edible oil.

Leclerc \lə-ˈkler**, Jacques-Philippe** *orig.* **Philippe-Marie, viscount de Hauteclocque** (b. Nov. 22, 1902, Belloy-Saint-Leonard, France—d. Nov. 28, 1947, Colomb-Bechar, Alg.) French general in World War II. He was captured by the Germans in 1939, but escaped to England, where he took the pseudonym Leclerc to protect his family and joined the FREE FRENCH forces of CHARLES DE GAULLE. He achieved a number of military victories in French Equatorial Africa and North Africa, and in 1944 he commanded a French division in the Normandy Invasion. On August 25 he received the surrender of the German commander in Paris. He died in an airplane accident and was posthumously named marshal of France.

lectisternium \ˌlek-tə-ˈstər-nē-əm\ (from Latin *lectum sternere,* "to spread a couch") Ancient Greek and Roman rite in which a meal was offered to gods and goddesses whose images were laid on a couch placed in the street. When it originated in Greece, couches were prepared for three pairs of gods: APOLLO and Latona, HERACLES and DIANA, and MERCURY and NEPTUNE. During the feast, which lasted seven or eight days, citizens kept open house, debtors and prisoners were released, and every effort was made to banish sorrow. Other gods were later honoured with the same rite. In Christian times, the word was used for a feast in memory of the dead.

LED See LIGHT-EMITTING DIODE

Leda \ˈlē-də\ In Greek legend, the daughter of King Thestius of Aetolia and wife of King Tyndareus of Lacedaemon. Visited by ZEUS in the form of a swan, she conceived HELEN of Troy. Zeus was also sometimes said to be the father of her son Pollux, while Leda's own husband, Tyndareus, was held to be the father of his twin, Castor (see DIOSCURI). Tyndareus was also the father of Leda's daughter Clytemnestra, who married AGAMEMNON.

Lederberg \ˈlā-dər-ˌberg**, Joshua** (b. May 23, 1925, Montclair, N.J., U.S.) U.S. geneticist. He earned his Ph.D. at Yale University. With his student NORTON ZINDER, Lederberg discovered that certain viruses were capable of carrying a bacterial gene from one bacterium to another, a discovery that made bacteria as important a tool of genetic research as *Drosophila* and the bread mold *Neurospora*. He also developed breeding techniques for bacterial genetics. In 1958 he shared the Nobel Prize with GEORGE WELLS BEADLE and EDWARD L. TATUM for discovery of the mechanisms of genetic recombination in bacteria.

Ledo Road See STILWELL ROAD

Ledoux \lə-ˈdü**, Claude-Nicolas** (b. March 21, 1736, Dormans-sur-Marne, France—d. Nov. 19, 1806, Paris) French architect. In the 1760s and early 1770s he designed private houses in an innovative NEOCLASSICAL style, among them Madame du Barry's famous château at Louveciennes (1771–73). In the mid 1770s he planned a new saltworks and surrounding town at the Salines de Chaux, Arc-et-Senans; the design, in which rings of workers' dwellings enclosed a central factory, was designed both to facilitate production and ensure healthy conditions for the workers. His theatre at Besançon (1771–73) was revolutionary in its provision of seats for the general public as well as the upper classes. The elaborate *barrières* (tollhouses) he designed for Paris (1785–89) were ruinously expensive, and Ledoux was removed from the project. Arrested during the French Revolution, he did not practice architecture after his release.

Ledru-Rollin \lə-ˈdrə̄-rō-ˈlaⁿ**, Alexandre-Auguste** (b. Feb. 2, 1807, Paris, France—d. Dec. 31, 1874, Fontenay-aux-Roses) French radical politician. He was elected to the Chamber of Deputies in 1839, but his insistence on the need for a republican government isolated him from other leftists. Following the FEBRUARY REVOLUTION, through his influence as minister of the interior in the provisional government (1848), elections for a new legislature were held for the first time under universal manhood suffrage. In 1849 he demanded the impeachment of Louis-Napoléon (later NAPOLEON III) and led an unsuccessful insurrection. He fled to England but returned to France after the amnesty of 1870.

Lee, Ann (b. Feb. 29, 1736, Manchester, Eng.—d. Sept. 8, 1784, Watervliet, N.Y., U.S.) British-American religious leader. A factory worker in her youth in Manchester, she joined the SHAKERS in 1758 and was acknowledged as their leader in 1770. Persecuted by the English authorities and compelled by what she believed was a vision, she immigrated to America in 1774. With a band of followers, she founded a settlement at Niskeyuna (present-day Watervliet), N.Y., in 1776, and thereafter her movement spread rapidly. Mother Ann, as she came to be known, was said to have performed miracles, including healing the sick by touch. She was imprisoned briefly for treason because of her pacifist doctrines and refusal to sign an oath of allegiance.

Lee, Bruce *orig.* **Lee Yuen Kam** (b. Nov. 27, 1940, San Francisco, Calif., U.S.—d. July 20, 1973, Hong Kong) U.S. film actor. The son of a touring Chinese opera star, he spent his childhood in Hong Kong, where he acted in several movies. He returned to the U.S., and in 1966 he landed a role in the television series *The Green Hornet*. In the early 1970s he became a popular star of martial-arts action films, including *Fist of Fury* (1972) and *Enter the Dragon* (1973), which gained an international cult following. His career was cut short by his sudden death at 33 from a brain edema suffered after taking a pain killer. Nevertheless, his films remained popular and became widely imitated. His son Brandon Lee (1965–93) was emerging as an action-movie star when he died in a shooting accident on a movie set.

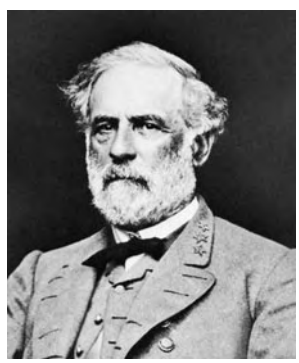
Lee, Gypsy Rose *orig.* **Rose Louise Hovick** (b. Jan. 9, 1914, Seattle, Wash., U.S.—d. April 26, 1970, Los Angeles, Calif.) U.S. striptease artist. She appeared in a vaudeville act with her sister from 1919

© 2006 Encyclopædia Britannica, Inc.

and made her debut in a BURLESQUE SHOW in 1929. She became the headliner at Billy Minsky's Republic Theatre on Broadway (1931) and appeared in the *Ziegfeld Follies* (1936). She was noted for her grace, style, and sophisticated wit. After retiring from burlesque (1937), she appeared in nightclubs and on television. Her autobiography, *Gypsy* (1957), was the basis for a successful 1959 musical (film, 1962).



Lee, Harper (b. April 28, 1926, Monroeville, Ala., U.S.) U.S. novelist. The daughter of a lawyer, Lee attended the University of Alabama but left for New York City before obtaining a law degree. An editor helped her transform a series of short stories into the novel *To Kill a Mockingbird* (1960). Lee's only novel, it was nationally acclaimed, winning a Pulitzer Prize in 1961, and was adapted into a memorable film in 1962. The novel's hero is the white lawyer Atticus Finch, whose just and compassionate acts include an unpopular defense of a black man falsely accused of raping a white girl. The book continued to resonate into the 21st century.

Lee, Henry (b. Jan. 29, 1756, Prince William county, Va.—d. March 25, 1818, Cumberland Island, Ga., U.S.) American army officer and politician. In the AMERICAN REVOLUTION he rose to cavalry commander (earning the nickname "Light-Horse Harry") and led victories at Paulus Hook, N.J., and in the South. As governor of Virginia (1791–94), he commanded the army that suppressed the WHISKEY REBELLION (1794). In the U.S. House of Representatives (1799–1801), he wrote the resolution eulogizing GEORGE WASHINGTON as "first in war, first in peace, and first in the hearts of his countrymen." After 1800 Lee failed in several land and financial speculations and was twice imprisoned for debt. He was the father of ROBERT E. LEE.

Lee, Ivy Ledbetter (b. July 16, 1877, Cedartown, Ga., U.S.—d. Nov. 9, 1934, New York, N.Y.) U.S. PUBLIC RELATIONS pioneer. He worked as a newspaper reporter before becoming press representative for a group of coal miners in 1906 and for the PENNSYLVANIA RAILROAD CO. in 1912. His success in improving their public images brought him many powerful clients, including the Rockefeller interests. His greatest innovation was his frankness with the press, which he took care to notify of newsworthy developments at the companies he represented.

Lee, Peggy *orig.* **Norma Deloris Egstrom** (b. May 26, 1920, Jamestown, N.D., U.S.—d. Jan. 21, 2002, Los Angeles, Calif.) U.S. popular singer. She endured a difficult childhood after her mother's early death. Singing with a group in Chicago, she was engaged by BENNY GOODMAN as his principal singer in 1941. She began singing on her own in 1943 and also began collaborating on songs, often with her husband, Dave Barbour, including "Fever," "Mañana," and several songs for WALT DISNEY's *Lady and the Tramp* (1955). With her smooth, lightly husky voice, usually backed by jazz-influenced arrangements, she produced other hits such as "Lover" and "Is That All There Is?"

Lee, Richard Henry (b. Jan. 20, 1732, Stratford, Va.—d. June 19, 1794, Chantilly, Va., U.S.) U.S. statesman. As a member of the Virginia House of Burgesses (1758–75), he opposed the Stamp Act and the Townshend Acts. He helped initiate the COMMITTEES OF CORRESPONDENCE and was active in the First and Second CONTINENTAL CONGRESS. On June 7, 1776, he introduced a resolution calling for independence from Britain. Its adoption led to the DECLARATION OF INDEPENDENCE, which he signed, as he did the ARTICLES OF CONFEDERATION. He again served in Congress from 1784 to 1787, acting as its president in 1784. He opposed ratification of the CONSTITUTION OF THE UNITED STATES because it lacked a bill of rights. He later served in the first U.S. Senate (1789–92).

Robert E. Lee, 1865.
LIBRARY OF CONGRESS, WASHINGTON, D.C.

Lee, Robert E(dward) (b. Jan. 19, 1807, Stratford, Westmoreland county, Va., U.S.—d. Oct. 12, 1870, Lexington, Va.) U.S. and Confederate military leader. He was the son of HENRY LEE. After graduating from West Point, he served in the engineering corps and in the Mexican War under WINFIELD SCOTT. He transferred to the cavalry in 1855 and commanded frontier forces in Texas (1856–57). In 1859 he led U.S. troops against the slave insurrection attempted by JOHN BROWN at Harpers Ferry. In 1861 he was offered command of a new army being formed to force the seceded Southern states back into the Union. Though opposed to secession, he refused. After his home state of Virginia seceded, he became commander of Virginia's forces in the AMERICAN CIVIL WAR and adviser to JEFFERSON DAVIS, president of the Confederacy. Taking command of the Army of Northern Virginia (1862) after JOSEPH JOHNSTON was wounded, Lee repulsed the Union forces in the SEVEN DAYS' BATTLES. He won victories at BULL RUN, FREDERICKSBURG, and CHANCELLORSVILLE. His attempts to draw Union forces out of Virginia by invading the North resulted in failures at ANTIETAM and GETTYSBURG. In 1864–65 he conducted defensive campaigns against Union forces under ULYSSES S. GRANT that caused heavy Union casualties. Lee ended his retreat behind fortifications built at Petersburg and Richmond (see PETERSBURG CAMPAIGN). By April 1865 dwindling forces and supplies forced Lee, now general of all Confederate armies, to surrender at APPOMATTOX COURT HOUSE. After several months of recuperation, he accepted the post of president of Washington College (later WASHINGTON AND LEE UNIVERSITY), where he served until his death.

Lee, Spike *orig.* **Shelton Jackson Lee** (b. March 20, 1957, Atlanta, Ga., U.S.) U.S. film director. He grew up in Brooklyn, N.Y., and earned a master's degree in film at New York University. The comedy *She's Gotta Have It* (1986) brought him attention, but it was *Do the Right Thing* (1989), a portrait of racial tensions in Brooklyn, that brought him widespread acclaim. Many of his films focused on aspects of African American life, including *School Daze* (1988), *Jungle Fever* (1991), *Crooklyn* (1994), and *He Got Game* (1998). The epic *Malcolm X* (1992) and the documentary *Four Little Girls* (1997) showed Lee's versatility as a director.

Lee, William (b. 1550?, Calverton, Nottinghamshire, Eng.—d. 1610?, Paris, France) British inventor of the first KNITTING MACHINE. Lee's model (1589) was the only one employed for centuries, and its principle of operation remains in use. Elizabeth I twice denied him a patent because of her concern for the kingdom's hand knitters. With support from Henry IV of France, Lee later manufactured hosiery in Rouen.

Lee Kuan Yew (b. Sept. 16, 1923, Singapore) Prime minister of Singapore (1959–90). Born to a wealthy Chinese family, Lee studied at the University of Cambridge and became a lawyer and a socialist. He worked as a legal adviser to labour unions and won election to Singapore's legislative council in 1955, while the country was still a British crown colony. He helped Singapore achieve self-government and, running as an anticolonialist and anticommunist, was elected prime minister in 1959. His numerous reforms included the emancipation of women. He briefly entered Singapore in the Federation of Malaysia (1963–65); on its withdrawal, Singapore became a sovereign state. Lee industrialized the country and made Singapore the most prosperous nation in Southeast Asia. He achieved both labour peace and a rising standard of living for workers, though his mildly authoritarian government at times infringed on civil liberties.

Lee Kuan Yew
KEYSTONE

Lee Teng-hui \'lē-'dəŋ-'hwē\ (b. Jan. 15, 1923, near Tan-shui, Taiwan) First Taiwan-born president (1988–2000) of TAIWAN (Republic of China). He became president in 1988 after the death of CHIANG CHING-KUO. He was reelected in 1990 and won a landslide victory in 1996 in Taiwan's first direct presidential election. Lee favoured a policy of "flexible diplomacy" in dealing with the People's Republic of China. His successor, Chen Shui-bian (Ch'en Shui-pian) was the first president not from the NATIONALIST PARTY.

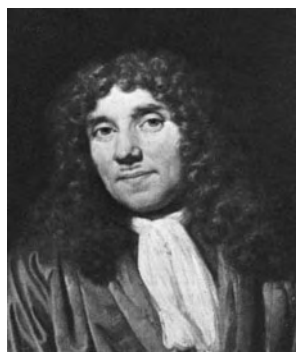
leech Any ANNELID worm of the class Hirudinea (about 300 known species), with a small sucker containing the mouth at the front end and a large sucker at the back end. Species range

European medicinal leech (*Hirudo medicinalis*).
JACQUES SIX

© 2006 Encyclopædia Britannica, Inc.

from tiny to about 8 in. (20 cm) long. Leeches live primarily in freshwater or on land. Some species are predators, some eat organic debris, and others are parasitic. Aquatic leeches may feed on the blood of fishes, amphibians, birds, and mammals, or they may eat snails, insect larvae, and worms. True land leeches feed only on the blood of mammals. Substances in the leech's saliva anesthetize the wound area, dilate the blood vessels, and prevent the blood from clotting. For centuries, some species have been used to drain off blood. Hirudin, extracted from the European medicinal leech, is used medically as an anticoagulant.

Leech, John (b. Aug. 29, 1817, London, Eng.—d. Oct. 29, 1864, London) British caricaturist. He gave up the study of medicine to produce comic sketches and etchings for magazines, notably *Punch*. He collaborated with George Cruikshank but later departed from the horrific and satirical elements of traditional English caricature to develop his own style of comfortable, warmly humorous middle-class urbanity, underlining character by emphatic contrasts of stock types. With John Tenniel he created the image of John Bull, a jovial, foursquare Englishman, sometimes in a Union Jack waistcoat, with a bulldog at heel.



Leeds City and metropolitan borough (pop., 2001: 715,404), metropolitan county of West Yorkshire, historic county of Yorkshire, England. It lies along the River Aire, northeast of Manchester. It originated as an Anglo-Saxon township and was incorporated as a city in 1626, becoming an early centre of the woolen industry. The completion in 1816 of the Leeds and Liverpool Canal stimulated its growth, and the factory production of ready-made clothing expanded rapidly at the end of the 19th century. It is the seat of the University of Leeds.

leek Hardy, vigorous, biennial plant (*Allium porrum*) of the lily family, native to the eastern Mediterranean and the Middle East. It has a mild, sweet, onionlike flavour. In Europe it is widely used in soups and stews and is cooked whole as a vegetable. It became the national emblem of Wales following an ancient victory by an army of Welshmen who wore leeks as a distinguishing sign. The long, narrow leaves and nearly cylindrical bulb of the first season are replaced in the second season by a tall solid stalk bearing leaves and a large umbel with many flowers.

Leek (*Allium porrum*)
G.R. ROBERTS

Leeuwenhoek \'lā-vən-ˌhůk**, Antonie van** (b. Oct. 24, 1632, Delft, Neth.—d. Aug. 26, 1723, Delft) Dutch microscopist. In his youth he was apprenticed to a draper; a later civil position allowed him to devote time to his hobby: grinding lenses and using them to study tiny objects. With his simple microscopes—skillfully ground, powerful single lenses capable of high image quality—he observed protozoa in rainwater and pond and well water and bacteria in the human mouth and intestine. He also discovered blood corpuscles, capillaries, and the structure of muscles and nerves, and in 1677 he first described the spermatozoa of insects, dogs, and humans. His research on lower animals argued against the doctrine of spontaneous generation, and his observations helped lay the foundations for the sciences of bacteriology and protozoology.

Antonie van Leeuwenhoek, detail of a portrait by Jan Verkolje; in the Rijksmuseum, Amsterdam.

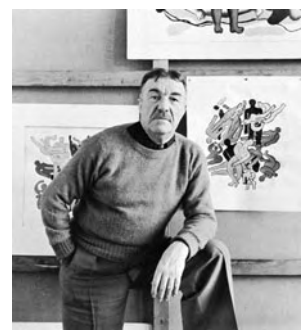
Leeward \'lü-ərd, 'lē-wərd\ **Islands** Arc of West Indian islands that constitute the most westerly and northerly of the Lesser Antilles, northeastern Caribbean Sea. The major islands are, from north to south, the Virgin Islands of the U.S. and the British Virgin Islands, Anguilla, St. Martin, Saint Kitts and Nevis, Antigua and Barbuda, Montserrat, and Guadeloupe. Just south of this chain is Dominica, sometimes classified as part of the Leeward Islands but usually designated as part of the Windward Islands.

Lefèvre d'Étaples \lə-'fevrᵊ-dā-'tȧplᵊ**, Jacques** (b. 1455, Étaples, Picardy—d. March 1536, Nérac, France) French humanist, theologian, and translator. Ordained a priest, he taught philosophy in Paris (1490–1507), after which he worked with the abbey of Saint-Germain-des-Prés. When suspected of Protestantism, he moved temporarily to Strasbourg and later to Nérac, where he was protected by the queen of Navarra. Casting off the influence of medieval Scholasticism, he promoted scriptural studies on the eve of the Reformation. He translated the Bible into French and wrote commentaries on St. Paul as well as philosophical and mystical works.

Lefkosía See Nicosia



left In politics, the portion of the political spectrum associated in general with egalitarianism and popular or state control of the major institutions of political and economic life. The term dates from the 1790s, when in the French revolutionary parliament the socialist representatives sat to the presiding officer's left. Leftists tend to be hostile to the interests of traditional elites, including the wealthy and members of the aristocracy, and to favour the interests of the working class (see proletariat). They tend to regard social welfare as the most important goal of government. Socialism is the standard leftist ideology in most countries of the world; communism is a more radical leftist ideology.

leg In a biped, the lower limb, jointed at the knee, supporting the body and used for walking and running. Its bones are the femur (thighbone), the longest bone in the human body; patella (kneecap); tibia (shin); and fibula. The biceps muscle of the thigh bends the leg; the quadriceps straightens it.

legal medicine See medical jurisprudence

legend Traditional story or group of stories told about a particular person or place. Formerly the term referred to a tale about a saint. Legends resemble folktales in content; they may include supernatural beings, elements of mythology, or explanations of natural phenomena, but they are associated with a particular locality or person. They are handed down from the past and are popularly regarded as historical though they are not entirely verifiable.

Léger \lā-'zhā**, Fernand** (b. Feb. 4, 1881, Argentan, Fr.—d. Aug. 17, 1955, Gif-sur-Yvette) French painter. Born to a peasant family, he worked as an architectural draftsman in Paris before studying art. Influenced by Paul Cézanne and early Cubism, Léger developed a painting style that combined bold colours with geometric and cylindrical forms arranged in highly disciplined compositions. His best-known works celebrated modern industrial technology by emphasizing shapes derived from machine parts. Though he was seriously injured in World War I, his art continued to affirm his faith in modern life and popular culture. In 1924 he conceived and directed *Ballet mécanique*, a nonnarrative film with photography by Man Ray.

Legio Maria See Maria Legio

legion Military organization, originally the largest permanent unit in the Roman army. It was the basis of the military system by which imperial Rome conquered and ruled its empire. The early Roman Republic found

© 2006 Encyclopædia Britannica, Inc.

the Greek PHALANX too unwieldy for fragmented fighting in the hills and valleys of central Italy. To replace it the Romans evolved a new tactical system based on small and flexible infantry units called maniples. These were grouped in larger units called cohorts, which ranged from 360 to 600 men, depending on the era. Ten cohorts made up a legion, which moved into battle with four cohorts in the first line and three each in the second and third lines. See also FOREIGN LEGION.

Legion of Honour *officially* **Order of the Legion of Honour** Highest-ranking order and decoration of the French republic. It was created by NAPOLEON in 1802 as a general military and civil order of merit. Membership is open to men and women, French citizens and foreigners, irrespective of rank, birth, or religion. Admission into the Legion requires 20 years of civil achievement in peacetime or extraordinary military bravery and service in times of war.

Legion of Mary Church See MARIA LEGIO

Legionnaire disease Type of PNEUMONIA, first identified in American Legion conventioneers in 1976, 29 of whom died. The cause was identified as a previously unknown bacterium, *Legionella pneumophila*, later revealed as causing earlier mysterious outbreaks at widely separated places. Usually, malaise and headache are followed by high fever and often chills, dry cough, shortness of breath, and pain, occasionally with mental confusion. Contaminated water (e.g., in water-distribution systems, humidifiers, and whirlpool spas) is usually suspected as the source. The disease is treated with antibiotics.

legislative apportionment *or* **legislative delimitation** Process by which representation is distributed among the constituencies of a representative assembly. In ancient Athens, every citizen represented himself, but throughout most of history representation has been restricted to certain social classes. With the growth of democracy, the extension of suffrage, and the rise of political parties, apportionment had to be methodically and mathematically arranged to ensure that the distribution of legislative seats would most accurately reflect the electorate's will. Territorial apportionment is currently the most common form. See also GERRYMANDERING, PROPORTIONAL REPRESENTATION.

legislature Lawmaking branch of a government. Before the advent of legislatures, the law was dictated by monarchs. Early European legislatures include the English PARLIAMENT and the Icelandic Althing (founded c. 930). Legislatures may be unicameral or bicameral (see BICAMERAL SYSTEM). Their powers may include passing laws, establishing the government's budget, confirming executive appointments, ratifying treaties, investigating the EXECUTIVE branch, impeaching and removing from office members of the executive and JUDICIARY, and redressing constituents' grievances. Members may be appointed or directly or indirectly elected; they may represent an entire population, particular groups, or territorial subdistricts. In presidential systems, the executive and legislative branches are clearly separated; in parliamentary systems, members of the executive branch are chosen from the legislative membership. See also BUNDESTAG; CONGRESS OF THE UNITED STATES; DIET; DUMA; EUROPEAN PARLIAMENT; KNESSET; Canadian PARLIAMENT.

legume \'le-ˌgyüm\ Any of about 18,000 species in about 650 genera of flowering plants that make up the order Fabales, consisting of the single family Leguminosae, or Fabaceae (the pea family). The term also refers to their characteristic fruit, also called a pod. Legumes are widespread on all habitable continents. Leaves of many members appear feathery, and flowers are almost universally showy. In economic importance, this order is surpassed only by the GRASS and SEDGE order (Cyperales). In the production of food, the legume family is the most important of any family. The pods are part of the diet of nearly all humans and supply most dietary protein in regions of high population density. In addition, legumes perform the invaluable act of NITROGEN FIXATION. Because they contain many of the essential AMINO ACIDS, legume seeds can balance the deficiencies of CEREAL protein. Legumes also provide edible oils, GUMS, fibers, and raw material for plastics, and some are ornamentals. Included in this family are ACACIA, ALFALFA, BEANS, BROOM, CAROB, CLOVER, COWPEA, LUPINE, MIMOSA, PEAS, PEANUTS, SOYBEANS, TAMARIND, and VETCH.

Lehár \'lā-ˌhär**, Franz (Christian)** *orig.* **Ferencz Christian Lehár** (b. April 30, 1870, Komárom, Hung., Austria-Hungary—d. Oct. 24, 1948, Bad Ischl, Austria) Hungarian composer. He began studying the violin at age 12 in Prague. In the 1890s he was a military bandmaster like his father; by the end of the decade he had moved to Vienna, where he became a popular composer of marches and waltzes. After 1901 he concentrated on orchestra conducting and on composing, notably his 40 witty and melodic operettas that embody the prewar Viennese spirit, including the popular *The Merry Widow* (1905), *The Countess of Luxembourg* (1909), and *The Land of Smiles* (1929).

Lehmbruck \'lām-brük**, Wilhelm** (b. Jan. 4, 1881, Meiderich, Ger.—d. March 25, 1919, Berlin) German sculptor, painter, and printmaker. His youthful work was academically realistic, but he grew to admire the works of AUGUSTE RODIN, and in 1910 he moved to Paris, where he produced paintings and lithographs as well as sculptures. He became one of the most important German EXPRESSIONIST sculptors, best known for his elongated nudes, such as *Kneeling Woman* (1911), which suggests a resigned pessimism. He returned to Germany at the outbreak of World War I and tended wounded soldiers in a hospital. *Seated Youth* (1917) reveals his profound depression; he committed suicide two years later.

Leiber \'lē-bər**, Jerry** (b. April 25, 1933, Baltimore, Md., U.S.) U.S. songwriter and producer. His family settled in Los Angeles, where he met Mike Stoller (b. 1933), who had moved there from New York. In 1950, while still in their teens, Leiber and Stoller became a songwriting and production team, among the first to produce recordings that combined pop music with RHYTHM AND BLUES. Their first successful collaboration came with "Hound Dog," recorded by Big Mama Thornton (1952) and later by ELVIS PRESLEY, who would record more than 20 of their songs. They wrote numerous songs for the Coasters, including "Yakety Yak." Other hits include "There Goes My Baby," "Stand by Me," and "Love Potion Number Nine." Their songs were recorded by the BEATLES, ARETHA FRANKLIN, JAMES BROWN, and Ben E. King, among many others.

Leibniz \'līb-nəts,\ *German* \'līp-nits**, Gottfried Wilhelm, Freiherr (baron) von Leibniz** (b. July 1, 1646, Leipzig, Saxony—d. Nov. 14, 1716, Hannover, Hanover) German philosopher, mathematician, inventor, jurist, historian, diplomat, and political adviser. He obtained a doctorate in law at age 20. In 1667 he began working for the elector of Mainz, in which position he codified the laws of the city, among other important tasks. He served the dukes of Braunschweig-Lüneburg as librarian and councillor (1676–1716). In 1700 he helped found the German Academy of Sciences in Berlin and became its first president. Though he wrote voluminously, he published little during his lifetime. In metaphysics he is known for his doctrine of the monad, according to which reality is ultimately constituted of simple substances (monads), each consisting of nothing but perception and appetite. Though each state of a monad is the cause of its succeeding state and the effect of its preceding one, there are no causal relations between monads; the appearance of causal relations between substances is accounted for by the supposition of a "pre-established harmony" between the perceptual states of different monads. His principle of the identity of indiscernibles states that an individual *x* and an individual *y* are identical if and only if they share all the same intrinsic, non-relational properties. His *Theodicy* (1710) sought to reconcile the goodness of God with the existence of evil in the world by asserting that only God is perfect and that the actual world is the "best of all possible worlds." This view was famously mocked by VOLTAIRE in his comic novel *Candide*. In mathematics, Leibniz explored the idea of a universal mathematical-logical language based on the binary number system (*De arte combinatoria* [1666]), though all the calculating devices that he later built used the decimal system. He discovered the FUNDAMENTAL THEOREM OF CALCULUS independently of ISAAC NEWTON; the acrimonious dispute over priority left England mathematically backward for more than a generation before Leibniz's superior notation and methods were adopted. He also made important contributions to optics and mechanics. He is considered the last great polymath of Western civilization.

Leibovitz, Annie *orig.* **Anna-Lou Leibovitz** (b. Oct. 2, 1949, Westbury, Conn., U.S.) U.S. photographer. She enrolled in the San Francisco Art Institute in 1967. In 1970, while still a student, she was given her first commercial assignment for *Rolling Stone* magazine. Leibovitz became the publication's chief photographer in 1973, and over the subsequent decade she created images of the major personalities of contemporary rock music. In 1983 she moved to *Vanity Fair* magazine, which broadened her pool of subjects to include film stars, athletes, and political figures, and in 1986 she began to pursue advertising photography. Many successful monographs of her photographs have been published.

Leicester \'les-tər\ City and unitary authority (pop., 2001: 279,921), geographic and historic county of LEICESTERSHIRE, central England. Located

© 2006 Encyclopædia Britannica, Inc.

on the River Soar, it was settled by Romans. A considerable community by Norman times, it was the site of a Norman castle and abbey built in 1143, the ruins of which still stand. King Richard III was killed near Leicester in the Battle of Bosworth Field (1485). It was incorporated in 1589 and became an industrial centre after the arrival of the railway in 1832. The University of Leicester (founded 1957) is nearby.

Leicester, Earl of See Simon de Montfort

Leicester \'les-tər**, Robert Dudley, earl of** (b. June 24, 1532/33—d. Sept. 4, 1588, Cornbury, Oxfordshire, Eng.) English courtier and favourite of Elizabeth I. Imprisoned in 1553 for aiding the attempt by his father, the duke of Northumberland, to put Lady Jane Grey on the throne, he was released in 1554. Handsome and ambitious, he won Elizabeth's affection upon her accession (1558) and was made a privy councillor in 1559. When his wife died in 1560, it was rumoured that he had murdered her in order to marry Elizabeth. He became an active suitor of Elizabeth; though he failed to win the queen's hand, they remained close friends. In 1585 he was sent in command of an English force to assist the Netherlands in its revolt against Spain; he proved incompetent and was recalled (1587).

Leicestershire \'les-tər-ˌshir\ Administrative (pop., 2001: 609,579), historic, and geographic county, central England. It is located in the East Midlands region; the geographic county encompasses the entire administrative county together with the unitary authority of Leicester. The Soar River crosses the county from south to north on its way to join the River Trent. East of the Soar valley lies a territory famous for its fox hunts. Leicestershire has a pastoral agricultural tradition and is noted for production of Stilton cheese. Manufacturing industries are also important, at Leicester, for example.

Leiden *or* **Leyden** \'līd-ᵊn,\ *Dutch* \'lā-də\ Commune (pop., 1999: 117,389), western Netherlands. First mentioned in 922 as a possession of Utrecht diocese, it was governed by the court of Holland until 1420. It became a printing centre after the Elzevir family set up their press there c. 1581. The University of Leiden was founded in 1575, and the town became a centre of theology, science, and art. Leiden was the birthplace of painters Rembrandt van Rijn and Jan van Goyen, and the Pilgrims resided there for 11 years before they sailed to America in 1620.

Leif Eriksson *or* **Leif Eriksson the Lucky** *Norwegian* **Leiv Eriksson den Hepne** (fl. 11th century) Icelandic explorer, possibly the first European to reach North America. The second son of Erik the Red, he was on his way back from Norway to Greenland, where he had been sent by Olaf I Tryggvason to Christianize the natives (c. 1000), when he sailed off course and landed probably at Nova Scotia, which he called Vinland. This standard account comes from the Icelandic *Eiríks saga*. Another account, the *Groenlendinga saga*, says he learned of Vinland from a man who had been there 14 years earlier and that Leif reached North America after 1000.

Leigh \'lē**, Mike** *in full* **Michael Leigh** (b. Feb. 20, 1943, Salford, Lancashire, Eng.) British film director and playwright. His first play, *The Box Play* (1965), began the process of improvisation and collaboration with his actors that became the basis of his works for stage, television, and film, which usually depict lower- and working-class life with sharp humour and pathos. He made his film debut with *Bleak Moments* (1971) and later directed offbeat movies such as *High Hopes* (1988), *Life Is Sweet* (1991), and *Naked* (1993), for which he won best director at the Cannes Film Festival. The internationally acclaimed *Secrets and Lies* (1996) was followed by *Career Girls* (1997), *Topsy-Turvy* (1999), and *All or Nothing* (2002).

Leigh, Vivien *orig.* **Vivian Mary Hartley** (b. Nov. 5, 1913, Darjeeling, India—d. July 8, 1967, London, Eng.) British actress. She made her film debut in 1934 and her London stage debut in *The Mask of Virtue* (1935). After a well-publicized search she was chosen for the role of Scarlett in *Gone with the Wind* (1939, Academy Award), which brought her great fame. Noted for her delicate beauty, she later starred in *Waterloo Bridge* (1940), *That Hamilton Woman* (1941), *Anna Karenina* (1948), and *A Streetcar Named Desire* (1951), for which she won an Academy Award for her portrayal of the tragically delusional Blanche DuBois. From 1940 to 1960 she was married to Laurence Olivier, with whom she appeared in a number of successful London stage productions. She starred in a 1963 Broadway musical adaptation of *Tovarich*, a disastrous production for which Leigh nonetheless won a Tony Award.

Leighton \'lā-tᵊn**, Margaret** (b. Feb. 26, 1922, Barnt Green, near Birmingham, Worcestershire, Eng.—d. Jan. 13, 1976, Chichester, West Sussex) British actress. A member of the Old Vic company, she made her London debut in 1944 and her Broadway debut in 1946. She was acclaimed for her wide range of roles in plays such as *The Cocktail Party* (1950) and *The Applecart* (1953). She received Tony Awards for her Broadway appearances in *Separate Tables* (1956) and *The Night of the Iguana* (1962). Her most notable film roles were in *The Winslow Boy* (1948), *The Sound and the Fury* (1959), and *The Go-Between* (1971).

Leinster \'len-stər\ Province (pop., 2002 prelim.: 2,105,449), eastern Ireland. It covers an area of 7,645 sq mi (19,801 sq km). Its counties include Carlow, Dublin, Kildare, Kilkenny, Laoighis, Longford, Louth, Meath, Offaly, Westmeath, Wexford, and Wicklow. Its northern part, Meath, was once a separate kingdom. In the early Middle Ages, kings of Leinster fought constantly against the Uí Néill, the line of high kings whose capital was at Tara in Meath. In the late 15th and early 16th centuries, Leinster was virtually independent, under the earls of Kildare.

Leipzig \'līp-sik̲, 'līp-sig\ City (pop., 2002 est.: 493,052), east-central Germany. Situated in western Saxony state, it was in the 11th century a fortified town known as Urbs Libzi. It was granted municipal status by 1170, and its location on the principal trade routes of central Europe made it an important commercial centre. Several battles of the Thirty Years' War were fought near the city, which was also the site of the Battle of Leipzig (1813). Massive demonstrations in Leipzig in 1989 helped topple East Germany's communist regime. Historic features include the University of Leipzig (1409), the 13th-century church of St. Thomas, and the annual Leipzig Fair.

Leipzig, Battle of *or* **Battle of the Nations** (Oct. 16–19, 1813) Decisive defeat for Napoleon at Leipzig, resulting in the destruction of what was left of French power in Germany and Poland. Surrounded in the city, Napoleon's army was able only to thwart the allied attacks. As it began to retreat over the single bridge westward from the city, a frightened corporal blew up the bridge, leaving 30,000 French troops trapped in Leipzig to be taken prisoner. The battle was one of the most severe of the Napoleonic Wars; the French lost 38,000 men killed and wounded, and the allies lost 55,000.

Leipzig, University of State-supported university in Leipzig, Germany, founded in 1409. In the 1500s it was a centre of Reformation thought, and in the 18th and 19th centuries it became one of Europe's leading literary and cultural centres, attracting such students as Gottfried Wilhelm Leibniz, Johann Wolfgang von Goethe, Johann Gottlieb Fichte, and Richard Wagner. Between 1953 and 1990 it was named Karl Marx University of Leipzig.

leishmaniasis \ˌlēsh-mə-'nī-ə-səs\ Human protozoal infection spread by the bite of a bloodsucking sand fly. It occurs worldwide but is especially prevalent in tropical areas. It is caused by various species of the flagellate protozoan *Leishmania*, which infect rodents and canines. Visceral leishmaniasis, or kala-azar, occurs throughout the world but is especially prevalent in the Mediterranean area, Africa, Asia, and Latin America; it affects the liver, spleen, and bone marrow and is usually fatal if not treated. Cutaneous leishmaniasis is endemic in areas around the Mediterranean, in central and northern Africa, and in southern and western Asia; it is also found in Central and South America and parts of the southern U.S. It is characterized by lesions on the skin of the legs, feet, hands, and face, most of which heal spontaneously after many months.

Leisler \'līs-lər**, Jacob** (b. 1640, Frankfurt am Main—d. May 16, 1691, New York, N.Y.) German-born colonial insurrectionist. He immigrated to New Netherland (New York) in 1660 and became a wealthy merchant. Objecting to the British unification of New York and New England (1685–89), he led the revolt called Leisler's Rebellion, established himself as lieutenant governor of the province (1689–91), and called the first intercolonial congress (1690) to plan action against the French and Indians. When he reluctantly surrendered to a new British governor, he was charged with treason and hanged, along with his son-in-law.

leitmotiv \'līt-mō-ˌtēf\ In music, a melodic idea associated with a character or an important dramatic element. It is associated particularly with the operas of Richard Wagner, most of which rely on a dense web of associative leitmotifs. Most composers after Wagner (and some of his immediate predecessors) continued to use this musico-dramatic principle, but few as rigorously as he did.

Leizhou \'lā-'jō\ **Peninsula** *or* **Lei-chou Peninsula** *conventional* **Luichow** \'lwē-'chaù\ **Peninsula** Peninsula off the southwestern coast of Guangdong province, southeastern China. Separated from Hainan Island by the Hainan Strait, it includes Kwangchowan, a territory leased by France from 1898 to 1945. Occupied by Japan in World War II, it was returned to Chinese control in 1946.

Leland \'lē-lənd**, Henry Martyn** (b. Feb. 16, 1843, Danville, Vt., U.S.—d. March 26, 1932, Detroit, Mich.) U.S. engineer and manufacturer. Trained as a machinist, he founded Leland & Faulconer Manufacturing Co. in Detroit in 1890 to build engines for automobile makers. In 1904 he merged the company into his newly founded Cadillac Motor Car Co., where he created the successful Model A Cadillac. In 1917 he founded the Lincoln Motor Co., which was purchased by Henry Ford in 1922. He was known for his rigorous standards; his innovations included the V-8 engine and adoption of the electric starter.

Lelang See Nangnang

Lemaître \lə-'me-tr^{ə}**, Georges** (b. July 17, 1894, Charleroi, Belg.—d. June 20, 1966, Louvain) Belgian astronomer and cosmologist. He served in the Belgian army during World War I, then entered a seminary and became a priest. In 1927 he became a professor of astrophysics at the University of London and proposed the big-bang model of the formation of the universe. Lemaître's theory, as modified by George Gamow, has become the leading theory of the universe's origin. Lemaître also studied cosmic rays and the three-body problem, which concerns the mathematical description of the motion of three mutually attracting bodies in space.

LeMay, Curtis E(merson) (b. Nov. 15, 1906, Columbus, Ohio, U.S.—d. Oct. 1, 1990, March Air Force Base, Calif.) U.S. Air Force officer. He joined the Army Air Corps in 1928. In World War II he developed advanced strategic bombardment techniques, including pattern bombing, and led bomber commands in Europe and the Pacific, where he launched firebombing raids on Japanese cities. As commander of U.S. air forces in Europe from 1945 to 1948, he directed the Berlin airlift (see Berlin blockade and airlift). From 1948 to 1957 he headed the U.S. Strategic Air Command, building it into a global strike force. He was chief of staff of the U.S. Air Force from 1961 to 1965. In 1968 he was the vice-presidential candidate on the third-party ticket headed by George Wallace.

Lemieux \lə-'myü**, Mario** (b. Oct. 5, 1965, Montreal, Que., Can.) Canadian ice-hockey player. In 1984 he made his professional debut as a member of the Pittsburgh Penguins and quickly became one of the sport's leading offensive threats, earning the nickname "Super Mario." He led his team to two Stanley Cup victories (1991–92). In 1992 Lemieux was found to have Hodgkin disease, but after surgery and radiation he returned to lead his team on a 17-game winning streak, an NHL record. He retired after the 1995–96 season with 613 goals and 881 assists. In 1999 he headed a group of investors that purchased the Penguins. He returned as a player in 2001, becoming the first owner-player in the history of modern sports. At the 2002 Winter Olympics he won a gold medal as a member of the Canadian men's hockey team.

lemming Any of several species of small rodents belonging to the family Cricetidae and found primarily in northern temperate and polar regions of North America and Eurasia. Lemmings have short legs, small ears, and long, soft fur. They are 4–7 in. (10–18 cm) long, including the stumpy tail, and are grayish or reddish brown above, paler below. They feed on roots, shoots, and grasses and live in burrows or rock crevices. They are noted for regular population fluctuations, and for their periodic migrations in spring and fall. Those of the Norway lemming (*Lemmus lemmus*) are the most dramatic, because many of the migrants drown in the sea. However, lemmings are hesitant to enter water and, contrary to legend, do not plunge into the sea in a deliberate death march.

Lemmon, Jack *orig.* **John Uhler Lemmon III** (b. Feb. 8, 1925, Boston, Mass., U.S.—d. June 27, 2001, Los Angeles, Calif.) U.S. actor. He attended Harvard University and acted in radio and television dramas before making his Broadway debut in 1953. He established his movie career in *Mister Roberts* (1955, Academy Award) and became noted for his character portrayals, often playing excitable, baffled individuals in movies such as *Some Like It Hot* (1959), *The Apartment* (1960), *The Odd Couple* (1968), and *The Out-of-Towners* (1970). His many other films include *Save the Tiger* (1973, Academy Award), *The China Syndrome* (1979), *Missing* (1982), and *Glengarry Glen Ross* (1992). He received an Emmy Award for his portrayal of a dying college professor in the television film *Tuesdays with Morrie* (1999).

lemon Small thorny tree or spreading bush (*Citrus limon*) of the rue (or citrus) family and its edible fruit. Under the yellow outer rind or peel is the white, spongy inner peel, the source of commercial pectin. The juicy pulp is acidic and rich in vitamin C and contains smaller amounts of B vitamins. The climates of coastal Italy and California are especially favourable for the cultivation of lemon trees, which in these regions produce fruit 6–10 times a year. Lemon juice enhances many dishes, and lemonade is a popular warm-weather beverage. Lemon by-products are used in beverages (citric acid), fruit jellies (pectin), and furniture polish (lemon oil).

Lemon (*Citrus limon*)
J. HORACE MCFARLAND CO.

lemon balm See balm

lemur \'lē-mər\ In general, any of the prosimian primates (including galagos), all of which have a naked, moist tip to their muzzle; comblike, forward-directed lower front teeth; and clawlike nails on the second toes of the feet. More strictly, the name refers to the typical lemurs (the nine species in the family Lemuridae), found only on Madagascar and the Comoro Islands, which have large eyes; a foxlike face; a slender, monkeylike body; and long hind limbs. All lemurs are docile and gregarious. Species range from 5 in. (13 cm) to about 2 ft (60 cm) long. The bushy tail may be longer than the body, and the woolly fur is reddish, gray, brown, or black. Most are active at night and spend most of their time in trees, eating fruits, leaves, buds, insects, and small birds and birds' eggs. A number of species are listed as endangered.

Lena \'lē-nə, 'lā-nə\ **River** River, east-central Russia, one of the longest rivers in the world. From its source in a Siberian mountain lake west of Lake Baikal, it flows 2,734 mi (4,400 km) north across Russia to enter the Arctic Ocean. Its basin covers an area of 961,000 sq mi (2,490,000 sq km), and it has many tributaries, including the Vitim and Olekma rivers. The land along its upper course and tributaries is rich in minerals, including gold and coal. Explorers first reached its delta on the Laptev Sea in the early 1630s.

lend-lease System promulgated by Pres. Franklin Roosevelt to give aid to U.S. allies in World War II. Faced with Britain's inability to pay cash for war materials and food, as required by U.S. law, Roosevelt asked Congress to allow repayment "in kind or property" from countries vital to U.S. defense. The Lend-Lease Act was passed in March 1941, despite arguments that it led the U.S. closer to war. Much of the $49 billion in aid went to British Commonwealth countries; the Soviet Union, China, and 40 other countries also received assistance. U.S. troops stationed abroad received about $8 billion in aid from the Allies.

L'Enfant \lä^{n}-'fä^{n},\ *English* \'län-ˌfänt**, Pierre-Charles** (b. Aug. 2, 1754, Paris, France—d. June 14, 1825, Prince Georges county, Md., U.S.) French-born U.S. engineer, architect, and urban planner. After studying in Paris, he volunteered as a soldier and engineer in the American Revolutionary Army. Congress made him major of engineers in 1783. In 1791 George Washington had him prepare a plan for a federal capital on the Potomac River. He designed a gridiron of blocks on which broad diagonal avenues were superimposed; focusing on the Capitol and presidential mansion, the plan incorporated green spaces and provided vistas of street intersections where monuments and fountains could be placed. Though he was dismissed in 1792 for his imperious attitude and died in poverty, his plan was later generally followed.

L'Engle \'leŋ-gəl**, Madeleine** *orig.* **Madeleine L'Engle Camp** (b. Nov. 29, 1918, New York, N.Y., U.S.) U.S. author of children's books. L'Engle pursued a career in theatre before publishing her first book, *The Small Rain* (1945). In *A Wrinkle in Time* (1962), she introduced a group of children who engage in a cosmic battle against a great evil; their adventures continue in *A Swiftly Tilting Planet* (1978) and other books. Her works often explore such themes as the conflict of good and evil, the nature of God, individual responsibility, and family life. She also has written adult fiction, poetry, and autobiography.

length, area, and volume Dimensional measures of one-, two-, and three-dimensional geometric objects. All three are magnitudes, representing the "size" of an object. Length is the size of a LINE segment (see DISTANCE FORMULAS), area is the size of a closed region in a plane, and volume is the size of a solid. Formulas for area and volume are based on lengths. For example, the area of a CIRCLE equals π times the square of the length of its radius, and the volume of a rectangular box is the product of its three linear dimensions: length, width, and height.

length of a curve Geometrical concept addressed by INTEGRAL CALCULUS. Methods for calculating exact lengths of line segments and arcs of circles have been known since ancient times. ANALYTIC GEOMETRY allowed them to be stated as formulas involving coordinates (see COORDINATE SYSTEMS) of points and measurements of angles. CALCULUS provided a way to find the length of a curve by breaking it into smaller and smaller line segments or arcs of circles. The exact value of a curve's length is found by combining such a process with the idea of a LIMIT. The entire procedure is summarized by a formula involving the INTEGRAL of the function describing the curve.

Lenin, Vladimir (Ilich) *orig.* **Vladimir Ilich Ulyanov** (b. April 22, 1870, Simbirsk, Russia—d. Jan. 21, 1924, Gorki, near Moscow) Founder of the Russian Communist Party, leader of the RUSSIAN REVOLUTION OF 1917, and architect and builder of the Soviet state. Born to a middle-class family, he was strongly influenced by his eldest brother, Aleksandr, who was hanged in 1887 for conspiring to assassinate the tsar. He studied law and became a Marxist in 1889 while practicing law. He was arrested as a subversive in 1895 and exiled to Siberia, where he married NADEZHDA KRUPSKAYA. They lived in western Europe after 1900. At the 1903 meeting in London of the RUSSIAN SOCIAL-DEMOCRATIC WORKERS' PARTY, he emerged as the leader of the BOLSHEVIK faction. In several revolutionary newspapers that he founded and edited, he put forth his theory of the party as the vanguard of the PROLETARIAT, a centralized body organized around a core of professional revolutionaries; his ideas, later known as LENINISM, would be joined with KARL MARX's theories to form MARXISM-Leninism, which became the communist worldview. With the outbreak of the RUSSIAN REVOLUTION OF 1905, he returned to Russia, but he resumed his exile in 1907 and continued his energetic agitation for the next 10 years. He saw World War I as an opportunity to turn a war of nations into a war of classes, and he returned to Russia with the RUSSIAN REVOLUTION OF 1917 to lead the Bolshevik coup that overthrew the provisional government of ALEKSANDR KERENSKY. As revolutionary dictator of the Soviet state, he signed the Treaty of BREST-LITOVSK with Germany (1918) and repulsed counterrevolutionary threats in the RUSSIAN CIVIL WAR. He founded the COMINTERN in 1919. His policy of WAR COMMUNISM prevailed until 1921, and to forestall economic disaster he launched the NEW ECONOMIC POLICY. In ill health from 1922, he died of a stroke in 1924.

Leningrad See SAINT PETERSBURG

Leningrad, Siege of (Sept. 8, 1941–Jan. 27, 1944) Prolonged siege of the city of Leningrad (now St. Petersburg) by German forces in World War II. German forces invaded the Soviet Union in June 1941 and approached Leningrad from the west and south while Germany's Finnish allies came from the north. By November 1941 the city was almost completely encircled and its supply lines to the Soviet interior cut off. In 1942 alone, in excess of 650,000 of Leningrad's citizens died from starvation, disease, and shelling from distant German artillery. Sparse food and fuel supplies reached the city by barge in the summer and by sled in winter across Lake Ladoga. The supplies kept the city's arms factories operating and its two million inhabitants barely alive, while another one million children and sick and elderly people were evacuated. Soviet offensives in 1943 partially broke the German encirclement and were followed in January 1944 by a successful Soviet attack that drove the Germans westward from the city's outskirts, ending the siege.

Leninism Principles expounded by VLADIMIR ILICH LENIN to guide the transition of society from CAPITALISM to COMMUNISM. The tenets of MARXISM, which Lenin embraced, provided no concrete guidelines for the transition. Lenin believed that a small, disciplined, professional group of revolutionaries was needed to violently overthrow the capitalist system, and that a "dictatorship of the PROLETARIAT" must guide society until the day when the state would wither away. That day never came, and Leninism in practice meant state control of all aspects of life by the COMMUNIST PARTY and the creation of the first modern totalitarian state. See also BOLSHEVIK, STALINISM, TOTALITARIANISM.

Lenni Lenape See DELAWARE

Lennon, John (Winston) (b. Oct. 9, 1940, Liverpool, Merseyside, Eng.—d. Dec. 8, 1980, New York, N.Y., U.S.) British singer and songwriter. He wanted to be a sailor like his father but became a musician after hearing ELVIS PRESLEY's recordings. In 1957 he formed the band that became the BEATLES, and in the 1960s he achieved enormous success performing with the group and writing songs with PAUL MCCARTNEY. In the mid-1960s he began working on side projects in film and music, notably with the Japanese-U.S. avant-garde artist Yoko Ono (b. 1933), whom he married in 1969. Their political activism and social ideals were reflected in much of Lennon's early solo work, including the hit "Imagine," and attracted the attention of the U.S. government, which sought to have him deported. After 1975 he withdrew from public life; he and Ono returned with the album *Double Fantasy* shortly before his murder by a deranged fan. His sons, Julian (b. 1963) and Sean (b. 1975), also became musicians.

lens Piece of glass or other transparent substance that is used to form an image of an object by converging or diverging rays of light from the object. Because of the curvature of its surface, different rays of light are refracted (see REFRACTION) through different angles. A convex lens causes rays to converge on a single point, the focal point. A concave lens causes rays to diverge as though they are coming from a focal point. Both types cause the rays to form a visual image of the object. The image may be real—inverted and photographable or visible on a screen—or it may be virtual—erect and visible only by looking through the lens.

Lent In the Christian church, a period of penitential preparation for EASTER, observed since apostolic times. Western churches once provided for a 40-day fast (excluding Sundays), in imitation of JESUS' fasting in the wilderness; one meal a day was allowed in the evening, and meat, fish, eggs, and butter were forbidden. These rules have gradually been relaxed, and only Ash Wednesday—the first day of Lent in Western Christianity, when the penitent traditionally have their foreheads marked with ashes—and GOOD FRIDAY are now kept as Lenten fast days. Rules of fasting are stricter in the Eastern churches.

lentil Small annual LEGUME (*Lens esculenta*) and its lens-shaped, protein-rich, edible seed. One of the most ancient of cultivated foods, it is a good source of vitamin B, iron, and phosphorus. Of unknown origin, the lentil is widely cultivated throughout Europe, Asia, and North Africa; though little grown in the Western Hemisphere, its inclusion in the U.S. diet is increasing. Growing 6–18 in. (15–45 cm) high, the plant has compound leaves and pale blue flowers. Animals are fed the stalks and leaves as fodder.

Lenya, Lotte *orig.* **Karoline Blamauer** (b. Oct. 18, 1900, Penzing, Austria—d. Nov. 27, 1981, New York, N.Y., U.S.) Austrian-born U.S. actress-singer. Born into poverty, Lenya worked as a dancer and actress in Zürich and later in Berlin. She married the composer KURT WEILL in 1926 and began appearing in musical dramas by Weill and his longtime collaborator BERTOLT BRECHT, such as *Mahagonny* (1927) and *The Threepenny Opera* (1928; film, 1930). Lenya and Weill fled Nazi Germany for Paris, where she sang in Brecht's and Weill's *Seven Deadly Sins* (1933). The couple moved to New York City in 1935, and Lenya made her U.S. debut in *The Eternal Road* (1937). After Weill's death, she lent her inimitably husky voice to revivals throughout the 1950s, including a long-running production of *The Threepenny Opera*, and she later performed in *Brecht on Brecht* (1962), *Mother Courage and Her Children* (1965), and *Cabaret* (1966), as well as in films.

Leo (Latin: "Lion") In astronomy, the constellation lying between Cancer and Virgo; in ASTROLOGY, the fifth sign of the ZODIAC, governing approximately the period July 23–August 22. Its symbol, a lion, has been associated with the Nemean lion slain by HERACLES. The Nemean lion was considered invulnerable because its skin was impervious to arrows, but Heracles battered it to death with a club. ZEUS put the lion in the sky as a constellation.

Leo I, Saint *known as* **Leo the Great** (b. 4th century, Tuscany?—d. Nov. 10, 461, Rome; Western feast day November 10, Eastern feast day February 18) Pope (440–461). He was a champion of orthodoxy and a Doctor of the Church. When the monk Eutyches of Constantinople asserted that Jesus Christ had only a single divine nature, Leo wrote the *Tome,* which established the coexistence of Christ's human and divine natures. Leo's teachings were embraced by the Council of CHALCEDON (451), which also accepted his teaching as the "voice of Peter." Leo dealt capably with the invasions of barbaric tribes, persuading the HUNS not to attack Rome (452)

© 2006 Encyclopædia Britannica, Inc.

and the VANDALS not to sack the city (455). Leo was also an exponent of the precept of papal primacy, and his personal example and letters and sermons contributed greatly to the growth of papal authority.

Leo III *known as* **Leo the Isaurian** \ī-'sȯr-ē-ən\ (b. c. 675, Germanicia, Commagene, Syria—d. June 18, 742, Constantinople) Byzantine emperor (717–41), founder of the Isaurian dynasty. A high-ranking military commander, he seized the throne with the help of Arab armies who hoped to subjugate the Byzantine Empire. He then successfully defended Constantinople against the Arabs (717–718). Having crowned his son CONSTANTINE V coemperor (720), Leo used his son's marriage to cement an alliance with the KHAZARS. Victory over the Arabs at Akroïnos (740) was crucial in preventing their conquest of Asia Minor. Leo issued an important legal code, the Ecloga (726). His policy of ICONOCLASM (730), which banned the use of sacred images in churches, engendered a century of conflict within the empire and further strained relations with the pope in Rome.

Leo IX, Saint *orig.* **Bruno, count von Egisheim und Dagsburg** (b. 1002, Egisheim, Alsace, Upper Lorraine—d. April 19, 1054, Rome; feast day April 19) Pope (1049–54). He was consecrated bishop of Toul in 1027. He was named pope by Emperor HENRY III but insisted on election by the clergy and people of Rome. His efforts to strengthen the papacy and eradicate clerical marriage and SIMONY laid the foundation for the Gregorian reform movement. His assertion of papal primacy and his military campaign against the Normans in Sicily (1053) alienated the Eastern church. His representatives excommunicated the patriarch of Constantinople. Though Leo had already died, their act triggered the SCHISM OF 1054.

Leo X *orig.* **Giovanni de' Medici** (b. Dec. 1, 1475, Florence—d. Dec. 1, 1521, Rome) Pope (1513–21), one of the most extravagant of the RENAISSANCE pontiffs. The second son of LORENZO DE' MEDICI, he was educated at his father's court in Florence and at the University of Pisa. He was named a cardinal in 1492, and in 1494 he was exiled from Florence by the revolt of GIROLAMO SAVONAROLA. He returned in 1500 and soon consolidated Medici control of the city. As pope, he became a patron of the arts, accelerating construction of ST. PETER'S BASILICA. He strengthened the papacy's political power in Europe, but his lavish spending depleted his treasury. He discouraged reforms at the fifth LATERAN COUNCIL, and he responded inadequately to the REFORMATION, excommunicating MARTIN LUTHER in 1521 and failing to address the need for change, a lapse that signaled the end of the unified Western church.

Leo XIII *orig.* **Vincenzo Gioacchino Pecci** (b. March 2, 1810, Carpineto Romano, Papal States—d. July 20, 1903, Rome) Pope (1878–1903). Born into the Italian nobility, he was ordained a priest in 1837 and entered the diplomatic service of the Papal States. He was appointed bishop of Perugia in 1846 and was named a cardinal in 1853. He was elected pope in 1878, and, despite his advanced age and frail health, he directed the church for a quarter of a century. Like his predecessor, PIUS IX, he opposed FREEMASONRY and secular liberalism, but he brought a new spirit to the papacy by adopting a conciliatory attitude toward civil governments and taking a more positive view of scientific progress.

Leo XIII, 1878
THE BETTMANN ARCHIVE

Leochares \lē-'ä-kə-ˌrēz\ (fl. 4th century BC, Greece) Greek sculptor to whom the *Apollo Belvedere* is often attributed. He worked for PHILIP II of Macedonia and his son, ALEXANDER THE GREAT, and was commissioned to produce gold and ivory statues of the royal family. He is said to have worked with SCOPAS on the Mausoleum at Halicarnassus, one of the SEVEN WONDERS OF THE WORLD, c. 350 BC.

León \lā-'ōn\ City (pop., 2001: 130,916), northwestern Spain. The city began as the camp of a Roman legion; its name is derived from the Latin *legio*. Held by the Goths during the 6th and 7th centuries, it then fell to the Moors, who ruled it until 850. In the 10th century, it became the capital of the kingdom of LEON. An industrial as well as a tourist centre, its site includes medieval churches.

León City (pop., 1995: 123,865), western Nicaragua. The second largest city in Nicaragua, it is the country's political and intellectual centre. It was founded by the Spanish on the edge of Lake MANAGUA in 1524; it was later destroyed by an earthquake and rebuilt in 1610 near the Pacific coast, northwest of MANAGUA. León was the capital of Nicaragua until 1855. It has had a long political and commercial rivalry with the city of GRANADA. It is the burial place of poet and diplomat RUBÉN DARÍO and the seat of the University of León.

Leon Medieval kingdom, northwestern Spain. Leon proper included the cities of LEÓN, SALAMANCA, and Zamora—the adjacent areas of Vallodolid and Palencia being disputed with CASTILE, originally its eastern frontier. It began as a Christian kingdom in the early 10th century when García I established his court on a former Roman legion campsite. Its rulers lost ground to the Moors during the 10th century but reconquered much territory in the 11th century. From 1037 to 1157 it was united with the kingdom of Castile, but it then regained its independence and was ruled by its own kings. It was permanently reunited with Castile in 1230. The modern autonomous community of CASTILE-LEÓN covers roughly the same area.

Léon, Arthur Saint- See Arthur SAINT-LÉON

Leonard, Buck *orig.* **Walter Fenner Leonard** (b. Sept. 8, 1907, Rocky Mount, N.C., U.S.—d. Nov. 27, 1997, Rocky Mount) U.S. baseball player. Leonard began his professional baseball career in the NEGRO LEAGUES in 1933. With his teammate JOSH GIBSON, he led the Homestead Grays to nine consecutive championships from 1937 through 1945. Known as a formidable home-run hitter and an outstanding first baseman, he was selected to the Negro leagues' East-West All-Star game a record 11 times.

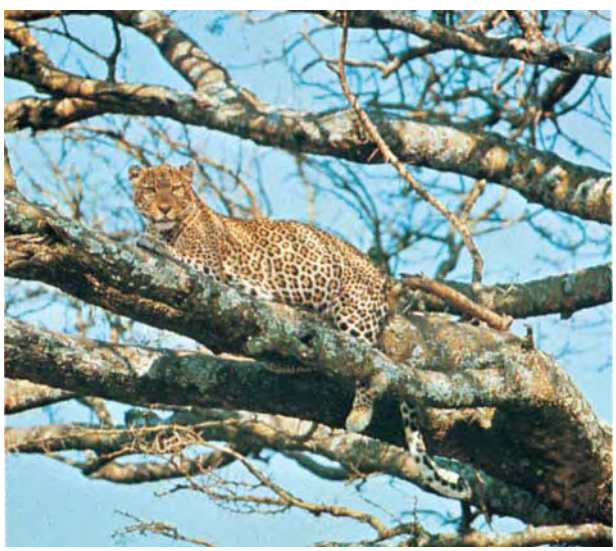
Leonard, Sugar Ray *orig.* **Ray Charles Leonard** (b. May 17, 1956, Rocky Mount, N.C., U.S.) U.S. welterweight and middleweight boxer. Leonard was an outstanding amateur, winning 145 of 150 bouts, including a 1976 Olympic championship. He turned professional in 1977 and gained the world welterweight title in 1979 by defeating Wilfred Benítez. He lost the title to Roberto Duran in 1980 but recaptured it from him later that year. He retired in the early 1980s with a detached retina but made a comeback in 1984. In 1987 he went into the ring as a middleweight to defeat Marvin Hagler in one of boxing's great matches. He retired again in 1991. He was resoundingly defeated in a final comeback attempt in 1997. Known for his agility and finesse, he won 36 of his 39 professional matches. He later became a television commentator.

Leonardo da Vinci \'vin-chē\ (b. April 15, 1452, Anchiano, Republic of Florence—d. May 2, 1519, Cloux, France) Italian Renaissance painter, sculptor, draftsman, architect, engineer, and scientist. The son of a landowner and a peasant, he received training in painting, sculpture, and mechanical arts as an apprentice to ANDREA DEL VERROCCHIO. In 1482, having made a name for himself in Florence, he entered the service of the duke of Milan as "painter and engineer." In Milan his artistic and creative genius unfolded. About 1490 he began his project of writing treatises on the "science of painting," architecture, mechanics, and anatomy. His theories were based on the belief that the painter, with his powers of perception and ability to pictorialize his observations, was uniquely qualified to probe nature's secrets. His numerous surviving manuscripts are noted for being written in a backward script that requires a mirror to be read. In 1502–03, as military architect and engineer for CESARE BORGIA, he helped lay the groundwork for modern cartography. After five years of painting and scientific study back in Florence (1503–08), he returned to Milan, where his scientific work flourished. In 1516, after an interlude under MEDICI patronage in Rome, he entered the service of FRANCIS I of France; he never returned to Italy. Though only some 17 completed paintings survive, they are universally seen as masterpieces. The power of *The Last Supper* (1495–97) comes in part from its masterly composition. In the *Mona Lisa* (c. 1503–06) the features and symbolic overtones of the subject achieve a complete synthesis. The unique fame that Leonardo enjoyed in his lifetime and that, filtered by historical criticism, has remained undimmed to the present day rests largely on his unlimited desire for knowledge, a trait that guided all his thinking and behaviour.

Leoncavallo \lā-ˌōn-kä-'väl-lō**, Ruggero** (b. March 8, 1857/58, Naples, Kingdom of the Two Sicilies—d. Aug. 9, 1919, Montecatini Terme, near Florence, Italy) Italian composer. After attending Naples Conservatory and earning a doctorate in literature, he toured as a pianist while writing operas. His first, *Chatterton* (1878), was produced with little suc-

© 2006 Encyclopædia Britannica, Inc.

cess, but its libretto attracted the interest of the publisher Giulio Ricordi. Giacomo Puccini's rejection of Leoncavallo's help with *Manon Lescaut* and Ricordi's rejection of his own projects caused him in anger to write the verismo one-act opera *Pagliacci* (1892) for Ricordi's rival. Though he wrote several other operas and operettas, *Pagliacci* was his only enduring success.



Leone \lā-'ō-nā**, Sergio** (b. Jan. 3, 1929?, Rome, Italy—d. April 30, 1989, Rome) Italian film director. After working as an assistant to Italian and U.S. directors, he made his directing debut with *The Colossus of Rhodes* (1961). He won a wide audience with *A Fistful of Dollars* (1964), the first of the violent Italian-made "spaghetti westerns"; the equally popular *For a Few Dollars More* (1965) and *The Good, the Bad, and the Ugly* (1966) also starred Clint Eastwood. Among his other films are the epics *Once upon a Time in the West* (1968) and *Once upon a Time in America* (1984). Many of his films were at first poorly received by critics, but Leone was eventually recognized for his meticulous care for historical accuracy and his powerful sense of visual composition.

Leonidas \lē-'ä-nə-dəs\ (d. 480 BC, Thermopylae, Locris [Greece]) King of Sparta (c. 490–480 BC). He is noted for his heroic stand against the Persians at the Battle of Thermopylae in 480. Seeing the hopelessness of the situation, he sent most of his troops in retreat and with his 300-man royal guard withstood the Persian army for two days, battling valiantly to the last man. He became the object of a hero cult at Sparta, and he stands as the epitome of bravery against overwhelming odds. The legend that Spartans never surrender derived from this episode.

Leonov \lē-'ä-nəf**, Aleksey (Arkhipovich)** (b. May 30, 1934, near Kemerovo, Russia, U.S.S.R.) Soviet cosmonaut. He joined the Soviet air force in 1953 and was selected for cosmonaut training in 1959. In 1965 he became the first person to perform a spacewalk. After exiting the spacecraft (Voskhod 2) and while tethered to the ship, Leonov made observations, took motion pictures, and practiced maneuvering in free fall before reentering the ship. A decade later he commanded the Soyuz craft that linked in orbit with the U.S. Apollo craft in July 1975.

Leontief \lē-'än-tē-ˌef**, Wassily** (b. Aug. 5, 1906, St. Petersburg, Russia—d. Feb. 5, 1999, New York, N.Y., U.S.) Russian-born U.S. economist. After studying at the universities of Leningrad (1921–25) and Berlin (1925–28), he immigrated to the U.S. in 1931. At Harvard University (1931–75) he articulated his input-output analysis. He also described what is known as the Leontief Paradox: that capital, not labour, is the scarce factor of production in the U.S. He was awarded the 1973 Nobel Prize. From 1975 until his death he taught at New York University.

leopard *or* **panther** Big cat (*Panthera pardus*) of the bush and forest, found throughout sub-Saharan Africa, in North Africa, and in Asia. The average leopard weighs 110–200 lbs (50–90 kg) and is about 6 ft (210 cm) long, excluding the 35-in. (90-cm) tail, and 24–28 in. (60–70 cm) high at the shoulder. The background colour is typically yellowish above and white below. The dark spots arranged in rosettes over much of the body lack a central spot, unlike those of the jaguar. The leopard is solitary and mainly nocturnal. An agile climber, it frequently stores the remains of its kills in tree branches. It generally preys on antelope and deer. It also hunts dogs and, in Africa, baboons. It sometimes takes livestock and may attack humans. The leopard is considered an endangered species by the U.S. but not by the IUCN (International Union for Conservation of Nature). See also cheetah; cougar; snow leopard.

Leopard (*Panthera pardus*)
LEONARD LEE RUE III

leopard seal *or* **sea leopard** Species (*Hydrurga leptonyx*) of generally solitary earless seal (family Phocidae) found in Antarctic and sub-Antarctic regions. It is the only seal that feeds on penguins, young seals, and other warm-blooded prey. It is slender and has a long head and long three-cusped cheek teeth. Named for its black-spotted gray coat, it attains a maximum length and weight (greater in the female) of about 12 ft (3.5 m) and 840 lbs (380 kg). It has a reputation for ferocity but is not known to make unprovoked attacks on humans.

Leopardi \ˌlā-ō-'pär-dē**, Giacomo** (b. June 29, 1798, Recanati, Papal States—d. June 14, 1837, Naples) Italian poet, scholar, and philosopher. Congenitally deformed, he suffered throughout his life from chronic ailments and frustrated hopes. His usually pessimistic poetry is admired for its brilliance, intensity, and effortless musicality. His verse collections include *Canzoni* (1824), *Versi* (1826), and *I canti* (1831). His finest poems are probably the lyrics called "Idillii" in early editions of his poetry. *Operette morali* (1827; "Minor Moral Works") is an influential philosophical exposition, mainly in dialogue form, of his doctrine of despair. He is considered among the great Italian writers of the 19th century.

Leopold I *orig.* **Léopold-Georges-Chrétien-Frédéric** (b. Dec. 16, 1790, Coburg, Saxe-Coburg-Saalfeld—d. Dec. 10, 1865, Laeken, Belg.) First king of the Belgians (1831–65). The son of Francis, duke of Saxe-Coburg-Saalfeld, he married Charlotte, daughter of the future English king George IV in 1816. After her death in 1817 Leopold continued to live in England until elected king of the newly formed Belgium. He helped strengthen the country's new parliamentary system and scrupulously maintained Belgian neutrality. Highly influential in European diplomacy, he used marriages to strengthen his ties. In 1832 he married the daughter of Louis-Philippe. In 1840 he helped arrange the marriage of his niece, Victoria, to his nephew, Prince Albert of Saxe-Coburg-Gotha. In 1857 he arranged the marriage of his daughter to Maximilian, archduke of Austria.

Leopold I (b. June 9, 1640 Vienna, Austria—d. May 5, 1705, Vienna) Holy Roman emperor (1658–1705). Son of Ferdinand III, Leopold was a devout Catholic destined for the church, but, when his elder brother died unexpectedly (1654), he became heir apparent to the Austrian Habsburg lands. He was crowned successively king of Hungary (1655) and of Bohemia (1656), and with his father's death Leopold became emperor in 1658. During his lengthy reign Austria emerged from a series of struggles to become a great European power. In 1683 the Turks besieged Vienna and were repulsed; war continued until the Turks were defeated and ceded control of Hungary in the Treaty of Carlowitz (1699). Leopold also entered into the War of the Grand Alliance, but the unfavourable peace treaty ceded Strasbourg to France. He was drawn into the War of the Spanish Succession, and he died before its end. His third marriage, to Eleonore of Palatinate-Neuburg, was a happy union that produced 10 children, including the future emperors Joseph I and Charles VI.

Leopold II *orig.* **Léopold-Louis-Philippe-Marie-Victor** (b. April 9, 1835, Brussels, Belg.—d. Dec. 17, 1909, Laeken) King of the Belgians (1865–1909). Succeeding his father, Leopold I, he led the first European efforts to develop the Congo River basin. In 1876 he founded an association to explore the Congo area, with Henry Morton Stanley as his main agent. Leopold formed the Congo Free State in 1885 and ruled as its sovereign. Under Leopold, the Congo became the scene of barbarous cruelty by the colonial masters; when news of the conditions there broke c. 1905, it provoked an international scandal. Under British and U.S. pressure, the region was removed from Leopold's personal rule and annexed to Belgium in 1908 as the Belgian Congo. Leopold was succeeded by his nephew, Albert I.

Leopold II (b. May 5, 1747, Vienna—d. March 1, 1792, Vienna) Holy Roman emperor (1790–92). Son of Maria Theresa and Emperor Francis I, he became duke of Tuscany in 1765. A practitioner of what has been

© 2006 Encyclopædia Britannica, Inc.

termed enlightened despotism, he built an efficient state government and encouraged representative institutions. In 1790 he succeeded his brother Joseph II as emperor and retained many of Joseph's reforms. In 1792 he allied with Prussia against revolutionary France, precipitating the French Revolutionary Wars.

Leopold III *orig.* **Léopold-Philippe-Charles-Albert-Meinrad-Hubertus-Marie-Miguel** (b. Nov. 3, 1901, Brussels, Belg.—d. Sept. 25, 1983, Brussels) King of the Belgians (1934–51). He succeeded his father, Albert I, and favoured an independent foreign policy but not strict neutrality. In World War II he assumed command of the Belgian army, but he surrendered his encircled forces 18 days after the German invasion in May 1940. The Belgian government repudiated his decision to surrender and remain with his forces rather than join the government-in-exile in London. Under house arrest through the war, he later went to Switzerland (1945–50) to await resolution of the controversy. Though 58% of voters voted for his return to the throne, he abdicated in 1951 in favour of his son Baudouin.

Leopold, (Rand) Aldo (b. Jan. 11, 1887, Burlington, Iowa, U.S.—d. April 24, 1948, near Madison, Wis.) U.S. environmentalist. After attending Yale University, he worked for the U.S. Forest Service (1909–28), mainly in the Southwest. In 1924 the country's first national wilderness area (Gila Wilderness Area in New Mexico) was created at Leopold's urging. From 1933 to 1948 he taught at the University of Wisconsin. A fervent campaigner for the preservation of wildlife and wilderness areas, he was a director of the Audubon Society from 1935 and became a founder of the Wilderness Society in the same year. His *Game Management* (1933) was followed in 1949 by the posthumous *A Sand County Almanac*, which eloquently called for the preservation of ecosystems. Read by millions, it strongly influenced the budding environmental movement.

Leopold of Hohenzollern-Sigmaringen \ˌhō-ənt-ˈsól-ərn-ˈzēk-mä-ˌriŋ-ən**, Prince** (b. Sept. 22, 1835, Krauchenweis, Prussia—d. June 8, 1905, Berlin, Ger.) Prussian candidate for the Spanish throne. He was a member of the Swabian line of the Hohenzollern dynasty and the brother of Carol I of Romania. Chancellor Otto von Bismarck and Spain's de facto leader, Juan Prim (1814–70), persuaded the reluctant Leopold to accept the Spanish throne, left vacant in 1868. Under French diplomatic pressure, Leopold's candidacy was withdrawn, but Prussia refused to bow to French demands that it never be renewed. The Ems Telegram provoked the French into declaring war (see Franco-Prussian War).

Léopoldville See Kinshasa

Lepanto \lē-ˈpän-tō**, Battle of** (Oct. 7, 1571) Naval engagement between allied Christian forces (Venice, the pope, and Spain) and the Ottoman Turks during an Ottoman campaign to acquire the Venetian island of Cyprus. After four hours of fighting off the coast of Lepanto, Greece, the allies, under Juan de Austria, were victorious, capturing 117 galleys and thousands of men. The battle was of little practical value, since Venice would surrender Cyprus to the Turks in 1573, but it had a great impact on European morale and was the subject of paintings by Titian, Tintoretto, and Veronese.

lepidopteran \ˌle-pə-ˈdäp-tə-rən\ Any of the more than 100,000 species constituting the order Lepidoptera (Greek: "scaly wing"): butterflies, moths, and skippers. The name refers to the dusting of minute scales that covers the wings and bodies of these insects. A slender proboscis is used for sucking. Nearly all lepidopterans are plant eaters, and species are found on every continent except Antarctica. Females may lay from a few to a thousand or more eggs at a time. All lepidopterans undergo complete metamorphosis. Many types move from one region to another, sometimes crossing thousands of miles of ocean, but the only species that truly migrates—the same individuals making a two-way flight—is the monarch butterfly.

Lepidus \ˈle-pə-dəs**, Marcus Aemilius** (d. 13/12 BC) Roman consul (46, 42 BC) and triumvir (43–36). After the death of Julius Caesar, Lepidus controlled parts of Gaul, Spain, and Africa and wielded great influence. He and Mark Antony opposed the republican conspirators and in 43 formed the Second Triumvirate with Octavian (later Augustus). He acquired a second Spanish province but lost Spain and Gaul to Antony and Octavian, keeping only Africa. After helping defeat Sextus Pompeius (36), he challenged Octavian, but his soldiers defected and he was forced to retire.

Lepontine \li-ˈpän-ˌtīn\ **Alps** Segment of the central Alps along the Italian-Swiss border. It is bordered by the Pennine Alps in the west and southwest and the Italian lake district in the south; its highest peak, Mount Leone, rises to 11,657 ft (3,553 m) and lies at its western end. Important passes include Simplon, Saint Gotthard, Lukmanier, and San Bernardino.

leprechaun \ˈlep-rə-ˌkän\ In Irish folklore, a fairy in the form of a tiny old man wearing a cocked hat and leather apron. Solitary by nature, leprechauns lived in remote places and worked as shoemakers. Each was believed to possess a hidden crock of gold. If captured and threatened, a leprechaun might reveal the gold's hiding place, provided his captor never took his eyes off him. Usually the captor was tricked into glancing away, and the leprechaun vanished. The word derives from the Old Irish *luchorpan* ("little body").

Leprechaun, from the *Irish Fairy Book*, by Alfred Perceval Crave, 1909.

leprosy *or* **Hansen disease** Chronic disease of the skin, peripheral nerves, and mucous membranes of the nose, throat, and eyes, caused by the bacterium *Mycobacterium leprae*. In tuberculoid leprosy, cells of the immune system crowd into infected areas of the skin, forming hard nodules, or tubercles, that spread along nerve fibres. This type of reaction commonly leads to claw hand, gross deformity of the foot, and paralysis of muscles of the face, eye, and neck. In the lepromatous type, bacilli multiply freely in deep layers of the skin and spread widely through lymphatic channels and along nerve fibres, causing thickening and corrugation of the skin, raising soft nodules on the ears, nose, and cheeks, and sometimes destroying the septum of the nose and the palate. Leprosy has a long history. Until the 20th century, infected people were ostracized from society or at best segregated and cared for in isolated leper colonies. Today the disease is entirely curable through multidrug therapy, though tissue damage caused before drug treatment cannot be reversed. Some 600,000 new cases arise every year, mostly in Asia, Africa, Central and South America, and the Pacific Islands. About 60 percent of new cases occur in India.

Leptis Magna *modern* **Labdah** Largest city of ancient Tripolis, located near modern Al-Khums, Libya. Founded by the Phoenicians in the 6th century BC, it passed to Numidia in 202 BC but broke away in 111 BC to become an ally of Rome. The emperor Trajan made it a Roman colony. The waning of the Roman Empire caused its decline, and it was largely abandoned after the Arab conquest of AD 642. It has some of the best-preserved Roman ruins in North Africa.

lepton \ˈlep-tän\ Any member of a class of fermions that respond only to electromagnetic, weak, and gravitational forces and do not take part in strong interactions. Leptons have a half-integral spin and obey the Pauli exclusion principle. They can either carry one unit of electric charge or be neutral. The charged leptons are the electrons, muons, and taus. Each has a negative charge and a distinct mass. Each charged lepton has an associated neutral partner, or neutrino, which has no electric charge and very little if any mass.

Lerma River River, west-central Mexico. It rises southeast of Toluca and flows northwest and then south for 350 mi (560 km) to empty into Lake Chapala. The Río Grande de Santiago, which leads from Lake Chapala to the Pacific Ocean, is sometimes considered an extension of the Lerma. With its major tributaries, it constitutes Mexico's largest river system.

Lermontov \ˈlʸer-mən-təf**, Mikhail (Yuryevich)** (b. Oct. 15, 1814, Moscow, Russia—d. July 27, 1841, Pyatigorsk) Russian poet and novelist. His first volume of verse, *Spring*, was published in 1830, the year he entered Moscow University. He left the university two years later to enter cadet school. A guards officer after graduating in 1834, he was twice exiled to regiments in the Caucasus because of his passionately libertarian verse. He became popular for having suffered for his poetry, which combined civic and philosophical themes with deeply personal motifs. His mature poems include "Mtsyri" (1840) and "Demon" (1841). His novel *A Hero of Our Time* (1840), a reflection on contemporary society and the fortunes of his generation, is written in superb prose, and the portrait of its alienated hero profoundly influenced later Russian writers. Like Aleksandr Pushkin, to whom he is often compared, he died in a duel. He is remembered as his country's leading Romantic poet.

Lerner, Alan Jay (b. Aug. 31, 1918, New York, N.Y., U.S.—d. June 14, 1986, New York City) U.S. librettist and lyricist. Born to a prosperous retailing family, he studied at Juilliard and Harvard. He wrote more than 500 radio scripts between 1940 and 1942, the year he met the composer Frederick Loewe. The two began collaborating, and their first Broadway success came with *Brigadoon* (1947; film, 1954). It was followed by *Paint Your Wagon* (1951; film, 1969). *My Fair Lady* (1956) was an unprecedented triumph, setting a record for the longest original run of any musical; the film version (1964) won seven Academy Awards. Their film musical *Gigi* (1958) received nine Academy Awards. *Camelot* followed in 1960 (film, 1967). Lerner also collaborated with Kurt Weill (*Love Life*, 1948) and Burton Lane (*On a Clear Day You Can See Forever*, 1965; film, 1970), among others. His film scripts include *An American in Paris* (1951, Academy Award).

Lerwick Town (pop., 1991: 7,336), administrative centre of the Shetland Islands, northern Scotland. It is on the eastern coast of the island of Mainland. Britain's northernmost town, it originated as a fishing village and is notable for its herring catch. The North Sea oil boom of the 1970s increased port traffic, and Lerwick became an oil supply and service base. It is the seat of the Shetland Islands council area.

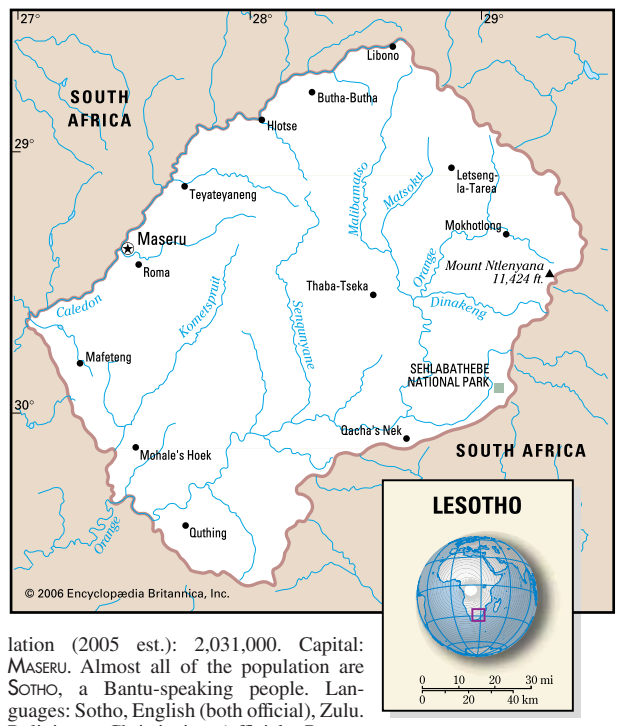
Les Vingt See Les Vingt

Lesage \lə-'säzh**, Alain-René** *or* **Le Sage** (b. May 6, 1668, Sarzeau, France—d. Nov. 17, 1747, Boulogne) French novelist and playwright. He studied law in Paris but later abandoned his clerkship to devote himself to literature. His classic *The Adventures of Gil Blas of Santillane* (1715–35), one of the earliest realistic novels, was influential in making the picaresque novel a European literary fashion. A prolific satirical dramatist, he adapted Spanish models for his early plays, including the highly successful comedy *Crispin, Rival of His Master* (1707). He also composed more than 100 *comédies-vaudevilles* in the tradition of Molière.

Lesage \lə-'säzh**, Jean** (b. June 10, 1912, Montreal, Que., Can.—d. Dec. 12, 1980, near Quebec, Que.) Canadian politician. He served as Canadian minister of resources and development from 1953 to 1957. In 1958 he became leader of Quebec's Liberal Party. When the Liberals won the 1960 provincial elections, he became Quebec's premier. He called for social and cultural reform, appointing the first minister of education and modernizing the school system and the civil service. He developed close cultural ties between Quebec and France. After the Liberals were defeated in 1966, he served as opposition leader until 1970.

lesbianism *also called* **sapphism** *or* **female homosexuality,** the quality or state of intense emotional and usually erotic attraction of a woman to another woman. First used in the late 16th century, the word "lesbian" referred to the Greek island of Lesbos. The connotation of female homosexuality was added in the late 19th century, when an association was made with the poetry of Lesbian poet Sappho (c. 610–c. 580 BC). At the turn of the 21st century, issues of concern to lesbians in Europe and North America included legal recognition for same-sex unions, child-rearing rights, women's health-care, taxes, inheritance, and the sharing of medical benefits with a partner.

Lesbos \'lez-ˌbäs\ *or* **Mytilene** \ˌmit-ᵊl-'ē-nē\ *or* **Mitilíni** \ˌmē-tē-'lē-nē\ Third largest island (pop., 1991: 87,151) in the Aegean Sea. It occupies an area of 630 sq mi (1,630 sq km), and with two other islands it forms a Greek department. Its main town is Mytilene. Lesbos was the birthplace of the poet Sappho and is the source of the term *lesbian*. Inhabited since c. 3000 BC, it was settled in c. 1050 BC by the Aetolians. After being under Persian rule (527–479 BC), it joined the Delian League. In the Peloponnesian War, it fell to Sparta (405 BC), but then it was recovered for Athens (389 BC). It later flourished under Byzantium. It was ruled by the Ottoman Empire (1462–1911) before being annexed by Greece. Fishing is important economically, as is the export of olives.



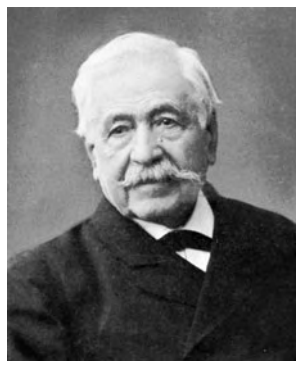
Leschetizky \ˌle-shə-'tit-skē**, Theodor** *orig.* **Teodor Leszetycki** (b. June 22, 1830, Łańcut, Pol., Austrian Empire—d. Nov. 14, 1915, Dresden, Ger.) Polish pianist and teacher. A prodigy, he studied in Vienna with Karl Czerny and Simon Sechter (1788–1867) from age 10 and was already a teacher by 14. In addition to performing, he became the most celebrated piano teacher of his time, first at the conservatory in St. Petersburg (1852–78) and thereafter in Vienna. His students included many of the most renowned pianists of their era, including Ignacy Paderewski and Artur Schnabel.

leshy \'ˈlʲe-shəy\ In Slavic mythology, a forest spirit. The leshy is an antic spirit who enjoys playing tricks on people, though when angered he can be treacherous. He is seldom seen, but his voice can be heard in the forest laughing, whistling, or singing. He often takes the shape of a man, but his eyebrows, eyelashes, and right ear are missing, his head is pointed, and he lacks a hat and belt. In his native forest, the leshy is as tall as the trees, but the moment he steps beyond it, he shrinks to the size of grass. The leshy is familiar to most Slavs living in heavily forested areas.

Leslie, Frank *orig.* **Henry Carter** (b. March 29, 1821, Ipswich, Suffolk, Eng.—d. Jan. 10, 1880, New York, N.Y., U.S.) British-U.S. illustrator and journalist. The *Illustrated London News* published his early sketches. He moved to the U.S. in 1848. There he founded numerous newspapers and journals, including the *New York Journal* (1854), *Frank Leslie's Illustrated Newspaper* (1855)—having changed his name in 1857—and *Frank Leslie's Boys' and Girls' Weekly* (1866). His illustrations from Civil War battlefields earned him his greatest profits. His second wife, Miriam Florence Leslie (1836–1914), legally changed her name to Frank Leslie after his death and continued his business after his death, twice rescuing it from debt. When she died a wealthy woman, she left most of her estate to the feminist Carrie Chapman Catt in the service of the suffragist cause.

Leśniewski \lesh-'nyef-skē**, Stanisław** *or* **Stanisław Leshniewski** (b. March 30, 1886, Serpukhov, Russia—d. May 13, 1939, Warsaw) Polish logician and mathematician. As a professor at the University of Warsaw (1919–39), he became a cofounder and leading representative of the Warsaw school of logic. His distinctive contribution was the construction of three interrelated formal systems, to which he gave the Greek-derived names of protothetic, ontology, and mereology.

Lesotho \lə-'sü-ˌtü, lə-'sō-ˌtō\ *officially* **Kingdom of Lesotho** *formerly* **Basutoland** Country, southern Africa, an enclave lying within the Republic of South Africa. Area: 11,720 sq mi (30,355 sq km). Population (2005 est.): 2,031,000. Capital: Maseru. Almost all of the population are Sotho, a Bantu-speaking people. Languages: Sotho, English (both official), Zulu. Religions: Christianity (official; Roman Catholic, other Christians, Protestant); also traditional beliefs. Currency: loti. About two-thirds of the total area is mountainous; the highest point is Mount Ntlenyana (11,424 ft [3,482 m]). The Maloti Mountains in the central northwest are the source of two of South Africa's largest rivers, the Tugela and the Orange. Mineral resources are scant. Agriculture employs nearly two-fifths of the workforce; the chief farm products are corn, sorghum, and wheat. Livestock provides exports (cattle, wool,



© 2006 Encyclopædia Britannica, Inc.

mohair). Industries focus mainly on light manufacturing (textiles and apparel, furniture, jewelry). Lesotho is a constitutional monarchy with two legislative houses; its chief of state is the king, and the head of government is the prime minister. Bantu-speaking farmers began to settle the area in the 16th century, and a number of chiefdoms arose. The most powerful of them organized the Basotho in 1824 and obtained British protection in 1843 as tension between the Basotho and the South African Boers increased. It became a British territory in 1868 and was annexed to the Cape Colony in 1871. The colony's effort to disarm the Basotho resulted in revolt in 1880, and four years later it separated from the colony and became a British High Commission Territory. It became independent in 1966. A new constitution, effective in 1993, ended seven years of military rule. At the beginning of the 21st century, Lesotho suffered from internal political problems and a deteriorating economy.

Lesse River \'les, 'le-sə\ River, southeastern Belgium. It rises in the Ardennes and meanders northwest for 52 mi (84 km), emptying into the Meuse River. It flows underground for about a mile at Han-sur-Lesse through the Grottoes of Han, renowned for their stalactites and stalagmites.

Lesseps \'le-səps**, Ferdinand (-Marie), viscount de** (b. Nov. 19, 1805, Versailles, France—d. Dec. 7, 1894, La Chenaie, near Guilly) French diplomat, builder of the Suez Canal. A career diplomat, he held posts in Egypt and elsewhere until 1849. In 1854 he was authorized by the viceroy of Egypt to build a canal across the isthmus of the Suez. He organized a company in 1858, with half its capital from French people, and construction began at Port Said in 1859. The Suez Canal was officially inaugurated in 1869. In 1879 Lesseps organized another company to build a Panama canal, but he gave up the project because of political and economic difficulties. He was prosecuted but cleared of charges of misappropriating funds, though French government members were accused of bribe taking.

Lesser Armenia See Little Armenia

Lesser Slave Lake Lake, central Alberta, Canada. Located northwest of Edmonton and south of Great Slave Lake, it occupies an area of 451 sq mi (1,168 sq km) and drains into the Athabasca River via the Lesser Slave River. Its name refers to the Slave (Dogrib) Indians, who once inhabited its shores.

Lessing, Doris (May) *orig.* **Doris May Tayler** (b. Oct. 22, 1919, Kermānshāh, Iran) British novelist and short-story writer. She lived on a farm in Southern Rhodesia (now Zimbabwe) 1924–49 before settling in England and beginning her writing career. Her works, which have often reflected her leftist political activism, are largely concerned with people caught in social and political upheavals. *Children of Violence* (1952–69), a semiautobiographical five-novel series featuring Martha Quest, reflects her African experience and is generally considered her most substantial work. *The Golden Notebook* (1962), her most widely read novel, is a feminist classic. Her masterful short stories are published in several collections. Other works include a science-fiction novel sequence, two novels published under an assumed name (Jane Somers), and autobiographical works, including *Under My Skin* (1994).

Lessing, Gotthold Ephraim (b. Jan. 22, 1729, Kamenz, Upper Lusatia, Saxony—d. Feb. 15, 1781, Braunschweig, Brunswick) German playwright and critic. After writing several light comedies, he became a theatre critic in Berlin in 1748. His play *Miss Sara Sampson* (1755) was the first German domestic tragedy. After studying philosophy and aesthetics in Breslau, he wrote the influential treatise *Laocoön: An Essay on the Limits of Painting and Poetry* (1766). *Minna von Barnhelm* (1767), his finest play, marks the beginning of classical German comedy. He was adviser to the first Hamburg national theatre and published his reviews as essays on the principles of drama in *Hamburg Dramaturgy* (1767–69). His *Wolfenbüttel Fragments* (1774–78) attacked orthodox Christianity, arousing great controversy. He also wrote the tragedy *Emilia Galotti* (1772) and the famous dramatic poem *Nathan the Wise* (1779).

Lethe \'lē-thē\ Ancient Greek personification of oblivion. She was the daughter of Eris (Strife). Her name was also applied to a river or plain in the realm of the dead. In the Orphic mysteries it was believed that the newly dead who drank from the River Lethe would lose all memory of their past existence. The initiated were taught to drink instead from Mnemosyne, the river of Memory.

Leto \'lē-tō\ In classical mythology, the mother of Apollo and Artemis. She was made pregnant by Zeus, and she wandered in search of a place to give birth until she found the barren island of Delos. The island was a floating rock borne about by the waves, but it was fixed to the bottom of the sea for the birth of Apollo and Artemis. In some versions, Leto's wanderings are ascribed to the jealousy of Zeus's wife, Hera.

Letterman, David (b. April 12, 1947, Indianapolis, Ind., U.S.) U.S. television talk-show host. He began his career as a stand-up comedian and was a guest host of Johnny Carson's *Tonight Show* from 1979. He hosted NBC's post-midnight *Late Night with David Letterman* (1982–93), winning six Emmy Awards and great popularity with his ironic, abrasive, flippant style of interviewing, which critics viewed as a parody of talk shows. Since 1993 he hosted *The Late Show with David Letterman* on CBS.

letterpress printing *or* **relief printing** *or* **typographic printing** In commercial printing, process by which many copies are produced by repeated direct impression of an inked, raised surface against sheets or a continuous roll of paper. Letterpress is the oldest traditional printing technique, the only important one from the time of Johannes Gutenberg (c. 1450) until lithography (late 18th century) and especially offset printing (early 20th century). The ink-bearing surface for a page of text was originally assembled letter by letter and line by line. The Monotype and Linotype were the first keyboard-activated typesetting machines. Letterpress can produce high-quality work at high speed, but requires much time to prepare and adjust the press. For the sake of speed, newspapers are now printed by the offset process.

Lettish language See Latvian language

lettre de cachet \'letrᵊ-də-ka-'shā\ (French: "letter with a seal") Letter bearing an official seal, signed by the king and countersigned by a secretary of state, used primarily to authorize someone's imprisonment without trial. An important instrument of administration under the ancien régime in France, lettres de cachet were greatly abused in the 17th–18th century. Their use was abolished in 1790.

lettuce Cultivated annual salad plant (*Lactuca sativa*) that produces clusters of crisp, water-filled leaves. The best-known varieties are head, or cabbage, lettuce (variety *capitata*); leaf, or curled, lettuce (variety *crispa*); cos, or romaine, lettuce (variety *longifolia*); and asparagus lettuce (variety *asparagina*). Head lettuce is further divided into butter heads and crisp heads (e.g., iceberg lettuce). In the U.S, large-scale farms grow mainly crisp-head varieties, shipping them nationwide. Small-scale, local farmers raise leaf and butter-head varieties. Lettuce is an early annual crop that grows best in cool weather and with ample water. Though usually consumed in salads, it may also be cooked.

Lettuce (*Lactuca sativa*, variety *capitata*)
DEREK FELL

leucine \'lü-ˌsēn\ One of the essential amino acids, present in most common proteins and particularly abundant in hemoglobin. One of the first amino acids discovered (1819), it is used in biochemical research and as a nutritional supplement.

leucite \'lü-ˌsīt\ One of the most common feldspathoid minerals, potassium aluminosilicate ($KAlSi_2O_6$). It occurs only in igneous rocks, particularly potassium-rich, silica-poor, recent lavas. Some important localities include Rome, Italy; Uganda; and Wyoming's Leucite Hills. Leucite is used as a fertilizer in Italy (because of its high potassium content) and as a source of commercial alum.

Leucothea \lü-'kä-thē-ə\ In GREEK MYTHOLOGY, a sea goddess. She is first mentioned in the *Odyssey*, in which she rescued ODYSSEUS from drowning. She was traditionally identified with Ino, daughter of CADMUS, who incurred the wrath of HERA by caring for the infant DIONYSUS, ZEUS's son by SEMELE. Hera drove Ino and her son Melicertes mad, and they leaped into the sea, where they were changed into marine deities—Ino into Leucothea, Melicertes into Palaemon. A dolphin carried Melicertes' body to the Isthmus of Corinth, and the ISTHMIAN GAMES were instituted in his honour.

leukemia CANCER of blood-forming tissues with high levels of LEUKOCYTES. Radiation exposure and hereditary susceptibility are factors in some cases. In acute leukemias, ANEMIA, fever, bleeding, and lymph-node swelling develop rapidly. Acute lymphocytic leukemia, found mostly in children, was once over 90% fatal in six months. Drug therapy can now cure more than half these children. Acute myelogenous (granulocytic) leukemia, found mostly in adults, has frequent remissions and recurrences, and few patients survive long. Chronic myelogenous leukemia most often begins in the 40s; weight loss, low fever, weakness, and other symptoms may not develop immediately. CHEMOTHERAPY helps the symptoms but may not prolong life. Chronic lymphocytic leukemia, mostly in the elderly, may be inactive for years. Survival rates are better than in myelogenous leukemia; most deaths are caused by infection or hemorrhage.

leukocyte \'lü-kə-ˌsīt\ *or* **white blood cell** *or* **white corpuscle** Any of several types of blood cells that help defend the body from INFECTION. The different mature forms—granulocytes, including neutrophils (heterophils), basophils, and eosinophils; monocytes, including macrophages; and LYMPHOCYTES—have different functions, including ingesting BACTERIA, PROTOZOANS, or infected or dead body cells; producing ANTIBODIES; and regulating the action of other leukocytes. They act mostly in the tissues and are in the bloodstream only for transport. Blood normally contains 5,000–10,000 leukocytes per cu mm.

leukoderma See VITILIGO

Levant \lə-'vänt\ Historical name for the countries along the shores of the eastern MEDITERRANEAN SEA. It was applied to the coastlands of ANATOLIA and Syria, sometimes extending from Greece to Egypt. The term was often associated with Venetian trading ventures. It was also used as a synonym for the Middle or Near East. In the 16th–17th centuries the term High Levant referred to the Far East (East Asia). The name Levant States was given to the French mandate of Syria and Lebanon after World War I (1914–18).

level Device for establishing a horizontal plane. It consists of a small, sealed glass tube containing liquid and an air bubble; the tube is fixed horizontally in a block or frame with a smooth lower surface. When the bubble is in the middle of the glass tube, the device is on a level surface; adjustment to the horizontal is indicated by movement of the bubble. The glass tube is slightly bowed, and the level's sensitivity is proportional to the radius of curvature.

Leveler Member of a republican faction in England during the ENGLISH CIVIL WARS and Commonwealth. The name was coined by the movement's enemies to suggest that its supporters wished to "level men's estates." The movement began in 1645–46 and demanded that sovereignty rest with the House of Commons (to the exclusion of king and lords), believing that manhood suffrage would make Parliament truly representative. The Levelers dominated the NEW MODEL ARMY, but the Putney debates in the army council discussing the Levelers' new social contract (1647) ended in deadlock. The generals restored army discipline by force, ending the Levelers' political power.

Leven \'lē-vən**, Loch** Lake, east-central Scotland. Roughly 3 mi (5 km) in diameter, it is one of the shallowest of the Scottish lochs, having an average depth of 15 ft (4.5 m). It contains a subspecies of BROWN TROUT known as Loch Leven trout. Castle Island, one of the lake's seven islands, has the ruins of a 14th-century castle where MARY, QUEEN OF SCOTS, was imprisoned (1567–68).

lever Simple MACHINE used to amplify physical FORCE. All early people used the lever in some form, for moving heavy stones or as digging sticks for land cultivation. Balance beams for weighing were probably used in Egypt c. 5000 BC; they consist of a bar pivoted at its center with weights on one end balancing the object on the other. As early as 1500 BC people were raising water and lifting soldiers over battlements using the swape or shadoof, a long lever pivoted near one end with a platform or container hanging from the short arm and counterweights attached to the long arm.

Lever Bros. \'lē-vər\ British soap and detergent manufacturer. Lever Bros. was founded in 1885 by William Hesketh Lever, later Viscount Leverhulme (1851–1925), and his brother, James Darcy Lever, to make and sell soap. The first company to market wrapped bars of soap made from vegetable oil instead of tallow, Lever Bros. expanded internationally with the help of energetic advertising slogans. It built a model industrial village at Port Sunlight in 1888 and offered employee benefits such as profit sharing and free insurance. William was elected to Parliament in 1906 and became a viscount in 1922. In 1929, Lever Bros. joined an association of European companies to form UNILEVER.

Levertov, Denise (b. Oct. 24, 1923, Ilford, Essex, Eng.—d. Dec. 20, 1997, Seattle, Wash., U.S.) English-born U.S. poet, essayist, and political activist. Levertov became a civilian nurse during World War II. She married an American writer after the war and moved to the U.S., where she was associated with the Black Mountain group, which included the poets Charles Olson and Robert Duncan. Influenced by the deliberate simplicity of WILLIAM CARLOS WILLIAMS's poetry, she wrote deceptively matter-of-fact verse on both personal and political themes. Among her poetry collections are *Here and Now* (1957), *The Sorrow Dance* (1967), and *The Freeing of the Dust* (1975).

Lévesque \lā-'vek**, René** (b. Aug. 24, 1922, New Carlisle, Que., Can.—d. Nov. 1, 1987, Montreal, Que.) Canadian politician. He joined the Canadian Broadcasting Corporation in 1946, became a war correspondent in Korea in 1952, and was a television commentator from 1956 to 1959. Elected to the Quebec legislature in 1960, he joined the administration of JEAN LESAGE. In 1967 he cofounded a separatist group that combined with others to form the PARTI QUÉBÉCOIS. In 1976 his party won control of the Quebec assembly, and he became premier. He proposed an independent Quebec in economic union with the rest of Canada, an arrangement he called "sovereignty-association." In 1980 his plan was rejected by the Quebec electorate. He resigned in 1985 because of failing health.

Levi \'lē-ˌvī\ In ancient Israel, the third son of the patriarch JACOB. Levi became head of the clans of religious functionaries known as Levites. Unlike the 12 tribes of ISRAEL, the Levites were given no allotment of land when CANAAN was conquered. They are thought to have performed subordinate services associated with public worship, serving as musicians, guardians, Temple officials, judges, and craftsmen.

Levi \'lā-vē**, Primo** (b. July 31, 1919, Turin, Italy—d. April 11, 1987, Turin) Italian writer and chemist. Two years after obtaining a degree in chemistry, Levi, who was Jewish, was captured by the Nazis and sent to Auschwitz as a slave labourer. His autobiographical works—*If This Is a Man*, or *Survival in Auschwitz* (1947), *The Reawakening* (1963), and *The Drowned and the Saved* (1986)—are restrained and moving accounts of and reflections on survival in the Nazi camps. His best-known work, *The Periodic Table* (1975), is a collection of 21 meditations, each named for a chemical element. The lingering effects of his wartime trauma may have led to his suicide.

Lévi \lā-'vē**, Sylvain** (b. March 26, 1863, Paris, France—d. Oct. 30, 1935, France) French scholar of Eastern religion, literature, and history. He taught at the Sorbonne (1889–94) and later for many years at the Collège de France (1894–1935). In 1929, with Takakusu Junjirō, he published a classic dictionary of BUDDHISM. His other writings include the standard treatise *The Indian Theater* (1890), *Nepal* (1905–08), and *India and the World* (1926); he also carried out pioneering studies of the Tocharian languages.

Lévi-Strauss \'lā-vē-'straůs**, Claude** (b. Nov. 28, 1908, Brussels, Belg.) Belgian-French social anthropologist and leading exponent of STRUCTURALISM. Lévi-Strauss originally studied philosophy at the University of

© 2006 Encyclopædia Britannica, Inc.

Paris (1927–32) but went on to teach sociology at the University of São Paulo (1934–37) and to conduct field research on the Indians of Brazil. At the New School for Social Research in New York City (1941–45) he came under the influence of the linguist Roman Jakobson; he came to view culture as a system of communication, analogous to a language, and constructed models based on structural linguistics, information theory, and cybernetics to interpret them. He attempted to identify universal structures of the mind as reflected in myths, cultural symbols, and social organization. From 1950 to 1974 he was director of studies at the École Pratique des Hautes Études, and in 1959 he joined the faculty of the Collège de France. Among his major works are *The Elementary Structures of Kinship* (1949), *Tristes tropiques* (1955), *Structural Anthropology* (1961, vol. 2, 1973), and the four-volume *Mythologiques* (1964–71).

Claude Lévi-Strauss.
AP/WIDE WORLD PHOTOS

Levi Strauss & Co. Leading U.S. manufacturer of casual and active clothing, noted especially for its blue denim jeans. The company traces its origin to Levi Strauss (1829–1902), a Bavarian immigrant who sold dry goods to miners during the California gold rush. Hearing of the miners' need for durable pants, he hired a tailor to make garments out of tent canvas, later substituting denim. In 1873 he and an associate received a patent for the copper riveting they used to strengthen their pants. The company's most spectacular growth occurred after 1946, with the decision to concentrate wholly on manufacturing clothing under its own label. In 1959 it began exporting, and during the 1960s Levi jeans became enormously popular worldwide. The company went public in 1971 and was returned to private control (by Strauss's descendants) in 1985.

Lévinas, Emmanuel (b. Dec. 30, 1905 [Jan. 12, 1906, Old Style], Kaunas, Lith.—d. Dec. 25, 1995, Paris, France) French philosopher. He studied at the Universities of Strasbourg and Freiburg and received a doctorate in philosophy from the Institut de France in 1928. His philosophical work in the 1930s helped to introduce the phenomenology of Edmund Husserl and Martin Heidegger to France. Lévinas's best-known work, *Totality and Infinity* (1961), is a highly original phenomenological investigation of ethics and the self that takes as its starting point the face-to-face encounter between the "I" and the "Other." Extensively developed in *Otherwise Than Being; or, Beyond Essence* (1974) and other writings, this analysis challenged Western philosophical tradition by treating ethics rather than ontology as "first philosophy." Lévinas was also the author of religious studies, including *Difficult Freedom: Essays on Judaism* (1963) and *Nine Talmudic Readings* (1990).

Levine \lə-'vīn**, James (Lawrence)** (b. June 23, 1943, Cincinnati, Ohio, U.S.) U.S. conductor. He debuted as a pianist at age 10 with the Cincinnati Symphony Orchestra. At Juilliard he studied piano with Rosina Lhévinne (1880–1976) and conducting with Jean Morel (1903–75). He was assistant conductor of the Cleveland Orchestra from 1964 to 1970. A guest appearance conducting *Tosca* (1971) led to his appointment as principal conductor (1973) and later music director (1975) and artistic director (1986) of the Metropolitan Opera. He built the flagging Met orchestra into a virtuoso ensemble and became recognized as one of the world's greatest conductors. He served as director of Chicago's Ravinia Festival from 1973 to 1993.

Levinson, Barry (b. April 6, 1942, Baltimore, Md., U.S.) U.S. film director. He worked as a comedy writer for Carol Burnett and Mel Brooks in the 1970s, then made his directorial debut with *Diner* (1982), the first of several movies set in his native city. He followed it with *The Natural* (1984), *Young Sherlock Holmes* (1985), *Tin Men* (1987), and *Good Morning, Vietnam* (1987). Noted for his directorial versatility, ranging from drama and crime stories to political satire, he also created the highly popular *Rain Man* (1988, Academy Award), *Avalon* (1990), *Bugsy* (1991), *Sleepers* (1996), *Wag the Dog* (1997), and *The Perfect Storm* (2000).

levirate and sororate \'le-və-rət...'sȯr-ə-rət\ Customs or laws regulating marriage following the death of a spouse, or in some cases during the lifetime of the spouse. The levirate decrees a dead man's brother to be the widow's preferred marriage partner. In ancient Hebrew society, this practice served to perpetuate the line of a man who died childless. Often, the brother who marries his sister-in-law is a proxy for the deceased and no new marriage is contracted, since all progeny are acknowledged as the seed of the dead man. The sororate decrees the marriage of a man to his deceased wife's sister or, under so-called sororal polygyny, to the wife's younger sisters as they come of age. The latter was practiced by some American Indian tribes in the 19th century and continues among the Australian Aborigines.

Leviticus Rabbah \li-'vi-ti-kəs-rä-'bä\ (c. AD 450) Compilation of 37 compositions on topics suggested by the Old Testament Book of Leviticus. Their message is that the laws of history focus on the holy life of Israel (the Jewish people). If the Jews obey the laws of society aimed at Israel's sanctification, then the foreordained history will unfold as Israel hopes. Israel, for its part, can affect its own destiny. Thus salvation at the end of history depends on sanctification in the here and now.

Levitt, Helen (b. Aug. 31, 1913, New York, N.Y., U.S.) U.S. photographer. She began her career in photography at age 18. Her first show, "Photographs of Children," was held at the Museum of Modern Art in New York in 1943. It featured the subject matter—children, especially the underprivileged—and humanity that characterize much of her work. In the mid 1940s Levitt collaborated with the novelist James Agee, filmmaker Sidney Meyers, and painter Janice Loeb on *The Quiet One*, a prizewinning documentary about a young African American boy. For most of the 1960s she concentrated on film editing and directing. Levitt resumed her pursuit of photography in the 1970s.

Levittown Extensive suburban housing development in Hempstead, Long Island, N.Y. Developed 1946–51 by the firm of Levitt and Sons, Inc., it was an early example of a completely preplanned and mass-produced housing complex. It contained thousands of low-cost homes (with accompanying shopping centers, playgrounds, swimming pools, community halls, and schools). Levitt repeated the formula in Bucks County, Pa. (1951–55). The name Levittown became equated with similar developments built across the country in the postwar building boom. Though once widely deplored, his towns differ from other, usually monotonous, middle-class speculative developments in their meandering roads and lush plantings.

levodopa *or* **L-dopa** Organic compound (L-3,4-dihydroxyphenylalanine) from which the body makes dopamine, a neurotransmitter deficient in persons with parkinsonism. When given orally in large daily doses, levodopa can lessen the effects of the disease. However, it becomes less effective over time and causes abnormal involuntary movements (dyskinesia).

levulose See fructose

Lewes \'lü-əs\ Town (pop., 1998 est.: 14,900), Lewes district, administrative county of East Sussex, historic county of Sussex, England. It lies on the River Ouse 6 mi (10 km) north of the English Channel. In 1264 Simon de Montfort vanquished Henry III at the Battle of Lewes. Historic sites include the ruins of an 11th-century castle and the 16th-century Barbican House (home of Anne of Cleves). An administrative centre, Lewes has some light industry. Glyndebourne, a renowned opera centre, is nearby.

Lewin, Kurt (b. Sept. 9, 1890, Mogilno, Ger.—d. Feb. 12, 1947, Newtonville, Mass., U.S.) German-U.S. social psychologist. After training and teaching in Berlin, he immigrated to the U.S., where he taught at the University of Iowa (1935–45) and later became director of a group dynamics research centre at the Massachusetts Institute of Technology (1945–47). He is best known for his field theory of behaviour, which holds that human behaviour is a function of an individual's psychological environment. To fully understand and predict human behaviour, according to Lewin, one must view the totality of events in a person's psychological field, or "lifespace." His works include *A Dynamic Theory of Personality* (1935) and *Field Theory in Social Science* (1951).

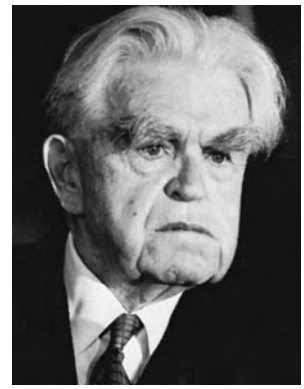
Lewis, C(larence) I(rving) (b. April 12, 1883, Stoneham, Mass., U.S.—d. Feb. 3, 1964, Cambridge, Mass.) U.S. philosopher. He taught primarily at Harvard University (1920–53). His best-known works are *Mind and the World Order* (1929), *Symbolic Logic* (1932), *An Analysis of Knowledge and Valuation* (1947), and *The Ground and Nature of the Right* (1955). He maintained that knowledge is possible only where there

© 2006 Encyclopædia Britannica, Inc.

is also a possibility of error. His position in epistemology represents a synthesis of EMPIRICISM and PRAGMATISM.

Lewis, C(live) S(taples) (b. Nov. 29, 1898, Belfast, Ire.—d. Nov. 22, 1963, Oxford, Oxfordshire, Eng.) Irish-born British scholar and writer. Lewis taught first at Oxford (1925–54) and later at Cambridge (1954–63). An early volume, the critical *Allegory of Love* (1936) on medieval and Renaissance literature, is often considered his finest scholarly work. He became known in England and the U.S. for several series of BBC radio broadcasts during the war years on the subject of Christianity. Many of his books embrace Christian APOLOGETICS; the best known is *The Screwtape Letters* (1942), a satirical epistolary novel in which an experienced devil instructs his young charge in the art of temptation. Also well known are *The Chronicles of Narnia* (1950–56), a series of seven children's stories (including *The Lion, the Witch, and the Wardrobe*, 1950) that have become classics of fantasy; and a science-fiction trilogy, known mostly for its first volume, *Out of the Silent Planet* (1938).

Lewis, (Frederick) Carl(ton) (b. July 1, 1961, Birmingham, Ala., U.S.) U.S. track-and-field athlete. He qualified for the 1980 Olympics but did not participate, because of the U.S. boycott of the Moscow games. At the 1984 Olympics he won the 100-m and 200-m races, the long jump, and the 4 × 100-m relay. At the 1988 Olympics he won the long jump (becoming the first athlete ever to win that event consecutively) and the 100-m race and received a silver medal in the 200-m. In 1992 he again won the long jump and anchored the winning U.S. 4 × 100-m relay team, and in 1996 he astounded observers by winning a fourth consecutive long-jump title.



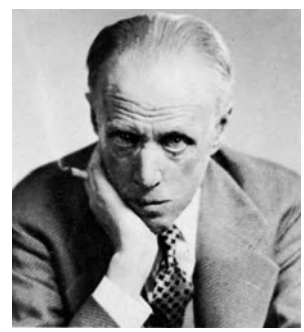
Lewis, David (Kellogg) (b. Sept. 28, 1941, Oberlin, Ohio, U.S.—d. Oct. 14, 2001, Princeton, N.J.) U.S. philosopher. He taught at the University of California at Los Angeles from 1966 to 1970 and thereafter at Princeton University. A wide-ranging thinker, Lewis made important—in some cases groundbreaking—contributions to a number of fields. He was best known for his extreme REALISM regarding POSSIBLE WORLDS; his defense of the IDENTITY THEORY in the PHILOSOPHY OF MIND (see also MIND-BODY PROBLEM); and his doctrine of "Humean supervenience" (named for the ENLIGHTENMENT philosopher DAVID HUME), according to which all truths about any possible world are determined by the distribution of properties attributable to specific points in space and time in that world (see SUPERVENIENCE). At the time of his death, he was widely considered the leading figure in ANALYTIC PHILOSOPHY.

Lewis, Edward B. (b. May 20, 1918, Wilkes-Barre, Pa., U.S.—d. July 21, 2004, Pasadena, Calif.) U.S. geneticist. He received a Ph.D. (1942) in genetics from the California Institute of Technology, where he taught from 1946 to 1988. By crossbreeding thousands of fruit flies, he discovered that genes are arranged on the chromosome in the order corresponding to body segments, an orderliness now known as the colinearity principle. Lewis's work helped explain mechanisms of general biological development, including the causes of deformities present at birth in humans. With Christiane Nüsslein-Volhard and Eric F. Wieschaus, he was awarded a 1995 Nobel Prize.

Lewis, Jerry *orig.* **Joseph Levitch** (b. March 16, 1926, Newark, N.J., U.S.) U.S. actor, director, and producer. In 1946 he developed a nightclub comedy routine with Dean Martin (1917–95), who played the suave crooner to Lewis's zany clown, and they appeared together in 16 movies, including *My Friend Irma* (1949) and *Pardners* (1956), before ending their partnership in 1956. Lewis then directed, produced, and acted in movies such as *The Bellboy* (1960) and *The Nutty Professor* (1963). These films, along with his collaborations with director Frank Tashlin, led many critics (especially in Europe) to regard Lewis as the comic heir to CHARLIE CHAPLIN and BUSTER KEATON. Since 1966 Lewis has hosted the U.S. annual Muscular Dystrophy Telethon.

Lewis, Jerry Lee (b. Sept. 29, 1935, Ferriday, La., U.S.) U.S. rock-and-roll musician. He began playing piano in his childhood, influenced by blues and gospel musicians. He attended Bible school in Texas but was expelled. Returning to Louisiana, he played in several bands, perfecting his signature "pumping" piano technique (the left hand maintaining a driving boogie pattern while the right played flashy ornamentation). His first hits came in 1957 with "Whole Lotta Shakin' Goin' On" and "Great Balls of Fire." In 1958 it was discovered that he had married a 13-year-old relative, and his record sales dropped. Though he had a few more hits, he concentrated on his famously energetic and uninhibited live performances. His career continued to be plagued by controversy.

Lewis, John L(lewellyn) (b. Feb. 12, 1880, near Lucas, Iowa, U.S.—d. June 11, 1969, Washington, D.C.) U.S. labour leader. The son of Welsh immigrants, he became a coal miner at age 15. He rose through the ranks of the UNITED MINE WORKERS OF AMERICA (UMWA) and from 1911 was also an organizer of the American Federation of Labor (AFL), with which the miners' union was affiliated. As president of the UMWA (1920–60), Lewis joined several other AFL union leaders in forming the Committee for Industrial Organization (1935) to organize workers in mass-production industries. On breaking with the AFL (see AFL-CIO), Lewis and other dissident union heads founded the Congress of Industrial Organizations. As its president (1936–40), Lewis presided over the often-violent struggle to introduce unionism into previously unorganized industries such as steel and automobiles. See also WILLIAM GREEN; LABOUR UNION; PHILIP MURRAY.



John L. Lewis, 1963

Lewis, Lennox *in full* **Lennox Claudius Lewis** (b. Sept. 2, 1965, London, Eng.) British boxer. His professional career began in 1989 in England. He won the World Boxing Council (WBC) heavyweight title in 1992, lost it in 1994, and recaptured it in 1997. In 1999 he faced American EVANDER HOLYFIELD, who held the heavyweight titles of the World Boxing Association (WBA) and the International Boxing Federation (IBF). In a controversial decision, the fight was called a draw. In the rematch that same year Lewis emerged as the undisputed champion, thereby unifying the heavyweight title. (The IBF and WBA portions of the title were later taken from Lewis because of disputes concerning mandatory fights, but he retained the WBC title and was still considered the undisputed champion by many in boxing.) In his 2002 bout with American MIKE TYSON, Lewis knocked Tyson out in the eighth round.

Lewis, Matthew Gregory (b. July 9, 1775, London, Eng.—d. May 4, 1818, at sea) English novelist and dramatist. The sensational success of his GOTHIC NOVEL *The Monk* (1796) earned him the nickname "Monk" Lewis. Its horror, violence, and eroticism brought it a wide readership, though it was universally condemned. Lewis also wrote a popular music drama in the same vein, *The Castle Spectre* (1798). After inheriting a large fortune in Jamaica in 1812, he sailed twice to the island to inquire about the treatment of slaves on his estates there, and he died at sea. *Journal of a West India Proprietor* (1834) attests to his humane and liberal attitudes.

Lewis, Meriwether (b. Aug. 18, 1774, near Charlottesville, Va.—d. Oct. 11, 1809, near Nashville, Tenn., U.S.) U.S. explorer. After serving in the militia during the Whiskey Rebellion (1794) in western Pennsylvania, he transferred into the regular army. In 1801 he became private secretary to Pres. THOMAS JEFFERSON, who selected him to lead the first overland expedition to the Pacific Northwest, including the area of the LOUISIANA PURCHASE. At Lewis's request, WILLIAM CLARK was appointed to share the command. The success of the LEWIS AND CLARK EXPEDITION (1804–06) was greatly due to Lewis's preparation and skill. At its conclusion, he and Clark each received 1,600 acres of land as a reward. Lewis was named governor of Louisiana Territory in 1808. He died under mysterious circumstances in an inn on the Natchez Trace while en route to Washington; whether his death resulted from murder or suicide is still a subject of controversy.

Sinclair Lewis.
THE GRANGER COLLECTION, NEW YORK

Lewis, (Harry) Sinclair (b. Feb. 7, 1885, Sauk Center, Minn., U.S.—d. Jan. 10, 1951, near Rome, Italy) U.S. novelist and social critic. He worked as a reporter and magazine writer before making his literary reputation with *Main Street* (1920),

© 2006 Encyclopædia Britannica, Inc.

a portrayal of Midwestern provincialism. Among his other popular satirical novels puncturing middle-class complacency are *Babbitt* (1922), a scathing study of a conformist businessman; *Arrowsmith* (1925), a look at the medical profession; *Elmer Gantry* (1927), an indictment of fundamentalist religion; and *Dodsworth* (1929), the story of a rich American couple in Europe. He won the 1930 Nobel Prize for Literature, the first given to an American. His later novels include *Cass Timberlaine* (1945). Lewis's reputation declined in later years, and he lived abroad much of the time. He was married to Dorothy Thompson from 1928 to 1942.

Lewis, (Percy) Wyndham (b. Nov. 18, 1882, on a yacht near Amherst, Nova Scotia, Can.—d. March 7, 1957, London, Eng.) English artist and writer. The founder and principal exponent of Vorticism, Lewis began a short-lived Vorticist review titled *Blast* in 1914. His first novel, *Tarr*, appeared in 1918. *The Childermass* (1928) was followed by the huge satirical novel *The Apes of God* (1930) and *The Revenge for Love* (1937). In the 1930s he produced some of his most noted paintings, including *The Surrender of Barcelona* (1936). He also wrote essays, short stories, and two admired memoirs. Notorious in the 1930s for championing fascism, he later recanted those beliefs.

Lewis and Clark Expedition (1804–06) First overland expedition to the U.S. Pacific coast and back, led by Meriwether Lewis and William Clark. Initiated by Pres. Thomas Jefferson, the expedition set out to find an overland route to the Pacific, documenting its exploration through the new Louisiana Purchase. About 40 men, skilled in various trades, left St. Louis in 1804. They traveled up the Missouri River into present-day North Dakota, where they built Fort Mandan (later Bismarck) and wintered among the Mandan Sioux. They left the next spring, hiring Toussaint Charbonneau and his Indian wife, Sacagawea, who served as guide and interpreter. They traveled through Montana and by horse over the Continental Divide to the headwaters of the Clearwater River. They built canoes to carry them to the Snake River and then to the mouth of the Columbia River, where they built Fort Clatsop (later Astoria, Ore.) and spent the winter. On the journey back the group divided, then reunited to canoe down the Missouri to St. Louis, arriving to great acclaim in September 1806. All but one member of the expedition survived. The journals kept by Lewis and others documented Indian tribes, wildlife, and geography and did much to dispel the myth of an easy water route to the Pacific.

Lexington City (pop., 2000: 260,512), north-central Kentucky, U.S. Named in 1775 for Lexington, Mass., after the Battles of Lexington and Concord, it was chartered in 1782 and was the site of the first session of the Kentucky legislature (1792). Incorporated as a city in 1831, it merged with Fayette county in 1974 to create an urban county government. It is the seat of Transylvania University (founded 1780) and the University of Kentucky, and it is also the headquarters of the American Thoroughbred Breeders Association.

Lexington and Concord, Battles of (April 19, 1775) Initial skirmishes between British soldiers and American colonists that marked the beginning of the American Revolution. En route from Boston to seize the colonists' military stores at Concord, Mass., the British force of 700 was met at Lexington by 77 local minutemen (see minuteman) alerted by Paul Revere and others. Which side fired the first shot is unclear, and resistance soon ended. The British moved on to nearby Concord, where they were met by more than 300 American patriots and were forced to withdraw. On their march back to Boston, they were continually harried by colonists firing from behind barns, trees, and roadside walls. Deaths totaled 273 British and 95 Americans.

Leyden See Leiden

Leyden, Lucas van See Lucas van Leyden

Leyster \'lā-stər**, Judith** (b. July 28, 1609, Haarlem, Neth.—d. Feb. 10, 1660, Heemstede) Dutch painter. A brewer's daughter, she had gained membership in the Haarlem painters' guild by age 24. Many of her known works, primarily portraits, genre paintings, and still lifes, were formerly attributed to her male contemporaries. Though the influence of Frans Hals is clear, she was also interested in the Baroque style of the Utrecht school. She embraced a greater range of subjects than other Dutch painters of the era and was one of the first to depict domestic scenes.

Leyte \'lā-tē\ Island (pop., 2000: 1,952,496) of the Visayan group, eastern Philippines. Occupying an area of 2,785 sq mi (7,214 sq km), it lies southwest of Samar Island, with which it is linked by a 7,093-ft (2,162-m) bridge. Known to 16th-century Spanish explorers as Tandaya, it was under Spanish rule until the late 19th century. Under U.S. control in the early 20th century, its population grew rapidly. During World War II it was occupied by the Japanese, who were ousted by U.S. forces in the Battle of Leyte Gulf. It has two major cities, Ormoc and Tacloban.

Leyte Gulf, Battle of (Oct. 23–26, 1944) Decisive air and sea battle of World War II that gave the Allies control of the Pacific. After the U.S. amphibious landing on the Philippine island of Leyte (Oct. 20), the Japanese reacted with a plan to decoy the U.S. fleet north while moving three attack forces into Leyte Gulf. The U.S. discovery of one of the forces as it moved into position set off three days of continuous surface and air clashes. In the largest naval battle of the war, U.S. forces crippled the Japanese fleet and forced it to withdraw, allowing the U.S. to complete its invasion of the Philippines.

Lezama Lima \lā-'zä-mä-'lē-mä**, José** (b. Dec. 19, 1910, Havana, Cuba—d. Aug. 9, 1976, Havana) Cuban poet, novelist, and essayist. After studying law in Havana, Lezama was associated with several literary reviews and later with a literary group that published the work of young poets who revolutionized Cuban letters. Among his works are the poetry volumes *Muerte de Narciso* (1937) and *La fijeza* (1949) and the essay collections *Analecta del reloj* (1953) and *La expresión americana* (1957). The novel *Paradiso* (1966), considered his masterpiece, reaffirms his faith in his art and his own aestheticism in the face of the 1959 revolution, of which he largely disapproved.

Lhasa \'lä-sə\ Capital (pop., 2003 est.: 129,490), Tibet Autonomous Region, China. Located at an elevation of 11,975 ft (3,650 m) in the Tibetan Himalayas near the Lhasa River, it has served as the religious centre of Tibet since at least the 9th century AD. Lhasa became Tibet's capital in 1642 and remained so after the Chinese communists asserted control of the region in 1951; it was designated capital of the Tibet Autonomous Region in 1965. The 7th-century temple of Gtsug-lag-khang is considered the holiest in Tibet. Other landmarks include the temple of Klu-khang; the Potala Palace, the Dalai Lama's former winter residence; and monasteries. Lhasa is sometimes known as the "Forbidden City" because of its inaccessibility and the traditional hostility of its religious leaders toward outsiders.

Lhasa apso \'lä-sə-'äp-sō\ Breed of dog from Tibet. The Lhasa apso is hardy, intelligent, and watchful. Longer than it is tall, it stands 10–11 in. (25–28 cm) tall and weighs 13–15 lb (6–7 kg). It has a heavily haired tail that curls over its back and a long, profuse coat that covers its eyes. Its coat may be of various colours, but most breeders prefer golden-brown shades.

Lhasa apso
SALLY ANNE THOMPSON/EB INC.

L'Hôpital's rule \ˌlō-pē-'tälz\ Procedure of differential calculus for evaluating indeterminate forms such as 0/0 and ∞/∞ when they result from attempting to find a limit. It states that when the limit of $f(x)/g(x)$ is indeterminate, under certain conditions it can be obtained by evaluating the limit of the quotient of the derivatives of f and g (i.e., $f'(x)/g'(x)$). If this result is indeterminate, the procedure can be repeated. It is named for the French mathematician Guillaume de L'Hôpital (1661–1704), who purchased the formula from his teacher the Swiss mathematician Johann Bernoulli (1667–1748).

Lhotse \'lōt-'sā\ Peak in the Himalayas. Located on the Nepal-Tibet boundary and reaching 27,890 ft (8,501 m), it is one of the world's highest mountains. It is sometimes considered part of Mount Everest's massif because it is joined to that peak by a 25,000-ft (7,600-m) ridge. The Swiss climbers Fritz Luchsinger and Ernest Reiss made the first ascent of the mountain in 1956. Lhotse is Tibetan for "south peak." E^1 was its original survey symbol, denoting Everest-1, given it by the Survey of India in 1931.

Li Ao \'lē-'au\ (b. 772, China—d. 841) Chinese scholar and high official of the Tang dynasty, who helped reinvigorate Confucianism at a time when it was severely challenged by Buddhism and Daoism. Little is known of Li's life, though he is believed to have known Han Yu. He was much influenced by Buddhism, and he helped integrate many Buddhist ideas into Confucianism. He anticipated the ideas of Neo-Confucianism by

© 2006 Encyclopædia Britannica, Inc.

asserting that human nature and human destiny were central to Confucianism, and he helped establish Mencius as a figure almost equal to Confucius in the eyes of Neo-Confucians.

Li Bai *or* **Li Bo** *or* **Li Pai** *or* **Li Po** *or* **Taibai** (b. 701, Jiangyou, Sichuan province, China—d. 762, Dangtu, Anhui province) Chinese poet. A student of Daoism, he spent long periods wandering and served as an unofficial court poet. His lyrics are celebrated for their exquisite imagery, rich language, allusions, and cadence. A romantic, he was a famous wine drinker and wrote of the joys of drinking, as well as about friendship, solitude, nature, and the passage of time. Popular legend says that he drowned when, sitting drunk in a boat, he tried to seize the moon's reflection in the water. He rivals Du Fu for the title of China's greatest poet.

Li Chunfeng (b. 602, Qizhou, Yong county, China—d. 670, Chang'an) Chinese mathematician and astronomer. He was given a position in the Imperial Astronomical Bureau in 627 following his critique of the Wuyin calendar. He became the deputy director of the Imperial Astronomical Bureau about 641. He participated in the compilation of the official histories of the Jin (265–420) and Sui (581–618) dynasties, writing the chapters containing historical outlines of Chinese astronomy, astrology, metrology, and a mathematical theory of music. In 648 he became the director of the Imperial Astronomical Bureau, and he coedited a collection of mathematical treatises used as manuals in the Mathematical College of the State University. Later he prepared the Linde calendar, which was promulgated in 665 and used until 728.

Li \'lē-'dä-'jaů\ **Dazhao** *or* **Li Ta-chao** (b. Oct. 6, 1888, Hebei province, China—d. April 28, 1927, Beijing) Cofounder with Chen Duxiu of the Chinese Communist Party (CCP). Chief librarian and professor of history at Beijing University, Li became inspired by the success of the Russian Revolution and began to study and lecture on Marxism. In 1921 the study groups Li had created formally became the CCP. Li helped the new party carry out the policy of the Communist International (see Comintern) and cooperated with the Nationalist Party of Sun Yat-sen. His career was cut short when he was seized and hanged by the warlord Zhang Zuolin, but his ideas of a revolution of the impoverished peasantry were brought to fruition by Mao Zedong.

Li \'lē-'hůŋ-'jäŋ\ **Hongzhang** *or* **Li Hung-chang** (b. Feb. 15, 1823, Hefei, Anhui province, China—d. Nov. 7, 1901, Beijing) Chinese statesman who represented China in the series of humiliating negotiations at the end of the Sino-French War (1883–85), Sino-Japanese War (1894–95), and Boxer Rebellion (1900). Much earlier in his career, Li had helped with the suppression of the Taiping Rebellion (1850–64) and had put down the Nian Rebellion (c. 1852–68). At that time, he came in contact with Westerners (notably England's Charles George Gordon) and Western weapons and became convinced that China needed Western-style firepower if it wanted to protect its sovereignty. In 1870, when Li was appointed governor-general of the capital province, Zhili, he was able to build arsenals, found a military academy, establish two modern naval bases, purchase warships, and undertake other "self-strengthening" measures. Through modernization he hoped to preserve traditional China, but within traditional China Li's innovations could not develop fully, and he was fatally hampered by the system he was trying to protect.

Li Keran *or* **Li K'o-jan** *orig.* **Li Yongshun** *alias* **Sanqi** (b. March 26, 1907, Xuzhou, Jiangsu province, China—d. Dec. 5, 1989, Beijing) Chinese painter and art educator. While studying at the Shanghai Art College he was influenced by Kang Youwei, who advocated merging Eastern and Western art to create a new century in Chinese painting. At the Hangzhou National Art College (1929–32) Li studied with the French teacher André Claoudit and developed an abstract and structural painting style that showed the influence of German Expressionism. In 1932 he became a member of the leftist Yiba Art Society. In the 1940s he began to paint cowboys and water buffalo, revitalizing this traditional subject matter with an innovative technique of splashed ink. He joined the faculty of the Beijing National Art College in 1946. While he emulated ancient Chinese calligraphy, his training in oil painting also taught him to apply Western elements, such as chiaroscuro, to his work. In his later years, Li attracted many students and followers, who formed the "Li School" of the 1980s.

Li Po See Li Bai

Li Rui (b. Jan. 15, 1769, Yuanhe, China—d. Aug. 12, 1817, Yuanhe) Chinese mathematician and astronomer who made notable contributions to the revival of traditional Chinese mathematics and astronomy and to the development of the theory of equations. Having failed the Chinese civil service examinations several times, he could obtain no official position and had to make a poor living as an assistant to various mandarins. From about 1800 he began to study the works of the 13th-century mathematicians Li Ye and Qin Jiushao. He found that traditional Chinese methods of solving higher-degree equations had several advantages over algebraic methods that had been recently imported from the West. His *Kaifang shuo* (1820; "On the Method of Extraction") contains his work on the theory of equations: a rule of signs, a discussion of multiple roots and negative roots, and the rule that nonreal roots of an algebraic equation must exist in pairs.

Li Shanlan *also known as* **Li Renshu** *or* **Li Qiuren** (b. Jan. 2, 1811, Haining, Zhejiang province, China—d. Dec. 9, 1882, China) Chinese mathematician. He mastered both traditional Chinese and available Western mathematical treatises at a precocious age. In Shanghai in 1852, he met Alexander Wylie of the London Missionary Society and agreed to collaborate on the translation of Western works. Along with his near contemporary Hua Hengfang, Li left a permanent impression on Chinese mathematical nomenclature and exposition. From 1869 Li was professor of mathematics at the Tongwen Guan college, the first Chinese person to hold such a Western-style position in mathematics.

Li Shaojun \'lē-'shaů-'jün\ (fl. 2nd century BC, China) Chinese alchemist. He was the first person to assert that the Daoist's ultimate goal was to achieve the status of *xian*, immortal sage, and he was responsible for much of the mystical content of popular Daoist thought. Claiming to be several centuries old, he gained the confidence of the great Han emperor Wudi and persuaded him that he could become immortal by praying to Zao Jun, a mythical Chinese figure who produced gold dinnerware that conferred immortality, and by eating from a vessel that had been transmuted into gold. Because of Li's influence, prayers to Zao Jun became established in Daoist ritual, and Zao Jun came to be considered the first great Daoist divinity.

Li Si \'lē-'sü\ *or* **Li Ssu** (b. 280 BC?, Chu state, central China—d. 208 BC, Xianyang, Shaanxi province) Minister of the Qin dynasty in China who utilized the ideas of Hanfeizi to make the Qin the first centralized Chinese empire. His ordering of the "Qin bibliocaust"—the burning of all books—earned him the opprobrium of future generations of Confucian scholars.

Li Sixun *or* **Li Ssu-hsün** (b. 651—d. 716) Chinese painter. Li, who was related to the Tang imperial family, led an active political life and was given the honorary rank of general. His son, Li Zhaodao, was also a famous painter, and thus the father is sometimes called Big General Li and the son Little General Li. While no genuine works survive, both Li Sixun and Li Zhaodao are known to have painted in a highly decorative and meticulous fashion, employing the precise line technique derived from earlier artists such as Gu Kaizhi and Zhan Ziqian. Li is considered the chief exponent of a decoratively coloured landscape style of the Tang dynasty and the founder of the so-called Northern school of professional painters.

Li Ta-chao See Li Dazhao

Li Tang *or* **Li T'ang** (b. c. 1050—d. c. 1130) Chinese painter. He earned the highest rank in the academy of painting of Emperor Huizong, and after the North fell to the Mongols he went to the South and entered the academy of Emperor Song Gaozong. His landscapes serve as a vital link between the earlier, and essentially Northern, variety of monumental landscape, and the more lyrical Southern style of the Ma-Xia school (based on the work of Ma Yuan and Xia Gui). Li perfected the brushstroke texture known as the "ax stroke," which gives a tactile sense to painted rocks and suggests the precise and comprehensive reality that Southern Song artists sought to give their landscapes.

Li Ye *literary name* **Jingzhai** (b. 1192, Luangcheng, Hebei province, China—d. 1279, Yuanshi) Chinese mathematician and scholar-official who contributed to the solution of polynomial equations in one variable. When the Mongols invaded his home district in 1233, Li wandered homeless in Shanxi, Shandong, and Henan provinces. During this period he composed his main work, *Ceyuan haijing* (1248; "Sea Mirror of Circle Measurements"), which contains 170 problems based on one geometric diagram of a circular city wall circumscribed by a right-angled triangle. Although the problems are highly contrived, they enabled Li to list some 692 algebraic formulas for triangular areas and segment lengths. In 1264 Li was appointed to the Hanlin Academy by Kublai Khan. Li strongly criti-

© 2006 Encyclopædia Britannica, Inc.

cized the political and intellectual climate of his time, though, and soon used ill health as a pretext to retire and live as a hermit.

Li Zhizao (b. 1565, Hangzhou, China—d. Nov. 1, 1630, Beijing) Chinese mathematician, astronomer, and geographer whose translations of European scientific books greatly contributed to the spread of Western science in China. In 1601 he met the Italian Jesuit Matteo Ricci, who baptized him in 1610. By engraving and printing numerous copies of Ricci's world map, Li altered many Chinese views of world geography. Li and Ricci translated Christopher Clavius's arithmetic primer *Epitome arithmeticae practicae* (1585; "Selected Arithmetic Methods") as *Tongwen suanzhi* (1614). This book systematically introduced European-style mathematical notation, while Li included complementary elements from traditional Chinese mathematics. He also brought together and published a series of books composed by the Jesuits with Chinese help, *Tianxue chuhan* (1629; "First Collection of Writings on Heavenly Learning"), that included 20 Western scientific and religious titles.

Li Zicheng \'lē-'dzü-'chəŋ\ *or* **Li Tzu-ch'eng** (b. Oct. 3, 1605?, Mizhi, Shaanxi province, China—d. 1645, Hubei province) Rebel leader who brought about the fall of China's MING DYNASTY (1368–1644). A former postal worker, he joined the rebel cause in 1631 following a great famine in the northern part of the country. In 1644 he proclaimed himself the first emperor of a new dynasty and marched on Beijing, which he took easily. His victory was short-lived; WU SANGUI, a general loyal to the Ming, called on the MANCHU tribes to drive him out, and he fled north, where he was probably killed by local villagers. See also DORGON.

liability, limited See LIMITED LIABILITY

liability insurance Insurance against claims of loss or damage for which a policyholder might have to compensate another party. The policy covers losses resulting from acts or omissions that are legally deemed to be negligent and that result in damage to the person, property, or legitimate interests of others. It was principally the introduction of the automobile that spurred the rapid growth of this form of insurance, which now extends to a great many activities in addition to driving, including MALPRACTICE insurance for doctors and other professionals, marine liability for boat owners and operators, and product liability for manufacturers of consumer goods. See also CASUALTY INSURANCE, CONSUMER PROTECTION.

liana \lē-'ä-nə\ *or* **liane** \lē-'än\ Any of various long-stemmed, woody VINES, especially of tropical rain forests, that are rooted in the soil and climb or twine around other plants as they grow upward. Lianas often form a tangled network, up to 330 ft (100 m) high, around and among the trees that support them.

Liao dynasty \'lyaù\ (907–1125) Dynasty formed by the nomadic Khitan tribes in much of present-day Manchuria, Mongolia, and the northeastern corner of China proper. The Chinese portion of the empire was governed on the TANG pattern, while the northern part was set up on a tribal basis. After the establishment of the SONG DYNASTY (960–1279), the Liao carried out a border war for control of northern China. Eventually the Song agreed to pay the Liao an annual tribute. The JUCHEN, former subjects of the Liao, destroyed the dynasty in 1125 but adopted most of its governmental system. The name "Cathay" for China derives from Khitay, another name for the Khitan.

Liao \'lyaù\ **River** River, LIAONING province and INNER MONGOLIA autonomous region, China. The East Liao rises in the mountains of Jilin province and the West Liao in southeastern Inner Mongolia. They merge and flow southwest as the Liao to empty into the Gulf of Liaodong, after a course of 836 mi (1,345 km). The river's drainage basin occupies 83,000 sq mi (215,000 sq km). It is navigable by small boats for about 400 mi (645 km) from its mouth.

Liaodong \'lyaù-'dùŋ\ **Peninsula** *or* **Liao-tung Peninsula** Peninsula, extending from the southern coastline of LIAONING province, northeastern China. It partly separates the BO HAI (Gulf of Chihli) on the west from Korea Bay on the east. It forms part of a mountain belt that continues in the Changbai Mountains; on the peninsula the range is known as the Qian Mountains. Near the southern tip of the peninsula lies the port of DALIAN.

Liaoning \'lyaù-'niŋ\ *formerly (1903–28)* **Fengtian** *or* **Feng-t'ien** \'fəŋ-'tyen\ Province (pop., 2002 est.: 42,030,000), northeastern China. It lies on the YELLOW SEA and is bordered by NORTH KOREA, JILIN and HEBEI provinces, and INNER MONGOLIA. With an area of 58,300 sq mi (151,000 sq km), it is the southernmost of the three provinces that form the region of MANCHURIA. Its capital is SHENYANG. It has four main topographical regions: the central plains, the LIAODONG PENINSULA, the western highlands, and the eastern mountain zone. In 1932–45 it was part of the Japanese puppet state of MANCHUKUO. Shenyang was taken by the Chinese communists in 1948. Liaoning is China's most industrialized province, producing steel, cement, crude oil, and electrical power.

liar paradox Paradox derived from the statement attributed to the Cretan prophet Epimenides (6th century BC) that all Cretans are liars. If Epimenides' statement is taken to imply that all statements made by Cretans are false, then since Epimenides was a Cretan, his statement is false (i.e., not all Cretans are liars). The paradox's simplest form arises from considering the sentence "This sentence is false." If it is true, then it is false, and if it is false, then it is true. Consideration of such semantic PARADOXES led logicians to distinguish between object language and metalanguage and to conclude that no language can consistently contain a complete semantic theory for its own sentences.

Liard River \'lē-ərd\ River, northwestern Canada. Rising in the Yukon Territory, it flows southeast through British Columbia. It then turns northeast and empties into the MACKENZIE RIVER in the Northwest Territories, after a course of 693 mi (1,115 km). Its upper course has rapids and canyons; its lower course is navigable for small boats. It is named for the liards (poplar trees) along its course.

Libby, Willard (Frank) (b. Dec. 17, 1908, Grand Valley, Colo., U.S.—d. Sept. 8, 1980, Los Angeles, Calif.) U.S. chemist. He studied at the University of California at Berkeley and later taught there and at the University of Chicago and UCLA. With the MANHATTAN PROJECT, he helped develop a method for separating URANIUM ISOTOPES and showed that TRITIUM is a product of cosmic radiation. In 1947 he and his students developed CARBON-14 DATING, which proved to be an extremely valuable tool for archaeology, anthropology, and earth science and earned him a 1960 Nobel Prize.

Liber Augustalis See Constitutions of MELFI

Liberace \ˌlib-ə-'rä-chē\ *orig.* **Wladziu Valentino Liberace** (b. May 16, 1919, West Allis, Wis., U.S.—d. Feb. 4, 1987, Palm Springs, Calif.) U.S. pianist. Born to Polish and Italian immigrants, he appeared as a soloist with the Chicago Symphony Orchestra at age 16. He began giving concerts in flamboyant costumes with ornate pianos and candelabra, and though he occasionally performed with symphony orchestras, he built his career playing primarily popular music. Hugely successful, he hosted his own television variety series, *The Liberace Show* (1952–55, 1969), and appeared in films such as *Sincerely Yours* (1955). In later years he performed frequently in Las Vegas, Nev.

liberal arts College or university curriculum aimed at imparting general knowledge and developing general intellectual capacities, in contrast to a professional, vocational, or technical curriculum. In Classical antiquity, the term designated the education proper to a freeman (Latin *liber*, "free") as opposed to a slave. In the medieval Western university, the seven liberal arts were grammar, rhetoric, and logic (the *trivium*) and geometry, arithmetic, music, and astronomy (the *quadrivium*). In modern colleges and universities, the liberal arts include the study of literature, languages, philosophy, history, mathematics, and science.

Liberal-Democratic Party (LDP) Japan's largest political party, which held power almost continuously from its formation in 1955 until 1993. It was created through the amalgamation and transformation of various factions of the prewar RIKKEN SEIYŪKAI and Minseitō parties. The conservative LDP appeared threatened in the 1970s but survived; the end of the 1980s boom years (the "bubble economy"), financial crises, and political scandals finally caused the party to lose its majority in the Diet in 1993. It came back to power in a coalition government in 1994, and since then LDP prime ministers have included OBUCHI KEIZŌ and KOIZUMI JUN'ICHIRŌ.

Liberal Party British political party that emerged in the mid-19th century as the successor to the WHIGS. It was the major party in opposition to the CONSERVATIVE PARTY until 1918, after which it was supplanted by the LABOUR PARTY. It was initially supported by the middle class that was enfranchised by the REFORM BILL OF 1832. Earl RUSSELL's administration in 1846 is sometimes regarded as the first Liberal government, but the first unequivocally Liberal government was formed in 1868 by WILLIAM E.

© 2006 Encyclopædia Britannica, Inc.

Gladstone. Under Gladstone, until 1894, the party's hallmark was reform; after 1884 it espoused Irish Home Rule. It championed individualism, private enterprise, human rights, and promotion of social justice; wary of imperial expansion, it was pacific and internationalist. During World War I it split into two camps, centred on H.H. Asquith and David Lloyd George. It continued as a minor party until 1988, when it merged with the Social Democratic Party to form the Liberal Democratic Party.

Liberal Party of Canada One of the two major Canadian political parties. It originated in two reformist opposition groups, Rouges and Clear Grits, that emerged in the mid-19th century in what are now the provinces of Quebec and Ontario, respectively. The first Liberal government was headed by Alexander Mackenzie (1873–78). The party regained power under Wilfred Laurier (1896–1911) and was the ruling party for much of the 20th century under such prime ministers as W.L. Mackenzie King, Louis Saint Laurent, Lester Pearson, Pierre Trudeau, and Jean Chrétien. Like the Conservative Party (later the Progressive Conservative Party), the Liberal Party comprises diverse regional, ethnic, religious, and class interests.

liberalism Political and economic doctrine that emphasizes the rights and freedoms of the individual and the need to limit the powers of government. Liberalism originated as a defensive reaction to the horrors of the European wars of religion of the 16th century (see Thirty Years' War). Its basic ideas were given formal expression in works by Thomas Hobbes and John Locke, both of whom argued that the power of the sovereign is ultimately justified by the consent of the governed, given in a hypothetical social contract rather than by divine right (see divine kingship). In the economic realm, liberals in the 19th century urged the end of state interference in the economic life of society. Following Adam Smith, they argued that economic systems based on free markets are more efficient and generate more prosperity than those that are partly state-controlled. In response to the great inequalities of wealth and other social problems created by the Industrial Revolution in Europe and North America, liberals in the late 19th and early 20th centuries advocated limited state intervention in the market and the creation of state-funded social services, such as free public education and health insurance. In the U.S. the New Deal program undertaken by Pres. Franklin D. Roosevelt typified modern liberalism in its vast expansion of the scope of governmental activities and its increased regulation of business. After World War II a further expansion of social welfare programs occurred in Britain, Scandinavia, and the U.S. Economic stagnation beginning in the late 1970s led to a revival of classical liberal positions favouring free markets, especially among political conservatives in Britain and the U.S. Contemporary liberalism remains committed to social reform, including reducing inequality and expanding individual rights. See also conservatism; individualism.

liberalism, theological School of religious thought characterized by concern with inner motivation as opposed to external controls. It was set in motion in the 17th century by René Descartes, who expressed faith in human reason, and it was influenced by such philosophers as Benedict de Spinoza, G. W. Leibniz, and John Locke. Its second stage, which coincided with the Romantic movement of the late 18th and 19th century, was marked by an appreciation of individual creativity, expressed in the writings of philosophers such as Jean-Jacques Rousseau and Immanuel Kant as well as of the theologian Friedrich Schleiermacher. The third stage, from the mid-19th century through the 1920s, emphasized the idea of progress. Stimulated by the Industrial Revolution and by Charles Darwin's *Origin of Species* (1859), thinkers such as T. H. Huxley and Herbert Spencer in England and William James and John Dewey in the U.S. focused on the psychological study of religious experience, the sociological study of religious institutions, and philosophical inquiry into religious values.

liberation theology Roman Catholic movement that originated in the late 20th century in Latin America and seeks to express religious faith by helping the poor and working for political and social change. It began in 1968, when bishops attending the Latin American Bishops' Conference in Medellín, Colom., affirmed the rights of the poor and asserted that industrialized nations were enriching themselves at the expense of the Third World. The movement's central text, *A Theology of Liberation* (1971), was written by the Peruvian priest Gustavo Gutiérrez (b. 1928). Liberation theologians have sometimes been criticized as purveyors of Marxism, and the Vatican has sought to curb their influence by appointing more conservative prelates.

Liberation Tigers of Tamil Eelam *or* **Tamil Tigers** Guerrilla organization seeking to establish an independent Tamil state in northern and eastern Sri Lanka. Formed in 1972, it is considered one of the world's most sophisticated and tightly organized insurgent groups. By 1985 it controlled the port of Jaffna and most of the Jaffna Peninsula in northern Sri Lanka. After losing control of Jaffna in 1987, it carried out several attacks, including the assassinations of the Sri Lankan president and the former Indian prime minister and a suicide bombing that killed 100 people in the capital of Colombo. Negotiations between the Tigers and the government broke down in the mid-1990s, and fighting subsequently intensified until February 2002 when a permanent cease-fire agreement was signed.

Liberia *officially* **Republic of Liberia** Republic, western Africa. Area: 37,743 sq mi (97,754 sq km). Population (2005 est.): 2,900,000. Capital: Monrovia. Liberia's ethnic groups include the Americo-

Liberians, descendants of the black freedmen who emigrated from the U.S. in the 19th century; and 16 indigenous peoples of the Mande, Kwa, and Mel linguistic groups. Languages: English (official), indigenous languages. Religions: traditional beliefs, Christianity, Islam. Currency: Liberian dollar. Liberia has coastal lowlands extending 350 mi (560 km) along the Atlantic; farther inland are hills and low mountains. Roughly one-fifth of Liberia consists of tropical rainforest. Agriculture is the main component of the economy, but only a portion of the arable land is cultivated. The country also has rich iron-ore reserves, which are a major source of exports. The principal cash crops are rubber, coffee, and cacao; the staple crops are rice and cassava. Constitutionally, Liberia is a republic with two legislative houses, and its head of state and government is the president; however, since 2003 it has been under a transitional government with a chairman. Africa's oldest republic, Liberia was established on land acquired for freed U.S. slaves by the American Colonization Society, which founded a colony at Cape Mesurado in 1821. In 1822 Jehudi Ashmun, a Methodist minister, became the director of the settlement and Liberia's real founder. In 1824 the territory was named Liberia, and its main settlement was named Monrovia. Joseph Jenkins Roberts proclaimed Liberian independence in 1847 and expanded its boundaries. Border disputes with the French and British lasted until 1892, when its boundaries were officially established. In 1980 a coup led by Gen. Samuel K. Doe marked the end of the Americo-Liberians' long political dominance over the indigenous Africans. A rebellion in 1989 escalated into a destructive civil war in the 1990s. A peace agreement was reached in 1996, but fighting broke out again in 1999 and lasted until 2003, when a transitional government was installed, backed by UN peacekeepers.

libertarianism Political philosophy that stresses personal liberty. Libertarians believe that individuals should have complete freedom of action, provided their actions do not infringe on the freedom of others. Liber-

© 2006 Encyclopædia Britannica, Inc.

tarianism's distrust of government is rooted in 19th-century ANARCHISM. Typical libertarians oppose not only the income tax and other government impositions but also programs seen by many as beneficial, such as social security and the postal service. In the U.S. their views often crosscut traditional party boundaries (e.g., libertarians oppose gun control, as do most Republicans, but support the legalization of prohibited drugs, as do some liberal Democrats). Among the thinkers embraced by libertarians are HENRY DAVID THOREAU and AYN RAND.

Liberty, Sons of Organization of American colonists formed in 1765 to oppose the STAMP ACT. The name was taken from a speech by Isaac Barré in the British Parliament that referred to American colonials who opposed unjust British measures as "sons of liberty." The group agitated for colonial resistance and helped prevent enforcement of the Stamp Act. After the act's repeal, the organization continued to oppose British measures against the colonists.

Liberty Party (1840–48) U.S. political party formed by a splinter group of abolitionists. It was created by ARTHUR TAPPAN and THEODORE WELD in opposition to WILLIAM LLOYD GARRISON, who scorned political action as a futile way to end slavery. At its first party convention in 1840, JAMES BIRNEY was nominated for U.S. president. By 1844 the party had influenced undecided legislators in many local elections to adopt antislavery stands. In 1848 it dissolved when many of its members joined the Barnburners (see HUNKERS AND BARNBURNERS) to form the FREE SOIL PARTY.

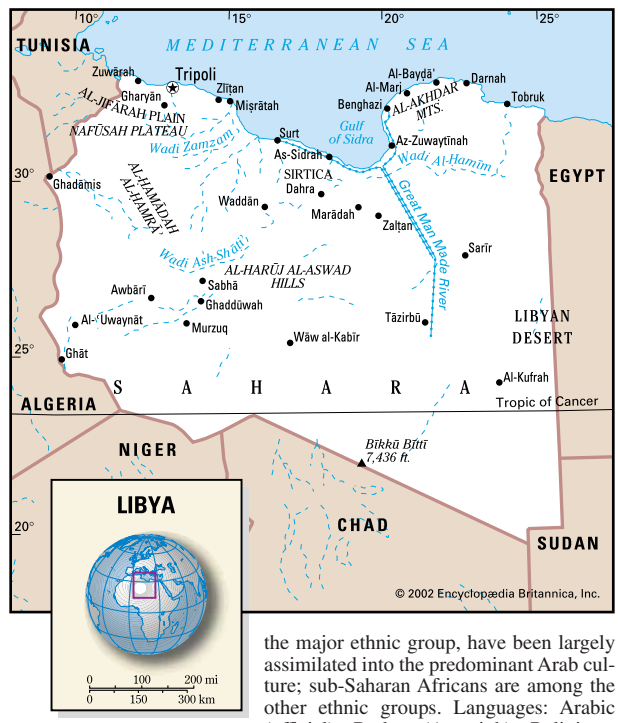
libido \lə-'bē-dō\ Physiological and emotional energy associated with the sex drive. The concept was originated by SIGMUND FREUD, who saw the libido as linked not only with sexual desire but with all constructive human activity. He believed that psychiatric illnesses were the result of misdirecting or suppressing the libido. CARL GUSTAV JUNG used the term more broadly to encompass all life processes in all species.

Libra (Latin: "Scales") In astronomy, the constellation lying between Scorpio and Virgo; in ASTROLOGY, the seventh sign of the ZODIAC, governing approximately the period September 22–October 23. Its symbol is either a woman holding a balance scale or the scale alone. The woman is sometimes identified with Astraea, the Roman goddess of justice.

library Collection of information resources in print or in other forms that is organized and made accessible for reading or study. The word derives from the Latin *liber* ("book"). The origin of libraries lies in the keeping of written records, a practice that dates at least to the 3rd millennium BC in Babylonia. The first libraries as repositories of books were those of the Greek temples and those established in conjunction with the Greek schools of philosophy in the 4th century BC. Today's libraries frequently contain periodicals, microfilms, tapes, videos, compact discs, and other materials in addition to books. The growth of on-line communications networks has enabled library users to search electronically linked databases worldwide. See also LIBRARY SCIENCE.

library classification System of arrangement adopted by a library to enable patrons to locate its materials quickly and easily. Classifications may be natural (e.g., by subject), artificial (e.g., by alphabet, form, or numerical order), or accidental (e.g., chronological or geographic). They also vary in degree; some have minute subdivisions while others are broader. Widely used systems include the DEWEY DECIMAL CLASSIFICATION, the Library of Congress Classification, the Bliss Classification, and the Colon Classification; special libraries may devise their own unique systems.

Library of Alexandria See Library of ALEXANDRIA



Library of Congress U.S. library, the largest and one of the greatest of what may be considered national libraries. Founded in Washington, D.C., in 1800, it was housed in the Capitol until the building was burned by British troops in 1814; it moved to permanent quarters in 1897. In addition to serving as a reference source for members of Congress and other government officers, it is outstanding among the learned institutions of the world, with magnificent collections of books, manuscripts, music, prints, and maps. It contains some 18 million books, 2.5 million recordings, 12 million photographs, 4.5 million maps, and more than 54 million manuscripts.

Library of Congress Classification *or* **LC Classification** System of library organization developed during the reorganization of the U.S. Library of Congress. It consists of separate, mutually exclusive, special classifications, often having no connection save the accidental one of alphabetical notation. The arrangement roughly follows groupings of social sciences, humanities, and natural and physical sciences. It divides the field of knowledge into 20 large classes and an additional class for general works. Each main class has a synopsis that also serves as a guide. The resulting order is from the general to the specific and from the theoretical to the practical. The LC Classification has largely replaced the DEWEY DECIMAL CLASSIFICATION in university, special, and government libraries.

library science Principles and practices of library operation and administration, and their study. It emerged as a separate field of study in the second half of the 19th century. The first training program for librarians in the U.S. was established by MELVIL DEWEY in 1887. In the 20th century, library science was gradually subsumed under the more general field of INFORMATION SCIENCE. Today's graduate programs in library and information science are accredited by the American Library Association (founded 1876) and prepare students for professional positions in other areas of the information industry as well.

Libreville \'lē-brə-ˌvil\ City (pop., 1993: 362,386), capital of GABON, located on the northern shore of the Gabon Estuary. Pongoue people first settled the region after the 16th century, followed by the Fang in the 19th century. The French built a fort on the estuary's northern bank in 1843, and in 1849 a settlement of freed slaves and a group of Pongoue villages were given the name Libreville. In 1850 France abandoned its fort and resettled on the plateau, now the commercial and administrative centre of the city. It is well industrialized and is Gabon's educational centre. Libreville was the capital of French Equatorial Africa from 1888 to 1904.

Libya *officially* **Socialist People's Libyan Arab Jamahiriya** \ˌja-mə-hi-'rē-yə\ Country, North Africa. Area: 679,362 sq mi (1,759,540 sq km). Population (2005 est.): 5,853,000. Capital: TRIPOLI. Berbers, once

the major ethnic group, have been largely assimilated into the predominant Arab culture; sub-Saharan Africans are among the other ethnic groups. Languages: Arabic (official), Berber (Amazigh). Religions: Islam (official; predominantly Sunni); also Christianity. Currency: Libyan dinar. All but two tiny fractions of Libya are covered by the SAHARA: Tripolitania in the northwest and Cyrenaica in the northeast. Tripolitania is Libya's most important agricultural region and its most populated area. The production and export of petroleum are the basis of Libya's economy; other resources include natural gas, manganese, and gypsum. Livestock raising, including sheep and goats, is important in the north. Libya is a socialist state with one policy-making body; the head of government is the prime minister, but MUAMMAR AL-QADDAFI has been the de facto head of state and real power in Libya since 1970. The early history is that of FEZZAN, CYRENAICA, and TRIPOLITANIA, which the Ottoman Empire combined under one regency in Tripoli in the 16th century. In 1911 Italy claimed

© 2006 Encyclopædia Britannica, Inc.

control of Libya, and, by the outbreak of World War II (1939–45), 150,000 Italians had immigrated there. The scene of much fighting in the war, it became an independent state in 1951 and a member of the Arab League in 1953. The discovery of petroleum in 1959 brought wealth to Libya. A decade later, a group of army officers led by al-Qaddafi deposed the king and made the country an Islamic republic. Under al-Qaddafi, Libya supported the Palestinian Liberation Organization (PLO) and allegedly provided aid for international terrorist groups. Intermittent warfare with Chad that had begun in the 1970s ended with Libya's defeat in 1987. A U.S. trade embargo (endorsed by the UN), imposed on Libya in the 1990s for its purported connection to terrorism, began to be lifted in 2003.

Libyan Desert Northeastern portion of the Sahara, extending from eastern Libya through southwestern Egypt into northwestern Sudan. The highest point is Mount ʿUwaynat (6,345 ft [1,934 m]), located where the three countries meet. Harsh and arid, it is characterized by bare rocky plateaus and sandy plains.

Licchavi \'lich-ə-vē\ **era** (c. 450–c. 750) In Nepal, the period of rule by the Licchavi dynasty. The dynasty originated in India, used Sanskrit as a court language, and issued Indian-style coins. It maintained close ties to India and also had economic and political relations with Tibet, thus becoming a cultural centre linking central and southern Asia. The era ended when Amsuvarman founded the Thakuri dynasty in the mid-8th century.

lichee See litchi

lichen \'lī-kən\ Any of about 15,000 species of small, colourful, scaly plants that consist of a symbiotic association of algae (usually green) and fungi (see fungus). These extremely hardy, slow growers often are pioneer species in sparse environments such as mountaintops and the far North. Fungal cells, anchored to the substrate with hairlike growths (rhizines), form the base. In the body (thallus), numerous algal cells are distributed among fewer fungal cells. Through photosynthesis the algal cells provide simple sugars and vitamins for both partners in this symbiotic association. The fungal cells protect the algal cells from environmental extremes. Lichens may form a thin, crustlike, tightly bound covering over their substrate (e.g., cracks in rocks), or they may be small and leafy, with loose attachments to the substrate. Their colours range from brown to bright orange or yellow. In far northern Europe and Asia, lichens provide two-thirds of caribou and reindeer food. They have been the source of medicines and dyes.

Lichtenstein \'lik-tən-ˌstīn, 'lik-tən-ˌstēn**, Roy** (b. Oct. 27, 1923, New York, N.Y., U.S.—d. Sept. 29, 1997, New York City) U.S. painter, sculptor, and graphic artist. He at first embraced Abstract Expressionism, but in the 1960s he turned to Pop art for which he is best known. Especially popular are his brilliantly coloured paintings in the style of large-scale comic strips, such as *Whaam* (1963). In the mid 1960s he began making Pop versions of well-known paintings by artists such as Claude Monet, Pablo Picasso, and Henri Matisse. In the 1970s he also made sculptures, in which he reproduced Art Deco forms. In the 1980s he painted a five-story-high mural in a New York City office building.

Licinius \lə-'si-nē-əs\ *orig.* **Valerius Licinianus Licinius** (d. 325) Roman emperor (308–324). Born of Illyrian peasant stock, he advanced in the army and in 308 was appointed augustus by his friend the emperor Galerius. Because the empire was split up among several emperors at that time (see tetrarch), his domain was confined to Pannonia. After the death of Galerius in 311, he allied with Constantine I, defeated his competitor Maximinus in Asia Minor, and partitioned the empire (313). Although reputedly converted to Christianity, he grew alienated and launched a campaign of mild persecution against the Christians c. 320. Constantine soon drove him from power and had him executed.

Licking River River, eastern Kentucky, U.S. It flows about 320 mi (515 km) generally northwest to enter the Ohio River at Covington, Ky., opposite Cincinnati, Ohio. It courses through an area of saline springs, which originally attracted animals to its salt licks.

Licklider \'lik-ˌlid-ər**, Joseph Carl Robnett** (b. March 11, 1915, St. Louis, Mo., U.S.—d. June 26, 1990, Arlington, Mass.) U.S. scientist. He studied math and physics and received a doctorate in psychology from the University of Rochester (N.Y.). He lectured at Harvard University before joining the faculty at MIT (1949–57, 1966–85). As a group leader at the Advanced Research Projects Agency (ARPA) in the 1960s, he encouraged research into time-sharing and helped lay the groundwork for computer networking and ARPANET, the predecessor of the Internet. He is known for his extensive work on human-computer interaction and interfaces. His influence led to the first American advanced-degree programs in computer science.

licorice \'li-krish\ Perennial herb (*Glycyrrhiza glabra*) of the pea family (see legume) and the flavouring, confection, and medicine made from its roots. Native to southern Europe, the plant is cultivated around the Mediterranean and in parts of the U.S. It grows to 3 ft (1 m) and bears graceful compound leaves, blue-violet flower clusters, and flat, flexible seedpods 3–4 in. (7–10 cm) long. It is 42 times sweeter than table sugar, and its flavour, similar to anise, can mask unpleasant medicinal tastes.

Spanish licorice (*Glycyrrhiza glabra*).
A TO Z BOTANICAL COLLECTION/EB INC.

Liddell Hart \ˌlid-ᵊl-'härt**, Sir Basil (Henry)** (b. Oct. 31, 1895, Paris, France—d. Jan. 29, 1970, Marlow, Buckinghamshire, Eng.) British military historian and strategist. He left Cambridge University to join the British army at the outbreak of World War I and retired as a captain in 1927. He was an early advocate of air power and mechanized tank warfare. He wrote for London newspapers from 1925 to 1945. His writings on strategy, which emphasized the elements of mobility and surprise, were more influential in Germany than in France or England; his "expanding torrent" theory of attack became the basis for German blitzkrieg warfare in 1939–41. The author of more than 30 books, he was knighted in 1966.

Lie \'lē**, Jonas (Lauritz Idemil)** (b. Nov. 6, 1833, Hokksund in Eiker, Nor.—d. July 5, 1908, Stavern) Norwegian novelist. He wrote his first novel, *The Visionary or Pictures from Nordland* (1870), with his wife's collaboration. Later novels include *The Barque "Future"* (1872), *One of Life's Slaves* (1883), and the classic *The Family at Gilje* (1883), which deals with the position of women. He sought to reflect in his writings the nature, folk life, and social spirit of his country. With Henrik Ibsen, Bjornstjerne Bjornson, and Alexander Kielland (1849–1906), he is considered one of "the four great ones" of 19th-century Norwegian literature.

Lie \'lē**, Trygve** (b. July 16, 1896, Kristiania, Nor.—d. Dec. 30, 1968, Geilo) First secretary-general of the United Nations (1946–52). Educated in law at the University of Kristiania (Oslo), Lie was active in the Norwegian Labour Party before being appointed foreign minister of Norway's government-in-exile during World War II. As a member of the Norwegian delegation to the UN Conference on International Organization (1945), he helped draft the provisions for the United Nations Security Council. As secretary-general, he helped to secure the removal of Soviet troops from Iran; he also dealt with the first Arab-Israeli war and the India-Pakistan conflict over Kashmir. The Soviet Union ceased to cooperate with him after he supported UN intervention in the Korean War, and his effectiveness was further hampered by charges from anticommunist politicians in the U.S. that his secretariat had employed subversives. He resigned in 1952.

lie detector *or* **polygraph** Instrument for recording physiological phenomena (including blood pressure, pulse rate, and respiration) of a human subject as he or she answers questions asked by an operator. These data (recorded as graphs) are used as the basis for judging whether the subject is lying. The phenomena usually chosen for recording are those not easily controlled voluntarily. The types of questions asked, their wording, and the mode of presentation have a tremendous effect on the results and their reliability. Used in police interrogation and investigation since 1924, the lie detector is still controversial among psychologists and not always accepted as evidence in courts.

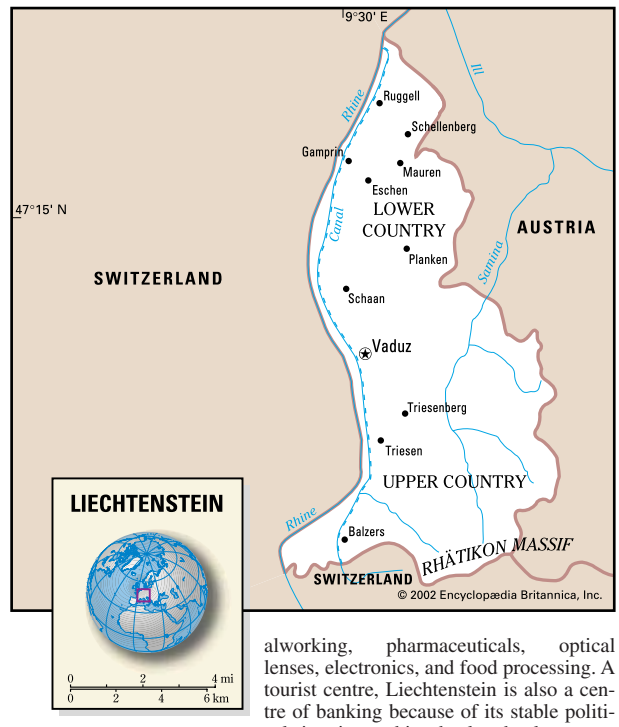
Liebermann \'lē-bər-ˌmän**, Max** (b. July 20, 1847, Berlin, Prussia—d. Feb. 8, 1935, Berlin, Ger.) German painter and etcher. The realism and simplicity of his first exhibited painting, *Women Plucking Geese* (1872), were in striking contrast to the Romantic, idealized art then in vogue. In the summer of 1873 he lived in Barbizon, where he became acquainted with the Barbizon school of painters; as a result of their influence, he brightened his palette and helped initiate the German school of Impressionism. In the 1880s he found his subjects in the orphanages and asylums for the old in Amsterdam and among the peasants and urban

© 2006 Encyclopædia Britannica, Inc.

labourers of Germany and The Netherlands. As a supporter of such academically unpopular styles as Impressionism and Art Nouveau, he founded the Berlin Sezession (1899) but later became president of the conservative Berlin Academy.

Liebig \'lē-bi̱k**, Justus, Freiherr (baron) von** (b. May 12, 1803, Darmstadt, Hesse-Darmstadt—d. April 18, 1873, Munich, Bavaria) German chemist. He made many important contributions to the early systematization of organic chemistry and to biochemistry, chemical education, and agricultural chemistry. He was the first to demonstrate the existence of free radicals and did much to clarify the properties of acids. He developed simple analytical methods (see analysis) that greatly aided his work, analyzed many tissues and body fluids, and showed that plants use carbon dioxide, water, and ammonia. In later years his reputation became so great that he was regarded as the final authority in chemical matters, and he was often involved in scientific controversies.

Liebknecht \'lēp-ˌkne̱kt**, Karl** (b. Aug. 13, 1871, Leipzig, Ger.—d. Jan. 15, 1919, Berlin) German socialist leader. Son of Wilhelm Liebknecht, he became a lawyer and a Marxist. In 1912 he entered the Reichstag and led the opposition to Germany's pre-World War I policy. In 1916 he was expelled from the Social Democratic Party for opposing its leadership and came into close alliance with Rosa Luxemburg, with whom he founded the Spartacists. He was imprisoned (1916–18) for advocating the overthrow of the government. In 1918 he played a leading role in forming the German Communist Party. A series of bloody clashes culminated in the January 1919 putsch in which Liebknecht resorted to force; he was shot on the pretext that he was attempting to escape arrest.



Karl Liebknecht, 1913
INTERFOTO-FRIEDRICH RAUCH, MUNICH

Liebknecht, Wilhelm (b. March 29, 1826, Giessen, Hesse—d. Aug. 7, 1900, Berlin, Ger.) German socialist, cofounder of the German Social Democratic Party. Imprisoned for participating in the Revolutions of 1848, he lived in exile in England (1849–62), working closely with Karl Marx and Friedrich Engels. Prussia granted him amnesty in 1862, but Otto von Bismarck had him expelled again in 1865. In Leipzig he and August Bebel organized the Social Democratic Labour Party in 1869. He was imprisoned (1872–74) for his writings against the Franco-Prussian War. Bismarck's repression of the socialists brought about a merger with the followers of Ferdinand Lassalle in 1875. With the expiration of the Anti-Socialist Law (1878–90), this party became known as the German Social Democratic Party. Liebknecht continued as a leading spokesman, primarily as a writer for the party's newspaper, *Vorwärts*.

ARCHIV FUR KUNST UND GESCHICHTE, BERLIN

Liechtenstein \'lik-tən-ˌshtīn\ *officially* **Principality of Liechtenstein** Principality, western Europe. It is located between Switzerland and Austria. Area: 62 sq mi (160 sq km). Population (2005 est.): 34,800. Capital: Vaduz. The Liechtensteiners are descended from the Alemanni tribe that came into the region after AD 500. Languages: German (official), Alemanni dialect, Walser dialect. Religions: Christianity (predominantly Roman Catholic; also Protestant); also Islam. Currency: Swiss franc. The eastern two-thirds of Liechtenstein's small territory is composed of the foothills of the Rhätikon Massif, part of the central Alps. The western section of the country is occupied by the Rhine River floodplain. Liechtenstein has no natural resources of commercial value, and virtually all raw materials, including wood, have to be imported. Manufacturing includes metalworking, pharmaceuticals, optical lenses, electronics, and food processing. A tourist centre, Liechtenstein is also a centre of banking because of its stable political situation and its absolute bank secrecy.

It is a constitutional monarchy with one legislative house; its chief of state is the prince, and the head of government is the prime minister. The Rhine plain was occupied for centuries by two independent lordships of the Holy Roman Empire, Vaduz and Schellenberg. The principality of Liechtenstein, consisting of these two lordships, was founded in 1719 and remained part of the Holy Roman Empire. It was included in the German Confederation (1815–66). In 1866 it became independent, recognizing Vaduz and Schellenberg as unique regions forming separate electoral districts. In 1921 it adopted Swiss currency, and in 1923 it joined the Swiss customs union. A coalition that ruled Liechtenstein for almost 60 years dissolved in 1997. Into the early 21st century Prince Hans Adam II continued his long-standing battle for constitutional changes that would increase his powers.

lied \'lēt\ German song, particularly an art song for voice and piano of the late 18th or the 19th century. The Romantic movement fostered serious popular poetry by poets such as Johann Wolfgang von Goethe. Composers often set such poetry to folk-influenced music, but the lied could also be highly sophisticated and even experimental. At first generally performed at private social gatherings, it eventually moved into the concert-hall repertoire. The most influential and prolific lied composer was Franz Schubert, who wrote more than 600; Robert Schumann, Felix Mendelssohn, Johannes Brahms, Hugo Wolf, Gustav Mahler, and Richard Strauss are most prominent in the lied's subsequent history.

Liège \'lyezh\ *Flemish* **Luik** \'lȯik\ City (pop., 2000 est.: 185,639), eastern Belgium. Located at the confluence of the Meuse and Ourthe rivers, it was inhabited in prehistoric times and was known to the Romans as Leodium. It became a town when St. Hubert transferred his see there in 721, and it was noted as a centre of learning in the Middle Ages. Annexed to France in 1795, it was later assigned with the rest of Belgium to The Netherlands in 1815. A centre of the successful revolt for Belgian independence in 1830, it is now an industrial research centre and a major port.

liege \lēj\ In European feudal society, an unconditional bond between a man and his overlord. Thus, if a tenant held estates from various overlords, his obligations to his liege lord, to whom he had paid "liege homage," were greater than his obligations to the other lords, to whom he had paid only "simple homage." See also feudal land tenure.

lien \lēn\ In law, a charge or encumbrance on property for the satisfaction of a debt or other duty. Common law developed two kinds of possessory lien: the specific (a lien on the specific property involved in a

© 2006 Encyclopædia Britannica, Inc.

transaction) and the general (a lien for the satisfaction of a balance due, not confined to a specific property involved in a transaction). Courts of EQUITY may, through the device of the equitable lien, recognize a creditor's interest in a debtor's property. Statutory liens are also available; developers and building contractors, for example, may use their interest in an improved site as security for payment (a mechanic's lien).

Liezi *or* **Lieh-tzu** \'lye-'dzə̈\ (fl. 4th century BC, China) Chinese Daoist philosopher. He was one of the three primary philosophers who developed the tenets of Daoist thought, and he is the presumed author of the Daoist work *LIEZI*. Many of the writings traditionally attributed to him have been identified as later forgeries, but he is still widely believed to have been a historical figure.

Liezi *or* **Lieh-tzu** Chinese Daoist classic. Though LIEZI is traditionally named as its author, in its present form it probably dates from the 3rd or 4th century AD. Like earlier Daoist classics, it emphasizes the mysterious DAO (way). The "Yang Zhu" chapter acknowledges the futility of challenging the *dao* and asserts that all one can look forward to in life is sex, music, physical beauty, and material abundance. This fatalistic belief in a life of radical self-interest was a new development in DAOISM.

Lifar \'lē-ˌfär**, Serge** (b. April 2, 1905, Kiev, Ukraine, Russian Empire—d. Dec. 15, 1986, Lausanne, Switz.) Russian-born French dancer, choreographer, and ballet master. In 1923 he joined the BALLETS RUSSES, where he became lead dancer in 1925 and created title roles in several of GEORGE BALANCHINE's ballets. He worked at the Paris Opéra Ballet as lead dancer and ballet master (1929–45, 1947–58), choreographing more than 50 works, including *Prometheus* (1929), *Icarus* (1935), *Les Mirages* (1947), and *Les Noces fantastiques* (1955). He rebuilt the company as a separate performing group, emphasizing the importance of male dancers. He retired as a dancer in 1956 but continued to choreograph for various European companies.

Lifar in *Night*, 1930
BBC HULTON PICTURE LIBRARY

life State characterized by the ability to metabolize nutrients (process materials for energy and tissue building), grow, reproduce, and respond and adapt to environmental stimuli. Fossil evidence suggests that earth's first living organisms, BACTERIA and CYANOBACTERIA, arose about 3.5 billion years ago. All known life-forms possess either DNA or RNA. VIRUSES, which possess DNA and RNA, cannot reproduce without a host cell and do not metabolize nutrients, and it is uncertain whether they should be classified as living or nonliving. Scientists disagree on the likelihood of extraterrestrial life. See also DRAKE EQUATION.

Life U.S. picture magazine published weekly in New York City from 1936 to 1972 and in special editions thereafter. One of the most popular and widely imitated of U.S. magazines, it was founded by HENRY R. LUCE and quickly became a cornerstone of Time-Life Publications. From the start it emphasized photography, with gripping, superbly chosen news photographs, photographic features, and photo-essays by the best photographers; gradually more writing was added. Its war coverage—particularly that of World War II—was notably vivid, authentic, and moving. *Life* ceased publication largely because its costs outstripped revenues. It reappeared in special issues and then, from 1978 to 2000, as a monthly.

life insurance Method by which large groups of individuals equalize the burden of financial loss from death by distributing funds to the beneficiaries of those who die. Life insurance is most developed in wealthy countries, where it has become a major channel of saving and investing. There are three basic types of life-insurance contract. Term insurance is issued for a specified number of years; protection expires at the end of the period and there is no cash value remaining. Whole-life contracts run for the whole of the insured's life and also accumulate a cash value, which is paid when the contract matures or is surrendered; the cash value is less than the policy's face value. Endowment contracts run for a specified time period and pay their full face value at the end of the period.

life span Time between birth and death. It ranges from a mayfly's day to certain trees' thousands of years. Its limit appears to depend on heredity, but such factors as (in humans) disease, natural disasters, war, diet, and habits such as smoking reduce it. Maximum life span is theoretical; more meaningful is average life span, which life-insurance companies and actuaries analyze and tabulate. Long-lived progenitors tend to beget long-lived descendants. A very-low-calorie diet appears to prolong life. Reduced infant mortality and improved sanitation and nutrition account for much of the increase since c. 1800—from about 35 to over 70 years in most industrialized countries. The oldest well-documented age reached by a human is 122 years.

Liffey, River River, Ireland. Rising southwest of DUBLIN, it flows northwest, then runs west in the Kildare lowland. It crosses east through Dublin, where it is channeled into canals, and empties into Dublin Bay, an arm of the Irish Sea, after a course of 50 mi (80 km). The river is personified as Anna Livia Plurabelle in JAMES JOYCE's *Finnegans Wake*.

lift Upward-acting FORCE on an aircraft wing or AIRFOIL. An aircraft in flight experiences an upward lift force, as well as the thrust of the engine, the force of its own weight, and a DRAG force. The lift force arises because the speed at which the displaced air moves over the top of the airfoil (and over the top of the attached BOUNDARY LAYER) is greater than the speed at which it moves over the bottom and because the pressure acting on the airfoil from below is therefore greater than the pressure from above.

lift-slab construction Technique whereby concrete floor slabs are poured on the ground, one on top of the other, and then lifted into place on top of columns by hydraulic jacks. Used for very tall multistory buildings, this method offers substantial savings in formwork.

ligament Tough fibrous band of CONNECTIVE TISSUE that supports internal organs and holds bones together properly in JOINTS. It is composed of dense bundles of fibres and spindle-shaped cells (fibroblasts and fibrocytes), with little ground substance. White ligament is rich in sturdy, inelastic COLLAGEN fibres; yellow ligament is rich in tough elastic fibres, which allow more movement. See also TENDON.

ligand \'lī-gənd, 'lī-gənd\ ATOM, group (see FUNCTIONAL GROUP), or MOLECULE attached to a central atom, usually of a TRANSITION ELEMENT, in a coordination or complex COMPOUND (see BONDING). It is almost always the electron-pair donor (NUCLEOPHILE) in a COVALENT BOND. Common ligands include the neutral molecules WATER (H_2O), ammonia (NH_3), and carbon monoxide (CO) and the ANIONS cyanide (CN^-), chloride (Cl^-), and hydroxide (OH^-). Rarely, ligands are CATIONS and electron-pair acceptors (ELECTROPHILES). Organic ligands include EDTA (see CHELATE) and nitrilotriacetic acid. Biological systems rely on ligands such as the PORPHYRIN in HEMOGLOBIN and CHLOROPHYLL, and numerous COFACTORS are ligands. In chelates, the ligand attaches at more than one point, sharing more than one electron pair, and is called bidentate or polydentate—having two or many "teeth." The ligands in a complex may be the same or different.

Ligeti \lē-'gā-tē**, György (Sándor)** (b. May 28, 1923, Diciosânmartin, Transylvania, Rom.) Hungarian (Transylvanian) composer. By 1950 he was teaching at the Budapest Academy, but not until he met KARLHEINZ STOCKHAUSEN and others in Vienna in 1956 did he find his compositional path. After a brief interest in electronic music, he gained international recognition for his avant-garde pieces for performers; these works dealt principally with shifting masses of sound and tone colours. His most famous work, *Atmosphères* (1961), was used in the film *2001: A Space Odyssey* (1968). The opera *Le Grand macabre* (1978) has been widely performed in Europe.

light That portion of the ELECTROMAGNETIC SPECTRUM visible to the human eye. It ranges from the red end to the violet end of the spectrum, with wavelengths from 700 to 400 nanometres and frequencies from 4.3×10^{14} to 7.5×10^{14} Hz. Like all ELECTROMAGNETIC RADIATION, it travels through empty space at a speed of about 186,000 mi/sec (300,000 km/sec). In the mid-19th century, light was described by James Clerk Maxwell in terms of electromagnetic waves, but 20th-century physicists showed that it exhibits properties of particles as well; its carrier particle is the PHOTON. Light is the basis for the sense of sight and for the perception of COLOUR. See also OPTICS; WAVE-PARTICLE DUALITY.

light-emitting diode (LED) SEMICONDUCTOR DIODE that produces visible or infrared light when subjected to an electric current, as a result of electroluminescence. Visible-light LEDs are used in many electronic devices as indicator lamps (e.g., an on/off indicator) and, when arranged in a matrix, to spell out letters or numbers on alphanumeric displays. Infrared LEDs are used in optoelectronics (e.g., in auto-focus cameras and television remote controls) and as light sources in some long-range fibre-

© 2006 Encyclopædia Britannica, Inc.

optic communications systems. LEDs are formed by the so-called III-V compound semiconductors related to gallium arsenide. They consume little power and are long-lasting and inexpensive.

light fixture See LUMINAIRE

light-frame construction System of construction using many small and closely spaced members that can be assembled by nailing. It is the standard for U.S. suburban housing. The balloon-frame house with wood cladding, invented in Chicago in the 1840s, aided the rapid settlement of the western U.S. In North America, with its abundant softwood forests, the framed building enjoyed an extensive revival after World War II in the form of platform frames. In platform framing, each floor is framed separately, as contrasted with balloon framing, in which the studs (vertical members) extend the full height of the building. Freed from the heavy timbers of the POST-AND-BEAM SYSTEM, platform framing offers ease of construction. Carpenters first fabricate a floor, which consists of wood joists and subflooring. The floor often serves as a working platform on which the stud wall frames are fabricated in sections and then lifted into place. On top of this is placed a second floor or the roof. The roof is formed of rafters (sloping joists) or wood TRUSSES. The standard interior wall sheathing is gypsum board (drywall), which provides fire-resistance, stability, and a surface ready for finishing. Framed structures traditionally were constructed individually at each house site; today many of the framing elements are mass-produced elsewhere and assembled on-site.

light quantum See PHOTON

light-year Distance traveled by LIGHT moving in a vacuum in one year, at its accepted speed of 186,282 mi/second (299,792 km/second). It equals about 5.9 trillion mi (9.5 trillion km), 63,240 ASTRONOMICAL UNITS, or 0.307 PARSEC.

Lightfoot, Gordon (b. Nov. 17, 1938, Orillia, Ont., Can.) Canadian singer and songwriter. He began writing folk-oriented pop singles in the mid-1960s, including "Early Morning Rain" and "Ribbon of Darkness." His later hits include "If You Could Read My Mind" and "The Wreck of the *Edmund Fitzgerald*." His songs have been covered by singers ranging from BARBRA STREISAND to JERRY LEE LEWIS.

lighthouse Structure, usually with a tower, built onshore or on the seabed to signal danger or provide aid to seafarers. The first known lighthouse was the Pharos of Alexandria. The modern lighthouse dates only from the early 18th century. Initially made of wood, these towers were often washed away in severe storms. The first lighthouse made of interlocking masonry blocks was built on the treacherous Eddystone Rocks reef, off Plymouth, England (1759). Interlocking masonry blocks remained the principal material of lighthouse construction until they were replaced by concrete and steel in the 20th century. Modern construction methods have facilitated the building of offshore lighthouses. The most common illuminant is the electric-filament lamp. Refinements in lenses (e.g., the Fresnel lens) and reflectors made it possible to substantially increase the light's intensity. Radio and satellite-based navigation systems have greatly reduced the need for large lighthouses in sighting land.

lighting Use of an artificial source of light for illumination. It is a key element of architecture and interior design. Residential lighting uses mainly either INCANDESCENT LAMPS or FLUORESCENT LAMPS and often depends heavily on movable fixtures plugged into outlets; built-in lighting is typically found in kitchens, bathrooms, and corridors and in the form of hanging pendants in dining rooms and sometimes recessed fixtures in living rooms. Lighting in nonresidential buildings is predominantly fluorescent. High-pressure sodium-vapor lamps (see ELECTRIC DISCHARGE LAMP) have higher efficiency and are used in industrial applications. HALOGEN LAMPS have residential, industrial, and photographic applications. Depending on their fixtures, lamps (bulbs) produce a variety of lighting conditions. Incandescent lamps placed in translucent glass globes create diffuse effects; in recessed ceiling-mounted fixtures with reflectors, they can light walls or floors evenly. Fluorescent fixtures are typically recessed and rectangular, with prismatic lenses, but other types including indirect cove lights (see COVING) and luminous ceilings, in which lamps are placed above suspended translucent panels. Mercury-vapor and high-pressure sodium-vapor lamps are placed in simple reflectors in industrial spaces, in pole-mounted streetlight fixtures, and in indirect up-lighting fixtures for commercial applications.

lightning Visible discharge of electricity when part of the atmosphere acquires enough electrical charge to overcome the resistance of the air. During a thunderstorm, lightning flashes can occur within clouds, between clouds, between clouds and air, or from clouds to the ground. Lightning is usually associated with cumulonimbus CLOUDS (thunderclouds) but also occurs in nimbostratus clouds, in snowstorms and dust storms, and sometimes in the dust and gases emitted by a volcano. A typical lightning flash involves a potential difference between cloud and ground of several hundred million volts. Temperatures in the lightning channel are on the order of 30,000 K (50,000 °F). A cloud-to-ground flash comprises at least two strokes: a pale leader stroke that strikes the ground and a highly luminous return stroke. The leader stroke reaches the ground in about 20 milliseconds; the return stroke reaches the cloud in about 70 microseconds. The thunder associated with lightning is caused by rapid heating of air along the length of the lightning channel. The heated air expands at supersonic speeds. The shock wave decays within a metre or two into a sound wave, which, modified by the intervening air and topography, produces a series of rumbles and claps. See also THUNDERSTORM.

lightning bug See FIREFLY

lignin \'lig-nən\ Complex oxygen-containing organic compound, a mixture of POLYMERS of poorly known structure. After CELLULOSE, it is the most abundant organic material on Earth, making up one-fourth to one-third of the dry weight of WOOD, where it is concentrated in the cell walls. Removed from wood pulp in the manufacture of PAPER, it is used as a binder in particleboard and similar products and as a soil conditioner, filler in certain plastics, adhesive ingredient, and raw material for chemicals including DIMETHYL SULFOXIDE and vanillin (synthetic VANILLA flavouring).

lignite Yellow to dark brown, rarely black, COAL that has been formed from PEAT under moderate pressure; it is one of the first products of coalification and is intermediate between peat and SUBBITUMINOUS COAL. Dry lignite contains about 60–70% carbon. Almost half of the world's total coal reserves contain lignite and subbituminous coal, but lignite has not been exploited to any great extent because lignite is inferior to higher-rank coals (e.g., BITUMINOUS COAL) in heating value, ease of handling, and storage stability. In some areas, however, the scarcity of fuel has led to extensive developments.

Liguria Region (pop., 2001 prelim.: 1,560,748), northwestern Italy. Covering 2,092 sq mi (5,418 sq km) and located on the Ligurian Sea between France and Tuscany, it has its capital at GENOA. Under Roman rule from the 1st century BC, the region was briefly controlled by the Lombards and FRANKS during the Middle Ages. The city of Genoa emerged as a leading power as early as the 11th century, and by 1400 the entire region benefited from its maritime and commercial powers. In 1815 the Congress of VIENNA gave Liguria to the kingdom of Piedmont-Sardinia. It contributed significantly to the union of Italy in 1861. Its economy is based on agriculture, tourism, and industries centred on its major cities, including Genoa. La Spezia is a major naval base.

likelihood *or* **chance** In mathematics, a subjective assessment of possibility that, when assigned a numerical value on a scale between impossibility (0) and absolute certainty (1), becomes a probability (see PROBABILITY THEORY). Thus, the numerical assignment of a probability depends on the notion of likelihood. If, for example, an experiment (e.g., a die toss) can result in six equally likely possible outcomes, the probability of each is ⅙.

Likud \li-'küd\ Coalition of Israeli right-wing political parties. It was created by the 1973 merger of the Herut Party (1948) and the Liberal Party (1961), which itself was a merger of the General Zionists and the Progressives. From the late 1970s Likud alternated in power with the ISRAEL LABOUR PARTY. Likud generally was considered more skeptical than Labour of the peace process with the Palestinians and Israel's Arab neighbours, but when in power some Likud prime ministers made dramatic concessions on both fronts. Party leaders have included MENACHEM BEGIN, YITZHAK SHAMIR, and ARIEL SHARON. See also ARAB-ISRAELI WARS; IRGUN ZVAI LEUMI; VLADIMIR JABOTINSKY.

lilac Any of about 30 species of fragrant northern spring-flowering garden shrubs and small trees that make up the genus *Syringa* in the OLIVE family, native to eastern Europe and temperate Asia. Lilacs have deep green leaves and large, oval clusters of compound blooms coloured deep purple, lavender, blue, red, pink, white, or creamy yellow; they are often highly fragrant. The common lilac (*S. vulgaris*) reaches 20 ft (6 m) in height and produces many suckers (shoots from the stem or root). The name syringa was formerly used for the mock orange of the SAXIFRAGE family, and the butterfly bush (see BUDDLEIA) is commonly called "summer lilac."

© 2006 Encyclopædia Britannica, Inc.

Lilburne, John (b. 1614?, Greenwich, near London, Eng.—d. Aug. 29, 1657, Eltham, Kent) English revolutionary. A Separatist, he joined the Puritan opposition to Charles I and helped smuggle Puritan pamphlets into England, for which he was imprisoned (1638–40). He became an officer in the Parliamentary army but resigned in 1645 rather than subscribe to the Solemn League and Covenant. He became a master propagandist for the Levelers and criticized Parliament for failing to meet their demands. He was imprisoned (1645–47) but remained very popular with Londoners and was twice acquitted of treason.

Lilith In Jewish folklore, a female demon. In rabbinic literature she is depicted either as Adam's first wife or as the mother of his demonic offspring after he separated from Eve outside Paradise (see Adam and Eve). The evil that Lilith directed against children could be counteracted by wearing an amulet bearing the names of the three angels who opposed her. A cult associated with Lilith survived into the 7th century AD.

Liliuokalani \li-ˌlē-ə-wō-kə-ˈlä-nē\ *orig.* **Lydia Kamakaeha** (b. Sept. 2, 1838, Honolulu, Hawaii—d. Nov. 11, 1917, Honolulu) Hawaiian queen, the last Hawaiian monarch to govern the islands (1891–93). She succeeded her brother, David Kalakaua, to the throne and tried to restore the traditional monarchy. She opposed the reciprocity treaty that gave commercial concessions to the U.S. In 1893 she was declared deposed by Sanford B. Dole and the Missionary Party, which favoured U.S. annexation. An uprising in her name was suppressed and the rebels jailed. To win pardons for her supporters, she formally abdicated in 1895. A talented musician, she composed the song "Aloha Oe."

Queen Liliuokalani.

Lille \ˈlēl\ City (pop., 1999: city, 184,493; metro area, 1,000,900), northern France, situated on the Deûle River. Fortified in the 11th century, it changed hands several times during the Middle Ages. Louis XIV besieged and captured the city in 1667. It was taken by the duke of Marlborough in 1708 and ceded to France in 1713. It was occupied by the Germans during both World War I and World War II. It is traditionally France's textile centre; other industries include machinery manufacturing and chemical plants. Its museum has a rich art collection.

Lillie, Beatrice (Gladys) (b. May 29, 1894, Toronto, Ont., Can.—d. Jan. 20, 1989, Henley-on-Thames, Oxfordshire, Eng.) Canadian-born British comedienne. She made her London stage debut as a singer in 1914 and developed her comic genius in revues produced by André Charlot. She made her New York City debut in 1924, establishing an international reputation as a high-spirited star of sophisticated comedy. She appeared in various revues until 1939; after World War II she starred in the revue *Inside U.S.A.* (1948–50) and toured worldwide in *An Evening with Beatrice Lillie* (1952–56). Her last stage performances were in *Auntie Mame* (1958) and *High Spirits* (1964).

Beatrice Lillie
BROWN BROTHERS

Lilongwe \li-ˈlȯŋ-gwā\ Capital and second largest city (pop., 2003 est.: 597,619), Malawi. Lilongwe is located on an inland plain 50 mi (80 km) west of the southern end of Lake Malawi. An agricultural market centre for the fertile Central Region Plateau, it replaced Zomba as the national capital in 1975. The old part of the city functions as a service and commercial centre, while the newer district of Capital Hill houses government buildings and embassies, except for the country's judiciary, which is housed in the city of Blantyre.

Lily, William (b. 1468?, Odiham, Hampshire, Eng.—d. Feb. 25, 1522, London) English Renaissance scholar and classical grammarian. Having made a pilgrimage to Jerusalem and visited Greece and Italy, he became a pioneer of Greek learning in England and was appointed master of the school of St. Paul's in 1510. His grammar, which actually consisted of two books, one in English and the other in Latin, first appeared about 18 years after his death. Its use by royal order in all English grammar schools won it the name "the King's Grammar." With corrections and revisions, it continued to be used as late as the 19th century and influenced generations of English people's views of all languages, including English.

lily family Family Liliaceae (order Liliales), which contains about 4,000 species of flowering herbs and shrubs in 280 genera. The genus *Lilium* includes the true lilies. Native primarily to temperate and subtropical regions, these monocots (see cotyledon) usually have six-segmented flowers, three-chambered capsular fruits, and leaves with parallel veins. Among the oldest cultivated plants, true lilies are erect perennials with leafy stems, scaly bulbs, usually narrow leaves, and solitary or clustered flowers, some quite fragrant, in a variety of colours. Most species store nutrients underground in a bulb, corm, or tuber. Important garden ornamentals and houseplants in the family include aloe, bluebell, crocus, daylily, hosta, Solomon's seal, and tulip. Food-producing members include onion, garlic, and asparagus.

lily of the valley Fragrant perennial herb and sole species (*Convallaria majalis*) of the genus *Convallaria* (lily family), native to Eurasia and eastern North America. White, bell-shaped flowers droop in a row from one side of a leafless stalk, which bears usually two glossy leaves at its base. The fruit is a single red berry. Lily of the valley is cultivated in shaded garden areas in many temperate parts of the world.

Lima \ˈlē-mə\ City (pop., 1996 est.: city, 316,332; 1998 est.: metro area, 7,060,600), capital of Peru. It is located inland from the Pacific Ocean port of Callao and near the Andes Mountains. Its nickname, El Pulpo ("The Octopus"), refers to its sprawling metropolitan area. It was founded by Francisco Pizarro in 1535 on the feast of the Epiphany, prompting the name Ciudad de los Reyes ("City of Kings"), but the name never took. Lima later became the capital of the Viceroyalty of Peru. The city was destroyed by an earthquake in 1746 but was rebuilt. It grew rapidly during the 20th century and now accounts for nearly one-third of Peru's total population. It is the country's economic and cultural centre. Historic sites include the cathedral (begun in the 16th century) and the National University of San Marcos (1551).

Lima, José Lezama See José Lezama Lima

Liman von Sanders \ˈlē-män-fȯn-ˈzän-dərs**, Otto** (b. Feb. 17, 1855, Stolp, Pomerania—d. Aug. 22, 1929, Munich, Ger.) German general. He entered the German army in 1874 and rose to lieutenant general. He reorganized the Turkish army and made it an effective fighting force in World War I. In command of the Turkish army at Gallipoli, he and the Turkish commanders forced the Allies to end the Dardanelles Campaign and prevented the seizure of Constantinople.

Limavady \ˌli-mə-ˈva-dē\ Town (pop., 1991: 10,350), seat of Limavady district (pop., 2001: 32,422), Northern Ireland. The town is on the River Roe east of the old city of Londonderry. It dates from the Plantation of Ulster in the early 17th century; it was later settled by Protestant Scots. The district is primarily agricultural.

limb darkening In astrophysics, the gradual decrease in observed brightness of the disk of a star from its centre to its edge (limb). This phenomenon, readily apparent in photographs of the Sun, occurs because the solar atmosphere's temperature increases with depth. Looking at the Sun's centre, an observer sees the deepest, hottest layers, which emit the most light. At the limb, only the upper, cooler layers, which produce less light, are visible. Observations of solar limb darkening are used to determine the temperature structure of the Sun's atmosphere.

limbo In Roman Catholicism, a region between heaven and hell, the dwelling place of souls not condemned to punishment but deprived of the joy of existence with God in heaven. The concept probably developed in the Middle Ages. Two distinct kinds of limbo were proposed: the *limbus patrum* ("fathers' limbo"), where Old Testament saints were confined until

© 2006 Encyclopædia Britannica, Inc.

liberated by JESUS in his "descent into hell"; and the *limbus infantum* or *limbus puerorum* ("children's limbo"), the abode of those who died without actual sin but whose original sin had not been washed away by BAPTISM or whose free will was restricted by mental deficiency. Today the Catholic church downplays the notion of limbo, and it is not an official part of church doctrine.

Limbourg \'lim-ˌbůrk\ **brothers** *or* **Limburg brothers** (fl. c. 1400–1416) Flemish illuminators. Sons of a sculptor, the three brothers—Pol, Herman, and Jehanequin de Limbourg—learned the goldsmith's art in Paris and entered the service of the duke de Berry, for whom they produced one of the most famous of all ILLUMINATED MANUSCRIPTS, a book of hours (private prayer book) known as the *Très riches heures du duc de Berry* (c. 1410–16). Since the brothers worked together, it is difficult to distinguish individual styles. They synthesized the achievements of their contemporaries into a style characterized by tall, aristocratic figures with lavish, curvilinear draperies and by highly naturalistic seasonal landscapes and scenes of peasant life. Their art did much to determine the course of EARLY NETHERLANDISH ART. Their deaths in the same year suggest that they died of plague.

lime Small shrublike tree (*Citrus aurantifolia*), widely grown in tropical and subtropical areas, and its edible acidic fruits. Stiff branches and twigs leave the thorny stem at irregular intervals and end in green leaves. Clusters of small white flowers produce small oval fruits with a thin, pale greenish yellow rind. The juicy pulp is more acidic and sweet than that of the LEMON. Limes are used to flavour many foods. High in vitamin C, they were formerly used in the British navy to prevent SCURVY; hence the nickname "Limey" for British sailors.

Lime (*Citrus aurantifolia*).
GRANT HEILMAN PHOTOGRAPHY

lime *or* **quicklime** *or* **calcium oxide** Inorganic compound, white or grayish white solid, chemical formula CaO, made by roasting LIMESTONE (calcium carbonate, $CaCO_3$) until all the carbon dioxide (CO_2) is driven off. One of the four most important basic chemical commodities, it is used as a REFRACTORY, as a flux in steel manufacture, as a CO_2 absorbent, to remove contaminants from stack gases, to neutralize various acids, in pulp and paper, in insecticides and fungicides, in sewage treatment, and in the manufacture of glass, calcium carbide, and sodium carbonate. Adding water to lime yields calcium hydroxide (slaked lime, calcium hydrate, hydrated lime, or caustic lime), which is used in mortar, plasters, cements, whitewash, hide dehairing, and water softening and purification and as a source of other calcium salts.

limelight Early form of theatrical lighting. The incandescent calcium light invented by Thomas Drummond in 1816 was first employed in a theatre in 1837 and was widely used by the 1860s. Its soft, brilliant light enabled it to be focused for spotlighting and to create effects such as sunlight and moonlight. The expression "in the limelight" referred to the most desirable acting area on the stage, the front and centre, which was illuminated by limelights. Electric lighting replaced limelight in the late 19th century.

limerick Popular form of short, humorous verse, often nonsensical and frequently ribald. It consists of five lines, rhyming *aabba*, and the dominant metre is anapestic, with two feet in the third and fourth lines and three feet in the others. The origin of the term is obscure, but a group of poets in County Limerick, Ire., wrote limericks in Irish in the 18th century. The first collections in English date from c. 1820. Among the most famous are those in EDWARD LEAR's *Book of Nonsense* (1846).

limes \'lē-mās\ *plural* **limites** *Latin* **"path"** In ancient Rome, a strip of open land along which troops advanced into unfriendly territory. It came to mean a Roman military road, fortified with watchtowers and forts. An example of this construction was the continuous system of fortifications and barriers extending 345 mi (555 km) along the Roman frontier in Germany and RAETIA. HADRIAN'S WALL also served as a *limes*. Though not impenetrable, the *limites* allowed the Romans to control communications along frontiers and deterred raiding parties. In the eastern and southern empire, *limites* were often used to guard caravan routes.

limestone Sedimentary rock composed mainly of CALCIUM carbonate ($CaCO_3$), usually in the form of CALCITE and, less commonly, ARAGONITE. It may contain considerable amounts of magnesium carbonate (DOLOMITE) as well. Most limestones have a granular texture; in many cases, the grains are tiny fragments of fossil animal shells. Much knowledge of the Earth's history has been derived from the study of FOSSILS embedded in limestone and other carbonate rocks. Limestone is used as a soil conditioner, in the manufacture of glass, and in agriculture. Ornamental varieties are used for flooring, exterior and interior facings of buildings, and monuments.

Limfjorden \'lēm-ˌfyȯr-dən\ Strait across northern Jutland, Denmark, connecting the North Sea and the Kattegat. It is 110 mi (180 km) long and is actually a series of fjords dotted with islands. In 1825 the North Sea broke through the western part, and the Thyborøn Kanal was cut to keep the outlet open.

limit Mathematical concept based on the idea of closeness, used mainly in studying the behaviour of FUNCTIONS close to values at which they are undefined. For example, the function $1/x$ is not defined at $x = 0$. For positive values of x, as x is chosen closer and closer to 0, the value of $1/x$ begins to grow rapidly, approaching INFINITY as a limit. This interplay of action and reaction as the independent VARIABLE moves closer to a given value is the essence of the idea of a limit. Limits provide the means of defining the DERIVATIVE and INTEGRAL of a function.

limitations, statute of Legislative act restricting the time within which legal proceedings may be brought, usually to a fixed period after the occurrence of the events that gave rise to the cause of action. Such statutes are enacted to protect persons against claims made after evidence has been lost, memories have faded, or witnesses have disappeared. The periods prescribed for different actions in different jurisdictions vary considerably.

limited liability Condition under which the loss that an owner (shareholder) of a business may incur is limited to the capital invested in the business and does not extend to personal assets. The forerunners of limited-liability companies were limited partnerships, which were common in Europe and the U.S. in the 18th and early 19th centuries. In limited partnerships, one partner is entirely liable for losses and the other partners are liable only for the amounts they invested in the business. After the Joint-Stock Companies Act (1844) in England made incorporation easier, joint-stock companies with limited liability for all members became widespread. The development of the limited-liability company was crucial to the rise of large-scale industry in the late 19th and 20th centuries, since it enabled businesses to mobilize CAPITAL from a variety of investors who were unwilling to risk their entire personal fortunes in their INVESTMENTS. See also RISK.

limited obligation bond See REVENUE BOND

limnology \lim-'nä-lə-jē\ Subdiscipline of HYDROLOGY that concerns the study of fresh waters, specifically lakes and ponds (both natural and manmade), including their biological, physical, and chemical aspects. François-Alphonse Forel (1841–1912) established the field with his studies of Lake Geneva. Limnology traditionally is closely related to hydrobiology, which is concerned with the application of the principles and methods of physics, chemistry, geology, and geography to ecological problems.

Limoges \lē-'mōzh\ **painted enamel** ENAMEL WORK made in Limoges, France, generally considered the finest painted enamel ware produced in Europe in the 16th century. The earliest examples show religious scenes in the late Gothic style, but Italian Renaissance motifs appeared c. 1520. Painting in GRISAILLE was later introduced. By the late 16th century the quality of the enamel ware had degenerated. See also LÉONARD LIMOSIN.

Limoges ware PORCELAIN, largely service ware, produced in Limoges, France, from the 18th century. FAIENCE of undistinguished quality was produced there from 1736, but the manufacture of hard-paste, or true, porcelain dates only from 1771. In 1784 the factory was acquired as an adjunct of the royal factory at Sèvres (see SÈVRES PORCELAIN), and the decorations of the two wares became similar. After 1858 Limoges became a mass exporter of porcelain to the U.S. under the name Haviland.

Limón \li-'mōn**, José (Arcadio)** (b. Jan. 12, 1908, Culiacán, Sinaloa, Mex.—d. Dec. 2, 1972, Flemington, N.J., U.S.) Mexican-born U.S. modern dancer, choreographer, and founder-director of the José Limón Dance Company. At age seven he moved to the U.S., where he later studied with

Doris Humphrey and Charles Weidman and danced with their company (1930–40). He established his own company in 1947, with Humphrey as artistic director. His choreography conveyed modern-dance expression within a well-defined structure, as exemplified by works such as *The Moor's Pavane* (1949) and *Missa Brevis* (1958). The company toured worldwide during Limón's life and remained active after his death.

Limón, 1965

limonite \'lī-mə-ˌnīt\ One of the major iron minerals, a hydrous ferric oxide of variable composition. Often brown and earthy, it is formed by alteration of other iron minerals, such as the hydration of hematite or the oxidation and hydration of siderite or pyrite.

Limonite (left) from Ironwood, Mich., and (right) from Montgomery, Pa.

Limosin \lē-mō-'zaⁿ**, Léonard** *or* **Léonard Limousin** \'lē-mü-'zaⁿ\ (b. c. 1505, Limoges, Fr.—d. c. 1577, Limoges) French painter. The most accomplished member of a prominent Limoges family of enamelers, he is known for the revealing realism of the portraits he painted on Limoges ware. His earliest authenticated work is his *Passion of the Lord* (1532), a series of 18 enamel plaques after prints by Albrecht Dürer. He was later influenced by the Italian Mannerists who worked at Fontainebleau for Francis I, whom Limosin served as court painter. He was also an accomplished painter in oils.

Limousin \ˌli-mə-'zēn,\ *French* \ˌlē-mə-'zeⁿ\ Historical and government region, central France. Covering 6,541 sq mi (16,942 sq km), the modern administrative region of Limousin (pop., 1999: 710,939) is roughly coextensive with the region when it held provincial status. The capital is Limoges (pop., 1999: 133,960). Originally inhabited by the ancient Gallic tribe of Lemovices, the region was conquered by Rome c. 50 BC. Under the Carolingians, it was part of Aquitaine. On Eleanor of Aquitaine's marriage to King Henry II of England in 1152, it passed to English control. Subsequently fought over by England and France, it was finally annexed to the French crown under the French king Henry IV.

limpet \'lim-pət\ Any of various species of snails that have a flattened shell. Most marine species (subclass Prosobranchia) cling to rocks near shore. A common U.S. species is the Atlantic plate limpet (*Acmaea testudinalis*) of cold waters. Keyhole limpets have a slit or hole at the apex of the shell. Some limpets (subclass Pulmonata) live in brackish water and freshwater. See also mollusk.

European limpets (*Patella vulgata*) with acorn barnacles (*Balanus balanoides*)

Limpopo River River, South Africa. Rising as the Crocodile (Krokodil) River in the Witwatersrand, South Africa, it flows northeast along the border of South Africa and southeast across Mozambique to empty into the Indian Ocean. Along its middle course it divides South Africa from Botswana and Zimbabwe. It is 1,100 mi (1,800 km) long but is navigable only 130 mi (208 km) from the coast. The first European to visit it was Vasco da Gama, who named its mouth the Espíritu Santo River in 1498.

Lin, Maya (b. Oct. 5, 1959, Athens, Ohio, U.S.) U.S. architect and sculptor. The daughter of intellectuals who had fled China in 1948, she achieved fame in 1981 when her class assignment at Yale University won the nationwide Vietnam Veterans Memorial competition. Lin's award-winning design consisted of a polished black granite V-shaped wall inscribed with the names of the approximately 58,000 men and women who were killed or missing in action; the abstract nature of the design aroused a great deal of controversy. Her subsequent, vastly different designs include the major commissions for the Civil Rights Memorial in Montgomery, Ala. (1989), and the Women's Table at Yale (1993), as well as an earth sculpture for the University of Michigan (1994) and an extraordinary translucent clock, *Eclipsed Time*, installed in the ceiling of New York City's Pennsylvania Station (1994).

Lin Biao \'lin-bē-'au̇\ *or* **Lin Piao** (b. Dec. 5, 1907, Huanggang, Hubei province, China—d. Sept. 13, 1971?, Mongolia?) Chinese military leader and government official who played a prominent role in the Cultural Revolution. He joined the Socialist Youth League in 1925 and Chiang Kai-shek's Northern Expedition in 1926. When Chiang turned on the communists in 1927, Lin fled to join Mao. During the Long March Lin became legendary for never losing a battle, and he prevailed against the Japanese in the 1930s and the Nationalists in the 1940s. In the early 1960s his reformation and indoctrination of the army in accordance with Mao's teachings became a model for the rest of society, and during the Cultural Revolution he was designated Mao's successor. Subsequent events are unclear, but in September 1971 the Chinese government reported that Lin died in a plane crash in Mongolia in an attempt to flee China; his death has remained a mystery.

Lin Yutang *or* **Lin Yü-t'ang** (b. Oct. 10, 1895, Longxi, Fujian province, China—d. March 26, 1976, Hong Kong) Chinese writer. The son of a Presbyterian minister, he studied in the U.S. and Europe. In 1932 he established a highly successful Western-style satirical magazine of a type totally new to China; soon he introduced two other publications. A prolific writer of works in Chinese and English, he produced his first English-language book, *My Country and My People*, in 1935. From 1936 he lived chiefly in the U.S. His other works include *The Wisdom of China and India* (1942), books on Chinese history and philosophy, and highly acclaimed English translations of Chinese literary masterpieces.

Lin Zexu \'lin-'dzə-'shü\ *or* **Lin Tse-hsü** (b. Aug. 30, 1785, Houguan, Fujian province, China—d. Nov. 22, 1850, Chaozhu, Guangdong province) Leading Chinese scholar and official of the Qing dynasty, accepted as a national hero for his stance against the British before the Anglo-Chinese Opium War (1839–42). Lin passed the highest examination in the Chinese examination system and entered the Hanlin Academy and government. Having suggested to the emperor ways to suppress the opium trade, Lin found himself appointed imperial commissioner and dispatched to Guangzhou (Canton) to deal with the problem directly. He was so successful that, in retaliation for his destruction of their opium stocks, the British ravaged large parts of southern China, and Lin was quickly dismissed. He served loyally at his post of exile and was soon called back to important service. He died on his way to help suppress the Taiping Rebellion.

linac See linear accelerator

Linacre \'li-ni-kər**, Thomas** (b. c. 1460, Canterbury, Kent, Eng.—d. Oct. 20, 1524, London) English physician and classical scholar. Elected a fellow at Oxford in 1484, he became one of the first propagators of the humanist "New Learning" in England; his students included Desiderius Erasmus and St. Thomas More. Many prominent Londoners were his medical patients, including Henry VIII, whose approval he obtained in 1518 to found the Royal College of Physicians, which decided who should practice medicine in Greater London and which licensed physicians throughout the kingdom, ending the indiscriminate practice of medicine by barbers, clergymen, and others.

Lincoln City (pop., 2000: 225,581), capital of Nebraska, U.S. Laid out in 1859 and called Lancaster, it was renamed for Abraham Lincoln when it was chosen as the capital in 1867. The town was incorporated in 1869 and was the home of the politician William Jennings Bryan from 1887 to 1921. It is a railroad junction and commercial centre serving the surrounding agricultural region. Its institutions of higher education include the University of Nebraska, Union College, and Nebraska Wesleyan University.

county of Lincolnshire, eastern England. Under the name Lindum, it served as a Roman fortress, and by AD 71 it had become a settlement for retired soldiers. It later came under Danish rule, and in the Middle Ages it was one of England's major towns. Henry II gave the city its first charter in 1154. It is a market centre for an agricultural region and also possesses some manufacturing. It has many medieval buildings, including the cathedral (begun c. 1075).

Lincoln, Abraham (b. Feb. 12, 1809, near Hodgenville, Ky., U.S.—d. April 15, 1865, Washington, D.C.) 16th president of the U.S. (1861–65). Born in a Kentucky log cabin, he moved to Indiana in 1816 and to Illinois in 1830. After working as a storekeeper, a rail-splitter, a postmaster, and a surveyor, he enlisted as a volunteer in the Black Hawk War (1832) and was elected captain of his company. He taught himself law and, having passed the bar examination, began practicing in Springfield, Ill., in 1836. As a successful circuit-riding lawyer from 1837, he was noted for his shrewdness, common sense, and honesty (earning the nickname "Honest Abe"). From 1834 to 1840 he served in the Illinois state legislature, and in 1847 he was elected as a Whig to the U.S. House of Representatives. In 1856 he joined the Republican Party, which nominated him as its candidate in the 1858 Senate election. In a series of seven debates with Stephen A. Douglas (the Lincoln-Douglas Debates), he argued against the extension of slavery into the territories. Though morally opposed to slavery, he was not an abolitionist; indeed, he attempted to rebut Douglas's charge that he was a dangerous radical, by reassuring audiences that he did not favour political equality for blacks. Despite his loss in the election, the debates brought him national attention. In the 1860 presidential election, he ran against Douglas again and won by a large margin in the electoral college, though he received only two-fifths of the popular vote. The South opposed his position on slavery in the territories, and before his inauguration seven Southern states had seceeded from the Union. The ensuing American Civil War completely consumed Lincoln's administration. He excelled as a wartime leader, creating a high command for directing all the country's energies and resources toward the war effort and combining statecraft and overall command of the armies with what some have called military genius. However, his abrogation of some civil liberties, especially the writ of habeas corpus, and the closing of several newspapers by his generals disturbed both Democrats and Republicans, including some members of his own cabinet. To unite the North and influence foreign opinion, he issued the Emancipation Proclamation (1863); his Gettysburg Address (1863) further ennobled the war's purpose. The continuing war affected some Northerners' resolve and his reelection was not assured, but strategic battle victories turned the tide, and he easily defeated George B. McClellan in 1864. His platform included passage of the 13th Amendment outlawing slavery (ratified 1865). At his second inaugural, with victory in sight, he spoke of moderation in reconstructing the South and building a harmonious Union. On April 14, five days after the war ended, he was shot and mortally wounded by John Wilkes Booth.

Lincoln, Benjamin (b. Jan. 24, 1733, Hingham, Mass.—d. May 9, 1810, Boston) American Revolutionary officer. After serving in the Massachusetts militia (1755–76), he was appointed major general in the Continental Army. As commander of forces in the South in 1780, he was forced to surrender with 7,000 troops after the British victory at Charleston, S.C. Released in a prisoner exchange, he served in the Yorktown campaign in 1781. From 1781 to 1783 he served as secretary of war, and in 1787 he commanded the militia forces that suppressed Shays' Rebellion. From 1789 to 1809 he was collector for the port of Boston.

Lincoln Center for the Performing Arts Travertine-clad cultural complex on the western side of Manhattan (1962–68), built by a board of architects headed by Wallace K. Harrison (1895–1981). The buildings, situated around a plaza with a fountain, are the home of the Metropolitan Opera, the New York City Opera, the New York Philharmonic, the New York City Ballet, and the Juilliard School. Harrison himself designed the Metropolitan Opera building, and Eero Saarinen designed the Vivian Beaumont Theater. Philip Johnson's New York State Theater incorporates a Classical facade and a four-story lobby. Johnson also rebuilt Avery Fisher Hall (home of the New York Philharmonic), originally designed by Max Abramovitz, to correct acoustic deficiencies and improve the lobby spaces.

Lincoln-Douglas Debates Series of seven debates between Republican candidate Abraham Lincoln and Democratic Sen. Stephen A. Douglas in the 1858 Illinois senatorial campaign. They focused on slavery and its extension into the western territories. Lincoln criticized Douglas for his support of popular sovereignty and the Kansas-Nebraska Act, while Douglas accused Lincoln of advocating racial equality and disruption of the Union. Douglas won reelection, but Lincoln's antislavery position and oratorical brilliance made him a national figure in the young Republican Party.

Lincolnshire \'liŋ-kən-ˌshir\ Administrative (pop., 2001: 646,646), geographic, and historic county, eastern England. It lies along the North Sea from the Humber estuary to the Wash. Among its most important towns is Lincoln. Inhabited in prehistoric times, it developed as an area of Roman settlement. Anglo-Saxons later established the kingdom of Lindsey. Danish influence was also widespread through villages established by Danes. Geographically isolated, it remains primarily an agricultural region. Along the coast, tourism has grown.

Lind, James (b. 1716, Edinburgh, Scot.—d. July 13, 1794, Gosport, Hampshire, Eng.) Scottish naval surgeon and physician. Having observed thousands of scurvy, typhus, and dysentery cases and the shipboard conditions that caused them, he published *A Treatise on Scurvy* in 1754, a time when scurvy killed more British sailors than combat. He recommended giving citrus fruits and juices (sources of vitamin C) to sailors on long voyages, a practice known to the Dutch for nearly two centuries. When the practice was fully instituted in 1795, scurvy disappeared from the ranks "as if by magic." Lind also suggested shipboard delousing and use of hospital ships, and he arranged for distillation of seawater for drinking.

Lind, Jenny *orig.* **Johanna Maria Lind** (b. Oct. 6, 1820, Stockholm, Swed.—d. Nov. 2, 1887, Malvern, Worcestershire, Eng.) Swedish soprano. She became prima donna at the Royal Opera in Stockholm at age 18. Study with Manuel García (1805–1906) in 1841 averted damage from vocal strain. Her career expanded to Germany, then to Vienna and London, where she created a sensation. Her European fame caught the eye of P.T. Barnum, who arranged a U.S. tour (dubbing her "the Swedish Nightingale") that launched many modern publicity techniques. She left Barnum in 1851 and resumed singing in Europe, though much less frequently. In her later years she lived and taught in England.

Lindbergh, Charles A(ugustus) (b. Feb. 4, 1902, Detroit, Mich., U.S.—d. Aug. 26, 1974, Maui, Hawaii) Aviator who made the first nonstop solo flight across the Atlantic Ocean. He left college to enroll in army flying schools and became an airmail pilot in 1926. He obtained backing from St. Louis businessmen to compete for a prize for flying from New York to Paris, and in 1927 in the monoplane *Spirit of St. Louis* he made the flight in 33.5 hours, becoming an instant hero in the U.S. and Europe. In 1929 he married the writer Anne Morrow (1906–2001), who would later serve as his copilot and navigator. In 1932 their child was kidnapped and murdered, a crime that received worldwide attention. They moved to England to escape the publicity, returning to the U.S. in 1940 to criticism over his speeches calling for U.S. neutrality in World War II. During the war Lindbergh was an adviser to Ford Motor Company and United Aircraft Corporation. After the war he was a consultant to Pan American Airways and the U.S. Department of Defense and served on many aeronautical boards and committees. In 1953 he wrote the Pulitzer Prize-winning *The Spirit of St. Louis*.

Charles A. Lindbergh in front of his airplane *Spirit of St. Louis,* 1927.
LIBRARY OF CONGRESS, WASHINGTON, D.C.

linden Any of about 30 species of trees that make up the genus *Tilia* (family Tiliaceae), native to the Northern Hemisphere. A few are outstanding deciduous ornamental and shade trees, with heart-shaped, coarsely toothed leaves, fragrant cream-coloured flowers, and small globular fruit. The American linden (*T. americana*), also called basswood or whitewood, grows as high as 130 ft (40 m). Its wood is used for beehives, crating, furniture, and packing material; like other linden species, it is also a popular bee tree, yielding a distinctive, pale, fragrant honey.

Lindisfarne *or* **Holy Island** Historic small island 2 mi (3 km) from the English Northumbrian coast. It became a religious centre in 635, when

© 2006 Encyclopædia Britannica, Inc.

St. Aidan established a monastery and church there. It was abandoned in 875 because of the threat of Danish raids, but the monastery was refounded in 1082 and survived until the dissolution of the monasteries (1536–40) under Henry VIII. The manuscript of the Lindisfarne Gospels (c. 696–698) is one of the finest surviving illuminated manuscripts of the period. Lindisfarne's present-day parish church may occupy the site of St. Aidan's original monastery.

Lindisfarne Gospels Illuminated manuscript version of the four Gospels, produced in the late 7th century for the Northumbrian island monastery of Lindisfarne. The book was designed and executed by Eadfrith, who became bishop of Lindisfarne in 698. Illuminated in the Hiberno-Saxon style, the Lindisfarne Gospels (now in the British Library) show the fusion of Irish, Classical, and Byzantine elements. See also Book of Kells.

Lindsay, Howard (b. March 29, 1889, Waterford, N.Y., U.S.—d. Feb. 11, 1968, New York, N.Y.) U.S. playwright, actor, and producer known for his collaboration with Russel Crouse (1893–1966). Lindsay began his career as an actor, director, and playwright, and Crouse was a journalist before they were paired by producer Vinton Freedley to write librettos for the successful Cole Porter musicals *Anything Goes* (1934) and *Red, Hot and Blue* (1936). Their most popular play, *Life with Father* (1939), ran for over seven years and starred Lindsay as Father. They produced *Arsenic and Old Lace* (1940) and later wrote librettos for musicals such as *State of the Union* (1945, Pulitzer Prize) and *The Sound of Music* (1959).

Lindsay, (Nicholas) Vachel (b. Nov. 10, 1879, Springfield, Ill., U.S.—d. Dec. 5, 1931, Springfield) U.S. poet. In his youth, he began traveling the country reciting his poems in return for food and shelter, in an attempt to revive poetry as an oral art form of the common people. He first received widespread recognition for "General William Booth Enters into Heaven" (1913), about the founder of the Salvation Army. His works are full of powerful rhythms, vivid imagery, and bold rhymes and express an ardent patriotism, a passion for progressive democracy, and a romantic view of nature. His collections include *Rhymes to Be Traded for Bread* (1912), *The Congo* (1914), and *The Chinese Nightingale* (1917). He was responsible for discovering the work of Langston Hughes. Depressed and unstable in later years, he committed suicide by drinking poison.

line Basic element of Euclidean geometry. Euclid defined a line as an interval between two points and claimed it could be extended indefinitely in either direction. Such an extension in both directions is now thought of as a line, while Euclid's original definition is considered a line segment. A ray is part of a line extending indefinitely from a point on the line in only one direction. In a coordinate system on a plane, a line can be represented by the linear equation $ax + by + c = 0$. This is often written in the slope-intercept form as $y = mx + b$, in which m is the slope and b is the value where the line crosses the y-axis. Because geometrical objects whose edges are line segments are completely understood, mathematicians frequently try to reduce more complex structures into simpler ones made up of connected line segments.

line integral In mathematics, the integral of a function of several variables defined on a line or curve that has been expressed in terms of arc length (see length of a curve). An ordinary definite integral is defined over a line segment, whereas a line integral may use a more general path, such as a parabola or a circle. Line integrals are used extensively in the theory of functions of a complex variable.

Line Islands Chain of islands, central Pacific Ocean, south of the Hawaiian Islands. The Line Islands extend 1,600 mi (2,600 km) and have a land area of 193 sq mi (500 sq km). Of the northern group, Teraina (Washington) Island and the Tabuaeran (Fanning) and Kiritimati (Christmas) atolls belong to the Republic of Kiribati, while Kingman Reef, Palmyra Atoll, and Jarvis Island are U.S. territories. Kiribati also holds the central group (Malden and Starbuck islands) and the southern group (Vostok and Flint islands and Caroline Atoll).

Linear A and Linear B Linear forms of writing used by Aegean civilizations during the 2nd millennium BC. Examples of Linear A, a syllabary (a writing system in which one character represents a whole syllable) written from left to right, date from 1850 BC to 1400 BC. The language written in Linear A remains unknown. Linear B, adapted from Linear A, was borrowed from the Minoan civilization by the Mycenaean Greeks, probably c. 1600 BC, and used to write the Mycenaean Greek dialect. Examples of Linear B script have been found on clay tablets and vases from c. 1400–1200 BC. These texts represent the oldest known form of Greek. Linear B was deciphered as Greek in 1952 by Michael Ventris and John Chadwick.

linear accelerator *or* **linac** Type of particle accelerator that imparts a series of relatively small increases in energy to subatomic particles as they pass through a sequence of alternating electric fields set up in a linear structure. The small accelerations add together to give the particles a greater energy than could be achieved by the voltage used in one section alone. One of the world's longest linacs is the 2-mi (3.2-km) machine at the Stanford Linear Accelerator Center, which can accelerate electrons to energies of 50 billion electron volts. Much smaller linacs, both proton and electron types, have important practical applications in medicine and industry.

linear algebra Branch of algebra concerned with methods of solving systems of linear equations; more generally, the mathematics of linear transformations and vector spaces. "Linear" refers to the form of the equations involved—in two dimensions, $ax + by = c$. Geometrically, this represents a line. If the variables are replaced by vectors, functions, or derivatives, the equation becomes a linear transformation. A system of equations of this type is a system of linear transformations. Because it shows when such a system has a solution and how to find it, linear algebra is essential to the theory of mathematical analysis and differential equations. Its applications extend beyond the physical sciences into, for example, biology and economics.

linear approximation In mathematics, the process of finding a straight line that closely fits a curve (function) at some location. Expressed as the linear equation $y = ax + b$, the values of a and b are chosen so that the line meets the curve at the chosen location, or value of x, and the slope of the line equals the rate of change of the curve (derivative of the function) at that location. For most curves, linear approximations are good only very close to the chosen x. Yet much of the theory of calculus, including the fundamental theorem of calculus and the mean-value theorem for derivatives, is based on such approximations.

linear programming Mathematical modeling technique useful for guiding quantitative decisions in business, industrial engineering, and to a lesser extent the social and physical sciences. Solving a linear programming problem can be reduced to finding the optimum value (see optimization) of a linear equation (called an objective function), subject to a set of constraints expressed as inequalities. The number of inequalities and variables depends on the complexity of the problem, whose solution is found by solving the system of inequalities like a system of equations. The extensive use of linear programming during World War II to deal with transportation, scheduling and allocations of resources under constraints like cost and priority gave the subject an impetus that carried it into the postwar era. The number of equations and variables needed to model real-life situations accurately is large, and the solution process can be time-consuming even with computers. See also simplex method.

linear transformation In mathematics, a rule for changing one geometric figure (or matrix or vector) into another using a formula with a specified format. The format must be a linear combination, in which the original components (e.g., the x and y coordinates of each point of the original figure) are changed via the formula $ax + by$ to produce the coordinates of the transformed figure. Examples include flipping the figure over the x or y axis, stretching or compressing it, and rotating it. Every such transformation has an inverse, which undoes its effect.

linen Fibre, yarn, and fabric made from the flax plant. Flax is one of the oldest textile fibres used by humans; evidence of its use has been found in Switzerland's prehistoric lake dwellings. Fine linen fabrics have been discovered in ancient Egyptian tombs. The fibre is obtained by subjecting plant stalks to a series of operations, including retting (a fermentation process), drying, crushing, and beating. Linen is stronger than cotton, dries more quickly, and is more slowly affected by exposure to sunlight. Low elasticity, imparting a hard, smooth texture, makes linen subject to wrinkling. Because linen absorbs and releases moisture quickly and is a good conductor of heat, linen garments feel cool to wearers. Fine grades of linen are made into woven fabrics and laces for apparel and household furnishings.

linga *or* **lingam** In Hinduism, the symbol of the god Shiva and of generative power. Fashioned from wood, gems, metal, or stone, lingas are the main objects of worship in temples to Shiva and family shrines through-

© 2006 Encyclopædia Britannica, Inc.

out India. Historically, the linga was a representation of the phallus, as sculptures from the 1st–2nd century AD, the earliest dates of linga worship, make clear, and most modern Hindus think of it in these terms. The stylization of the linga as a smooth cylindrical mass asserts an aniconic meaning. A sexual dimension remains in the most common form in which the linga appears today. The YONI, symbol of the female sex organ, often forms the base of the linga, a reminder that the male and female principles together represent the totality of existence. The linga is worshiped with offerings of flowers, water, fruit, leaves, and rice; the purity of the materials and the cleanliness of the worshiper are particularly stressed.

Sandstone *linga*, c. 900; in the British Museum.
COURTESY OF THE TRUSTEES OF THE BRITISH MUSEUM

Lingayat \ˈliŋ-gə-yət\ Member of a Hindu sect that worships SHIVA as the only deity. It has a wide following in southern India. Its followers take their name ("linga-wearers") from the small LINGAS that both men and women wear on a cord around the neck. The Lingayats' belief in a single deity and their concept of BHAKTI (devotion) as an intuitive and loving knowledge of God show the influence of RAMANUJA. They reject BRAHMA and the authority of the VEDAS; their opposition to child marriage and the ill-treatment of widows anticipated the social reform movements of the 19th century.

Lingayen \ˌliŋ-gä-ˈyen\ **Gulf** Inlet, South CHINA SEA, northwestern coast of LUZON, Philippines. It is 26 mi (42 km) wide at its entrance and 36 mi (56 km) long. It has several islands, the largest of which is Cabarruyan Island. Dagupan, on the bay's southeast coast, is the principal commercial centre. It was the scene of Japanese and U.S. troop-landing operations during World War II.

lingcod Commercially popular fish species (*Ophiodon elongatus*) that is strictly marine, found along the Pacific coast of North America. It is a voracious predator with a large mouth and caninelike teeth. Lingcods are popular game and commercial fish that may reach a length of 5 ft (1.5 m). They have well-developed fins and tails. The meat, though greenish, is considered highly edible.

lingonberry Fruit of a small creeping plant (*Vaccinium vitis-idaea*) of the HEATH FAMILY, related to the BLUEBERRY and CRANBERRY. Also known as cowberry, foxberry, and mountain or rock cranberry, the lingonberry is a wild plant used for jelly and juice by northern Europeans and by Scandinavians in the U.S. The plants grow densely in the forest understory and, like cranberries, can be harvested by raking.

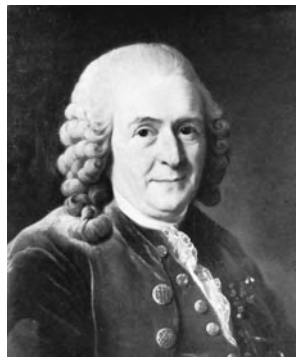
lingua franca \ˈliŋ-gwə-ˈfraŋ-kə\ Language used for communication between two or more groups that have different native languages. It may be a standard language—for example, English and French are often used for international diplomacy, and SWAHILI is used by speakers of the many different local languages of eastern Africa. A lingua franca may also be a PIDGIN, like Melanesian Pidgin, widely used in the southern Pacific. The term lingua franca (Latin: "Frankish language") was first applied to a pidgin based on French and Italian developed in the Mediterranean. See also CREOLE.

linguistics Study of the nature and structure of language. It traditionally encompasses SEMANTICS, SYNTAX, and PHONOLOGY. Synchronic linguistic studies aim to describe a language as it exists at a given time; diachronic studies trace a language's historical development. Greek philosophers in the 5th century BC who debated the origins of human language were the first in the West to be concerned with linguistic theory. The first complete Greek GRAMMAR, written by Dionysus Thrax in the 1st century BC, was a model for Roman grammarians, whose work led to the medieval and Renaissance vernacular grammars.

With the rise of historical linguistics in the 19th century, linguistics became a science. In the late 19th and early 20th centuries FERDINAND DE SAUSSURE established the structuralist school of linguistics (see STRUCTURALISM), which analyzed actual speech to learn about the underlying structure of language. In the 1950s NOAM CHOMSKY challenged the structuralist program, arguing that linguistics should study native speakers' unconscious knowledge of their language (competence), not the language they actually produce (performance). His general approach, known as transformational GENERATIVE GRAMMAR, was extensively revised in subsequent decades as the extended standard theory, the principles-and-parameters (government-binding) approach, and the minimalist program. Other grammatical theories developed from the 1960s were generalized phrase structure grammar, lexical-functional grammar, relational grammar, and cognitive grammar. Chomsky's emphasis on linguistic competence greatly stimulated the development of the related disciplines of PSYCHOLINGUISTICS and neurolinguistics. Other related fields are anthropological linguistics, COMPUTATIONAL LINGUISTICS, mathematical linguistics, SOCIOLINGUISTICS, and the PHILOSOPHY OF LANGUAGE.

linguistics, historical Branch of linguistics concerned with examining changes in PHONOLOGY, GRAMMAR, and SEMANTICS during a language's evolution, reconstructing earlier stages, and uncovering evidence of the influence of other languages. Its roots are in Classical and medieval writings on etymology and in the comparative study of Greek and Latin during the Renaissance. Only in the 19th century did more scientific language-analysis methods lead to the development of historical linguistics as a scholarly discipline. The Neogrammarians, a group of German linguists who formulated sound correspondences in the INDO-EUROPEAN LANGUAGES, were especially influential. In the 20th century the methods of historical linguistics were extended to other language groups.

linkage In mechanical engineering, a system of solid, usually metallic, links (bars) connected to two or more other links by pin joints (hinges), sliding joints, or ball-and-socket joints to form a closed chain or a series of closed chains. When one link is fixed, the possible movements of the other links relative to the fixed link and to one another depend on the number of links and the number and types of joints. With four pin-connected links, for example, the links all move in parallel planes, and regardless of which link is fixed, the others move in a fixed way relative to the fixed link. With various relative lengths of the links, this four-bar linkage becomes a useful mechanism for converting uniform rotary to non-uniform rotary motion or continuous rotary to oscillatory motion. It is the most commonly used linkage mechanism in machine construction.



linkage group All the GENES on a single CHROMOSOME. They are inherited as a group; during cell division they act and move as a unit rather than independently. Variations in linkage groups can occur if a chromosome breaks, and the sections join with the partner chromosome if it has broken in the same places. This exchange of genes between chromosomes, called crossing-over, usually occurs during MEIOSIS. Sex linkage is the tendency of a characteristic to be linked to one sex; sex-linked traits in humans include red-green colour blindness and hemophilia.

Linkletter, Art(hur Gordon) (b. July 17, 1912, Moose Jaw, Sask., Can.) Canadian-born U.S. broadcasting host. He served as emcee for the variety show *House Party* (1943–67), which involved the audience in spontaneous contests and activities; he created the show's popular segment "Kids Say the Darndest Things." He hosted another audience-participation show, *People Are Funny*, on radio (1943–59) and television (1954–61). He wrote more than 20 books, including the best-selling *Kids Say the Darndest Things* (1957), *I Wish I'd Said That* (1968), and *Old Age Is Not for Sissies* (1988).

Linnaeus \lə-ˈnē-əs**, Carolus** *Swedish* **Carl von Linné** (b. May 23, 1707, Råshult, Småland, Swed.—d. Jan. 10, 1778, Uppsala) Swedish botanist and explorer. He studied botany at Uppsala university and explored Swedish Lapland before going to Holland to study medicine

© 2006 Encyclopædia Britannica, Inc.

(1735). There he became the first to develop principles for defining genera and species of organisms and to create a uniform system for naming them, BINOMIAL NOMENCLATURE. Linnaeus's system was based mainly on flower parts, which tend to remain unchanged during evolution. Though artificial, such a system was valuable in that it enabled students to place a plant rapidly in a named category. Linnaeus not only systematized the plant and animal kingdoms, but he also classified the mineral kingdom and wrote a study of the diseases known in his day. His manuscripts, herbarium, and collections are preserved by London's Linnaean Society. His works include *Systema Naturae* (1735), *Fundamenta Botanica* (1736), and *Species Plantarum* (1753).

linoleum Smooth-surfaced floor covering made from a mixture of oxidized linseed oil, resins, and other substances such as binder, fillers, and pigments, applied to a felt or canvas backing. Linoleum is flexible, warm, and unaffected by ordinary floor temperatures, and it does not readily burn. It is specially hardened to resist indentation and is not susceptible to damage from fats, oils, greases, or organic solvents.

Linotype \'lī-nə-ˌtīp\ Trademark name for a TYPESETTING machine by which characters are cast in type metal as a complete line, rather than as individual characters (as on the Monotype typesetting machine). It was patented in 1884 by OTTMAR MERGENTHALER. It has now been almost entirely supplanted by photocomposition. In Linotype, a keyboard is manipulated to compose each line of text. The slugs produced by the machine are rectangular solids of type metal (an alloy of lead, antimony, and tin) with raised characters that are a mirror image of the desired printed line. After hot-metal CASTING, the slug of type, air-cooled briefly, is placed in a "stick" for insertion in the proper position into the press form being made up. See also LETTERPRESS PRINTING, PRINTING.

Linux \'li-nəks\ Nonproprietary OPERATING SYSTEM (OS) for digital computers. In 1991 Linus Torvalds of Finland began asking for volunteer programmers over the INTERNET to collaborate on the development of a UNIX-like OS for PERSONAL COMPUTERS; the "1.0" release of Linux was in 1994. A true multiuser, multitasking system, Linux contained features (e.g., virtual memory, shared libraries, memory management, and TCP/IP networking) formerly only found on MAINFRAME computers. With its source code freely available, thousands of volunteers, as well as several companies that sell prepackaged Linux products, have contributed to the OS. A reliable, fast-performing system with good security features, Linux is popular for corporate computer NETWORK and Web SERVERS.

Linz \'lints\ *ancient* **Lentia** City (pop., 2001: 183,504), north-central Austria. Located on the DANUBE RIVER west of VIENNA and on the direct rail route between the Baltic and Adriatic seas, it originated as a Roman fortress. An important medieval trading centre, it was noted for its fairs in the 15th century. Linz was badly damaged in World War II. It is now a cultural centre and the seat of Johannes Kepler University.

lion Large, powerfully built CAT (*Panthera leo*), the proverbial "king of beasts." It is now found mainly in parts of sub-Saharan Africa, though about two hundred constitute an Asiatic race living under strict protection in India. Lions inhabit grassy plains and open savanna. The male is 6–7 ft (1.8–2.1 m) long, excluding the 3-ft (1-m) tail, stands about 4 ft (1.2 m) high at the shoulder, and weighs 370–500 lbs (170–230 kg). The female, or lioness, is considerably smaller. The male's coat is usually buff yellow or orange-brown; lionesses are more consistently tawny or sandy. The male's outstanding characteristic is his mane. Lions are unique among cats in that they live in a group, or pride, often consisting of about 15 individuals. Lionesses are the chief hunters. They prey on animals of all sizes, including hippopotamuses, but prefer wildebeests, antelopes, and zebras. After eating, a lion may rest for a week.

Male lion (*Panthera leo*).
R.I.M. CAMPBELL/BRUCE COLEMAN LTD.

Lion, Gulf of Gulf of the Mediterranean Sea, extending along the coast of southern France from the Spanish border to Toulon. Major ports along the gulf are MARSEILLE and Sète.

lionfish Any of several species of showy Indo-Pacific fish of the SCORPION-FISH family (Scorpaenidae), noted for their venomous fin spines, which can inflict painful, though rarely fatal, puncture wounds. Lionfish have enlarged pectoral fins and elongated dorsal fin spines, and each species bears a particular pattern of bold stripes. When disturbed, the fish spread and display their fins, and, if further pressed, present and attack with the dorsal spines. *Pterois volitans*, sometimes kept by fish fanciers, is striped with red, brown, and white and grows to about 12 in. (30 cm) long. Several smaller Indo-Pacific species of the genus *Dendrochirus* are also known as lionfish.

Lions Clubs, International Association of Civilian service club. The largest such organization in the world, it was founded in Dallas, Texas, U.S. in 1917 to foster a spirit of "generous consideration" among peoples of the world and to promote good government, good citizenship, and active interest in civic, social, commercial, and moral welfare. Its activities include general community welfare projects, aid to the blind, promotion of knowledge, and support for the UN. Lions Clubs operate in some 190 countries.

Lipari Islands See EOLIE ISLANDS

Lipchitz \'lip-shits**, Jacques** *orig.* **Chaim Jacob Lipchitz** (b. Aug. 10, 1891, Druskininkai, Lithuania, Russian Empire —d. May 26, 1973, Capri, Italy) Lithuanian-born French sculptor, he was also active in the U.S. Trained as an engineer in Vilnius, he turned to sculpture after moving to Paris in 1909. His early work was Cubist in style. Around 1925 he began producing a series of works known as "transparents," open-spaced, curvilinear bronzes, such as *Harpist* (1928), which would greatly influence the course of sculpture in the following quarter-century. After settling near New York City in 1941, he produced such massive works as *The Prayer* (1943) and *Bellerophon Taming Pegasus* (1966).

lipid \'lip-əd\ Any of a diverse class of organic compounds, found in all living things, that are greasy and insoluble in water. One of the three large classes of substances in foods and living cells, lipids contain more than twice as much energy (CALORIES) per unit of weight as the other two (PROTEINS and CARBOHYDRATES). They include the FATS and edible OILS (e.g., butter, olive oil, corn oil), which are primarily TRIGLYCERIDES; phospholipids (e.g., LECITHIN), which are important in cell structure and metabolism; WAXES of animal or plant origin; and sphingolipids, complex substances found in various tissues of the brain and nervous system. Since insolubility is the defining characteristic, CHOLESTEROL and related STEROIDS, carotenoids (see CAROTENE), PROSTAGLANDINS, and various other compounds are also classifiable as lipids.

lipid storage disease Any of a group of relatively rare hereditary disorders of FAT METABOLISM in which ENZYME defects cause distinctive types of LIPIDS to accumulate. They include TAY-SACHS DISEASE, Gaucher disease, Niemann-Pick disease, and Fabry disease. Several are untreatable and cause death before age five; others occur in adulthood.

Lipizzaner *or* **Lippizaner** \ˌli-pət-'sä-nər\ Breed of light HORSE named for the Austrian imperial stud at Lipizza, near Trieste, formerly part of Austria-Hungary. The founding of the breed, which has six strains, dates to 1580. Lipizzaners have a long back and a short, thick neck, average 15–16 hands (about 60–64 in., or 152–164 cm) in height and 1,000–1,300 lbs (450–585 kg) in weight, and are usually gray. Some are found in countries that were originally part of Austria-Hungary; a few have been exported to the U.S. The best known are those trained at Vienna's Spanish Riding School.

lipoprotein \ˌlī-pə-'prō-ˌtēn\ Any of a class of organic compounds that contain both LIPID (FAT) and PROTEIN. They may be soluble (those in egg yolk and blood plasma) or insoluble (those in cell membranes) in water and water solutions. Lipoproteins in blood plasma are the mode of transport for CHOLESTEROL, insoluble by itself. Low-density lipoproteins (LDLs) carry

© 2006 Encyclopædia Britannica, Inc.

cholesterol from the liver, where it is made, to the cells, where it is used; high-density lipoproteins (HDLs) may carry excess cholesterol back to the liver for breakdown and excretion. LDL-bound cholesterol is primarily responsible for deposits in arteries (see ARTERIOSCLEROSIS) that can lead to CORONARY HEART DISEASE, ANGINA PECTORIS, MYOCARDIAL INFARCTION, or STROKE. HDL does not form such deposits and may actually retard or reduce their buildup.

Lippe \'li-pə\ Former German state. It lay between the TEUTOBURG FOREST and the WESER RIVER, and its capital was Detmold. A lordship in medieval times, it became a county in the 16th century. Dynastic divisions in the early 17th century resulted in two counties, Lippe and SCHAUMBURG-LIPPE. In 1720 it was made a principality. A member of the GERMAN CONFEDERATION in 1815, it became part of the German Empire in 1871 and of the WEIMAR REPUBLIC in 1918. In 1947 it was incorporated into North Rhine–Westphalia.

Lippe River River, western Germany. Rising on the western edge of the TEUTOBURG FOREST, it follows a westerly course of 155 mi (250 km) and enters the RHINE RIVER near Wesel. Once used for the transport of coal, timber, and agricultural produce, it now supplies water to the RUHR region canal system.

Lippi, Filippino (b. c. 1457, Prato, Republic of Florence—d. April 18, 1504, Florence) Italian painter. After the death of his father, FRA FILIPPO LIPPI, when Filippino was 12, he entered the workshop of SANDRO BOTTICELLI and absorbed many aspects of his style. One of his most important assignments was the completion of the frescoes in the Brancacci Chapel in Florence's Santa Maria del Carmine (c. 1485–87), left unfinished when MASACCIO died. His most popular painting is the *Vision of St. Bernard* altarpiece (c. 1480). His highly decorative frescoes in the Carafa Chapel in Santa Maria sopra Minerva, Rome (1488–93), and those in the Strozzi Chapel in Santa Maria Novella, Florence (completed 1502), anticipated Tuscan Mannerism of the 16th century.

Lippi, Fra Filippo (b. c. 1406, Florence—d. Oct. 8/10, 1469, Spoleto, Papal States) Italian painter. In 1421 he became a Carmelite monk at Santa Maria del Carmine in Florence, where MASACCIO was soon decorating the Brancacci Chapel with frescoes. Lippi himself painted frescoes in the church, much influenced by Masaccio's, then disappeared from the monastery in 1432. In 1434 he was in Padua, but in 1437 he returned to Florence under the protection of the MEDICI FAMILY and was commissioned to execute several works for convents and churches. His *Madonna and Child* (1437) and *Annunciation* (c. 1442) show a maturing style characterized by warm colouring and attention to decorative effects. Later critics have recognized in Lippi a "narrative" spirit that reflected the life of his time and translated into everyday terms the ideals of the early RENAISSANCE. In 1456, while painting in a convent in Prato, he fled with one of the nuns, Lucrezia Buti. The couple was later released from their individual vows and permitted to marry, and from that union was born the illustrious FILIPPINO LIPPI. The former friar returned often to Prato, and his frescoes in the cathedral there stand among his finest achievements.

"The Madonna and Child with Two Angels," by Fra Filippo Lippi, c. 1465; in the Uffizi, Florence
ALINARI—ART RESOURCE/EB INC.

Lippmann, Walter (b. Sept. 23, 1889, New York, N.Y., U.S.—d. Dec. 14, 1974, New York) U.S. newspaper commentator and author. Educated at Harvard, he became an editor at the fledgling *NEW REPUBLIC* (1914–17). His thinking influenced WOODROW WILSON, and he took part in the negotiations that culminated in the Treaty of Versailles. After writing for and editing the reformist *World*, he moved to the *New York Herald-Tribune,* where he began his "Today and Tomorrow" column in 1931; eventually widely syndicated, it won two Pulitzer Prizes (1958, 1962), and Lippmann became one of the most respected political columnists in the world. His books include *A Preface to Politics* (1913); *Public Opinion* (1922), perhaps his most influential work; *The Phantom Public* (1925); and *The Good Society* (1937).

Lipset, Seymour Martin (b. March 18, 1922, New York, N.Y., U.S.) U.S. sociologist and political scientist. He received his bachelor's degree from the City College of New York and his Ph.D. from Columbia University, where he later taught (1950–56). While teaching at the University of California, Berkeley (1956–66), he also served as director of its Institute of International Studies (1962–66). Since then he has taught at Harvard University, Stanford University, and George Mason University. His many books about class structure, elite behaviour, and political parties have significantly shaped the study of comparative politics.

Lipton, Sir Thomas J(ohnstone) (b. May 10, 1850, Glasgow, Scot.—d. Oct. 2, 1931, London, Eng.) British merchant who built the Lipton tea empire. He opened a small grocery in Glasgow that grew into a chain of retail shops throughout Britain. To supply his shops cheaply, Lipton bought tea, coffee, and cocoa plantations in Ceylon as well as English fruit farms, jam factories, and bakeries. In 1898 his business was organized into Lipton, Ltd.; he was knighted the same year and made a baronet in 1902. A keen yachtsman, he raced his Shamrock yachts five times unsuccessfully for the AMERICA'S CUP.

liquation \li-'kwā-shən\ Technique for separating constituents of an ore, metal, or alloy by partial melting. When the material is heated to a temperature where one of the constituents melts and the other remains solid, the liquid constituent can be drained off. It was formerly used for extracting antimony minerals from ore, separating silver from copper with the use of lead as a solvent, and refining tin.

liqueur \li-'kər\ LIQUOR produced by combining a base spirit, usually BRANDY, with flavourings and sugar syrup. Alcohol content ranges from 24% to 60% by volume, and flavourings include fruits, nuts, herbs, spices, and such ingredients as coffee and chocolate. Liqueurs were probably first produced commercially by medieval monks and alchemists. Sweet and containing ingredients that promote digestion, they are popular as after-dinner drinks and are also used in mixed drinks and dessert dishes. Varieties include apricot liqueur, crème de menthe (mint-flavoured), curaçao (with green orange peel, from Curaçao), and proprietary brands such as Bénédictine (an herb liqueur), Grand Marnier (an orange liqueur from France's Cognac region), Irish Mist (flavoured with Irish whiskey and honey), and Kahlúa (coffee-flavoured).

liquid One of the three principal states of matter, intermediate between a gas and a solid. A liquid has neither the orderliness of a solid nor the randomness of a gas. Liquids have the ability to flow under the action of very small shear STRESSES. Liquids in contact with their own vapour or air have a SURFACE TENSION that causes the interface to assume the configuration of minimum area (i.e., spherical). Surfaces between liquids and solids have interfacial tensions that determine whether the liquid will wet the other material. With the exception of liquid metals, molten salts, and solutions of salts, the electrical conductivities of liquids are small.

liquid crystal Substance that flows like a liquid but maintains some of the ordered structure characteristic of a CRYSTAL. Some organic substances do not melt directly when heated but instead turn from a crystalline solid to a liquid crystalline state. When heated further, a true liquid is formed. Liquid crystals have unique properties. The structures are easily affected by changes in mechanical STRESS, ELECTROMAGNETIC FIELDS, temperature, and chemical environment. See also LIQUID CRYSTAL DISPLAY.

liquid crystal display (LCD) Optoelectronic device used in displays for watches, calculators, notebook computers, and other electronic devices. Current passed through specific portions of the LIQUID CRYSTAL solution causes the crystals to align, blocking the passage of light. Doing so in a controlled and organized manner produces visual images on the display screen. The advantage of LCDs is that they are much lighter and consume less power than other display technologies (e.g., CATHODE-RAY TUBES). These characteristics make them an ideal choice for flat-panel displays, as in portable laptop and notebook computers.

liquidity preference In economics, the premium that holders of wealth demand for exchanging ready money or bank deposits for safe, nonliquid assets such as government BONDS. As first used by JOHN MAYNARD KEYNES, liquidity preference referred to the demand for money as an asset. He hypothesized that the amount of money held for this purpose would vary inversely with the rate of INTEREST. Post-Keynesian analysis of

© 2006 Encyclopædia Britannica, Inc.

liquidity preference has identified other factors that influence the demand for money, including income levels and the yields of various forms of wealth.

liquor See DISTILLED LIQUOR

Liri River \'lē-rē\ River, central Italy. It rises near Cappadocia and flows south and southeast through the APENNINES. Joined by other rivers, it turns southwest to empty into the Tyrrhenian Sea near Minturno. It is 98 mi (158 km) long. During World War II, the Liri valley was invaded by Allies as part of their advance on Rome.

Lisbon *Portuguese* **Lisboa** City (pop., 2001: 556,797), capital of PORTUGAL. The country's chief seaport and largest city, it lies on the TAGUS RIVER near the river's entrance into the Atlantic Ocean. It was under Roman rule from 205 BC; JULIUS CAESAR made it a municipium called Felicitas Julia. Ruled by a series of barbarian tribes from the 5th century, it was captured by Moors in the 8th century. The Crusaders under AFONSO I gained control of it in 1147, and it became the national capital in 1256. It flourished as a leading European trading city in the 14th–16th centuries. One of the greatest earthquakes ever recorded struck Lisbon in 1755, killing 30,000. Urban renewal following the earthquake was unrivaled in scope. Lisbon hosted the World's Fair (Expo '98). It is a major commercial, administrative, educational, and manufacturing centre. It was the birthplace of LUIS CAMÕES.

Lisburn Town (pop., 1991: 42,110), seat of Lisburn district (pop., 2001: 108,694), Northern Ireland. Located on the River Lagan southwest of BELFAST, it was a small village known as Lisnagarvey before English, Scots, and Welsh settled there in the 1620s as part of the Plantation of Ulster scheme. It later attracted French linen workers who introduced Dutch looms and reorganized the Ulster linen industry; the town is still an important linen-manufacturing centre. The district was created in 1973.

LISP \'lisp\ Powerful computer PROGRAMMING LANGUAGE designed for manipulating lists of data or symbols rather than processing numerical data, used extensively in ARTIFICIAL-INTELLIGENCE applications. It was developed in the late 1950s and early 1960s by a group headed by JOHN MCCARTHY at MIT. Its name derives from "list processor." Radically different from such other programming languages as ALGOL, C, C++, FORTRAN, and PASCAL, it requires large memory space and is slow in executing programs.

Lissitzky, El *or* **El Lisitsky** *orig.* **Lazar Markovich Lisitskii** (b. Nov. 10, 1890, Pochinok, near Smolensk, Russia—d. Dec. 30, 1941, Moscow) Russian painter, typographer, and designer. As a teacher at MARC CHAGALL's revolutionary art school in Vitebsk, he met KAZIMIR MALEVICH, whose influence is seen in a series of abstract paintings that were Lissitzky's major contribution to CONSTRUCTIVISM. In 1922, after the Soviet government turned against modern art, he went to Germany. There THEO VAN DOESBURG and LÁSZLÓ MOHOLY-NAGY transmitted his ideas to the West through their teaching at the BAUHAUS. In 1925 he returned to Russia and devoted himself to devising new techniques of printing, photomontage, and architecture.

List, (Georg) Friedrich (b. Aug. 6, 1789, Reutlingen, Württemberg, Ger.—d. Nov. 30, 1846, Kufstein, Austria) German-born U.S. economist. He first gained prominence as the founder of an association of German industrialists that favoured abolishing tariff barriers between the German states. Exiled in 1825 for his liberal views, he went to the U.S. In his *Outlines of American Political Economy* (1827) he maintained that a national economy in an early stage of industrialization required tariff protection to stimulate development. After becoming a U.S. citizen, he returned to Germany as U.S. consul at Baden (1831–34) and Leipzig (1834–37). His best-known work was *The National System of Political Economy* (1841). Financial and other difficulties eventually drove him to suicide.

Lister, Joseph *later* **Baron Lister (of Lyme Regis)** (b. April 5, 1827, Upton, Essex, Eng.—d. Feb. 10, 1912, Walmer, Kent) British surgeon and medical scientist. He received a medical degree from Oxford in 1852 and became an assistant to James Syme, the greatest surgical teacher of the day. In 1861 he was appointed surgeon to the Glasgow Royal Infirmary, where he observed that 45–50% of amputation patients died from sepsis (infection). Initially he theorized that airborne dust might cause sepsis, but in 1865 he learned of LOUIS PASTEUR's theory that microorganisms cause infection. Using PHENOL as an antiseptic, Lister reduced mortality in his ward to 15% within four years. Most surgeons were unconvinced until a widely publicized operation under antiseptic conditions was successful. By the time of his retirement in 1893, he had seen his principle accepted almost universally. He is regarded as the founder of antiseptic medicine.

Joseph Lister, 1857.
COURTESY OF THE WELLCOME TRUSTEES, LONDON

Liszt \'list**, Franz** *Hungarian* **Ferenc Liszt** (b. Oct. 22, 1811, Raiding, Hung.—d. July 31, 1886, Bayreuth, Ger.) Hungarian composer and pianist. Encouraged by his father, who was a talented amateur musician, Liszt developed an early interest in music and began composing at age eight. He studied piano with KARL CZERNY and composition with ANTONIO SALIERI in Vienna, making his debut there in 1822. After a Paris success in 1823, he toured Europe, but his father's early death (1828) and a disastrous love affair led to a desire to give up music for the priesthood. Hearing violinist NICCOLÒ PAGANINI perform in 1831, Liszt was inspired to develop his own technique to the utmost and to compose his first mature pieces, including the *Transcendental Études* (1837) and *Paganini Études* (1839). An affair with Countess Marie d'Agoult resulted in the birth of his daughter, Cosima (1837–1930), who would marry his friend, the composer RICHARD WAGNER. Liszt's brilliance and success were at their peak during the 1840s, when he toured Europe as a virtuoso, earning great adulation for his panache and his astounding technique. He ceased concertizing in the late 1840s to devote himself to composition and furthering the work of progressive composers. In the 1850s he wrote many of his most ambitious works, including *A Faust Symphony* (1854) and the *Piano Sonata in B Minor* (1853). In 1865 he took minor Roman Catholic church orders, though he never became a priest. His later output is remarkable in anticipating many 20th-century developments; for instance, his development of chromatic harmony influenced atonal music.

Franz Liszt, lithograph by Joseph Kriehuber, 1846.
COURTESY OF THE MUSEO TEATRALE ALLA SCALA, MILAN

Litani \li-'tä-nē\ **River** River, southern Lebanon. Rising west of BAALBEK, it flows southwest between the LEBANON and ANTI-LEBANON MOUNTAINS to enter the Mediterranean Sea south of Sidon. Its lower course is known as Qāsimiyyah. Although only 90 mi (145 km) long, the river irrigates one of Lebanon's most extensive farming regions, the BIQĀʿ VALLEY.

litchi *or* **lichee** *or* **lychee** \'lē-chē, 'lī-chē\ Fruit of the tree *Litchi chinensis* (family Sapindaceae), believed to be native to southern China and adjacent regions but now also cultivated elsewhere. It has been a favourite fruit of the Cantonese since ancient times and is a popular dessert in U.S. Chinese restaurants. The fresh pulp tastes musky; when dried, it is acidic and very sweet. The handsome tree develops a compact crown of foliage, with compound leaves that are bright green year-round. Clusters of small, inconspicuous flowers form small, oval red fruits.

literacy Ability to read and write. The term may also refer to familiarity with literature and to a basic level of education obtained through the

© 2006 Encyclopædia Britannica, Inc.

written word. In ancient civilizations such as those of the Sumerians and Babylonians, literacy was the province of an elite group of scholars and priests. Though more prevalent in classical Greece and Rome, it was often limited to members of the upper classes. The spread of literacy in Europe in the Middle Ages was evidenced by the use of writing for functions once conducted orally, such as the indenture of servants and the notation of evidence at trials. The rise of literacy in Europe was closely tied to great social transformations, notably the Protestant Reformation, which brought individual study of the Bible, and the development of modern science. The spread of literacy during the Reformation and the Renaissance was greatly facilitated by the development of PRINTING from movable type and by the adoption of vernacular languages in place of Latin. Compulsory schooling, established in Britain, Europe, and the U.S. in the 19th century, has led to high rates of literacy in the modern industrialized world.

literary criticism Discipline concerned with philosophical, descriptive, and evaluative inquiries about literature, including what literature is, what it does, and what it is worth. The Western critical tradition began with PLATO's *Republic* (4th century BC). A generation later, ARISTOTLE, in his *Poetics*, developed a set of principles of composition that had a lasting influence. European criticism since the Renaissance has primarily focused on the moral worth of literature and the nature of its relationship to reality. At the end of the 16th century, SIR PHILIP SIDNEY argued that it is the special property of literature to offer an imagined world that is in some respects superior to the real one. A century later JOHN DRYDEN proposed the less idealistic view that literature must primarily offer an accurate representation of the world for "the delight and instruction of mankind," an assumption that underlies the great critical works of ALEXANDER POPE and SAMUEL JOHNSON. A departure from these ideas appeared in the criticism of the Romantic period, epitomized by WILLIAM WORDSWORTH's assertion that the object of poetry is "truth…carried alive into the heart by passion." The later 19th century saw two divergent developments: an aesthetic theory of "art for art's sake," and the view (expressed by MATTHEW ARNOLD) that literature must assume the moral and philosophical functions previously filled by religion. The volume of literary criticism increased greatly in the 20th century, and its later years saw a radical reappraisal of traditional critical modes and the development of a multiplicity of critical factions (see DECONSTRUCTION; POSTSTRUCTURALISM; STRUCTURALISM).

literati Scholars in China and Japan whose poetry, calligraphy, and paintings were supposed primarily to reveal their cultivation and express their personal feelings rather than demonstrate professional skill. The concept of literati painters was first formulated in China in the Northern SONG DYNASTY but was enduringly codified in the MING DYNASTY by DONG QICHANG. In the 18th–19th century, literati painting became popular with the Japanese, who exaggerated elements of Chinese composition and brushwork. See also IKE NO TAIGA.

lithification Complex process whereby loose grains of sediment are converted into ROCK. Lithification may occur at the time a sediment is deposited or later. CEMENTATION is one of the main processes involved, particularly for sandstones and conglomerates. In addition, reactions take place within a sediment between various minerals and between minerals and the fluids trapped in the pores; these reactions may form new minerals or add to others already present in the sediment.

lithium Chemical ELEMENT, lightest alkali METAL, chemical symbol Li, atomic number 3. It is soft, white, lustrous, and very reactive, forming compounds in which it has VALENCE 1. The metal is used in certain ALLOYS, as a coolant in nuclear reactors, and (because of its reactivity) as a reagent, scavenger, and rocket fuel. Lithium HYDRIDE is used as a source of hydrogen; lithium hydroxide is used as an additive in storage BATTERIES and to absorb carbon dioxide. Halides (see HALOGEN) of lithium are used as moisture absorbents, and lithium SOAPS are used as thickeners in lubricating greases. Lithium carbonate is an important drug for treating DEPRESSION and BIPOLAR DISORDER.

litho-offset See OFFSET PRINTING

lithography \li-'thä-grə-fē\ PRINTING process that makes use of the immiscibility of grease and water. Aloys Senefelder of Prague (1771–1834) exploited the properties of a stone with a calcium carbonate base and a fine, porous surface, and perfected his printing process in 1798. In Senefelder's process, the stone, with a design drawn on it with crayon or greasy ink, was wetted with water; after various etching and protecting steps, it was brushed with oily ink; it retained the ink only on the design. This inked surface was then printed—either directly on paper, by a special press (as in most fine-art PRINTMAKING), or onto a rubber cylinder and thence onto paper (as in commercial printing). The method of preparing stones for hand printing, still the lithographic method preferred by artists, has hardly changed. Commercial lithographic printing on a modern rotary OFFSET PRINTING press can produce high-quality, finely detailed impressions at high speed, reproducing any material that can be photographed in the platemaking process. It now accounts for more than 40% of all printing, packaging, and publishing, more than twice the percentage produced by any other single printing process.

lithosphere Rigid, rocky outer layer of the Earth, consisting of the CRUST and the solid outermost layer of the upper MANTLE. It extends to a depth of about 60 mi (100 km). It is broken into about a dozen separate, rigid blocks, or plates (see PLATE TECTONICS). Slow convection currents deep within the mantle, generated by radioactive heating of the interior, are believed to cause the lateral movements of the plates (and the continents that rest on top of them) at a rate of several inches per year.

Lithuania *officially* **Republic of Lithuania** Country, northeastern Europe. Area: 25,212 sq mi (65,300 sq km). Population (2005 est.): 3,413,000. Capital: VILNIUS. Lithuanians make up about four-fifths of the

population; there are smaller numbers of Russians, Poles, and Belarusians. Languages: Lithuanian (official), Russian, Polish, Belarusian. Religion: Christianity (predominantly Roman Catholic; also Eastern Orthodox). Currency: litas. The country consists of low-lying plains alternating with hilly uplands, watered by rivers that meander westward to the Baltic Sea. Manufacturing, including metalworking, woodworking, and textile production, is especially important in the east and south. Agriculture focuses on livestock breeding, especially dairy farming and pigs, and the cultivation of cereals, flax, sugar beets, potatoes, and fodder crops. Lithuania is a multiparty republic with one legislative house; its head of state is the president, and the head of government is the prime minister. Lithuanian tribes united in the mid-13th century to oppose the TEUTONIC Knights. Gediminas, one of the grand dukes, expanded Lithuania into an empire that dominated much of eastern Europe in the 14th–16th centuries. In 1386 the Lithuanian grand duke became the king of Poland, and the two countries remained closely associated for the next 400 years. Lithuania was acquired by Russia in the Third Partition of POLAND in 1795 and joined in the Polish revolt in 1863. Occupied by Germany during World War I, it declared its independence in 1918. In 1940 the Soviet Red Army gained control of Lithuania, which was soon incorporated into the Soviet Union. Germany occupied Lithuania again from 1941, but the Red Army regained control in 1944. With the breakup of

© 2006 Encyclopædia Britannica, Inc.

the U.S.S.R., Lithuania declared its independence in 1990 and gained full independence in 1991. In the 1990s and early 21st century it sought economic stability, and in 2004 it became a member of the European Union.

Lithuanian language East Baltic language spoken by more than four million people in the Republic of Lithuania and in diaspora communities, with perhaps 70,000 speakers in North America. Lithuanian is sparsely attested until 1547, when the first book in the language was printed. Efforts to develop a standard language in the late 19th century were dominated by speakers of the West High dialect spoken in German-ruled East Prussia. Among them was Jonas Jablonskis (1860–1930), whose orthography (based on the Latin alphabet with numerous diacritics) and grammar (1901) won official acceptance when Lithuania became independent. Lithuanian is renowned for its archaism among living Indo-European languages.

litmus \'lit-məs\ Mixture of coloured organic compounds obtained from several species of lichens. In the form of a water solution or as litmus paper, it is the oldest and most-used indicator of whether a substance is an acid or a base. It turns red or pink in acid solutions and blue or purple-blue in alkaline solutions.

Little Armenia *or* **Lesser Armenia** Ancient kingdom, southeastern coast of Anatolia. After initial struggles with the Byzantine Empire, it was established in Cilicia by the Armenian Rubenid dynasty in the 12th century and developed contacts with the West. It was influenced by cultural contacts with Crusaders and with Venetian and Genoese merchants. It was conquered by the Muslim Mamlūk dynasty in 1375.

Little Bighorn, Battle of the *or* **Custer's Last Stand** (June 25, 1876) Battle at the Little Bighorn River, Montana Territory, U.S., between federal troops led by Lt. Col. George Armstrong Custer and a band of Sioux and Cheyenne Indians. The U.S. government had ordered the northern Plains tribes to return to designated reservations and had sent troops under Gen. Alfred H. Terry to enforce the order. Terry hoped to surround an Indian encampment at the mouth of the Little Bighorn, but a party of some 200 soldiers led by Custer launched an early attack and was slaughtered. Government troops subsequently flooded into the area and forced the Indians to surrender.

Little Entente \än-'tänt\ Mutual defense arrangement formed in 1920–21 between Czechoslovakia, Yugoslavia, and Romania, with French support. It was directed against German and Hungarian domination in the Danube River basin and toward protection of its members' territorial integrity. It was successful in the 1920s, but after Adolf Hitler's rise to power (1933) its members adopted increasingly independent foreign policies. The entente collapsed after Germany annexed the Czech Sudetenland (1938).

Little League International baseball organization for children and youth, started in 1939 in Williamsport, Pa., by Carl E. Stotz and brothers Bert and George Bebble. The league originally included boys aged 8–12; girls were admitted in 1974. It now includes two upper divisions for youths aged 13–15 and 16–18. In the junior division the game is played on a field two-thirds the size of a professional baseball diamond. A season comprises about 15 games. The organization expanded rapidly after World War II; by the 1990s there were about 2.5 million players in some 30 countries. The Little League World Series is held in Williamsport each year in August.

little magazine Any of various small, usually avant-garde periodicals devoted to serious literary writings. The name signifies most of all a usually noncommercial manner of editing, managing, and financing. They were published from c. 1880 through much of the 20th century and flourished in the U.S. and England, though French and German writers also benefited from them. Foremost among them were two U.S. periodicals, *Poetry* and the more erratic and often more sensational *Little Review* (1914–29); the English *Egoist* (1914–19) and *Blast* (1914–15); and the French *transition* (1927–38).

Little Missouri River River, northwestern U.S. It rises in northeastern Wyoming and flows northeast across the southeastern corner of Montana and the northwestern corner of South Dakota. It continues north into North Dakota, turning east to empty into the Missouri River after a course of 560 mi (900 km). The Theodore Roosevelt National Park lies along its shores in North Dakota.

Little Richard *orig.* **Richard Wayne Penniman** (b. Dec. 5, 1932, Macon, Ga., U.S.) U.S. rhythm and blues singer and pianist. Born into a strict religious family, he sang and played piano in church but was later ejected from his home by his father, reportedly for homosexual behaviour. He performed in nightclubs, traveled with a medicine show, and recorded as a blues artist from the early 1950s. His first big hit came with "Tutti Frutti" (1956), an energetic performance that, with his penchant for the outrageous, set a standard for the emerging rock idiom. Similar hits followed, including "Long Tall Sally," "Lucille," and "Good Golly, Miss Molly." In 1957 he underwent a religious conversion and was later ordained a minister. He soon returned to music, becoming a regular attraction in Las Vegas, and he continued to tour and appear in films with much success. He was an original inductee into the Rock and Roll Hall of Fame.

Little Rock City (pop., 2000: 183,133), capital of Arkansas, U.S., located on the Arkansas River. In 1722 Bernard de la Harpe, a French explorer, named the site La Petite Roche for a rock formation on the riverbank. It became the capital of Arkansas in 1821. It was strongly anti-Union at the outbreak of the American Civil War; Federal troops occupied the city in 1863. It grew as the commercial centre of a farming region and as a hub of railway and river transportation. In 1957 federal troops were sent there to prevent state authorities from interfering with desegregation at Central High School. The state's largest city, it has many institutions of higher learning, including the University of Arkansas at Little Rock (1927).

Little St. Bernard Pass Mountain pass, Savoy Alps. Situated southwest of the Italian border in southeastern France, it connects Bourg-St.-Maurice, France, with La Thuile, Italy. Hannibal probably led the Carthaginian army over the pass on his way toward Rome in 218 BC. It was the principal route across the Alps into Gallia Comata, a province of Gaul, until Montgenèvre Pass was opened in 77 BC. Beside the pass is a hospice founded in the 11th century by St. Bernard of Menthon.

little theatre Movement in U.S. theatre to free dramatic forms and methods of production from the limitations of the large commercial theatres by establishing small experimental centres of drama. Young dramatists, stage designers, and actors influenced by the vital European theatre of the late 19th century, especially by the theories of Max Reinhardt, established community playhouses such as the Little Theatre, New York City (1912), the Little Theatre, Chicago (1912), and the Toy Theatre, Boston (1912). A few became important commercial producers; the Washington Square Players (1915), for example, later became the Theatre Guild (1918). Playwrights such as Eugene O'Neill, George S. Kaufman, and Maxwell Anderson found their early opportunities in the little theatres.

Little Turtle (b. c. 1752, near Fort Wayne, Ind.—d. July 14, 1812, Fort Wayne, Ind., U.S.) American Indian leader. Chief of the Miami tribe, he led raids on settlements in the Northwest Territory in the early 1790s. Defeated by Gen. Anthony Wayne at the Battle of Fallen Timbers (1794), he was obliged to sign the Treaty of Greenville (1795), which ceded to the U.S. much of Ohio and parts of Illinois, Indiana, and Michigan. He then advocated peace and prevented the Miami from joining the Shawnee confederacy of Tecumseh.

Littleton, Sir Thomas (b. 1422, probably at Frankley, Worcestershire, Eng.—d. Aug. 23, 1481, Frankley) British jurist. In a turbulent period he held several high offices, including judge of the Court of Common Pleas (from 1466). His *Littleton on Tenures* (1481 or 1482) was the earliest treatise on English law ever printed. It long remained the principal authority on English real property law.

liturgical drama Play acted in or near the church in the Middle Ages. The form probably dated from the 10th century, when the "Quem quaeritis" ("Whom do you seek") section of the Easter mass was performed as a small scene in the service. The plays gradually increased in length, with themes derived from biblical stories (particularly those of Easter and Christmas), and they flourished in the 12th–13th centuries. Their Latin dialogue was frequently chanted to simple melodies. They continued to be written into the 16th century, but the connection with the church eventually ended as the plays came under secular sponsorship and were acted in the vernacular. See also miracle play; morality play; mystery play.

Liturgical movement 19th- and 20th-century effort to encourage the active participation of the laity in the liturgy of the Christian churches by creating simpler rites more attuned to early Christian traditions and more relevant to modern life. The movement began in the Roman Catholic church in the mid-19th century and spread to other Christian churches in Europe and the U.S. The Second Vatican Council (1962–65) called for

© 2006 Encyclopædia Britannica, Inc.

translation of Latin liturgies into the vernaculars of individual countries and the reform of all sacramental rites. The Lutheran Church revised the *Lutheran Book of Worship* in 1978, and the Episcopal Church adopted a revised *Book of Common Prayer* in 1979.

Litvinov \lyit-'vē-nôf**, Maksim (Maksimovich)** *orig.* **Meir Walach** (b. July 17, 1876, Białystok, Pol.—d. Dec. 31, 1951, Moscow, Russia, U.S.S.R.) Soviet diplomat and commissar of foreign affairs (1930–39). He joined the Russian Social-Democratic Workers' Party (1898), was arrested for revolutionary activity (1901), and fled to Britain. In 1917–18 he represented the Soviet government in London, then returned to Russia, where he joined the Commissariat for Foreign Affairs and led Soviet delegations to disarmament conferences. As commissar for foreign affairs, he established diplomatic relations with the U.S. (1934), negotiated anti-German treaties with France and Czechoslovakia (1935), and urged the League of Nations to resist Germany (1934–38). He was dismissed before the signing of the German-Soviet Nonaggression Pact (1939). He served as ambassador to the U.S. (1941–43).

Liu Bang See Gaozu

Liu Shaoqi \lē-'ü-'shaù-'chē\ *or* **Liu Shao-ch'i** (b. Nov. 24, 1898, Ningxiang district, Hunan province, China—d. Nov. 12, 1969, Kaifeng, Henan province) Chairman of the People's Republic of China (1959–68) and chief theoretician of the Chinese Communist Party (CCP). An activist communist background from the 1920s helped Liu's rise within the CCP in the 1930s and '40s, while his excellent education and studies in the Soviet Union made him an effective spokesman for the new government in China. When Mao resigned as chairman after the failure of his Great Leap Forward, Liu assumed the title. His policies for revitalizing agriculture by permitting peasants to cultivate private plots and giving them monetary incentives were ones to which Mao later strongly objected. In 1968 Liu was purged from power for being a "capitalist roader" and Lin Biao was appointed Mao's successor. Not until 1974 was Liu's death in 1969 made public.

Liu Songnian *or* **Liu Sung-nien** (b. 1174—d. 1224, Qiantang, Zhejiang province, China) Chinese figure and landscape painter. Liu entered the Southern Song Painting Academy as a student in the Chunxi period (1174–89) and went on to become a *daizhao* ("painter-in-attendance") in the Shaoxi period (1190–94). During the reign of the emperor Ningzong (1195–1224) he was awarded the prestigious Golden Belt. Liu followed the tradition of Li Tang. Typically his works featured relatively large figures executed in a detailed manner and placed close to the spectator in the picture plane. The facial expressions of his figures are vivid, and the patterns in which their clothing drapes are very intricate. His most important landscape paintings depict a human in harmony with nature. Liu paved the way for an academic style that would be further developed by his contemporaries Ma Yuan and Xia Gui.

live oak Any of several North American ornamental and timber trees in the red-oak group of the genus *Quercus* in the beech family. The southern live oak (*Q. virginiana*) is a massive (50 ft, or 15 m, tall), durable evergreen tree. The trunk divides near the ground into several limbs that extend horizontally as much as two to three times the height of the tree. The elliptical leaves are dark green and glossy above, whitish and hairy below. A valuable timber tree, the southern live oak is also planted as a shade and avenue tree in the southern U.S. The oldest trees are 200–300 years old.

liver Largest gland in the body, with several lobes. It secretes bile; metabolizes proteins, carbohydrates, and fats; stores glycogen, vitamins, and other substances; synthesizes coagulation factors; removes wastes and toxic matter from the blood; regulates blood volume; and destroys old red blood cells. The portal vein carries blood from the gastrointestinal tract, gallbladder, pancreas, and spleen to the liver to be processed. A duct system carries bile from the liver to the duodenum and the gallbladder. Liver tissue consists of a mass of cells tunneled with bile ducts and blood vessels. About 60% are hepatic cells, which have more metabolic functions than any other cells. A second type, Kupffer cells, play a role in blood-cell formation, antibody production, and ingestion of foreign particles and cell debris. The liver manufactures plasma proteins, including albumin and clotting factors, and synthesizes enzymes that modify substances such as nutrients and toxins, filtered from the blood. Liver disorders include jaundice, hepatitis, cirrhosis, tumours, vascular obstruction, abscess, and glycogen-storage diseases.

Liverpool City (pop., 2001: 439,476), northwestern England, on the estuary of the River Mersey. It forms the nucleus of the metropolitan county of Merseyside in the historic county of Lancashire. King John granted its charter in 1207. Its growth was slow until the 18th century, when it expanded rapidly as a result of trade with the Americas and the West Indies, becoming Britain's most important port after London. The Liverpool and Manchester Railway (opened 1830) was the first in England to link two major cities. Heavily damaged in World War II, it declined in importance as a port and an industrial centre in the postwar era. The birthplace of the Beatles, it is also the seat of the University of Liverpool (1903).

Liverpool, Robert Banks Jenkinson, 2nd earl of (b. June 7, 1770, London, Eng.—d. Dec. 4, 1828, Fife House, Whitehall, London) British prime minister (1812–27). He entered the House of Commons in 1790 and became a leading Tory, serving as foreign secretary (1801–04), home secretary (1804–06, 1807–09), and secretary for war and the colonies (1809–12). The War of 1812 with the U.S. and the final campaigns of the Napoleonic Wars were fought during his premiership. He urged abolition of the slave trade at the Congress of Vienna (1814–15). Although sometimes overshadowed by his colleagues and by the duke of Wellington's military prowess, he conducted a sound administration.

liverwort Any of more than 8,000 species of small, nonvascular, spore-producing land plants that make up the class Hepatopsida (or Hepaticae) of bryophytes, found worldwide but mostly in the tropics. Thallose liverworts commonly grow on moist soil or damp rocks; leafy liverworts are found in similar habitats and on tree trunks in damp woods. Sexual (gametophyte) and asexual (sporophyte) generations alternate in the life cycle (see alternation of generations). The thallus of thallose liverworts, resembling a lobed liver, gives liverworts their name. Though not economically important to humans, liverworts provide food for animals, facilitate the decay of logs, and aid in the disintegration of rocks by their ability to retain moisture.

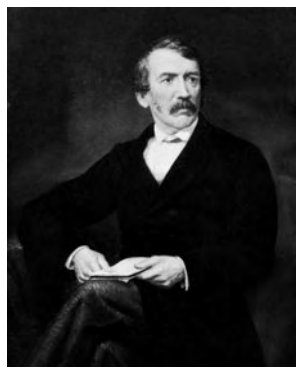
livestock Farm animals, with the exception of poultry. In Western countries the category encompasses primarily cattle, sheep, pigs, goats, horses, donkeys, and mules; other animals (e.g., buffalo, oxen, or camels) may predominate in other areas. See also ass, cow, dairy farming.

Living Theatre, The Theatrical avant-garde repertory company. It was formed in New York City in 1947 by Julian Beck (1925–85) and Judith Malina (b. 1926) to produce experimental plays, often on radical themes. Its first big success was Jack Gelber's *The Connection* (1959), a drama of drug addiction. After problems with U.S. tax authorities, the company was relocated to Europe (1964–68). It returned to New York City to present the confrontational *Paradise Now* (1968), a production intended to spark revolution. In the 1970s the group presented a cycle of plays in public spaces and nontraditional venues (Pittsburgh steel mills, Brazilian prisons, the streets of Palermo, Italy) under the collective title *The Legacy of Cain*. Thereafter the company performed again in theatres, continuing to examine new dramatic techniques. After 1999 The Living Theatre divided its time between headquarters in Italy and New York City.

living will Document specifying medical measures to be taken or withheld in the event the writer is disabled. Advances in medical technology now allow the body to be kept alive in circumstances that would normally result in death (e.g., inability to eat, breathe, or maintain the heartbeat), but many people do not want to be kept alive if there is no chance of recovery. Because it is impossible to express one's wishes when in a vegetative state, a living will allows them to be stated in advance. Such a document usually specifies conditions under which a do-not-resuscitate (DNR) order is to take effect and authorizes another person to make decisions on the patient's behalf.

Robert R. Livingston, portrait by Charles Willson Peale, c. 1782; in Independence National Historical Park, Philadelphia

COURTESY OF THE INDEPENDENCE NATIONAL HISTORICAL PARK COLLECTION, PHILADELPHIA



Livingston, Robert R. (b. Nov. 27, 1746, New York, N.Y.—d. Feb. 26, 1813, Clermont, N.Y.) U.S. law-

© 2006 Encyclopædia Britannica, Inc.

yer and diplomat. He served in the Continental Congress and helped draft the Declaration of Independence. As New York state's first chancellor (1777–1801), he administered the oath of office to Pres. George Washington (1789). From 1781 to 1783 he was U.S. secretary of foreign affairs. As minister to France from 1801 to 1804, he helped effect the Louisiana Purchase. In partnership with Robert Fulton, he later received a steamboat monopoly for New York waters; the first vessel to operate on the Hudson River (1807) was named the *Clermont*, after his ancestral home.

Livingston, William (b. Nov. 30, 1723, Albany, N.Y.—d. July 25, 1790, Elizabeth, N.J.) American politician. He served in the New York legislature (1759–60), wrote political pamphlets and newspaper articles, and helped prepare a digest of New York laws for the period 1691 to 1756. He moved to New Jersey in 1772 and represented the colony in the Continental Congress (1774–76). As New Jersey's first governor (1776–90), he was a delegate to the Constitutional Convention and led his state to an early ratification of the U.S. Constitution.

Livingstone, David (b. March 19, 1813, Lanarkshire, Scot.—d. May 1, 1873, Chitambo, Barotseland) Scottish missionary and explorer in Africa. Of working-class origins, Livingstone studied theology and medicine in Glasgow before being ordained (1840) and deciding to work in Africa to open up the interior for colonization, extend the Gospel, and abolish the slave trade. By 1842 he had already penetrated farther north of the Cape Colony frontier than any other white man. He was the first European to reach Lake Ngami (1849) and the first to reach Luanda from the interior (1854). He encountered and named Victoria Falls (1855), journeyed across the continent to eastern Mozambique (1856, 1862), explored the Lake Malawi region (1861–63), came across Lakes Mweru and Bangweulu (1867), and penetrated to points farther east of Lake Tanganyika than any previous expedition had managed (1871). His attempt to find the source of the Nile (1867–71) failed. When he was found by Henry Morton Stanley in 1871, his health was failing; he refused to leave, and in 1873 he was found dead by African aides. Livingstone produced a complex body of knowledge—geographic, technical, medical, and social—that took decades to mine. In his lifetime he stirred the imagination of English-speaking peoples everywhere and was celebrated as one of the great figures of British civilization.

David Livingstone, oil painting by F. Havill after photographs; in the National Portrait Gallery, London
COURTESY OF THE NATIONAL PORTRAIT GALLERY, LONDON

Livonia Region, eastern coast of Baltic Sea, north of Lithuania. Originally inhabited by the Livs, a Finno-Ugric people, it eventually expanded to include nearly all of modern Latvia and Estonia. In the 13th century it was conquered and Christianized by the Order of the Brothers of the Sword and organized into the Livonian confederation. A Russian invasion set off the Livonian War (1558–82), in which Russia, Poland, and Sweden seized portions of it. Sweden eventually gained control of most of it but ceded the region to Russia in 1721. In 1918 the northern portion became part of independent Estonia and the southern portion joined independent Latvia.

Livorno *English* **Leghorn** City (pop., 2001 prelim.: 148,143), Tuscany region, central Italy, on the Ligurian Sea. Originally a fishing village, it came under Florentine rule in 1421. Cosimo I began construction of the Medici Harbour in the 16th century, and under Ferdinand I of Tuscany (1549–1609) the city became a haven for refugees. In the 18th century Leopold II enlarged the harbour and gave privileges to foreign merchants. Livorno became part of the Kingdom of Italy in 1860. One of Italy's largest ports, it has extensive commercial activities and a large shipbuilding yard. Historic sites include a cathedral and a 16th-century fort.

Livy \'li-vē\ *orig.* **Titus Livius** (b. 59/64 BC, Patavium, Venetia—d. AD 17, Patavium) Roman historian. Little is known of his life, most of which must have been spent in Rome. His lifework was a history of the city, written in 142 books; Books 11–20 and 46–142 have been lost, and those after Book 45 are known only from fragments and later summaries. Unlike earlier Roman historians, Livy played no part in politics, and as a result he presented history not as partisan politics but in terms of character and morality. The Latin prose style he developed suited his subject matter. His history, a classic in his lifetime, profoundly influenced the style and philosophy of historical writing down to the 18th century.

lizard Any of about 3,000 species of reptiles constituting the suborder Sauria. They are most diverse and abundant in the tropics but are found from the Arctic Circle (one species) to southern Africa, South America, and Australia. Like snakes, lizards have scales, paired male copulatory organs, and a flexible skull. Typical lizards have a moderately cylindrical body, four well-developed legs (although some lizards are legless), a tail slightly longer than the head and body combined, and movable lower eyelids. They range in size from 1-in. (3-cm) geckos to the 10-ft (3-m) Komodo dragon, but most are about 12 in. (30 cm) long. Ornamentation includes crests on the head, back, or tail; spines; brightly coloured throat fans; and throat frills. Most species feed on insects and rodents, but some, such as the iguana, eat plants. See also Gila monster; horned toad.

Ljubljana \lē-ˌü-blē-'ä-nə\ City (pop., 2002 prelim.: 257,338), capital of Slovenia. Located on the Ljubljanica River, it is surrounded by the northern Dinaric Alps. The site of the Roman city of Emona in the 1st century BC, it was destroyed in the 5th century AD and rebuilt by the Slavs as Luvigana. It passed to Carniola in the 12th century and came under Habsburg rule in 1277. Taken by the French in 1809, it was the administrative seat of the Illyrian Provinces until 1813 and the capital of the kingdom of Illyria from 1816 to 1849. It was the centre of Slovene nationalism under Austrian rule, and in 1918 it became part of the Kingdom of Serbs, Croats, and Slovenes (later Yugoslavia). It remained the Slovene capital after Slovenia's independence in 1992. A railroad and commercial centre, it is the site of the University of Ljubljana (founded 1595).

llama \'lä-mə\ Domesticated South American lamoid (see alpaca), maintained in herds in Bolivia, Peru, Ecuador, Chile, and Argentina. The llama (*Lama glama*) is used primarily as a pack animal but also as a source of food, wool, hides, tallow for candles, and dried dung for fuel. A 250-lb (113-kg) llama can carry a load of 100–130 lb (45–60 kg) and travel 15–20 mi (25–30 km) a day. It can subsist on little water and a wide variety of plant materials. Though usually white, it may be solid black or brown, or white with black or brown markings. It is usually gentle, but when overloaded or mistreated it will lie down, hiss, spit and kick, and refuse to move. Not known to exist in the wild state, it appears to have been bred from guanacos during or before the Inca civilization.

Llandrindod \hlan-'drin-ˌdäd\ **Wells** Town (pop., 1991: 4,362), administrative centre of Powys county, historic county of Radnorshire, eastern Wales. Its medicinal waters were first discovered c. 1696, and in the 19th century it became a popular spa. The spa declined after World War II and closed in the 1960s but reopened in 1983. To the northwest lie the remains of a Roman fort.

Llano Estacado \'la-nō-ˌes-tə-'kä-dō\ *or* **Staked Plain** Plateau, southeastern New Mexico and western Texas, U.S. Occupying an area of about 30,000 sq mi (78,000 sq km), it is a semiarid plain with occasional pools of rainwater. Its soil supports grazing, dryland farming of grains, and irrigated cotton production. Production of petroleum and natural gas is also important. Lubbock and Amarillo, Texas, are its most important cities.

Llanquihue \läŋ-'kē-wə**, Lake** Lake, south-central Chile. The country's largest lake, it has an area of about 330 sq mi (860 sq km); it is 22 mi (35 km) long and 25 mi (40 km) wide. In the distance stand volcanoes and beyond them, on the Argentine border, Mount Tronador (11,660 ft [3,554 m]). Popular resort towns are located on its shores.

Llosa, Mario Vargas See Mario Vargas Llosa

Lloyd, Chris Evert See Chris Evert

Lloyd, Harold (b. April 20, 1893, Burchard, Neb., U.S.—d. March 8, 1971, Hollywood, Calif.) U.S. film comedian. He began to appear in one-reel comedies in 1913 and mastered the comic chase scene as a member of Mack Sennett's troupe. He joined Hal Roach's company and created his Lonesome Luke character in popular movies such as *Just Nuts* (1915). He developed his trademark white-faced character wearing round glasses in 1918. Noted for his use of physical danger as a source of laughter, he performed his own daring stunts, hanging from the hands of a clock far

© 2006 Encyclopædia Britannica, Inc.

above the street in *Safety Last* (1923) and standing in for a football tackling-dummy in *The Freshman* (1925). He was the highest paid star of the 1920s. He received a special Academy Award in 1952.

Lloyd George of Dwyfor, David Lloyd George, Earl (b. Jan. 17, 1863, Manchester, Eng.—d. March 26, 1945, Ty-newydd, near Llanystumdwy, Caernarvonshire, Wales) British prime minister (1916–22). He entered Parliament in 1890 as a Liberal and retained his seat for 55 years. He served as president of the Board of Trade (1905–08), then as chancellor of the Exchequer (1908–15). Rejection of his controversial "People's Budget" (to raise taxes for social programs) in 1909 by the House of Lords led to a constitutional crisis and passage of the PARLIAMENT ACT OF 1911. He devised the National Insurance Act of 1911, which laid the foundation of the British WELFARE STATE. As minister of munitions (1915–16), he used unorthodox methods to ensure that war supplies were forthcoming during World War I. He replaced H.H. ASQUITH as prime minister in 1916, with Conservative support in his coalition government. His small war cabinet ensured speedy decisions. Distrustful of the competence of the British high command, he was constantly at odds with Gen. DOUGLAS HAIG. In the 1918 elections his decision to continue a coalition government further split the LIBERAL PARTY. He was one of the three great statesmen responsible for the Treaty of VERSAILLES at the PARIS PEACE CONFERENCE. He began the negotiations that culminated in the Anglo-Irish treaty of 1921. He resigned in 1922 and headed an ailing Liberal Party (1926–31).

Lloyd Webber, Andrew *later* **Baron Lloyd Webber** (b. March 22, 1948, London, Eng.) British composer. He studied at Oxford and at the Royal College of Music. His first collaboration with lyricist Tim Rice (b. 1944), *Joseph and the Amazing Technicolor Dreamcoat* (1968), was followed by the "rock opera" *Jesus Christ Superstar* (1971), which blended classical forms with rock music. Their last major collaboration was *Evita* (1978). Lloyd Webber's eclectic, rock-based works helped revitalize musical theatre. In both London and New York City, his musical *Cats* (1981), based on poems by T.S. ELIOT, became the longest-running musical in history. He later collaborated on *Starlight Express* (1984), *Phantom of the Opera* (1986), and *Sunset Boulevard* (1993), among other stage works. He was knighted in 1992 and ennobled in 1996.

Lloyd's of London Insurance marketing association in London, specializing in high-risk insurance services. Its history dates to 1688, when Edward Lloyd kept a London coffeehouse where merchants, seafarers, and marine-insurance underwriters met to transact business. The underwriters at Lloyd's eventually formed a marine-insurance association (incorporated 1871); it expanded to include other forms of insurance in 1911. After a series of financial scandals, the corporation was reorganized under the Lloyd's Act of 1982. Today Lloyd's consists of more than 20,000 individual members organized in several hundred syndicates, which are represented at Lloyd's by underwriting agents. Individual syndicate members, rather than the corporation, are liable for losses. Until record losses in the 1980s and '90s bankrupted some syndicate members, they had unlimited liability for business transacted for them; in 1993 that liability was limited. See also INSURANCE, LIABILITY INSURANCE.

Llull \ˈlyül\, **Ramon** *English* **Raymond Lully** (b. 1232/33, Ciutat de Majorca, Majorca—d. 1315/16, Tunis or near Majorca) Spanish (Catalan) mystic, poet, and missionary. He was reared at the court of Majorca, where he wrote lyrical troubadour poetry. He later traveled widely, attempting to convert Muslims to Christianity; he is said to have been stoned to death at Bejaïa. As a philosopher, he is best known as the inventor of an "art of finding truth." Primarily intended to support the church in its missionary work, it was also designed to unify all branches of knowledge. In his principal work, *Ars magna* (1305–08), he tried to depict all forms of knowledge, including theology, philosophy, and the natural sciences, as mutually analogous and manifestations of the godhead in the universe. His writings influenced Neoplatonic mysticism throughout medieval and early modern Europe. In Catalan culture, his allegorical novels *Blanquerna* (c. 1284) and *Felix* (c. 1288) enjoy wide popularity; he is also known for his treatise on chivalry, his animal fables, and an encyclopaedia of medieval thought.

Llyr \ˈhlir\ In CELTIC RELIGION, the leader of one of the two warring families of the gods. According to one interpretation, the Children of Llyr were the powers of darkness, constantly in conflict with the Children of Dôn, the powers of light. In Welsh tradition, Llyr and his son Manawydan were associated with the sea. Llyr's other children included BRÂN, Creidylad, and Branwen, wife of the sun god Matholwch, king of Ireland.

Llywelyn ap Gruffudd \hlə-ˈwe-lin-ap-ˈgri-fiṯh\ (d. Dec. 11, 1282, near Builth, Powys, Wales) Prince of Wales (1258–77). As prince of GWYNEDD in northern Wales from 1255, he sought to extend his rule throughout his native country, and he proclaimed himself prince of Wales in 1258. He fought the English lords of southern Wales (1262) and allied himself with HENRY III's opponent, SIMON DE MONTFORT. After Montfort's death, however, he signed a treaty recognizing Henry as overlord (1267). Llywelyn rebelled against EDWARD I but was defeated by him in 1277. He was killed in a final rebellion in 1282, and Wales soon fell entirely under English rule.

Llywelyn ap Iorwerth \hlə-ˈwe-lin-ap-ˈyȯr-werth\ *known as* **Llywelyn the Great** (d. April 11, 1240, Aberconway, Gwynedd, Wales) Welsh prince. The grandson of a powerful Welsh prince, he was exiled as a child from GWYNEDD in northern Wales but returned in 1194 and deposed his uncle, gaining control of most of northern Wales by 1202. Though Llywelyn married King JOHN's daughter, the English king invaded Wales when Llywelyn's authority reached too far (1211). Llywelyn soon recovered his lands and allied with John's baronial opponents. HENRY III acknowledged his rule in most of Wales (1218), but by 1223 Llywelyn was forced to withdraw to the north.

Lo-lang See NANGNANG

load-bearing wall See BEARING WALL

loam Rich, friable (crumbly) soil with nearly equal parts of sand and silt, and somewhat less clay. The term is sometimes used imprecisely to mean earth or soil in general. Loam in subsoil receives varied minerals and amounts of clay by leaching (percolation) from the topsoil above.

Loanda See LUANDA

Lobachevsky \ˌlō-bə-ˈchev-skē**, Nikolay (Ivanovich)** (b. Dec. 1, 1792, Nizhny Novgorod, Russia—d. Feb. 24, 1856, Kazan) Russian mathematician. His entire life centred around the University of Kazan, where he studied and later (from 1816) taught. In 1829 he published his groundbreaking theory, a geometry that rejected EUCLID's PARALLEL POSTULATE. It was the final solution to a problem that had baffled mathematicians for 2,000 years. Lobachevsky also did distinguished work in the theory of infinite series, especially trigonometric series, as well as in INTEGRAL CALCULUS, ALGEBRA, and PROBABILITY. He was largely ignored during his lifetime; acceptance of his new geometry came a decade after his death, though much of the credit went to others. With Bolyai János of Hungary (1802–60), Lobachevsky is considered the founder of NON-EUCLIDEAN GEOMETRY.

Lobamba Town (pop., 1995 est.: 10,000), legislative capital of Swaziland. Located near MBABANE, it is in a densely populated rural area. It is, according to traditional SWAZI customs, the residence of the Queen Mother and is thereby the spiritual home of the Swazi nation. It is the site of parliamentary buildings and an official residence of the king.

lobbying Any attempt by a group or individual to influence the decisions of government. The term originated in 19th-century efforts to influence the votes of legislators, generally in the lobby outside a legislative chamber. The effort may be a direct appeal to a decision maker in either the executive or legislative branches, or it may be indirect (e.g., through attempts to influence public opinion). It may include oral or written efforts of persuasion, campaign contributions, public-relations campaigns, research supplied to legislative committees, and formal testimony before such committees. A lobbyist may be a member of a special-interest group, a professional willing to represent any group, or a private individual. In the U.S., the Federal Regulation of Lobbying Act (1946) requires that lobbyists and the groups they represent register and report contributions and expenditures.

lobelia family \lō-ˈbēl-yə\ Family Lobeliaceae, which contains about 750 species of flowering plants in 25 genera. Some are grown for their attractive, two-lipped flowers. Postlike and shaggy-tree forms are found on mountains in Africa. The family includes the CARDINAL FLOWER, great blue lobelia (*L. siphilitica*), and Indian tobacco (*L. inflata*). Once used for smoking and for the vomit-inducing ALKALOID in its roots, lobelia is now regarded as poisonous.

Lobengula \ˌlō-beŋ-ˈgyü-lə\ (b. c. 1836, Mosega, Transvaal—d. January 1894, near Bulawayo, Rhodesia) Second and last king of the South African NDEBELE nation. Son of the founder of the Ndebele kingdom, Mzilikazi, Lobengula succeeded to the throne in 1870 after a period of civil war. He attempted to form an alliance with the British, granting them first farming (1886) and then mineral (1888) concessions. Not satisfied, the

© 2006 Encyclopædia Britannica, Inc.

British South Africa Co. under Cecil Rhodes undertook a military expedition that destroyed the Ndebele kingdom in 1893. See also Khama III.

lobotomy \lə-'bä-tə-mē\ Surgical procedure in which nerve pathways in a lobe or lobes of the brain are severed from those in other areas. Introduced in 1935 by António Egas Moniz and Almeida Lima, it came to be used to help grossly disturbed patients. Favoured for patients who did not respond to shock therapy, it did reduce agitation but often caused increased apathy and passivity, inability to concentrate, and decreased emotional response. It was widely performed until c. 1956, when drugs that were more effective in calming patients became available. Lobotomies are no longer performed; however, psychosurgery, the surgical removal of specific regions of the brain, is occasionally used to treat patients whose symptoms have resisted all other treatments.

lobster Any of numerous species of marine shrimplike decapods that are bottom-dwellers and mostly nocturnal. Lobsters scavenge for dead animals but also eat live fish, small mollusks and other bottom-dwelling invertebrates, and seaweed. One or more pairs of legs are often modified into pincers, usually larger on one side than the other. True lobsters have a distinct snout on the upper body shell. The American lobster (*Homarus americanus*) and scampi are the most commercially important, being highly prized as food. The American lobster, found from Labrador to North Carolina, weighs about 1 lb (0.5 kg) and is about 10 in. (25 cm) long when caught in shallow water. Most deepwater specimens weigh about 5.5 lbs (2.5 kg); some may weigh 40 lbs (20 kg). See also shellfish.

American lobster (*Homarus americanus*).
JOHN H. GERARD

local area network (LAN) Communications network consisting of many computers within a local area, such as a single building or company complex. Individual users can share data or files on a LAN as if the data or files resided on their respective computers; a central computer used for this purpose is called a server. Laser printers and other peripheral equipment can be connected to a LAN for common use. Coaxial and fibre-optic cables are popular communication lines for LANs because they provide fast data transmission and are easy to install. See also computer network.

Local Group Concentration of about 40 galaxies to which the Milky Way Galaxy belongs. Nearly half are dwarf elliptical galaxies, but the six largest are spiral or irregular galaxies. They are probably kept from separating by mutual gravitational attraction. The Milky Way system is near one end of the group; the great Andromeda Galaxy is near the other end, about two million light-years away.

Locarno, Pact of (1925) Multilateral treaty signed in Locarno, Switz., intended to guarantee peace in western Europe. Its signatories were Belgium, Britain, France, Germany, and Italy. Germany's borders with France and Belgium as set by the Treaty of Versailles were decreed inviolable, but its eastern borders were not. Britain promised to defend Belgium and France. Other provisions included mutual defense pacts between France and Poland and between France and Czechoslovakia. The treaty led to the Allied troops' departure from the Rhineland by 1930, five years ahead of schedule. See also Kellogg-Briand Pact.

Lochner \'lȯk-nər**, Stefan** (b. c. 1400, Meersburg am Bodensee, Bishopric of Constance—d. 1451, Cologne) German painter. Nothing is known of his early life, but he may have studied in The Netherlands before settling in Cologne c. 1430, for Flemish influence is evident in his attention to minute details. Jan van Eyck's influence is seen in *The Adoration of the Magi*, his altarpiece for Cologne's great cathedral, but Lochner adds his own naturalistic observation and masterly sense of colour and design. Known for his highly mystical religious paintings, he is considered the greatest representative of the school of Cologne.

lock Mechanical or electronic device for securing a door or receptacle so that it cannot be opened except by a key or a code. The lock originated in the Middle East; the oldest known example was found near Nineveh. Possibly 4,000 years old, it is of the pin tumbler type, otherwise known as an Egyptian lock. The Romans were the first to use metal locks and to make small keys for them. They also invented wards, projections in the keyhole that prevent a key from turning unless it has slots that avoid the projections. Probably the most familiar lock today is the cylinder lock, a pin tumbler lock opened by a flat key with a serrated edge; the serrations raise pins in the cylinder to the proper heights, allowing the cylinder to turn. Also common are the unit lock, housed within a rectangular notch cut into the edge of a door, and the mortise lock, housed in a mortise cut into the door edge, the lock mechanism being covered on both sides. Other types include lever and combination locks. Electronic locks that open with a magnetic card key are popular for banks, hotel rooms, and offices.

A cylinder lock's tumbler consists of a series of pins arranged in pairs. The pins are spring-loaded to press against the contours of the inserted key. A wrong key will cause one or more of the pins to block the cylinder from turning; only when the tops of all the lower pins line up with the edge of the cylinder can the cylinder turn.

Locke, John (b. Aug. 29, 1632, Wrington, Somerset, Eng.—d. Oct. 28, 1704, Oates, Essex) English philosopher. Educated at Oxford, principally in medicine and science, he later became physician and adviser to the future 3rd earl of Shaftesbury (1667–72). He moved to France, but after Shaftesbury's fall in 1683 he fled to the Netherlands, where he supported the future William III. Locke returned to England after the Glorious Revolution (1688) to become commissioner of appeals, a post he held until his death. In his major philosophical work, *Essay Concerning Human Understanding* (1690), he argued that knowledge begins in sensation or introspection rather than in innate ideas, as the philosophers of rationalism held. From sensation and reflection the mind receives "ideas," which are the material of knowledge. Some ideas represent actual qualities of objects (such as size, shape, or weight) and others perceived qualities, which do not exist in objects except as they affect observers (such as colour, taste, or smell); Locke called the former qualities "primary" and the latter "secondary." Ideas that are given directly in sensation or reflection are simple, and simple ideas may be "compounded" to form complex ideas. Locke did not succeed in giving a clear account of the origin of the idea of substance (it is "a something-I-know-not-what") or the idea of the "self," though his account of personal identity in terms of memory was influential. In the philosophy of language, he identified the meanings of words

© 2006 Encyclopædia Britannica, Inc.

with ideas rather than things. In *Two Treatises of Government* (1690), he defended a doctrine of natural rights and a conception of political authority as limited and conditional on the ruler's fulfillment of his obligation to serve the public good. A classic formulation of the principles of political LIBERALISM, this work influenced the American and French revolutions and the CONSTITUTION OF THE U.S. He is considered the founding figure of British EMPIRICISM.

Lockheed Martin Corp. U.S. diversified company that is one of the world's largest aerospace manufacturers. It was established in 1995 through the merger of Lockheed Corp. (formed 1926 as Lockheed Aircraft Co.) and Martin Marietta Corp. (formed 1961 from the merger of Martin Co. and American-Marietta Co.). During World War II, Lockheed established a secret division ("Skunk Works") that became the leading U.S. developer of military aircraft (e.g., F-104 fighter, U-2 and SR-71 spy planes, and F-117A stealth fighter). In the early 1970s its financially troubled production of the L-1011 TriStar commercial jetliner necessitated its rescue from bankruptcy by massive U.S. government aid. Lockheed's work in missile development resulted in the Polaris, Poseidon, and TRIDENT submarine-launched ballistic missile systems; in the space sector its activities included the construction and systems integration of the HUBBLE SPACE TELESCOPE. In the early 1990s, in partnership with BOEING CO., it contracted to build the F-22 Raptor stealth fighter (first flown 1997). Martin Co.'s major business after World War II was the development of rockets (e.g., TITAN) and electronics systems for the U.S. government. Later, as Martin Marietta, it constructed the VIKING Mars landers and the Magellan spacecraft to Venus and designed and produced the external fuel tank for the SPACE SHUTTLE. In the mid-1990s Lockheed Martin formed a joint venture, International Launch Services, with the Russian firms ENERGIA and Khrunichev to market commercial space launch services.

lockjaw See TETANUS

lockout Tactic used by employers in labour disputes, in which employees are locked out of the workplace or otherwise denied employment. In the 1880s and '90s, factory owners in the U.S. often used lockouts against the KNIGHTS OF LABOR, which was struggling to organize industries such as meatpacking and cigar making. The lockout has been used less frequently in modern times, usually as part of a pact among members of employers' associations to frustrate LABOUR UNIONS by closing work facilities in response to STRIKES.

Locofoco \ˌlō-kō-ˈfō-kō\ Party Radical wing of the DEMOCRATIC PARTY organized in New York City in 1835. Made up largely of workingmen and reformers, the party opposed state banks, monopolies, tariffs, and special interests. Its name derives from the friction matches, known as locofocos, that radicals used to light candles when Democratic Party regulars tried to oust them from a TAMMANY HALL meeting by turning out the gas lights. Never a national party, the Locofocos reached the height of their influence when Congress passed the Independent Treasury Act (1840), which effected the primary Locofoco aim of complete separation of government and banking. The party was reabsorbed into the Democratic Party in the 1840s.

locomotion Any of various animal movements that result in progression from one place to another. Locomotion is classified as either appendicular (accomplished by special appendages) or axial (achieved by changing the body shape). Aquatic protozoans move by ciliary or flagellar appendages or by pseudopods, footlike appendages. Other forms of aquatic locomotion include walking on legs (some ARTHROPODS), crawling (by contracting the body muscles, anchoring to the substrate, and extending), and swimming by either hydraulic propulsion (e.g., JELLYFISH) or undulation (FISHES). Terrestrial arthropods and VERTEBRATES move by means of jointed appendages, the legs. Snakes and other limbless vertebrates crawl by means of muscular thrusts against the substrate. Flight is achieved by the forward thrust of WINGS.

locomotive Self-propelled vehicle used for hauling railroad cars on tracks. Early experimental steam locomotives were built in Wales and England by RICHARD TREVITHICK from 1803. The first practical steam locomotive, the *Rocket*, was developed in 1829 by GEORGE STEPHENSON, in whose "steam blast" system the steam from a multitube boiler drove pistons connected to a pair of flanged driving wheels. The first U.S. steam locomotive was built by JOHN STEVENS in 1825, and the first commercially usable locomotive, the *Tom Thumb*, by PETER COOPER in Baltimore in 1830. Later improvements enabled a locomotive to move up to 200 freight cars at 75 mph (120 kph). Steam from wood or coal fuel was the main source of power until the mid-20th century, though electric power had been used from the early 20th century, especially in Europe. After World War II DIESEL power replaced steam because of its higher efficiency and lower cost, though diesel-electric and gas turbine-electric combinations were also used.

locoweed Any of several species of poisonous plants of the genera *Astragalus* and *Oxytropis*, in the pea family (see LEGUME), native to the prairies of north-central and western North America. These low-growing plants (up to 1.5 ft [45 cm] high) have variably hairy, fernlike leaves and spikes of pealike flowers. They pose a danger to grazing animals because they contain a toxin that affects muscle control, producing frenzied behaviour, impaired vision, and sometimes death. Because they taste bad, livestock usually eat them only when other forage is scarce. Decaying locoweeds release toxins into the soil that are sometimes absorbed by otherwise harmless forage crops.

Locri Epizephyrii \ˈlō-ˌkrī-ˌe-pi-zə-ˈfir-ē-ˌī\ Ancient city in MAGNA GRAECIA, on the eastern coast of Italy's southwestern extremity. Founded by Greeks c. 680 BC, it was the first Greek community to have a written code of laws, the Locrian code (c. 660 BC). It founded colonies and resisted Athenian intervention during the PELOPONNESIAN WAR. Fickle in its allegiance, it was captured by Rome in 205 BC and destroyed by Sicilian Muslims in 915.

locust In botany, any of about 20 tree species in the genus *Robinia* of the pea family (see LEGUME), all native to eastern North America and Mexico. Best-known is the black locust (*R. pseudoacacia*), often called false acacia or yellow locust. Widely cultivated in Europe as an ornamental, it grows 80 ft (24 m) high and bears long, compound leaves. The fragrant white flowers hang in loose clusters. There are many varieties, some thornless. The black locust has long been used for erosion control and as a timber tree. The so-called honey locust (*Gleditsia triacanthos*), also of the pea family, is a North American tree commonly used as an ornamental and often found in hedges.

Black locust (*Robinia pseudoacacia*)
JOHN H. GERARD—EB INC.

locust Any of several species of GRASSHOPPERS (family Acrididae) that undergo population explosions and migrate long distances in destructive swarms. In North America the names *locust* and *grasshopper* are interchangable and used for any acridid; CICADAS are sometimes called locusts. In Europe, *locust* refers to large species and *grasshopper* to small ones. Locusts are found worldwide. Sporadic locust swarms may be explained by the theory that swarming species have a solitary phase (the normal state) and a gregarious phase. Nymphs that mature in the presence of many other locusts develop into the gregarious type; thus migratory swarms form as a result of overcrowding. Swarms may be almost unimaginably large, towering 5,000 ft (1,500 m) high; in 1889 a Red Sea swarm was estimated to cover 2,000 sq mi (5,000 sq km). Locust plagues can be extremely destructive of crops.

lodestone See MAGNETITE

lodge Originally an insubstantial dwelling, or one erected for a temporary occupational purpose (e.g., woodcutting or masonry) or for use during the hunting season. The lodge became a more permanent type of house as the lands around European mansions were developed as parks. The lodge was often the cottage of the gamekeeper, caretaker, gatekeeper, or gardener, or it could be a larger building for occupation by a higher-ranking person. Today the word suggests a rustic dwelling or inn in a natural setting, often one used seasonally (e.g., a ski lodge).

Lodge, Henry Cabot (b. May 12, 1850, Boston, Mass., U.S.—d. Nov. 9, 1924, Cambridge, Mass.) U.S. politician. He was the recipient of the first Ph.D. in political science awarded by Harvard University. He served in the U.S. House of Representatives from 1887 to 1893 and in the Senate from 1893 to 1924. He supported U.S. entry into World War I but opposed participation in the LEAGUE OF NATIONS; as chairman of the Senate's foreign relations committee he delayed action on the adoption of the Treaty of Versailles with its covenant establishing the League. He proposed amendments (the Lodge reservations) that would require Senate

© 2006 Encyclopædia Britannica, Inc.

approval before the U.S. would accept certain League decisions. Pres. Woodrow Wilson refused to accept the amendments, and the Senate rejected the treaty.

Lodge, Henry Cabot (b. July 5, 1902, Nahant, Mass., U.S.—d. Feb. 27, 1985, Beverly, Mass.) U.S. politician and diplomat. The grandson of Sen. Henry C. Lodge, he served in the U.S. Senate (1937–44, 1947–52) and as U.S. representative to the UN (1953–60). In 1960 he was the Republican vice presidential candidate under Richard Nixon. During the 1960s he served as U.S. ambassador to South Vietnam and as ambassador to West Germany. In 1969 he was the chief U.S. negotiator at the Paris peace talks with North Vietnam. He later served as special envoy to the Vatican.

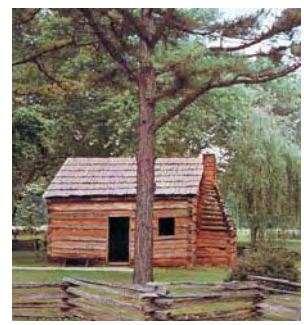
Lodi \'lō-dē**, Peace of** (1454) Treaty between Venice and Milan ending the war of succession to the Milanese duchy in favor of Francesco Sforza. It recognized Sforza as ruler of Milan and restored Venice's territories in northern Italy, including Brescia and Bergamo. It also provided for a 25-year mutual defensive pact to maintain existing boundaries and established an Italian League. The treaty created a balance of power among Venice, Milan, Naples, Florence, and the Papal States, and it began a 40-year period of relative peace.

Łódz \'wüch,\ *English* \'lōdz\ City (pop., 2001 prelim.: 793,217), central Poland. Located southwest of Warsaw, it was a village in the 14th century and gained municipal rights in 1798. The Russian-ruled Congress Kingdom of Poland established it as a centre of the textile industry in 1820, and by the late 19th century it was Poland's leader in the production of cotton textiles. It was occupied by the Germans during World Wars I and II. It is now a cultural centre and Poland's second largest city.

loess \'les, 'lō-əs\ Unstratified, geologically recent deposit of silty or loamy material that is usually buff or yellowish brown and is deposited chiefly by the wind. Loess is a sedimentary deposit composed largely of silt-sized grains that are loosely cemented by calcium carbonate. It is usually homogeneous and highly porous and is traversed by vertical capillaries that permit the sediment to fracture and form vertical bluffs.

Loesser \'le-sər**, Frank (Henry)** (b. June 29, 1910, New York, N.Y., U.S.—d. July 28, 1969, New York City) U.S. composer, librettist, and lyricist. The son of a piano teacher, in 1936 he moved to Hollywood, where he worked with Burton Lane, Jule Styne, Jimmy McHugh, and Hoagy Carmichael. His wartime songs include "Praise the Lord and Pass the Ammunition" and "What Do You Do in the Infantry?"; postwar hits include "On a Slow Boat to China" and "Baby It's Cold Outside" (Academy Award, 1949). His first Broadway musical was *Where's Charley?* (1948; film, 1952). In 1950 he produced *Guys and Dolls* (film, 1955), one of the greatest American musicals. It was followed by *The Most Happy Fella* (1956) and *How to Succeed in Business Without Really Trying* (1962, Pulitzer Prize). His work for film includes the score for *Hans Christian Andersen* (1952).

Loewe \'lō**, Frederick** (b. June 10, 1901, Berlin, Ger.—d. Feb. 14, 1988, Palm Springs, Calif., U.S.) German-born U.S. songwriter. Son of a Viennese tenor, Loewe was a piano prodigy; at age 13 he became the youngest soloist ever to appear with the Berlin Philharmonic Orchestra. He studied with Ferruccio Busoni and Eugène d'Albert. His song "Katrina," written at age 15, sold more than a million copies. Arriving in the U.S. in 1924, he contributed music to Broadway revues. In 1942 he met Alan Jay Lerner; their 18-year collaboration would produce five classic musicals. Personal differences ended their partnership after *Camelot* (1960), but they reunited to adapt their film *Gigi* (1958) for the stage (1973) and to write songs for the film *The Little Prince* (1974).



Loewy \'lō-ē**, Raymond (Fernand)** (b. Nov. 5, 1893, Paris, Fr.—d. July 14, 1986, Monaco) French-born U.S. industrial designer. After obtaining an advanced degree in electrical engineering, he immigrated in 1919 to New York City, where he worked as a fashion illustrator and designer of department store window displays. He opened his own design firm in 1929, and in the 1930s and '40s he designed a variety of household products with rounded corners and simplified, "streamlined" outlines. A refrigerator he designed for Sears, Roebuck & Co. (1934) won first prize at the 1937 Paris International Exposition. In later years his highly functional designs for everything from locomotives to soda dispensers helped shape U.S. industrial design.

Löffler \'lœf-lər**, Friedrich (August Johannes)** (b. June 24, 1852, Frankfurt an der Oder, Prussia—d. April 9, 1915, Berlin, Ger.) German bacteriologist. In 1884, with Edwin Klebs (1834–1913), he discovered the organism that causes diphtheria. Simultaneously with Émile Roux (1853–1933) and Alexandre Yersin (1863–1943), he indicated the existence of a diphtheria toxin. His demonstration that some animals are immune to diphtheria was basic to Emil von Behring's work in developing antitoxins. Löffler also discovered the cause of some swine diseases and identified, with Wilhelm Schütz, the organism that causes the horse disease glanders. With Paul Frosch he found that foot-and-mouth disease is caused by a virus (the first time a virus was found to be the agent of an animal disease) and developed a serum against it.

loft Upper space within a building, often open on one side, used for storage or other purposes (e.g., sleeping loft, hayloft). The term also refers to one of the upper floors in a factory or warehouse, typically undivided by partitions and now often converted to other uses, such as residences or artists' studios. In churches the rood loft is a display gallery above the rood screen (see cathedral), and a choir or organ loft is a gallery reserved for church singers and musicians. In theaters, the loft is the area above and behind the proscenium.

Lofting, Hugh (John) (b. Jan. 14, 1886, Maidenhead, Berkshire, Eng.—d. Sept. 26, 1947, Santa Monica, Calif., U.S.) British-born U.S. author and illustrator. He lived principally in the U.S. from 1912. He is known for his classic children's books about Doctor Dolittle, a chubby, gentle, eccentric physician to animals who learns their language the better to treat them. He originally created the character to entertain his children in letters he sent from the front during World War I. *The Story of Dr. Dolittle* (1920) won instant success; it was followed by *The Voyages of Dr. Dolittle* (1922, Newbery Medal), *Dr. Dolittle in the Moon* (1928), and *Dr. Dolittle's Return* (1933), among many other volumes.

log cabin Small, one-room house built of logs notched at the ends and laid one upon another with the spaces filled with plaster, moss, mortar, mud, or dried manure. In North America they were built by early settlers, hunters, loggers, and other wilderness dwellers. They have also been built in Europe, particularly Scandinavia. Though designs vary, a common style features a sloping, single-gabled timbered roof and small windows. Modern summer cottages may be built of logs (or given log-cabin siding) to achieve a rustic effect.

Log cabin, Abraham Lincoln's boyhood home, Knob Creek, Kentucky, originally built early 19th century.
WETTACH/SHOSTAL

Logan, James *orig.* **Tah-gah-jute** (b. c. 1725, probably at Shamokin, Pa.—d. 1780, near Lake Erie) American Indian leader. He was the son of the Oneida chief Shikellamy, who was a friend of the secretary of the Pennsylvania colony, James Logan (1674–1751). He moved to the Ohio River valley, where he became friendly with Indians and white settlers. After his family was massacred by a frontier trader in 1774, he led Indian raids on white settlements in Lord Dunmore's War. He refused to participate in peace negotiations, sending his grievances in a message known as "Logan's Lament." He was allied with the British in the American Revolution.

Logan, Mount Peak, St. Elias Mountains, southwestern Yukon Territory, Canada, near the Alaskan boundary. Reaching 19,524 ft (5,951 m), it is the highest mountain in Canada and is second in North America only to Mount McKinley. It is located in Kluane National Park, which occupies 8,500 sq mi (22,000 sq km). The summit was first reached in 1925. The peak was named for William Logan, founder of the Geological Survey of Canada.

loganberry Bramble plant (*Rubus loganobaccus*) of the rose family. It originated in Santa Cruz, Calif., in 1881, apparently as a natural hybrid between the wild blackberry of the Pacific coast and the red raspberry. It is grown in large quantities in Oregon and Washington and is cultivated in Britain and Tasmania. The loganberry is a vigorous, nearly trailing, blackberry-like plant with compound leaves and prickly canes. Its wine-red, tart berries are canned, frozen, used in preserves or pies, or made into wine.

logarithm In mathematics, the power to which a base must be raised to yield a given number (e.g., the logarithm to the base 3 of 9, or $\log_3 9$, is 2, because $3^2 = 9$). A common logarithm is a logarithm to the base 10. Thus, the common logarithm of 100 (log 100) is 2, because $10^2 = 100$. Logarithms to the base *e*, in which $e = 2.71828\ldots$, called natural logarithms (ln), are especially useful in calculus. Logarithms were invented to simplify cumbersome calculations, since exponents can be added or subtracted to multiply or divide their bases. These processes have been further simplified by the incorporation of logarithmic functions into digital calculators and computers. See also JOHN NAPIER.

loggia \'lō-jē-ə\ Hall, gallery, or porch open to the air on one or more sides. It evolved in the Mediterranean region as an open sitting room with protection from the sun. It is often a roofed, arcaded open gallery on an upper story overlooking a court, though it can also be a separate arcaded or colonnaded structure. In medieval and Renaissance Italy, it was often used in conjunction with a public square, as in Florence's Loggia dei Lanzi (begun 1376).

logic Study of inference and argument. Inferences are rule-governed steps from one or more propositions, known as premises, to another proposition, called the conclusion. A deductive inference is one that is intended to be valid, where a valid inference is one in which the conclusion must be true if the premises are true (see DEDUCTION; VALIDITY). All other inferences are called inductive (see INDUCTION). In a narrow sense, logic is the study of deductive inferences. In a still narrower sense, it is the study of inferences that depend on concepts that are expressed by the "logical constants," including: (1) propositional connectives such as "not," (symbolized as $\neg$), "and" (symbolized as $\wedge$), "or" (symbolized as $\vee$), and "if-then" (symbolized as $\supset$), (2) the existential and universal quantifiers, "$(\exists x)$" and "$(\forall x)$," often rendered in English as "There is an *x* such that …" and "For any (all) *x*, …," respectively, (3) the concept of identity (expressed by "="), and (4) some notion of predication. The study of the logical constants in (1) alone is known as the PROPOSITIONAL CALCULUS; the study of (1) through (4) is called first-order PREDICATE CALCULUS with identity. The logical form of a proposition is the entity obtained by replacing all nonlogical concepts in the proposition by variables. The study of the relations between such uninterpreted formulas is called formal logic. See also DEONTIC LOGIC; MODAL LOGIC.

logic, many-valued FORMAL SYSTEM in which the well-formed formulae are interpreted as being able to take on values other than the two classical values of truth or falsity. The number of values possible for well-formed formulae in systems of many-valued logic ranges from three to uncountably many.

logic, philosophy of Philosophical study of the nature and scope of LOGIC. Examples of questions raised in the philosophy of logic are: "In virtue of what features of reality are the laws of logic true?"; "How do we know the truths of logic?"; and "Could the laws of logic ever be falsified by experience?" The subject matter of logic has been variously characterized as the laws of THOUGHT, "the rules of right reasoning," "the principles of valid argumentation," "the use of certain words called logical constants," and "truths based solely on the meanings of the terms they contain."

logic design Basic organization of the circuitry of a DIGITAL COMPUTER. All digital computers are based on a two-valued logic system—1/0, on/off, yes/no (see BINARY CODE). Computers perform calculations using components called logic gates, which are made up of INTEGRATED CIRCUITS that receive an input signal, process it, and change it into an output signal. The components of the gates pass or block a clock pulse as it travels through them, and the output bits of the gates control other gates or output the result. There are three basic kinds of logic gates, called "and," "or," and "not." By connecting logic gates together, a device can be constructed that can perform basic arithmetic functions.

logical positivism Early school of ANALYTIC PHILOSOPHY, inspired by DAVID HUME, the mathematical logic of BERTRAND RUSSELL and ALFRED NORTH WHITEHEAD, and LUDWIG WITTGENSTEIN's *Tractatus* (1921). The school, formally instituted at the University of Vienna in a seminar of Moritz Schlick (1882–1936) in 1922, continued there as the VIENNA CIRCLE until 1938. It proposed several revolutionary theses: (1) All meaningful discourse consists either of (a) the formal sentences of logic and mathematics or (b) the factual propositions of the special sciences; (2) Any assertion that claims to be factual has meaning only if it is possible to say how it might be verified; (3) Metaphysical assertions, including the pronouncements of religion, belong to neither of the two classes of (1) and are therefore meaningless. Some logical positivists, notably A.J. AYER, held that assertions in ethics (e.g., "It is wrong to steal") do not function logically as statements of fact but only as expressions of the speaker's feelings of approval or disapproval toward some action. See also RUDOLF CARNAP; EMOTIVISM; VERIFIABILITY PRINCIPLE.

logicism \'lä-ji-ˌsi-zəm\ In the philosophy of MATHEMATICS, the thesis that all mathematical propositions are expressible as or derivable from the propositions of pure LOGIC. GOTTLOB FREGE attempted to establish the thesis in his *Die Grundlagen der Arithmetik* (1884) and other works; BERTRAND RUSSELL argued for logicism in *The Principles of Mathematics* (1903) and attempted a formal proof with ALFRED NORTH WHITEHEAD in *Principia Mathematica* (1910–13).

logistic system See FORMAL SYSTEM

logistics \lō-'jis-tiks, lə-'jis-tiks\ In military science, all the activities of armed-force units in support of combat units, including transport, supply, communications, and medical aid. The term, first used by HENRI JOMINI, ALFRED THAYER MAHAN, and others, was adopted by the U.S. military in World War I and gained currency in other nations in World War II. Its importance grew in the 20th century with the increasing complexity of modern warfare. The ability to mobilize large populations has escalated military demands for supplies and provisions, and sophisticated technology has added to the cost and intricacy of weapons, communications systems, and medical care, creating the need for a vast network of support systems. In World War II, for instance, only about three in 10 U.S. soldiers served in a combat role.

Logone \lō-'gōn\ **River** River, north-central Africa. The chief tributary of the CHARI RIVER of the Lake Chad basin in equatorial Africa, it drains northeastern Cameroon and Chad. It flows 240 mi (390 km) northwest to join the Chari at N'DJAMENA, Chad. It is seasonally navigable for small steamers below Bongor.

logos (Greek: "word," "reason," "plan") In Greek philosophy and theology, the divine reason that orders the cosmos and gives it form and meaning. The concept is found in the writings of HERACLEITUS (6th century BC) and in Persian, Indian, and Egyptian philosophical and theological systems as well. It is particularly significant in Christian theology, where it is used to describe the role of JESUS as the principle of God active in the creation and ordering of the cosmos and in the revelation of the divine plan of salvation. This is most clearly stated in the Gospel of JOHN the Apostle, which identifies Christ as the Word (Logos) made flesh.

Logroño \lə-'grō-nyō\ City (2001: 133,058), capital of LA RIOJA autonomous community, Spain. Originating in Roman times, it owed its growth during the Middle Ages to its position on the pilgrimage route to SANTIAGO DE COMPOSTELA. An ancient walled town, it is a trade centre in an agricultural region and is known for its Rioja wine.

Lohengrin \'lō-ən-ˌgrēn,\ *English* \'lō-ən-ˌgrin\ Hero-knight of medieval Germanic legends. He was called the knight of the swan because he arrived in a boat drawn by a swan to help a noble lady in distress. He married her but forbade her to ask his origin; when she forgot this promise, he left her, never to return. The first version of his legend appeared c. 1210 in WOLFRAM VON ESCHENBACH's *Parzival*, in which the swan knight was the son and heir of Parzival (PERCEVAL). The anonymous 15th-century epic *Lorengel* provided the basis for RICHARD WAGNER's opera *Lohengrin* (1850).

Loire \'lwär\ **River** River, southeastern France. The longest river in France, it flows north and west for 634 mi (1,020 km) to the Bay of BISCAY, which it enters through a wide estuary below Saint-Nazaire. Embankments were built as early as the 12th century, and in subsequent centuries it was used extensively for the transport of goods. A canal system built in the 17th and 18th centuries is inadequate for modern vessels.

loka \'lō-kə\ In HINDUISM, the universe or any particular division of it. The most common division of the universe is the *tri-loka*, or three worlds (heaven, earth, and atmosphere, or heaven, world, and netherworld), each of which is divided into seven regions. Sometimes, instead of the *tri-loka*, 14 worlds are envisioned, seven above the earth and seven below. Whatever the division, it illustrates the basic Hindu concept of hierarchically ordered worlds.

Loki \'lō-kē\ In Norse mythology, a trickster who was able to change his shape and sex. His father was the giant Fárbauti, but he was included

© 2006 Encyclopædia Britannica, Inc.

among the Aesir, a tribe of the gods. A companion of the great gods Odin and Thor, Loki helped them with his clever plans but sometimes embarrassed them. He also appeared as the enemy of the gods, entering their banquets uninvited and demanding drink. After causing the death of the god Balder, he was punished by being bound to a rock. Loki created a female, Angerboda, with whom he produced three evil progeny: Hel, the goddess of death; Jörmungand, the evil serpent surrounding the world; and Fenrir, the wolf.

Lollards Followers of John Wycliffe in late medieval England. The pejorative name (from Middle Dutch *lollaert*, "mumbler") had been applied earlier to European groups suspected of heresy. The first Lollard group centred on some of Wycliffe's colleagues at Oxford led by Nicholas of Hereford. In 1382 the archbishop of Canterbury forced some of the Oxford Lollards to renounce their views, but the sect continued to multiply. The accession of Henry IV in 1399 signaled a wave of repression. In 1414 a Lollard rising was quickly defeated by Henry V; it brought severe reprisals and marked the end of the Lollards' overt political influence. A Lollard revival began c. 1500, and by 1530 the old Lollard and the new Protestant forces had begun to merge. The Lollard tradition predisposed opinion in favor of Henry VIII's anticlerical legislation. The Lollards were responsible for a translation of the Bible by Nicholas of Hereford, and their core teachings included an emphasis on personal faith and the authority of the Bible and the rejection of clerical celibacy, transubstantiation, and indulgences.

Lomax \'lō-ˌmaks**, John** (b. Sept. 23, 1867, Goodman, Miss., U.S.—d. Jan. 26, 1948, Greenville, Miss.) U.S. ethnomusicologist. He attended Harvard University and soon thereafter began publishing collections of cowboy songs. In the 1930s he and his teenage son Alan (1915–2002) collected folk songs of the Southwest and Midwest. Jelly Roll Morton, Leadbelly, and Muddy Waters were perhaps the most significant of their many important discoveries; the Lomaxes' archive of Morton's performance and storytelling was of particular significance. Both men did important work at the Library of Congress's Archive of Folk Music. Their many books and anthologies spurred the folk music revival of the 1950s and '60s.

Lombard Any member of a Germanic people who from 568 to 774 ruled a kingdom in the region of Lombardy. Originally a pastoral tribe from northwestern Germany, the Lombards migrated southward and adopted an imperial military system. In the 6th century they moved into northern Italy, conquering the cities that had been left defenseless after the overthrow of the Ostrogoths by the Byzantine Empire. In the 8th century Liudprand, probably the greatest of the Lombard kings, steadily reduced the area of Italy still under Byzantine rule. When the Lombard kings invaded papal territories, Pope Adrian I sought aid from Charlemagne. In 773 the Franks besieged the Lombard capital, capturing Desiderius, the Lombard king; Charlemagne became king of the Lombards as well as of the Franks, and Lombard rule in Italy ended.

Lombard, Carole *orig.* **Jane Alice Peters** (b. Oct. 6, 1908, Fort Wayne, Ind., U.S.—d. Jan. 16, 1942, near Las Vegas, Nev.) U.S. film actress. She made her screen debut in *A Perfect Crime* (1921) and appeared in comedy shorts from 1925. She starred in the classic screwball comedy *Twentieth Century* (1934), which showcased her unique blend of sophisticated glamour and earthy audacity and established her as a leading comic actress. She appeared in a series of popular comedies, including *My Man Godfrey* (1936), *Nothing Sacred* (1937), *Mr. and Mrs. Smith* (1941), and *To Be or Not to Be* (1942). She married Clark Gable in 1939. She died in a plane crash while on tour to sell war bonds.

Lombard, Peter See Peter Lombard

Lombard League Italian league that resisted attempts by the Holy Roman emperors to curtail the liberties of the communes of Lombardy in northern Italy in the 12th–13th century. Founded in 1167, it was backed by Pope Alexander III, who saw it as an ally against Emperor Frederick I Barbarossa. After several military setbacks at the hands of the league, Frederick was forced to grant the Lombard cities communal liberties and jurisdiction under the Peace of Constance. The league again was renewed in 1226 and resisted Frederick II's attempt to reassert imperial power in northern Italy.

Lombardi, Vince(nt Thomas) (b. June 11, 1913, Brooklyn, N.Y., U.S.—d. Sept. 3, 1970, Washington, D.C.) U.S. football coach. He attended Fordham University, where he played on the famous line known as the "Seven Blocks of Granite." As head coach and general manager of the Green Bay Packers (1959–67), he imposed a strenuous regimen and led the team to five NFL championships (1961, 1962, 1965, 1966, 1967) and to victories in Super Bowls I and II (1967, 1968). Because of his success, he became a national symbol of single-minded determination to win. As coach, general manager, and part owner of the Washington Redskins in 1969, he led that team to its first winning season in 14 years.

Lombardo, Guy (Albert) (b. June 19, 1902, London, Ont., Can.—d. Nov. 5, 1977, Houston, Texas, U.S.) Canadian-born U.S. bandleader. He trained as a violinist and in 1917 formed his band, the Royal Canadians. They began broadcasting nationally from Chicago in 1927, and from 1929 he was the winter attraction at New York City's Roosevelt Grill, a booking repeated for more than 30 years. He later moved to the Waldorf-Astoria Hotel, continuing the famous New Year's Eve broadcasts, begun in 1954, that climaxed with "Auld Lang Syne." Though derided by critics as the "king of corn," Lombardo gained long-lasting popularity by conducting what was billed as "the sweetest music this side of heaven."

Lombardy \'läm-bər-dē\ Region (pop., 2003 est.: 9,108,645), northern Italy. Bounded on the north by Switzerland, it contains many Alpine peaks as well as the fertile valley of the Po River. Its capital is Milan. Inhabited by Celtic peoples from the 5th century BC, it was conquered by Rome after the Second Punic War and became part of Cisalpine Gaul. In AD 568–774 it was the centre of the kingdom of the Lombards. During the Middle Ages several of its towns became self-governing municipalities; they formed the Lombard League in the 12th century and won autonomy by defeating Frederick I Barbarossa in 1176. The area was later ruled by Spain (1535–1713), Austria (1713–96), and France (1796–1814). In 1859 Lombardy joined the newly unified Italy. Italy's most populous region, it is a thriving commercial area centred on Milan.

Lombok \'lȯm-ˌbȯk\ Island, Indonesia. It is one of the Lesser Sunda Islands, separated from Bali by the Lombok Strait and from Sumbawa by the Alas Strait. It is 70 mi (115 km) long and 50 mi (80 km) wide and occupies an area of 2,098 sq mi (5,435 sq km). It is divided by two mountain chains; its northern range includes Mount Rindjani (12,224 ft [3,726 m]), Indonesia's tallest mountain. It was ruled by the sultan of Makasar in 1640. The Balinese later seized control and established four kingdoms there; the Dutch ruled the kingdom of Mataram from 1843 and gained control of the entire island by the late 19th century. Following World War II, it became part of Indonesia.

Lomé \lō-'mā\ City (pop., 2003 est.: 676,400; urban agglom.: 749,700), capital of Togo. Located on the Gulf of Guinea in southwestern Togo, it was chosen as the capital of German Togoland in 1897 and developed as an administrative and commercial centre. Its port was modernized in the 1960s, and its deepwater harbour is a major shipping centre. It is the site of the University of Bénin (1965).

Loménie de Brienne \lō-mā-'nē-də-brē-'en**, Étienne Charles de** (b. Oct. 9, 1727, Paris, France—d. Feb. 19, 1794, Sens) French ecclesiastic and minister of finance (1787–88) before the French Revolution. Unable to cope with the worsening financial crisis, he resigned in favour of Jacques Necker. Made archbishop of Sens and then cardinal (1788), he was one of the few prelates who took the oath to the Civil Constitution of the Clergy (1790). He died in prison during the Reign of Terror.

Lomond \'lō-mən**, Loch** Lake, Scotland. Located at the southern edge of the Highlands, it is the country's largest lake 24 mi (39 km) long and 0.75 to 5 mi (1.2 to 8 km) wide, with an area of 27 sq mi (70 sq km). It drains by the short River Leven into the Firth of Clyde at Dumbarton. Its eastern shore near Ben Lomond is the region made famous by the outlaw Rob Roy.

Lomonosov \lə-ˌmə-'nȯ-səf**, Mikhail Vasilyevich** (b. Nov. 19, 1711, near Kholmogory, Russia—d. April 15, 1765, St. Petersburg) Russian scientist, poet, and grammarian, considered the first great Russian linguistic reformer. Educated in Russia and Germany, he established what became the standards for Russian verse in the *Letter Concerning the Rules of Russian Versification*. In 1745 he joined the faculty at the St. Petersburg Imperial Academy of Sciences, where he made substantial contributions to the physical sciences. He later wrote a Russian grammar and worked to systematize the Russian literary language, which had been an amalgam of Church Slavonic and Russian vernacular. He also reorganized the academy, founded Moscow State University (which now bears his name), and created the first coloured-glass mosaics in Russia.

© 2006 Encyclopædia Britannica, Inc.

Lon Nol (b. Nov. 13, 1913, Prey Vêng, Camb.—d. Nov. 17, 1985, Fullerton, Calif., U.S.) Cambodian military and political leader. A magistrate in the French colonial service, he became successively head of the national police (1951), army chief of staff (1955), and commander in chief (1960). He was twice premier (1966–67, 1969–70) under NORODOM SIHANOUK. In 1970 he was the chief architect of the U.S.-supported coup that deposed Sihanouk. He abandoned Sihanouk's policy of neutrality in the Vietnam War and threw Cambodia's support behind the U.S. and South Vietnam. In 1972 he assumed total power in Cambodia; he fled to the U.S. in 1975 when the KHMER ROUGE takeover was imminent.

London *officially* **Greater London** Capital and largest city (pop., 2001: 7,172,036) of the United Kingdom, situated in southeastern England on the River THAMES. It is the political, industrial, cultural, and financial centre of the country. Formally known as the metropolitan county of Greater London (established 1965), it has an area of 659 sq mi (1,706 sq km) and consists of two regions: Inner London comprises 14 of London's 33 boroughs (including the original City of London), and Outer London encompasses the other 19 boroughs. Greater London is an administrative entity, with an elected mayor and assembly. Founded by the Romans as Londinium in the 1st century AD, it passed to the Saxons in the 5th–6th century. The Danes invaded England and London in 865. Following the Norman Conquest (1066), WILLIAM I (the Conqueror) established the central stronghold of the fortress known as the TOWER OF LONDON. Norman kings selected Westminster as their seat of government. The church known as WESTMINSTER ABBEY had been built earlier by EDWARD THE CONFESSOR. The largest city in Europe north of the Alps by 1085, it was struck by the BLACK DEATH in 1348–49. Trade grew significantly in the mid-16th century, fueled by the establishment of Britain's overseas empire. In 1664–65 the plague killed about 70,000 Londoners, and in 1666 the GREAT FIRE OF LONDON consumed five-sixths of the City of London; it was afterward rebuilt (see CHRISTOPHER WREN). London was the centre of world trade from the late 18th century to 1914. It opened the world's first electric underground railway in 1890. Severely damaged by German bombs in the Battle of BRITAIN during World War II, it was again rebuilt and grew rapidly in the postwar period. Among its sites of interest are BUCKINGHAM PALACE, the TATE GALLERIES, the National Gallery, the BRITISH MUSEUM, and the VICTORIA AND ALBERT MUSEUM.

London City (pop., 2001: metro area, 432,451), southeastern Ontario. It lies on the Thames River, near several of the GREAT LAKES. Its name and site were chosen in 1792 for the location of a capital of Upper Canada, but the plans failed to materialize. First settled in 1826, it was incorporated as a city in 1855. It became an important transportation and industrial centre as a result of its interlake location. It is the seat of the University of Western Ontario.

London, Jack *orig.* **John Griffith Chaney** (b. Jan. 12, 1876, San Francisco, Calif., U.S.—d. Nov. 22, 1916, Glen Ellen, Calif.) U.S. novelist and short-story writer. Born to poverty, the largely self-educated London became a sailor, hobo, Alaskan gold miner, and militant socialist. He gained a wide audience with his first book, *The Son of the Wolf* (1900), and the story "To Build a Fire" (1908). Thereafter he wrote steadily; his 50 books of fiction and nonfiction, including many romantic depictions of elemental struggles for survival as well as socialist tracts, include *The Call of the Wild* (1903), *The Sea-Wolf* (1904), *White Fang* (1906), *The Iron Heel* (1907), *Martin Eden* (1909), and *Burning Daylight* (1910). Though his work brought him wealth and fame, his suicide at age 40 was the result of alcoholism and mounting debt.

Jack London writing *The Sea Wolf*, 1904.
JACK LONDON STATE HISTORIC PARK

London, Treaty of (April 1915) Secret treaty between neutral Italy and the Allied forces of France, Britain, and Russia to bring Italy into World War I. The Allies wanted Italy's participation because of its border with Austria. Italy was promised Trieste, southern Tyrol, northern Dalmatia, and other territories in return for a pledge to enter the war within a month. Despite the opposition of most Italians, who favoured neutrality, Italy joined the war against Austria-Hungary in May.

London, University of Federation of more than 50 British institutions of higher learning, located primarily in London, England. It was established by liberals and religious dissenters in 1828, and it accepted for enrollment Roman Catholics, Jews, and other non-Anglicans. The first two colleges were University College and King's College. From 1849 a student enrolled in any university in the British Empire could be awarded a University of London degree after examination. By the early 20th century many institutions had become affiliated with the university, including Bedford College, the first British university to grant degrees to women; the London School of Economics and Political Science, now an internationally renowned centre for the social sciences; and three other institutions that later became the Imperial College of Science and Technology.

London Bridge Any of several successive structures spanning the River Thames. The Old London Bridge of nursery-rhyme fame was built by Peter of Colechurch between 1176 and 1209, replacing an earlier timber bridge. Because of obstructions encountered in building the cofferdams, the arch spans varied from 15 to 34 ft (4.6–10.4 m); the uneven construction resulted in frequent need for repair, but the bridge survived more than 600 years. Its roadway was loaded with a jumble of houses and shops, many projecting out over the river. It was demolished and replaced in the 1820s by New London Bridge, designed and built by John Rennie, Sr. (1761–1821), and his son John Rennie, Jr. (1794–1874). In the 1960s it was again replaced; the old masonry facing was dismantled and reerected at Lake Havasu City, Ariz., as a tourist attraction.

London Naval Conference (Jan. 21–April 22, 1930) Conference held in London to discuss naval disarmament and review the treaties of the WASHINGTON CONFERENCE. Representatives of Britain, the U.S., France, Italy, and Japan agreed to regulate submarine warfare and to place limits on new construction of cruisers, destroyers, submarines, and other warships. A treaty limiting battleship size was not signed, and the treaties renewed in 1935 were canceled on the outbreak of WORLD WAR II.

London Stock Exchange London marketplace for SECURITIES. It was formed in 1773 by a group of stockbrokers who had been doing business informally in local coffeehouses. In 1801 its members raised money for construction of a building in Bartholomew Lane; they established rules for the exchange the following year. In 1973 the London Stock Exchange merged with several regional British stock exchanges. In 1991 the exchange replaced its governing council with a board of directors, and it became a public limited company.

Londonderry *locally and historically* **Derry** District (pop., 2001: 105,066), northwestern Northern Ireland. It is also the name of a former traditional county, colonized by the English in 1609; the 1973 administrative reorganization broke up the county into several districts, including Londonderry. Bordered by the Irish republic and Lough Foyle, it is centred around the seaport city of LONDONDERRY. In 1969 the old city and the adjacent area were merged administratively, and in 1973 it became one of Northern Ireland's 26 districts.

Londonderry *locally and historically* **Derry** Seaport (pop., 1995 est.: 77,000) and district seat of LONDONDERRY, Northern Ireland. St. COLUMBA established a monastery there in the 6th century, but the settlement was repeatedly destroyed by Norse invaders. In 1600 an English force seized the city; shortly thereafter JAMES I of England granted the city to the citizens of London, who brought in Protestant settlers, and it was then that it became officially known as Londonderry. Growth of the modern city dates from the 1850s, when linen shirt making became important, and clothing manufacture remains a major industry. Home to two cathedrals, Anglican and Roman Catholic, it has been the site of terrorist violence. Steeped in the region's political turmoil, controversy surrounds the city's name. The British government officially refers to the city and district as Londonderry City, but since 1984 the nationalist-controlled city council has called itself the Derry City Council.

Long, Huey (Pierce) (b. Aug. 30, 1893, near Winnfield, La., U.S.—d. Sept. 10, 1935, Baton Rouge, La.) U.S. politician. Despite an impoverished background, he managed to obtain enough formal schooling to pass the bar in 1915. Politically ambitious, he was elected state railroad com-

© 2006 Encyclopædia Britannica, Inc.

missioner at 25. His call for state regulation of the utilities and his attacks on the Standard Oil Company won him widespread popularity. As governor (1928–31) of Louisiana, he became nationally famous for his fiery oratory and unconventional behaviour, and his nickname, "Kingfish," became widely known. He implemented public works projects and education reform but used autocratic methods to control the state government. Elected to the U.S. Senate (1932–35), he sought national power with a Share-the-Wealth program. In 1935 he was assassinated by Carl A. Weiss, whose father Long had vilified. His brother Earl K. Long (1895–1960) later served as governor (1939–40, 1948–52, 1956–60).

Huey Long

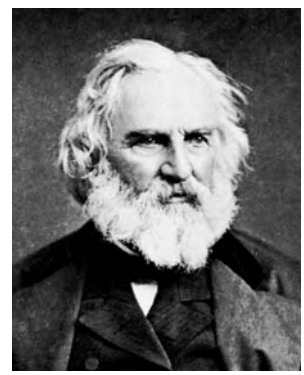
Long Beach City (pop., 2000: 461,522), southwestern California, U.S. The site was originally an Indian trading camp, and Spanish ranches were located there in the 18th century. Laid out as Willmore City in 1880 and incorporated in 1888, it was renamed for its 8.5-mi (13.5-km) beach. The discovery of oil nearby in 1921 led to rapid growth. An earthquake in 1933 caused extensive damage. It is connected to the Los Angeles harbour by the Cerritos Channel. The British ocean liner *Queen Mary* has been moored in the harbour since 1969.

long-distance running In track and field, any foot race over 5,000 m in length. Marathons and cross-country running are also considered long-distance events. Women rarely ran in races beyond 3,000 m until the late 20th century.

Long Island Island (pop., 2000: 7,448,618), southeastern New York, U.S., lying between Long Island Sound and the Atlantic Ocean. It has four counties: Kings, Queens, Nassau, and Suffolk. Kings County (the borough of Brooklyn) and Queens County (the borough of Queens) form part of New York City. At its western end it is separated from the Bronx and Manhattan by the East River and from Staten Island by the Narrows. It is 118 mi (190 km) long, 12–23 mi (19–37 km) wide, and has an area of 1,401 sq mi (3,629 sq km). Its eastern portion has many beaches; it serves as a recreation area for New York City. Its southern shore, lined by sand spits (see Fire Island), shelters several bays, including Jamaica Bay. Originally inhabited by Indians (mostly Delaware), it was included in a grant to the Plymouth Co. It was settled by Dutch and English, but the whole island became part of the British colony of New York in 1664. It was the site of the Battle of Long Island (Aug. 27, 1776), an American defeat in the American Revolution.

Long Island Sound Body of water between the southern shore of Connecticut and the northern shore of Long Island, New York, U.S. It connects with the East River and with Block Island Sound. Covering 1,180 sq mi (3,056 sq km), it is 90 mi (145 km) long and 3–20 mi (5–32 km) wide. Its shores have many residential communities and summer resorts.



long jump *or* **broad jump** Track-and-field sport consisting of a horizontal jump for distance. It was formerly performed from both standing and running starts, as separate events, but the standing long jump is no longer included in major competitions. The running long jump was an event in the Olympic Games of 708 BC and in the modern Games from 1896. In 1948 the women's long jump became an Olympic event.

Long March (1934–35) Trek of 6,000 mi (10,000 km) by Chinese Communists, resulting in the relocation of their revolutionary base from southeastern China to northwestern China and the emergence of Mao Zedong as their undisputed leader. Having withstood four of Chiang Kai-shek's campaigns against their base area, the Communists were nearly defeated by his fifth attack. The remaining 85,000 troops broke through Nationalist lines and fled first westward under Zhu De and then north under Mao. By the time Mao arrived at Shaanxi, he was followed by only about 8,000 survivors, most of the rest having been killed by fighting, disease, and starvation (among the casualties were Mao's two children and a brother). At their new base the Communists were able to build up their strength at a safe remove from the Nationalists in preparation for their eventual victory in 1949.

Long Parliament Session of the English Parliament summoned in November 1640 by Charles I, so named to distinguish it from the Short Parliament of April–May 1640. Charles called the session to raise the money needed for his war against the Scots. Resistant to Charles's demands, the Parliament caused the king's advisers to resign and passed an act forbidding its own dissolution without its members' consent. Tension between the king and Parliament increased until the English Civil War broke out in 1642. After the king's defeat (1646), the army, led by Thomas Pride, exercised political power and in 1648 expelled all but 60 members of the Long Parliament. The remaining group, called the Rump, brought Charles to trial and execution (1649); it was forcibly ejected in 1653. In 1659, after the end of Oliver Cromwell's protectorate, the Parliament was reestablished; those who were excluded in 1648 were restored to membership. The Parliament dissolved itself in 1660.

longbow Leading missile weapon of the English from the 14th century into the 16th century. Probably of Welsh origin, it was usually 6 ft (2 m) tall and shot arrows more than a yard long. The best were made of yew, might require a force of 100 lbs (45 kg) to draw, and had an effective range of 200 yards (180 m). English archers used longbows in the Hundred Years' War, and the weapon played an important role in the battles of Crécy, Poitiers, and Agincourt. See also bow and arrow, crossbow.

Longfellow, Henry Wadsworth (b. Feb. 27, 1807, Portland, Mass., U.S.—d. March 24, 1882, Cambridge, Mass.) U.S. poet. Longfellow graduated from Bowdoin College and traveled in Europe before joining the modern-language faculties of Bowdoin (1829–35) and Harvard (1836–54). His *Voices of the Night* (1839), containing "The Psalm of Life" and "The Light of the Stars," first won him popularity. *Ballads and Other Poems* (1841), including "The Wreck of the Hesperus" and "The Village Blacksmith," swept the nation, as did his long poem *Evangeline* (1847). With *Hiawatha* (1855), *The Courtship of Miles Standish* (1858), and *Tales of a Wayside Inn* (1863), including "Paul Revere's Ride," he became the best-loved American poet of the 19th century. He later translated Dante's *Divine Comedy* (1867) and published his intended masterpiece, *Christus*, a trilogy on Christianity (1872). The hallmarks of his verse are gentleness, simplicity, and an idealized vision of the world.

Henry Wadsworth Longfellow.
HISTORICAL PICTURES SERVICE, CHICAGO

longhair Generic term for any member of breeds of domestic cats noted for their long, soft, flowing coat. Longhair breeds include Balinese, Birman, Cymric, Himalayan, Javanese, Norwegian forest cat, Maine coon cat, Persian, Ragdoll, Somali, and Turkish Angora. Though considered more lethargic than shorthair cats, longhairs are, like shorthairs, noted for playfulness, affection, and the ability to defend themselves if necessary.

Longhi \'lȯŋ-gē**, Pietro** *orig.* **Pietro Falca** (b. 1702, Venice—d. May 8, 1785, Venice) Italian painter. Son of a Venetian goldsmith, he studied painting in Bologna and thereafter became known for his scenes of everyday life among Venice's upper class and bourgeoisie. Popular for their charm and seeming naïveté, his paintings have a Rococo sense of the intimate and manifest the interest in social observation characteristic of the Enlightenment. He also painted landscapes and portraits.

longhouse Traditional communal dwelling of the Iroquois Indians until the 19th century. The longhouse was a rectangular box built out of poles, with doors at each end and saplings stretched over the top to form the roof, the whole structure being covered with bark. It was about 20 ft (6 m) wide and could be more than 200 ft (60 m) in length, depending on the number of families living in it. Down the middle of the house were fires, which were shared by families on either side. The term is also applied today to an Iroquois building designated as church and meeting hall, though its form is entirely different. See also pole construction.

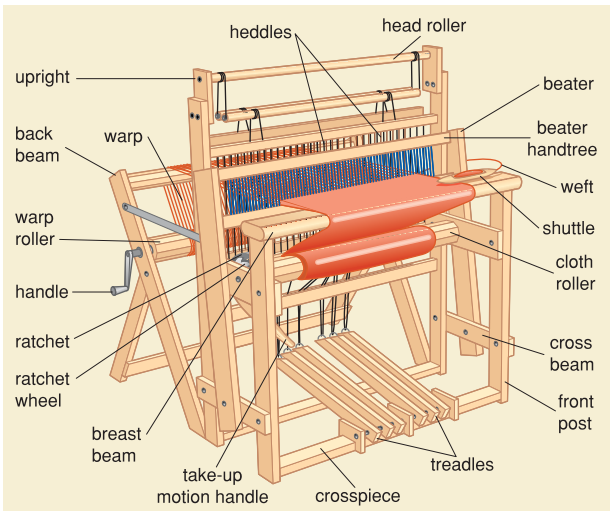
longitude See LATITUDE AND LONGITUDE

Longmen caves *or* **Lung-men caves** Series of Chinese cave temples carved into the rock of a high riverbank south of Luoyang, in HENAN province. Construction began late in the NORTHERN WEI DYNASTY (AD 386–535) and continued sporadically through the 6th century and the TANG DYNASTY. Delicately crafted to create ethereal effects in stone, the temples contain images of the BUDDHA clothed as a Chinese scholar. Work at Longmen culminated in 672–675 with the construction of a monumental shrine known as Fengxian Si, which includes a seated Buddha more than 35 ft (10.7 m) high.

Longshan culture *or* **Lung-shan culture** (2500–1900 BC) Neolithic culture of China's HUANG HE (Yellow River) valley. Large sites with rammed-earth walls have been found. Characteristic Longshan pottery has thin walls and is well crafted; there are tall-stemmed black cups with eggshell-thin walls as well as polished black beakers. Oracle bones were used for divination. There is evidence of differentiation in social status, and jade artifacts and traces of metallurgy have been found.

longship *or* **Viking ship** Sail-and-oar vessel widely used in northern Europe for more than 1,500 years. It was a 45–75-ft (14–23-m) GALLEY with up to 10 oars on a side, a square sail, and a 50–60-man capacity. Double-ended and built with overlapped planks, it was exceptionally sturdy in high seas. Examples have been found from as early as 300 BC. It carried the Vikings on their piratical raids of the 9th century and bore LEIF ERIKSSON to America in 1000. Dutch, French, English, and German merchants and warriors also used it.



Longstreet, James (b. Jan. 8, 1821, Edgefield District, S.C., U.S.—d. Jan. 2, 1904, Gainesville, Ga.) U.S. army officer. He graduated from West Point but resigned from the U.S. Army when South Carolina seceded. Appointed brigadier general in the Confederate army, he fought in the battles of BULL RUN, ANTIETAM, and FREDERICKSBURG. He was second in command to ROBERT E. LEE at the Battle of GETTYSBURG, where his delay in attacking contributed to the Confederate defeat. He later directed the Confederate attack at CHICKAMAUGA. He was badly wounded in the Battle of the WILDERNESS but later resumed his command. He surrendered with Lee at APPOMATTOX COURT HOUSE. He later served as U.S. minister to Turkey (1880–81) and commissioner of Pacific railways (1898–1904).

Lönnrot \'lœn-růt**, Elias** (b. April 9, 1802, Sammatti, Swedish Finland—d. March 19, 1884, Sammatti, Russian Finland) Finnish folklorist and philologist. While serving as a medical officer for 20 years in a remote part of eastern Finland, Lönnrot collected linguistic information and folk poetry from the region's inhabitants. Believing that the short poems were fragments of a continuous epic, he added connective material of his own and assembled them into the *KALEVALA* (1835, enlarged 1849), which became the Finnish national epic. He also published *Old Songs and Ballads of the Finnish People* (1840–41) and other collections.

Lonsdale, Dame Kathleen *orig.* **Kathleen Yardley** (b. Jan. 28, 1903, Newbridge, County Kildare, Ire.—d. April 1, 1971, London, Eng.) Irish-born British crystallographer. In 1929 her X-ray crystallography techniques established the regular hexagonal arrangement of carbon atoms in molecules of benzene compounds. She developed a technique with which she measured (to seven figures) the distance between carbon atoms in diamond. She also applied crystallographic techniques to medical problems, in particular the study of bladder stones and certain drugs. In 1945 she became the first woman elected to the Royal Society of London, and in 1956 she was created Dame of the British Empire.

loofah *or* **luffa** \'lü-fə\ Any of six species of annual climbing vines, also called vegetable sponge or sponge gourd, that make up the genus *Luffa* in the GOURD family, native to the Old World tropics. Two species cultivated in temperate areas (*L. acutangula* and *L. aegyptiaca*) produce 1-ft (30-cm) cucumber-shaped fruits. Edible and greenish when young, these fruits become straw-coloured with age. On removal of the skin, pulp, and seeds, there remains a complex of closely netted vascular bundles (food- and water-carrying tubes) that resembles a sponge in texture. This spongelike product is used for bathing, for washing dishes, and as an industrial fibre.

loom Machine for WEAVING cloth. The earliest looms, from the 5th millennium BC, consisted of bars or beams forming a frame to hold a number of parallel threads in two alternating sets. By raising one set of these threads (which together formed the warp), it was possible to run a cross thread (a weft, or filling) between them. A SHUTTLE carried the filling strand through the warp. The fundamental operation of the loom remained unchanged, but over centuries many improvements were introduced in both Asia and Europe. The drawloom, probably invented in Asia for SILK weaving, provided a means for raising warp threads in groups as required by a pattern. In the 18th century JACQUES DE VAUCANSON and J.-M. JACQUARD mechanized this function by the ingenious use of punched cards; the cards programmed the mechanical drawboy, saving labour and eliminating errors (see JACQUARD LOOM). In England the inventions of JOHN KAY (FLYING SHUTTLE), EDMUND CARTWRIGHT (power drive), and others contributed to the INDUSTRIAL REVOLUTION, in which the loom and other TEXTILE machinery played a central role.

Principal parts of a traditional hand loom.
© MERRIAM-WEBSTER INC.

loon *or* **diver** Any of four species (genus *Gavia*) of diving birds of North America and Eurasia. Loons range in length from 2 to 3 ft (60–90 cm). They have small pointed wings, webs between the front three toes, legs placed far back on the body, making walking awkward, and thick plumage that is mainly black or gray above and white below. They feed mainly on fishes, crustaceans, and insects. Almost wholly aquatic, they can swim long distances underwater and can dive to a depth of 200 ft (60 m). They are generally found singly or in pairs, but some species winter or migrate in flocks. They are known for their eerie, "laughing" cries.

Common loon, or great northern diver (*Gavia immer*)
WAYNE LANKINEN—BRUCE COLEMAN LTD.

looper *or* **cankerworm** *or* **inchworm** LARVA of any member of a large, widespread group (mostly in the family Geometridae, with some in the family Noctuidae) of MOTHS. Loopers move in a characteristic "inching" or "looping" gait by extending the front part of the body and bringing the rear up to meet it. Resembling twigs or leaf stems, they feed on foliage, and can seriously damage or destroy trees.

Loos \'lōs**, Adolf** (b. Dec. 10, 1870, Brno, Moravia, Austria-Hungary—d. Aug. 23, 1933, Kalksburg, near Vienna, Austria) Austrian architect. Educated in Dresden, Ger., he practiced in Vienna, though he spent extended periods in the U.S. and Paris. Opposed to both ART NOUVEAU and Beaux-Arts historicism, he announced as early as 1898 his intention to avoid the use of unnecessary ornament. His Steiner House in Vienna (1910) has been referred to by some architectural historians as the first completely modern dwelling; the main (rear) facade is a symmetrical, skillfully balanced composition of rectangles. His essays from this period, denouncing ornament and decoration, were equally influential. His best-known large structure is the Goldman and Salatsch Building in

© 2006 Encyclopædia Britannica, Inc.

Vienna (1910), in which small amounts of Classical detail are offset by large areas of blank, polished marble. His work strongly influenced European Modernist architects after World War I.

Loos, Anita (b. April 26, 1893?, Sissons, Calif., U.S.—d. Aug. 18, 1981, New York, N.Y.) U.S. novelist and screenwriter. She was a child actress; at an early age she also began contributing sketches and articles to various periodicals. By age 20 she was a professional screenwriter for silent films. Her first novel, *Gentlemen Prefer Blondes* (1925), brought fame to Loos and her central character, the naive gold digger Lorelei Lee; a musical version (1949) starred Carol Channing (b. 1921), and a film (1953) starred Marilyn Monroe. Loos's later film scripts included *Blossoms in the Dust* (1941) and *I Married an Angel* (1942). She also wrote two memoirs, *A Girl Like I* (1966) and *Kiss Hollywood Good-Bye* (1974).

loosestrife Any ornamental plant of the family Lythraceae, especially in the genera *Lythrum* and *Decodon*, and two genera of the primrose family (*Lysimachia* and *Steironema*). Purple loosestrife (*Lythrum salicaria*), native to Eurasia, grows 2–6 ft (0.6–1.8 m) high on riverbanks and in ditches. Its branched stem bears whorls of narrow, pointed, stalkless leaves and ends in tall, tapering spikes of red-purple flowers. Introduced into North America early in the 19th century, it has become a noxious weed in many parts of the U.S. and Canada because its dense growth outcompetes native wetland vegetation that provides food and habitat for wildlife.

López (Michelsen), Alfonso (b. June 30, 1913, Bogotá, Colom.) President of Colombia (1974–78). Son of a former president, he served as senator, governor, and foreign minister before his 1974 landslide victory in Colombia's first competitive presidential election in 16 years. A liberal, he raised taxes on high incomes and took steps to curb inflation, but the elimination of price subsidies and a rise in unemployment led to labour unrest, land seizures by peasants, and guerrilla activity. In 1982 he was defeated in another run for the presidency.

Lopez (Knight), Nancy (b. Jan. 6, 1957, Torrance, Calif., U.S.) U.S. golfer. She left the University of Tulsa (Okla.) after her sophomore year to become a professional golfer. In her first full season in 1978, she won a record total of nine tournaments, including five in a row. She became a three-time winner of the Ladies' Professional Golf Association (LPGA) championship (1978, 1985, 1989) and a four-time LPGA Player of the Year. Her success and personality helped rejuvenate women's golf.

López Portillo \'lō-ˌpez-pȯr-'tē-yō\ **(y Pacheco), José** (b. June 16, 1920, Mexico City, Mex.—d. Feb. 17, 2004, Mexico City) President of Mexico (1976–82). He was a professor before joining the governments of Gustavo Díaz Ordaz and Luis Echeverría. As president, he emphasized attraction of foreign investment, tax concessions to stimulate industrial development, creation of nonagricultural jobs, and exploitation of oil and natural gas. His most significant political reform was to increase participation of minority parties, facilitating later challenges to the Institutional Revolutionary Party. Most of the wealth that flowed from expanded oil exports was squandered or pocketed by government and union officials. His administration was discredited by the huge foreign debt it amassed and charges of corruption. See also Pemex.

loquat \'lō-ˌkwät\ Subtropical evergreen tree (*Eriobotrya japonica*) of the rose family, related to the apple and other well-known fruit trees of the temperate zone. Usually less than 33 ft (10 m) tall, it is common in parks and gardens, often trained to ornamental flatttened shapes by espalier. Dense, fragrant, white flowers grow beyond clusters of leaves with serrated edges. The small yellow-orange fruits have a pleasant, mildly acid taste; they are eaten fresh, stewed, or as jelly or liqueur. The loquat is grown commercially (usually on a small scale) in many subtropical regions.

Loquat (*Eriobotrya japonica*)
G.R. ROBERTS

loran *abbreviation of* **long-range navigation** A land-based system of radio navigation in common use over the continental United States and in its coastal waters. It was developed during World War II for the U.S. military. A civilian version, Loran-C, was developed in the 1950s. Loran-C can be used to determine position within about 30 ft (10 m) by comparing signals from multiple stations. Loran-like systems operate in many coastal waters around the world. However, the availability of the global positioning system (GPS), with a typical accuracy of 3 ft (1 m), has begun to relegate loran to backup status.

Lorca, Federico García See Federico García Lorca

lord See feudalism

Lord Chamberlain's Men See Chamberlain's Men

lord chancellor British official who heads the judiciary and presides over the House of Lords. Until the 14th century the chancellor served as royal chaplain and king's secretary. The office acquired a more judicial character in the reign of Edward III (1327–77). Most of the office's power, exemplified in the administrations of St. Thomas Becket (died 1170) and Thomas, Cardinal Wolsey (died 1530), ceased to exist centuries ago. The judicial work of contemporary chancellors is confined to the House of Lords and the Privy Council. As speaker of the House of Lords, the chancellor states the question and takes part in debates.

Lord Dunmore's War (1774) Attack by Virginia militia on the Shawnee in Kentucky. The militiamen seized Fort Pitt on the western border, renaming it after their royal governor, Lord Dunmore, who had ordered attacks against the Shawnee, seen as a threat to white settlers then spreading into the Indian hunting grounds. Defeated at the Battle of Point Pleasant, the Shawnee signed a treaty giving up their hunting grounds. The war was probably started to divert Virginians from disagreements with royal administrators; as such, it has been called the first battle of the American Revolution.

Lorde \'lȯrd**, Audre (Geraldine)** (b. Feb. 18, 1934, New York, N.Y., U.S.—d. Nov. 17, 1992, St. Croix, U.S. Virgin Islands) U.S. poet and essayist. Born to West Indian parents, she worked as a librarian until 1968, when she began to write full-time. She is best known for her passionate writings on lesbian feminism and racial issues, including *Cables to Rage* (1970), *New York Head Shop and Museum* (1974), and *The Black Unicorn* (1978), often called her finest work. Her battle with cancer inspired *The Cancer Journals* (1980) and *A Burst of Light* (1988, National Book Award).

Lords, House of Upper house of Britain's bicameral Parliament. From the 13th and 14th centuries it was the house of the aristocracy. Until 1999 its membership included clergy, hereditary peers, life peers (peers appointed by the prime minister since 1958), and the judges of the Supreme Court of Judicature (Britain's final court of appeal). Though it predates the House of Commons and dominated it for centuries, its power has gradually diminished. Its power to affect revenue bills was constrained by the Parliament Act of 1911, and in 1949 its power to delay by more than a year the enactment of any bill passed by the Commons was revoked. In 1999 the hereditary peers lost their right to sit in the House of Lords, though an interim reform retains their voice in a more limited fashion. The body's chief value has been to provide additional consideration to bills that may be not be well formulated.

Lord's Prayer Prayer taught by Jesus to his disciples and used by all Christians as the basic prayer in common worship. It appears in two forms in the New Testament: a shorter version in Luke 11:2–4, and a longer version, part of the Sermon on the Mount, in Matthew 6:9–13. In both contexts it is offered as a model of how to pray. It is sometimes called the Pater Noster (Latin: "Our Father") for its first two words.

Lorelei \'lȯr-ə-ˌlī\ Rock on the bank of the Rhine River near Sankt Goarshausen in Germany. It produces an echo and is associated with the legend of a beautiful maiden who drowned herself over a faithless lover. She was transformed into a siren who lured fishermen to their death. Clemens Brentano claimed to have invented the essentials of the legend. Heinrich Heine's poem on the Lorelei has been set to music by more than 25 composers.

Loren \lō-'ren**, Sophia** *orig.* **Sofia Villani Scicolone** (b. Sept. 20, 1934, Rome, Italy) Italian film actress. After a poverty-stricken childhood in war-torn Naples, she became a model and movie extra in Rome. Coached by the producer Carlo Ponti (later her husband), she acted in Italian movies from 1950, including *The Gold of Naples* (1954). Her later films, in which she became noted for her statuesque beauty and earthy femininity, include *The Black Orchid* (1959), *El Cid* (1961), *Two Women*

Lorentz \'lōr-ˌents**, Hendrik Antoon** (b. July 18, 1853, Arnhem, Neth.—d. Feb. 4, 1928, Haarlem) Dutch physicist. He taught at the University of Leiden (1878–1912) and later directed Haarlem's Teyler Institute. In 1875 he refined JAMES CLERK MAXWELL's theory of electromagnetic radiation so that it explained the reflection and refraction of light. Aiming to devise a single theory to explain the relationship of electricity, magnetism, and light, he later suggested that atoms might consist of charged particles that oscillate and produce light. In 1896 his student Pieter Zeeman (1865–1943) demonstrated this phenomenon (see ZEEMAN EFFECT), and in 1902 the two men were awarded the second Nobel Prize for Physics. In 1904 Lorentz developed the Lorentz transformations (including the so-called Fitzgerald-Lorentz contraction), mathematical formulas that relate space and time measurements of one observer to those of a second observer moving relative to the first. These formed the basis of ALBERT EINSTEIN's special theory of RELATIVITY.

Lorentz-FitzGerald contraction *or* **space contraction** In RELATIVITY physics, the shortening of an object along the direction of its motion relative to an observer. Dimensions in other directions are not contracted. This concept was proposed by the Irish physicist George F. FitzGerald (1851–1901) in 1889 and later independently developed by HENDRIK ANTOON LORENTZ. Significant at speeds approaching that of LIGHT, the contraction results from the properties of space and time, not from compression, cooling, or any similar physical disturbance. See also TIME DILATION.

Lorentz transformations Set of equations in RELATIVITY physics that relate the space and time coordinates of two systems moving at a constant speed relative to each other, developed in 1904 by HENDRIK ANTOON LORENTZ. Required to describe phenomena approaching the speed of LIGHT, these transformations express the concepts that space and time are not absolute; that length, time, and mass depend on the observer's relative motion; and that the speed of light in a vacuum is constant and independent of the motion of the observer or the source.

Lorenz, Edward (Norton) (b. May 23, 1917, West Hartford, Conn., U.S.) U.S. meteorologist. Following degrees from Dartmouth College and Harvard University in mathematics, he turned to weather forecasting in 1942 with the U.S. Army Air Corps. After World War II he joined MIT as a researcher, earned a doctorate in meteorology (1948), and stayed on as a professor. In the early 1960s, he discovered that the weather exhibits a nonlinear phenomenon known as sensitive dependence on initial conditions (see CHAOS THEORY). He explained this phenomenon, which makes long-range weather forecasting impossible, to the public as the "butterfly effect": in China a butterfly flaps its wings, leading to unpredictable changes in U.S. weather a few days later.

Lorenz \'lōr-ents**, Konrad (Zacharias)** (b. Nov. 7, 1903, Vienna, Austria—d. Feb. 27, 1989, Altenburg) Zoologist and founder (with NIKOLAAS TINBERGEN) of modern ETHOLOGY. While still a schoolboy he nursed sick animals from the nearby zoo. In 1935 he first elucidated and demonstrated the phenomenon of IMPRINTING in ducklings and goslings. He later examined the roots of human aggression (in the best-selling *On Aggression*, 1963) and the nature of human thought. His other popular works include *King Solomon's Ring* (1949) and *Man Meets Dog* (1950). He shared a 1973 Nobel Prize with Tinbergen and KARL VON FRISCH.

Lorenzetti \ˌlō-rānt-'set-tē**, Pietro and Ambrogio** (respectively b. c. 1280/90, Siena?, Republic of Siena—d. c. 1348, Siena; b. c. 1290, Siena, Republic of Siena—d. c. 1348, Siena) Italian painters. Both brothers were possibly pupils of DUCCIO di Buoninsegna, whose influence is seen in Pietro's altarpiece in the Pieve di Santa Maria at Arezzo and in Ambrogio's early works. Ambrogio's works reveal an individualistic realism and preoccupation with three-dimensional space and form, most evident in his fresco series in Siena's Palazzo Pubblico (1338–39). These most important of Sienese frescoes reveal him to be an explorer of perspective and a political and moral philosopher. Pietro's dramatic frescoes in the lower church of San Francesco at Assisi (c. 1315) show his relation to the art of GIOTTO, though he departs from Giotto in his attention to detail. His *Birth of the Virgin* and Ambrogio's *Presentation in the Temple*, for Siena Cathedral (1342), are notable for their handling of perspective. With SIMONE MARTINI, the brothers were the principal exponents of Sienese art in the years before the BLACK DEATH, in which both presumably died.

Lorenzo Monaco \lō-'rent-sō-'mò-nä-kō\ *orig.* **Piero di Giovanni** (b. c. 1370/71, Siena, Republic of Siena—d. c. 1425, Florence, Republic of Florence) Italian painter. He took the vows of the Camaldolese order in Florence in 1391 (Monaco means "Monk"), but in 1402 he was enrolled in the painters' guild there under his lay name and living outside the monastery. His work combined the graceful lines and decorative feeling of the Sienese school with the traditions of the Florentine school. His *Coronation of the Virgin* (1413) reveals his predilection for swirling draperies and rhythmic, curvilinear forms and his understanding of light. His late frescoes in the Bartolini Chapel of Santa Trinità in Florence establish him as a master of Gothic art.

Lorenzo the Magnificent See Lorenzo de' MEDICI

Lorestan Bronze See LURISTAN BRONZE

loris Any of three species of nocturnal, arboreal PRIMATES in the family Lorisidae. Lorises have soft gray or brown fur, huge eyes encircled by dark patches, and no tail. They move slowly and often hang by their feet, leaving their hands free to grasp branches or food. The slender loris (*Loris tardigradus*) of India and Sri Lanka is 8–10 in. (20–25 cm) long; it eats insects and small animals. The slow lorises (genus *Nycticebus*) of South Asia and the Malay Peninsula eat insects, small animals, fruit, and vegetation. *Nycticebus pygmaeus* is about 8 in. (20 cm) long; *N. coucang* is 10.5–15 in. (27–38 cm) long. Habitat degradation and hunting have seriously depleted loris populations.

Loris-Melikov \'lȯr-is-'myāl-i-kȯf**, Mikhail (Tariyelovich), Count** (b. Jan. 1, 1826, Tiflis, Russia—d. Dec. 24, 1888, Nice, France) Russian military officer and statesman. He commanded an army corps to notable victories in the RUSSO-TURKISH WAR of 1877–78, for which he was made a count. As governor-general of the central Russian provinces (1879), he recommended administrative and economic reforms to alleviate social discontent. Impressed, ALEXANDER II appointed him minister of the interior (1880) and approved his efforts to liberalize the Russian autocracy, but the tsar was assassinated before the reforms were enacted. Loris-Melikov resigned when ALEXANDER III rejected his reforms.

Lorrain, Claude See CLAUDE LORRAIN

Lorraine Historical duchy of western Europe and government region of France. Originally known as Upper Lorraine and later simply as Lorraine, it was formed by the division of LORRAINE (Lotharingia) into two duchies in 959. Upper Lorraine, in the region of the MEUSE and MOSELLE rivers, was ruled by one ducal family from the 11th to the 15th century. METZ, Toul, and Verdun, outside the dukes' control, were seized by France in 1552. Lorraine came permanently under the French crown in 1766 and was divided into *départements* in 1790. After the FRANCO-PRUSSIAN WAR, part of Lorraine was ceded to Germany as part of ALSACE-LORRAINE. Roughly coextensive with the historical region of Lorraine, the current administrative *région* of Lorraine (pop., 1999: 2,310,376) covers 9,092 sq mi (23,547 sq km). Its capital is Metz.

Lorraine *or* **Lotharingia** \ˌlō-thə-'rin-jə\ Medieval region, present-day northeastern France. By the Treaty of VERDUN (843), it became part of the realm of LOTHAR I. Inherited by his son Lothar, it became the kingdom of Lotharingia. After Lothar's death, it was contested by Germany and France and came under German control in 925.

Lorre \'lȯr-ē**, Peter** *orig.* **László Loewenstein** (b. June 26, 1904, Rózsahegy, Hung.—d. March 23, 1964, Hollywood, Calif., U.S.) Hungarian-born U.S. film actor. He played bit parts with a German theatrical troupe before earning international fame as the psychotic murderer in the German film *M* (1931). He left Germany in 1933 and made his English-language debut in *The Man Who Knew Too Much* (1934). He went to Hollywood, where he played malevolent characters in movies such as *Mad Love* (1935), *The Maltese Falcon* (1941), *Casablanca* (1942), and

© 2006 Encyclopædia Britannica, Inc.

The Beast with Five Fingers (1946). He also starred in the eight Mr. Moto detective movies (1937–39). He later directed and starred in the German film *The Lost One* (1951).

Los Alamos Town (pop., 2000: 11,909), north-central New Mexico, U.S. It lies on the Pajarito plateau of the Jemez Mountains, northwest of Santa Fe. The site was chosen by the U.S. government in 1942 as the location for the Manhattan Project, which developed the first atomic bomb. After World War II, the Los Alamos Scientific Laboratory developed the first nuclear fusion bomb. The town was built to house laboratory employees; it is still the site of a major nuclear research facility.

Los Angeles City (pop., 2000: 3,694,820), southern California, U.S. The second largest city in the U.S., it is situated between the San Gabriel Mountains and the Pacific Ocean. Bisected by the Santa Monica Mountains, which separate the neighbourhoods of Hollywood, Beverly Hills, and Pacific Palisades from the San Fernando Valley, it is near the San Andreas Fault, and earthquakes are frequent. It began in 1771 as a Spanish mission; in 1781 settlers claimed the land as El Pueblo de la Reyna de los Angeles (the Town of the Queen of the Angels). Taken by U.S. forces in the Mexican War, it prospered in the wake of the 1849 gold rush. Incorporated in 1850, the city grew rapidly after the arrival of the railroads in 1876 and 1885. In 1913 an aqueduct was built to supply it with water from the slopes of the Sierra Nevada. It was struck by a major earthquake in 1994. Sites of interest include early Spanish missions, the Getty Museum, the Los Angeles County Museum of Art, and the Museum of Contemporary Art. Educational institutions include the University of Southern California, Occidental College, and the University of California at Los Angeles.

Los Angeles Times Morning daily newspaper. Established in 1881, it was purchased and incorporated in 1884 by Harrison Gray Otis (1837–1917) under The Times-Mirror Co. (the hyphen was later dropped from the name). The newspaper prospered and became a power in conservative politics in California. It was long dominated by the Chandler family, beginning with Otis's son-in-law, Harry Chandler, in 1917. After Otis Chandler became publisher in 1960, its editorial policies changed; it developed from a conservative regional paper into a model of balanced and comprehensive journalism and was recognized as one of the world's great newspapers. The Times Mirror Company was acquired in June 2000 by the Tribune Company of Chicago, and the Chandler family received a significant ownership position in the Tribune Company. (See Chicago Tribune.)

Los Glaciares \ˌlȯs-glä-ˈsyär-rās\ **National Park** National park, southwestern Argentina. Located in the Andes Mountains at the Chilean border, it was established in 1937 and has an area of 625 sq mi (1,618 sq km). It has two distinct regions: forests and grassy plains in the east and peaks, lakes, and glaciers in the west. Its highest point is Mount Fitzroy (11,073 ft [3,375 m]).

Lost Generation Group of U.S. writers who came of age during World War I and established their reputations in the 1920s; more broadly, the entire post–World War I American generation. The term was coined by Gertrude Stein in a remark to Ernest Hemingway. The writers considered themselves "lost" because their inherited values could not operate in the postwar world and they felt spiritually alienated from a country they considered hopelessly provincial and emotionally barren. The term embraces Hemingway, F. Scott Fitzgerald, John Dos Passos, E.E. Cummings, Archibald MacLeish, and Hart Crane, among others.

lost-wax casting Traditional method of producing molds for metal sculpture and other castings. It requires a positive, a core made of refractory material and an outer layer of wax. The positive can be produced either by direct modeling in wax over a prepared core (direct lost-wax casting), or by casting in a piece mold or flexible mold taken from a master cast. The wax positive is invested with a mold made of refractory materials and heated to melt the wax, leaving a narrow cavity between the core and the investment. Molten metal is poured into this cavity. When the metal has solidified, the investment and core are broken away. See also investment casting.

Lot Nephew of Abraham. He emigrated with Abraham from Ur to Canaan and settled in Sodom, a city so evil that God decided to destroy it. Warned by angels of the coming disaster, Lot fled the city with his family. His wife disobeyed God's orders by looking back at the burning city and was turned into a pillar of salt. Lot later had children by his own daughters, and they became the founders of the Moabite and Ammonite nations, enemies of Israel. See also Sodom and Gomorrah.

Lot River River, southern France. It flows 300 mi (480 km) west to join the Garonne River near Aiguillon. The river's course passes Cahors, the old capital of Quercy. It is navigable for part of its course but has little boat traffic.

Lothar \ˈlō-tär\ **I** *German* **Lothar** (b. 795—d. Sept. 29, 855, Abbey of Prüm, Ger.) Frankish emperor. The eldest son of Louis I (the Pious), he was crowned king in Bavaria (814) and coemperor with Louis (817). Lothar participated in the rebellion against Louis in 830 over the emperor's efforts to alter the succession plan, and he was returned to Italy after the revolt's failure. He led a second revolt against his father and deposed him (833), but Louis was restored to power the next year, and Lothar's rule was restricted to Italy. On his father's death (840) he attempted to gain sole control over the Frankish territories, but his brothers, Louis the German and Charles II (the Bald), defeated him (841). The Treaty of Verdun gave Lothar the middle realm, or heartland, of the Frankish dominions (from the North Sea to Italy) and the imperial title.

REPRODUCED BY PERMISSION OF THE BRITISH LIBRARY

Lothar II *German* **Lothar** (b. early June 1075—d. Dec. 3/4, 1137, Breitenwang) German king (1125–37) and Holy Roman emperor (1133–37). The most powerful noble in Saxony, he took part in revolts (1112–15) against the German king Henry V. Elected king on Henry's death, he fought a war against the Hohenstaufen who claimed the throne (1125–29); his victory was a triumph for elective monarchy over hereditary succession. Lothar was crowned emperor as a reward for supporting Pope Innocent II (1133). He made peace with the Hohenstaufen (1135) but attacked Roger II of Sicily, driving him out of southern Italy (1136–37).

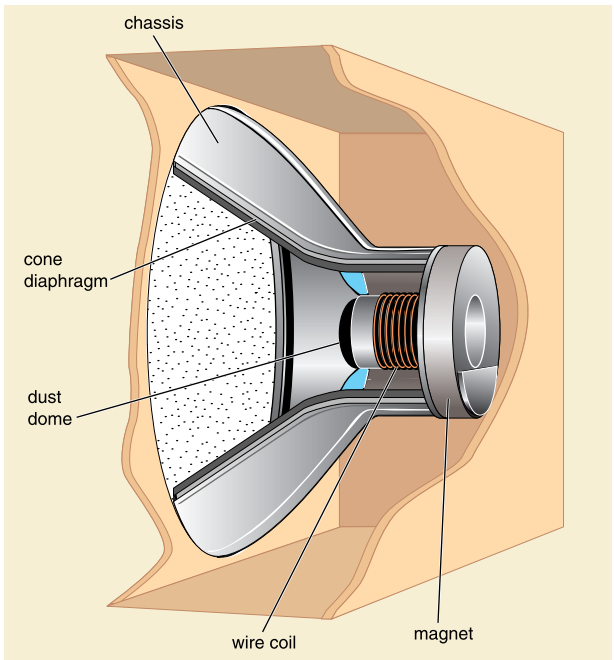
Lotharingia See Lorraine

Loti \lō-ˈtē**, Pierre** *orig.* **Louis-Marie-Julien Viaud** (b. Jan. 14, 1850, Rochefort, France—d. June 10, 1923, Hendaye) French novelist. As a naval officer, Loti visited the Middle East and East Asia, which later provided the exotic settings of his novels and reminiscences. His first novel, *Aziyadé* (1879), won him critical and popular success. Other novels include *An Iceland Fisherman* (1886), *Japan: Madam Chrysanthemum* (1887), and *Disenchanted* (1906). Among his recurring motifs are love, death, and despair at the passing of sensuous life. He reveals his compassion in such works as *The Book of Pity and of Death* (1890). His themes anticipated some of the preoccupations of French literature between the world wars.

lottery Drawing of lots in which prizes are distributed to the winners among persons buying a chance. A form of gambling, lottery in its modern form may be traced to 15th-century Europe. The Continental Congress in 1776 voted to establish a lottery to raise funds for the American Revolution. By the mid-19th century, in the wake of abuses by private organizers, U.S. states began passing antilottery laws. An 1878 Supreme Court opinion held that lotteries had "a demoralizing influence upon the people," and by the 1890s most had been eliminated. A revival began in the mid-1960s; many state governments seeking revenues instituted officially sanctioned, independently audited lotteries. In most such operations, the bettor buys a numbered receipt or writes down his or her number choices, a drawing is held, and the winners identify themselves. The value of the prizes is the amount remaining after expenses and the state's share are deducted from the pool. Winnings are usually subject to taxes. The top prize can grow into the tens of millions, usually causing a buying frenzy as it increases, but the odds against winning remain astronomical.

Lotto, Lorenzo (b. c. 1480, Venice—d. 1556, Loreto, Papal States) Italian painter. He worked in several cities other than Venice and devel-

© 2006 Encyclopædia Britannica, Inc.



oped an idiosyncratic style. His late Renaissance-style work exhibits a preference for opulent colours and a faculty for narrative painting. His nervous temperament is evident in such works as the *Crucifixion* in Monte San Giusto (c. 1530), with its highly charged mysticism and crowded composition. Toward the end of his life (1554), he became a lay brother at the Santa Casa in Loreto to escape his critics and his debts. Though primarily a religious painter, he is best known today for his psychologically acute portraits.

lotus Any of several different plants whose flowers have been given symbolic meaning by many cultures. The lotus of the Greeks is *Ziziphus lotus* (family Rhamnaceae), a shrub native to southern Europe; wine made from its fruit was thought to produce contentment and forgetfulness. The Egyptian lotus is a white WATER LILY (*Nymphaea lotus*). The sacred lotus of the Hindus is an aquatic plant (*Nelumbo nucifera*) with white or delicate pink flowers; the lotus of eastern North America is *Nelumbo pentapetala*, a similar plant with yellow blossoms. *Lotus* is also a genus of the pea family (see LEGUME), containing about 100 species found in temperate regions of Europe, Asia, Africa, and North America; the 20 or more species in North America are grazed by animals. The lotus is a common ornament in architecture, and since ancient times it has symbolized fertility, purity, sexuality, birth, and rebirth of the dead.

Lotus Sutra Text central to the Japanese Tendai (Chinese TIANTAI) and NICHIREN sects of MAHAYANA Buddhism. It represents the BUDDHA as divine and eternal, having attained perfect enlightenment eons ago. All beings are invited to become fully enlightened Buddhas through the grace of innumerable BODHISATTVAS. Composed largely in verse, the sutra contains many charms and MANTRAS. First translated into Chinese in the 3rd century AD, it was extremely popular in China and Japan, where the simple act of chanting it was thought to bring salvation.

Lou Gehrig disease See AMYOTROPHIC LATERAL SCLEROSIS

loudspeaker *or* **speaker** In SOUND reproduction, device for converting electrical energy into acoustical (sound) signal energy that is radiated into a room or open air (see ACOUSTICS). The part of the speaker that converts electrical into mechanical energy is frequently called the motor, or voice coil. The motor vibrates a diaphragm that vibrates the air in immediate contact with it, producing a sound wave corresponding to the pattern of the original speech, music, or other acoustic signal. See illustration opposite.

Components of a loudspeaker. Electrical signals sent through the coil cause it to act as an electromagnet, which is alternately repelled by or attracted to the permanent magnet. This movement causes the cone diaphragm to vibrate, creating sound waves.

© MERRIAM-WEBSTER INC.

Louganis \lü-'gā-nəs**, Greg(ory Efthimios)** (b. Jan. 29, 1960, San Diego, Calif., U.S.) U.S. diver, considered the greatest diver in history. He was trained early in dancing, tumbling, and acrobatics. During his diving career, he won an unprecedented 47 national and 13 world championships, including two Olympic gold medals (1984) and one silver (1976). In 1982 he became the first diver ever to earn a perfect score of 10, and the following year he received 99 points in springboard competition. He was known for his graceful, effortless style. In 1995 he revealed that he had AIDS.

Louis \'lü-ē\ **I** *known as* **Louis the Pious** (b. April 16, 778, Chasseneuil, near Poitiers, Aquitaine—d. June 20, 840, Petersau, an island in the Rhine River near Ingelheim) Frankish emperor (814–40). The son of CHARLEMAGNE, he was crowned coemperor with his father in 813 and became emperor in 814 on his father's death. As emperor, Louis implemented important religious and cultural reforms and formalized Carolingian relations with the pope. He also introduced a plan of succession that sought to preserve the integrity of the empire while respecting the Germanic tradition of dividing the realm among all heirs. The birth of the future CHARLES II (Charles the Bald) to his second wife, Judith, and alteration of the plan of succession provided Louis's older sons and a number of bishops with an excuse for rebellion. Twice deposed by his sons, he recovered the throne each time (830, 834), but at his death his surviving sons indulged in a bloody civil war that left the Carolingian empire in disarray.

Louis I *or* **Ludwig** \'lüt-vi̱k\ **I** (b. Aug. 25, 1786, Strasbourg, France—d. Feb. 29, 1868, Nice) King of Bavaria (1825–48). The son of MAXIMILIAN I, Louis won early acclaim as a liberal and a German nationalist, but after his accession he feuded with the Diet and came to distrust all democratic institutions. By 1837 the reactionary Bavarian government had begun to erode the liberal constitution of 1818 that Louis had worked to establish. An outstanding patron of the arts, he collected the art works that fill Munich's museums and transformed Munich into the artistic centre of Germany. His planning created the city's present layout and classic style. He caused scandal by his affair with LOLA MONTEZ, and at the outbreak of the REVOLUTIONS OF 1848 he abdicated in favour of his son MAXIMILIAN II.

Louis II *or* **Ludwig II** *also known as* **Mad King Ludwig** (b. Aug. 25, 1845, Nymphenburg Palace, Munich—d. June 13, 1886, Starnberger See, Bavaria) King of Bavaria (1864–86). The son of MAXIMILIAN II of Bavaria, he supported Prussia in the FRANCO-PRUSSIAN WAR (1870–71). He brought his territories into the newly founded German Empire in 1871 but concerned himself only intermittently with affairs of state, preferring a life of increasingly morbid seclusion. A lifelong patron of the composer RICHARD WAGNER, he developed a mania for extravagant building projects; the most fantastic, NEUSCHWANSTEIN, was a fairy-tale castle decorated with scenes from Wagner's operas. He drowned himself three days after he was formally declared insane.

Louis IV *or* **Ludwig IV** *known as* **Louis the Bavarian** (b. 1283, Munich, Ger.—d. Oct. 11, 1347, Munich) German king (1314–47) and uncrowned Holy Roman emperor (1328–47). As the Luxembourg candidate for emperor, he was opposed by the Habsburg candidate Frederick III of Austria. Both men were elected and crowned king in 1314, and Louis's forces defeated Frederick's army in 1322. A conflict with Pope JOHN XXII over the appointment of the imperial vicar in Italy led to his excommunication (1324). To placate his opponents, Louis agreed to rule jointly with Frederick, an arrangement that continued until Frederick's death (1330). He accepted the imperial crown from the Roman people instead of from the pope (1328) and backed the appointment of an ANTIPOPE. In 1346 Pope CLEMENT VI secured the election of a rival king, Charles of Moravia, and Louis died of a heart attack before finishing his preparations for war.

Louis VI *known as* **Louis the Fat** (b. 1081—d. Aug. 1, 1137) King of France (1108–37). He was effective ruler of France well before the death of his father, Philip I, in 1108, and he spent much time in subduing the unruly French barons. He fought HENRY I of England (1104–13, 1116–20) and prevented a threatened invasion by Emperor Henry V (1124). He died

© 2006 Encyclopædia Britannica, Inc.

a month after arranging his son's marriage to Eleanor of Aquitaine, whereupon his son succeeded him as Louis VII.

Louis VII *known as* **Louis the Younger** (b. c. 1120—d. Sept. 18, 1180, Paris) King of France (1137–80). One of the Capetian kings, he married Eleanor of Aquitaine in 1137, thus temporarily extending his kingdom to the Pyrenees. Doubtful of her fidelity, he had the marriage annulled in 1152 and, after the death of his second wife, married Alix of Champagne, who bore him his son and heir, Philip II Augustus. Eleanor married the future Henry II of England, who took control of Aquitaine and carried on a long rivalry with Louis (1152–74) marked by recurrent warfare and constant intrigue. Louis was joined by Conrad III in leading the Second Crusade (1147–49), which failed in all its objectives.

Louis IX *or* **St. Louis** (b. April 25, 1214, Poissy, France—d. Aug. 25, 1279, near Tunis, Tun.; canonized Aug. 11, 1297; feast day August 25) King of France (1226–70). He inherited the throne at age 12. His mother served as regent until 1234, helping to subdue rebellious barons and Albigensian heretics (see Cathari). Louis led a Crusade (1248–50) in hopes of regaining Jerusalem and Damascus, but his troops were badly defeated by the Egyptians. On his return he reorganized the royal administrative system and standardized coinage. He built the extraordinary Sainte-Chapelle to house a religious relic believed to be Jesus' crown of thorns. Louis made peace with the English in the Treaty of Paris (1259), allowing Henry III to keep Aquitaine and neighboring lands but obliging him to declare himself Louis's vassal. He died of plague during a Crusade. The most popular of the Capetian kings, his reputation for justness and piety led the French to venerate him as a saint even before his canonization in 1297.

Louis XI (b. July 3, 1423, Bourges, France—d. Aug. 30, 1483, Plessis-les-Tours) King of France (1461–83). He plotted against his father, Charles VII, and was exiled to Dauphiné (1445), which he ruled as a sovereign state until Charles approached its borders with an army (1456). Louis then fled to the Netherlands, returning to France to become king on his father's death in 1461. He fought rebellious French princes (1465) and made concessions to Charles the Bold (1468). Seeking to strengthen and unify France, he destroyed the power of the Burgundians in 1477. He regained control of Boulonnais, Picardy, and Burgundy, took possession of Franche-Comté and Artois (1482), annexed Anjou (1471), and inherited Maine and Provence (1481).

Louis XII (b. June 27, 1462, Blois, France—d. Jan. 1, 1515, Paris) King of France (1498–1515). He became king on the death of his cousin Charles VIII. He annulled his marriage to marry Charles's widow, Anne of Brittany, and to reinforce the union of her duchy with France. He continued France's part in the Italian Wars, often with disastrous results. He conquered Milan in 1499, then lost it, but was later recognized as duke of Milan by Emperor Maximilian I. He concluded a treaty with Ferdinand V that partitioned Naples (1500), but the two kings went to war and Louis lost all of Naples (1504). In 1508 he consolidated the League of Cambrai, but when the league fell apart in 1510 its members joined England in a Holy League against France, invading it several times. Despite his failures, Louis was highly popular with the French, who called him the "Father of the People."

Louis XIII (b. Sept. 27, 1601, Fontainebleau, France—d. May 14, 1643, Saint-Germain-en-Laye) King of France (1610–43). He was the son of Henry IV and Marie de Médicis. His mother was regent until 1614 but continued to govern until 1617; she arranged Louis's marriage to the Spanish Anne of Austria in 1615. Resentful of his mother's power, Louis exiled her, but Cardinal de Richelieu, her principal adviser, reconciled them in 1620. In 1624 Louis made Richelieu his principal minister, and the two cooperated closely to make France a leading European power, consolidating royal authority in France and fighting to break the dominant rule of the Spanish and Austrian Habsburgs in the Thirty Years' War. Pro-Spanish Catholic zealots led by Marie de Médicis appealed to Louis to reject Richelieu's policy of supporting the Protestant states, but Louis stood by his minister and his mother withdrew into exile. France declared war on Spain in 1635 and had won substantial victories by the time Richelieu died in 1642. Louis was succeeded by his son Louis XIV.

Louis XIII style Style of the visual arts produced in France during the reign of Louis XIII, including the regency of his mother, Marie de Médicis, who introduced much of the art of her native Italy. The Mannerism of Italy and Flanders was so influential that a true French style did not develop until the mid-17th century, when the influence of Caravaggio was assimilated by Georges de La Tour and the Le Nain brothers, and the influence of the Carracci brothers was extended by Simon Vouet, who trained the academic painters of the next generation. The sculpture of the period was undistinguished. The most prolific area of the arts was architecture. Here, too, the Italian influence is seen, as in the Palais de Justice at Rennes and the Luxembourg Palace in Paris, both designed by Salomon de Brosse, and the chapel of the Sorbonne in Paris, designed by Jacques Lemercier. The furniture of the period is typically massive and solidly built and commonly decorated with cherubs, ornate scrollwork, fruit-and-flower swags, and grotesque masks.

Louis XIV *known as* **the Sun King** (b. Sept. 5, 1638, Saint-Germain-en-Laye, France—d. Sept. 1, 1715, Versailles) King of France (1643–1715), ruler during one of France's most brilliant periods and the symbol of absolute monarchy of the Neoclassical age. He succeeded his father, Louis XIII, at age four, under the regency of his mother, Anne of Austria. In 1648 the nobles and the Paris Parlement, who hated the prime minister, Cardinal Mazarin, rose against the crown and started the Fronde. In 1653, victorious over the rebels, Mazarin gained absolute power, though the king was of age. In 1660 Louis married Marie-Thérèse of Austria (1638–83), daughter of Philip IV of Spain. When Mazarin died in 1661, Louis astonished his ministers by informing them that he intended to assume responsibility for ruling the kingdom. A believer in dictatorship by divine right, he viewed himself as God's representative on earth. He was assisted by his able ministers, Jean-Baptiste Colbert and the marquis de Louvois. Louis weakened the nobles' power by making them dependent on the crown. A patron of the arts, he protected writers and devoted himself to building splendid palaces, including the extravagant Versailles, where he kept most of the nobility under his watchful eye. In 1667 he invaded the Spanish Netherlands in the War of Devolution (1667–68) and again in 1672 in the Third Dutch War. The Sun King was at his zenith; he had extended France's northern and eastern borders and was adored at his court. In 1680 a scandal involving his mistress, the marchioness de Montespan (1641–1707), made him fearful for his reputation, and he openly renounced pleasure. The queen died in 1683, and he secretly married the pious marchioness de Maintenon. After trying to convert French Protestants by force, he revoked the Edict of Nantes in 1685. Fear of his expansionism led to alliances against France during the War of the Grand Alliance (1688–97) and the War of the Spanish Succession (1701–14). Louis died at age 77 at the end of the longest reign in European history.

Louis XIV style Style of the visual arts produced in France during the reign of Louis XIV. In 1648 Charles Le Brun founded the Royal Academy of Painting and Sculpture, which rigidly dictated styles for the rest of the reign. The most influential painter was Nicolas Poussin, who forged the way for French Classicism (see Classicism and Neoclassicism). Sculpture reached a new zenith with the works of François Girardon and Pierre Puget. A national style in the decorative arts evolved through the Gobelin factory (see Gobelin family). Furniture was veneered, inlaid, heavily gilded, and commonly decorated with shells, satyrs, garlands, mythological heroes, and dolphins; the style is particularly associated with André-Charles Boulle. In architecture, Jean-Baptiste Colbert rigidly controlled the renovation of the Palace of Versailles, with landscaping by André Le Nôtre.

Louis XV (b. Feb. 15, 1710, Versailles, France—d. May 10, 1774, Versailles) King of France (1715–74). An orphan from age three, Louis succeeded to the throne on the death of his great-grandfather Louis XIV (1715), under the regency of Philippe II, duke d'Orléans (1674–1723). His marriage to Princess Marie Leszczynska of Poland (1703–68) in 1725 led to France's involvement in the War of the Polish Succession (1733–38). He chose André-Hercule de Fleury as his chief minister in 1726, and his own influence became perceptible only after Fleury's death in 1744. Louis's mistresses, particularly the marchioness de Pompadour, held considerable political influence. Louis brought France into the War of the Austrian Succession (1740–48) and the Seven Years' War (1756–63), by which France lost to Britain almost all its colonial possessions. As the crown's moral and political authority declined, the Parlements gained in power, preventing fiscal reform. The king died hated by his subjects.

Louis XV style Rococo style of French decorative arts during the reign of Louis XV, when artists produced exquisite decor for the homes of royalty and nobility. Emphasis was laid on the ensemble, so that paintings and sculptures became part of the decorative arts. The full range of richness in decorative techniques was represented—superb carving, ornamentation of all types of metal, inlay work in exotic woods, metal, mother-of-pearl, and ivory, and exquisite lacquered chinoiserie that rivaled products from East Asia. Fantasy joined nature and Asian themes in pro-

© 2006 Encyclopædia Britannica, Inc.

viding decorative motifs. Notable artists and designers include Jean-Honoré Fragonard, François Boucher, and Jean-Baptiste Oudry.

Louis XVI (b. Aug. 23, 1754, Versailles, France—d. Jan. 21, 1793, Paris) Last king of France (1774–92) in the Bourbon line preceding the French Revolution. In 1770 he married Marie-Antoinette, and in 1774 he succeeded to the throne on the death of his grandfather, Louis XV. Immature and lacking in strength of character, he was unable to give the necessary support to his ministers, including Anne-Robert-Jacques Turgot and Jacques Necker, in their efforts to stabilize France's tottering finances. Restoration of the Parlements in 1774 shifted power to the aristocracy. Aristocratic opposition to the economic reforms of Charles-Alexandre de Calonne forced the king to summon the Estates-General in 1788, setting the Revolution in motion. Dominated by the reactionary court faction, he defended the privileges of the clergy and nobility. He dismissed Necker in 1789 and refused to sanction the achievements of the National Assembly. His resistance to popular demands was one cause for the royal family's forcible transfer from Versailles to the Tuileries palace in Paris. He lost credibility further when he attempted to escape the capital in 1791 and was caught at Varennes and returned to Paris. Thereafter he was dominated by the queen, who encouraged him to a policy of subterfuge instead of implementing the Constitution of 1791, which he had sworn to maintain. In 1792 the Tuileries was captured by the people and militia, and the First French Republic was proclaimed. When proof of his counterrevolutionary intrigues with foreigners was found, he was tried for treason. Condemned to death, he went to the guillotine in 1793. His dignity during his trial and execution only somewhat redeemed his reputation.

Louis XVI style Style of the visual arts produced in France from c. 1760 to the French Revolution. The predominant style in painting, architecture, sculpture, and the decorative arts was Neoclassicism—a reaction against the excesses of the Rococo style and a response to Jean-Jacques Rousseau's call for "natural" virtue, as well as a response to the excavations at Pompeii and Herculaneum. The most prominent painter was Jacques-Louis David, whose severe compositions recalled the style of Nicolas Poussin. The foremost sculptor of the day was Jean-Antoine Houdon. The style in furniture was classical, yet workmanship was more complex than in any earlier period. Jean-Henri Riesener and other German craftsmen were among the most prominent cabinetmakers. See also Classicism and Neoclassicism.

Louis XVII *orig.* **Louis-Charles** (b. March 27, 1785, Versailles, France—d. June 8, 1795, Paris) Titular king of France from 1793. The second son of Louis XVI and Marie-Antoinette, he became heir to the throne on his brother's death, shortly after the outbreak of the French Revolution. In 1792 he was imprisoned with the rest of the royal family. When his father was beheaded in 1793, the French émigré nobility proclaimed Louis-Charles king. He died in prison at age 10, but the secrecy surrounding his last months gave rise to rumours that he was not dead, and over the next few decades more than 30 persons claimed to be Louis XVII. DNA tests in 2000 established that the child who died in 1795 was in fact the son of Louis XIV and Marie-Antoinette.

Louis XVIII *orig.* **Louis-Stanislas-Xavier, count de Provence** (b. Nov. 17, 1755, Versailles, France—d. Sept. 16, 1824, Paris) King of France by title from 1795 and in fact from 1814 to 1824. He fled the country in 1791, during the French Revolution, and issued counterrevolutionary manifestos and organized émigré-nobility associations. He became regent for his nephew Louis XVII after the 1793 execution of Louis XVI, and at the dauphin's death in 1795 he proclaimed himself king. When the allied armies entered Paris in 1814, Charles-Maurice de Talleyrand negotiated the Bourbon Restoration and Louis was received with jubilation. He promised a constitutional monarchy, and the Charter of 1814 was adopted; after the interruption of the Hundred Days, when Napoleon returned from Elba, he resumed his constitutional monarchy. The legislature included a strong right-wing majority, and though Louis opposed the extremism of the ultras, they exercised increasing control and thwarted his attempts to heal the wounds left by the Revolution. He was succeeded at his death by his brother, Charles X.

Louis, Joe *in full* **Joseph Louis Barrow** (b. May 13, 1914, Lafayette, Ala., U.S.—d. April 12, 1981, Las Vegas, Nev.) U.S. boxer. Louis was born into a sharecropper's family and only began boxing after the family moved to Detroit. He won the U.S. Amateur Athletic Union title in 1934 and turned professional that year. During his career he defeated six previous or subsequent heavyweight champions: Primo Carnera, Max Baer, Jack Sharkey, James J. Braddock, Max Schmeling, and Jersey Joe Walcott. Nicknamed "the Brown Bomber," Louis gained the world heavyweight championship by defeating Braddock in 1937 and held the title until 1949. Two of Louis's most famous bouts, those with the German boxer Max Schmeling, were invested with nationalist and racial implications, as Schmeling was seen, unfairly, as the embodiment of Aryanism and the Nazi party. Louis lost to Schmeling in 1936 but defeated him in one round in 1938, causing much jubilation among Americans, and especially African Americans. He successfully defended his title 25 times (21 by knockout) before retiring in 1949. His service in the U.S. Army during World War II no doubt prevented him from defending his title many more times. He made unsuccessful comeback attempts against Ezzard Charles in 1950 and Rocky Marciano in 1951.

Louis, Morris *orig.* **Morris Louis Bernstein** (b. Nov. 24, 1912, Baltimore, Md., U.S.—d. Sept. 7, 1962, Washington, D.C.) U.S. painter. He studied painting at the Maryland Institute and worked as an easel painter for the WPA Federal Art Project. Inspired by Helen Frankenthaler's colour stain technique, in 1954 he began a series of paintings titled *Veils*, featuring stained vertical waves of colour; these works had an impersonal, nonpainterly quality. During this period he became associated with the New York school of Abstract Expressionism. His later work featured diagonal parallel streams of colour that flowed across the bottom corners of the picture plane. In his last series, *Stripes*, bunched, straight vertical bands of colour are surrounded by empty canvas.

Louis-Napoléon See Napoleon III

Louis-Philippe *known as* **the Citizen King** (b. Oct. 6, 1773, Paris, France—d. Aug. 26, 1850, Claremont, Surrey, Eng.) King of the French (1830–48). Eldest son of the duke d'Orléans, he supported the new government at the outbreak of the French Revolution and joined the Revolutionary army in 1792 but deserted during the war with Austria (1793) and lived in exile in Switzerland, the U.S., and England. He returned to France on the restoration of Louis XVIII and joined the liberal opposition. Following the July Revolution (1830) and Charles X's abdication, he was proclaimed the "Citizen King" by Adolphe Thiers and elected by the legislature. During the subsequent July Monarchy, he consolidated his power by steering a middle course between the right-wing monarchists and the socialists and other republicans but resorted to repressive measures because of numerous rebellions and attempts on his life. He strengthened France's position in Europe and cooperated with the British in forcing the Dutch to recognize Belgian independence. Mounting middle-class opposition to his arbitrary rule and his inability to win allegiance from the new industrial classes caused his abdication during the February Revolution of 1848.

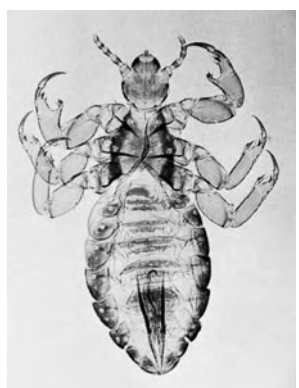
Louisiade \lü-ˌē-zē-ˈäd\ **Archipelago** Island group, Papua New Guinea, southeast of New Guinea. Stretching for more than 100 mi (160 km), it occupies 10,000 sq mi (26,000 sq km) of the South Pacific Ocean. It has nearly 100 islands; the largest are Misima, Tagula, and Rossel. It was visited by the Spanish in 1606 and was named after Louis XV of France in 1768. Occupied by Japanese forces in 1942, the islands are near the site of the Battle of the Coral Sea.

Louisiana State (pop., 2000: 4,468,976), southern U.S. Lying on the Gulf of Mexico, it is bordered by Arkansas, Mississippi, and Texas. It covers 47,716 sq mi (123,584 sq km); its capital is Baton Rouge. It can be divided physically into the Mississippi River flood plain and delta and the low hills of the Gulf of Mexico coastal plain. It is the only U.S. state to be governed under the Napoleonic Code. Indian occupancy in the area probably spanned 16,000 years; at the time of European settlement the region was inhabited by the Caddo and Choctaw. French explorer La Salle descended the Mississippi River in 1682 and claimed the entire river basin for France. The city of New Orleans was founded in 1718, and Louisiana became a French crown colony in 1731. Colonization increased in the 1760s with the arrival of French-speaking Acadians (Cajuns) from Nova Scotia. Spain controlled the territory from 1762 to 1800; then it passed back to the French. The lands

© 2006 Encyclopædia Britannica, Inc.

that constitute modern Louisiana were acquired by the U.S. as part of the Louisiana Purchase in 1803 and became the Territory of Orleans in 1804. Louisiana became the 18th U.S. state in 1812. It seceded from the Union in 1861 at the start of the American Civil War and was readmitted in 1868. The plantation economy continued with the farmer class denied land ownership, which contributed to the rise of the populist Huey Long in the 1920s. After World War II Louisiana experienced more rapid development with the rise of offshore oil and gas drilling. Soybeans are a major agricultural crop; tree farming and shrimp fishing are also important. Petroleum and natural gas are the chief mineral resources. In 2005 hurricanes devastated New Orleans and surrounding communities.

Louisiana Purchase Territory purchased by the U.S. from France in 1803 for $15 million. It extended from the Mississippi River to the Rocky Mountains and from the Gulf of Mexico to British America (Canada). In 1762 France had ceded Louisiana west of the Mississippi River to Spain, but Spain returned it to French control in 1800. Alarmed by this potential increase in French power, Pres. Thomas Jefferson threatened to form an alliance with Britain. Napoleon then sold the U.S. the entire Louisiana Territory, although its boundaries remained unclear; its northwestern and southwestern limits were not established until 1818–19. The purchase doubled the area of the U.S.



Louisville \'lü-i-ˌvil\ City (pop., 2000: 256,231), north-central Kentucky, U.S., located on the Ohio River. Settled in 1778 on Corn Island, it expanded the next year when the settlers moved ashore. Named for Louis XVI of France, it became an important river trading centre and was chartered as a city in 1828. During the American Civil War it served as a Union military headquarters and supply depot. The largest city in Kentucky, it is a leading producer of bonded bourbon whiskey and cigarettes. It is home to the University of Louisville (founded 1798) and Churchill Downs, the site of the Kentucky Derby.

Loup \'lüp\ River River, east-central Nebraska, U.S. It flows east to join the Platte River. It is 300 mi (485 km) long and is harnessed to produce hydroelectric power. Its name is derived from the French name (meaning "wolf") for the Skidi Indians.

Lourdes Pilgrimage site in southwestern France, situated southwest of Toulouse at the foot of the Pyrenees. The town and its fortress formed a strategic stronghold in medieval times, but its modern significance dates from 1858, when a 14-year-old girl had repeated visions of the Virgin Mary (see Bernadette of Lourdes). The visions were declared authentic by Pope Pius IX in 1862. The underground spring in the grotto where Bernadette had her visions was declared to have miraculous qualities, and Lourdes has since become one of the foremost destinations for Roman Catholic pilgrims. Nearly 3 million visit annually, many of them sick or disabled people hoping to be healed. A basilica was built above the grotto in 1876, and a vast underground church was added in 1958.

Lourenço Marques See Maputo

louse Any of some 3,300 species of small, wingless, parasitic insects of the order Phthiraptera. The order consists mainly of biting, or chewing, lice (parasites of birds and mammals) and sucking lice (see sucking louse). The louse's body is flattened. The eggs, or nits, are cemented to the hair or plumage of the host, and most species spend their entire lives on the bodies of host animals. Heavy infestations cause much irritation and may lead to secondary infections. In moving from host to host, lice may spread many diseases, including tapeworm infestation in dogs and murine typhus in rats.

Male human louse (*Pediculus humanus;* magnified about 15 ½ ×)
WILLIAM E. FERGUSON

louse, human Any of three types of sucking louse that infest humans. The body louse (mainly *Pediculus humanus humanus*, also called human louse or cootie) and head louse (*P. h. capitis*) are spread by person-to-person contact and through shared clothing, bedding, combs, and other personal items. Body lice carry the organisms that cause relapsing fever, trench fever, and typhus. Head lice may cause impetigo. Both are readily spread under conditions of overcrowding, especially among children. The crab louse, or pubic louse (*Phthirus pubis*) infests primarily the pubic region and occasionally other hairy regions. Its first pair of legs is smaller than the other two pairs, making it look like a crab. Crab lice are transmitted primarily through sexual intercourse. Lice infestations can be quickly cured with shampoos, soaps, and lotions containing benzene hexachloride, along with the thorough washing of bedding and clothing.

lousewort Any of about 500 species of herbaceous plants that make up the genus *Pedicularis* in the snapdragon family. The lousewort is found throughout the Northern Hemisphere but especially on the mountains of central and eastern Asia. The bilaterally symmetrical flowers sometimes have very unusual shapes. The flowers of the little elephant (*P. groenlandica*), for example, resemble the head, trunk, and ears of an elephant. Louseworts are semiparasitic on the roots of other plants.

Lousewort (*Pedicularis lanceolata*)
KITTY KOHOUT FROM ROOT RESOURCES—EB INC.

Louvain \lü-'vaⁿ**, Catholic University of** Either of two Belgian universities established in 1970, both descended from a renowned university founded in 1425 in Louvain. The original university included on its faculty in the early 1500s Desiderius Erasmus, Justus Lipsius, and Gerardus Mercator. The modern university was reorganized into separate units following student riots and government upheavals in 1969. At the Katholieke Universiteit te Leuven, the language of instruction is Dutch. At the Université Catholique de Louvain, located in Louvain-la-Neuve, instruction is in French.

louver \'lü-vər\ Arrangement of parallel, horizontal blades or slats of glass, wood, or other material designed to regulate airflow or light penetration. Louvers are often used in windows or doors to allow air or light in while keeping the elements out. They may be either movable or fixed. The term also refers to metal blades covering the intake and exhaust outlets of ventilation and air-conditioning units.

Louvois \lüv-'wä**, François-Michel Le Tellier** \lə-tāl-'yā**, marquis de** (baptized Jan. 18, 1639, Paris, France—d. July 16, 1691, Versailles) French secretary of state for war under Louis XIV and his most influential minister (1677–91). The son of Michel Le Tellier (1603–85), one of the most powerful officials in France, he was groomed by his father to replace him as war secretary. A brilliant administrator, Louvois brought his father's military reforms to fruition, making the French army one of the most formidable in Europe. He was complicit in the military policy that led up to the revocation of the Edict of Nantes (1685), and was also responsible for the destruction of the Palatinate (1688), which led to the War of the Grand Alliance.

Louvre \'lüvrᵊ\ **Museum** National museum and art gallery of France, in Paris. It was built as a royal residence, begun under Francis I in 1546 on the site of a 12th-century fortress. It ceased to be used as a palace when the court moved to Versailles in 1682, and plans were made in the 18th century to turn it into a public museum. In 1793 the revolutionary government opened the Grand Gallery; Napoleon built the northern wing; and two major western wings were completed and opened by Napoleon III. The completed Louvre included a vast complex of buildings forming two main quadrilaterals and enclosing two large courtyards. A controversial steel-and-glass pyramid entrance designed by I.M. Pei opened in 1989. The painting collection is one of the richest in the world, representing all periods of European art up to Impressionism; its collection of French 15th–19th-century paintings is unsurpassed.

lovage \'lə-vij\ Herb (*Levisticum officinale*) of the parsley family, native to southern Europe. It is cultivated for its stalks and foliage, which are used for tea, as a vegetable, and to flavour foods. Its rhizomes are used as a carminative, and the seeds are used for flavouring desserts. Oil obtained from the flowers is used in perfumery.

© 2006 Encyclopædia Britannica, Inc.

Love Canal Neighbourhood in NIAGARA FALLS, N.Y., the site of the worst environmental disaster involving chemical wastes in U.S. history. Originally the site of an abandoned canal, it became a dumping ground for nearly 22,000 tons of chemical waste in the 1940s and '50s. The canal was later filled in, and housing was built on it. The leakage of toxic chemicals into these homes was detected in 1978, and residents were discovered to have a high incidence of chromosome damage. After their evacuation, 1,300 former residents obtained a $20 million settlement from the dumping company and the city. In the early 1990s New York state ended its cleanup and declared parts of the area safe for residence.

lovebird Any of nine species of small PARROTS (genus *Agapornis,* subfamily Psittacinae) of Africa and Madagascar. Popular as pets for their pretty colours and the seemingly affectionate closeness of pairs, lovebirds are 4–6 in. (10–16 cm) long, chunky, and short-tailed. Most have a red bill and a prominent eye ring. The two sexes look alike. Large flocks forage in woods and scrublands for seeds and may damage crops. Hardy and long-lived, they are combative toward other birds and have a loud, squawky voice. Though not easy to tame, they can be taught to perform tricks and mimic human speech to a limited extent.

Lovebirds (*Agapornis personata*).
TONI ANGERMAYER

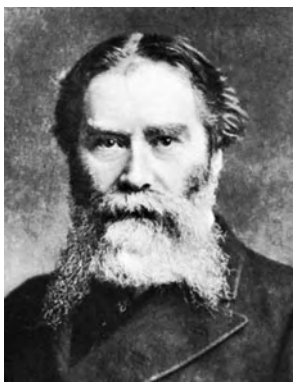
Lovejoy, Elijah P(arish) (b. Nov. 9, 1802, Albion, Maine, U.S.—d. Nov. 7, 1837, Alton, Ill.) U.S. newspaper editor and abolitionist. He moved to St. Louis in 1827. In 1833 he became editor of the *St. Louis Observer*, a Presbyterian weekly in which he wrote articles strongly condemning slavery. Under the threat of mob violence (1836), he moved his paper from the slave state of Missouri across the river to Alton, in the free state of Illinois. There mobs repeatedly destroyed his presses, and he was shot and killed while defending his building against an attack. News of his death strengthened abolitionist sentiment.

Lovelace, Ada King, countess of *orig.* **Augusta Ada Byron, Lady Byron** (b. Dec. 10, 1815, London, Eng.—d. Nov. 29, 1852, London) English mathematician. Her father was the poet Lord BYRON. In 1835 she married William King, 8th Baron King; when he was created an earl in 1838, she became countess of Lovelace. Having studied with the famous mathematician-logician Augustus De Morgan, she was introduced to CHARLES BABBAGE's Difference Engine (calculator) and studied plans for his Analytical Engine (computer) as early as 1833. In 1843 she translated and annotated an article about the Analytical Engine by Italian mathematician Luigi Federico Menabrea. In correspondence with Babbage, she also described how the Analytical Engine could be "programmed" to calculate certain numbers; this work has been called the first computer program, and in consequence she has been called the first computer programmer. ADA, a computer programming language, is named for her.

Lovell \'lə-vəl**, Sir (Alfred Charles) Bernard** (b. Aug. 31, 1913, Oldland Common, Gloucestershire, Eng.) British radio astronomer. He received his Ph.D. from the University of Bristol, worked for the Air Ministry during World War II, and lectured at the University of Manchester after the war. He built the first giant RADIO TELESCOPE (1957) at Jodrell Bank, near Manchester; with a bowl diameter of 250 ft (76 m), the instrument is used for astronomical research and spacecraft tracking and communication.

low blood pressure See HYPOTENSION

Low Countries Coastal region, northwestern Europe, consisting of BELGIUM, The NETHERLANDS, and LUXEMBOURG. Known as the Low Countries because much of the land along the North Sea is below or at sea level, they are often called the BENELUX countries, from the initial letters of their names.



low relief See BAS-RELIEF

Lowell City (pop., 2000: 105,167), northeastern Massachusetts, U.S. Settled in 1653 as East Chelmsford, it became a major centre of cotton-textile manufacturing in the 19th century. It was renamed for industrialist FRANCIS LOWELL and was incorporated as a town in 1826. In the 20th century it began losing textile manufacturing to southern states, and it diversified into other industries. The Lowell National Historical Park (established 1978) commemorates the first textile mills in the U.S. It is the birthplace of the artist JAMES MCNEILL WHISTLER and the seat of the University of Massachusetts Lowell.

Lowell, Amy (b. Feb. 9, 1874, Brookline, Mass., U.S.—d. May 12, 1925, Brookline) U.S. critic and poet. Born into the prominent Lowell family of Boston, she devoted herself to poetry at age 28 but published nothing until 1910. Her first volume, *A Dome of Many-Coloured Glass* (1912), was succeeded by *Sword Blades and Poppy Seed* (1914), which included her first poems in free verse and what she called "polyphonic prose." She became a leader of IMAGISM and was noted for her vivid and powerful personality and her scorn of conventional behaviour. Her other works include *Six French Poets* (1915), *Tendencies in Modern American Poetry* (1917), and *John Keats*, 2 vol. (1925).

Lowell, Francis Cabot (b. April 7, 1775, Newburyport, Mass., U.S.—d. Aug. 10, 1817, Boston) U.S. businessman. Born into a prominent Massachusetts family, Lowell closely studied the British textile industry while visiting Britain. With Paul Moody he devised an efficient power LOOM and spinning apparatus. His Boston Manufacturing Co. in Waltham (1812–14) was apparently the world's first mill in which were performed all operations converting raw COTTON into finished cloth. His example greatly stimulated the growth of New England industry. Lowell, Mass., is named for him.

Lowell, James Russell (b. Feb. 22, 1819, Cambridge, Mass., U.S.—d. Aug. 12, 1891, Cambridge) U.S. poet, critic, editor, and diplomat. He received a law degree from Harvard but chose not to practice. In the 1840s he wrote extensively against slavery, including the *Biglow Papers* (1848), satirical verses in Yankee dialect. His other most important works are *The Vision of Sir Launfal* (1848), a long poem on the brotherhood of mankind; and *A Fable for Critics* (1848), a witty evaluation of contemporary authors. After his wife's death in 1853, he wrote mainly essays on literature, history, and politics. A highly influential man of letters in his day, he taught at Harvard, edited *The Atlantic Monthly* and *The North American Review*, and served as minister to Spain and ambassador to Britain.

James Russell Lowell.
LIBRARY OF CONGRESS, WASHINGTON, D.C.

Lowell, Percival (b. March 13, 1855, Boston, Mass., U.S.—d. Nov. 12, 1916, Flagstaff, Ariz.) U.S. astronomer. He was born into a distinguished Boston family. In the 1890s he built a private observatory in Flagstaff, Ariz., to study MARS. He championed the now-abandoned theory that intelligent inhabitants of a dying Mars had constructed a planetwide system of irrigation. He thought that the so-called canals of Mars (see MARS, CANALS OF) were bands of cultivated vegetation dependent on this irrigation. Lowell's theory, long vigorously opposed, was finally put to rest by images received from the U.S. MARINER spacecraft. His prediction of a planet beyond Neptune was vindicated when Pluto was discovered in 1930.

Lowell, Robert *orig.* **Robert Traill Spence Lowell, Jr.** (b. March 1, 1917, Boston, Mass., U.S.—d. Sept. 12, 1977, New York, N.Y.) U.S. poet. Lowell was a descendant of a distinguished family that included JAMES RUSSELL LOWELL and AMY LOWELL. Though he turned away from his Puritan heritage, it forms the subject of much of his poetry. His first major work, *Lord Weary's Castle* (1946, Pulitzer Prize), contains "The Quaker Graveyard in Nantucket." *Life Studies* (1959) contains an autobiographical essay and 15 complex, confessional poems largely based on his family history and personal life, which included time in mental institutions. His activities in liberal causes in the 1960s influenced his next three volumes, including *For the Union Dead* (1964). His later collections include *The Dolphin* (1973, Pulitzer Prize).

Lowry \'laù-rē**, (Clarence) Malcolm** (b. July 28, 1909, Birkhead, Cheshire, Eng.—d. June 27, 1957, Ripe, Sussex) British novelist, short-story writer, and poet. In his youth Lowry rebelled against his conventional upbringing and shipped to China as a cabin boy; he later lived in France, the U.S., Mexico, Canada, and Italy. His reputation rests on the novel *Under the Volcano* (1947), about the last desperate day of a dispirited alcoholic and former British consul in Mexico. Its juxtaposition of images of social decay and self-destructiveness was seen as a symbolic vision of Europe on the verge of World War II. Though critically praised, it received popular recognition only after Lowry's death at age 47, probably the result of alcoholism.

Loy, Myrna *orig.* **Myrna Williams** (b. Aug. 2, 1905, Radersburg, Mont., U.S.—d. Dec. 14, 1993, New York, N.Y.) U.S. film actress. She played bit parts in Hollywood movies before being cast as the exotic mistress in the 1925 production of *Ben-Hur*, which established her early film persona as a foreign vamp. She earned praise as the wittily sophisticated Nora Charles in *The Thin Man* (1934) and its sequels and in other movies such as *The Best Years of Our Lives* (1946), *Mr. Blandings Builds His Dream House* (1948), *Cheaper by the Dozen* (1950), and *Lonelyhearts* (1958). Dubbed the "Queen of Hollywood" during her heyday, she evinced equality in a male-dominated world, and her combination of beauty and brains made male audiences regard her as the ideal mate. She worked for the American Red Cross in World War II and later for UNESCO.

loyalist American colonist loyal to Britain in the American Revolution. About one-third of American colonists were loyalists, including officeholders who served the British crown, large landholders, wealthy merchants, Anglican clergy and their parishioners, and Quakers. Loyalists were most numerous in the South, New York, and Pennsylvania, but they did not constitute a majority in any colony. At first they urged moderation in the struggle for colonial rights; when denounced by radical patriots, they became active partisans. Some joined the British army, including 23,000 from New York; when captured in battle, they were treated as traitors. All states passed laws against them, confiscating or heavily taxing their property. Beginning in 1776, about 100,000 loyalists fled into exile, many to Canada. Public sentiment against them diminished after 1789, and punitive state laws were repealed by 1814.

Loyola, Saint Ignatius of *orig.* **Iñigo de Oñaz y Loyola** (b. 1491, Loyola, Castile—d. July 31, 1556, Rome; canonized March 12, 1622, feast day July 31) Spanish founder of the Society of Jesus (Jesuits). Born into the nobility, he began his career as a soldier. While convalescing from wounds inflicted by a French cannonball in 1521, he experienced a religious conversion. After a pilgrimage to Jerusalem, he pursued religious studies in Spain and France. In Paris he gathered about him the companions (including St. Francis Xavier) who were to join him in founding the Jesuits. He was ordained a priest in 1537 and established the Society of Jesus in 1539. The new order received papal approval in 1540, and Loyola served as its general until his death, by which time it had branches in Italy, Spain, Germany, France, Portugal, India, and Brazil. Loyola described his mystical vision of prayer in *The Spiritual Exercises*. In his last years he laid the foundations of a system of Jesuit schools.

Lozi \'lō-zē\ *or* **Barotse** \bə-'rät-sə\ Complex of 25 Bantu-speaking peoples divided into six cultural groups centring on the area formerly known as Barotseland in western Zambia. Numbering more than 700,000, the Lozi move between two sets of villages in response to annual flooding. Their economy is based on agriculture, animal husbandry, and fishing. Their stratified society consists of aristocrats, commoners, and serfs.

LSD *in full* **lysergic acid diethylamide** Highly potent hallucinogenic drug. An organic compound, LSD can be derived from the alkaloids ergotamine and ergonovine, found in the ergot fungus, but most LSD is produced synthetically. It can block the action of the neurotransmitter serotonin and produces marked deviations from normal perceptions and behaviour lasting 8–10 hours or longer. Mood shifts, time and space distortions, and impulsive behaviour may progress to paranoia and aggression. Flashbacks to LSD-induced hallucinations can occur years later. LSD is not an approved drug, and no clinically valuable uses have been found for it.

Lu Vassal state of ancient China that originated during the Western Zhou and came to prominence in the Warring States period of the Eastern Zhou dynasty. It is known as the birthplace of Confucius. The Chunqiu ("Spring and Autumn Annals"), one of the Confucian Classics, records the major events at the court of Lu between 722 and 481 BC.

Lu Hsiang-shan See Lu Xiangshan

Lu Hsün See Lu Xun

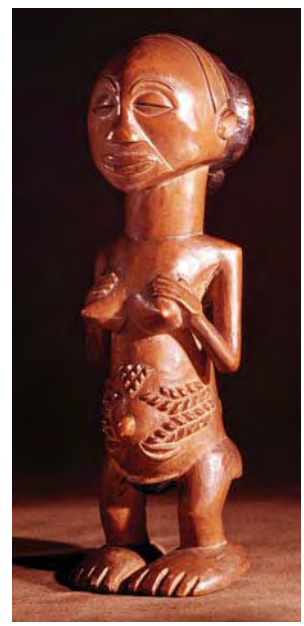
Lu Jiuyuan See Lu Xiangshan

Lü-ta See Dalian

Lu Xiangshan *or* **Lu Hsiang-shan** \'lü-'shyäŋ-'shän\ *or* **Lu Jiuyuan** \'lü-'jyō-'ywän\ (b. 1139, Kiangsi, China—d. Jan. 10, 1193, China) Chinese Neo-Confucian philosopher of the Southern Song dynasty. A government official and a teacher, he was the rival of the great Neo-Confucian rationalist Zhu Xi. Lu taught that the highest knowledge of the way (dao) comes from constant inner reflection and self-examination. In this process, one develops or recovers the fundamental goodness of one's nature. Lu's writings were published after his death, and his thought was revised three centuries later by Wang Yangming, who established the Xinxue school of Neo-Confucianism, often called the Lu-Wang school.

Lu Xun *or* **Lu Hsün** \'lü-'shün\ *orig.* **Zhou Shuren** (b. Sept. 25, 1881, Shaoxing, Zhejiang province, China—d. Oct. 19, 1936, Shanghai) Chinese writer. He became associated with the nascent Chinese literary movement in 1918 (part of the larger May Fourth Movement), when he published his short story "Diary of a Madman," a condemnation of traditional Confucian culture and the first Western-style story written wholly in Chinese. Though best known for his fiction, he was also a master of the prose essay, a vehicle he used especially late in life. He never joined the Communist Party himself, but he recruited many of his countrymen to communism and came to be considered a revolutionary hero.

Lualaba \ˌlü-ä-'lä-bä\ **River** River, central Africa. It is the headstream of the Congo River, and its 1,100-mi (1,800-km) course lies entirely within the Democratic Republic of the Congo. It is harnessed in places for hydroelectric power.



Luan \lù-'wän\ **River** River, Hebei province, northeastern China. It rises in eastern Inner Mongolia and flows north, then curves to the southeast. It passes through the Great Wall and divides into a number of smaller rivers, discharging into the Bo Hai (Gulf of Chihli) after a course of 545 mi (877 km). The river is navigable below Chengde.

Luanda \lù-'än-də\ *or* **Loanda** \lō-'än-də\ City (pop., 1999 est.: 2,555,000), capital of Angola. Situated on the Atlantic coast, it is Angola's largest city and its second busiest seaport. Founded in 1576 by Paulo Dias de Novais, it became the administrative centre for the colony of Angola in 1627. It was a major outlet for slave traffic to Brazil until the 19th century. It is a commercial and industrial area, with oil-refining capacity. It is the seat of the University of Luanda; the old fortress of São Miguel lies beyond the port. It was damaged during the persistent Angolan civil war that ended in 2002.

Luang Pradist Manudharm See Pridi Phanomyong

Luba *or* **Baluba** Cluster of some 5.6 million Bantu-speaking peoples who share a common political history surrounding the Luba-Lunda states. They are savanna and forest dwellers who hunt and gather, engage in agriculture, and keep livestock; they also fish intensively in the Congo and its tributaries. They have associations for hunting, magic, and medicine and a well-developed oral tradition that includes epic cycles. Two groups are noted as wood-carvers.

Luba-Lunda states \'lü-bə-'lün-də\ Complex of states that flourished in Central Africa in the 16th–19th centuries. In the late 15th century a small group of ivory hunt-

Female Luba ancestral statue of carved wood; in the Musée de l'Homme, Paris.

ers founded a state around which a number of satellites proliferated, spreading by the 17th century into the southern Congo Basin and what are now western Angola, and Zambia. The northeastern portion was inhabited by the Luba; the southwestern portion by the Lunda. These groups traded slaves and ivory to the Portuguese for cloth and other goods. In the 18th century migrants founded Kazembe farther southeast; it flourished until late in the 19th century, when it was colonized by the British.

Lubbock \'lə-bək\ City (pop., 2000: 199,564), northwestern Texas, U.S. Located south of AMARILLO, it was named for Tom S. Lubbock, a signer of the Texas declaration of independence. Formed in 1890 from Old Lubbock and Monterey, it developed as a ranching centre and was incorporated in 1909. A tornado in 1970 caused widespread damage. It is one of the nation's leading cotton markets and the centre of a diversified agricultural and industrial region. It is the seat of Texas Tech University (1923).

Lübeck \'lē-ˌbek\ City (population 2002 est.: 213,486), northern Germany. Founded on the site of a Slavic settlement in 1143, it developed as a trading post. It became a free city in 1226 and the seat of the HANSEATIC LEAGUE in 1358. It declined after the 16th century, and its trade was ruined during the NAPOLEONIC WARS. It revived after the Elbe-Lübeck canal was built in 1900. Its status as a self-governing entity ended in 1937, when the Nazis made it part of the Prussian province of SCHLESWIG-HOLSTEIN. It is one of Germany's largest Baltic ports. Historic sites include a 12th-century cathedral and several Gothic churches.

Lubitsch \'lü-bich**, Ernst** (b. Jan. 28, 1892, Berlin, Ger.—d. Nov. 30, 1947, Hollywood, Calif., U.S.) German-U.S. film director. He acted with MAX REINHARDT's German stage company (1911–14) and in short film comedies, then turned to directing costume dramas that were the first German films shown abroad, including *Passion* (1919), *Deception* (1920), and *The Loves of Pharaoh* (1921), as well as comedies such as *The Doll* (1919) and *The Oyster Princess* (1919). He moved to Hollywood in 1923 and developed a style of sophisticated wit and unerring narrative timing —the famous "Lubitsch touch"—in successful comedies such as *The Marriage Circle* (1924), *The Love Parade* (1929), *Trouble in Paradise* (1932), *Ninotchka* (1939), *The Shop Around the Corner* (1940), *To Be or Not to Be* (1942), and *Heaven Can Wait* (1943).

Lublin \'lü-blin\ City (pop., 2000 est.: 355,803), eastern Poland, situated on the Bystrzyca River. Founded as a stronghold in the late 9th century, the settlement received town rights in 1317. In 1795 it passed to Austria and in 1815 to Russia. In 1918 the first independent temporary Polish government was proclaimed in Lublin. In World War II the Nazi CONCENTRATION CAMP Majdanek was established in one of its suburbs. After the war Lublin served briefly as the seat of the national government. It is now an industrial and cultural centre for southeastern Poland.

lubrication Introduction of any of various substances between sliding surfaces to reduce wear and FRICTION. Lubricants may secondarily control corrosion, regulate temperature, electrically insulate, remove contaminants, or damp shock. Prehistoric peoples used mud and reeds to lubricate sledges, timbers, or rocks. Animal fat lubricated the axles of the first wagons and continued in wide use until crude OIL became the chief source of lubricants. Crude oil has been the basis of products designed for the specific lubricating needs of automobiles, aircraft, locomotives, turbojets, and all other power machinery. There are three basic varieties of lubrication: fluid-film (in which a fluid film completely separates sliding surfaces), boundary (in which the friction between surfaces is determined by the properties of the surfaces and properties of the lubricant other than VISCOSITY), and solid (used when liquid lubricants lack adequate resistance to load or temperature extremes). The principal lubricants are liquid, oily materials (petroleum-based or synthetic, and including greases); solids (such as graphite, molybdenum disulfide, soft metals, waxes, and plastics); and gases.

Lubumbashi \ˌlü-büm-'bä-shē\ *formerly (until 1966)* **Elisabethville** City (pop., 1994 est.: 851,381), Democratic Republic of the Congo. It was established by Belgian colonists in 1910 near the border with Zambia and grew to become the centre of one of the world's largest copper mining and smelting operations. It was the centre of Katanga province's secession movement in the early 1960s.

Luca da Cortona See Luca SIGNORELLI

Lucas, George (b. May 14, 1944, Modesto, Calif., U.S.) Film director and producer. He studied filmmaking at the University of Southern California. His first feature film, *THX 1138* (1971), was followed by the surprise success *American Graffiti* (1973). He wrote and directed the immensely popular science-fiction movie *Star Wars* (1977), which made innovative use of computerized special effects. He formed the production company Lucasfilms (1978) and its special-effects division Industrial Light and Magic and produced the *Star Wars* sequels—*The Empire Strikes Back* (1980) and *The Return of the Jedi* (1993)—as well as STEVEN SPIELBERG's *Raiders of the Lost Ark* (1981) and its sequels. He returned to directing with the first *Star Wars* prequel, *The Phantom Menace* (1999), which was followed by the other prequels *Attack of the Clones* (2002) and *Revenge of the Sith* (2005).

Lucas, Robert E., Jr. (b. Sept. 15, 1937, Yakima, Wash., U.S.) U.S. economist. He studied at the University of Chicago and began teaching there in 1975. He questioned the influence of JOHN MAYNARD KEYNES in MACROECONOMICS and the efficacy of government intervention in domestic affairs. He criticized the PHILLIPS CURVE for failing to provide for the dampened expectations of companies and workers in an inflationary economy. His theory of rational expectations, which suggests that individuals may alter the expected results of national fiscal policy by making private economic decisions based on anticipated results, won him the 1995 Nobel Prize. See also ECONOMETRICS; INFLATION.

Lucas (Huyghszoon) van Leyden \'lü-käs-vän-'lī-dən\ (b. 1489/94, Leiden, Neth.—d. before Aug. 8, 1533, Leiden) Netherlandish painter and engraver. He was trained by his father, a painter, but his great talent was as an engraver. Even such youthful prints as *Muhammad and the Monk Sergius* (1508) show great technical skill. In 1510, under the influence of ALBRECHT DÜRER, he produced two masterpieces of engraving, *The Milkmaid* and *Ecce Homo*, the latter much admired by REMBRANDT. He is thought to have developed the technique of etching on copper (instead of iron) plates; the softness of copper permitted him to combine etching and line engraving in the same print. He was also among the first to employ AERIAL PERSPECTIVE in prints. Though his paintings seldom attain the power of his engravings, he was an outstanding Netherlandish painter of his period; *The Last Judgment* (1526–27) is his most celebrated painting.

Luce, Clare Boothe *orig.* **Ann Clare Boothe** (b. March 10, 1903, New York, N.Y., U.S.—d. Oct. 9, 1987, Washington, D.C.) U.S. politician, dramatist, and socialite. She was born into poverty to parents who never married. From 1930 to 1934 she worked as an editor at *Vogue* and *Vanity Fair*. In the latter she published short sketches satirizing New York society, some of which were collected as *Stuffed Shirts* (1931). In 1935 she married HENRY R. LUCE, the publisher of *Time* and later *Life* magazine. Three of her witty plays were adapted into films: *The Women* (1936), *Kiss the Boys Goodbye* (1938), and *Margin for Error* (1939). From 1939 to 1940 she worked as a war correspondent for *Life* and recounted her experiences in *Europe in the Spring* (1940). As a member of the House of Representatives (1943–47), she became influential in Republican Party politics. She served as ambassador to Italy from 1953 to 1956, was a public supporter of BARRY GOLDWATER in the 1960s, and served on the President's Foreign Intelligence Advisory Board under Presidents Nixon, Ford, and Reagan in the 1970s and '80s. In 1983 she was awarded the Presidential Medal of Freedom. She is remembered for her fiesty demeanour and her acid wit, which she displayed in oft-quoted aphorisms such as, "No good deed goes unpunished."

Clare Boothe Luce.
CAMERA PRESS

Luce, Henry R(obinson) (b. April 3, 1898, Dengzhou, Shandong province, China—d. Feb. 28, 1967, Phoenix, Ariz., U.S.) U.S. magazine publisher. Luce was born to U.S. missionary parents. He graduated from Yale University in 1920. While at Yale he had met Briton Hadden, with whom he launched *TIME* in 1923. He added the business magazine *Fortune* in 1929 and *LIFE* magazine in 1936. Among other Luce magazines were *House & Home*, established in 1952, and *Sports Illustrated*, launched

© 2006 Encyclopædia Britannica, Inc.

in 1954. His publications, founded as means of educating what Luce considered a poorly informed U.S. public, had many imitators, and Luce became one of the most powerful figures in the history of U.S. journalism. Both he and his wife, Clare Boothe Luce, had a major influence on the Republican Party and on national affairs.

Lucerne \lü-'sərn\ *German* **Luzern** \lüt-'sern\ City (pop., 2000: 59,496), central Switzerland. Located southwest of Zürich, on Lake Lucerne and its Reuss River outlet, it developed around an 8th-century monastery. It joined the Swiss Confederation in 1332. A stronghold of Catholicism during the Reformation, it later took part in the Sonderbund war. It is a tourist centre, with its medieval walls, towers, and covered bridges. Among its many monuments is the famous *Lion of Lucerne*, carved in rock, which commemorates the Swiss Guards slain while defending the Tuileries Palace in Paris in 1792.

Lucerne, Lake *German* **Vierwaldstättersee** \'fēr-vält-ˌshtet-ər-'zā\ **("Lake of the Four Forest Cantons")** Lake, central Switzerland. It is 24 mi (39 km) long and 0.5 to 2 mi (0.8 to 3 km) wide, with an area of 44 sq mi (114 sq km). It has a maximum depth of 702 ft (214 m). The "Cross of Lucerne" is formed by its four main basins, which are joined by narrow channels. Named after the city of Lucerne at its western end, it is in a region of resorts and tourist attractions.

Luchow See Hefei

Lucian \'lü-shən\ *or* **Lucianos** *Latin* **Lucianus** (b. c. AD 120, Samosata, Commagene, Syria—d. after 180, Athens) Ancient Greek rhetorician, pamphleteer, and satirist. As a young man he acquired a Greek literary education while traveling through western Asia Minor. He became a public speaker before turning to writing essays. His works, outstanding for their mordant wit, are a sophisticated critique of the shams and follies of the literature, philosophy, and intellectual life of his day. In such works as *Charon*, *Dialogues of the Dead*, *True History*, and *Nigrinus*, he satirized nearly every aspect of human behaviour. His best work of literary criticism is *How to Write History*.

Luciano \lü-'chä-nō**, Lucky** *orig.* **Salvatore Lucania later Charles Luciano** (b. Nov. 11, 1896, Lercara Friddi, Sicily, Italy—d. Jan. 26, 1962, Capodicino Airport, Naples) Italian-born U.S. gangster. He immigrated with his family to New York in 1906 and soon was involved in crime. In 1916 he conspired with Frank Costello, Meyer Lansky, and other young gangsters, earning the nickname "Lucky" by evading arrest and winning at craps. He joined the crime gang of Joe Masseria in 1920 and was soon directing Masseria's bootlegging, narcotics, and prostitution rackets. In 1931 he had both Masseria and rival boss Salvatore Maranzano murdered; by 1934 he was "boss of all bosses" in a national crime syndicate. Jailed for extortion in 1936, he continued to direct criminal operations from his prison cell. In 1946 his sentence was commuted, and he was deported to Italy, where he directed drug traffic and the smuggling of aliens into the U.S.

Lucifer In classical mythology, the morning star (the planet Venus at dawn), personified as a male figure. Lucifer (Latin: "Light-Bearer") carried a torch and served as herald of the dawn. In Christian times, Lucifer came to be regarded as the name of Satan before his fall; it was thus used by John Milton in *Paradise Lost*.

Lucite *or* **Plexiglas** *or* **Perspex** Trademark names of the organic compound polymethyl methacrylate, a synthetic polymer of methyl methacrylate. Colourless and highly transparent, the solid material has high dimensional stability and good resistance to weathering and shock. It is used in aircraft canopies and windows, in boat windshields, and as a general alternative to glass in many applications. An object made of Lucite has the unusual property of keeping a beam of light reflected within its surfaces and thus carrying the beam around bends and corners; Lucite is therefore used in devices for illuminating interior organs during surgery as well as for ornaments, medallions, and lenses.

Lucknow \'lək-ˌnaù\ City (pop., 2001 prelim.: 2,207,340), capital of Uttar Pradesh state, northern India, on the Gomati River southeast of Delhi. It was captured by the Mughal ruler Bābur in 1528 and under his grandson Akbar became part of Oudh province. In 1775 it became the capital of Oudh. It is now an important rail centre with paper factories and other industrial development. Notable sites include the Great Imambara (tomb) of one of the nabobs of Oudh, the Residency where the British were besieged during the Indian Mutiny of 1857, and the University of Lucknow.

Lucretius \lù-'krē-shəs\ *in full* **Titus Lucretius Carus** (fl. 1st century BC) Latin poet and philosopher. He is known for his long poem *On the Nature of Things,* the fullest extant statement of the physical theory of Epicurus. In it Lucretius established the main principles of atomism and refuted the rival theories of Heracleitus, Empedocles, and Anaxagoras; demonstrated the atomic structure and mortality of the soul; described the mechanics of sense perception, thought, and certain bodily functions; and described the creation and working of the world and of the celestial bodies and the evolution of life and human society.

Lucullus \lü-'kə-ləs**, Lucius Licinius** (b. c. 117—d. 57/56 BC) Roman general who served as consul in 74 BC. He fought alongside Sulla and was the only officer to take part in Sulla's march on Rome. After Sulla's death Lucullus maintained his power through intrigue. He commanded the legions that drove Mithradates from Bithynia and Pontus to Armenia and later invaded Armenia and defeated its king, Tigranes. Mutinies prevented his complete victory, and Lucullus was replaced by Pompey, whom he opposed in the Senate. His legendary hedonism and extravagance made the word Lucullan a synonym of "lavish."

Lucy Nickname for a remarkably complete (40% intact) hominin skeleton found by Donald Johanson at Hadar, Eth., in 1974 and dated to 3.2 million years ago. The specimen is usually classified as Australopithecus *afarensis* and suggests—by having long arms, short legs, an apelike chest and jaw, and a small brain but a relatively humanlike pelvis—that bipedal locomotion preceded the development of a larger (more humanlike) brain in hominin evolution. Lucy stood about 3 ft 7 in. (109 cm) tall and weighed about 60 lbs (27 kg). See also Hadar remains; Laetoli footprints; Sterkfontein.

lud \'lüd\ Among the Votyak and Zyryan peoples of Russia, a sacred grove, usually consisting of fir trees, where sacrifices were performed. Enclosed by a high fence, the lud contained a place for a fire and tables for the sacrificial meal. It was forbidden to break even a branch from a tree in the grove, which was watched over by a hereditary guardian. The annual sacrificial rite generally centered on an ancient tree dedicated to a deity. All food had to be consumed at the site, and the hides of sacrificed animals were hung from the trees. Groves were sacred in most other Finno-Ugric religions as well.

Luda See Dalian

Luddite Member of organized groups of early 19th-century English craftsmen who surreptitiously destroyed the textile machinery that was replacing them. The movement began in Nottingham in 1811 and spread to other areas in 1812. The Luddites, or "Ludds," were named after a probably mythical leader, Ned Ludd. They operated at night and often enjoyed local support. Harsh repressive measures by the government included a mass trial at York in 1813 that resulted in many hangings and banishments. The term Luddite was later used to describe anyone opposed to technological change.

Ludendorff \'lü-dᵊn-ˌdȯrf**, Erich** (b. April 9, 1865, Kruszewnia, near Poznań, Prussian Poland—d. Dec. 20, 1937, Munich, Ger.) German general. In 1908 he joined the German army general staff and worked under Helmuth von Moltke in revising the Schlieffen Plan. In World War I he was appointed chief of staff to Paul von Hindenburg, and the two won a spectacular victory at the Battle of Tannenberg. In 1916 the two generals were given supreme military control. They tried to conduct a total war by mobilizing the entire forces of the home front, and in 1917 Ludendorff approved unrestricted submarine warfare against the British, which led to the U.S. entry into the war. In 1918, after his offensive on the Western Front failed, he demanded an armistice, but then he insisted the war continue when he realized the severity of the Armistice conditions. Political leaders opposed him, and he resigned his post. Ludendorff insisted he had been betrayed, and for the next 20 years he led a bizarre life, becoming a leader of reactionary political movements and taking part in the Kapp Putsch (1920) and Beer Hall Putsch

Erich Ludendorff, c. 1930.
ARCHIV FÜR KUNST UND GESCHICHTE

(1923). He served in Parliament as a National Socialist (1924–28) and developed a belief that "supernational powers"—Jewry, Christianity, Freemasonry—had deprived him and Germany of victory in World War I.

Ludlum, Robert (b. May 25, 1927, New York, N.Y., U.S.—d. March 12, 2001, Naples, Fla.) U.S. author of spy thrillers. He worked in the theatre as an actor and a successful producer and acted for television before turning to writing. Among his best-sellers were *The Scarlatti Inheritance* (1971), *The Osterman Weekend* (1972; film, 1983), *The Matarese Circle* (1979), and *The Bourne Identity* (1980; film, 1988, 2002). Though critics often found his plots unlikely and his prose uninspired, his fast-paced combination of international espionage, conspiracy, and mayhem proved enormously popular.

Ludwig I See LOUIS I

Ludwig II See LOUIS II

Ludwig IV See LOUIS IV

Ludwig, Carl F(riedrich) W(ilhelm) (b. Dec. 29, 1816, Witzenhausen, near Kassel, Hesse-Kassel—d. April 23, 1895, Leipzig, Ger.) German physician. He invented devices to record arterial blood-pressure changes, measure blood flow, and separate gases from blood (which established their role in blood purification). He was the first to keep animal organs alive outside the body. His paper on urine secretion in 1844 hypothesized a filtering role for the kidney. Nearly 200 of Ludwig's students became prominent scientists, and he is regarded as the founder of the physicochemical school of physiology.

Lueger \'lüg-ər**, Karl** (b. Oct. 24, 1844, Vienna, Austria—d. March 10, 1910, Vienna) Austrian politician. He was elected to the Vienna city council (1875) and to the Austrian parliament (1885), and he cofounded the Christian Social Party (1889). He effectively used the prevalent anti-Semitic and German nationalist currents in Vienna to advance his political objectives. He was elected mayor of Vienna in 1895 and transformed the Austrian capital into a modern city, bringing streetcars, electricity, and gas under city government control. He also developed parks, schools, and hospitals. He was instrumental in introducing universal suffrage in Austria (1907).

Lufthansa *in full* **Deutsche Lufthansa AG** One of Europe's largest air-passenger, cargo, and airline-services companies. The airline originated in 1926 as Deutsche Luft Hansa AG and eventually was flying to destinations in South America and Southeast Asia before service was disrupted by World War II. The company took its current name in 1954 and began regular passenger air service in 1955. Originally a state-run airline, Lufthansa was privatized in the 1990s and began its multiyear acquisition of Swiss International Airlines in 2005. Lufthansa's businesses include vacation travel, air freight, and aircraft maintenance.

Lug See LUGUS

Lugano \lü-'gä-nō**, Lake** *or* **Lago Ceresio** \che-'res-yō\ Lake in Switzerland and Italy, located between MAGGIORE and COMO lakes. Straddling the border of the two countries, it has an area of 19 sq mi (49 sq km) and a maximum depth of 945 ft (288 m). Between Melide and Bissone, the lake is so shallow that a stone dam across it carries the St. Gotthard railway. The resort town of Lugano, on its shores in Switzerland, is Italian in appearance. See photograph above.

Lugard \lü-'gärd**, F(rederick) (John) D(altry)** *later* **Baron Lugard (of Abinger)** (b. Jan. 22, 1858, Fort St. George, Madras, India—d. April 11, 1945, Abinger, Surrey, Eng.) British colonial administrator. In Nigeria he served as high commissioner (1900–06) and governor and governor-general (1912–19). He fought as an officer in British campaigns in Asia and North Africa before accepting posts with the British East Africa Company, the Royal Niger Company, and other private enterprises. He succeeded, in advance of the French, in establishing trade routes centred at BUGANDA, the Middle Niger, and Bechuanaland. As the chief government administrator in Nigeria, he united the disparate northern and southern districts and greatly influenced British colonial policy by exercising control centrally through native rulers and respecting native legal systems and customs.

Lugdunensis \ˌləg-də-'nen-sis\ Roman province, one of the three administrative divisions of GAUL. It extended northwest from its capital at Lugdunum (modern LYON) and included the land between the SEINE and

Lake Lugano, near Lugano, Switz.
R.G. EVERTS—RAPHO/PHOTO RESEARCHERS

LOIRE rivers up to BRITTANY and the Atlantic coast. It was conquered by Julius CAESAR during the GALLIC WARS and became a Roman province in 27 BC under AUGUSTUS.

lugeing \'lü-zhiŋ\ Sled racing using a small sled that is ridden in a supine position. The sled, called a luge, is steered with the feet and subtle shoulder movements. Dating back to the 15th century, lugeing is a traditional winter sport in Austria and is also practiced in other countries. The course used is similar to that employed in BOBSLEDDING, and speeds above 90 mph (145 km/hr) are not uncommon. Lugeing became a Winter Olympics sport in 1964.

Lugones \lü-'gō-nās**, Leopoldo** (b. June 13, 1874, Villa María del Río Seco, Arg.—d. Feb. 19, 1938, Buenos Aires) Argentine poet, critic, and cultural ambassador. He initially worked as a journalist but thought of himself primarily as a poet. His early verse, collected in volumes such as *Mountains of Gold* (1897), reveals his affinity with MODERNISMO. Later he embraced political conservatism, and his poetry and prose treated national themes in a realistic style. He was director of the National Council of Education from1914 to 1938 and also produced histories of Argentina and studies and translations of classical Greek literature. He strongly influenced such younger writers as JORGE LUIS BORGES.

Lugosi \lə-'gō-sē**, Bela** *orig.* **Blasko Béla Ferenc Dezsö** (b. Oct. 20, 1882, Lugos, Hung.—d. Aug. 16, 1956, Los Angeles, Calif., U.S.) Hungarian-born U.S. film actor. He acted with the National Theatre in Budapest (1913–19) and appeared in German films before leaving for the U.S. in 1921. He directed and starred in the play *Dracula* in New York in 1927; he reprised the role, which was ideally suited for his aristocratic manner and heavy accent, in the movie *Dracula* (1931). His other horror movies include *The Black Cat* (1934), *Mark of the Vampire* (1935), *Son of Frankenstein* (1939), *Frankenstein Meets the Wolfman* (1943), and *The Body Snatcher* (1945). Lugosi declined into poverty and obscurity and eventually took roles in low-budget independent films. He was buried wearing the long, black cape that he had worn in *Dracula*.

Lugosi as Count Dracula
CULVER PICTURES

Lugus \'lü-gəs\ *or* **Lug** Major god of the CELTIC RELIGION. In Irish tradition, Lug Lámfota ("Lug of the Long Arm") was the sole survivor of triplet brothers. In Wales, as Lleu Llaw Gyffes ("Lleu of the Dexterous Hand"), he was said to be the son of the virgin goddess Aranrhod. His mother sought to destroy him, but his uncle Gwydion raised him and kept him safe. When his mother denied him a wife, Gwydion created a woman

© 2006 Encyclopædia Britannica, Inc.

for him from flowers. His name is an element in such European and British place-names as Lyon, Leiden, and Carlisle.

Luhya *or* **Luyia** \'lü-yə\ Cluster of several closely related Bantu-speaking peoples of western Kenya. They emerged as a coherent group about 1945, when it was politically advantageous to possess a larger ethnic identity. Today, numbering some 3.8 million, the Luhya are the second-largest ethnic group in Kenya. They grow corn, cotton, and sugarcane as cash crops and millet, sorghum, and vegetables as staples, and they also keep livestock. Many have moved to urban areas seeking work.

Luichow Peninsula See LEIZHOU PENINSULA

Luini \lü-'ē-nē**, Bernardino** (b. c. 1480/85—d. 1532, Milan) Italian painter active in Milan. Little is known of his life. His earliest surviving works are a polyptych in a church near Como (c. 1510) and a fresco, *Madonna and Child* (1512), at the Cistercian monastery of Chiravalle, near Milan. Working in the Renaissance style, he was a prominent follower of LEONARDO DA VINCI in Lombardy; many of Luini's frescoes and altarpieces are in Lombardy churches. He also painted mythological subjects, most notably a *Europa* and a *Cephalus and Procris* (c. 1520), originally for a Milanese palace.

Lukács \'lü-ˌkäch**, György** (b. April 13, 1885, Budapest, Hung.—d. June 4, 1971, Budapest) Hungarian philosopher and critic. Born into a wealthy Jewish family, he joined the Hungarian Communist Party in 1918. In *History and Class Consciousness* (1923), he developed a Marxist philosophy of history and laid the basis for his literary criticism by linking the development of form in art with the history of the class struggle. A major figure during the 1956 Hungarian uprising, he was deported but was allowed to return in 1957. His works include the essay collection *Soul and Form* (1911) and *The Historical Novel* (1955). His earlier work, especially *Theory of the Novel* (1920) and *History and Class Consciousness* (1923), is now considered superior to his later Stalinist-influenced criticism, which celebrated the official Soviet policy of SOCIALIST REALISM.

Luke, Saint (fl. 1st century AD; feast day October 18) In Christian tradition, the author of the third GOSPEL and the Acts of the Apostles. He wrote in Greek and is considered the most literary of the NEW TESTAMENT writers. By his own account, he was not an eyewitness to the ministry of JESUS. He was a companion to St. PAUL, who called him the "beloved physician," and he is believed to have accompanied Paul on missionary journeys to Macedonia and Rome. Though little is known of his life, tradition holds that he was a Gentile and a native of Antioch in Syria and that he died a martyr.

Lula See Luiz SILVA

Lula da Silva, Luiz Inácio *known as* **Lula** (b. Oct. 6, 1945, Garanhuns, Pernambuco state, Braz.) Leader of Brazil's leftist Workers' Party. A former factory worker, Lula helped build a labour union movement into an important political party. In 1988 his party swept the municipal elections of São Paulo and other major cities. A leading contender for president in 1989, 1995, and 1998, proposing policies to help Brazil's working class, he lost each time to more conservative candidates. In 2002, however, he was successful in his bid for the presidency. See also Fernando COLLOR DE MELLO.

Lully \lü-'lē**, Jean-Baptiste** *orig.* **Giovanni Battista Lulli** (b. Nov. 28, 1632, Florence—d. March 22, 1687, Paris, France) Italian-born French composer. He was made a ward of the court after his mother died and was sent to a noble French household at age 13 as valet. There he learned guitar, organ, violin, and dancing and came to know the composer Michel Lambert (1610–96), who introduced him to society and later became his father-in-law. Lully became a dancer and musician for the king and at age 30 was put in charge of all royal music. In the 1660s he composed the incidental music for MOLIÈRE's plays as well as those of France's great tragedians. In the early 1670s he obtained the sole patent to present opera and produced the series of "lyric tragedies"—most with librettos by Philippe Quinault (1635–88)—for which he is known, including *Alceste* (1674), *Atys* (1676), and *Armide* (1686). The orchestra he developed was an important forerunner of the modern orchestra. A self-inflicted injury to his toe with his heavy conducting stick led to his death. His style of composition was imitated throughout Europe.

Lully, Raymond See Ramon LLULL

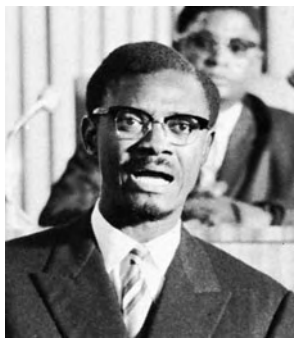
lumber Collective term for harvested wood, whether cut into logs, heavy timbers, or members used in light-frame construction. Lumber is classified as hardwood or softwood (see WOOD). The term often refers specifically to the products derived from logs in a sawmill. Conversion of logs to sawed lumber involves debarking, sawing into boards or slabs, resawing into thinner boards of varying sizes, edging, crosscutting to square the ends and remove defects, grading according to strength and appearance, and drying in the open air or in kilns. Drying below the fiber-saturation point results in shrinkage and generally greater strength, stiffness, and density and better prepares the wood for finishing. Preservatives are often applied to protect the wood from deterioration and decay.

Lumet \'lü-mət**, Sidney** (b. June 25, 1924, Philadelphia, Pa., U.S.) U.S. television and film director. He worked as a child actor in the Yiddish theatre and on Broadway. After serving in World War II, he directed plays and taught acting. He directed more than 200 television dramas for CBS (1951–57), including *Playhouse 90* and *Studio One* productions, before making his debut as a movie director with the acclaimed *Twelve Angry Men* (1957). He went on to direct commercially successful psychological dramas such as *The Fugitive Kind* (1960), *Fail Safe* (1964), *Serpico* (1973), *Dog Day Afternoon* (1975), *Network* (1976), *The Verdict* (1982), and *Night Falls on Manhattan* (1997).

Lumière \lǖ-'myer**, Auguste and Louis** (respectively b. Oct. 19, 1862, Besançon, France—d. April 10, 1954, Lyon; b. Oct. 5, 1864, Besançon, France—d. June 6, 1948, Bandol) French inventors. In 1882 Louis developed a method of making photographic plates, and by 1894 the brothers' factory was producing 15 million plates a year. They worked on improving THOMAS ALVA EDISON's Kinetoscope and patented their combination movie camera and projector, the Cinématographe, in 1895. Their film *La Sortie des ouvriers de l'usine Lumière* ("Workers Leaving the Lumière Factory"), which they showed to a paying audience in Paris in 1895, is considered the first motion picture. In 1896 the brothers, led by Louis, made more than 40 films recording everyday French life. They made the first newsreels, sending crews all over the world to shoot new material and show their films. In addition to the films he directed, Louis served as producer for some 2,000 films. The brothers also made basic innovations in colour photography.

Auguste Lumière
BOYER—H. ROGER-VIOLLET

luminaire *or* **light fixture** Complete lighting unit, consisting of one or more lamps (bulbs or tubes that emit light), along with the socket and other parts that hold the lamp in place and protect it, wiring that connects the lamp to a power source, and a reflector that helps direct and distribute the light. Fluorescent fixtures usually have lenses or louvers to shield the lamp (thus reducing glare) and redirect the light emitted. Luminaires include both portable and ceiling- or wall-mounted fixtures.



luminescence Process by which an excited material emits light in a process not caused solely by a rise in temperature. The EXCITATION is usually achieved with ULTRAVIOLET RADIATION, X RAYS, ELECTRONS, alpha particles, ELECTRIC FIELDS, or CHEMICAL ENERGY. The colour, or wavelength, of the light emitted is determined by the material, while the intensity depends on both the material and the input energy. Examples of luminescence include light emissions from neon lamps, luminescent watch dials, television and computer screens, fluorescent lamps, and fireflies. See also BIOLUMINESCENCE; FLUORESCENCE; PHOSPHORESCENCE.

luminism Painting style that emphasizes a particular clarity of light. It is characteristic of the works of a group of U.S. painters of the late 19th century, influenced by the HUDSON RIVER SCHOOL. Typically landscapes or seascapes, with sky occupying nearly half the composition, luminist works are distinguished by cool, clear colours and meticulously detailed objects modeled by light. The most prominent luminist painters were John Frederick Kensett, MARTIN JOHNSON HEADE, and Fitz Hugh Lane.

Lumumba \lə-'mùm-bə**, Patrice (Hemery)** (b. July 2, 1925, Onalua, Belgian Congo—d. January 1961, Katanga province, Republic of the Congo) African nationalist leader, first prime minister of the Democratic Republic of the CONGO (June–September 1960). Lumumba worked as a trade-union organizer before founding the Mouvement National Con-

© 2006 Encyclopædia Britannica, Inc.

golais, Congo's first nationwide political party, in 1958. That same year his militant nationalism at a major Pan-African conference in Accra, Ghana, brought him to prominence. During negotiations in Belgium in 1960, he was asked to form the first independent Congolese government. His rival Moise Tshombe immediately announced the secession of Katanga province. When Belgian troops arrived to sustain the secession, Lumumba appealed first to the UN and then to the Soviet Union. He was dismissed by Pres. Joseph Kasavubu and, a short time later, assassinated by Tshombe loyalists. His death caused a scandal throughout Africa, where he was looked on as a leader of Pan-Africanism.

Lumumba
AGENCE DALMAS

Luna Any of a series of unmanned Soviet lunar probes, launched between 1959 and 1976, responsible for various lunar "firsts." Luna 2 (1959) was the first spacecraft to strike the Moon; Luna 3 (1959) was the first to circle the Moon and took the first photographs of its far side. Luna 9 (1966) made the first successful lunar soft landing. Luna 16 (1970) was the first unmanned spacecraft to carry lunar soil samples back to Earth. Luna 17 (1970) soft-landed a robot vehicle for exploration; it also contained television equipment and sent live pictures of several miles of the Moon's surface. See also Pioneer; Ranger; Surveyor.

Luna See Selene

luna moth Species (*Actias luna*) of saturniid moth of eastern North America. Lunas are pale green and have a wingspread of 4 in. (10 cm). The wings have a thin brown border, and each hind wing has a long tail-like projection. The larvae feed on the leaves of many kinds of trees and shrubs. See also moth.

Lunacharsky, Anatoly (Vasilyevich) (b. Nov. 23, 1875, Poltava, Ukraine, Russian Empire—d. Dec. 26, 1933, Menton, France) Russian politician and writer. Deported in 1898 for his revolutionary activities, he joined the Bolsheviks in 1904 and disseminated propaganda to Russian students and political refugees in foreign countries. He joined Vladimir Iuich Lenin in Russia in 1917 and was appointed commissar for education, a role in which he did much to ensure the preservation of works of art during the Russian Civil War. He encouraged innovation in the theatre and in education, and he published plays of his own.

Lunceford \'lənsfərd**, Jimmie** *orig.* **James Melvin Lunceford** (b. June 6, 1902, Fulton, Miss., U.S.—d. July 12, 1947, Seaside, Ore.) U.S. jazz musician and bandleader. Lunceford was a well-schooled musician who played saxophone and taught music before forming a band in 1929. Trumpeter and arranger Sy Oliver (1910–88) joined in 1933, bringing a crisp ensemble sound to the two-beat rhythmic approach of the band. Lunceford's band gained national attention after he succeeded Cab Calloway at Harlem's Cotton Club in 1934, and it was thereafter counted among the finest big bands of the swing era, rivaling those of Duke Ellington and Count Basie in popularity.

Lunda empire See Luba-Lunda states

Lundy, Benjamin (b. January 4, 1789, Sussex county, N.J., U.S.—d. Aug. 22, 1839, Lowell, Ill.) U.S. abolitionist and publisher. He worked in Virginia and Ohio, where he organized the Union Humane Society (1815), one of the first antislavery societies. In 1821 he founded a newspaper, the *Genius of Universal Emancipation*, which he edited in various places until 1835, when he began publishing another paper, the *National Enquirer* (later the *Pennsylvania Freeman*), in Philadelphia. He traveled in search of places for former slaves to settle, including Canada and Haiti.

lung Either of two light, spongy, elastic organs in the chest, used for breathing. Each is enclosed in a membrane (pleura). Contraction of the diaphragm and the muscles between the ribs draw air into the lungs through the trachea, which splits into two primary bronchi, one per lung. Each bronchus branches into secondary bronchi (one per lobe of lung), tertiary bronchi (one per segment of lung), and many bronchioles leading to the pulmonary alveoli. There oxygen in the inspired gas is exchanged for carbon dioxide from the blood in the surrounding capillaries. Adequate tissue oxygen supply depends on sufficient distribution of air (ventilation) and blood (perfusion) in the lungs. Lung injuries or diseases (e.g., emphysema, embolism, pneumonia) can affect either or both.

lung cancer Malignant tumour of the lung. Four major types (squamous-cell carcinoma, adenocarcinoma, large-cell carcinoma, and small-cell carcinoma) have roughly equal prevalence. Most cases are due to long-term cigarette smoking. Heavy smoking and starting smoking earlier in life increase the risk. Passive inhalation ("secondhand smoke") is linked to lung cancer in nonsmokers. Other risk factors include exposure to radon or asbestos. Symptoms, including coughing (sometimes with blood), chest pain, and shortness of breath, seldom appear until lung cancer is advanced, when treatment with surgery, chemotherapy, and radiation or some combination of the three is less effective. Most patients die within a year of diagnosis.

lung congestion Distention of blood vessels in the lungs and filling of the pulmonary alveoli with blood. It results from infection, hypertension, or inadequate heart function (e.g., left-sided heart failure). Congestion seriously impairs gas exchange, leading to breathing difficulty, bloody discharge in sputum, and bluish skin tint.

Lung-men caves See Longmen caves

Lung-shan culture See Longshan culture

Luni River \'lü-nē\ River, Rajasthan state, western India. Rising in the western Aravalli Range, where it is known as the Sagarmati, it flows southwest and enters a patch of desert before dissipating into the Rann of Kachchh, after a total course of 330 mi (530 km). Its Sanskrit name is Lavanavari ("Salt River"), referring to its high salinity. The major river in the region, it serves as a source of irrigation.

Lunt, Alfred and Lynn Fontanne *orig.* **Lillie Louise Fontanne** (respectively b. Aug. 19, 1892, Milwaukee, Wis., U.S.—d. Aug. 3, 1977, Chicago, Ill.; b. Dec. 6, 1887, Essex, Eng.—d. July 30, 1983, Genesee Depot, Wis.) U.S. acting team. Lunt made his acting debut in Boston in 1912 and starred in *Clarence* on Broadway (1919). Fontanne made her acting debut in London in 1909 and in New York City in 1910. She and Lunt married in 1922 and performed with the Theatre Guild from 1924 to 1929. They acted together in more than 25 plays, including *The Guardsmen* (1924) and *Design for Living* (1933), the latter of which Noël Coward wrote for them. Considered the foremost acting couple of the U.S. theatre, they were acclaimed for the subtlety and effortless cooperation of their performances, especially in comedies by Coward and George Bernard Shaw.

Lunyu \'lün-'yü\ *English* **Analects** One of four Confucian texts that, when published together in 1190 by Zhu Xi, made up the Four Books. Scholars consider *Lunyu* the most reliable source of the doctrine of Confucius. It covers almost all the basic ethical concepts of Confucianism—for example, ren (benevolence), *junzi* (the superior man), Tian (Heaven), *zhong yong* (doctrine of the mean), *li* (proper conduct), and *zheng ming* (rectification of names). It also contains many direct quotations from Confucius and personal glimpses of the sage as recorded by his disciples. See also Neo-Confucianism; *Zhong yong*.

Luo \lə-'wō\ People of the flat country near Lake Victoria in western Kenya and northern Uganda. They speak a language of the Nilo-Saharan family. Numbering 3.2 million, the Luo are the third-largest ethnic group in Kenya. They are settled agriculturalists who also keep cattle; many work as agricultural labourers and in urban occupations. Most are Christians. See also Nilot.

Lupercalia \ˌlü-pər-'kā-lē-ə\ Ancient Roman festival held each February 15. Its origins are uncertain, but the likely derivation of its name from *lupus* (Latin: "wolf") may signal a connection with a primitive deity who protected herds from wolves or with the legendary she-wolf who nursed Romulus and Remus. Each Lupercalia began with the sacrifice of goats and a dog; two of its priests (Luperci) were then led to the altar and their foreheads were anointed with blood. After all had feasted, the Luperci cut thongs from the skins of the sacrificed animals and ran around the Palatine hill, striking at any woman who came near them; a blow from the thong was supposed to bestow fertility.

lupine *or* **lupin** \'lü-pən\ Any of about 200 species of herbaceous and partly woody plants that make up the genus *Lupinus* in the pea family (see legume), found throughout the Mediterranean and especially on the prairies of western North America. Many are grown in the U.S. as orna-

© 2006 Encyclopædia Britannica, Inc.

mentals, and a few species are useful as cover or forage crops. Herbaceous lupines, which grow up to 4 ft (1.25 m) tall, have low, divided leaves and an upright flower spike, and many are hybridized for gardens. The name comes from the Latin for "wolf" because these plants were once thought to deplete, or "wolf," minerals from the soil; in actuality some species aid soil fertility through NITROGEN FIXATION.

Lupino \lù-'pē-nō\ **family** British theatrical family. The earliest member, Signor Luppino, flourished c. 1610, probably in Italy. His descendant George William Luppino (1632–93), a puppet master, immigrated to England as a political refugee. A later descendant, the scenic artist and dancer Thomas Frederick Lupino (1749–1845), changed the spelling of the family name. Another family member, George Hook Lupino (1820–1902), had 16 children, 10 of whom were dancers. His eldest son, George Lupino (1853–1932), was a famous clown; George's son Barry Lupino (1884–1962) excelled in pantomime and musical comedy; another son, Stanley Lupino (1894–1942), performed in comedy revues. Stanley's nephew Henry Lupino (1892–1959), a Cockney comedian known as Lupino Lane, created the "Lambeth walk" dance in the musical *Me and My Girl* (1937). Stanley's daughter Ida Lupino (1916–95) moved in 1934 to the U.S., where she starred in movies such as *They Drive by Night* (1940), *The Sea Wolf* (1941), and *The Hard Way* (1942). One of the first female film directors, she was noted for *The Hitch-Hiker* (1953) and *The Bigamist* (1953), and she also directed several dramas for television.

lupus erythematosus \'lü-pəs-ˌer-ə-ˌthē-mə-'tō-səs\ Either of two inflammatory AUTOIMMUNE DISEASES, both more common in women. In the discoid type, a skin disease, red patches with grayish brown scales appear on the upper cheeks and nose (often in a butterfly pattern), scalp, lips, and/or inner cheeks. Sunlight worsens it. Antimalarial drugs may help. The second type, systemic (disseminated) lupus erythematosus (SLE), may affect any organ or structure, especially the skin (with marks like those of the discoid type), kidneys, heart, nervous system, serous (moisture-forming) membranes (e.g., in synovial joints or lining the abdomen), and lymph nodes, with acute episodes and remissions. Symptoms vary widely. Kidney and central-nervous-system involvement can be life-threatening. Treatment includes pain relief, control of inflammation, and trying to limit damage to vital organs.

Luria, A(leksandr) R(omanovich) (b. July 3, 1902, Kazan, Russia—d. 1977) Soviet neuropsychologist. After earning degrees in psychology, education, and medicine, he became professor of psychology at Moscow State University and later head of its department of neuropsychology. Influenced by his former teacher L.S. VYGOTSKY, he studied language disorders and the role of speech in mental development and retardation. During World War II Luria made advances in brain surgery and in the restoration of brain functions after trauma. He also developed theories concerning the functioning of the frontal lobe and the existence of zones of brain cells working in concert. His books include *Higher Cortical Functions in Man* (1966), *The Working Brain* (1973), and *Basic Problems of Neurolinguistics* (1976).

Luria \'lür-yä**, Isaac ben Solomon** (b. 1534, Jerusalem—d. Aug. 5, 1572, Safed, Syria) Jewish mystic and founder of a school of KABBALA. He was brought up in Egypt, where he pursued rabbinic studies. He dedicated himself to the study of the Kabbala with messianic fervour, and in 1570 he journeyed to a centre of the movement in Galilee. He died two years later in an epidemic, having written little. The Lurianic Kabbala, a collection of Luria's doctrines recorded after his death by a pupil, had great influence on later Jewish mysticism and on HASIDISM. It propounds a theory of the creation and later degeneration of the world and calls for restoration of the original harmony through ritual meditation and secret combinations of words.

Luria \'lür-ē-ə**, Salvador (Edward)** (b. Aug. 13, 1912, Turin, Italy—d. Feb. 6, 1991, Lexington, Mass., U.S.) Italian-born U.S. biologist. He fled Italy for France in 1938, arriving in the U.S. in 1940. In 1942 he obtained an electron micrograph of phage particles that confirmed earlier descriptions of them as consisting of a round head and a thin tail. In 1943 he and MAX DELBRÜCK showed that viruses can undergo permanent changes in their hereditary material. He also proved that the simultaneous existence of phage-resistant bacteria with phage-sensitive bacteria in the same culture was a result of the selection of spontaneous bacterial mutants. In 1945 he and A.D. HERSHEY demonstrated the existence not only of such bacterial mutants but also of spontaneous phage mutants. The three men shared a 1969 Nobel Prize.

Luristan Bronze \'lůr-ə-ˌstan\ *or* **Lorestan Bronze** \'lȯr-ə-ˌstan\ Objects excavated since the late 1920s in the valleys of the Zagros Mountains in the Luristan region of western Iran. Dating from c. 1500 to c. 500 BC, they consist of utensils, weapons, jewelry, horse trappings, belt buckles, and ritual and votive objects. They are believed to have been produced either by the CIMMERIANS or by Indo-European peoples of MEDIA or PERSIA.

Lusaka \lü-'sä-kä\ City (pop., 1999 est.: metro. area, 1,577,000), capital of ZAMBIA. In the 1890s the area was taken by the British South Africa Company during the formation of Northern RHODESIA; it became the capital in 1935. After the federation of Northern and Southern Rhodesia in 1953, it was a centre of the civil disobedience movement that led to the creation of the independent state of Zambia in 1960, with Lusaka as its capital. Possessing some light industry, it is also a commercial centre for the surrounding agricultural region. The University of Zambia (founded 1965) is located nearby.

Lüshun \'lǖ-'shůn\ *or* **Lü-shun** *formerly* **Port Arthur** Former city, since 1950 a district of DALIAN city, LIAONING province, northeastern China. Situated at the southern tip of the LIAODONG PENINSULA, it was used as a staging post as early as the 2nd century BC. Fortified under the MING DYNASTY, it was captured by the MANCHUS in 1633 and served as the seat of a defense unit under the QING DYNASTY. In 1878 it became the chief base for China's first modern naval force. Leased to Russia in 1898, it was captured by Japan (1905) during the RUSSO-JAPANESE WAR and was made the seat of a provincial government. Under a 1945 treaty it became a Sino-Soviet military base; the Soviet forces withdrew in 1955.

Lusitania British ocean liner sunk by a German submarine off the coast of Ireland on May 7, 1915. The British Admiralty had warned the *Lusitania* to avoid the area and to use the evasive tactic of zigzagging, but the crew ignored these recommendations. Though unarmed, the ship was carrying munitions for the Allies, and the Germans had circulated warnings that the ship would be sunk. The loss of life—1,198 people drowned, including 128 U.S. citizens—outraged public opinion. The U.S. protested Germany's action, and Germany limited its submarine campaign against Britain. When Germany renewed unrestricted submarine warfare, the U.S. entered World War I in April 1917.

Lussac, Joseph Gay- See Joseph GAY-LUSSAC

lustre In mineralogy, the appearance of a mineral surface in terms of its light-reflecting qualities. Lustre depends on a mineral's refractivity (see REFRACTION), transparency, and structure. Variations in these properties produce different kinds of lustre, from metallic (e.g., gold) to dull (e.g., chalk).

lustred glass *or* **lustered glass** Art glass of the ART NOUVEAU style, delicately iridescent with rich colours, mimicking the iridescent sheen produced by the corrosion of ancient buried glassware. In 1893 LOUIS COMFORT TIFFANY founded the Stourbridge Glass Co. to produce lustred drinking glasses, bowls, vases, lamps, and jewelry. His lustred glass, produced by metallic pigments applied to opaque glass, produced a pearly sheen, whereas that produced in Europe in the 1870s used transparent glass, which resulted in a mirrorlike surface. Tiffany's wares were so popular that he made thousands of pieces annually until 1933.

lute Plucked STRINGED INSTRUMENT popular in 16th–17th-century Europe. It originated from the Arab *ʿūd*, which reached Europe in the 13th century. Like the *ʿūd*, the lute has a deep pear-shaped body with an ornamental soundhole, a fretted neck with a bent-back pegbox, and strings hitched to a bridge glued to the instrument's belly. In later years it acquired several unstopped bass strings. It became the preferred instrument for cultivated amateur musicians and acquired an extensive literature of song accompaniments and solo and consort music.

Angel playing a lute, from "Presentation in the Temple," painted altarpiece by Vittore Carpaccio, 1510; in the Accademia, Venice.

Luther, Martin (b. Nov. 10, 1483, Eisleben, Saxony—d. Feb. 18, 1546, Eisleben) German priest who sparked the REFORMATION. The son of a miner, he studied philosophy and law before entering an Augustinian monastery in 1505. He was ordained two years later and continued his theological studies at the University of Wittenberg, where he became a professor of biblical studies. He was shocked by the corruption of the clergy on a trip to Rome in 1510 and was later troubled by doubts centring on fear of divine retributive justice. His spiritual crisis was resolved when he hit on the idea of JUSTIFICATION by faith, the doctrine that salvation is granted as a gift through God's grace. He urged reform of the Roman Catholic church, protesting the sale of INDULGENCES and other abuses, and in 1517 he distributed to the archbishop of Mainz and several friends his NINETY-FIVE THESES (according to legend, Luther nailed the theses to the door of the castle church in Wittenberg); the theses questioned Roman Catholic teaching and called for reform. In 1521 he was excommunicated by POPE LEO IX and declared an outlaw at the Diet of Worms (see WORMS, DIET OF). Under the protection of the elector of Saxony, Luther took refuge in Wartburg. There he translated the Bible into German; his superbly vigorous translation has long been regarded as the greatest landmark in the history of the GERMAN LANGUAGE. He later returned to Wittenberg, and in 1525 he married the former nun Katherina von Bora, with whom he raised six children. Though his preaching was the principal spark that set off the PEASANTS' WAR (1524–25), his vehement denunciation of the peasants contributed to their defeat. His break with Rome led to the founding of the Lutheran Church (see LUTHERANISM); the Lutheran confession of faith or, AUGSBURG CONFESSION, was produced with Luther's sanction by PHILIPP MELANCHTHON in 1530. Luther's writings included hymns, a liturgy, and many theological works.

Lutheranism Protestant movement founded on the principles of MARTIN LUTHER. Lutheranism arose at the start of the REFORMATION, after Luther posted his NINETY-FIVE THESES in Wittenberg. It spread through much of Germany and into Scandinavia, where it was established by law. It was brought to the New World by the colonists of New Netherland and NEW SWEDEN and spread through the U.S. Middle Atlantic states in the 18th century and the Midwest in the 19th century. Its doctrines are contained in the catechisms of Luther and in the AUGSBURG CONFESSION. Lutheran doctrine emphasizes SALVATION by faith alone and the primacy of the BIBLE as the church's authority. The Lutheran ministry is one of service—not special status—and is described as the priesthood of all believers. Lutherans accept two sacraments (baptism and the Eucharist) and believe in predestination to salvation. The Lutheran World Federation is based in Geneva. See also PIETISM.

lutite \'lü-ˌtīt\ Any fine-grained sedimentary rock consisting of clay- or silt-sized particles (less than 0.0025 in., or 0.06 mm, in diameter) that are derived principally from nonmarine (continental) rocks. Laminated lutites and lutites that split easily into thin layers are usually called SHALES. Other lutites may be called claystones, siltstones, or mudstones.

Lutosławski \ˌlü-tə-'släv-skē**, Witold** (b. Jan. 25, 1913, Warsaw, Pol.—d. Feb. 7, 1994, Warsaw) Polish composer. Trained in Warsaw, he initially became known as a pianist. His international reputation was secured by the premiere of his *Concerto for Orchestra* (1954), full of colour and based on folk elements, and later the *Funeral Music* for string orchestra (1958). From the late 1950s he incorporated limited aleatory (elements of chance; see ALEATORY MUSIC) effects in his works. His four brilliantly orchestrated symphonies, particularly the *Second* (1967) and *Third* (1983), are widely admired, as are his *Livre pour orchestra* (1968) and his *String Quartet* (1964).

Lutuli \lə-'tü-lē**, Albert (John Mvumbi)** (b. 1898, Rhodesia—d. July 21, 1967, Stanger, S.Af.) ZULU chief and president of the AFRICAN NATIONAL CONGRESS (1952–60). Trained at a mission school, Lutuli taught and served a small community as chief before being elected ANC president. He was frequently imprisoned for his anti-apartheid activities. He set forth his views in *Let My People Go* (1962). In 1960 he became the first African to be awarded the Nobel Prize for Peace.

Lutyens \'lə-chənz**, Sir Edwin L(andseer)** (b. March 29, 1869, London, Eng.—d. Jan. 1, 1944, London) British architect. His design for a house at Munstead Wood, Godalming, Surrey (1896), created for GERTRUDE JEKYLL, established his reputation. In the series of country houses he subsequently designed, many in collaboration with Jekyll, Lutyens adapted past styles to contemporary domestic life in delightful and original ways. For the new Indian capital at Delhi, he devised a plan based on a series of hexagons separated by broad avenues; his most important building there, the Viceroy's House (1912–30), combined aspects of Classical architecture with Indian motifs. After World War I he became architect to the Imperial War Graves Commission, for which he designed the Cenotaph in London (1919–20) and other memorials.

Luxembourg \'lük-səm-ˌbürk,\ *English* \'lək-səm-ˌbərg\ *officially* **Grand Duchy of Luxembourg** Country, western Europe. Area: 999 sq mi (2,586 sq km). Population (2005 est.): 457,000. Capital: LUXEMBOURG.

Most of the population is ethnically French or German, though there is a proportion of foreign residents, chiefly Portuguese, Italians, French, Belgians, and Germans. Languages: Luxembourgian, French, German. Religion: Christianity (predominantly Roman Catholic). Currency: euro. The country has a maximum length of 51 mi (82 km) and a maximum width of 35 mi (56 km). It is divided into two regions: the Oesling, an extension of the Ardennes Mountains in the northern third of the country consisting of a high plateau dissected by river valleys; and the Bon Pays, or Gutland, a rolling plateau that occupies the rest of the land. Luxembourg's economy is largely based on heavy industry and international trade and banking, and its per capita income is among the highest in the world. It is a constitutional monarchy with two legislative houses; its chief of state is the grand duke, and the head of government is the prime minister. At the time of Roman conquest (53 BC), the area was inhabited by two Belgic tribes, the Treveri and the Mediomatrici. After AD 400, Germanic tribes invaded the region. It later came into CHARLEMAGNE's empire. Made a duchy in 1354, it was ceded to the house of BURGUNDY in 1443 and to the HABSBURGS in 1477. In the mid-16th century it became part of the Spanish Netherlands. The Congress of VIENNA in 1815 made it a grand duchy and awarded it to The Netherlands. After an uprising in 1830, its western portion became part of Belgium, while the remainder was held by The Netherlands. In 1867 the European powers guaranteed the neutrality and independence of Luxembourg. In the late 19th century it built a great steel industry by exploiting its extensive iron ore deposits. It was invaded and occupied by Germany in both world wars. Following World War II, it abandoned its neutrality by joining NATO in 1949. It joined the BENELUX ECONOMIC UNION in 1944 and the EUROPEAN COAL AND STEEL COMMUNITY, a forerunner of the EUROPEAN UNION, in 1952. Luxembourg ratified the MAASTRICHT TREATY on European Union in 1992 and adopted the euro as its official monetary unit in 1999.

Luxembourg City (pop., 2001 prelim.: 76,833), capital of LUXEMBOURG. A rocky promontory along the Alzette River was the site of a Roman fortress and later of a Frankish castle, around which the medieval town developed. Siegfried, count of Ardennes, purchased this castle and made the duchy of Luxembourg independent in 963. The strongest in Europe

© 2006 Encyclopædia Britannica, Inc.

after Gibraltar, the castle was garrisoned by the Prussians as a bulwark of the German Confederation (1815–66); it was dismantled by treaty in 1867. Long an important road and railway focus, the city is also an important industrial and financial centre. It is the seat of the European Court of Justice and several administrative offices of the European Union.

Luxemburg \'lůk-səm-ˌbůrk,\ *English* \'lək-səm-ˌbərg**, Rosa** (b. March 5, 1871, Zamość, Pol., Russian Empire—d. Jan. 15, 1919, Berlin, Ger.) Polish-born German political radical, intellectual, and author. As a Jew in Russian-controlled Poland, she was drawn early into underground political activism. In 1889 she fled to Zürich, Switz., where she obtained her doctorate. Having become involved in the international socialist movement, in 1892 she cofounded what would become the Polish Communist Party. The Russian Revolution of 1905 convinced her that the world revolution would originate in Russia. She advocated the mass strike as the proletariat's most important tool. Imprisoned in Warsaw for agitation, she then moved to Berlin to teach and write (1907–14). Early in World War I she cofounded the Spartacus League (see Spartacists), and in 1918 she oversaw its transformation into the German Communist Party; she was murdered during the Spartacus Revolt less than a month later. She believed in a democratic path to socialism after a world revolution to overthrow capitalism and opposed what she recognized as Vladimir Ilich Lenin's emerging dictatorship.

Rosa Luxemburg.
INTERFOTO/FRIEDRICH RAUCH, MUNICH

Luxemburgian Dialect of German spoken exclusively in Luxembourg. A Moselle-Franconian dialect of the West Middle German group, enriched by many French words and phrases, Luxemburgian is spoken by all classes. Luxembourg's population is generally bilingual or trilingual. Luxemburgian is mostly used orally, French in government and the courts, and German in newspapers; all three languages are used in the schools.

Luxor \'lək-ˌsȯr, 'lůk-ˌsȯr\ *Arabic* **Al-Uqṣur** City (pop., 1996: 360,503), Upper Egypt. Its name has been given to the southern half of the ruins of Thebes. It is centred on the Great Temple of Amon, which was built on the eastern bank of the Nile River by King Amenhotep III in the 14th century BC. Tutankhamen and Horemheb completed the temple, and Ramses II added to it. Ruins include pillars and courts of the original temple as well as the remains of Coptic churches and a mosque. The modern city serves as a tourist centre and as a market for the surrounding agricultural district. See also Karnak.

luxury tax Excise levy on goods or services considered to be luxuries rather than necessities (e.g., jewelry and perfume). Luxury taxes may be levied with the intent of taxing the rich or in a deliberate effort to alter consumption patterns, either for moral reasons or in times of national emergency. Today revenue productivity generally overshadows the moral argument.

Luyia See Luhya

Luzon \lü-'zȯn\ Island (pop., 2000: 37,909,589), Philippines. The country's largest island, with an area of 40,420 sq mi (104,688 sq km), it is the site of Quezon City and Manila, the nation's capital. Located in the northern Philippine archipelago, it is bounded by the Philippine Sea, the Sibuyan Sea, and the South China Sea, and it is separated from Taiwan by the Luzon Strait. It represents one-third of the country's land area and half of its population. It is largely mountainous; in 1991 the eruption of Mount Pinatubo altered the island's geography. It is the country's leader in both industry and agriculture.

Luzon Strait Passage between northern Luzon, Philippines, and southern Taiwan. Connecting the China Sea on the west with the Philippine Sea on the east, and extending 200 mi (320 km), it is part of an important shipping route. A series of channels, it is dotted with the islands of the Batan and Babuyan island groups.

Lviv \lə-'vē-ü,\ *English* \lə-'vēf\ *or* **Lvov** \lə-'vȯf\ City (pop., 2001: 733,000), western Ukraine. Founded c. 1256 by Prince Daniel of Galicia, it came under Polish rule in 1349. Lviv became one of the great medieval trading towns and changed hands many times. It was taken by the Cossacks in 1648 and by the Swedes in 1704. Given to Austria in 1772, it became the capital of the Austrian province of Galicia. It passed to Poland in 1919, after an unsuccessful attempt by Ukrainians to set up a republic (1918). It was seized by the Soviet Union in 1939 and, after German occupation, annexed by the Soviets in 1945. It is now a centre for Ukrainian culture and the seat of a university (founded 1661).

Lvov \lə-'vȯf**, Georgy (Yevgenyevich), Prince** (b. Nov. 2, 1861, Popovka, near Tula, Russia—d. March 7, 1925, Paris, France) Russian politician, first head of the provisional government established during the Russian Revolution of 1917. In 1905 he joined the liberal Constitutional Democratic Party and was elected to the first Duma (1906). He became chairman of the All-Russian Union of Zemstvos (1914) and won the respect of political liberals and army commanders. In March 1917 he became premier but was unable to satisfy the increasingly radical demands of the populace. He resigned in July, after a major left-wing demonstration, in favour of Aleksandr Kerensky. Arrested when the Bolsheviks seized power, he escaped and settled in Paris.

Lyallpur See Faisalabad

Lyautey \lyō-'tā**, Louis-Hubert-Gonzalve** (b. Nov. 17, 1854, Nancy, France—d. July 21, 1934, Thorey) French soldier and first colonial administrator in Morocco under the protectorate (1912–56). Early in his career he served in French Indochina, Madagascar, and Algeria. As resident general in Morocco (1912–24), he pacified the colony and advocated the principle of indirect rule.

Lycaonia \ˌlī-kā-'ō-nē-ə\ Ancient region, southern Anatolia. Situated north of the Taurus Mountains in present-day Turkey, in ancient times it was bounded by the regions of Caria and Pamphylia. It was ruled by Alexander the Great, the Seleucids, the Attalids, and, finally, the Romans. Under Rome it was attached to Galatia and Cappadocia. From Seleucid times on, Iconium (modern Konya) served as its capital. It was visited by St. Paul and by the 4th century had developed an organized ecclesiastical system.

lyceum \lī-'sē-əm\ **movement** Form of adult education popular in the U.S. during the mid-19th century. The lyceums were voluntary local associations that sponsored lectures and debates on topics of current interest. The first was founded in 1826, and by 1834 there were approximately 3,000 in the Northeast and Midwest. They attracted such speakers as Ralph Waldo Emerson, Frederick Douglass, Henry David Thoreau, Daniel Webster, Nathaniel Hawthorne, and Susan B. Anthony. The movement began to decline with the outbreak of the Civil War and eventually blended into the postbellum Chautauqua movement. In their heyday the lyceums contributed to the broadening of the school curricula and the development of local museums and libraries.

lychee See litchi

Lycia \'li-shə\ Ancient district, southwestern Anatolia. Located along the Mediterranean Sea coast in present-day Turkey, in ancient times it was situated between the regions of Caria and Pamphylia. By the 8th century BC it was a thriving maritime country. It later fell to king Cyrus II of the Persian Achaemenian dynasty. Annexed to Roman Pamphylia in AD 43, after the 4th century it became a separate Roman province.

Lycurgus \lī-'kər-gəs\ (fl. 7th century BC?) Legendary founder of the legal institutions of ancient Sparta. Because ancient sources give differing accounts of his career, some scholars conclude that he was not a historical person, but many believe that a man named Lycurgus instituted drastic reforms in Sparta after the revolt of the helots in the 7th century BC. Lycurgus is thought to have devised the militarized communal system that made Sparta unique among Greek city-states and to have determined the powers of the council and the assembly.

Lycurgus (b. c. 390—d. 324 BC) Athenian orator and statesman. He supported Demosthenes in opposing Macedonia. As controller of state finances (338–326), he was noted for his efficient administration and vigorous prosecution of corrupt officials. He reconstituted the army and remodeled the fleet, carried on a major building program that included reconstruction of the theatre of Dionysus, produced the official edition of the dramas of Aeschylus, Sophocles, and Euripides, and worked to restore Athenian cults and festivals.

Lydia Ancient land, western Anatolia. Located in present-day Turkey, it was bounded on the west by the Aegean Sea and profoundly influenced

the Ionian Greeks in the 7th–6th centuries BC through such economic developments as the use of metallic coinage. It was conquered by the Persians under CYRUS II in 546 BC. It later passed to Syria and Pergamum, and under the Romans it became part of the province of Asia.

lye Alkaline (see ALKALI) liquid extracted by soaking wood ashes in water, commonly used for washing and in making SOAP. More generally, lye is any strong alkaline solution or solid, such as sodium hydroxide (CAUSTIC SODA) or potassium hydroxide (caustic potash).

Lyell \'lī-əl**, Sir Charles** (b. Nov. 14, 1797, Kinnordy, Forfarshire, Scot.—d. Feb. 22, 1875, London, Eng.) Scottish geologist. While studying law at the University of Oxford, he became interested in geology and later met such notable geologists as ALEXANDER VON HUMBOLDT and GEORGES CUVIER. Lyell came to believe that there were natural (as opposed to supernatural) explanations for all geologic phenomena, a position he supported with many examples in his three-volume *Principles of Geology* (1830–33). A recognized leader in his field, he gained the friendship of other well-known men of science, including the HERSCHEL FAMILY and CHARLES DARWIN, whose *Origin of Species* (1859) persuaded Lyell to accept evolution. Lyell was largely responsible for the general acceptance of the concept of UNIFORMITARIANISM in geology.

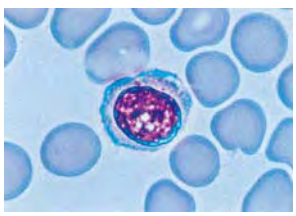
COURTESY OF THE NATIONAL PORTRAIT GALLERY, LONDON

Lyly \'li-lē**, John** (b. 1554?, Kent, Eng.—d. November 1606, London) English writer. Educated at Oxford, Lyly gained fame in London with two prose romances, *Euphues* (1578) and *Euphues and His England* (1580). The novels inspired *euphuism*, an elegant, extravagant Elizabethan literary style, and made Lyly the first English prose stylist to leave an enduring impression on the language. As a dramatist he also contributed to the development of prose dialogue in English comedy, a genre to which he devoted himself almost exclusively after 1580. *Endimion* (performed 1588) is considered his finest play.



Lyme disease Tick-borne bacterial disease. It was identified in 1975 and named for Old Lyme, Conn. It is caused by a SPIROCHETE, *Borrelia burgdorferi*, transmitted by TICKS, which pick it up in the blood of infected animals, mostly deer. Humans can be bitten by ticks in tall grass or fallen leaves. Lyme disease has three stages: a target-shaped rash, often with flulike symptoms; migrating arthritic pain and neurological symptoms (disturbances to memory, vision, or locomotion); and crippling arthritis with symptoms like those of multiple sclerosis and sometimes with facial paralysis, meningitis, or memory loss. Most cases do not progress beyond the first stage, but those that do reach the third stage within two years. Prevention involves avoiding tick bites. Diagnosis can be difficult, especially if the initial rash is not noticed. Early antibiotic treatment can prevent progression. Advanced cases need more powerful antibiotics, and symptoms may recur.

lymph Pale fluid that bathes tissues, maintaining fluid balance and removing bacteria. It enters the blood system at a vein under the collarbone that it reaches via channels and ducts, being driven through them mainly by surrounding muscle activity. The lymphatic organs (SPLEEN and THYMUS) and LYMPH NODES filter out bacteria and other particles the lymph takes up from body tissues. Lymph contains LYMPHOCYTES and macrophages, the primary cells of the IMMUNE SYSTEM. See also LYMPHATIC SYSTEM.

lymph node Small, rounded mass of LYMPHOID TISSUE contained in CONNECTIVE TISSUE. They occur all along lymphatic vessels, with clusters in certain areas (e.g., neck, groin, armpits). They filter bacteria and other foreign materials out of LYMPH and expose them to LYMPHOCYTES and macrophages that can engulf them; these cells multiply in response to accumulation of such materials, which is why lymph nodes swell during INFECTIONS. The nodes also produce lymphocytes and ANTIBODIES, to be carried by lymph throughout the LYMPHATIC SYSTEM. In HODGKIN DISEASE and other LYMPHOMAS, malignant lymph cells proliferate, causing lymph node enlargement. Other cancers often invade lymphatic vessels, which can carry cells from the tumour to lymph nodes, where they are trapped and grow into secondary tumours. Lymph nodes are therefore removed in cancer surgery to detect or prevent tumour spread.

lymphatic system System of LYMPH NODES, vessels, and nodules and LYMPHOID tissue, including the THYMUS, SPLEEN, TONSILS, and BONE MARROW, through which LYMPH circulates and is filtered. Its primary function is to return proteins, waste products, and fluids to the blood; molecules too big to enter the CAPILLARIES pass through the more permeable walls of lymphatic vessels. Valves keep lymph flowing in one direction, more slowly than blood and at a lower pressure. The lymphatic system also has a role in the IMMUNE SYSTEM. Nodes filter bacteria and foreign matter from lymph. Smaller nodules, which often produce LYMPHOCYTES, form in areas more exposed to such materials. They can merge and become permanent, as in the tonsils. Blockage of a lymph vessel may cause fluid to collect in the tissues, producing lymphedema (tissue swelling). Other lymphatic system disorders include lymphocytic LEUKEMIAS and LYMPHOMA. See also RETICULOENDOTHELIAL SYSTEM.

lymphocyte Type of LEUKOCYTE fundamental to the IMMUNE SYSTEM, regulating and participating in acquired IMMUNITY. Each has receptor molecules on its surface that bind to a specific ANTIGEN. The two primary types, B CELLS and T CELLS, originate from stem cells in BONE MARROW and travel to LYMPHOID TISSUES. When a B cell binds to an antigen, it multiplies to form a clone of identical cells. Some of these, acted on by helper T cells, differentiate into plasma cells that produce ANTIBODIES against the antigen. Others (memory cells) multiply, providing long-term IMMUNITY to the antigen.

Human lymphocyte (phase-contrast microphotograph).
MANFRED KAGE—PETER ARNOLD

lymphoid tissue Cells, tissues, and organs composing the IMMUNE SYSTEM, including the BONE MARROW, THYMUS, SPLEEN, and LYMPH NODES. The most highly organized components are the thymus and lymph nodes, and the least organized are the cells that wander in the loose CONNECTIVE-TISSUE spaces under membranes lining most body systems, where they can establish lymph nodules (local LYMPHOCYTE production centre) in response to ANTIGENS. The most common lymphoid tissue cell is the lymphocyte. Others are macrophages, which engulf foreign materials and probably alter them to initiate the immune response, and reticular cells, which produce and maintain thin networks of fibres as a framework for most lymphoid organs. See also IMMUNITY; LYMPHATIC SYSTEM.

lymphoma \lim-'fō-mə\ Any of a group of malignant diseases (see CANCER) that usually start in the LYMPH NODES or LYMPHOID TISSUES. The two major types, HODGKIN DISEASE and non-Hodgkin lymphoma, each have several subtypes. Diagnosis of either type requires BIOPSY, usually from the lymph nodes. Non-Hodgkin lymphomas may be diffuse (widespread) or nodular (concentrated in nodules); nodular lymphomas generally develop more slowly.

Lynch, David (b. Jan. 20, 1946, Missoula, Mont., U.S.) U.S. director. Trained as an artist, he studied in Europe and began experimenting with film in the late 1960s. In 1977 he made his first feature, *Eraserhead*, a grotesque and nightmarish film that became a cult favourite. He directed the critically acclaimed *The Elephant Man* (1980), the science-fiction *Dune* (1984), and the bizarre mystery *Blue Velvet* (1986). He was noted for his disturbing and dark view of life. His later films include *Wild at Heart* (1990, Golden Palm), *Lost Highway* (1997), *The Straight Story* (1999), and *Mulholland Drive* (2001). He also created the offbeat television series *Twin Peaks* (1990–91).

lynching Execution of a presumed offender by a mob without trial, under the pretense of administering justice. It sometimes involves torturing the victim and mutilating the body. Lynching has often occurred under unsettled social conditions. The term derives from the name of Charles Lynch, a Virginian who headed an irregular court to persecute LOYALISTS during the AMERICAN REVOLUTION. In the United States, lynching was widely used in the post-Reconstruction South against blacks, often to intimidate other blacks from exercising their civil rights.

Lynd \'lind**, Robert (Staughton); and Lynd, Helen** *orig.* **Helen Merrell** (respectively b. Sept. 26, 1892, New Albany, Ind., U.S.—d. Nov.

© 2006 Encyclopædia Britannica, Inc.

1, 1970, Warren, Conn.; b. March 17, 1894, La Grange, Ill., U.S.—d. Jan. 30, 1982, Warren, Ohio) U.S. sociologists. The Lynds taught for several decades at Columbia University and Sarah Lawrence College, respectively. In their collaboration on the studies *Middletown* (1929) and *Middletown in Transition* (1937), classics of sociological literature as well as popular successes, they became the first scholars to apply the methods of CULTURAL ANTHROPOLOGY to the study of a modern Western city (Muncie, Ind.).

Lynn, Loretta *orig.* **Loretta Webb** (b. April 14, 1935, Butcher Hollow, Ky., U.S.) U.S. COUNTRY MUSIC singer. Born in a coalminer's shack, Lynn married at age 13 and bore the first of six children the next year. In 1960 she released her first single, "Honky Tonk Girl," which became a hit. In 1962 she joined the GRAND OLE OPRY, and by the mid-1960s hits such as "Don't Come Home A-Drinkin'" made her one of country's biggest stars. In 1970 she released her signature song, "Coal Miner's Daughter"; it provided the title of a best-selling autobiography and a popular film (1980). Her half-sister, Crystal Gayle (b. 1951), also had a successful recording career.

Lynn Canal Deep fjord, southeastern Alaska, U.S. An important gateway to the Klondike region, it is 80 mi (129 km) long and 6 mi (10 km) wide. The northernmost fjord to penetrate the Coast Mountains, it was named in 1794 by Capt. George Vancouver for his birthplace, King's Lynn, Eng.

lynx Any of three species of short-tailed forest CAT (genus *Lynx*) found in Europe, Asia, and northern North America. The North American lynx (*Lynx canadensis*) is regarded as distinct from the Eurasian and Spanish (Iberian) species. The lynx has long legs, large paws, tufted ears, hairy soles, and a broad, short head. Its coat, which forms a bushy ruff on the neck, is tawny to cream-coloured and mottled with brown and black. Its dense, soft winter fur has been used for trimming garments. Lynx are approximately 30–40 in. (80–100 cm) long, without the 4–8-in. (10–20-cm) tail, and stand about 24 in. (60 cm) high at the shoulder. They weigh 20–45 lb (10–20 kg). Nocturnal and silent except during mating season, lynx live alone or in small groups. They climb and swim well and feed on birds, small mammals, and occasionally deer. Some regional populations of lynx are considered endangered.

Lyon \ˈlyōⁿ\ *English* **Lyons** \ˈlyōⁿ, ˈlī-ənz\ City (pop., 1999: city, 445,452; metro. area, 1,348,932), east-central France. Located at the confluence of the RHÔNE and SAÔNE rivers, it was founded as the Roman military colony Lugdunum in 43 BC (see LORRAINE) and became a principal city of Gaul. It was incorporated in 1032 into the Holy Roman Empire and in 1312 into the kingdom of France. It flourished economically in the 15th century, and by the 17th century it was the silk-manufacturing centre of Europe. It was a centre of the French RESISTANCE movement during World War II. A major river port, it has a diversified economy, including textile, metallurgical, and printing industries. Its many ancient buildings include a Roman theatre, a 12th-century Gothic cathedral, and a 15th-century palace.

Lyon, Councils of 13th and 14th ecumenical councils of the Roman Catholic Church. The First Council of Lyon was convened by Pope INNOCENT IV in 1245 after he fled to Lyon from the besieged city of Rome; the pope deposed the emperor, FREDERICK II, and urged support for Louis IX on the Seventh CRUSADE. At the Second Council in 1274, Pope GREGORY X nominally reunited the Eastern and Western churches, but the Greek clergy soon repudiated the union.

Lyon, Mary (Mason) (b. Feb. 28, 1797, near Buckland, Mass., U.S.—d. March 5, 1849, South Hadley) U.S. pioneer in higher education for women. She studied at various academies, supporting herself from age 17 by teaching. Her success as a teacher and administrator, and the demand for the young women she had trained, led to her plan for a permanent instructional institution for women. The school she founded in South Hadley, Mass., opened in 1837 as the Mount Holyoke Female Seminary (the forerunner of MOUNT HOLYOKE COLLEGE), and she served as its principal until her death.

lyre Stringed musical instrument consisting of a resonating body with two arms and a crossbar to which the strings extending from the resonator are attached. Lyrelike instruments existed in Sumer before 2000 BC. Greek lyres were of two types, the KITHARA and the lyra. The latter had a rounded body and a curved back—often a tortoiseshell—and a skin belly. It was the instrument of the amateur; professionals used the more elaborate kithara. In ancient Greece the lyre was an attribute of APOLLO and symbolized wisdom and moderation. In medieval Europe new varieties of lyre emerged that, like the kithara, were box lyres, although their precise relation to the lyres of Classical antiquity is not known. The lyres of modern East Africa probably reflect ancient diffusion of the instrument via Egypt.

East African bowl lyre; in the Pitt Rivers Museum, Oxford
COURTESY OF THE PITT RIVERS MUSEUM, OXFORD

lyrebird Either of two species of insectivorous suboscine PASSERINES (family Menuridae) named for the shape of their extremely long tail when spread in courtship display. Found in forests in southeastern Australia, lyrebirds are ground dwellers with chickenlike bodies. About 40 in. (1 m) in total length, the male superb lyrebird is the longest of the passerines. He displays in a small clearing, bringing his tail forward so that the beautiful white plumes form a canopy over his head and the lyre-like feathers stand out to the side. In this position, while prancing in rhythm, he sings far-carrying melodious notes interspersed with perfect mimicry of other creatures and even of mechanical sounds.

lyric Verse or poem that can, or supposedly can, be sung to musical accompaniment (in ancient times, usually a lyre) or that expresses intense personal emotion in a manner suggestive of a song. Lyric poetry expresses the thoughts and feelings of the poet and is sometimes contrasted with narrative poetry and verse drama, which relate events in the form of a story. The ELEGY, ODE, and SONNET are important forms of lyric poetry.

Lysander \lī-ˈsan-dər\ (d. 395 BC, Haliartus, Boeotia) Spartan leader in the PELOPONNESIAN WAR. In his first year as admiral he won the support of the Persian king Cyrus the Younger. He defeated the Athenian fleet at Notium (406), causing the dismissal of ALCIBIADES. In 405 he destroyed the Athenian fleet at the Battle of AEGOSPOTAMI; this action closed the grain route and starved the city into surrender. Lysander installed the THIRTY TYRANTS and made his friends governors of Athens's former empire. He suffered a defeat when Sparta allowed the restoration of democracy in Athens (403). Having led an army of Sparta's northern allies into Boeotia, he was killed while attacking Haliartus.

Lysenko \lə-ˈseŋ-kō**, Trofim (Denisovich)** (b. 1898, Karlovka, Ukraine, Russian Empire—d. Nov. 20, 1976, Kiev, Ukraine, U.S.S.R.) Soviet biologist and agronomist. During the Soviet famines of the 1930s, he proposed techniques for the enhancement of crop yields, rejecting orthodox Mendelian GENETICS on the basis of unconfirmed experiments, and gained a large popular following. As director of the Soviet Academy of Sciences' Institute of Genetics (1940–65), he became the controversial "dictator" of Stalinist biology. Claiming, among other things, that wheat plants raised in the appropriate environment would produce seeds of rye, he promised greater, more rapid, and less costly increases in crop yields than other biologists believed possible. Eventually his "grassland" system of crop rotation was abandoned in favour of cultivation with mineral fertilizers, and a hybrid-corn program based on the U.S. example was pursued. In 1964 Lysenko's doctrines were officially discredited, and intensive efforts were made toward reestablishing orthodox genetics in the Soviet Union.

Trofim Lysenko, 1938.

Lysias \ˈli-sē-əs\ (b. c. 445—d. c. 380 BC) Greek orator. He was a METIC (resident foreigner) in Athens, and as such he was forbidden to speak as

© 2006 Encyclopædia Britannica, Inc.

a Roman citizen; all his speeches were delivered by others. He and his brother were seized by the ruling oligarchy in 404 as disaffected aliens; his brother was killed but Lysias escaped. He ranks with ANTIPHON as a writer of clear, simple prose of great effectiveness, and his style became one model for Attic Greek prose. Many of his writings survive.

Apoxyomenos, Roman marble copy of Greek bronze by Lysippus, c. 310 BC; in the Vatican Museum, Rome.
ANDERSON—ALINARI FROM ART RESOURCE

lysine \'lī-ˌsēn\ One of the essential AMINO ACIDS, present in many common PROTEINS. Its proportion in the proteins of some important food plants (including wheat and corn) is so small that populations dependent on these grains as the sole source of dietary protein suffer from lysine deficiency, affecting growth in children and general well-being in adults. It is used in biochemical and nutritional research, in pharmaceuticals, in fortified foods, and as a nutritional supplement and feed additive.

Lysippus \lī-'si-pəs\ *or* **Lysippos** (fl. 4th century BC, Sicyon, Greece) Greek sculptor. He was famous for the new and slender proportions of his figures and for their lifelike naturalism. He reportedly made more than 1,500 works, most in bronze. None survive, but some copies may be reliably ascribed to him, including *Apoxyomenos*, a young athlete scraping oil from his skin. Another key work is the colossal Heracles at Sicyon. He made many portrait busts of ALEXANDER THE GREAT from boyhood on; it was said that Alexander would have no other sculptor portray him.

lysogeny \lī-'sä-jə-nē\ Type of life cycle that takes place in a BACTERIOPHAGE after it infects certain types of bacteria. The bacteriophage's genome (entire collection of genes) enters the chromosome of the host bacterium and replicates together with it. No offspring viruses are produced; instead, the infecting virus lies dormant within the host's chromosome until the host is exposed to certain stimuli, such as ultraviolet light. At that point, the virus genome is removed from the host chromosome and begins to multiply, forming new viruses. Finally, the bacterial host is destroyed (lysed), releasing virus particles into the environment to infect new bacterial cells.

lysosome \'lī-sə-ˌsōm\ Membrane-enclosed organelle found in all eukaryotic cells (see EUKARYOTE) that is responsible for the cell's digestion of macromolecules, old cell parts, and microorganisms. Lysosomes contain a wide variety of enzymes that break down macromolecules such as nucleic acids, proteins, and polysaccharides. Many of the products of lysosomal digestion, including amino acids and nucleotides, are recycled back to the cell for use in synthesizing new cellular components.

M16 rifle *or* **AR-15** Assault rifle adopted as a standard weapon by the U.S. Army in 1967. The M16, designed by Eugene M. Stoner in the 1950s for the ArmaLite Division of Fairchild Engine and Airplane Corp., has both semiautomatic and automatic capabilities. It weighs less than 9 lbs (3.6 kg) when equipped with a 30-round magazine, is 39 in. (99 cm) long, and fires a high-velocity .223-inch (5.56-mm) round. It can be fitted with a 40-mm grenade launcher. The M4 is a compact carbine version of the M16. See also Springfield rifle; AK-47.

Ma, Yo-Yo (b. Oct. 7, 1955, Paris, France) French-born U.S. cellist. Born to Chinese parents in France, he made his cello debut at age five. He attended the Juilliard School and then Harvard University. Praised for his extraordinary technique and rich tone, Ma performed and recorded the standard cello repertoire and received a large number of commissions from contemporary composers. He is known for his many recordings with the pianist Emanuel Ax (b. 1949), for his collaborations with an unusual range of other musicians and artists, and for his energetic work on behalf of music programs for young people and a variety of international causes. In 1998 he founded the Silk Road Project, an arts organization that explores the historical and current exchange of ideas between Asian and Western cultures.

Ma Yuan *or* **Ma Yüan** (b. c. 1160/65, Qiantang, Zhejiang province—d. 1225) Chinese landscape painter. Born into a family of court painters, Ma Yuan began his career under the emperor Xiaozong, became *daizhao* ("painter-in-attendance") under Emperor Guangzong, and received the highest honour, the Golden Belt, under Emperor Ningzong. Apart from these facts, little is known about Ma's life. He occasionally painted flowers and figure subjects, but it was in landscape painting that his genius lay. He executed a number of large landscape screens, all of which are now lost. He also painted tall hanging scrolls depicting steep mountains with streams, waterfalls, and vigorously yet elegantly rendered pine trees. In many of his works, the mountains are pushed to one side, creating a "one corner" composition; between the distant mountains and the foreground rocks, where a scholar may be sitting, lies an expanse of empty space with a suggestion of mist or water. Ma's style was popular with late Song painters, and it is often difficult to distinguish his works from those of his followers. The romantic landscape style of Ma and his contemporary Xia Gui inspired a school of painting that came to be known as the Ma-Xia school, characterized by asymmetrical compositions with simplified ink tones and angular brushstrokes.

maa-alused \'mä-'ä-lü-ˌsed\ In Estonian folk religion, mysterious elves living under the earth. These small folk had suitably tiny possessions, and their world was differently oriented from the mortal world above them (up was down and right was left). People came in contact with them either by chance or at the elves' wish. Legends tell of distraught elves seeking help from humans in cases of difficult childbirth or illness. A human could marry an elf, but such marriages eventually dissolved. In Finland, such elves were called *maahiset*.

Maasai See Masai

Maastricht \mä-'strikt,\ *English* \'mä-strikt\ **Treaty** *officially* **Treaty on European Union** Agreement that established the European Union (EU) as successor to the European Community. It bestowed EU citizenship on every national of its member states, provided for the introduction of a central banking system and a common currency (see euro), and committed the member states to work toward a common foreign and security policy. Signed in 1992, it was ratified and took effect in 1993. See also European Court of Justice, European Parliament, Treaties of Rome.

Ma'at \'mä-ˌät\ In ancient Egyptian religion, the personification of truth, justice, and the cosmic order. Ma'at was the daughter of Re, the sun god, and she stood at the head of his bark as it traveled through the sky and the underworld. She was also associated with Thoth, the god of wisdom. The judgment of the dead was believed to be determined by the weighing of the heart of the deceased on a scale she balanced. In its abstract sense, *ma'at* was the divine order established at creation and reaffirmed at the accession of each new king of Egypt.

Maathai, Wangari (b. April 1, 1940, Nyeri, Kenya) Kenyan politician and environmental activist. Maathai was educated in the U.S. and later earned a Ph.D. (1971) at the University of Nairobi, where she then taught veterinary anatomy. In 1977, as a way of conserving land and empowering women, she founded the Green Belt Movement, which recruited women to plant trees in deforested areas; by the early 21st century, it was responsible for the planting of some 30 million trees. Over time the organization also came to include programs in civic and environmental education, advocacy, and job training. Maathai, an outspoken critic of government corruption and supporter of debt cancellation for poor African countries, was elected to Kenya's National Assembly in 2002 and later served as assistant minister of environment, natural resources, and wildlife (2003–05). In 2004 she received the Nobel Prize for Peace, becoming the first black African woman to win a Nobel Prize.

Mabinogion \mä-bē-'nȯg-yən,\ *English* \ˌma-bə-'nō-gē-ən\ Collection of 11 medieval Welsh tales based on mythology, folklore, and heroic legends. The tales have multiple authors and are versions of stories told and retold through the centuries. Among the finest are four stories known as "The Four Branches of the Mabinogi," written in the late 11th century. Some show Celtic, Norman, and French influence; "Peredur Son of Efrawg," for example, parallels Chrétien de Troyes's *Perceval*. Four other tales show little continental influence: "Kulhwch and Olwen," "Lludd and Llefelys," "The Dream of Macsen," and "The Dream of Rhonabwy."

Mac-Mahon \mȧk-mȧ-'ōⁿ**, (Marie-Edme-Patrice-) Maurice, count de** *later* **duke de Magenta** (b. July 13, 1808, Sully, France—d. Oct. 17, 1893, Loiret) French soldier and second president (1873–79) of the Third Republic. Descended from an Irish Jacobite family, he began his army career in 1827 and distinguished himself in the Crimean War and in the Italian campaign at the Battle of Magenta (1859), after which he was made a marshal of France and duke de Magenta. He was governor-general of Algeria (1864–70) and later a commander in the Franco-Prussian War. He was appointed head of the Versailles Army, which defeated the Paris Commune in 1871. He was elected president after the resignation of Adolphe Thiers. During his term the Constitutional Laws of 1875 were promulgated. Mac-Mahon resigned following a constitutional crisis that was resolved in favour of parliamentary control of the government. Thereafter in the Third Republic, the office of president became largely honorific.

macadam \mə-'ka-dəm\ Form of pavement invented by John McAdam. McAdam's road cross-section consisted of a compacted subgrade of crushed granite or greenstone designed to support the load, covered by a surface of light stone to absorb wear and tear and shed water to the drainage ditches. In modern macadam construction, crushed stone or gravel is placed on the compacted base course and bound together with asphalt cement or hot tar. A third layer to fill the spaces is then added and rolled. Cement-sand slurry is sometimes used as the binder.

macadamia \ˌma-kə-'dā-mē-ə\ Any of about 10 species of ornamental evergreen trees, in the family Proteaceae, and their edible, richly flavoured dessert nuts. Macadamias originated in the coastal rainforests and scrubs of northeastern Australia.

Macadamia (*Macadamia ternifolia*)
WALTER DAWN

© 2006 Encyclopædia Britannica, Inc.

Those grown commercially in Hawaii and Australia are principally of two species, the smooth-shelled *Macadamia integrifolia* and the rough-shelled *M. tetraphylla*. Macadamias are grown in quantity also in parts of Africa and South and Central America. Hard to propagate and slow to bear fruit, the trees grow only in rich, well-drained soil in areas receiving 50 in. (130 cm) of rain annually. Fragrant pink or white flower clusters on trees with large, shiny, leathery leaves produce bunches of 1–20 fruits. The nuts contain much fat but are a good source of minerals and vitamin B.

MacAlpin, Kenneth See KENNETH I

macaque \mə-'kak\ Any of about 12 primarily Asian species of omnivorous, diurnal MONKEYS (genus *Macaca*) with cheek pouches for carrying food. Some species have long tails, some have short tails, and some have none. Males are 16–28 in. (41–70 cm) long (excluding the tail) and weigh 12–40 lb (5.5–18 kg). Troops live in mountains and lowlands and along shores. The RHESUS MONKEY (*M. mulatta*) has been important to medical and psychological research. Malays train pig-tailed macaques (*M. nemestrina*) to pick coconuts. See also BARBARY APE; BONNET MONKEY; CELEBES BLACK APE.

MacArthur, Charles (Gordon) (b. Nov. 5, 1895, Scranton, Pa., U.S.—d. April 21, 1956, New York, N.Y.) U.S. journalist, playwright, and screenwriter. He worked as a reporter in Chicago and New York City (1914–26) before collaborating with Edward Shelden on the play *Lulu Belle* (1926). With BEN HECHT he wrote the Broadway hits *The Front Page* (1928; film, 1931) and *Twentieth Century* (1932; film, 1934) and several later plays noted for their graphic, crisp dialogue. Their screenplays included the film adaptations of their own plays and *Wuthering Heights* (1939), and they wrote and directed movies such as *Crime Without Passion* (1934), *The Scoundrel* (1935), and *Soak the Rich* (1936). He was married to actress HELEN HAYES.

MacArthur, Douglas (b. Jan. 26, 1880, Little Rock, Ark., U.S.—d. April 5, 1964, Washington, D.C.) U.S. general. Son of Gen. Arthur MacArthur (1845–1912), he graduated from West Point, of which he became superintendent (1919–22). He rose through the ranks to become general and army chief of staff (1930–35). In 1932 he commanded the troops that evicted the BONUS ARMY. In 1937 he took over command of the Philippine military. At the outbreak of World War II he was recalled to active duty; he led the combined Philippine-U.S. forces in the Philippines until it was overrun by the Japanese (1942). From Australia, he commanded U.S. forces in the South Pacific and directed the recapture of strategic islands, returning as promised ("I shall return") to liberate the Philippines in 1944. Promoted to general of the army, he received Japan's surrender on Sept. 2, 1945. As Allied commander of the postwar OCCUPATION of Japan (1945–51), he directed the restoration of the country's economy and the drafting of a democratic constitution. As commander of UN forces in the KOREAN WAR in 1950, he stemmed the advance of North Korean troops. His request for authority to bomb China was rejected by Pres. HARRY TRUMAN; when MacArthur made the dispute public, Truman relieved him of his command, for insubordination. He returned to the U.S. to a hero's welcome, though many deplored his egotism. He was twice (1948, 1952) seriously considered for the Republican Party nomination for president.
